The recent EU Treaty changes have significantly strengthened the status and role of human rights within the EU legal order, as the provisions of Articles 2, 3, 6, and 7 TEU discussed above indicate. In 1994 the ECJ ruled, in its opinion on the accession of the EU to the ECHR, that the EU lacked competence under the Treaties at the time to accede to the ECHR, and that an amendment would be necessary.[189] That part of the Court's judgment has been answered by Article 6(2) TEU which now provides for accession to the ECHR, but the ECJ also made other relevant comments in *Opinion 2/94* about the limited competence of the EU to adopt measures to protect and promote human rights at the time:

> 27. No Treaty provision confers on the Community institutions any general power to enact rules on human rights or to conclude international conventions in this field.
>
> 28. In the absence of express or implied powers for this purpose, it is necessary to consider whether Article 235 of the Treaty [*now Article 352 TFEU*] may constitute a legal basis for accession.
>
> 29. Article 235 is designed to fill the gap where no specific provisions of the Treaty confer on the Community institutions express or implied powers to act, if such powers appear none the less to be necessary to enable the Community to carry out its functions with a view to attaining one of the objectives laid down by the Treaty.
>
> . . .
>
> 33. Furthermore, it is well settled that fundamental rights form an integral part of the general principles of law whose observance the Court ensures. For that purpose, the Court draws inspiration from the constitutional traditions common to the Member States and from the guidelines supplied by international treaties for the protection of human rights on which the Member States have collaborated or of which they are signatories. In that regard, the Court has stated that the Convention has special significance (see in particular *ERT*).
>
> 34. Respect for human rights is therefore a condition of the lawfulness of Community acts. Accession to the Convention would, however, entail a substantial change in the present Community system for the protection of human rights in that it would entail the entry of the Community into a distinct international institutional system as well as the integration of all the provisions of the Convention into the Community legal order.
>
> 35. Such a modification of the system for the protection of human rights in the Community, with equally fundamental institutional implications for the Community and for the Member States, would be of constitutional significance and would therefore be such as to go beyond the scope of Article 235 [*now Article 352 TFEU*]. It could be brought about only by way of Treaty amendment.

Thus not only did the EU (then the EC) not have competence at the time to accede to the ECHR because of the 'fundamental institutional implications' of accession, but the ECJ also ruled that no

provision of the Treaty conferred general power on the EU to enact rules on human rights or to conclude international human rights conventions.

The situation has changed since then, especially as regards external EU competence. One important and striking example of this is the EU's recent negotiation and conclusion of the UN Convention on the Rights of Persons with Disabilities, the first major international human rights treaty which the EU has concluded.[190] However, as far as competence to promote human rights *within* the EU is concerned, the situation has perhaps not yet changed quite so much. Despite the declaration in Article 2 that the EU is founded, *inter alia*, on the value of respect for human rights, and the stipulation in Article 3 that the EU's aim is to promote its values, the EU still requires specific competence under a provision of the Treaties if it is to take concrete action. The Treaties still do not provide the EU with any 'general power to enact rules on human rights'.

However, the EU today possesses a powerful human rights tool in the specific field of non-discrimination, since Article 19 TFEU confers competence on the EU to adopt measures combating discrimination on a range of specified grounds. This important field of EU human rights policy is discussed in more detail in Chapter 24. Another growing rights-based field of EU policy is that of data-protection since the enactment of Directive 95/46. Apart from specific treaty competences, the 'residual powers' provision of Article 352 TFEU can be used (alone or in conjunction with another Treaty provision) as a legal basis for some human rights-related measures, as it was for the enactment of the regulation establishing the EU's external human rights and democratization programme,[191] and for the establishment of the Vienna Monitoring Centre on Racism and Xenophobia which was the predecessor to the Fundamental Rights Agency.[192]

Further, although the promotion of human rights is not in itself a specific competence of the EU under the Treaties, respect for human rights appears as a value and even a goal which is 'mainstreamed' throughout the external relations of the EU. Following the Lisbon Treaty, Article 3(5) TEU provides that the EU shall contribute 'to the protection of human rights' in its relations with the wider world, and Article 21(1) TEU provides that the EU's action on the international scene shall be guided by the principles of 'democracy, the rule of law, the universality and indivisibility of human rights and fundamental freedoms, respect for human dignity, the principles of equality and solidarity' amongst others. This gives a Treaty basis to the EU's policy over the past decade to integrate human rights protection into its external relations. The EU's regular practice since 1995 has been to include human rights clauses in external agreements dealing with trade, development, and association relationships,[193] and it has occasionally imposed sanctions or withdrawn trade concessions for human rights violations, as in the cases of Myanmar and Sri Lanka. It has used human rights-based conditionality in the accession process for new Member States,[194] and runs an extensive international human rights and democratization programme known as the EIDHR.[195] These and other EU activities in the field of human rights have been outlined each year since the EU began publishing its Annual Report on Human Rights in 1999.

[195] For the European Initiative for Democracy and Human Rights see http://ec.europa.eu/europeaid/how/finance/eidhr_en.htm.

There is however no express Treaty commitment to the protection and promotion of human rights across the EU's internal policies, as there is for external policy. There are four 'mainstreaming' clauses in Articles 8, 9, 10, and 11 TFEU, which require all EU policies and activities to take account of gender equality, a range of social policy concerns, other grounds of discrimination, and environmental protection respectively, but there is no express commitment to mainstream human rights concerns more generally. This difference between the emphasis on human rights in external and internal policies has led to criticisms of a double standard in the EU's approach to human rights,[196] and it is one which has been acknowledged by the Council of Ministers.[197] Nevertheless, it continues to be a theme in critiques of the EU's human rights policies.[198] On the other hand, the enhanced legal status of the Charter of Fundamental Rights has spurred the Commission to develop further its proposal for a Charter 'impact assessment' for EU policies, which may help over time to address the double-standard critique.[199] Other recurrent criticisms of EU human rights policies are that the EU is failing to show leadership and is losing influence internationally on human rights issues.[200]

It seems fair to say that the approach of Member States to developing the EU's legal powers in the field of human rights is equivocal. Whenever a potentially expansive new power, institution, or legal norm is agreed upon, such as the anti-discrimination competence in Article 19 TFEU, the adoption of the Charter of Fundamental Rights, or the establishment of the Fundamental Rights Agency, there seems to be a countervailing restrictive move on the part of key political actors, particularly the Member States' governments. Examples of this are the insistence in Article 51 of the Charter that no new task or power has been created by its adoption, the attempt to narrow the scope of application of the Charter to Member States in Article 51, and the refusal to allow the Fundamental Rights Agency to monitor Member States for the purposes of Article 7 TEU. More generally, the political reactions of Member States when the EU has attempted to intervene on a human rights issue within a Member State, for example in the controversy over France's collective expulsion of Roma people in 2010,[201] and more recently in Hungary's reaction to EU criticism of its proposal to introduce restrictive media legislation,[202] suggest that there is still significant resistance to the EU's development of such a role.

8 THE EU CHARTER OF FUNDAMENTAL RIGHTS[203]

(A) INTRODUCTION

The Charter of Fundamental Rights was first drawn up in 1999–2000, following an initiative of the European Council to 'showcase' the achievements of the EU in this field. The novel Convention process by which the Charter was adopted, which became a model for the subsequent Convention on the Future of Europe and ultimately for the ordinary Treaty-revision procedure now contained in Article 48 TEU, produced a draft Charter in less than a year.[204] The Charter was then solemnly proclaimed by the Commission, Parliament, and Council and politically approved by the Member States at the Nice European Council summit in December 2000,[205] but its legal status was deliberately left undetermined at the time, pending the outcome of the series of constitutional processes on which the EU had embarked.[206] Following the Convention on the Future of Europe in 2003–2004 and the subsequent IGC which adopted the EU Constitutional Treaty, the horizontal clauses at the end of the Charter were amended slightly, and the Charter as a whole was incorporated as Part II of the three-part Constitutional Treaty. Subsequently, the non-ratification of the Constitutional Treaty in 2005 prolonged the Charter's ambiguous legal status, although it was cited regularly by the CFI, Advocates General, and eventually even by the ECJ, until the coming into force of the Lisbon Treaty in December 2009. Now, although the text of the Charter is not incorporated into the EU Treaties, Article 6 TEU unequivocally grants it the same legal status as the Treaties themselves.

At the time of the Lisbon Treaty, however, Britain and Poland (with the Czech Republic later to join[207]) negotiated a Protocol to the Treaties which on its face purports to limit the impact of the Charter in those states.[208] The Protocol contains two Articles which read:

Article 1

1. The Charter does not extend the ability of the Court of Justice of the European Union, or any court or tribunal of Poland or of the United Kingdom, to find that the laws, regulations or administrative provisions, practices or action of Poland or of the United Kingdom are inconsistent with the fundamental rights, freedoms and principles that it reaffirms.

2. In particular, and for the avoidance of doubt, nothing in Title IV of the Charter creates justiciable rights applicable to Poland or the United Kingdom except in so far as Poland or the United Kingdom has provided for such rights in its national law.

[203] For some of the vast literature on the Charter see (2001) 8(1) Maastricht Journal of European and Comparative Law; E Eriksen, J Fossum, and A Menéndez (eds), *The Chartering of Europe* (Arena Report No. 8/2001); K Feus (ed.), *An EU Charter of Fundamental Rights: Text and Commentaries* (Federal Trust, 2000); EU Network of Independent Experts on Fundamental Rights, *Commentary on the Charter* (June, 2006).

[207] The European Council on 29–30 Oct 2009 agreed on the text of a new protocol which would apply the provisions of Protocol 30 of the Lisbon Treaty to the Czech Republic. See the Annex to the Presidency Conclusions.

[208] Protocol No 30 to the Lisbon Treaty. See also Declarations 51, 62, and 63 annexed to the Lisbon Treaty, made by the Czech Republic and Poland respectively.

Article 2

To the extent that a provision of the Charter refers to national laws and practices, it shall only apply to Poland or the United Kingdom to the extent that the rights or principles that it contains are recognised in the law or practices of Poland or of the United Kingdom.

It may have been the intention of Poland and the UK to limit the potential effect of the incorporation of the Charter by the Lisbon Treaty within those jurisdictions, but the consensus thus far is that the Protocol would appear to have little more than declaratory effect, perhaps as an interpretative guide.[209] Article 1 declares that it 'does not extend' the ability of the ECJ, but we have seen earlier in the chapter that the ECJ, long prior to the enactment of the Charter, exercised jurisdiction to review acts of the Member States within the scope of EU law for compliance with the general principles of EU law. The Protocol does not purport to overturn this earlier case law of the ECJ, and since the contents of the Charter are largely based on the instruments which the ECJ had cited for some years as the inspiration for EU general principles, it seems that Article 1(1) is primarily declaratory. Article 1(2) is designed to support or supplement Article 52(7) of the Charter by deeming Title IV of the Charter (on solidarity rights) not to have created any new justiciable rights in Poland or the UK, but again it can be argued that since the Charter is largely declaratory of what the ECJ had been doing for years under the language of the 'general principles of law', Title IV simply gave the general principles an explicit legal footing.[210] Despite the fact that the Protocol has occasionally been referred to as an 'opt-out' from the Charter, it seems unlikely that it will have any significant effect in practice.

(B) CONTENT

The mandate originally given by the European Council to the body which first drafted the Charter of Rights was to consolidate and render visible the EU's existing 'obligation to respect fundamental rights' rather than to create anything new, and the sources on which the drafting body should draw were indicated.[211] However, the Charter contains several innovative provisions, such as a prohibition on reproductive human cloning, and there are also notable omissions, for example protection for the rights of minorities. Overall the Charter could perhaps best be described as a creative distillation of the rights contained in the various European and international agreements and national constitutions on which the ECJ had for some years already drawn.

Following its lofty preamble in the name of the 'peoples of Europe',[212] which refers amongst other things to the common and indivisible universal values on which the Union is founded and to the diversity of cultures, traditions, and identities in Europe, the Charter is divided into seven chapters. The various rights are grouped into six distinct chapters, and the final chapter contains the so-called horizontal clauses or general provisions. The first six chapters are headed: I Dignity, II Freedoms, III Equality, IV Solidarity, V Citizens' Rights, and VI Justice.

The foundational rights such as the right to life, freedom from torture, slavery, and execution are contained in the first chapter. While these might once have appeared anomalous in a Charter

[210] I Pernice, 'The Treaty of Lisbon and Fundamental Rights' in S Griller and J Ziller (eds), *The Lisbon Treaty, EU Constitutionalism without a Constitutional Treaty?* (Springer, 2008) Part III C.

[211] These were specified as the rights contained in the ECHR and those derived from the common constitutional traditions of the Member States, as well as from provisions of the European Social Charter and the Community Charter of Fundamental Social Rights of Workers, 'which go beyond mere objectives': Conclusions of the Cologne European Council, June 1999.

[212] Schönlau (n 204).

addressed primarily to the institutions of the EU, on the basis that EU powers to infringe such rights remain limited, the EU's growing body of policing, criminal law, and anti-terrorism policies suggest that this is no longer so. One topical example is the apparent evidence of complicity on the part of EU Member States in concealing the operation of secret CIA detention camps within EU countries and in the practice of 'extraordinary rendition' of individuals for torture in recent years.[213]

The second chapter on freedoms also concentrates on the basic civil and political liberties to be found in the ECHR, such as liberty, association, expression, property, private and family life,[214] but contains in addition certain fundamental social rights such as the right to education, the right to engage in work, and the right to asylum, as well as a number of provisions which have gained particular prominence in the EU context, such as the right to protection of data and the freedom to conduct a business.

Chapter III on equality contains a basic equality-before-the-law guarantee, as well as a provision similar (though not identical) to that in Article 19 TFEU, a reference to positive action provisions in the field of gender equality, protection for children's rights, and some weaker provisions guaranteeing 'respect' for cultural diversity, for the rights of the elderly, and for persons with disabilities.

Chapter IV on solidarity contains certain labour rights and reflects some of the provisions of the European Social Charter which have already been integrated into EU law.[215] This chapter contains a mixture of fundamental provisions such as the prohibition on child labour and the right to fair and just working conditions, as well as others which have been criticized as insufficiently fundamental to have a place in this Charter, such as the right to a free placement service. Further, this chapter of the Charter has been particularly criticized because of the weak formulation of many of the rights contained in it (including some, such as environmental and consumer protection, which are not formulated as rights or freedoms at all), and because of the phrase 'in accordance with Community law and national laws and practices' which follows them and which seems to undermine the content of the guarantee.

Chapter V contains 'citizens' rights', many of which, unlike the other provisions of the Charter, are not universal but are guaranteed only to EU citizens. These include the rights of EU citizenship in Articles 20–25 TFEU, while the more broadly applicable rights include the right of access to documents and the right to good administration, which was the first Charter provision to have been judicially cited by the CFI.[216]

Chapter VI, entitled Justice, includes several of the rights of the defence, such as the right to a fair trial, the presumption of innocence, the principle of legality and proportionality of penalties, and the familiar EU right to an effective remedy.

(c) THE 'HORIZONTAL' CLAUSES

The final Chapter VII contains the general clauses which relate to the scope and applicability of the Charter, its addressees, its relationship to other legal instruments, and the 'standard' of protection.

Article 51(1), as we have seen above, indicates that the Charter is addressed to the various institutions and agencies of the EU, but to the Member States only when they are 'implementing' Union law.[217] The principle of subsidiarity is mentioned in this provision, although its exact meaning in this

[213] Amnesty International's Report, 'Open Secret: Mounting Evidence of Europe's Complicity in Rendition and Secret Detention' (2010).

[214] C McGlynn, 'Families and the EU Charter of Fundamental Rights: Progressive Change or Entrenching the Status Quo?' (2001) 26 ELRev 582.

[215] M Gijzen, 'The Charter: A Milestone for Social Protection in Europe?' (2001) 8 MJ 33.

[216] Case T–54/99 *max.mobil Telekommunikation Service GmbH v Commission* [2002] ECR II–313, [48].

[217] For fuller discussion see Section 6(c) above, and (nn 149–162) and text.

context is unclear. Article 51 goes on to specify that the EU and the Member States 'respect the rights, observe the principles and promote the application thereof in accordance with their respective powers' and respecting the limits of the EU's powers under the Treaties. There is a tension between the obligation to 'promote' the rights in the Charter and the repeated emphasis on the limits of the EU's powers, which appears also in Article 51(2), which asserts that the Charter does not create any new power or task for the EU nor modify any existing task.[218] Despite the insistence that the Charter is simply a codified or slightly supplemented form of what already existed under ECJ jurisprudence, a broad set of standards against which EU and Member State action within the scope of existing EU policies and powers is to be judged, and not a source of or basis for positive action, the obligation to 'promote' the rights suggests something more proactive.[219] Certainly the proposition in Article 51 that none of the EU's tasks has been 'modified' by the adoption of the Charter seems almost oxymoronic.

Article 52(1), which draws on the jurisprudence of both the ECHR and the ECJ, contains a general 'derogation' clause, indicating the nature of the restrictions on Charter rights which will be acceptable.[220] Any limitation on the exercise of rights and freedoms contained in the Charter must be 'provided for by law' and must respect the essence of those rights and freedoms. Limitations must meet the requirements of proportionality and must be 'necessary and genuinely meet objectives of general interest recognized by the Union,[221] or the need to protect the rights and freedoms of others'.

Article 52(2) addresses the question of overlap between existing provisions of EU law and the provisions of the Charter, providing that rights recognized by the Charter 'for which provision is made in the Treaties shall be exercised under the conditions and within the limits defined by those Treaties'. This seems intended to avoid any potential differences in the interpretation of similarly worded provisions of the Charter and of the EU Treaties, most notably the citizenship provisions.

The tricky relationship between the ECHR, other international human rights instruments, national constitutional provisions, and the Charter is addressed in Articles 52(3) and 53.[222] It seems that during the drafting process a heated debate on the proper relationship of the Charter to the Convention was held, as well as on the question whether a right contained in the Charter should necessarily be interpreted in the same way as a similar or identical right contained in the ECHR, and on the proper relationship between the ECJ and the European Court of Human Rights.[223] Article 52(3) relates specifically to the ECHR and is clearly intended to promote harmony between the provisions of the

[218] The relevant explanatory note to Art 51 reads '[p]aragraph 2 confirms that the Charter may not have the effect of extending the competences and tasks which the Treaties confer on the Union. Explicit mention is made here of the logical consequences of the principle of subsidiarity and of the fact that the Union only has those powers which have been conferred upon it. The fundamental rights as guaranteed in the Union do not have any effect other than in the context of the powers determined by the Treaties. Consequently, an obligation, pursuant to the second sentence of paragraph 1, for the Union's institutions to promote principles laid down in the Charter may arise only within the limits of these same powers.'

[219] Note the speech of Commissioner Vitorino to the European Parliament on 17 Apr 2002, 'The Future of Fundamental Rights in the EU', in which he argues that the Charter should not be limited by a negative approach, but should have a proactive effect in the promoting of human rights by creating policies related to them.

[220] For criticism see D Triantafyllou, 'The European Charter of Fundamental Rights and the "Rule of Law": Restricting Fundamental Rights by Reference' (2002) 39 CMLRev 53.

[221] This formulation has been criticized by some who see it as permitting the economic objectives of the EU to be introduced as grounds for limiting the scope of fundamental rights, something which would not be possible under most provisions of the ECHR.

[222] See, from a large literature, G Harpaz, 'The European Court of Justice and its Relationship with the European Court of Human Rights: the Quest for Enhanced Reliance, Coherence and Legitimacy' (2009) 46 CMLRev 105; J Callewaert, 'The European Convention on Human Rights and European Union Law: A Long Way to Harmony' (2009) 6 EHRLR 768; P Lemmens, 'The Relationship between the Charter of Fundamental Rights of the EU and the ECHR: Substantive Aspects' (2001) 8 MJ 49; K Lenaerts and E de Smijter, 'The Charter and the Role of the European Courts' (2001) 8 MJ 49; S Parmar, 'International Human Rights Law and the EU Charter' (2001) 8 MJ 351.

[223] P Goldsmith, 'A Charter of Rights, Freedoms and Principles' (2001) 38 CMLRev 1201.

European Convention and those of the Charter, while not preventing the EU from developing more extensive protection than is provided for under the Convention:

> In so far as this Charter contains rights which correspond to rights guaranteed by the Convention for the Protection of Human Rights and Fundamental Freedoms, the meaning and scope of those rights shall be the same as those laid down by the said Convention. This provision shall not prevent Union law providing more extensive protection.

This provision does not specifically address the question of the relationship between the two European Courts, the ECtHR and the ECJ, although it seems likely to be intended to promote deference—or at least close attention—on the part of the ECJ to the case law of the ECtHR, and thus far the ECJ is certainly paying such attention.[224] The explanatory memorandum declares that the EU legislator must comply with the standards laid down in the ECHR 'without thereby adversely affecting the autonomy of Union law and that of the Court of Justice', but it also indicates that the meaning of the rights is determined in part by the ECtHR.

The Lisbon Treaty added four further paragraphs to Article 52 of the Charter. Article 52(4) stipulates that the provisions of the Charter derived from national constitutional traditions should be interpreted in harmony with those traditions. Paragraph (6) complements this by stipulating that 'full account' should be taken of national laws and practices as specified in the Charter. Article 52(7), together with Article 6(1) TEU, gives some legal weight to the explanatory memorandum to the Charter which was drafted by the secretariat.[225] This is an interesting development, since although the 'explanations' frequently provide a helpful account of the background to a provision, they were not drafted with a view to having legal force.

However, the most contentious and much-debated amendment made by the Lisbon Treaty to the Charter as originally adopted in 2000 is that contained in Article 52(5), which seeks to distinguish provisions of the Charter containing 'principles', and stipulates that provisions containing 'principles' will be 'judicially cognisable' only when they have been implemented by legislative or executive acts of the EU or the Member States, and only in relation to interpretation or rulings on the legality of such acts. Although this amendment was somewhat complicated and unclear, it seems to have been intended to introduce into the Charter some version of the traditional (and often-criticized) distinction between negatively-oriented civil and political rights and positively-oriented economic and social rights, with a view to rendering the latter largely non-justiciable.

Article 53 of the Charter contains a kind of general non-regression clause which is similar in ways to that in Article 53 of the ECHR, and which refers not only to the ECHR but also to national constitutions and international agreements:

> Nothing in this Charter shall be interpreted as restricting or adversely affecting human rights and fundamental freedoms as recognised, in their respective fields of application, by Union law and international law and by international agreements to which the Union, the Community or all the Member States are party, including the European Convention for the Protection of Human Rights and Fundamental Freedoms, and by the Member States' constitutions.

It was queried whether the presence of this clause and the absence of a 'supremacy' clause in the Charter guaranteeing the primacy of EU law could call into question the long-established supremacy

[224] For ECJ cases referring to Art 52(3) of the Charter see (n 28).

[225] Art 52(7) reads: 'The explanations drawn up as a way of providing guidance in the interpretation of the Charter of Fundamental Rights shall be given due regard by the courts of the Union and of the Member States'.

doctrine.[226] Such a concession seems highly unlikely, even if the general wording of Article 53(3) preserves the existing tension between the autonomy of the EU legal order, on the one hand, and the claims of Member States to the authority of their fundamental constitutional provisions, on the other.

Finally, Article 54 contains a clause modelled on Article 17 of the ECHR, which provides that no provision of the Charter shall imply the right to engage in any activity aimed at the destruction or excessive limitation of any of the rights contained therein.

9 THE EU AND THE ECHR

(A) ACCESSION BY THE EU TO THE ECHR

The long-debated question whether the EU should accede to the European Convention on Human Rights was finally settled by the Lisbon Treaty's amendment to Article 6(2) TEU, which declares that the EU 'shall' accede to the ECHR. The decision to accede did not rest in the power of the EU alone, however, since the Council of Europe's statute also had to be amended, requiring the assent of some forty-seven Council of Europe member states. Following many years of blockage by Russia's failure to ratify Protocol 14 to the ECHR, the provision of Article 59(2) ECHR permitting EU accession finally came into force in 2010. Given that the EU now has its own Charter of Rights, much of which is closely modelled on the ECHR, the question arises why EU accession to the ECHR is still considered to be necessary or desirable. There are several possible answers.

First, the EU has continued to encounter criticism of its human rights role, and scepticism as to whether its commitment to promoting human rights (rather than only EU economic and political interests) is genuine. The ECJ was prominently accused of using human rights discourse in an attempt to extend the influence of EU law over areas which should remain the primary concern of the Member States, given their political, cultural, and ideological diversity.[227] Accession to the ECHR could help to signal the credibility of the EU as far as human rights commitments are concerned.

A second accusation was that the Court had used the rhetorical force of the language of rights, while in reality mainly advancing the commercial goals of the internal market, being biased in favour of 'market rights' instead of protecting values which are genuinely fundamental to the human condition, or being concerned mainly with promoting the integration goals of the EU.[228] A further objection was that the ECJ should not in any case model itself as a European Human Rights Court, since this was not its main function under the EU Treaties, and because another European Court, the ECtHR in Strasbourg, was specifically entrusted by the Member States of the Council of Europe with the task of monitoring their compliance with the commitments of the ECHR.[229] The ECtHR was established with an express human rights jurisdiction, and has acquired expertise and a moral stature which the ECJ does not yet share.

Thirdly, the ECJ's extension of EU power to require national laws to comply with fundamental rights also highlighted the possibility of conflict between the pronouncements of the two European

[227] See, eg, the controversy over the Irish abortion information Case C–159/90 *SPUC v Grogan* [1991] ECR I–4685, which led to an attempt by the Irish government to insulate the Irish constitutional prohibition on abortion, and on information and referral services, from the possible impact of EU law: see Protocol No 35 to the TEU and TFEU. See also the debate between Coppel and O Neill and Weiler and Lockhart (n 59).

[228] For a combination of both concerns see Coppel and O'Neill (n 59), and compare Weiler and Lockhart (n 59).

[229] See, eg, the argument of the UK Government in Case 118/75 (n 20) 1191 (ECR).

Courts.[230] Some took the view that any serious conflict of interpretation between the two Courts was unlikely,[231] but others cautioned that it was possible.

Finally, the desirability of being able to challenge acts of the EU directly before the ECtHR has been presented as a clear argument in favour of accession. Accession will thus mean that the ECJ will no longer be the final official arbiter of the lawfulness of EU action which is alleged to violate human rights. The EU will have its own judge on the ECtHR, as each Member State of the Council of Europe does. According to the European Commission, accession will:

> — Help develop a common culture of fundamental rights in the EU.
> — Reinforce the credibility of the EU's human rights' system and EU external policy.
> — Show that the EU puts its weight behind the Strasbourg system of fundamental rights protection.
> — Ensure that there is a harmonious development of the case law of the European Court of Justice and the European Court of Human Rights.[232]

The Commission, which was formally given a negotiating mandate by the Council of Ministers, began negotiations over accession with the Council of Europe in July 2010. The procedure will result eventually in an agreement on accession to be concluded by the Committee of Ministers of the Council of Europe and unanimously by the Council of the EU. The process is likely to take some time, since the assent of the European Parliament will be required, and the agreement will have to be ratified by all forty-seven contracting parties to the ECHR, including those which are EU Member States.

At the time of writing, various issues remain to be addressed, including: (i) whether a mechanism can be introduced to ensure the ECtHR does not rule on the compatibility of an EU act with the Convention until such time as the ECJ has first ruled on the matter; (ii) whether the EU should accede to all the ECHR protocols; (iii) how the EU's judge will be elected; (iv) in what circumstances the EU will be a co-defendant before the ECtHR when a complaint is brought against an EU Member State; and (v) whether EU Member States will be formally barred from bringing inter-state complaints against one another under the ECHR.

(B) INDIRECT REVIEW OF EU ACTS BY THE ECtHR PRIOR TO ACCESSION

While EU accession to the ECHR will mean that complaints can be brought directly against the EU before the Strasbourg Court, the ECtHR in fact for some years has been prepared in certain circumstances to entertain *indirect* complaints against EU acts when they are brought against one or all Member States.[233]

In 1999, the ECtHR ruled in *Matthews v UK* that, while the Convention did not preclude the transfer by a state of national competences to an international organization such as the EU, the responsibility

[232] http://ec.europa.eu/commission_2010-2014/reding/pdf/echr_background.pdf.

[233] For decisions of the previously existing Commission on Human Rights on this and on several related questions see App No 13258/87 *Melcher (M) v Germany*, 64 D & R 138; App No 21090/92 *Heinz v Contracting States and Parties to the European Patent Convention*, 76 AD & R 125; App No 21072/92 *Gestra v Italy*, 80 BD & R 93.

of the states for violations of the ECHR would continue even after such a transfer.[234] *Matthews* was in some ways an unusual case, because the law which was found to be in violation of the Convention was an international agreement entered into by all EU Member States. It was an agreement which could not be reviewed by the ECJ, and one for which each Member State could plausibly continue to be held responsible.

However, in a subsequent series of cases involving various EU acts, such as *Guérin*,[235] *Senator Lines*,[236] *Segi/Gestoras Pro-Amnistía*,[237] and *Emesa Sugar,*[238] the ECtHR seemed willing in principle to entertain indirect challenges against a variety of such acts, a Commission decision, an ECJ judgment, a Common Position of the CFSP, although in most cases it dismissed the challenge for other reasons, such as the lack of a victim or the non-applicability of the substantive right claimed. In no case did the ECtHR reject the application on the ground that it lacked jurisdiction to examine violations which emanated from an act of the EU.

The most important ruling of the ECtHR concerning its jurisdiction over EU acts, however, is the *Bosphorus* case against Ireland.[239] This case was brought by a Turkish company against Ireland for the impounding, without compensation, of an aircraft which the applicant company had leased from the national airline of the former Yugoslavia. The Irish authorities had impounded the aircraft in reliance on an EU regulation, following the interpretation of that regulation by the ECJ on a reference from the Irish Supreme Court,[240] which implemented the UN sanctions regime against the former Yugoslavia during the civil war in the early 1990s. The ECtHR took the view that the alleged violation was committed by Ireland due to the state's compliance with a binding and non-discretionary EU law obligation: in other words, the EU regulation was the real source of the alleged violation. The ECtHR went on to set out the approach which it should adopt when complaints of this kind were made to it:

Application No 45036/98 **Bosphoros v Ireland**
Judgment of 30 June 2005

EUROPEAN COURT OF HUMAN RIGHTS

1. The question is therefore whether, and if so to what extent, that important general interest of compliance with EC obligations can justify the impugned interference by the State with the applicant's property rights.

[234] App No 24833/94 *Matthews v UK*, judgment of 18 Feb 1999, esp [34]–[35]; R Harmsen, 'National Responsibility for EC Acts under the ECHR: Recasting the Accession Debate' (2001) 7 EPL 625. [240] Case C–84/95 *Bosphorus v Minister for Transport* [1996] ECR I–3953.

2. The Convention does not, on the one hand, prohibit Contracting Parties from transferring sovereign power to an international (including a supranational) organisation in order to pursue co-operation in certain fields of activity (the M. & Co. decision, at p. 144 and Matthews at § 32, both cited above). Moreover, even as the holder of such transferred sovereign power, that organisation is not itself held responsible under the Convention for proceedings before, or decisions of, its organs as long as it is not a Contracting Party . . .

3. On the other hand, it has also been accepted that a Contracting Party is responsible under Article 1 of the Convention for all acts and omissions of its organs regardless of whether the act or omission in question was a consequence of domestic law or of the necessity to comply with international legal obligations . . .

4. In reconciling both these positions and thereby establishing the extent to which State action can be justified by its compliance with obligations flowing from its membership of an international organisation to which it has transferred part of its sovereignty, the Court has recognised that absolving Contracting States completely from their Convention responsibility in the areas covered by such a transfer would be incompatible with the purpose and object of the Convention: the guarantees of the Convention could be limited or excluded at will thereby depriving it of its peremptory character and undermining the practical and effective nature of its safeguards (M. & Co. at p. 145 and Waite and Kennedy, at § 67). The State is considered to retain Convention liability in respect of treaty commitments subsequent to the entry into force of the Convention . . .

5. In the Court's view, State action taken in compliance with such legal obligations is justified as long as the relevant organisation is considered to protect fundamental rights, as regards both the substantive guarantees offered and the mechanisms controlling their observance, in a manner which can be considered at least equivalent to that for which the Convention provides (see the above-cited M. & Co. decision, at p. 145, an approach with which the parties and the European Commission agreed). By 'equivalent' the Court means 'comparable': any requirement that the organisation's protection be 'identical' could run counter to the interest of international co-operation pursued (paragraph 150 above). However, any such finding of equivalence could not be final and would be susceptible to review in the light of any relevant change in fundamental rights' protection.

6. If such equivalent protection is considered to be provided by the organisation, the presumption will be that a State has not departed from the requirements of the Convention when it does no more than implement legal obligations flowing from its membership of the organisation.

However, any such presumption can be rebutted if, in the circumstances of a particular case, it is considered that the protection of Convention rights was manifestly deficient. In such cases, the interest of international co-operation would be outweighed by the Convention's role as a 'constitutional instrument of European public order' in the field of human rights . . . .

7. It remains the case that a State would be fully responsible under the Convention for all acts falling outside its strict international legal obligations. The numerous Convention cases cited by the applicant at paragraph 117 above confirm this. Each case (in particular, the Cantoni judgment, at § 26) concerned a review by this Court of the exercise of State discretion for which EC law provided . . . The Matthews case can also be distinguished: the acts for which the United Kingdom was found responsible were 'international instruments which were freely entered into' by it (§ 33 of that judgment) . . .

8. Since the impugned act constituted solely compliance by Ireland with its legal obligations flowing from membership of the EC (paragraph 148 above), the Court will now examine whether a presumption arises that Ireland complied with its Convention requirements in fulfilling such obligations and whether any such presumption has been rebutted in the circumstances of the present case.

The ECtHR went on in paragraphs 159–165 to survey the EU's system of protection for fundamental rights, and to rule that the presumption that Ireland complied with its ECHR obligations did indeed arise, on the basis that the EU provided human rights protection 'equivalent' to that of the

ECHR system, and that there was no dysfunction in the EU's control system such as to rebut that presumption in the case at hand.[241]

Two separate opinions were signed by seven judges in the case, however, expressing certain reservations about the approach of the majority. These opinions, while concurring with the substantive ruling that no violation of the right to property had occurred, expressed varying views about the approach taken to the 'presumption of compliance' with the ECHR of national acts adopted pursuant to international legal obligations. In particular, they expressed concern about the idea of abandoning a case-by-case review of compliance for a largely abstract review of the organization's general system of 'equivalent protection' for human rights. They also drew attention to the deficiencies in the EU's system of judicial protection due to the limited *locus standi* for private parties before the ECJ, a limitation which has been partly addressed but not cured by Article 263 TFEU after the Lisbon Treaty, and they raised the question whether this amounted to a violation of Article 6(1) of the ECHR.[242]

Pending EU accession to the ECHR, the circumstances in which the ECtHR will indirectly review EU action appears to be as follows: where an EU act, such as a directive, which was at issue in the case of *Cantoni*,[243] leaves discretion in implementation to Member States, or where it is 'an international agreement freely entered into by the Member State' as in *Matthews*, a challenge can be brought before the ECtHR against the implementing state, which remains responsible for any violation of ECHR obligations.[244] Where however an EU act, as in the case of the regulation in *Bosphorus*, leaves no discretion in implementation to the Member State, the state will be presumed (in the absence of contrary evidence of a dysfunction in control) to have acted compatibly with the ECHR so long as the EU control system overall provides an equivalent level of protection for human rights to that provided by the ECHR. Finally, where an EU act, as in *Senator Lines*, is one which is not subject to implementation by the states but is adopted by an autonomous EU institution such as the Commission or the Court, it seems that an applicant will have to bring an action against all of the Member States collectively as the author of the act, and it seems likely (although perhaps not certain[245]) that the ECtHR would apply the presumption of compatibility.

Notably however, despite the presumption of compliance of EU acts with the ECHR in *Bosphorus,* the ECtHR in the recent case of *MSS v Belgium and Greece* found these states to be in violation of Article 3 ECHR on account of the inadequacy of Greece's conditions and procedures for dealing with

[241] For a critical comment see K Kuhnert, 'Bosphorus—Double Standards in European Human Rights Protection?' (2006) 2 Utrecht Law Review 177, and for a more approving assessment see C Costello, 'The Bosphorus Ruling of the ECtHR: Fundamental Rights and Blurred Boundaries in Europe' (2006) 6 HRLR 87.

[242] The question whether the restricted access of individuals to direct actions before the ECJ under Art 230 EC violates the principle of effective judicial protection, including that expressed by Art 6 of the ECHR, has been raised many times before the CFI and ECJ: Case C–263/02 P *Jégo-Quéré v Commission* [2004] ECR I–3425; Case C–50/00 *UPA v Council* [2002] ECR I–6677; Case T–370/02 *Alpenhain-Camembert-Werk v Commission* [2004] ECR II–2097; Case T–338/02 *Segi v Council* [2004] ECR II–1647; Case C–141/02 P *Commission v T-Mobile Austria* [2005] ECR I–1283; Case T–231/02 *Gonnelli and AIFO v Commission* [2004] ECR II–1051.

[243] App No 17862/91 *Cantoni v France*, judgment of the ECtHR, 15 Nov 1996. The case concerned a claim of violation of Art 7(1) of the ECHR on retroactivity of criminal liability, due to the allegedly inadequate definition in a provision of the French Public Health code, which implemented EU Dir 65/65, of the term 'medical product'.

[244] App No 30696/09 *MSS v. Belgium and Greece,* discussed at (n 246).

[245] It is possible, although unlikely, that the ECtHR might refuse to apply the presumption of compatibility in the case of such 'self-executing' EU acts if they are for some reason not subject to adequate review within the EU itself—as was true of the measure at issue in *Matthews*. It is possible also to imagine a non-reviewable CFSP measure (like that in *Segi*) which does not require any implementation being treated by the ECJ like the international agreement in *Matthews*. Another possibility, however, is that the ECtHR would apply the presumption of compatibility to such self-executing EU acts, but would treat the lack of reviewability as a consideration such as to rebut the presumption of ECHR compatibility.

asylum-seekers, in a ruling which clearly casts doubt, as Judge Rozakis's concurring opinion indicates, on the viability of the EU's Dublin Regulation on the transfer of asylum-seekers.[246]

One question which remains is whether the ECtHR might continue, even after EU accession to the ECHR, to apply the deferential *Bosphorus* approach by allowing EU acts to benefit from a presumption of compatibility of its acts with the ECHR. Given that this presumption of compatibility has already met significant criticism, and that there will be no formal limits on the ECtHR's jurisdiction to scrutinize EU acts following accession, there seems to be no reason for the EU to benefit from any presumption of compatibility of its acts with the ECHR, or to escape full scrutiny by the Court of Human Rights.

(c) MUTUAL INFLUENCE OF THE ECJ AND THE ECtHR PRIOR TO ACCESSION

We have seen above how the ECJ regularly cites and pays increasingly close attention to ECHR rulings.[247] And as the scope of EU law has expanded, the number of cases in which rights claims are raised has similarly expanded, which means that claims based on ECHR and Charter rights are increasingly brought before the ECJ.

The potential for differences in interpretation between the two European Courts on the same issue can be seen in a range of earlier cases of the ECJ and ECtHR respectively. Compare, for example, the judgment of the ECtHR in *Open Door Counselling*[248] with the Opinion of the Advocate General in *Grogan*,[249] or the approach of the ECJ in *ERT*[250] with that of the ECtHR in *Lentia v Austria*,[251] or the decision of the ECJ in *Hoechst*[252] with that of the ECtHR in *Niemietz*;[253] or the ECJ in *Orkem*[254] with the ECtHR in *Funke*,[255] and the subsequent series of ECJ and CFI cases concerning various rights of the defence in EU competition proceedings in *SKC*,[256] *Limburgse Vinyl Maatschappij*,[257] *Baustahlgewebe,*[258] and *Roquette Frères*.[259]

[246] App No 30696/09 *MSS v. Belgium and Greece,* judgment of the Grand Chamber of 21 Jan 2011. For an earlier ruling of the ECtHR dealing with the implementation of the Dublin Reg as between the UK and Greece which, despite similar evidence, had found no violation of the Convention at the time see App No 32733/08 *KRS* (n 122).

[247] The ECJ itself has said that 'the Court of Justice regularly applies the Convention and refers in that connection, more and more precisely in recent years, to the case-law of the European Court of Human Rights': Discussion document of the ECJ on certain aspects of the accession of the EU to the ECHR, Luxembourg, 5 May 2010, [3].

[248] *Open Door Counselling Ltd and Dublin Well Woman Centre v Ireland*, Series A, no 246.

[250] Case C–260/89 *ERT* (n 22).

[251] *Informationsverein Lentia* v *Austria*, Series A, no 276. In this case the ECtHR found that the radio and television monopoly of the Austrian Broadcasting Corporation constituted a violation of Art 10 of the Convention, whereas the ECJ in Case C–260/89 (n 22) left the Art 10 issue to be decided by the national court. See also Case C–23/93 *TV10 SA v Commissariaat voor de Media* [1994] ECR I–4795, concerning Dutch broadcasting restrictions, in which the ECJ referred to its conclusion in an earlier case, Case C–353/89 *Commission v Netherlands* [1991] ECR I–4069, that the maintenance of the pluralism which the broadcasting policy sought to safeguard was precisely what the ECHR was designed to protect. See the similar conclusion of the Commission on Human Rights in its Decision of 11 Jan 1994 in App No 21472/93 *X v The Netherlands*, 76A D & R 129.

[252] Cases 46/87 and 227/88 *Hoechst AG v Commission* [1989] ECR 2859.

[253] *Niemietz v Germany* (n 109). See however the subsequent decision of the ECJ in Case C–94/00 *Roquette Frères* (n 110) citing the later ECHR judgment in *Colas Est v France*, 16 Apr 2002

[254] Case 374/87 (n 107).

[255] *Funke v France* (n 112).

[256] Cases T–213/95 and 18/96 *SCK* (n 103) [56]–[57].

[257] Cases T–305/94–335/94 *Limburgse Vinyl Maatschappij NV v Commission* [1999] ECR II–931, [420].

[258] Case C–185/95 P *Baustahlgewebe* (n 103); Lenaerts and de Smijter (n 222).

[259] Case C–94/00 *Roquettes Frères* (n 110).

Another indication of the potential for conflict arose in the *Emesa Sugar* litigation, concerning whether the lack of opportunity for a party to reply to the Advocate General's Opinion before the ECJ constituted a violation of the right to adversarial proceedings in Article 6(1) ECHR.[260] The ECJ sought to distinguish the relevant ECtHR jurisprudence on which the applicant relied,[261] finding it inapplicable to the situation of the Advocate General, so that there was no violation of Article 6(1).[262] In the later EU case of *Kaba*,[263] however, which raised a similar challenge to the role of the Advocate General by relying on a later ECHR ruling,[264] Advocate General Colomer was highly critical of the ECtHR and its case law on this issue.[265] The ECJ however did not address the issue and decided the *Kaba* case on a different ground, and the ECtHR later dismissed the application by *Emesa Sugar* as inadmissible on the basis that Article 6(1) ECHR did not cover customs duties procedures.[266] In other words, despite the lurking conflict underpinning the case, both the ECJ and the ECtHR in their different ways sought to avoid giving contradictory rulings without finding the jurisprudence of the other European Court to be at fault.

What can be seen is a determination on the part of both European Courts to avoid conflict in their respective case law, and to demonstrate deference to the other court in relation to similar questions arising before them.[267] This is certainly the approach which Article 52(3) of the Charter of Fundamental Rights encapsulates.[268] And while, as we have seen, the ECJ and the General Court continue to make many approving references to the jurisprudence of the ECtHR, the ECtHR too has occasionally cited EU law and ECJ judgments with approval in cases such as *Stec*[269] and *DH v Czech Republic*.[270]

It is assumed by many that accession by the EU to the ECHR will bring about greater harmony between the two systems, by formally subjecting the EU to the binding force of the ECHR, and by formally subjecting the ECJ to the binding force of judgments of the ECtHR.[271] On the other hand, it has been suggested that the ECJ may wish to leave itself a 'margin of appreciation' in this respect,[272] and the Declaration annexed by the Lisbon IGC to the EU Treaties is ambiguous.[273] Nor does the ECHR itself provide a clear answer, since Article 46 ECHR specifies only that 'the High Contracting Parties undertake to abide by the final judgment of the Court in any case to which they are parties'. The ECJ made no comment on the question whether it will be formally bound by the case law of the ECtHR in its recent memorandum on

[260] Case C–17/98 *Emesa Sugar* (n 238); R Lawson, Note (2000) 37 CMLRev 983.

See also the interesting admissibility decision of the ECHR in App No 15073/03 *John v Germany*, decision of 13 Feb 2007, where the ECJ dismissed a claim for breach of Art 6(1) ECHR based on a national court's refusal to make a preliminary reference to the ECJ.

[271] T Lock, 'The ECJ and the ECtHR: The Future Relationship between the Two European Courts' (2009) 8 Law and Practice of International Courts and Tribunals 375.

[272] Rosas (n 231) nn 43–44 and text.

[273] Declaration No 2 on Art 6(2) TEU provides: 'The Conference agrees that the Union's accession to the ECHR should be arranged in such a way as to preserve the specific features of Union law. In this connection, the Conference notes the existence of a regular dialogue between the Court of Justice of the European Union and the European Court of Human Rights; such dialogue could be reinforced when the Union accedes to that Convention'.

accession to the ECHR, but argued strongly for a mechanism to be established to ensure that before the ECtHR is called on by a litigant to provide an 'external' review of an EU act for compatibility with the ECHR, one of the EU Courts must have the opportunity to give a prior 'internal' review.[274]

10 CONCLUSIONS

i. Human rights issues occupy an increasingly significant place within EU law and policy today. The Charter of Fundamental Rights has been given binding legal force. The EU is currently negotiating its accession to the ECHR. Compliance with human rights standards is a condition for the admission of new Member States, and serious non-compliance forms the basis for the symbolic sanction mechanism in Article 7 TEU. The Commission is developing instruments such as human-rights mainstreaming and human-rights impact assessment, and an EU Fundamental Rights Agency has been established.

ii. The case law of the ECJ and the CFI/General Court dealing with human rights matters has grown exponentially. A series of high-profile rulings annulling anti-terrorist sanctions has garnered particular attention, but there have been many other notable, if less publicized, cases dealing with fundamental rights, on issues ranging from asylum and refugee claims to child custody disputes, criminal procedure, media pluralism, data protection, and employment rights. While Member States' governments remain ambivalent about the EU's role in relation to human rights matters within the EU, it is clear that the ECJ has not retreated from its assertion of jurisdiction to undertake human right review of all Member State action which falls 'within the scope of EU law', despite the somewhat narrower wording of Article 51 of the Charter

iii. Accession by the EU to the ECHR within the next few years will formalize the complex but cooperative relationship between the ECJ and the European Court of Human Rights. It is clear that both the Strasbourg and the Luxembourg Courts have, in their different ways, sought to avoid conflict between their respective bodies of case law, and that both Article 52(3) of the Charter and accession by the EU to the ECHR are viewed as further moves in the direction of jurisprudential harmony between the two systems. Nevertheless, the ECJ is clearly concerned to maintain its autonomy (and the autonomy of the EU legal order) after accession, and it also seems clear that—despite the deferential *Bosphorus* ruling—the ECHR will not compromise its standards under the Convention to accommodate particular EU laws and goals, as the recent *MSS v Belgium and Greece* ruling suggests.

ENFORCEMENT ACTIONS AGAINST MEMBER STATES

1 CENTRAL ISSUES

i. Article 17(1) TEU entrusts to the Commission the task of ensuring and overseeing the application EU law 'under the control of the Court of Justice'. One crucial component of the Commission's task is to monitor Member State compliance and to respond to non-compliance.

ii. The TFEU provides for various enforcement mechanisms[1] involving judicial proceedings against the Member States, which are brought either by the Commission or—much less frequently—by a Member State. Article 258 TFEU establishes the general enforcement procedure, giving the Commission broad power to bring enforcement proceedings against Member States which it considers to be in breach of their obligations under EU law.[2]

iii. The enforcement procedure performs several functions. It is in part an elite channel for the amicable resolution of disputes involving Member States without recourse to litigation, in part a channel for individuals to complain to the Commission about breaches of EU law, and in part an 'objective' law enforcement tool in the Commission's hands.[3] It has also been described as a forum for enhancing the accountability of the different actors involved, in particular the Member States and the Commission,[4] involving also the Parliament and the Ombudsman.

[1] See, eg, Art 108(2) TFEU on state aid, and Art 114(9) TFEU on internal market measures. Under Art 271 the Board of the European Investment Bank and the Council of the European Central Bank have powers similar to those of the Commission under Art 258 TFEU. Art 348 TFEU provides for an enforcement procedure where Member States have relied on Art 347 TFEU to derogate from fundamental EU rules: see Case C–120/94 R *Commission v Greece* [1994] ECR I–3037. On the interaction between the derogation in Arts 346 and 347 TFEU (ex Arts 296–298 EC) and the infringement procedure see Cases C–284/05 *Commission v Finland*, C–294/05 *Commission v Sweden* C–372/05 *Commission v Germany*, C–387/05 *Commission v Italy,* C–461/05 *Commission v Denmark*, all 15 Dec 2009; Case C–38/06 *Commission v Portugal*, 4 Mar 2010; Case C–337/05 *Commission v Italy*, [2008] ECR I–2173, and Case C–157/06 *Commission v Italy* [2008] ECR I–7313; M Trybus, Note (2006) 46 CMLRev 973.

[2] The original infringement procedure under Art 88 of the Coal and Steel Treaty (which expired at the end of 2002) gave considerably more power to the Commission (then called the High Authority), which was empowered to record the failure of a state to fulfil its obligations, without first bringing the case before the ECJ. However, the state itself could then bring the matter before the Court. Following the Lisbon Treaty amendments, Arts 58–60 TFEU now also govern the Euratom Treaty.

[3] For a discussion of the tensions between all three dimensions see R Rawlings, 'Engaged Elites: Citizen Action and Institutional Attitudes in Commission Enforcement' (2000) 6 ELJ 4.

[4] C Harlow and R Rawlings, 'Accountability and Law Enforcement: The Centralized EU Infringement Procedure' (2006) 31 ELRev 447; M Smith, *Centralised Enforcement, Legitimacy and Good Governance in the EU* (Routledge, 2010) 15–18, who identifies five different functions of the general infringement procedure.

iv. As the number of infringement cases continues to rise, the general enforcement mechanism has come under strain,[5] and various attempts have been made to address the resulting problems of overload and delay.[6] Environmental cases continue to account for a high proportion of the overall cases under examination by the Commission as well as of the cases referred to the ECJ.[7]

v. The pecuniary penalty mechanism of Article 260 TFEU allows the Commission to request the ECJ to impose a penalty payment on a Member State which has failed to comply with a previous judgment pursuant to Article 258. Although the number of judgments involving penalty payments remains low, the Commission increasingly resorts to Article 260. However, the procedure has been criticized on various grounds including the lack of procedural transparency and consistency, as well as the criteria for calculating penalties.

2 THE FUNCTION AND OPERATION OF THE INFRINGEMENT PROCEDURE

Article 258 TFEU provides:

> If the Commission considers that a Member State has failed to fulfil an obligation under the Treaties, it shall deliver a reasoned opinion on the matter after giving the State concerned the opportunity to submit its observations.
>
> If the State concerned does not comply with the opinion within the period laid down by the Commission, the latter may bring the matter before the Court of Justice of the European Union.

One apparently minor but important change introduced by the Lisbon Treaty was to alter the wording of Article 258 so that it refers to the failure to fulfil an obligation under 'the Treaties' rather than solely 'this Treaty', as was the case under the previous EC Treaty.[8] This change reflects the formal abolition of the intergovernmental 'pillars' of the Union by the Lisbon Treaty, and highlights the fact that, with the exception of Chapter 2 of the TEU governing the common foreign and security policy, the provisions of which are largely excluded from the ECJ's jurisdiction, infringement proceedings can now be brought for violation of obligations under both the TEU and the TFEU.[9]

[5] For a useful overview see R Munoz, 'The Monitoring of the Application of Community Law: The Need to Improve the Current Tools and an Obligation to Innovate', Jean Monnet Working Paper 04/2006.

[6] For some of these see A Europe of Results: Applying Community Law, COM(2007)502.

[7] According to the statistical annex to the Commission's 26th Annual Monitoring Report, SEC(2009)1685/2, one-fifth of the cases under consideration by the Commission in 2008, and more than one-quarter of the cases referred to the ECJ, concerned environmental matters. Further, according to the Commission's Evaluation Report, COM(2010)70 on the operation of the first year of EU Pilot, a system established by the Commission to coordinate a more efficient response to infringement complaints and queries, over one-third of all complaints and inquiries related to the environment.

[8] Another minor change introduced by the Lisbon Treaty is Art 197 TFEU, which provides that '[e]ffective implementation of Union law by the Member States, which is essential for the proper functioning of the Union, shall be regarded as a matter of common interest', and allows the EU to adopt non-harmonizing legislation to support Member States' administrative capacity.

[9] See however the complex provisions postponing for five years some of the institutional changes applicable to AFSJ under Art 10 of Protocol 36 on Transitional Provisions annexed to the Lisbon Treaty, including the Commission's powers to bring infringement proceedings before the ECJ.

(A) NATURE AND FUNCTION OF THE ARTICLE 258 PROCEDURE

The Commission initiates Article 258 proceedings either in response to a complaint or on its own initiative. Since it has no investigation service, complaints are brought on the basis of information gained from diverse sources, for example through the press, from European Parliament questions or petitions, through direct correspondence from individual or other complainants, or modern technological sources such as databases indicating when Member States have failed to notify implementation of a directive.

The Commission has regularly acknowledged that complaints from citizens constitute a significant source for its detection of infringements, and has suggested that the Article 258 procedure thus contributes to creating a more participatory Community in which citizens can play a role in law enforcement.[10] In 1999 a standard complaint form was designed for individuals' ease of use,[11] and a number of mechanisms have been established by the Commission to enable individuals to communicate inquiries and complaints, such as Europe Direct, Citizen's Signpost, and European Business Centres.[12]

Nonetheless, the Commission has equally underscored its view that the enforcement procedure is not intended primarily to provide individuals with a means of redress, but rather is an 'objective' mechanism for ensuring state compliance with EU law.[13] Cautioning against an over-emphasis on the role of individuals, the Commission has pointed to its discretion in deciding whether to commence infringement proceedings, emphasizing the bilateral rather than trilateral nature of the procedure,[14] and identifying the primary objective as that of bringing offending Member States into line rather than satisfying individual interests.[15]

Given this ambivalent attitude, it is not surprising to find that the role actually played by individual complainants is imprecise and varying, although often key in detecting and pursuing infringements.[16] On the one hand, the individual has no say in determining whether or not the Commission actually initiates proceedings against a Member State.[17] On the other hand, since the establishment of the Ombudsman's office, individuals have regularly made complaints about the Commission's procedures, leading to pressure from the Ombudsman on the Commission to make changes and improvements to its practices.[18] After the Ombudsman's own-initiative investigation in 1996,[19] the Commission ceased its previous practice of failing to inform complainants when a case had been

[15] 18th Annual Report, COM(2001)309.

[16] One specific example is the role of a particular Irish NGO, Friends of the Irish Environment (www.friendsoftheirishenvironment.net/eu/), working with a group of crusading lawyers including Peter Sweetman and Greg Casey, which has consistently brought information about environmental infringements in Ireland to the attention of the Commission, leading to the initiation of several of the infringement proceedings brought against Ireland.

[18] For some recent examples see complaints nos 2979/2008/VL, 1532/2008/(WP)GG, 146/2005(GG), 3317/2004(GG), 956/2004(PB), 3453/2005, and 289/2005(WP)GG, The last two resulted in Special Reports to the European Parliament in 2006 and 2007 respectively. All reports and draft recommendations to the Commission are available on the Ombudsman website, www.ombudsman.europa.eu.

[19] See 303/97/PD, reported in the Ombudsman's Annual Report for 1997; R Mastroianni, 'The Enforcement Procedure under Article 169 of the EC Treaty and the Powers of the European Commission: Quis Custodiet Custodes?' (1995) 1 EPL 535; P Kunzlik, 'The Enforcement of EU Environmental Law: Article 169, the Ombudsman and the Parliament' (1997) 6 EELR 46, and more recently Harlow and Rawlings (n 4).

terminated, and began to make more frequent use of press releases and to place more information on the internet. In 2002, the Commission issued a communication to the European Parliament on relations with individual complainants and published a consolidated version of its internal procedural rules governing relations with complainants.[20] These have allowed the Ombudsman to assess the Commission's performance by reference to its own published commitments, as well as the general principles of transparency and good administration.[21] In 2007, the Commission announced the establishment of a new EU Pilot method 'for improved information exchange and problem-solving' whereby a complainant is initially put in direct contact with a Member State's 'central contact point' with a view to resolution of the problem within a fixed deadline, and where the Commission follows up if no resolution is forthcoming.[22]

A major source of frustration for complainants and other interested parties has been the difficulty in obtaining access to documents relating to the infringement proceedings. The Commission has repeatedly invoked the exception to the EU transparency rules governing 'inspections, investigations and audits',[23] and has generally been supported in this respect by the Ombudsman.[24] In *Petrie*, the CFI underscored the bilateral nature of infringement proceedings in upholding the refusal of access to documents relating to infringement proceedings, pointing out that individuals are not party to such proceedings.[25] A judicial move in the direction of greater transparency came in *Bavarian Lager II*[26] in which the CFI ruled that disclosure of documents relating to infringement proceedings which had been closed six years previously could not jeopardize Commission investigations, and so were not covered by the exception governing inspections.[27] Although the ECJ overturned part of the CFI's judgment here on the basis of EU data-protection legislation,[28] its later ruling *Sweden and API v Commission* affirmed the move towards greater disclosure in the context of infringement proceedings which are closed.[29] In *Sweden/API*, while the ECJ confirmed that there is no third party right of access to pleadings submitted to the Court in judicial proceedings,[30] and that there is a general presumption that disclosure of pleadings lodged by one of the institutions in court proceedings would undermine the protection of those proceedings while they remained pending,[31] this could be overturned by the presentation of evidence that a particular document is

[20] COM(2002)141, [2002] OJ C244/5. See also, in the same year, the Commission's Communication on Better Monitoring of Community Law, COM(2002)725. The Commission made an explicit commitment to deal with any case arising from a complaint within a year of receiving the complaint, but in 2006 the Ombudsman sent a special report to the European Parliament arising out of a complaint made to him against the Commission concerning a failure to act within the promised one-year deadline: see the special report of 30 May 2006, www.ombudsman.europa.eu.

[21] See, eg, Complaint no. 3453/2005/GG and the resulting report by the Ombudsman to the European Parliament, available at www.ombudsman.europa.eu. Nevertheless, the office of the Ombudsman has been criticized for wasting the opportunity to push for stronger administrative and citizen-friendly reforms: Rawlings (n 3).

[26] Case T–194/04 *Bavarian Lager v Commission* [2007] ECR II–4523.

[27] Ibid.

[28] Case C–28/08 P *Commission v Bavarian Lager*, 29 June 2010.

[29] Cases C–514, 528 and 532/07 P *Sweden and API v Commission*, 21 Sept 2010, [112]–[127].

[30] On this point the ECJ departed from the reasoning of the CFI, which had ruled that the Commission was under an obligation, after the hearing had taken place, to carry out a concrete assessment of each document requested in order to determine whether, given the specific content of that document, its disclosure would undermine the court proceedings to which it related: Case T–36/04 *API v Commission* [2007] ECR II–3201.

[31] Cases C–514, 528 and 532/07 P *Sweden and API* (n 29) [77]–[102].

not covered by the presumption.[32] Secondly, the ECJ upheld the ruling of the CFI that documents relating to investigations carried out by the Commission in the context of infringement proceedings under Article 258 TFEU would no longer be covered by the exception for the protection of court proceedings in Article 4(2) of Regulation 1049/2001 after the ECJ had delivered its judgment closing those proceedings.[33] Rejecting the Commission's argument that the CFI had misconstrued the relationship between Article 258 and Article 260 (penalty payment) proceedings, the ECJ ruled that these were two distinct procedures and that once the ECJ had found the existence of a breach in the Article 258 procedure, an amicable settlement in the case was no longer possible in the case of that breach. Consequently, it could not be presumed that disclosure of pleadings lodged in a procedure which led to the Article 258 judgment would undermine investigations which could lead to proceedings being brought under Article 260.[34]

An analysis of the different phases of the infringement procedure over time has been suggested by Harlow and Rawlings. The first phase in the early years was one of diplomacy shaped largely by the Commission,[35] the second a more judicialized phase influenced by the jurisprudence of the Court but still dominated by the Commission's negotiation approach, and the third a more clearly legalized phase following the enactment of a provision for pecuniary penalties against states.

Carol Harlow and Richard Rawlings, Accountability and Law Enforcement: The Centralized EU Infringement Procedure[36]

> Söderman [the first EU Ombudsman] portrays the 'citizen who complains' as a 'party in the administrative procedure', who ought to be recognised as such and should enjoy all the procedural safeguards of EC law together with (subject to legal confidentiality) access to the file in accordance with the right to good administration contained in Art.41 of the European Charter of Fundamental Rights. This tripartite analysis, with the Commission presented as arbitrator between two parties, contrasts significantly with the view of Court and Commission of an elite procedure confined to two parties: Commission and Member State. . . .
>
> But just how far can such an approach sensibly go, given the evident need for an efficient procedure and for the Commission to retain effective control of decisions? One need not be an apologist for the Commission to appreciate that complainants are self-selecting and that their concern to vindicate the rule of law is commonly a product of private interest, even if, in some of the cases discussed above, a strong measure of public interest is joined. The dissonance between a Commission policy of stopping at the point of voluntary compliance and a natural concern among complainants with the effects of past infringements is an obvious flashpoint.

[32] Ibid [103]–[104].

[33] Ibid [112]–[123]. The documents to which access was sought concerned the *Open Skies* infringement proceedings brought by the Commission against 8 Member States. See Cases C–466–476/98 *Commission v UK* [2002] ECR I–9855.

[34] Cases C–514, 528 and 532/07 P *Sweden and API* (n 29) [112]–[123].

[35] For an example of the Court's understanding of this elite negotiation conception of the infringement procedure some decades ago see its ruling in the case concerning Belgium's interpretation of the 'public service' exception to the Treaty provisions on the free movement of workers in Case 149/79 *Commission v Belgium* [1980] ECR 3881 [23]–[24], in which the ECJ 'invites the Commission and the Kingdom of Belgium to re-examine the issue between them in the light of the foregoing considerations and to report to the court, either jointly or separately, within a specified period, either any solution to the dispute which they succeed in reaching together or their respective viewpoints, having regard to the matters of law arising from this judgment'.

[36] (2006) 31 ELRev 447.

(B) OPERATION OF THE PROCEDURE

The infringement procedure can be divided into four distinct stages:

i. The initial *pre-contentious stage* gives the Member State the occasion to explain its position and the opportunity to reach an accommodation with the Commission.

ii. If the matter is not clarified or resolved informally between the two at this stage, the state will be *formally notified* of the specific infringement alleged by means of a letter from the Commission. The state is usually given two months to reply, except in cases of urgency, and the Commission normally decides within a year either to close a case or to proceed.

iii. If, after an exchange with the state, the matter has not been resolved, the Commission may proceed to the stage of issuing a *reasoned opinion*. The reasoned opinion sets out clearly the grounds on which the alleged infringement rests, and marks the beginning of the time period within which the Member State must comply, if it is to avoid the final stage.

iv. The final stage is *referral* of the matter by the Commission *to the Court of Justice*.

The Commission clearly values the 'elite cooperation' dimension of the infringement procedure which enables disputes over enforcement to be resolved at the pre-contentious stage without recourse to the Court. During the mid-1990s, however, following a change of practice by the Commission concerning the issue of letters of formal notice, the number of referrals to the Court rose rapidly.[37] Since then they have stabilized somewhat, and the Commission has suggested that 'in many cases the pre-litigation examination of complaints is enough to prompt the Member States to put the situation right'.[38] In its 26th Report in 2009 the Commission declared that approximately 68 per cent of complaints were closed before the first formal step in infringement proceedings; that around 84 per cent of infringement procedures based on a complaint were closed before the reasoned opinion stage and around 94 per cent before a ruling from the European Court of Justice.[39]

Since 2002, the Commission has drawn attention to a range of 'complementary mechanisms' for resolving non-compliance, such as problem-solving networks like the internal market SOLVIT, national mediation, and even national judicial proceedings.[40] Mechanisms of infringement-prevention and management, such as interpretative communications, promotion of peer pressure, notification obligations, transparency campaigns, providing training, exchanges of information and practice, and so-called 'package meetings' with Member States, have also been emphasized.[41] A recently introduced EU pilot scheme for handling complaints and inquiries is intended to address potential compliance problems at an early stage.[42] These are all intended to help Member States with compliance so that the need for recourse to formal infringement proceedings is correspondingly reduced. Further, the Commission introduced criteria to enable it to prioritize particular kinds of infringement: those that 'undermine the foundations of the rule of law' or that undermine the 'smooth functioning of the EC legal system', and those involving the incorrect transposal or non-transposal of directives, and has more recently refined these criteria.[43]

[37] See the 13th and 14th Annual Reports for 1995 and 1996 [1996] OJ C303 and [1997] OJ C332 respectively.

[38] See the discussion of statistics in COM(2002)725, Commission Communication on Better Monitoring of the Application of Community Law.

[39] COM(2009)675, [2.2].

[40] COM(2002)725 (n 38).

[41] Ibid.

[42] See (n 22) and text.

[43] COM(2007)502 (n 6). The Commission emphasizes particularly breaches presenting 'the greatest risks, widespread impact for citizens and businesses and the most persistent infringements confirmed by the Court'.

The Commission's conception of the centralized EU enforcement procedure today is thus of a mechanism to be used in a carefully-targeted and strategic manner, ideally as a last-resort mechanism, after other strategies to encourage compliance have failed, and after negotiation and constructive intervention have not succeeded. Apart from the drastically limited time and resources of the Commission in an EU of twenty-seven members, there are pragmatic and political reasons for it to exercise political discretion and not to pursue every known Member State breach to judgment.[44]

Recall too that the enforcement mechanism can be a lengthy and time-consuming process, a fact which the European Parliament has occasionally noted with concern. The Commission stated in 2008 that it took on average fifty months to close a case from the time of a reasoned opinion until its referral to the ECJ,[45] although in its 26th Report in 2009 it declared that the average time taken to process an infringement from opening the file to sending the application to the Court had fallen to twenty-four months. Finally, it is important to remember that enforcement actions successfully brought before the ECJ do not necessarily lead to compliance, even with the additional deterrent of the pecuniary penalty procedure of Article 260 TFEU.

3 RELATIONSHIP BETWEEN 'PUBLIC' AND 'PRIVATE' ENFORCEMENT MECHANISMS

The early rulings of the ECJ which established the principle of direct effect made clear that the public enforcement procedures of Articles 258 and 259 TFEU (then Articles 169 and 170 EEC) provide merely one amongst several legal mechanisms for ensuring the application of Community law. According to the ECJ in *Van Gend en Loos:*[46]

> The vigilance of individuals concerned to protect their rights amounts to an effective supervision in addition to the supervision entrusted by Articles 169 and 170 to the diligence of the Commission and of the Member States.

In *Mölkerei-Zentrale* however, the ECJ ruled that proceedings brought by an individual were intended to protect individual rights in a specific case, whereas Commission enforcement proceedings were intended to ensure the general and uniform observance of Community law.[47] This meant that the two kinds of proceedings 'have different objects, aims, and effects, and a parallel may not be drawn between them'.[48] Despite the attempts to maintain a clear distinction between the outcome of a preliminary ruling and an enforcement action, however, it is abundantly evident that the ECJ in the context of its preliminary rulings interpretative jurisdiction often effectively declares that a Member State is in breach of EU law, leaving little scope for a different conclusion on the part of the referring domestic court.[49]

Nevertheless, the two procedures are treated in legal terms as quite distinct. The ECJ in 2006 rejected the UK's argument that Commission infringement proceedings should be deemed inadmissible on the basis that national judicial proceedings were pending:

> The existence of the remedies available through the national courts cannot prejudice the bringing of an action under Article 226 EC, since the two procedures have different objectives and effects[50]

[44] Rawlings (n 3) 26, on selective enforcement.
[45] SEC(2008)2851, [4.1.1].
[46] [1963] ECR 1, 13.
[47] Case 28/67 *Mölkerei-Zentrale Westfalen v Hauptzollamt Paderborn* [1968] ECR 143, 153.
[48] Ibid.
[49] Ch 13.
[50] Case C–508/03 *Commission v UK* [2006] ECR I–3969, [71].

Similarly the ECJ has ruled that the direct effect of a Community provision, and hence the ability of individuals to enforce it before national courts, is no defence to a Commission action under Article 258 TFEU for failure to implement that provision.[51] Conversely, the ECJ in *Danske Slagterior* rejected attempts to link an individual enforcement action with the public enforcement procedure in a way which would extend the time limit for bringing the individual action.[52]

4 THE COMMISSION'S DISCRETION

There has been much debate over the extent of the Commission's discretion to bring proceedings under Article 258. One risk is that the Commission may use its discretion in a way which is excessively lenient or arbitrarily selective with defaulting Member States. Another risk is that enforcement proceedings could be used unfairly or oppressively if there are insufficient procedural constraints on the Commission.

Given the multiple roles of the Commission under the Treaties, there may be political and other reasons leading it to exercise its discretion against bringing infringement proceedings, even where a state is blatantly in violation of EU law.[53] The language of paragraph 2 of Article 258 clearly suggests that, once it has issued a reasoned opinion indicating a breach by a Member State, the Commission has discretion whether or not to bring the matter before the ECJ. And even though paragraph 2 uses mandatory language ('shall') with respect to the decision to issue a reasoned opinion, there is agreement on the fact that the Commission has discretion whether and when to issue a reasoned opinion.[54]

As to the Commission's reasons for bringing proceedings, the Court has repeatedly made clear that proceedings are entirely 'objective', so that it will examine only whether the infringement alleged by the Commission exists, and will not examine the Commission's motives for bringing the action.[55] In the following case, the UK argued that there was a political motive behind the Commission's action:

Case 416/85 **Commission v United Kingdom**
[1988] ECR 3127

9. That argument cannot be upheld. In the context of the balance of powers between the institutions laid down in the Treaty, it is not for the Court to consider what objectives are pursued in an action brought under Article 169 of the Treaty. Its role is to decide whether or not the Member State in question has failed to fulfil its obligations as alleged. As the Court held in Case 7/68 *Commission* v. *Italy* [1968] ECR 423, an action against a Member-State for failure to fulfil its obligations, the bringing of which is a matter for the Commission in its entire discretion, is objective in nature.

[54] A Evans, 'The Enforcement Procedure of Article 169 EEC: Commission Discretion' (1979) 4 ELRev 442, 445.

[55] See, eg, Case C–200/88 *Commission v Greece* [1990] ECR I–4299, [9]. For another example see the AG's opinion in the *Open Skies* case, dismissing the argument that the Commission's action should be inadmissible on the ground of misuse of procedure, since it had brought this set of infringement proceedings against 8 Member States primarily in order to pressurize the Council to open negotiations with the USA: Case C–466–476/98 *Commission v UK et al* [2002] ECR I–9855, [29], AG Tizzano.

Conversely, the *absence* of a specific motive or interest on the Commission's part in bringing proceedings against a Member State will not affect the admissibility of the enforcement proceedings either.[56] The Commission acts 'in the general interest', according to the Court, and does not have to have a specific interest, because Article 258 'is not intended to protect that institution's own rights'.[57]

States have enjoyed greater success in arguing that there are *procedural* constraints, such as reasonable time limits, on the Commission's discretion. In an early case, the Court ruled that the Commission's choice of moment to initiate proceedings could not affect their admissibility.[58] However, despite initial reluctance,[59] the ECJ subsequently ruled that there were certain constraints on the Commission's discretion as far as the *length* of time taken by the Commission to bring proceedings in respect of a particular infringement was concerned. In a case in which the Netherlands argued that a period of more than five years for bringing infringement proceedings from the time the first letter was sent to it by the Commission was excessive, the ECJ ruled that although Article 258 deliberately laid down no particular time-limit for bringing proceedings, excessive delay might nonetheless be prejudicial:

> It is true that in certain cases the excessive duration of the pre-litigation procedure laid down by [Article 258 TFEU] s capable of making it more difficult for the Member State concerned to refute the Commission's arguments and of thus infringing the rights of the defence. However, in the instant case, the Netherlands Government has not proved that the unusual length of the procedure had any effect on the way in which it conducted its defence.[60]

In 2006, however, the Court rejected an argument by the UK that, given the length of time which had passed since the particular events which were the subject of the infringement proceedings, the proceedings brought by the Commission would violate the principle of legal certainty and the acquired rights of individuals who had been affected by those earlier events.[61]

Restrictions have also been imposed on the Commission's discretion regarding when to refer a matter to the Court *after* the issuing of a reasoned opinion, rather than on its discretion in commencing the infringement proceedings in the first place, since this could also prejudice a Member State's ability to exercise its rights of defence. In proceedings against Ireland, the ECJ referred to the Commission's 'regrettable behaviour' and reprimanded it for the short length of time it had allowed for compliance with the reasoned opinion. However, the Commission's action was nevertheless admissible since, despite the short time period, the Commission had in fact awaited Ireland's reply before referring the matter to the Court:

> The Court is compelled to state its disapproval of the Commission's behaviour in this regard. It is indeed unreasonable, as Ireland has pointed out, to allow a Member State five days to amend legislation which has been applied for more than 40 years and which, moreover, has not give rise to any action on the part of the Commission over the period which has elapsed since the accession of the Member State in question. Furthermore, it is clear that there was no particular urgency.[62]

Proceedings brought by the Commission against Belgium were later deemed inadmissible due to the shortness of the time allowed for responding to the letter of formal notice and the reasoned opinion.[63]

[56] Case C–431/92 *Commission v Germany* [1995] ECR I–2189, [19]–[22].
[57] Case C–394/02 *Commission v Greece* [2005] ECR I–4713, [15]–[16].
[58] Case 7/68 *Commission v Italy* [1968] ECR 423, 428.
[59] Case 7/71 *Commission v France* [1971] ECR 1003, [5]–[6].
[60] Case C–96/89 *Commission v Netherlands* [1991] ECR 2461, [16].
[61] Case C–508/03 (n 50); Case C–475/98 *Commission v Austria* [2002] ECR I–9797.
[62] Case 74/82 *Commission v Ireland* [1984] ECR 317, [12].
[63] Case 293/85 *Commission v Belgium* [1988] ECR 305.

The Court ruled that a reasonable period must be allowed, although very short periods could be justified in circumstances of urgency or where the Member State was fully aware of the Commission's views long before the procedure started.[64] A period of four months to respond to a reasoned opinion was adequate where a Member State had three years' prior notice of the Commission's view.[65] The ECJ also rejected the argument that a period of seven days for Austria to respond to a formal letter and fourteen days for responding to a reasoned opinion were too short, ruling that these periods were justified by the urgency of the complaint and the circumstances of the case.[66]

The ECJ has consistently refused to admit actions for 'failure to act' brought by *non-privileged* parties against the Commission under Article 265 TFEU (formerly Article 232 EC), which seek to require the Commission to initiate infringement proceedings under Article 258. In keeping with its bilateral conception of the infringement procedure, the ECJ in *Star Fruit* rejected an attempt by a company to use Article 265 TFEU to force the Commission to commence infringement proceedings against France:

> It is clear from the scheme of Article 169 of the Treaty [now Art 258 TFEU] that the Commission is not bound to commence the proceedings provided for in that provision but in this regard has a discretion which excludes the right for individuals to require that institution to adopt a specific position.[67]

Similarly, the Court has dismissed actions for annulment directed by an individual litigant against a 'decision' by the Commission not to commence proceedings against a Member State, again on the basis that this was a matter within the Commission's discretion and that the action sought—the adoption of a reasoned opinion—would not be susceptible in any case to an action for annulment.[68]

Although the lack of a role for individuals in the initiation and conduct of enforcement proceedings has provoked considerable adverse comment,[69] we have seen above that the Commission's discretion in this respect may not be entirely unjustified.[70]

F Snyder, The Effectiveness of European Community Law[71]

[Note Lisbon Treaty renumbering: Arts 169, 170, and 171 are now Arts 258, 259, and 260 TFEU respectively]

> The main form of dispute settlement used by the Commission is negotiation, and litigation is simply a part, sometimes inevitable but nevertheless generally a minor part, of this process. The Commission's view of litigation thus differs substantially from that of the European Court. In order to understand why this is so, we need to consider the role of the Commission in the Community litigation system.

> Put simply, it is a distinctive role. The Commission has complete discretion in bringing infringement proceedings against Member States under Article 169; it is a necessary intermediary in actions by one Member State against another under Article 170; it will . . . be entitled under the amended Article 171 to request the Court to impose a lump sum or penalty payment on Member States which have failed to comply with a previous judgment by the Court; . . . Consequently the Commission can use litigation as an element in developing longer-term strategies. Instead of simply winning individual cases, it is able to concentrate on establishing basic principles or playing for rules.

The Commission over time has imposed certain administrative constraints on its own discretion. From 1989 onwards it decided to bring immediate infringement proceedings against any defaulting state as soon as the time limit for implementation of a directive had passed.[72] From 1990 onward it has routinely issued letters of formal notice whenever Member States have not notified national measures implementing directives which are due for implementation.[73] Further, as indicated above, the Commission codified its own internal rules governing relations with individual complainants in response to pressure from the Ombudsman.[74] It seems that the supervisory role of the European Parliament and the administrative role of the Ombudsman have had a positive influence on the Commission's conduct in the infringement procedure, and have strengthened the mechanisms and forms of accountability of the Commission within that process.[75]

5 THE REASONED OPINION

(A) FUNCTION

The reasoned opinion which the Commission is required to issue and to notify to a Member State forms an important part of the pre-judicial procedure under Article 258, and provides the Member State concerned with a measure of protection. Together with the letter of formal notice, the reasoned opinion (sometimes followed by a supplementary reasoned opinion[76]) is the official means by which the Commission communicates to the state the substance of the complaint against it, and specifies a time period within which the violation of Community law must be remedied. It is aimed to provide the Member State with a clear statement of the case against it, and to 'ensure respect for the principles of natural justice'.[77]

(B) FORM AND CONTENT

The obligation to provide reasons is a requirement of general importance in EU law, and Article 296 TFEU requires that legal acts state the reasons on which they are based. Article 258 contains a specific requirement of reasoning in relation to the opinions issued by the Commission under the enforcement procedure. However, although the reasoning requirement is an 'essential procedural requirement' of EU law, breach of which constitutes a ground for annulment of a measure under Article 263 TFEU,

[72] 7th Annual Report [1990] OJ C232/6.
[73] 8th Annual Report (n 15) 7(e).
[74] COM(2002)141 (n 20).
[75] The Commission acknowledges as much in its 2007 Report on Applying Community Law (n 6) when referring to European Parliament reports expressing concern about infringement proceedings.

[77] Evans (n 54) 446.

the Commission's opinion under Article 258 is not subject to an action for annulment because it lacks binding effect.[78] According to Advocate General Lagrange in an early case:

> No formalism must be demanded of this document, since, as I have said, the reasoned opinion is not an administrative act subject to review by the Court of its legality.[79]

Nonetheless, although a reasoned opinion may not be the subject of an action for annulment, a Member State which is the subject of such an opinion may contest the lack of adequate reasoning in a different way, by raising the matter before the ECJ if and when the enforcement proceedings reach that stage.[80] In an early case in which Italy challenged the legal form and content of the reasoned opinion, the ECJ replied:

> The opinion referred to in Article 169 [now Art. 258 TFEU] of the Treaty must be considered to contain a sufficient statement of reasons to satisfy the law when it contains—as it does in this case—a coherent statement of the reasons which led the Commission to believe that the State in question has failed to fulfil an obligation under the Treaty.[81]

This means that the Commission is not obliged in its reasoned opinion to address or to answer every argument made by the state at the pre-litigation stage, nor to indicate what steps should be taken by the state to remedy the alleged breach.[82] Further, the initial letter of formal notice need not meet particularly strict requirements, since the reasoned opinion is the crucial document which sets out the complaint to which the state must respond. However, the Court has ruled that the Commission must respond to a state's reply to its letter of formal notice, even if the state is late in replying to the notice.[83] Further, the essence of the complaint must be the same in the formal letter,[84] the reasoned opinion, and in the Commission's application to bring the case before the ECJ.[85] But so long as the Commission sets out clearly in the reasoned opinion the grounds on which it has relied in concluding that the state has violated Union law, and the particular complaints which will form the subject matter of the proceedings,[86] the reasoning requirement will be satisfied.

Since the reasoned opinion is intended to operate as a procedural protection for the Member State, the Commission is not entitled to amend the substantive content of its submission when the case comes to be heard before the Court, even if both parties wish the Court to consider other aspects of the state's conduct which took place after the date of the reasoned opinion.[87] In such a case, the Commission

[78] Case 48/65 *First Lütticke Case* (*Alfons Lütticke GmbH v Commission*) [1966] ECR 19.

[79] Case 7/61 *Commission v Italy* [1961] ECR 317, 334, 336.

[80] In Case C–191/95 *Commission v Germany* [1998] ECR I–5449; Case C–272/97 *Commission v Germany* [1999] ECR I–2175; and Case C–198/97 *Commission v Germany* [1999] ECR I–3257, the ECJ dismissed several challenges by Germany to the reasoned opinion on the ground that it had been adopted by the College of Commissioners without having the text of the opinion before them. The ECJ said that it was sufficient for the Commissioners to have available to them, at the time, the information on which the decision to commence proceedings had been based.

[81] Case 7/61 *Commission v Italy* [1961] ECR 317, 327.

[84] For a case in which an allegation of breach of the requirement of loyal cooperation in Art 10 EC (now Art 4 TEU) was not admitted by the Court because the formal letter had not referred to it see Case C–371/04 *Commission v Italy* [2006] ECR I–10257.

[85] Case C–191/95 *Commission v Germany* [1998] ECR I–5449, [54]; Case C–365/97 *Commission v Italy* [1999] ECR I–7773, [26].

[86] Case C–328/96 *Commission v Austria* [1999] ECR I–7479, [39]–[41], where part of the Commission's complaint was ruled inadmissible for failure to specify this.

[87] Case 7/69 *Commission v Italy* [1970] ECR 111, where Italy had enacted a law, after the date of the reasoned opinion, intended to remedy the alleged violation. Although both Italy and the Commission wished the Member State to take

cannot amend its complaint to include a fresh objection after the reasoned opinion has been issued, but must initiate the entire Article 258 procedure again. This requirement that the content of the reasoned opinion be essentially the same as (although not necessarily identical to[88]) the submissions contained in the Commission's application to the Court has been reiterated many times.[89] However, it will not be sufficient for the Commission when the matter comes before the Court simply to refer in its application to 'all the reasons set out in the letter of formal notice and the reasoned opinion'. Rather the application itself must contain a statement of the grounds on which it is based.[90]

On the other hand, where enforcement proceedings brought by the Commission have been found by the ECJ to be inadmissible on the ground that the Commission's application is based on an objection different from that in the reasoned opinion, the Commission is not obliged to recommence the entire pre-litigation procedure but may lodge a fresh application before the Court based on the same objections as the reasoned opinion originally issued.[91] And where EU legislation on which the reasoned opinion was based has been amended prior to the case coming before the ECJ, this does not necessarily mean the Commission has to withdraw the action or issue a new reasoned opinion, so long as the obligations under the amended measure correspond to those arising under the original legislation.[92]

There is one circumstance in which the Court will accept an application made by the Commission which is not the same as it was under the reasoned opinion, and that is where the change *limits* what is contained in the reasoned opinion rather than expanding it in a way which could disadvantage the respondent state.[93] And, finally, an extension of the subject matter of the dispute to events which took place *after* the reasoned opinion is acceptable insofar as they are of the same kind and constitute the same conduct as the events to which the opinion referred,[94] or only if the later evidence is not being used to establish a specific violation, but rather to support the argument that the other violations alleged are part of a general and persistent pattern or practice.[95]

The Commission is also not prohibited from responding, during the hearing before the Court, to arguments and defences raised by the respondent Member State, even where it has not made those points in the reasoned opinion itself.[96] Further, the Member State cannot complain of a breach of the right to a fair hearing by the fact that the Commission, in its application to the ECJ, does not take account of facts or defences put forward by the Member State after the expiry of the period set by the reasoned opinion.[97] However, while the Commission is procedurally bound to raise all of the grounds on which it is bringing the case during the pre-litigation procedure, Member States are not similarly bound to raise their defence during the pre-litigation procedure, but may raise new matters as defences before the Court.[98]

into account the impact of the new law (which the Commission considered to be inadequate to cure the breach), the ECJ refused to do so.

(c) CONFIDENTIALITY OF THE REASONED OPINION

In a number of cases, individual complainants who had sought to persuade the Commission to bring proceedings against a Member State and who were disappointed by the Commission's failure to do so, subsequently sought to obtain disclosure of the reasoned opinion and of other documentation relevant to the investigative proceedings. However, despite a setback for the Commission in the *WWF* case,[99] neither the CFI, the ECJ nor the Ombudsman[100] was prepared to require disclosure of a reasoned opinion, a draft reasoned opinion, or any documents relating to the investigative stage of the infringement procedure, before the ECJ had given judgment in Article 258 proceedings. In *WWF*, the CFI ruled, in relation to a Commission investigation into possible breaches of EU law, that:

> [T]he confidentiality which the Member States are entitled to expect of the Commission in such circumstances warrants, under the heading of protection of the public interest, a refusal of access to documents relating to investigations which may lead to an infringement procedure, even where a period of time has elapsed since the closure of the investigation.[101]

And in *Petrie*, which concerned a request for access to a range of documents including letters of formal notice and reasoned opinions, the CFI ruled that:

> This requirement of confidentiality remains even after the matter has been brought before the Court of Justice, on the ground that it cannot be ruled out that the discussions between the Commission and the Member State in question regarding the latter's voluntary compliance with the Treaty requirements may continue during the court proceedings and up to the delivery of the judgment of the Court of Justice. The preservation of that objective, namely an amicable resolution of the dispute between the Commission and the Member State concerned before the Court of Justice has delivered judgment, justifies refusal of access to the letters of formal notice and reasoned opinions drawn up in connection with the Article 226 EC [now Art. 258 TFEU] proceedings.[102]

Access to Commission documents is now governed by Regulation 1049/2001, and Article 4(2) thereof allows the Commission to rely on an exception governing 'protection of the purpose of inspections, investigations and audits' to refuse access to documents relating to infringement proceedings. However, in *Bavarian Lager II*[103] the CFI ruled that disclosure of documents relating to infringement proceedings which had been closed six years previously could not jeopardize Commission investigations, and so were not covered by the exception governing inspections.[104] Further, in the *Sweden/API* case, the ECJ ruled that documents relating to investigations carried out by the Commission in the context of infringement proceedings under Article 258 would no longer be automatically covered by the exception for the protection of court proceedings in Article 4(2) *after* the ECJ had delivered judgment closing those proceedings, but instead would have to be appraised on a case-by-case basis.[105] It seems likely that the rationale underpinning these rulings would apply also to an application for

[99] See Case T–105/95 (n 25), in which the CFI restricted the Commission's ability to rely on a particular exception to the obligation to provide access to documents as a mandatory general exception rather than an individual discretionary one.

disclosure of the reasoned opinion, once the ECJ had delivered judgment in the Article 258 case in question.

Finally, even though it is not required to and cannot be compelled to do so at least until after judgment, the Commission occasionally publishes its reasoned opinions, and more regularly press releases relating to its reasoned opinions,[106] and since 2002 has maintained an electronically accessible list of its decisions on infringement proceedings.[107]

6 WHY IS AN ENFORCEMENT ACTION ADMISSIBLE AFTER THE BREACH IS REMEDIED?

Once the procedural conditions for bringing Article 258 proceedings have been fulfilled, and the period laid down by the Commission for compliance has expired without an adequate response by the Member State, it is no answer for that state to assert, when the case is heard before the ECJ, that the breach has since been remedied.

The question for the ECJ is whether the Member State was in breach at the time of the expiry of the period laid down in the reasoned opinion. The Court's approach here contrasts with its approach to actions brought against a Union institution for failure to act. In proceedings against the European Parliament under Article 265 TFEU (ex Article 232 EC) for failure to act, the ECJ held that the action was devoid of purpose once the institution in question had acted to remedy its default.[108] Yet where proceedings have been brought under Article 258 by the Commission against Member States, such actions have been declared admissible by the Court even though the state in question had remedied its breach by that time. Several reasons have been offered to explain why.

First, the Commission argues that it has a continued interest in bringing the action, not least to prevent states from undermining infringement proceedings by bringing their illegal conduct to an end just before judgment is delivered, and possibly re-commencing that same conduct again afterwards.[109] Secondly, it is important for the Court to be able to rule on the legality of breaches of short duration, since these may be no less serious than longer breaches.[110] However, if the effects of a specific infringement have come to an end before the expiry of the period set out in the reasoned opinion,[111] the action before the ECJ will be inadmissible even if the Commission fears that a similar breach is likely to occur again in the future.[112] A third reason for giving judgment even after the breach has been remedied is in order to establish the basis for liability on the part of a defaulting Member State.[113] An individual's action for redress before the national courts—which has been cited by the Commission as 'one of the best ways of combating recidivism'[114]—could derive considerable assistance from a prior finding of the ECJ that the Member State in question had acted in violation of EU law.[115] A prior

[106] For a reference to the Commission's publication of a press release relating to a reasoned opinion see Case C–28/08 (n 104) [20].

finding by the ECJ of an infringement is an effective means, even if not a necessary one, of showing the illegality of state action when damages are sought for loss caused by that action.[116]

7 TYPES OF BREACH BY MEMBER STATES OF EU LAW

Article 258 is very general in its description of a Member State violation for the purposes of enforcement proceedings. The Commission must simply consider that a state 'has failed to fulfil an obligation under this Treaty'. This may include actions as well as omissions on the part of states, failure to implement directives, breaches of specific Treaty provisions or of other secondary legislation, or of any rule or standard which is an effective part of EU law. We shall see below that cases involving breaches by Member States in the sphere of the Union's external relations have increasingly come before the Court in recent years.

An interesting and unusual example of breach of a Treaty provision can be seen in a case brought against Ireland for having brought dispute-settlement proceedings involving the interpretation of EU law against the UK in relation to the MOX nuclear recycling plant in the UK to a tribunal under the International Convention on the Law of the Sea, rather than before the ECJ.[117] According to the ECJ, 'a breach of this nature involves a manifest risk that the jurisdictional order laid down in the Treaties and consequently the autonomy of the Community legal system may be adversely affected'.[118]

Certain kinds of breach, for example non-transposition of a directive, are far more often the subject of infringement proceedings than others. The following examples illustrate some of the different sorts of breaches with which the cases are concerned.

(A) BREACH OF THE OBLIGATION OF SINCERE COOPERATION UNDER ARTICLE 4(3) TEU

Case 96/81 **Commission v Netherlands** [1982] ECR 1791

The Commission brought proceedings against The Netherlands alleging failure to implement certain bathing water directives and claiming that the Dutch Government had failed to provide information on its compliance with the provisions of one directive, as required by the terms of the directive itself. The Commission argued that due to the failure to supply this information, it was entitled to presume that the respondent state had failed to implement the necessary national measures. The breach identified in the application to the Court by the Commission was not however 'failure to comply with the duty to provide information' but rather 'failure to fulfil the obligation to implement the directive'.

THE ECJ

6. It should be emphasized that, in proceedings under [Article 169 of the EEC Treaty] for failure to fulfil an obligation, it is incumbent upon the Commission to prove the allegation that the obligation has not been fulfilled. It is the Commission's responsibility to place before the Court the information needed to enable the Court to establish that the obligation has not been fulfilled, and in doing so the Commission may not rely on any presumption.

[116] See the attempt in Case T–182/97 *Smanor v Commission* [1998] ECR II–271 to obtain an enforcement ruling from the ECJ for this precise purpose.

[117] Case C–459/03 *Commission v Ireland* [2006] ECR I–4635.

[118] Ibid [154].

However, although the Commission cannot rely on a presumption of breach where a Member State fails to provide information on compliance,[119] the ECJ has ruled that once the Commission has produced sufficient evidence to show that the Member State appeared to be violating Community law it is incumbent on the state not simply to deny the allegations, but to contest the information produced in a substantive way.[120] Further, even though the burden of proof lies with the Commission to show breach, where the complaint is of inadequate transposition of a directive, it is not necessary for the Commission to demonstrate the harmful effects of the transposing legislation.[121]

In the bathing water case above, the Court went on to say that all Member States had an obligation under Article 10 EC (now Article 4(3) TEU) to facilitate the achievement of the Commission's tasks, including that of monitoring compliance with the Treaty. This particular mode of infringement is frequently invoked by the Commission in enforcement actions where Member State authorities refuse or fail to respond to its requests for information.[122] Clearly, if a Member State is not willing to respond at the pre-litigation stage of an investigation by the Commission for the purposes of infringement proceedings, it will be difficult for the Commission to ascertain whether or not there has been a breach by the state. The Commission's response to this impasse is to initiate separate enforcement proceedings on the basis of a breach of the obligation of cooperation.[123] On the other hand, the ECJ will not necessarily go on to establish a separate violation of the obligation of sincere cooperation where it has already established a violation of more specific provisions of EU law.[124]

The obligation of sincere cooperation has been held to entail positive obligations on states not just to avoid violating EU law itself, but also to prevent others from frustrating the provisions of the Treaty. In proceedings by the Commission against France, the ECJ ruled that by failing to take adequate steps to prevent violent and disruptive protests by French farmers which were hindering the free movement of agricultural goods, France had breached its obligations under the Treaty.[125] More generally, the obligation of sincere cooperation will be breached if a Member State fails to penalize those who infringe Union law in the same way as it penalizes those who infringe national law, and in a way which is 'effective, proportionate and dissuasive'.[126] Most recently, the obligation of sincere cooperation has been pleaded in a number of cases of involving EU external relations.[127]

(B) INADEQUATE IMPLEMENTATION OF EU LAW

In many cases, the cause of the Commission's complaint is not the complete failure to transpose or to implement Union legislation, but rather inadequate implementation.

Case 167/73 **Commission v France**
[1974] ECR 359

[Lisbon Treaty renumbering: Art 48 EEC is now Art 45 TFEU]

The French legislature had failed to repeal a provision of the French Code du Travail Maritime under which a certain proportion of the crew of a ship was required to be of French nationality. This nationality requirement was contrary to Community law, but the French Government claimed that directions had been given verbally to the naval authorities to treat Community nationals as French nationals, and that this was sufficient to comply with Community law.

THE ECJ

40. It appears both from the argument before the Court and from the position adopted during the parliamentary proceedings that the present state of affairs is that freedom of movement for workers in the sector in question continues to be considered by the French authorities not as a matter of right but as dependent on their unilateral will.

41. It follows that although the objective legal position is clear, namely, that Article 48 and Regulation No 1612/68 are directly applicable in the territory of the French Republic, nevertheless the maintenance in these circumstances of the wording of the Code du Travail Maritime gives rise to an ambiguous state of affairs by maintaining, as regards those subject to the law who are concerned, a state of uncertainty as to the possibilities available to them of relying on Community law.

42. This uncertainty can only be reinforced by the internal and verbal character of the purely administrative directions to waive the application of the national law.

In the case of directives, which are not directly applicable, it is always incumbent on the Member States to implement them fully. Even where directives are vertically directly effective or can be given indirect domestic effect in another way, this does not reduce the obligation on the state to implement them properly. Article 288 TFEU provides that the manner and form of implementation of directives are a matter for each Member State to decide, but this has not prevented the ECJ from reviewing the adequacy of the chosen method of implementation. According to the Court, the state's freedom to decide on the manner of implementation:

> [D]oes not however release it from the obligation to give effect to the provisions of the directive by means of national provisions of a binding nature . . . Mere administrative practices, which by their nature may be altered at the whim of the administration, may not be considered as constituting the proper fulfilment of the obligation deriving from that directive.[128]

A further objection to state reliance on such 'whimsical' administrative practices is that, quite apart from their uncertainty and alterability, they lack the appropriate publicity to constitute adequate implementation.[129] However, the ECJ has not always condemned Member States which fail to adopt any specific measures to implement a directive, as is evident from the following case concerning freedom of establishment for nurses.

[128] Case 96/81 *Commission v Netherlands* [1982] ECR 1791, [12].
[129] Case 160/82 *Commission v Netherlands* [1982] ECR 4637.

Case 29/84 **Commission v Germany**
[1985] ECR 1661

[Lisbon Treaty renumbering: Art 189 EEC is now Art 288 TFEU]

17. The German Government does not deny that mere administrative practices, which by their nature can be modified as and when the administration pleases and which are not publicized widely enough, cannot be regarded as a proper fulfilment of the obligation imposed on the Member States by Article 189 of the Treaty, as the Court has consistently held. However, the government claims that that principle cannot be applied in this instance because the administrative practice in question cannot be changed as and when the administration pleases and it has been given sufficient publicity . . .

[*After summarizing the Commission's counter-argument, the ECJ ruled as follows:*]

22. Faced with those conflicting views, the Court considers it necessary to recall the wording of the third paragraph of Article 189 of the Treaty, according to which a directive is binding, as to the result to be achieved upon each Member State to which it is addressed, but leaves to the national authorities the choice of form and methods.

23. It follows from that provision that the implementation of a directive does not necessarily require legislative action in each Member State. In particular the existence of general principles of constitutional or administrative law may render implementation by specific legislation superfluous, provided however that those principles guarantee that the national authorities will in fact apply the directive fully and that, where the directive is intended to create rights for individuals, the persons concerned are made fully aware of their rights and, where appropriate, afforded the possibility of relying on them before the national courts.

The ECJ has subsequently ruled that proper transposition is particularly important for individuals to know their rights when those on whom the Directive confers rights are nationals of *other* Member States.[130]

In proceedings brought by the Commission against the UK for improper implementation of the Product Liability Directive 85/374, the ECJ made interesting use of the 'indirect effect' of directives, the obligation on national courts to construe domestic law in accordance with a relevant directive,[131] to dismiss the Commission's application. Whereas the Commission argued that the UK was in breach of the Directive because national courts would be required to interpret national law *contra legem* in order to conform with its requirements, the ECJ simply ruled that there was nothing to suggest that the UK courts would not, if called upon to do so, interpret the relevant national law—the Consumer Protection Act—in the light of the wording and purpose of the Directive so as to give effect to its aim.[132]

Finally, where national legislation has been the subject of different judicial interpretations, some of which are consistent with and others inconsistent with EU law, the ECJ has ruled that such legislation is insufficiently clear to comply with EU law.[133]

[130] Case C–365/93 *Commission v Greece* [1995] ECR I–499, [9]; Case C–96/95 *Commission v Germany* [1997] ECR I–1653, [34]–[35]; Case C–162/99 *Commission v Italy* [2001] ECR I–541.

[131] Case C–300/95 *Commission v UK* [1997] ECR I–2649.

[132] Contrast Case C–338/91 *Steenhorst-Neerings* [1993] ECR I–5475, in which the ECJ ruled that where a Member State had not implemented a dir properly, the capacity of national courts to read apparently inconsistent national legislation in a way which conformed with the unimplemented dir would not absolve the Member State from the obligation to implement properly.

[133] Case C–129/00 *Commission v Italy* [2003] ECR I–14637, [33].

(c) BREACHES WHICH INTERFERE WITH EU EXTERNAL RELATIONS

Reflecting the growing activities of the EU in the field of international relations, several infringement proceedings brought by the Commission in recent years concerned conduct by Member States which either is alleged to violate an international agreement binding on the EU, or which otherwise violates the obligation of sincere cooperation by jeopardizing EU objectives in the external relations field. In the *Open Skies* cases, the Commission brought proceedings against a number of Member States which had entered bilateral negotiations with the US on air transport agreements, and the ECJ found that they had infringed the EU's external competence.[134]

In a recent case concerning the negotiation of issues relating to a mixed environmental agreement, the Stockholm Convention, the ECJ ruled that Sweden had violated the obligation of sincere cooperation by its unilateral proposal to list a particular substance before the EU had had time to propose a position on that issue, in an area of shared EU–Member State competence.[135] According to the Court:

> 104 Such a situation is likely to compromise the principle of unity in the international representation of the Union and its Member States and weaken their negotiating power with regard to the other parties to the Convention concerned.

In other recent cases, the Netherlands was condemned by the ECJ for charging excessive and discriminatory fees for residence permits under the EC–Turkey Association Agreement,[136] and Ireland was condemned for failing to adhere to the Berne Convention on copyright.[137] Finally, in an important set of judgments the ECJ ruled that Sweden and Austria had breached Article 351 TFEU (ex Article 307 EC) by failing to eliminate the incompatibilities between the provisions of the then EC Treaty on the free movement of capital, and the bilateral investment treaties they had concluded with non-Member States prior to their accession to the EU.[138]

(d) SYSTEMIC AND PERSISTENT BREACHES OR GENERAL PRACTICES

The Commission has at times used the infringement procedure to monitor ongoing Member State implementation of a particular set of laws, and in some cases to challenge relatively minor breaches where they are part of a pattern of inadequate implementation and compliance in practice.[139] Even when legislation is properly implemented, a state may be held in breach if an administrative practice infringes EU law, at least

[134] Cases C–466–476/98 *Commission v UK et al* [2002] ECR I–9855.

[135] Case C–246/07 *Commission v Sweden*, 20 Apr 2010. See also Case C–266/03 *Commission v Luxembourg* [2005] ECR I–4805 and Case C–433/03 *Commission v Germany* [2005] ECR I–6985, concerning Germany's and Luxembourg's failure to consult the Commission before ratifying a waterways agreement with non-Member States and Case 45/07 *Commission v Greece*, 12 Feb 2009, concerning a monitoring proposal made by Greece to the International Maritime Organization which would have interfered with an EU reg on enhancing ship and port facility security.

[136] Case C–92/07 *Commission v Netherlands*, 29 Apr 2010.

[137] Case C–13/00 *Commission v Ireland* [2002] ECR I–2943.

[138] Case C–249/06 *Commission v Sweden* [2009] ECR I–1335; Case C–205/06, *Commission v Austria* [2009] ECR I–1301. The ECJ did not accept the invitation of the AG to rule also on a violation of the principle of sincere cooperation in Art 4 TEU (ex Art 10 EC), because the Commission had not raised it in the reasoned opinion but only at the hearing.

[139] Case C–365/97 (n 85); Comment by JC van Haersolte (2002) 39 CMLRev 407. For analysis see Implementing European Community Environmental Law, COM(2008)773/4, [3.3 (b)].

in circumstances where the practice is consistent and general.[140] In such cases, according to the ECJ, the Member State's failure to fulfil obligations can be established only by means of 'sufficiently documented and detailed proof of the alleged practice of the national administration and/or courts', which is different from the kind of evidence usually required when the breach concerns the terms of national legislation.[141]

In a 'pathbreaking'[142] case against Ireland in 2005, the Court ruled that a general administrative practice could be deduced from a selected number of individual infringements, enabling a finding of 'general and persistent breach' to be made against the state.[143] The Commission's proceedings against Ireland cited twelve individual complaints relating to waste disposal which allegedly violated the Waste Directive, and argued that these examples illustrated breaches of a more general nature.[144] The Commission sought judgment not only on the twelve specific complaints but also on the general and persistent nature of Ireland's deficient implementation of the Directive. Ireland counter-argued that the twelve complaints in the reasoned opinion definitively delimited the subject matter of the action against it. The ECJ however supported the Commission's stance and declared, on the basis of an examination of the individual complaints, that Ireland was generally and persistently failing in its obligation to implement the provisions of the Directive correctly.[145] In terms of the burden of proof, the ECJ ruled that once the Commission had adduced sufficient evidence (of individual complaints) to show a persistent and repeated practice of breach, it was up to the state to challenge in detail the evidence provided and the consequences flowing from it. The Commission has since taken advantage of this new category of administrative practices or systemic breaches and has, albeit not always successfully, pursued a number of allegations of this kind in recent years.[146]

It should be noted, however, that while the ECJ has made certain allowances for the Commission in adducing proof of general and persistent breaches, it has been fairly stringent in recent years in its requirement that the Commission in other cases should adequately discharge the burden of proof without relying on presumptions.[147]

(E) ACTION BY THE COURTS OF A MEMBER STATE

Failure by a Member State's judiciary to comply with EU law has never formed the basis of an Article 258 judgment against that state, even though the action of national courts is often implicated in a particular breach.[148] Yet the ECJ has regularly ruled that states are responsible even for action and inaction by constitutionally independent organs of the state, and has even ruled that a state may be liable in damages to individuals for breaches of EU law committed by national courts of final

[140] Case C–494/01 (n 95); Case C–441/02 *Commission v Germany* [2006] ECR I–3449.

[141] Case C–441/02 (n 140). In this case the ECJ found that the Commission had not proven that the German practice of making expulsion orders against EU citizens was sufficiently consistent and general, rather than being merely a series of isolated cases: [51]–[53].

[147] Case C–335/07 *Commission v Finland* [2009] ECR I–9459 concerning treatment of waste water; Case C–507/03 *Commission v Ireland* [2007] ECR I–9777; Case C–105/08 *Commission v Portugal*, 17 June 2010; Case C–512/08 *Commission v France*, 5 Oct 2010 concerning reimbursement of hospital costs from medical treatment abroad; Case C–110/05 *Commission v Italy* [2009] ECR I–519, [66]; Case C–160/08 *Commission v Germany*, 29 April 2010, [109]–[111] holding that it was sufficient for the Commission to establish the general practice in a particular region of the state.

[148] See, eg, Case C–129/00 (n 133).

appeal.[149] Nonetheless, the ECJ has not yet addressed the question whether action by a national court could be the subject of infringement proceedings under Article 258,[150] and it seems likely that the Commission has deliberately sought to avoid such politically sensitive cases.[151]

In 2004, however, the Commission took the unprecedented step of issuing a reasoned opinion against Sweden, citing the failure of its supreme court to make references to the ECJ under Article 267 TFEU, and the absence of any law or regulation governing the procedure for making preliminary references.[152] The case did not proceed to judgment since the Swedish government introduced procedural legislation to resolve the case, but the affair was controversial in Sweden where it was not generally accepted that the Swedish courts had violated EU law.[153]

8 STATE DEFENCES IN ENFORCEMENT PROCEEDINGS

Although Member States have not lacked ingenuity or resourcefulness in providing reasons to justify their failure to fulfil Treaty obligations,[154] the ECJ has rarely been receptive to such arguments.[155] In one case in which an intervening Member State put forward a defence on behalf of the respondent state, the intervention was rejected as inadmissible and the ECJ found a breach of EU law.[156] However, there is nothing to prohibit Member States from introducing defences which they did not raise in the pre-litigation procedure, even though the Commission cannot introduce surprise complaints in the same way.[157] On the other hand, the rules of procedure provide that no new plea in law may be introduced in the course of proceedings unless it is 'based on matters of law or of fact which come to light in the course of the procedure'.[158] Further, the fact that a Member State's infringement has had 'no adverse effects' is not a defence to infringement proceedings.[159] Luxembourg's recent attempt to plead *res judicata* and *ne bis in idem* on the basis that the Commission had brought a previous case based on the same facts, and its argument that the Commission should have brought Article 260 TFEU penalty proceedings rather than a fresh application under Article 258, was rejected by the ECJ, which ruled that the two sets of complaints were not identical and that the Commission was justified in opening a second procedure.[160]

[160] Case C–526/08 *Commission v Luxembourg*, 29 June 2010, [21]–[35].

(A) FORCE MAJEURE

The ECJ has regularly rejected pleas of force majeure by Member States and has consistently ruled that a state is responsible for breach 'whatever the agency of the State whose action or inaction is the cause of the failure to fulfil its obligations, even in the case of a constitutionally independent institution',[161] or in the case of a fraudulent individual.[162] It has equally consistently ruled that 'a Member State may not plead provisions, practices or circumstances existing in its internal legal system in order to justify a failure to comply with obligations and time limits laid down in Community directives'.[163] The ECJ did however agree that *force majeure* could be pleaded in a case where a bomb attack presented 'insurmountable difficulties', rendering compliance with the Treaty impossible.[164]

(B) LACK OF INTENTIONAL WRONGDOING BY THE STATE

The Court has been similarly dismissive of arguments by Member States that they were not at fault, or were not deliberately delaying or opposing EU law. Its response to such pleas has been to declare that 'the admissibility of an action based on Article 169 (now Article 258 TFEU) of the Treaty depends only on an objective finding of a failure to fulfil obligations and not on proof of any inertia or opposition on the part of the Member State concerned'.[165] Similarly, the Court has rejected the relevance of arguments that the Member State's breach was 'minor',[166] or that it was the result of 'excusable error'.[167] The Court looks only to see whether or not the infringement has taken place as alleged, and the breach need not involve any deliberate infringement or moral wrongdoing on the part of the Member State.[168]

(C) THE EU MEASURE ON WHICH THE INFRINGEMENT PROCEEDINGS ARE BASED IS ILLEGAL

Case 226/87 **Commission v Greece**
[1988] ECR 3611

[Lisbon Treaty renumbering: Arts 90, 169, 170, 173, and 175 are now Arts 106, 258, 259, 263, and 265 TFEU]

A year after adopting a decision under Article 90 EC declaring Greek legislation on public-sector insurance to be incompatible with the Treaty, when Greece had taken no action to amend the legislation, the

[161] Case 77/69 *Commission v Belgium* [1970] ECR 237, [15].

[162] Case C–334/08 *Commission v Italy*, 8 July 2010, [46]–[49], where the fraudulent individual was an official within the Italian administration.

[163] Case 280/83 *Commission v Italy* [1984] ECR 2361, [4]; Case 160/82 (n 129); Case 215/83 *Commission v Belgium* [1985] ECR 1039; Case C–298/97 *Commission v Spain* [1998] ECR I–3301; Case C–326/97 *Commission v Belgium* [1998] ECR I–6107.

[164] Case 33/69 *Commission v Italy* [1970] ECR 93, [16]. However, even in this case the Court was not satisfied that the bomb attack rendered compliance excessively difficult by the time proceedings were brought. See also Case 70/86 *Commission v Greece* [1987] ECR 3545; Case C–334/87 *Greece v Commission* [1990] ECR I–2849, [11], for a definition of force majeure in other circumstances.

[165] Case 301/81 *Commission v Belgium* [1983] ECR 467, [8].

[166] Case C–43/97 *Commission v Italy* [1997] ECR I–4671.

[167] Case C–385/02 *Commission v Italy* [2004] ECR I–8121, [40].

[168] See however Case C–146/89 *Commission v UK* [1991] ECR I–3533, in which the Court was sufficiently impressed by the 'exemplary conduct' of the UK in later voluntarily remedying its breach to order each party to bear its own costs.

Commission brought infringement proceedings before the ECJ. The Greek Government contested the lawfulness of the Commission's initial Article 90 decision.

THE ECJ

14. The system of remedies set up by the Treaty distinguishes between the remedies provided for in Articles 169 and 170, which permit a declaration that a Member State has failed to fulfil its obligations, and those contained in Articles 173 and 175, which permit judicial review of the lawfulness of measures adopted by the Community institutions, or the failure to adopt such measures. Those remedies have different objectives and are subject to different rules. In the absence of a provision of the Treaty expressly permitting it to do so, a Member State cannot therefore plead the unlawfulness of a decision addressed to it as a defence in an action for a declaration that it has failed to fulfil its obligations arising out of its failure to implement that decision.

It therefore seems that it is not possible for a Member State to plead the illegality of an earlier Union decision addressed to it, in order to resist judgment against it in Article 258 proceedings for failure to comply with that decision. The rationale is that if the Member State objected to the decision, it had the opportunity at the time of bringing a direct action for its annulment under Article 263 TFEU. However, a plea of illegality might be a defence to an action under Article 258 where the Union measure was so gravely flawed as to be legally 'non-existent', or where the earlier measure was not a decision addressed to the Member State in question, but a regulation the illegality of which might not have been apparent to the Member State until the Commission brought enforcement proceedings.[169] It may also be possible for the illegality of the decision to be pleaded in an extreme case where the decision infringes a principle of a constitutional nature.[170]

(D) OTHER MEMBER STATES ARE ALSO IN BREACH

This ground has been pleaded numerous times by Member States, without success.[171] The idea that the obligation to comply with EU law is a reciprocal one which depends on full compliance by other Member States has long been rejected by the ECJ. Since *Van Gend en Loos*[172] the ECJ has distinguished Community law from traditional forms and principles of international law,[173] in which the reciprocity principle has a much more central role. Nevertheless, this has not deterred Member States from continuing to raise the concept of reciprocity in their defence.[174]

9 THE CONSEQUENCES OF AN ARTICLE 258 RULING

A weakness of the Article 258 procedure, at least until the pecuniary penalty provision was introduced into Article 260 by the Maastricht Treaty, was that the only ruling which the ECJ could make against

[169] See AG Mancini in Case 204/86 *Commission v Greece* [1988] ECR 5323, 5343–5345; Case 226/87 *Commission v Greece* [1988] ECR 3611, 3617. For an unsuccessful attempt to plead the illegality of a dir (rather than a dec) which the state had failed to implement see Case C–74/91 *Commission v Germany* [1992] ECR I–5437. More recently on the admissibility of a plea of illegality on the part of a privileged application outside the context of infringement proceedings see the opinion of AG Mengozzi in Case C–91/05 *Commission v Council (ECOWAS)* [2008] ECR I–3851, [34]–[71].

a defaulting Member State in Article 258 proceedings was a finding of violation. This indeed remains true even after the introduction of the penalty payment procedure, insofar as the ECJ cannot order the adoption of any specific measures in Article 258 proceedings, nor otherwise dictate the consequences of its judgment in those proceedings.[175] One possibility which has been raised by Member States, however, is that the ECJ might rule that the retroactive effect of its judgment will be limited. In the group of 'own-resources' cases against a number of Member States decided in 2009, the ECJ refused the requests of the states concerned to limit the retroactive effect of the judgment, but did not rule out the possibility of doing so in a different context:

> 58 Even if judgments delivered under Article 226 EC were to have the same effects as those delivered under Article 234 EC [now Art. 267 TFEU] and, therefore, considerations of legal certainty might, exceptionally, make it necessary to limit their temporal effects (see Case C–78/05 *Commission* v *Greece* [2007] ECR I–4185, paragraph 67; Case C–475/07 *Commission* v *Poland* [2009] ECR I–0000, paragraph 61; and Case C–559/07 *Commission* v *Greece* [2009] ECR I–0000, paragraph 78), it need merely be stated that the Republic of Finland has made no attempt, either in its written pleadings or at the hearing, to demonstrate that there is any risk of serious economic repercussions.[176]

10 ARTICLE 259

In addition to the Commission's enforcement power under Article 258, Article 259 TFEU provides a means for any Member State to initiate an action against another state which it considers to be in breach of the Treaty. Article 259 provides:

> A Member State which considers that another Member State has failed to fulfil an obligation under the Treaties may bring the matter before the Court of Justice.
>
> Before a Member State brings an action against another Member State for an alleged infringement of an obligation under the Treaties, it shall bring the matter before the Commission.
>
> The Commission shall deliver a reasoned opinion after each of the States concerned has been given the opportunity to submit its own case and its observations on the other party's case both orally and in writing.
>
> If the Commission has not delivered an opinion within three months of the date on which the matter was brought before it, the absence of such opinion shall not prevent the matter from being brought before the Court.

Unlike under Article 258, the Member State bringing the action does not first have to contact the Member State which is the subject of the complaint. Instead the matter must initially be brought by the complainant state before the Commission. The procedure thereafter is similar to that under Article 258, except that in the case of Article 259 both states must be heard and given a chance to make oral and written submissions before the Commission gives its reasoned opinion. Given that Article 258 provides a mechanism for Member States rather than the Commission to bring another state before the ECJ, it seems the complainant state may bring the case to the ECJ even where the Commission takes the view that there is no breach.

[175] See, eg, Case C–104/02 *Commission v Germany* [2005] ECR I–2689, [48]–[51], concerning whether the Court could order the Member State to pay default interest.

[176] Case C–284/05 *Commission v Finland*, 15 Dec 2009. For the other group of cases on this same issue see (n 1).

Article 258 has very rarely been used,[177] no doubt because of the ill-will it could occasion (and reflect) between Member States, and because of their preference for resolving disputes by political means.[178] States also have the option of intervening in a case brought by the Commission to support its allegations. Where political solutions fail, however, and where the Commission chooses not to bring proceedings, states have occasionally had recourse to the Article 259 mechanism.[179] In 2000 Spain brought an action against the UK concerning the way in which the UK extended voting rights in European Parliament elections to residents of Gibraltar.[180] The Commission encouraged the two states to resolve the dispute amicably and declined to issue a reasoned opinion, 'given the sensitivity of the underlying bilateral issue',[181] but the ECJ ultimately upheld the conduct of the UK and found against Spain.

11 ARTICLE 260 TFEU: THE PECUNIARY PENALTY

The provision for a penalty payment to be imposed against a Member State which has failed to comply with a previous enforcement judgment of the Court was first introduced into Article 260 TFEU (ex Article 228 EC) by the Treaty on European Union in 2002. It was intended to give teeth to the infringement procedure, and to provide a sharper incentive for Member States to comply with ECJ rulings against them. Prior to the existence of the penalty payment option, the only way provided under Article 260 to 'enforce' compliance with a judgment against a Member State under Article 258 was by bringing the state before the ECJ again for a second declaratory ruling. Following its amendment by the Lisbon Treaty in 2009, Article 260 provides:

> 1. If the Court of Justice of the European Union finds that a Member State has failed to fulfil an obligation under the Treaties, the State shall be required to take the necessary measures to comply with the judgment of the Court.
>
> 2. If the Commission considers that the Member State concerned has not taken the necessary measures to comply with the judgment of the Court, it may bring the case before the Court after giving that State the opportunity to submit its observations. It shall specify the amount of the lump sum or penalty payment to be paid by the Member State concerned which it considers appropriate in the circumstances.
>
> If the Court of Justice finds that the Member State concerned has not complied with its judgment it may impose a lump sum or penalty payment on it.
>
> This procedure shall be without prejudice to Article 259.
>
> 3. When the Commission brings a case before the Court pursuant to Article 258 on the grounds that the Member State concerned has failed to fulfil its obligation to notify measures transposing a directive adopted under a legislative procedure, it may, when it deems appropriate, specify the amount

[177] Note that Ireland chose to bring proceedings against the UK concerning the Mox nuclear plant before a Tribunal of the International Convention on the Law of the Sea rather than before the ECJ, and was chastised accordingly by the ECJ in Case C–459/03 *Commission v Ireland* [2006] ECR I–4635 for violating Art 344 TFEU.

[178] In 1984 the procedure was set in motion by the Commission in response to a complaint from France against the Netherlands, which led to a reasoned opinion by the Commission: see Case 169/84 *Cofaz v Commission* [1986] ECR 391, [6].

[179] Case 141/78 *France v UK* [1979] ECR 2923 (fishing dispute); Case C–388/95 *Belgium v Spain* [2000] ECR I–3121 (rules of origin for wine).

[180] Case C–145/04 *Spain v UK* [2006] ECR I–7917. The UK's action had been a response to the judgment of the European Court of Human Rights in App No 24833/94 *Matthews v UK*, ECHR 1999-I.

[181] Case C–145/04 (n 180) [32].

of the lump sum or penalty payment to be paid by the Member State concerned which it considers appropriate in the circumstances.

If the Court finds that there is an infringement it may impose a lump sum or penalty payment on the Member State concerned, not exceeding the amount specified by the Commission. The payment obligation shall take effect on the date set by the Court in its judgment.

Two changes were introduced into Article 260 by the Lisbon Treaty in 2009. The first is that the Commission is no longer obliged, as it previously was under paragraph 2, to issue a reasoned opinion before bringing a Member State before the ECJ for non-compliance with an Article 258 ruling. This amendment is likely to make the penalty procedure somewhat speedier and more efficient. The second change is in the newly-introduced paragraph 3, which provides that the Commission may move directly to seek a pecuniary penalty against a Member State where a Member State has failed to notify measures transposing an EU directive.[182] In other words, the possibility of imposing a penalty payment on a Member State for breach of EU law is extended beyond the circumstances of non-compliance with an Article 258 ruling of the Court to include another common form of violation. Another notable aspect of the new paragraph 3, which is not present under paragraph 2, is that the Court, in imposing a penalty payment for non-transposition, may not exceed the amount specified by the Commission.

No upper limit to the amount of penalty is specified,[183] and the Court is not bound to follow the proposal of the Commission, other than in not exceeding the penalty proposed in cases of non-transposition under paragraph 3. There is no formal mechanism for collection of the payment should a Member State refuse to comply,[184] although it is generally assumed that the Commission may withhold payments which may be due to the Member State under other EU law funds. Further, Article 260 provides no possibility for the Commission to seek an injunction from the Court,[185] and the Court may not order a Member State to take specific action in such proceedings.[186] The Court has also indicated that it has no jurisdiction under Article 260 to require Member States to comply with its judgment within a specified period of time.[187]

Initially it seemed that, unlike with a declaratory judgment under Article 258 which would be given by the ECJ even where the Member State had complied with the Commission's reasoned opinion before judgment, so long as the state had not complied before the expiry of the period laid down in the reasoned opinion, the ECJ would not impose a penalty in circumstances where the Member State had apparently complied before the date of the Article 260 judgment.[188] However, with the introduction

[182] The Commission in early 2011 published a Communication on the implementation of Art 260(3) [2011] OJ C12/1, setting out its policy on the application of the new provision. The Commission states that it will not be used in the case of non-legislative Dirs and, surprisingly, states in para 19 that it will be used in cases of partial notification and not only total failure to notify.

[183] Art 261 TFEU, which provides for the imposition of penalties by the Court under regs adopted by the Council and the Parliament, also specifies that the Court's jurisdiction under such legislation may be unlimited.

[184] For a critical analysis see M Theodossiou, 'An Analysis of the Recent Response of the Community to Non-compliance with Court of Justice judgments: Art 228' (2003) 27 ELRev 25.

[185] Although the Court has a general power to order injunctive measures in interim proceedings under Art 279 TFEU, it does not have these powers under Art 260, when giving judgment in infringement proceedings.

[186] Case C–105/02 *Commission v Germany* [2006] ECR I–9659, [44]–[45].

[187] Case C–473/93 *Commission v Luxembourg* [1996] ECR I–3207, [51]–[52]. However, in Case C–291/93 *Commission v Italy* [1994] ECR I–859, [6], the ECJ ruled that, although Art 260 TFEU (ex 228 EC) did not specify the period within which a judgment must be complied with, the interest in the immediate and uniform application of Community law required compliance as soon as possible.

[188] See Case C–119/04 *Commission v Italy* [2006] ECR I–6885, concerning the long-running complaint about nationality discrimination against foreign-language university lecturers, where the Court did not impose the penalty requested by the Commission on the basis that Italy appeared to have substantially complied by the date the Court examined the facts. In fact it has been argued that Italy had not at all complied with the previous judgment, and that the law it had introduced in purported compliance with that earlier judgment had left the affected individuals in a worse

of lump sum payments to penalize a state's breach which continues between the date of the initial Article 258 judgment and the date of the Article 260 judgment, the Court has made clear that it is entirely appropriate to impose a lump sum payment, although not a periodic penalty, where Member State non-compliance with an earlier judgment has continued after the date set by the Commission in the reasoned opinion, even where it has ceased by the time the Court gives judgment in the Article 260 proceedings.[189] On the other hand, it is clear that the success of Article 260 cases depends largely on the quality of the evidence submitted by the Commission,[190] and the continuing saga of Italian employment discrimination against foreign-language lecturers demonstrates the invidious effects for individual complainants (who, as we have seen, are in no sense parties to the case) when the Commission fails to bring sufficient evident to prove its allegations.[191]

The Commission nowadays makes relatively frequent use of the procedure for proposing pecuniary penalties.[192] In its 2009 annual report, the Commission indicated that the Article 260 procedure was launched in eighty-five cases during 2008, and almost half of these concerned environmental breaches.[193] This compares with eighty-four such proceedings launched during 2007 and ninety-four during 2006, with environmental infringements again comprising a very high proportion.[194] The number of cases actually referred to the ECJ under Article 260, however, is very significantly lower than the number initiated, and many—although not all—cases are closed by the Commission when the state eventually complies. The Commission stated that in 2008, for example, no second referral to the Court under Article 260 TFEU was made, compared with seven cases referred in 2007 and ten in 2006.[195] The Commission also now provides a list in its annual reports of all Article 258 judgments with which individual Member States have not yet complied, together with an indication of what action it is taking (under Article 260 or otherwise) against those states.

Before the Court had developed its case law on the calculation of penalties under Article 260, the Commission in the mid 1990s published guidelines and a memorandum proposing a method for calculation.[196] The Commission argued that the amount should reflect the aim of the sanction, ie to secure effective compliance with EU law as quickly as possible, and that the most appropriate means of achieving this aim would be a periodic penalty running from the date of service of the ECJ's judgment. The Commission took the view that penalties should always be deterrent and never purely symbolic. The daily penalty should be calculated on the basis of three criteria: (1) the seriousness of the infringement (including not only failure to comply with an ECJ judgment, but also the seriousness of the original infringement in terms of both effects and symbolism), (2) its duration, and (3) the need

position than they had been under the original discriminatory employment conditions. See H Rodgers, Parliament Magazine, Feb 2007.

[189] See, eg, Case C–304/02 *Commission v France* [2005] ECR I–6263. The Commission had made this suggestion in its memo on the penalty payment: SEC(2005)1658. For more recent cases on this point see Case C–568/07 *Commission v Greece* [2009] ECR I–4504; Case C–121/07 *Commission v France*, 9 Dec 2008. Compare Case C–503/04 *Commission v Germany* [2007] ECR I–6153, in which the ECJ imposed neither a lump sum nor a periodic penalty, and Case C–369/07 *Commission v Greece* [2009] ECR I–5703, in which the ECJ imposed both, finding that the breach was continuing at the date of judgment.

[190] See, eg, C–457/07 *Commission v Portugal* [2009] ECR I–8091 in which the ECJ dismissed all 5 complaints brought by the Commission against Portugal for a mixture of procedural and evidentiary reasons.

[191] (N 188).

[194] SEC(2008)2855 and SEC(2007)976.

[195] COM(2009)675, [2.2]. For a query whether the figures given by the Commission truly reflect the number of cases actually referred to the ECJ see I Kibley, 'The Interpretation of Article 260 TFEU (ex 228 EC)' (2010) 35 ELRev 370, 383.

[196] See [1996] OJ C242/6 and [1997] OJ C63/2; for discussion see Theodossiou (n 184).

to ensure that the penalty itself is a deterrent to further infringements. The method of calculation should involve a uniform flat-rate amount per day of delay to penalize the violation of the principle of legality, multiplied by factors (the coefficient) reflecting the seriousness of the infringement and its duration,[197] and by a factor representing the ability of the Member State to pay and the number of votes it has in the Council.[198] Following several rulings by the Court which built on this non-binding guidance, the Commission amended and supplemented its memorandum in 2005 and in 2010, following the ECJ's lead in particular on the issue of lump sum payments and in order to reflect updated macro-economic data.[199]

Ever since the Court's first ruling on the pecuniary penalty in 2000,[200] it has repeatedly emphasized that, while agreeing with much of the guidance published by the Commission, the Court is not bound by the Commission's advice.[201] In proceedings against Spain concerning non-compliance with a judgment on the quality of bathing water, for example, the Court rejected the Commission's proposal to impose a *daily* penalty on Spain, and instead imposed an annual penalty to be assessed on an ongoing basis so as to reflect the progress towards compliance effected by Spain.[202] This was because of the nature of the breach and the difficulty of showing, until a considerable period of time after the fact, that the quality of bathing water conformed to the limit values set by EU law.[203] Similarly in a case against France involving inadequate implementation of the products liability Directive, the Court rejected the Commission's guidelines for calculating the coefficient relating to the duration of the infringement.[204] More recently the Court raised both the base sum and the coefficient proposed by the Commission in a case against Portugal for non-implementation of a judgment concerning state liability in the field of public contracts.[205]

It was in 2004, however, that the ECJ first imposed its clear stamp on the penalty payment procedure by subjecting France to a lump sum penalty payment for a longstanding violation, even though the Commission had not recommended this.[206] The case, in which sixteen other Member States intervened, was brought against France for non-compliance with a judgment dating from 1991 concerning the monitoring and implementation of EU rules on fisheries conservation. Four of the intervening Member States supported the possibility of imposing a lump sum penalty concurrently with a periodic penalty, on the basis that the lump sum payment was a complementary deterrent measure. The twelve other states, however, argued that the Treaty text, as well as considerations of policy and principle, militated against the concurrent imposition of both penalties. The Court dismissed all of these arguments:

[197] See the Commission's internal decision on the 'duration coefficient' in PV(2001) 1517/2 of 2 Apr 2001.

[198] For criticism of the criteria used to determine ability to pay see Kilbey (n 195).

[199] SEC(2005)1658 and SEC(2010)923. While lump sum payments had not been ruled out in its initial guidelines, the Commission had clearly expressed a strong preference for periodic penalties, and in practice it had never proposed a lump sum penalty to the Court. The case law of the Court prompted the Commission to change its guidelines in this respect.

[200] Case C–387/97 *Commission v Greece* [2000] ECR I–5047. For comment see L Borzsak, 'Punishing Member States or Influencing Their Behaviour or *Iudex (non)* Calculat?' (2001) 13 JEL 235 and C Hilson, Note (2001) 3 Env LR 131.

[201] Ibid [87]–[89]. Although the Court did rule against Greece and imposed a penalty, it reduced the amount of the periodic penalty payment proposed by the Commission.

[202] Case C–278/01 *Commission v Spain* [2003] ECR I–14141; Comment M Ruffert (2004) 41 CMLRev 1387.

[203] The Court did similarly in Case C–304/02 (n 189), varying the periodic penalty proposed by the Commission and imposing it on a half-yearly rather than a daily basis, to allow progress towards compliance to be measured.

[204] Case C–177/04 (n 93).

[205] Case C–70/06 *Commission v Portugal*, 10 Jan 2008. The reason given by the ECJ for raising it was that the coefficient proposed by the Commission did not reflect the growth of Portugal's gross domestic product, and hence its ability to pay. Interestingly, Portugal has since brought proceedings against the Commission for its enforcement of the penalty imposed in Case C–70/06 [2008] ECR I–1, in Case T–33/09 *Portugal v Commission*, pending, [2009] OJ C82/30.

[206] Case C–304/02 (n 189). In a subsequent case against France in which the Commission had requested only a periodic penalty and not a lump sum, the ECJ considered whether a lump sum should nonetheless be imposed, but concluded that it should not: Case C–177/04 (n 93).

Case C-304/02 **Commission v France**
[2005] ECR I-6263

> 80 The procedure laid down in Article 228(2) EC [now Article 260, paragraph 2 TFEU] has the objective of inducing a defaulting Member State to comply with a judgment establishing a breach of obligations and thereby of ensuring that Community law is in fact applied. The measures provided for by that provision, namely a lump sum and a penalty payment, are both intended to achieve this objective.
>
> 81 Application of each of those measures depends on their respective ability to meet the objective pursued according to the circumstances of the case. While the imposition of a penalty payment seems particularly suited to inducing a Member State to put an end as soon as possible to a breach of obligations which, in the absence of such a measure, would tend to persist, the imposition of a lump sum is based more on assessment of the effects on public and private interests of the failure of the Member State concerned to comply with its obligations, in particular where the breach has persisted for a long period since the judgment which initially established it.
>
> 82 That being so, recourse to both types of penalty provided for in Article 228(2) EC is not precluded, in particular where the breach of obligations both has continued for a long period and is inclined to persist.

The Court took the view that the absence of any Commission guidelines for the imposition of a lump sum penalty did not lead to any violation of the principle of legal certainty, nor did the fact that the Commission had not proposed the imposition of a lump sum penalty in this particular case present any obstacle to the imposition of such a penalty by the Court. The Court also rejected the argument that it needed 'political legitimacy' to impose a financial penalty which was not suggested by the Commission, and declared that the financial penalties to be imposed should be decided upon 'according to the degree of persuasion needed in order for the Member State in question to alter its conduct'.[207] The rights of defence of the Member State were not affected by its being unable to put forward arguments against a lump sum, in the Court's view, because the Article 228(2) procedure was to be viewed as a method of enforcement of the earlier judgment, following a finding, based on *inter partes* proceedings, that a breach of EU law persisted.[208]

Interestingly, especially in view of the extensive counter-arguments made by several Member States against the power of the Court to impose a lump sum penalty where it had not been proposed by the Commission in accordance with pre-established criteria, the ECJ's reasoning on the amount of the lump sum penalty was minimal. The Court simply stated in two brief paragraphs that:

> 114 In a situation such as that which is the subject of the present judgment, in light of the fact that the breach of obligations has persisted for a long period since the judgment which initially established it and of the public and private interests at issue, it is essential to order payment of a lump sum (see paragraph 81 of the present judgment).
>
> 115 The specific circumstances of the case are fairly assessed by setting the amount of the lump sum which the French Republic will have to pay at EUR 20 000 000.

Following the case, the Commission amended its guidelines to refer to the desirability of a lump sum payment where Member States have delayed compliance considerably, and also to the principle of proportionality and equal treatment of the Member States, which had been emphasized by the ECJ in other Article 260 judgments,[209] as well as to the need for sanctions to be foreseeable.[210] Reversing its

[207] Case C–304/02 (n 189) [90]–[91].
[208] Ibid [93].
[209] Case C–378/97 *Commission v Greece* [2000] ECR I–5047; Case C–278/01 (n 202).
[210] SEC(2005)1658.

previous stance on lump sum payments, the Commission indicated that it would henceforth propose at least a minimum lump sum payment to the Court in every Article 260 case, to reflect 'the principle that any case of persistent non-compliance … in itself represents an attack on the principle of legality'.[211]

The Commission made a range of other recommendations in its 2005 memo, for example proposing that distinct sanctions could be imposed for distinct infringements within the context of a single case, to allow for greater precision and adaptability. Drawing on the Spanish bathing water and French fisheries cases, it also proposed to allow for adjustment of sanctions to reflect partial or gradual compliance, and for periods such as six months or a year, rather than only daily penalties. A procedure to allow for the suspension of penalties after appropriate verification of compliance with conditions set down by the Court was also suggested, though such a procedure has not yet materialized and it is not entirely clear how it is to be determined whether and when a breach has come to an end.[212] Several other guidelines were laid down by the Commission in its memo, including factors which would aggravate or mitigate the seriousness of a breach for the purposes of calculating the penalty due.

The Court has continued to impose lump sum payments in many of the judgments handed down since then,[213] following much of the guidance proposed by the Commission as to the calculation of penalties, and occasionally imposing both a lump sum and a periodic penalty cumulatively.[214] However, the Court firmly rejected the Commission's suggestion of the automatic imposition of a lump sum in any case where the Member State has not complied by the date set in the reasoned opinion, and emphasized that the decision whether or not to impose a lump sum (or periodic penalty) lies within the discretion of the Court taking all the relevant circumstances into account.[215] More generally, the Court has been criticized for the lack of reasoning behind its calculation of penalties and for a lack of transparency and consistency in the criteria it uses to determine factors such as seriousness and duration.[216]

The Article 260 mechanism clearly represents the sharp end of the overall enforcement procedure, with a distinctly less diplomatic and more formal legal flavour than the Article 258 stage. This is sharpened further by the Lisbon Treaty's abolition of the requirement of a reasoned opinion by the Commission, and by the new possibility of seeking a pecuniary penalty for non-transposition of a directive without any prior infringement ruling by the ECJ under Article 258. However, it is also evident that the burden remains on the Commission to marshal the appropriate evidence against the Member State before the ECJ,[217] and that a failure to do so in Article 260 proceedings may even undermine the effect of a previous Article 258 judgment against a state.[218]

[211] Ibid [20].

[212] Shortly after the fisheries judgment, Case C–304/02 *Commission v France* [2005] ECR I–6263, imposing both a lump sum and a 6-monthly periodic penalty upon it, France challenged the decision made by the Commission pursuant to that judgment, in which the Commission claimed that France was continuing its failure to comply fully with the original judgment under Art 258 and should pay the periodic penalty. See Case T–139/06 *France v Commission* [2006] OJ C165/31 which has not yet come before the Court but is listed as still pending: http://curia.europa.eu/en/content/juris/t2_juris.htm. In this application France challenges the Commission's competence to adopt such a decision and argues in the alternative that the penalty is too high. See also Case T–33/09 *Portugal v Commission* (n 205).

[213] Case C–109/08 *Commission v Greece* [2009] ECR I–4657 concerning a prohibition on electronic games outside casinos, in which Greece argued both that the penalty payment was too high and that a lump sum was inappropriate, but the ECJ followed the Commission's proposal and imposed both; Case C–568/07 *Commission v Greece* [2009] ECR I–4505 concerning freedom of establishment for opticians; Case C–121/07 *Commission v France* [2008] ECR I–9159, concerning deliberate release of GMOs.

[217] Case C–457/07 *Commission v Portugal* [2009] ECR I–8091, in which the Commission's Art 260 application was rejected by the Court.

[218] On the long-running saga of foreign-language lecturers in Italy see Case C–212/99 *Commission v Italy* [2001] ECR I–4923; Case C–119/04 *Commission v Italy* (n 188).

12 INTERIM MEASURES

Under Articles 278 and 279 TFEU the ECJ has the power to prescribe interim measures which it considers to be necessary in a case which has been brought before it.[219] Although interim measures may be sought in any case before the ECJ,[220] they may be particularly useful for the Commission to seek at the same time as proceedings under Article 258.

When in Article 258 proceedings a breach is found, the Court simply declares that the Member State has failed to fulfil its obligations, and its ruling does not have any effect on the impugned national rule or provision. Indeed as a general matter, actions before the ECJ do not have suspensory effect.

Article 278 TFEU however provides:

> Actions brought before the Court of Justice of the European Union shall not have suspensory effect. The Court may, however, if it considers that circumstances so require, order that application of the contested act be suspended.

Article 279 then provides:

> The Court of Justice of the European Union may in any cases before it prescribe any necessary interim measures.

The Court's Rules of Procedure specify that such interim measures may not be ordered unless there are circumstances giving rise to urgency, as well as factual and legal grounds which establish a *prima facie* justification for granting the measures sought. The effect of the urgency requirement is that the interim measures requested must be of such a nature as to prevent the injury which is alleged, and that serious and irreparable harm to the applicant's interests must be threatened.[221] Further, the Commission must display diligence in response to a complaint made against a Member State if it is seeking interim measures, given the requirement of urgency, and the ECJ may refuse to order such measures if it has not done so.[222]

13 CONCLUSIONS

i. Some of the main criticisms of the enforcement procedure over the years, including its lack of effectiveness, the absence of a role for individual complainants, and the elite and unresponsive attitude of the Commission, have gradually been addressed. The penalty payment procedure under Article 260 TFEU and the development of a procedure for pursuing 'general and persistent breaches' have helped to address some aspects of the effectiveness problem; and pressure from the Ombudsman and the European Parliament has encouraged the Commission to follow somewhat

For a case involving several applications for extension of interim measures see Case C–320/03 R *Commission v Austria* [2003] ECR I–7929, [2003] ECR I–11665, and [2004] ECR I–3593.

[222] Case C–87/94 R *Commission v Belgium* [1994] ECR I–1395.

more regular and transparent administrative procedures including in its dealings with individual complainants.

ii. The overall enforcement mechanism continues to comprise a mixture of different approaches: parts of it operate in a bilateral and diplomatic dispute-resolution mode, parts of it according to a more formal, judicially-monitored sanction procedure, and parts of it as a quasi-administrative complaints procedure.

iii. The pressing risk of overload has led the Commission to propose an array of preventative, alternative, and supplementary mechanisms, including a pilot procedure for dealing with complaints at an early stage, and it continues to prioritize specific categories of infringement.[223]

iv. The gradual growth in recourse to the penalty payment procedure and its extension by the Lisbon Treaty are likely to renew calls to improve the clarity and consistency of the procedure, including clearer criteria for the calculation of penalties.

PRELIMINARY RULINGS

1 CENTRAL ISSUES

i. Article 267 TFEU, which contains the preliminary ruling procedure, is one of the most interesting provisions of the Treaty.[1] There would have been few, at the inception of the Treaty, who would have guessed its importance in shaping EU law, and the relationship between the national and EU legal systems. Article 267 TFEU[2] is very much the 'jewel in the Crown' of the ECJ's jurisdiction. Prior to the Nice Treaty only the ECJ could give preliminary rulings. This was changed by the Nice Treaty, and this change has been carried over to the Lisbon Treaty. Article 256(3) TFEU accords the General Court jurisdiction to give such rulings in specific areas laid down by the Statute of the Court of Justice, subject to certain qualifications that will be considered below. The power to accord the General Court jurisdiction to give preliminary rulings has not, however, been acted on thus far. The ECJ therefore currently hears all Article 267 TFEU cases.

ii. The relationship between national courts and the ECJ is reference-based. It is not an appeal system. No individual has a right of appeal to the ECJ. It is for the national court to make the decision to refer. The ECJ will rule on the issues referred to it, and the case will then be sent back to the national courts, which will apply the Union law to the case at hand.

iii. Article 267 has been of seminal importance for the development of EU law. It is through preliminary rulings that the ECJ has developed concepts such as direct effect and supremacy.[3] Individuals assert in national courts that the Member State has broken a Union provision, which gives them rights that they can enforce in their national courts. The national court seeks a ruling from the ECJ whether the particular EU provision has direct effect, and the ECJ is thereby able to develop the concept. Article 267 has been the mechanism through which national courts and the ECJ have engaged in a discourse on the appropriate reach of EU law when it has come into conflict with national legal norms.

iv. Article 267 is also an indirect way of testing the validity of EU action for conformity with Union law.[4] An individual can contest the legality of EU law directly before the General Court under

[1] Prior to the Lisbon Treaty two variants of the preliminary ruling procedure were applicable to the Area of Freedom, Security and Justice (AFSJ), which were found in Art 35 EU and Art 68 EC. These variants are no longer applicable, because the AFSJ is now subject to the normal Treaty rules concerning preliminary rulings. There are, however, transitional provisions that limit the legal impact of the Lisbon Treaty on measures concerning Police and Judicial Cooperation in Criminal Matters adopted before its entry into force: Protocol (No 36) On Transitional Provisions, Arts 9–10.

[2] Ex Art 234 EC, Art 177 EEC.

[3] F Mancini and D Keeling, 'From *CILFIT* to *ERT*: The Constitutional Challenge Facing the European Court' (1991) 11 YBEL 1, 2–3.

[4] See 000.

Article 263 TFEU, but, as will be seen in the next chapter, the rules concerning access to court under Article 263 are restrictive, and therefore raising the validity of EU law before a national court under Article 267 TFEU may be the only way to challenge such a measure.

v. Article 267 has been the principal vehicle through which the relationship between the national and EU legal systems has been fashioned. The original conception of the relationship was *horizontal* and *bilateral*. It was horizontal in that the ECJ and the national courts were separate but equal. They had differing functions, which each performed within its appointed sphere. It was for the national court to decide whether to refer a matter to the ECJ, which the ECJ would then interpret. It was bilateral in the sense that, in principle, the ECJ's rulings were delivered to the particular national court that made the request. In this sense, there was a series of bilateral relationships between the ECJ and each of the national courts.

vi. The relationship has become steadily more *vertical* and *multilateral*. It has become more vertical in that developments have emphasized that the ECJ sits in a superior position to that of the national courts. The verticality of the relationship also manifests itself in a less obvious, but equally important, manner. The ECJ has, in effect, enrolled the national courts as enforcers and appliers of EU law. They are perceived as a central part of an EU-wide judicial hierarchy,[5] with the ECJ sitting at its apex. The relationship has become more multilateral, in that judgments given in response to the request for a ruling from one Member State are increasingly held to have either a *de facto* or *de jure* impact on all other national courts.

vii. There has been much discussion about reform of the EU judicial system. This discourse has been driven by the increased workload on the ECJ and General Court, and by the enlargement of the EU.

2 FOUNDATIONS: ARTICLE 267

> The Court of Justice of the European Union shall have jurisdiction to give preliminary rulings concerning:
>
> (a) the interpretation of the Treaties;
>
> (b) the validity and interpretation of acts of the institutions, bodies, offices or agencies of the Union;
>
> Where such a question is raised before any court or tribunal of a Member State, that court or tribunal may, if it considers that a decision on the question is necessary to enable it to give judgment, request the Court to give a ruling thereon.
>
> Where any such question is raised in a case pending before a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal shall bring the matter before the Court.
>
> If such a question is raised in a case pending before a court or tribunal of a Member State with regard to a person in custody, the Court of Justice of the European Union shall act with the minimum of delay.

(A) QUESTIONS THAT CAN BE REFERRED

A preliminary reference can be made in two types of case, the first of which concerns *the interpretation of the Treaty*: Article 267(1)(a). It is through Article 267(1)(a) that the Court has

[5] Report of the Court of Justice on Certain Aspects of the Application of the Treaty on European Union (1995), [11]–[15].

given many of its seminal judgments concerning direct effect and supremacy. The ECJ does not, however, pass judgment on the validity as such of a national law. It interprets the Treaty. The consequence of this interpretation may be that a provision of national law is incompatible with EU law, and the supremacy of EU law will mean that there is an obligation on the national court to redress the situation. The ECJ itself is nonetheless not directly making any judgment on the validity of national law.[6]

Article 267(1)(b) also allows for preliminary references to be made which relate *to the validity and interpretation of acts of the institutions, bodies, offices, or agencies of the EU*. Preliminary references concerning the validity[7] of acts of the institutions, bodies, etc covers cases such as *ICC*[8] and *Foto-Frost*,[9] in which the validity of an EU regulation, directive, or decision is contested before a national court. Preliminary references concerning the interpretation of acts of the institutions, bodies, etc covers cases where an individual argues that, for example, an EU regulation gives rise to rights that can be enforced in national courts. References can however be made under Article 267(1)(b) irrespective of whether or not the EU provision is directly effective, in order, for example, to clarify the interpretation of the relevant provision. References may also be made in relation to non-binding acts such as recommendations,[10] and certain agreements with non-Member States.[11] The ECJ has also held that a preliminary reference may be made where a provision of national law is based on or makes some reference to EU law, even if the consequence is that the ambit of EU law is extended by the national provisions.[12]

(B) COURTS OR TRIBUNALS WHICH CAN REFER

Article 267(2) and (3) is framed in terms of courts or tribunals of a Member State, which may or must make a reference. It is for the ECJ to decide whether a body is a court or tribunal for these purposes, and the categorization under national law is not conclusive.[13] The ECJ will take a number of factors into account when making this determination, including: whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is *inter partes*, whether it applies rules of law, and whether it is independent.[14] The application of these criteria has

not always been straightforward.[15] Thus, for example, it is clear from *Cartesio*[16] that although Article 267 TFEU does not make reference to the ECJ dependent on the proceedings being *inter partes*, such a reference could only be made if there were a case pending before the national court, which led to a decision of a judicial nature A reference could not, by way of contrast, be made where a court made what was in essence an administrative decision that did not resolve a legal dispute, since the national court could not be regarded as exercising a judicial function in this instance. The *Broekmeulen* case provides a good example of the ECJ's general reasoning in this area.

Case 246/80 **C Broekmeulen v Huisarts Registratie Commissie** [1981] ECR 2311

[Note Lisbon Treaty renumbering: Art 177 is now Art 267 TFEU]

The case concerned a Dutch body called the Appeals Committee for General Medicine. It heard appeals from another body, which was responsible for registering those who wished to practise medicine in the Netherlands. Both bodies were established under the auspices of the Royal Netherlands Society for the Promotion of Medicine. Although this was a private association, it was indirectly recognized in other parts of Dutch law, and it was not possible to practise without registration. The Appeals Committee was not a court or tribunal under Dutch law, but it did follow an adversarial procedure and allow legal representation. Broekmeulen was of Dutch nationality, but had qualified in Belgium. He sought to establish himself as a doctor in the Netherlands and his application to be registered was refused. The question arose whether the Appeals Committee was a court or tribunal for the purposes of Article 177.

THE ECJ

14. A study of the Netherlands legislation and of the statutes and internal rules of the Society shows that a doctor who intends to establish himself in the Netherlands may not in fact practise either as a specialist, or as an expert in social medicine, or as a general practitioner, without being recognised and registered by the organs of the Society…

15. It is thus clear that…the Netherlands system of public health operates on the basis of the status accorded to doctors by the Society and that registration as a general practitioner is essential to every doctor wishing to establish himself in the Netherlands as a general practitioner.

16. Therefore a general practitioner who avails himself of the right of establishment and the freedom to provide services conferred upon him by Community law is faced with the necessity of applying to the Registration Committee established by the Society, and, in the event of his application's being refused, must appeal to the Appeals Committee. The Netherlands Government expressed the opinion that a doctor who is not a member of the Society would have the right to appeal against such a refusal to the ordinary courts, but stated that the point had never been decided by the Netherlands courts. Indeed all doctors, whether members of the Society or not, whose application to be registered as a general practitioner is refused, appeal to the Appeals Committee, whose decisions to the knowledge of the Netherlands Government have never been challenged in the ordinary courts.

17. [I]t should be noted that it is incumbent upon Member States to take the necessary steps to ensure that within their own territory the provisions adopted by the Community institutions are implemented in their entirety. If, under the legal system of a Member State, the task of implementing such provisions is assigned to a professional body acting under a degree of governmental supervision,

[15] T Tridimas, 'Knocking on Heaven's Door: Fragmentation, Efficiency and Defiance in the Preliminary Ruling Procedure' (2003) 40 CMLRev 9, 27–34.

[16] Case C–210/06 *Cartesio Oktató és Szolgáltató bt* [2008] ECR I–9641, [56]–[57].

and if that body, in conjunction with the public authorities concerned, creates appeal procedures which may affect the exercise of rights granted by Community law, it is imperative, in order to ensure the proper functioning of Community law, that the Court should have an opportunity of ruling on issues of interpretation and validity arising out of such proceedings.

18. As a result of all the foregoing considerations and in the absence, in practice, of any right of appeal to the ordinary courts, the Appeals Committee, which operates with the consent of the public authorities and with their cooperation, and which, after an adversarial procedure, delivers decisions which are recognised as final, must, in a matter involving the application of Community law, be considered as a court or tribunal of a Member State within the meaning of Article 177 of the Treaty. Therefore, the Court has jurisdiction to reply to the question asked.

It is necessary that the body making the reference be a court or tribunal of a Member State.[17] This can be problematic in, for example, the context of arbitration. Whether an arbitral court or tribunal can be regarded as an emanation of a Member State will depend on the nature of the arbitration. The fact that the arbitral body gives a judgment according to law, and that the award is binding between the parties, will not, however, be sufficient. There must be a closer link between the arbitration procedure and the ordinary court system in order for the former to be considered as a court or tribunal of a Member State.[18]

(c) COURTS OR TRIBUNALS WHICH MUST REFER

Article 267 TFEU draws a distinction between courts or tribunals with a discretion to refer to the ECJ, Article 267(2), and courts or tribunals 'against whose decisions there is no judicial remedy under national law', Article 267(3), which have an obligation to refer, provided that a decision on a question is necessary to enable judgment to be given. The rationale for the duty to refer in Article 267(3) is to prevent a body of national case law that is not in accordance with EU law from being established in any Member State.[19]

There are two views about the type of bodies covered by Article 267(3). According to the abstract theory, the only bodies that come within this Article are those whose decisions are never subject to appeal. According to the concrete theory, the real test is whether the court or tribunal's decision is subject to appeal in the type of case in question.[20]

Costa[21] suggested that the ECJ favoured the concrete theory. In that case the *giudice conciliatore* (magistrate) made a reference to the ECJ. Although his decisions were capable of being appealed in some instances, there was no such right of appeal in the particular case, because the sum involved was relatively small. The ECJ therefore treated the national court as one against whose decision there was no judicial remedy in the actual case at hand.

[17] Case C–355/89 *DHSS (Isle of Man) v Barr and Montrose Holdings Ltd* [1991] ECR I–3479; Case C–100/89 *Kaefer and Procacci v France* [1990] ECR I–4647.

[18] Case 102/81 *Nordsee Deutsche Hochseefischerei GmbH v Reederei Mond Hochseefischerei Nordstern AG and Co KG* [1982] ECR 1095; Case C–126/97 *Eco Swiss China Time Ltd v Benetton International NV* [1999] ECR I–3055; Case C–125/04 *Denuit and Cordenier v Transorient-Mosaïque Voyages and Culture SA* [2005] ECR I–923.

[19] Case C–393/98 *Ministerio Publico and Gomes Valente v Fazenda Publica* [2001] ECR I–1327, [17]; Case C–99/00 *Criminal Proceedings against Lyckeskog* [2002] ECR I–4839, [14]–[15]; Case C–458/06 *Skatterverket v Gourmet Classic Ltd* [2008] ECR I–4207, [23].

[20] Difficulties may also arise in circumstances where the judgment in question can be reconsidered in other proceedings: Case 107/76 *Hoffmann-La Roche v Centrafarm* [1977] ECR 957.

[21] Case 6/64 [1964] ECR 585, 592.

The concrete theory was affirmed in *Lyckeskog*,[22] although it may still be difficult to decide whether a court's decision is truly final in the particular type of case. The ECJ held that decisions of a national appeal court that could be challenged before a national Supreme Court did not come within Article 267(3), and this was so notwithstanding the fact that the appeal court decision was subject to a prior declaration of admissibility before it could be appealed to the Supreme Court. If a question concerning the interpretation of EU law arose before the Supreme Court it would be under an obligation to refer pursuant to Article 267(3), either when examining admissibility or at a later stage.[23]

This approach was confirmed and applied in *Cartesio*.[24] The ECJ held that a court whose decisions could be appealed on points of law could not be classified as a court or tribunal against whose decisions there was no judicial remedy under national law for the purposes of Article 267 (3) TFEU, even though the procedural system under which the dispute was to be decided imposed restrictions with regard to the arguments that could be advanced on appeal. In the instant case the existence of an appeal did not, moreover, suspend the judgment of the court appealed against. This did not, said the ECJ, render the judgment of such a court final for the purposes of Article 267(3), since the lack of suspensory effect did not deprive the parties of the possibility of exercising effectively their right to appeal that decision.

(D) RELATIONSHIP BETWEEN NATIONAL COURTS

The preceding discussion leaves open the relationship between national courts under the preliminary ruling procedure, and more especially the legal tenability of a reference made by a lower national court that is then reversed on appeal by a higher national court. This important issue was considered in *Cartesio*, where the ECJ supported the ability of lower courts to refer to the ECJ, even in the face of a negative decision by a higher national court.

Case C–210/06 **Cartesio Oktató és Szolgáltató bt** [2008] ECR I–9641

Under Hungarian law it was possible for a lower court decision referring a case to the ECJ to be set aside on appeal, and the lower court could be ordered to resume the domestic law proceedings.

THE ECJ

96. In accordance with Article 234 EC, the assessment of the relevance and necessity of the question referred for a preliminary ruling is, in principle, the responsibility of the referring court alone, subject to the limited verification made by the Court in accordance with the case-law cited in paragraph 67 above. Thus, it is for the referring court to draw the proper inferences from a judgment delivered on an appeal against its decision to refer and, in particular, to come to a conclusion as to whether it is appropriate to maintain the reference for a preliminary ruling, or to amend it or to withdraw it.

97. It follows that, in a situation such as that in the case before the referring court, the Court must—also in the interests of clarity and legal certainty—abide by the decision to make a reference for a preliminary ruling, which must have its full effect so long as it has not been revoked or amended by the

[22] Case C–99/00 (n 19).

[23] For discussion within the UK see *Chiron Corporation v Murex Diagnostics Ltd* [1995] All ER (EC) 88, 93–94; F Jacobs, 'Which Courts and Tribunals are Bound to Refer to the European Court?' (1977) 2 ELRev 119.

[24] Case C–210/06 *Cartesio* (n 16) [77]–[78].

referring court, such revocation or amendment being matters on which that court alone is able to take a decision.

98. In the light of the foregoing, the answer to the third question must be that, where rules of national law apply which relate to the right of appeal against a decision making a reference for a preliminary ruling, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the second paragraph of Article 234 EC is to be interpreted as meaning that the jurisdiction conferred by that provision of the Treaty on any national court or tribunal to make a reference to the Court for a preliminary ruling cannot be called into question by the application of those rules, where they permit the appellate court to vary the order for reference, to set aside the reference and to order the referring court to resume the domestic law proceedings.

(E) NATIONAL COURT RAISING EU LAW OF ITS OWN VOLITION

The issue of whether national courts can be limited by national procedural rules as to whether they can raise a matter of EU law of their own volition is as follows. In *Peterbroeck* the ECJ held that a national procedural rule which prevented a national court from raising a matter of EU law of its own motion concerning the compatibility of a national law with EU law, even where it had not been raised by the person concerned within the specified time, was itself contrary to EU law. It was held that the domestic rule could not be justified on the ground of legal certainty or the proper conduct of procedure.[25] This case was distinguished in *Van Schijndel*.[26] The ECJ held that there was no such obligation on national courts if it would oblige the national court to abandon the passive role assigned to it by the domestic procedural rules by going beyond the ambit of the dispute as defined by the parties themselves.

It is nonetheless clear from *Asturcom*[27] that the ECJ may impose a duty to raise a point of EU law, provided that the court has discretion to raise such a point in analogous domestic actions. Thus it held that the Directive on Unfair Contracts should be interpreted to mean that a national court hearing an action for enforcement of an arbitration award that had become final and was made in the absence of the consumer was required to assess of its own motion whether the arbitration clause in a consumer contract was unfair, in so far as under national rules of procedure it could carry out such an assessment in similar actions of a domestic nature.

3 THE EXISTENCE OF A QUESTION: DEVELOPMENT OF PRECEDENT

It is for the national court to decide whether to make a reference. The mere fact that a party before the national court contends that the dispute gives rise to a question concerning the validity of EU law does not mean that the court is compelled to consider that a question has been raised within the meaning of Article 267 TFEU.[28] The national court may conclude that a reference is not required

[25] Case C–312/93 *Peterbroeck, Van Campenhout & Cie SCS v Belgium* [1995] ECR I–4599.

because the Union Courts have already resolved the issue, because there is no doubt as to the validity of the EU measure, or because a decision on the question is not necessary for the case before the national court.

(A) NATIONAL LAW IN BREACH OF EU LAW AND PRIOR ECJ RULINGS

It is clear that Article 267 TFEU is designed to be used only if there is a question to be answered which falls into one of the categories mentioned in Article 267(1). There may be a number of reasons why a 'question' posed by the national court does not necessitate a ruling, the most obvious being that the ECJ has already ruled on the matter.

Cases 28–30/62 **Da Costa en Schaake NV, Jacob Meijer NV and Hoechst-Holland NV v Nederlandse Belastingadministratie**
[1963] ECR 31

[Note Lisbon Treaty renumbering: Arts 12 and 177 are now Arts 30 and 267 TFEU]

The facts in the case were materially identical to those in Case 26/62 *Van Gend en Loos*. The questions asked were also materially identical to those posed in the *Van Gend* case.

THE ECJ

The regularity of the procedure followed by the Tariefcommissie in requesting the Court for a preliminary ruling under Article 177 of the EEC Treaty has not been disputed and there is no ground for the Court to raise the matter of its own motion.

The Commission . . . urges that the request be dismissed for lack of substance, since the questions on which an interpretation is requested from the Court in the present cases have already been decided . . . in Case 26/62, which covered identical questions raised in a similar case.

This contention is not justified. A distinction should be made between the obligation imposed by the third paragraph of Article 177 upon national courts or tribunals of last instance and the power granted by the second paragraph of Article 177 to every national court or tribunal to refer to the Court of the Communities a question on the interpretation of the Treaty. Although the third paragraph of Article 177 unreservedly requires courts or tribunals of a Member State against whose decisions there is no judicial remedy under national law—like the Tariefcommissie—to refer to the Court every question of interpretation raised before them, the authority of an interpretation under Article 177 already given by the Court may deprive the obligation of its purpose and thus empty it of its substance. Such is the case especially when the question raised is materially identical with a question which has already been the subject of a preliminary ruling in a similar case.

When it gives an interpretation of the Treaty in a specific action pending before a national court, the Court limits itself to deducing the meaning of the Community rules from the wording and spirit of the Treaty, it being left to the national court to apply in the particular case the rules which are thus interpreted. Such an attitude conforms with the function assigned to the Court of ensuring unity of interpretation of Community law within the six Member States. . . .

It is no less true that Article 177 always allows a national court, if it considers it desirable, to refer questions of interpretation to the Court again. This follows from Article 20 of the Statute of the Court of Justice, under which the procedure laid down for the settlement of preliminary questions is automatically set in motion as soon as such a question is referred by a national court.

The Court must, therefore, give a judgment on the present application.

The interpretation of Article 12 of the EEC Treaty, which is here requested, was given in the Court's judgment . . . in Case 26/62.

[*The Court then repeated the judgment it had given in the case of* Van Gend en Loos. *It continued as follows*.]

The questions of interpretation posed in this case are identical with those settled as above and no new factor has been presented to the Court.

In these circumstances the Tariefcommissie must be referred to the previous judgment.

The ECJ's approach appears clearly in this extract. The national court is still able, in formal terms, to refer a matter to the ECJ, even where the ECJ has ruled on the issue. However, it is clear that such an application must raise some new factor or argument. If it does not do so, then the ECJ will be strongly inclined to restate the substance of the earlier case. The existence of an earlier ruling can deprive the national court's obligation to refer 'of its purpose and thus empty it of its substance'. The *Da Costa* case, therefore, initiated what is in effect a system of precedent. These seeds have been developed by the ECJ in later cases.[29]

Case 283/81 **Srl CILFIT and Lanificio di Gavardo SpA v Ministry of Health**
[1982] ECR 3415

[Note Lisbon Treaty renumbering: Art 177 is now Art 267 TFEU]

The plaintiffs alleged that certain duties imposed by Italian law were in breach of Regulation 827/68. The Italian Ministry of Health urged the Italian Court of Cassation, against whose decisions there was no judicial remedy under national law, not to refer the matter to the ECJ, because the answer to the question was so obvious as to remove the need for a reference. The Court of Cassation decided that this contention was itself an issue of Community law. It therefore requested a ruling from the ECJ on whether the obligation to refer imposed in Article 177(3), was unconditional, or whether it was premised on the existence of reasonable interpretive doubt about the answer which should be given to a question. The ECJ's response to the *acte clair* point will be examined in detail below. The ECJ also gave guidance on the relevance of its prior decisions.

THE ECJ

8. In this connection, it is necessary to define the meaning for the purposes of Community law of the expression 'where any such question is raised' in order to determine the circumstances in which a national court or tribunal against whose decisions there is no judicial remedy under national law is obliged to bring a matter before the Court of Justice.

9. In this regard, it must in the first place be pointed out that Article 177 does not constitute a means of redress available to the parties to a case pending before a national court or tribunal. Therefore the mere fact that a party contends that the dispute gives rise to a question concerning the interpretation of Community law does not mean that the court or tribunal concerned is compelled to consider that

[29] D Edward, '*CILFIT* and *Foto-Frost* in their Historical and Procedural Context' in M Maduro and L Azoulai (eds), *The Past and Future of EU Law, The Classics of EU Law Revisited on the 50th Anniversary of the Rome Treaty* (Hart, 2010) 173–184; P Craig, 'The Classics of EU Law Revisited: *CILFIT* and *Foto-Frost*' in ibid, 185–191; D Sarmiento, '*CILFIT* and *Foto-Frost*: Constructing and Deconstructing Judicial Authority in Europe' in ibid, 192–200.

a question has been raised within the meaning of Article 177. On the other hand, a national court or tribunal may, in an appropriate case, refer a matter to the Court of Justice of its own motion.

10. Secondly, it follows from the relationship between paragraphs (2) and (3) of Article 177 that the courts or tribunals referred to in paragraph (3) have the same discretion as any other national court or tribunal to ascertain whether a decision on a question of Community law is necessary to enable them to give judgment. Accordingly, those courts or tribunals are not obliged to refer to the Court of Justice a question concerning the interpretation of Community law raised before them if that question is not relevant, that is to say, if the answer to that question, regardless of what it may be, can in no way affect the outcome of the case.

11. If, however, those courts or tribunals consider that recourse to Community law is necessary to decide a case, Article 177 imposes an obligation on them to refer to the Court of Justice any question of interpretation which may arise.

12. The question submitted by the Corte di Cassazione seeks to ascertain whether, in certain circumstances, the obligation laid down by paragraph (3) of Article 177 might none the less be subject to certain restrictions.

13. It must be remembered in this connection that in . . . *Da Costa* the Court ruled that: 'Although paragraph (3) of Article 177 unreservedly requires courts or tribunals of a Member State against whose decision there is no judicial remedy under national law . . . to refer to the Court every question of interpretation raised before them, the authority of an interpretation under Article 177 already given by the Court may deprive the obligation of its purpose and thus empty it of its substance. Such is the case especially when the question raised is materially identical with a question which has already been the subject of a preliminary ruling in a similar case.'

14. The same effect, as regards the limits set to the obligation laid down by paragraph (3) of Article 177, may be produced where previous decisions of the Court have already dealt with the point of law in question, irrespective of the nature of the proceedings which led to those decisions, even though the questions at issue are not strictly identical.

15. However, it must not be forgotten that in all such circumstances national courts and tribunals, including those referred to in paragraph (3) of Article 177, remain entirely at liberty to bring a matter before the Court of Justice if they consider it appropriate to do so.

A previous ruling can therefore be relied on even if it did not emerge from the same type of proceedings, and even though the questions at issue were not strictly identical. Provided that the point of law has already been determined by the ECJ, it can be relied on by a national court in a later case, thereby obviating the need for a reference. The national courts were encouraged to rely on the ECJ's prior rulings where the substance of the legal point had already been adjudicated.[30] Those earlier ECJ rulings became, in that sense, precedents for the national courts. This is subject to the qualification in paragraph 15: the national court can still refer if it so wishes, and the application will not be deemed inadmissible, but the ECJ is likely to give its decision by reasoned order, in which reference is made to its previous judgment or to the relevant case law.[31]

(B) THE VALIDITY OF EU LEGISLATION AND PRIOR ECJ RULINGS

The cases discussed thus far concerned the impact of an earlier ECJ ruling when Member State action has been alleged to violate the Treaty. The ECJ has been even more forceful when the impact

[30] Cases C–428 and 434/06 *Unión General de Trabajadores de La Rioja (UGT-Rioja) v Juntas Generales del Territorio Histórico de Vizcaya* [2008] ECR I–6747, [42]–[43].

[31] Case C–260/07 *Pedro IV Servicios SL v Total España SA*, 2 Apr 2009, [31].

of its previous decisions on the validity of EU legislation has been in issue. This is exemplified by the *ICC* case:

Case 66/80 **International Chemical Corporation v Amministrazione delle Finanze dello Stato**
[1981] ECR 1191

Council Regulation 563/76 was designed to reduce stocks of skimmed-milk powder. It made the grant of Community aid dependent on proof that the recipient had purchased a certain quantity of such skimmed milk held by an intervention agency. Compliance with this obligation was secured by the payment of security that was forfeited if the skimmed milk was not bought. The plaintiff received the Community aid and paid the security, but did not buy the skimmed-milk powder, and hence the national intervention agency did not release the security. In an earlier case the ECJ had found that Regulation 563/76 was invalid, because the price at which the milk powder was to be bought was regarded as disproportionately high.[32] The plaintiff, therefore, took the view that the security could not be forfeited, since it only served to ensure compliance with an obligation (to buy the milk powder), which was invalid. The Italian court requested a ruling on whether the earlier judgment holding the regulation to be null and void was effective in any subsequent litigation, or whether such a finding was only of relevance in relation to the court which had originally sought the ruling.

THE ECJ

11. The main purpose of the powers accorded to the Court by Article 177 is to ensure that Community law is applied uniformly by national courts. Uniform application of Community law is imperative not only when a national court is faced with a rule of Community law the meaning and scope of which is to be defined; it is just as imperative when the Court is confronted by a dispute as to the validity of an act of the institutions.

12. When the Court is moved under Article 177 to declare an act of one of the institutions to be void there are particularly imperative requirements concerning legal certainty in addition to those concerning the uniform application of Community law. It follows from the very nature of such a declaration that a national court may not apply the act declared to be void without once more creating serious uncertainty as to the Community law applicable.

13. It follows therefrom that although a judgment of the Court given under Article 177 of the Treaty declaring an act of an institution, in particular a Council or Commission regulation, to be void is directly addressed only to the national court which brought the matter before the Court, it is sufficient reason for any other national court to regard that act as void for the purposes of a judgment which it has to give.

14. That assertion does not however mean that national courts are deprived of the power given to them by Article 177 . . . and it rests with those courts to decide whether there is a need to raise once again a question which has already been settled by the Court where the Court has previously declared an act of a Community institution to be void. There may be such a need in particular if questions arise as to the grounds, the scope and possibly the consequences of the invalidity established earlier.

15. If that is not the case national courts are entirely justified in determining the effect on the cases brought before them of a judgment declaring an act void given by the Court in an action between other parties.

16. It should further be observed, as the Court acknowledged in its judgments . . . in Joined Cases 117/76 and 16/77, *Ruckdeschel and Diamalt*,[33] and Joined Cases 124/76 and 20/77, *Moulins de*

[32] See Case 116/76 *Granaria v Hoofdproduktschap voor Akkerbouwprodukten* [1977] ECR 1247.
[33] [1977] ECR 1753.

Pont-à-Mousson and Providence Agricole,[34] that as those responsible for drafting regulations declared to be void the Council or the Commission are bound to determine from the Court's judgment the effect of that judgment.

17. In the light of the foregoing considerations and in view of the fact that by its second question the national court has asked, as it was free to do, whether Regulation 563/76 was void, the answer should be that that is in fact the case for the reasons already stated in the judgments of 5 July 1977.

The *ICC* case provides further evidence of the ECJ's approach to precedent. The national court has discretion to refer a matter to the Court, even if the latter has already given judgment. However, the ECJ makes it patently clear that, although such a judgment is addressed primarily to the court which requested the original ruling, it should be relied on by other national courts before which the matter arises. The original ruling will, in this sense, have a multilateral and not merely a bilateral effect. A decision of the ECJ will, therefore, have a precedential impact on all national courts within the EU. The Court has, however, made it clear that national courts cannot themselves find that an EU norm is invalid.

Case 314/85 **Firma Foto-Frost v Hauptzollamt Lübeck-Ost**
[1987] ECR 4199[35]

A national court inquired whether it had the power to declare invalid a Commission decision on the ground that it was in breach of a Community regulation on a certain issue.

THE ECJ

13. In enabling national courts against whose decisions there is a judicial remedy under national law to refer to the Court for a preliminary ruling questions on interpretation or validity, Article 177 did not settle the question whether those courts themselves may declare that acts of Community institutions are invalid.

14. Those courts may consider the validity of a Community act and, if they consider that the grounds put forward before them by the parties in support of invalidity are unfounded, they may reject them, concluding that the measure is completely valid. By taking that action they are not calling the existence of the Community measure into question.

15. On the other hand, those courts do not have the power to declare acts of the Community institutions invalid. As the Court emphasised in the judgment . . . (Case 66/80, *International Chemical Corporation* . . .), the main purpose of the powers accorded to the Court by Article 177 is to ensure that Community law is applied uniformly by national courts. That requirement of uniformity is particularly imperative when the validity of a Community act is in question. Divergences between courts in the Member States as to the validity of Community acts would be liable to place in jeopardy the very unity of the Community legal order and detract from the fundamental requirement of legal certainty.

. . .

17. Since Article 177 gives the Court exclusive jurisdiction to declare void an act of a Community institution, the coherence of the system requires that where the validity of a Community act is challenged before a national court the power to declare the act invalid must also be reserved to the Court of Justice.

18. It must also be emphasised that the Court of Justice is in the best position to decide on the validity of Community acts. Under Article 20 of the Protocol on the Statute of the Court of Justice of the EEC,

[34] [1977] ECR 1795.

[35] Case C–27/95 *Woodspring DC v Bakers of Nailsea Ltd* [1997] ECR I–1847; Case C–461/03 *Gaston Schul Douane-expediteur BV v Minister van Landbouw, Natuur en Voedselkwalitiet* [2005] ECR I–10513, [15]–[25]; Case C–344/04 *IATA* (n 28) [27]–[32].

Community institutions whose acts are challenged are entitled to participate in the proceedings in order to defend the validity of the acts in question. Furthermore, under the second paragraph of Article 21 of that Protocol the Court may require the Member States and institutions which are not participating in the proceedings to supply all information which it considers necessary for the purpose of the case before it. . . .

19. It should be added that the rule that national courts may not themselves declare Community acts to be invalid may have to be qualified in certain circumstances in the case of proceedings relating to an application for interim measures; however, that case is not referred to in the national court's question.

20. The answer to the first question must therefore be that national courts have no jurisdiction to declare that acts of Community institutions are invalid.

The ECJ, in *Atlanta*,[36] provided guidance on the issue of interim relief raised in paragraph 19. Where a national measure is challenged because of the alleged invalidity of the EU regulation on which it was based, the national court can grant interim relief. Certain conditions must however be met. The national court must have serious doubts about the validity of the EU measure, and must have referred the measure to the ECJ for a ruling. The interim relief must be necessary to prevent serious and irreparable damage to the applicant. The national court must take due account of the Union interest.[37] It must, moreover, respect any decision of the ECJ or General Court already given on the substance of the disputed measure.

(c) ECJ RULINGS AND LEGAL CERTAINTY

The discussion thus far has been concerned with the effect of a prior ruling of the EU Courts for national courts. It is, as we have seen, for the national court to apply that prior ruling. The ECJ does not, however, delve into the national legal system and determine the validity of national law. It gives an interpretation of the compatibility of national law with EU law, and it is then for the national court to apply that interpretation within its legal system. The general principle is that the ECJ's ruling establishes the law from the time that it entered into force, and should therefore be applied to legal relationships before the ruling was given.[38] This can lead to difficulties concerning legal certainty.[39]

Case C–453/00 **Kühne & Heitz NV v Produktschap voor Pluimvee en Eieren** [2004] ECR I–837

The applicants were exporters of poultry meat to non-member countries. The product was originally classified under one heading of the common customs tariff, on the basis of which the applicants were paid certain export refunds. The Dutch customs authorities then decided that the product should fall under a different classification and demanded reimbursement of the export refunds. The applicants appealed that decision to a Dutch court, which dismissed the appeal. The applicants did not request a preliminary ruling on the matter. In a subsequent decision involving different parties the ECJ made

[36] Case C–465/93 *Atlanta Fruchthandelsgesellschaft mbH v Bundesamt für Ernährung und Forstwirtschaft* [1995] ECR I–3761; Cases C–143/88 and 92/89 *Zuckerfabrik Süderdithmarschen AG v Hauptzollamt Itzehoe* [1991] ECR I–415; Case C–334/95 *Kruger GmbH & Co KG v Hauptzollamt Hamburg-Jonas* [1997] ECR I–4517.

[37] By considering whether, eg, the EU measure would be deprived of all effectiveness if it were not implemented immediately.

[38] Case C–455/08 *Commission v Ireland*, 23 Dec 2009, [39].

[39] J Komarek, 'Federal Elements in the Community Judicial System: Building Coherence in the Community Legal System' (2005) 42 CMLRev 9; R Caranta, Note (2005) 42 CMLRev 179.

it clear that the re-classification of the product by the Dutch customs authorities was erroneous. The applicants then sought reimbursement of the refunds that they would have received if the Dutch authorities had classified the goods correctly. Under Dutch law administrative bodies could, in principle, reopen a final decision, and could in certain circumstances withdraw the decision. However under Dutch law the finality of an administrative decision would not normally be affected by subsequent judicial decisions, since that could seriously impair legal certainty and give rise to administrative chaos. The ECJ reiterated the general principle that a ruling under Article 267 established the law as it should be understood from the time it entered into force, and that therefore this should be applied by an administrative body to legal relationships before the ruling was given. The issue was whether this should be applied even where the administrative decision had become final.

THE ECJ

24. Legal certainty is one of a number of general principles recognised by Community law. Finality of an administrative decision . . . contributes to such legal certainty and it follows that Community law does not require that administrative bodies be placed under an obligation, in principle to reopen an administrative decision which has become final in that way.

[*The ECJ then noted that under Dutch law administrative decisions could, subject to certain conditions, be reopened.*]

26. [T]he circumstances of the main case are the following. First, national law confers on the administrative body competence to reopen the decision . . . which has become final. Second, that decision became final only as a result of a judgment of a national court against whose decisions there is no judicial remedy. Third, that judgment was based on an interpretation of Community law which, in the light of a subsequent judgment of the Court, was incorrect and which was adopted without a question being referred to the Court for a preliminary ruling in accordance with the conditions provided for in the third paragraph of Article 234 EC. Fourth, the person concerned complained to the administrative body immediately after becoming aware of that judgment of the Court.

27. In such circumstances, the administrative body concerned is, in accordance with the principle of cooperation arising under Article 10 EC, under an obligation to review that decision in order to take account of the interpretation of the relevant provisions of Community law given in the meantime by the Court. The administrative body will have to determine on the basis of the outcome of that review to what extent it is under an obligation to reopen, without adversely affecting the interests of third parties, the decision in question.

Later cases have fine-tuned the requirements laid down in the preceding case.[40] Thus it is clear from *Kempter*[41] that the third condition in *Kühne & Heitz* does not require the parties to have raised the point of EU law before the national court. It suffices in this respect if either the point of EU law, the interpretation of which proved to be incorrect in light of a subsequent ECJ judgment, was considered by the national court ruling at final instance or could have been raised by the latter of its own motion.

(D) CONCLUSION

The development of precedent charted above has implications for the relationship between national courts and the ECJ. It modifies the original conception of a horizontal and bilateral relationship. In so far as ECJ rulings have precedential value, they place the Court in a superior position to the national

[40] Case C–234/04 *Kapferer v Schlanck & Schick GmbH* [2006] ECR I–2585; Cases C–392 and 422/04 *i-21 Germany GmbH and Arcor & Co KG v Germany* [2006] ECR I–8559.

[41] Case C–2/06 *Kempter* (n 27) [44].

courts. The very existence of a system of precedent is indicative of a shift to a vertical hierarchy between the ECJ and national courts: the ECJ will lay down the legally authoritative interpretation, which will then be adopted by national courts. The creation of precedent serves also to render that relationship less bilateral, and more multilateral, since an earlier ECJ ruling can be relied on by any national court dealing with the point of law that has already been decided by the ECJ.

The importance attached to earlier rulings is both reflected in and reinforced by Article 104(3) of the Rules of Procedure,[42] which allows the ECJ to give its decision by reasoned order referring to a previous decision or earlier case law where a question referred is identical to one that has already been answered, or where the answer to the question can be clearly deduced from prior case law. Thus if the national court does refer where there is an existing precedent the ECJ may well give judgment by reasoned order that reiterates its previous ruling.

4 THE EXISTENCE OF A QUESTION: THE '*ACTE CLAIR*' DOCTRINE

A national court may feel that the answer to the issue is so clear that no reference to the ECJ is required. National courts have, in the past, refused to make a reference for this reason.[43] The conditions in which this is legitimate were considered in *CILFIT*:

Case 283/81 **Srl CILFIT and Lanificio di Gavardo SpA v Ministry of Health** [1982] ECR 3415

[Note Lisbon Treaty renumbering: Art 177(3) is now Art 267(3) TFEU]

The facts were set out above. Where a precedent exists, then the relationship between the ECJ and the national court is as set out in the preceding section. The *acte clair* doctrine may however apply where there is no prior ECJ decision on the point. The extract follows on immediately from that given above.

THE ECJ

16. Finally, the correct application of Community law may be so obvious as to leave no scope for any reasonable doubt as to the manner in which the question raised is to be resolved. Before it comes to the conclusion that such is the case, the national court or tribunal must be convinced that the matter is equally obvious to the courts of the other Member States and to the Court of Justice. Only if those conditions are satisfied may the national court or tribunal refrain from submitting the question to the Court of Justice and take upon itself the responsibility for resolving it.

17. However, the existence of such a possibility must be assessed on the basis of the characteristic feature of Community law and the particular difficulties to which its interpretation gives rise.

18. To begin with, it must be borne in mind that Community legislation is drafted in several languages and that the different language versions are equally authentic. An interpretation of a provision of Community law thus involves a comparison of the different language versions.

19. It must also be borne in mind, even where the different language versions are entirely in accord with one another, that Community law uses terminology which is peculiar to it. Furthermore, it must

[42] Rules of Procedure of the Court of Justice, 1 Dec 2005, available at http://curia.europa.eu/jcms/upload/docs/application/pdf/2010-04/rp.en.pdf.

[43] See, eg, *Re Société des Pétroles Shell-Berre* [1964] CMLR 462.

be emphasised that legal concepts do not necessarily have the same meaning in Community law and in the law of the various Member States.

20. Finally, every provision of Community law must be placed in its context and interpreted in the light of the provisions of Community law as a whole, regard being had to the objectives thereof and to its state of evolution at the date on which the provision in question is to be applied.

21. In the light of all those considerations, the answer to the question submitted . . . must be that paragraph (3) of Article 177 of the EEC Treaty is to be interpreted as meaning that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of Community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the Community provision in question has already been interpreted by the Court or that the correct application of Community law is so obvious as to leave no scope for any reasonable doubt. The existence of such a possibility must be assessed in the light of the specific characteristics of Community law, the particular difficulties to which its interpretation gives rise and the risk of divergences in judicial decisions within the Community.

The implications of *CILFIT* were considered by a number of commentators. References to Article 177 should now be read as to Article 267 TFEU.

GF Mancini and DT Keeling, From CILFIT to ERT: The Constitutional Challenge Facing the European Court[44]

The correct analysis of *CILFIT* was given by a Danish scholar, Professor Hjalte Rasmussen,[45] who maintains that the judgment was based on an astute strategy of 'give and take'. The Court, recognizing that it could not in any case coerce the national courts into accepting its jurisdiction, concedes something—a great deal in fact, nothing less than the right not to refer if the Community measure is clear—to the professional or national pride of the municipal judge, but then . . . restricts the circumstances in which the clarity of the provision may legitimately be sustained to cases so rare that the nucleus of its own authority is preserved intact (or rather consolidated because it voluntarily divested itself of a part of its exclusive jurisdiction). The objective of the Court is plain: by granting supreme courts the power to do lawfully that which they could in any case do unlawfully, but by subjecting that power to stringent conditions, the Court hoped to induce the supreme courts to use willingly the 'mechanism for judicial cooperation' provided by the Treaty. The result is to eliminate sterile and damaging conflicts and to reduce the risk that Community law might be the subject of divergent interpretations.

Mancini and Keeling therefore saw *CILFIT* as a dialogue between the ECJ and the national courts, with the intent being to rein in the latter. The 'give and take' of *CILFIT* involved the ECJ accepting the *acte clair* doctrine in principle, but placing significant constraints on its exercise in the hope that national courts would play the game and only refuse to refer when matters really were unequivocally clear.

Some writers were, however, more sceptical as to whether the conditions laid down in *CILFIT* really did curb the discretion of national courts.

[44] Mancini and Keeling (n 3) 4.
[45] H Rasmussen, 'The European Court's *Acte Clair* Strategy in *CILFIT*' (1984) 9 ELRev 242.

A Arnull, The Use and Abuse of Article 177[46]

The effect of the *CILFIT* decision, it was argued,[47] would be to enable national judges to justify any reluctance they might feel to ask for a preliminary ruling by reference to a decision of the European Court. Of the factors to be borne in mind by national courts before they concluded that the meaning of a provision of Community law was clear, only the requirement that the different language versions be compared, it was submitted, had any teeth. However, even this requirement was less onerous than it seemed, as comparison of the different language versions would usually be carried out by reference to the version in the judge's own tongue.

[*Arnull examined the practice of the United Kingdom courts that had cited the* CILFIT *decision. He concluded in the following vein.*[48]]

The English cases in which *CILFIT* has been cited and a reference made seem to support Rasmussen's view that the effect of that decision, despite appearances to the contrary, would be to make national courts wary of deciding points of Community law for themselves. However, the English cases where *CILFIT* was mentioned but no reference made show that sometimes the outcome of that ruling has been far less beneficial. They illustrate how it can be used to justify refusing to make a reference where the national court has formed a view as to how the points of Community law at issue should be resolved. Courts in the United Kingdom make far fewer references than courts in other Member States of comparable size . . . It is therefore a serious matter when a decision of the European Court is used by the English Courts as a reason for failing to take a step which it might otherwise have been more difficult to avoid.

Others have, however, argued that the conditions in *CILFIT* are too restrictive, and that more discretion should be left to national courts. Thus Advocate General Jacobs argued that national judges should not have to consider all the official language versions of EU acts.[49] This view has been echoed by the Association of the Councils of State and Supreme Administrative Jurisdictions of the EU, which contended that the conditions in *CILFIT* should be relaxed, that they should be applied in a 'commonsense' way, and that comparing all the language versions was no longer realistic or feasible. It argued that *CILFIT* should be applied so that the national court would determine whether the case was worth the burden of a preliminary reference.[50] Rasmussen put an analogous argument.

H Rasmussen, Remedying the Crumbling EC Judicial System[51]

The thrust of a *CILFIT II* should be to give the initiative back to the judges of the Member States, trusting them to solve on their own far more questions of interpretation of Community law, including those which are not straightforward. In technical terms, a *CILFIT II* should operate so as to enlarge considerably the scope of the Community acts which are deemed to be *actes clairs*. The job to pin down on paper the demarcation line between those cases which will deserve EC judicial attention . . . and those classes of cases which the national judges ought to decide on their own responsibility will not be an easy one, but it is as indispensable as difficult.

Current indications are however that the ECJ is content with the formulation in *CILFIT* and shows no inclination to modify the ruling to any significant degree.[52] It is true that in *Intermodal*[53] the ECJ declined to extend the *CILFIT* conditions, holding that a national court was not required to ensure that the matter was equally obvious to bodies of a non-judicial nature, such as administrative authorities. Subject to that caveat, the ECJ reaffirmed the *CILFIT* condition that before declining to refer a national court must be convinced that the matter was so obvious that there was no scope for any reasonable doubt as to the way in which the question should be resolved, and more especially that the matter was equally obvious to other national courts and to the ECJ.[54] The reality in the UK is that the Supreme Court does not generally consider the *CILFIT* criteria separately, but asks if the answer is 'clear beyond the bounds of reasonable argument'.[55]

SUMMARY

i. The relationship between national courts and the ECJ has been transformed by the development of precedent, *acte clair*, and sectoral delegation of responsibility.

ii. These developments have made national courts EU courts in their own right. They can dispose of cases without the need for a further reference to the ECJ. They can do so where there is an EU precedent on the point, where the matter is so clear as to obviate the need for a reference, or where more general responsibility has been delegated to them in a particular area.

iii. The combined effect has been to render the relationship more vertical and multilateral than it was at the inception of the EU.

5 THE DECISION TO REFER: THE NATIONAL COURT'S PERSPECTIVE

The discussion thus far has touched on factors which can influence the national court's decision whether to refer: the existence of an ECJ judgment and the *acte clair* doctrine. We now consider the more general factors that a national court may take into account when making the decision whether to refer. There are two criteria that must be satisfied before a reference may be made.

The first is that the question must be raised before the court or tribunal of the Member State. However, it has been seen that the *CILFIT* case held that a national court may raise a matter of its own motion, even if this has not been done by the parties.[56] The second general criterion is that the national court must consider that a decision on the question is necessary to enable it to give judgment. *CILFIT* makes it clear that even a national court of last resort must believe that this is so before it is obliged to make a reference. It should also be noted that Article 267 does not provide that the reference must be necessary, but that a decision on the question be necessary to enable the national court to give judgment. The danger of confusing these two issues is brought out in the *Bulmer* case.

The *Bulmer* case shows the 'early approach' of the UK courts to the exercise of the discretion accorded to them.

HP Bulmer Ltd v J Bollinger SA
[1974] 2 WLR 202

Bollinger made champagne and claimed that the use of the word champagne by makers of cider, in the form of champagne cider, should be prohibited. Bollinger alleged that the use of the word champagne to describe products other than those which came from the Champagne region in France was contrary to Community law. Bollinger asked that this question of Community law should be referred to the ECJ. The judge at first instance refused to make the reference, and Bollinger appealed to the Court of Appeal. Lord Denning emphasized that the discretion whether to refer was for the national court and that it should do so only where the decision on the question was necessary to enable it to give judgment. A reference might not be necessary where there was an existing ECJ judgment on the point or where the matter was *acte clair*.

COURT OF APPEAL: LORD DENNING MR

(2) Guidelines as to the exercise of discretion. Assuming that the condition about 'necessary' is fulfilled, there remains the matter of discretion. . . .

(i) The time to get a ruling. The length of time . . . before a ruling can be obtained from the European Court. This may take months and months. . . . Meanwhile, the whole action in the English court is stayed until the ruling is obtained. This may be very unfortunate, especially in a case where an injunction is sought or there are other reasons for expedition. . . .

(ii) Do not overload the Court. The importance of not overloading the European Court by references to it. If it were overloaded, it could not get through its work. . . .

(iii) Formulate the question clearly. The need to formulate the question clearly. It must be a question of interpretation only of the Treaty. It must not be mixed up with the facts. . . .

(iv) Difficulty and importance. The difficulty and importance of the point. Unless the point is really difficult and important, it would seem better for the English judge to decide it himself. For in so doing, much delay and expense will be saved. . . .

(v) Expense. The expense of getting a ruling from the European Court. . . .

(vi) Wishes of the parties. The wishes of the parties. If both parties want the point referred . . . the English court should have regard to their wishes, but it should not give them undue weight. The English court should hesitate before making a reference against the wishes of one of the parties, seeing the expense and delay which it involves.

Lord Denning MR decided on the facts that a reference was not needed for a number of reasons.[57] The judgment was not uncontroversial and the guidelines were criticized. Thus Jacobs argued that there were many situations where time and costs would be saved by an early reference and that cases raising important points of EU law could arise where there was little at stake between the parties.[58]

The *Samex* case is more indicative of the 'current approach' of the UK courts, which are more ready to refer.

[57] The time and expense involved; the facts had not been fully found; and the point was not a difficult one, [1974] 3 WLR 202, 216–217.

Customs and Excise Commissioners v ApS Samex (Hanil Fiber Industrial Co Ltd, third party)
[1983] 1 All ER 1042

An EC regulation allowed Member States to impose quantitative limits on the import of textiles from certain countries outside the EC. The implementation of the import scheme was left to the Member States, who were to issue import licences up to the quota for each year. The defendant made a contract to buy goods from a non-member state, which stipulated that the goods had to be shipped by a certain date. The Customs authorities discovered that the goods had been shipped outside the relevant dates, and imposed penalties on the defendant. The latter responded by arguing that the Customs authorities were in breach of the Community regulation, and sought a reference to the ECJ. Bingham J considered the guidelines set out by Lord Denning MR in *Bulmer*. He then continued as follows.

HIGH COURT: BINGHAM J

Sitting as a judge in a national court, asked to decide questions of Community law, I am very conscious of the advantages enjoyed by the Court of Justice. It has a panoramic view of the Community and its institutions, a detailed knowledge of the treaties and of much subordinate legislation made under them, and an intimate familiarity with the functioning of the Common Market which no national judge denied the collective experience of the Court of Justice could hope to achieve. Where questions of administrative intention and practice arise the Court of Justice can receive submissions from the Community institutions, as also where relations between the Community and non-Member States are in issue. Where the interests of Member States are affected they can intervene to make their views known. . . .

Where comparison falls to be made between Community texts in different languages, all texts being equally authentic, the multinational Court of Justice is equipped to carry out the task in a way which no national judge, whatever his linguistic skills, could rival. The interpretation of Community instruments involves very often not the process familiar to common lawyers of laboriously extracting the meaning from words used but the more creative process of supplying flesh to a spare and loosely constructed skeleton. The choice between alternative submissions may turn not on purely legal considerations, but on a broader view of what the orderly development of the Community requires. These are matters which the Court of Justice is very much better placed to assess and determine than a national court.

While United Kingdom courts sometimes still refer to the guidelines in *Bulmer* they also tend to be more ready to make a reference. Sir Thomas Bingham MR encapsulated the more modern approach.[59]

[I]f the facts have been found and the Community law issue is critical to the court's final decision, the appropriate course is to refer the issue to the Court of Justice unless the national court can with complete confidence resolve the issue itself. In considering whether it can . . . the national court must be

fully mindful of the differences between national and Community legislation, of the pitfalls which face a national court venturing into what may be an unfamiliar field, of the need for uniform interpretation throughout the Community and of the great advantages enjoyed by the Court of Justice in construing Community instruments. If the national court has any real doubt, it should obviously refer.

6 ACCEPTANCE OF THE REFERENCE: THE ECJ'S PERSPECTIVE

We now turn to consider how the ECJ perceives its role when an issue is referred by a national court. The ECJ's approach has altered since the inception of the EEC.

(A) THE LIBERAL INITIAL APPROACH

The ECJ's initial approach was very liberal and it would, wherever possible, read the reference so as to preserve its ability to pass judgment on the case.

The ECJ was prepared to *correct improperly framed references*. Thus in *Costa* the ECJ stated that it had power to extract from a question imperfectly formulated by the national court those questions which really did pertain to the interpretation of the Treaty.[60] This is also exemplified by the *Schwarze* case.

Case 16/65 **Firma C Schwarze v Einfuhr- und Vorratsstelle für Getreide und Futtermittel** [1965] ECR 877

[Note Lisbon Treaty renumbering: Arts 173 and 177 are now Arts 263 and 267 TFEU]

Schwarze obtained import licences from the EVSt to import barley. The EVSt fixed the rate of levy which should be paid, pursuant to a Council regulation. The rate of levy was fixed on the basis of a Commission decision. Schwarze argued that the levy rate was too high, and that the Commission decision was illegal. The Finanzgericht therefore submitted a number of detailed questions to the ECJ. France argued that the questions being asked were concerned not with the interpretation of the Treaty, but rather with the validity of Community acts; and that the proper way of challenging such acts was via Article 173, and not via Article 177.

THE ECJ

It appears from the wording of the questions submitted that the Hessisches Finanzgericht is concerned not so much with the interpretation of the Treaty or of an act of a Community institution, as with a preliminary ruling on the validity of such an act under Article 177(1)(b). . . .

In its comments, the government of the French Republic complains that several of the questions submitted call for more than just an interpretation of the Treaty. The Court of Justice would, in answering these alleged questions of interpretation, actually be ruling on points involving not the interpretation of the Treaty but the validity of acts of the EEC institutions.

[60] Case 6/64 *Costa v ENEL* [1964] ECR 585.

> The contention of the French Republic that Article 177 cannot be used to obtain from the Court a ruling that such an act is null and void is pertinent. That provision does, however, expressly give the Court power to rule on the validity of such an act. Where it appears that the real object of the questions submitted by a national court is a review of the validity of Community acts rather than an interpretation thereof, the Court of Justice must nevertheless decide the questions immediately, instead of holding the referring court to a strict adherence to form which would only serve to prolong the Article 177 procedure and be incompatible with its true nature. Such a strict adherence to form is conceivable in actions between parties whose respective rights must be determined according to strict rules. It would not, however, be appropriate in the very special area of judicial cooperation provided for in Article 177, where the national court and the Court of Justice—each within its own jurisdiction and with the purpose of ensuring a uniform application of Community law—must together and directly contribute to the legal conclusions. Any other procedure would have the result of letting the national courts rule on the validity of acts of the Community.

The ECJ also *commonly rejected claims that a reference should not be accepted because of the reasons for making it, or the facts on which it was based*. The ECJ emphasized that these matters were the domain of the national court. Thus in *Costa* the ECJ stated that Article 267 'is based on a clear separation of functions between national courts and the Court of Justice'. The ECJ was not empowered to 'investigate the facts of the case or to criticise the grounds and purpose of the request for interpretation'.[61] Similarly in *Pierik*,[62] the ECJ reiterated that Article 267 was based on a clear division of function, which precluded it from judging the relevance of the questions asked, or from determining whether concepts of EU law really were applicable to the case before the national court. The ECJ stressed the point once again in *Simmenthal*,[63] stating that what is now Article 267 was based on a distinct separation of function between national courts and the ECJ, such that the latter did not have jurisdiction to take cognizance of the facts of the case or to criticize the reasons for the reference.

The ECJ's approach during the early years was therefore open and flexible. It clearly did not wish to discourage litigants from having recourse to Community law, more especially because it was through Article 267 TFEU that the ECJ developed doctrines such as direct effect and supremacy. Nor did the ECJ wish to place obstacles in the path of national judiciaries by refusing to answer questions unless they were perfectly framed. This would not have encouraged national judges to make use of novel legal machinery.

(B) THE ECJ ASSERTS AUTHORITY OVER CASES REFERRED

It is clear, notwithstanding the preceding cases, that the ECJ regards itself as having the ultimate authority to decide whether a reference is warranted or not. The seminal case in this respect is *Foglia*.

Case 104/79 **Pasquale Foglia v Mariella Novello**
[1980] ECR 745

[Note Lisbon Treaty renumbering: Arts 95 and 177 are now Arts 110 and 267 TFEU]

> Foglia made a contract to sell wine to Novello, and the contract stated that Novello would not be liable for any taxes levied by the French or Italian authorities which were contrary to EC law. The goods were

[61] Ibid 593.
[62] Case 117/77 *Bestuur van het Algemeen Ziekenfonds, Drenthe-Platteland v G Pierik* [1978] ECR 825.
[63] Case 35/76 *Simmenthal SpA v Ministero delle Finanze* [1976] ECR 1871, [4].

carried by Danzas, a general transporter. The contract of carriage also contained a clause stipulating that Foglia would not be liable for charges which were contrary to EC law. Danzas in fact paid a French tax, and this was included in the bill submitted to Foglia, who paid the bill including the amount of the disputed tax, notwithstanding the clause in the contract of carriage which would have entitled him not to do so. Foglia then sought to recover this amount from Novello in an action before an Italian court. The latter refused to pay, relying on the clause in her contract with Foglia which stipulated that she would not be liable for any unlawful charge. Novello argued that the charge was contrary to Article 95. The Italian court sought a preliminary ruling whether the French tax was in fact contrary to Community law. The ECJ noted that the pleadings of Foglia and Novello concerning tax discrimination were essentially identical.

THE ECJ

10. It thus appears that the parties to the main action are concerned to obtain a ruling that the French tax system is invalid for liqueur wines by the expedient of proceedings before an Italian court between two private individuals who are in agreement as to the result to be attained and who have inserted a clause in their contract in order to induce the Italian court to give a ruling on the point. The artificial nature of this expedient is underlined by the fact that Danzas did not exercise its rights under French law to institute proceedings over the consumption tax although it undoubtedly had an interest in doing so in view of the clause in the contract by which it was also bound and moreover of the fact that Foglia paid without protest that undertaking's bill which included a sum paid in respect of that tax.

11. The duty of the Court of Justice under Article 177 of the EEC Treaty is to supply all courts in the Community with the information on the interpretation of Community law which is necessary to enable them to settle genuine disputes which are brought before them. A situation in which the Court was obliged by the expedient of arrangements like those described above to give rulings would jeopardise the whole system of legal remedies available to private individuals to enable them to protect themselves against tax provisions which are contrary to the Treaty.

The ECJ therefore declined to give a ruling, but the Italian judge was undaunted and referred further questions to the ECJ. He asked, in effect, whether the preceding decision was consistent with the principle that it was for the national judge to determine the facts and the need for a reference.

Case 244/80 **Pasquale Foglia v Mariella Novello (No 2)**
[1981] ECR 3045

THE ECJ

12. In his first question the Pretore requested clarification of the limits of the power of appraisal reserved by the Treaty to the national court on the one hand and the Court of Justice on the other with regard to the wording of references for a preliminary ruling and of the appraisal of the circumstances of fact and law in the main action, in particular where the national court is requested to give a declaratory judgment.

. . .

14. With regard to the first question it should be recalled, as the Court of Justice has had occasion to emphasise in very varied contexts, that Article 177 is based on cooperation which entails a division of duties between the national courts and the Court of Justice in the interest of the proper application and uniform interpretation of Community law throughout all the Member States.

15. With this in view it is for the national court—by reason of the fact that it is seised of the substance of the dispute and that it must bear the responsibility for the decision to be taken—to assess, having regard to the facts of the case, the need to obtain a preliminary ruling to enable it to give judgment.

16. In exercising that power of appraisal the national court, in collaboration with the Court of Justice, fulfils a duty entrusted to them both of ensuring that in the interpretation and application of the Treaty the law is observed. Accordingly the problems which may be entailed in the exercise of its power of appraisal by the national court and the relations which it maintains within the framework of Article 177 with the Court of Justice are governed exclusively by the provisions of Community law.

17. In order that the Court of Justice may perform its task in accordance with the Treaty it is essential for national courts to explain, when the reasons do not emerge beyond any doubt from the file, why they consider that a reply to their question is necessary to enable them to give judgment.

18. It must in fact be emphasised that the duty assigned to the Court by Article 177 is not that of delivering advisory opinions on general or hypothetical questions but of assisting in the administration of justice in the Member States. It accordingly does not have jurisdiction to reply to questions of interpretation which are submitted to it within the framework of procedural devices arranged by the parties in order to induce the Court to give its view on certain problems of Community law which do not correspond to an objective requirement inherent in the resolution of a dispute. A declaration by the Court that it has no jurisdiction in such circumstances does not in any way trespass upon the prerogatives of the national court but makes it possible to prevent the application of the procedure under Article 177 for purposes other than those appropriate for it.

19. Furthermore, it should be pointed out that, whilst the Court of Justice must be able to place as much reliance as possible upon the assessment by the national court of the extent to which the questions submitted to it are essential, it must be in a position to make any assessment inherent in the performance of its own duties in particular in order to check, as all courts must, whether it has jurisdiction. Thus the Court, taking into account the repercussions of its decisions in this matter, must have regard, in exercising the jurisdiction conferred upon it by Article 177, not only to the interests of the parties to the proceedings but also to those of the Community and of the Member States. Accordingly it cannot, without disregarding the duties assigned to it, remain indifferent to the assessments made by the courts of the Member States in the exceptional cases in which such assessments may affect the proper working of the procedure laid down by Article 177.

. . .

21. The reply to the first question must accordingly be that whilst, according to the intended role of Article 177, an assessment of the need to obtain an answer to the questions of interpretation raised, regard being had to the circumstances of fact and law involved in the main action, is a matter for the national court it is nevertheless for the Court of Justice, in order to confirm its own jurisdiction, to examine, where necessary, the conditions in which the case has been referred to it by the national court.

. . .

25. The reply to the fourth question must accordingly be that in the case of preliminary questions intended to permit the national court to determine whether provisions laid down by law or regulation in another Member State are in accordance with Community law the degree of legal protection may not differ according to whether such questions are raised in proceedings between individuals or in an action to which the State whose legislation is called in question is a party, but that in the first case the Court of Justice must take special care to ensure that the procedure under Article 177 is not employed for purposes which were not intended by the Treaty.

The important point of principle in *Foglia (No 2)* was that the ECJ would be the ultimate decider of its own jurisdiction. The reasoning is both subtle and dramatic. The judgment began in orthodox

fashion in demarcating the role of the national court and the ECJ. A few paragraphs later this was transformed: due regard was to be given to the view of the national court as to whether a response was required to a question, but the ultimate decision rested with the ECJ. If, in order to resolve this issue, further and better particulars were required from the national courts, then these must be forthcoming.

Foglia was therefore not simply about hypothetical cases. It was about the primacy of control over the Article 267 procedure and the nature of the judicial hierarchy, involving Union and national courts, which operates through this Article. The original division of function between national courts and the ECJ may have been separate but equal, as manifested in the idea that the former decide whether to refer, while the latter gives the ruling on the matter placed before it. *Foglia* reshaped that conception. The ECJ was not simply to be a passive receptor, forced to adjudicate on whatever was placed before it. It would assert some control over the suitability of the reference. The decision in the case, concerning the allegedly hypothetical nature of the proceedings, was simply one manifestation of this assertion of jurisdictional control. The ECJ would, in the future, 'make any assessment inherent in the performance of its own duties in particular in order to check, as all courts must, whether it has jurisdiction' (paragraph 19).

The *Foglia* case generated much comment. Bebr argued against the ruling. References to Article 177 should now be read as to Article 267.

G Bebr, The Existence of a Genuine Dispute: An Indispensable Precondition for the Jurisdiction of the Court under Article 177 EEC Treaty?[64]

> In its well-established case law the Court of Justice has always viewed Article 177 as establishing a method of co-operation between the national courts and the Court, based on jurisdictional exclusivity rather than on a hierarchical superiority. Moreover it has systematically refused to review the grounds for questions raised and their relevance to the pending litigation, being obviously anxious to demonstrate that its function is limited to an interpretation of Community rules or to a review of validity of Community acts. . . .
>
> . . . In this case it took note of several factors from which it inferred that the dispute was fabricated and that, therefore, it lacked jurisdiction . . .
>
> The fabricated nature of a dispute as a precondition for the admissibility of a referral is a slippery concept, not without dangerous pitfalls. The French government which participated in the preliminary proceedings did not, it may be noted, even contest the jurisdiction of the Court. The Court did so of its own motion. Of course, there may be various shades and degrees to which litigation may appear fabricated. The situation may seldom be clear cut. Litigation in which a private party seeks to obtain a ruling in a test case in which it invokes a directly effective Community rule against a Member State before its own national courts may raise a similar problem; it may also lack the character of a genuine dispute. Who may say with any certainty that the plaintiff entertained the action seriously or whether he merely sought to obtain a decision in a test case which although of negligible interest to him, raised a question of principle?[65]

Not all were however opposed to the decision in *Foglia*. Wyatt argued in favour of the ruling, noting that enforcement actions brought by the Commission under Articles 258 and 259 TFEU are subject to preliminary objections concerning admissibility.

[64] (1980) 17 CMLRev 525, 530–532.

[65] Bebr also objected to the *Foglia* ruling because of the difficulties which it would thereby create for the judge in the national courts and for the implications which it might have for the ambit of direct effect.

D Wyatt, Foglia (No 2): The Court Denies it has Jurisdiction to Give Advisory Opinions[66]

> [A]t bottom the controversy over the Court's decision in *Foglia* v. *Novello*... turns on the simple question whether or not references to the European Court from national courts are subject, before the European Court, to the same preliminary objections as to admissibility as any other claim upon the part of private parties, Member States, or Community institutions, to invoke the Court's jurisdiction. If they are not, then the guardians of the European Court's judicial functions, indeed of its very jurisdiction, within the framework of Article 177 EEC, are national courts, rather than the Court itself. It is not impossible that the draftsmen of the Treaty should have ordained such a thing. Simply improbable, in view of the departure from principle which it would involve: superior courts are invariably entrusted with the competence to determine their own jurisdiction.
>
> [*Wyatt demonstrated,* inter alia, *differing ways in which the ECJ determined various jurisdictional issues, such as whether the body making the reference was a court. Later he referred to the reasoning in* Foglia (No 2), *in which the ECJ emphasized that it had no jurisdiction to give advisory opinions*.]
>
> While the Court must be able to place as much reliance as possible upon assessments by national courts of questions referred, it must, it insisted, be in a position to make *itself* any assessment inherent in the performance of its own duties, in particular in order to *check*, as all *courts* must, whether it had jurisdiction. In exercising its *jurisdiction* under Article 177, the Court was bound to consider, not only the interests of the parties to the proceedings, but also the interests of the Community, and of the Member States....
>
> The Court's reasoning is convincing. It affirms its right to determine its own jurisdiction, and contrasts its own essentially judicial functions, with the delivery of advisory opinions. The distinction between a judgment and an advisory opinion is that the former affects the legal position of the parties to a dispute; the latter has no such effect. The capacity to give a *judgment* itself characterises the organ in question as a *court*. The capacity to give legal advice of course has no such corollary....

(c) CASES WHERE THE ECJ HAS DECLINED JURISDICTION

The principle in *Foglia* lay dormant for some time, and attempts to invoke it were unsuccessful.[67] This fuelled the belief that the case was a one-off, and that the principle therein was unlikely to be used. The ECJ however began to use the *Foglia* principle, particularly from the 1990s onwards. The cases fall into a number of categories.

(i) *Hypothetical Cases*

The hypothetical nature of the question provides one example.[68] There are a number of reasons for refusing to give such rulings. They are, in part, practical, since it would be a waste of judicial resources to give a ruling in a hypothetical case, because the problem may never in fact transpire.[69] There are also conceptual problems. If a case really is hypothetical it may be unclear precisely who should be

[66] (1982) 7 ELRev 186, 187–188, 190. Italics in the original.

[67] Case 261/81 *Walter Rau Lebensmittelwerke v De Smedt Pvba* [1982] ECR 3961; Case 46/80 *Vinal SpA v Orbat SpA* [1981] ECR 77; Case C–150/88 *Eau de Cologne and Parfumerie-Fabrik Glockengasse No 4711 KG v Provide Srl* [1989] ECR 3891.

[68] Case C–467/04 *Criminal Proceedings against Gasparini and others* [2006] ECR I–9199.

[69] The wastage of resources argument will also be of relevance if the problem has become moot, in the sense that it has been resolved. Whether a problem has become moot can be contentious. Compare Cases C–422–424/93 *Zabala v Instituto Nacional de Empleo* [1995] ECR I–1567 with Case C–194/94 *CIA Security International SA v Signalson SA* [1996] ECR I–2201.

the appropriate parties to the action, and the relevant arguments may not be put. Moreover, if the hypothetical problem becomes 'concrete', it may not do so in exactly the form envisaged by the court's judgment, and hence the precise relevance of that judgment may be unclear.

While there may, therefore, be sound reasons for refusing to give opinions in hypothetical cases, there is also a fine line dividing that type of case from test cases.[70] A function of a legal system is to enable people to plan their lives with knowledge of the legal implications of the choices they make. Test cases enable individuals to gain such knowledge. That the line between advisory opinions/hypothetical judgments and test cases can be a fine one is exemplified by the facts of the *Foglia* case itself.[71] Moreover, it is clear that the mere fact that parties agree on the interpretation they wish to be accorded to EU law does not, in itself, mean that the dispute is not a real one.[72]

(ii) *The Questions Raised not Relevant to Resolution of the Dispute*

A second reason why the ECJ may not wish to give a ruling is that the questions raised are not relevant to the resolution of the substantive action in the national court.[73] Thus in *Meilicke*[74] the action was brought by a German lawyer, who challenged a theory of non-cash contributions of capital developed by the German courts on the ground that it was not compatible with the Second Banking Directive. The ECJ cited *Foglia (No 2)*, and declined to give a ruling, because it had not been shown that the issue of non-cash subscriptions was actually at stake in the main action.

In *Corsica Ferries*[75] the ECJ reiterated that it had no jurisdiction to rule on questions that had no relation to the facts or the subject matter of the main action, and decided that only four of the possible eight questions met this criterion. The same concern with relevance was evident in *Monin*,[76] where the ECJ held that it lacked jurisdiction to answer questions that did not involve an interpretation of EU law required for the decision by the national court. It therefore declined to answer questions placed before it by an insolvency judge, given that this judge would not have to deal with these issues in the insolvency itself. The *Dias* case exemplifies the same general point.

[70] Case C–412/93 *Leclerc-Siplec v TFI Publicité and M6 Publicite* [1995] ECR I–179, Jacobs AG; Case C–200/98 *X AB and Y AB v Rikssatteverket* [1999] ECR I–8261; Case C–458/06 *Skattervet v Gourmet Classic Ltd* [2008] ECR I–4207, [31]–[32].

[71] *Foglia* was not a hypothetical case in the normal sense of that term. It concerned an actual seller of wine whose business was being affected by a current French tax which he believed to be contrary to Community law. The ECJ's argument that the issue should have been resolved by a different route will not withstand examination. Danzas had no incentive to litigate in France, even though it initially paid the tax, since it was a general carrier, and it would make no commercial sense for it to start an expensive action which was of no specific concern to its business. Foglia's decision to pay Danzas, even though it could have resisted payment under the contract, is also readily explicable. If Foglia had resisted payment then either Danzas would have accepted this, swallowed the loss, and still not have pursued the claim in France because it would not have been worthwhile; and/or it would have accepted this, but increased the cost of carriage by the amount of the tax for subsequent journeys and passed it on to Foglia. In either eventuality the legality of the tax under Community law would not have been contested. Even if Danzas had resorted to formal litigation with Foglia, this action would probably have been initiated in Italy, since it would have been an ordinary contract action the governing law of which would probably have been Italian. Compare *Foglia* to Case C–379/98 *PreussenElektra AG v Schhleswag AG, in the presence of Windpark Reufenkoge III GmbH and Land Schleswig-Holstein* [2001] ECR I–2099, [38]–[46].

[72] Case C–412/93 *Leclerc-Siplec* (n 70); Case C–341/01 *Plato Plastik Robert Frank GmbH v Caropack Handelsgesellschaft mbH* [2004] ECR I–4883; Case C–144/04 *Mangold v Helm* [2005] ECR I–9981.

[73] Case C–134/95 *Unità Socio-Sanitaria Locale No 47 di Biella (USSL) v Istituto Nazionale per l'Assicurazione contro gli Infortuni sul Lavoro (INAIL)* [1997] ECR I–195; Case C–167/01 *Kamer van Koophandel en Fabrieken voor Amsterdam v Inspire Art Ltd* [2003] ECR I–10155; Case C–314/01 *Siemens AG Österreich and another v Hauptverband der österreichischen Socialversicherungstrager* [2004] ECR I–2549; Case C–293/03 *Gregorio My v ONP* [2004] ECR I–12013; Case C–152/03 *Ritter-Coulais v Finanzamt Gemersheim* [2006] ECR I–1711; Case C–313/07 *Kirtruna SL and Elisa Vigano v Red Elite de Electrodomésticos SA* [2008] ECR I–7907.

[74] Case C–83/91 *Wienand Meilicke v ADV/ORGA F A Meyer AG* [1992] ECR I–4871.

[75] Case C–18/93 *Corsica Ferries Italia Srl v Corpo dei Piloti del Porto di Genova* [1994] ECR I–1783.

[76] Case C–428/93 *Monin Automobiles-Maison du Deux-Roues* [1994] ECR I–1707.

Case C–343/90 **Lourenço Dias v Director da Alfandega do Porto** [1992] ECR I–4673

[Note Lisbon Treaty renumbering: Art 95 is now Art 110 TFEU]

Dias was a van driver who was prosecuted for modifying his imported vehicle in a manner which altered its categorization for tax purposes without having paid the extra tax. The ECJ was presented with eight detailed questions from the national court concerning the compatibility of the relevant national rules with Article 95. The Portuguese government argued that the sole basis of the dispute was a narrow question concerning its tax system and that none of the questions actually referred dealt with that issue. The ECJ accepted that national courts were *prima facie* in the best position to decide on the need for a reference, and that therefore, in principle, the ECJ was bound to give a ruling when asked. It then qualified this obligation.

THE ECJ

17. Nevertheless, in Case 244/80 *Foglia (No. 2)*... paragraph 21, the Court considered that, in order to determine whether it has jurisdiction, it is a matter for the Court of Justice to examine the conditions in which the case has been referred to it by the national court. The spirit of cooperation which must prevail in the preliminary ruling procedure requires the national court to have regard to the function entrusted to the Court of Justice, which is to assist in the administration of justice in the Member States and not to deliver advisory opinions on general or hypothetical questions....

18. In view of that task, the Court considers that it cannot give a preliminary ruling... where, *inter alia*, the interpretation requested relates to measures not yet adopted by the Community institutions (see Case 93/78, *Mattheus*...), the procedure before the court making the reference... has already been terminated (see Case 338/85 *Pardini*...) or the interpretation of Community law sought by the national court bears no relation to the actual nature of the case or to the subject-matter of the main action (Case 126/80 *Salonia*...).

19. It should also be borne in mind that... it is appropriate that, before making the reference to the Court, the national court should establish the facts of the case and settle the questions of purely national law.... By the same token, it is essential for the national court to explain the reasons why it considers that a reply to its questions is necessary to enable it to give judgment....

20. With this information in its possession, the Court is in a position to ascertain whether the interpretation of Community law which is sought is related to the actual nature and subject-matter of the main proceedings. If it should appear that the question raised is manifestly irrelevant for the purposes of deciding the case, the Court must declare that there is no need to proceed to judgment.

(iii) *Questions not Articulated Sufficiently Clearly*

A third rationale for refusing to take a case may be that the questions are not articulated clearly enough for the ECJ to be able to give any meaningful legal response.[77] This should be contrasted with the situation in which the ECJ does tease out the real question from a reference which has been imperfectly formulated.[78] The ECJ will not, however, alter the substance of the questions referred to it. Governments and the parties concerned are allowed to submit observations under Article 20 of the Statute of the Court. They are notified of the order of the referring court, and hence it would be wrong for the ECJ to alter the substance of the questions referred.[79]

[77] Case C–318/00 *Bacardi-Martini SAS and Cellier des Dauphins v Newcastle United Football Club* [2003] ECR I–905.
[78] Case C–88/99 *Roquette Frères SA v Direction des Services Fiscaux du Pas-de-Calais* [2000] ECR I–10465.
[79] Case C–235/95 *AGS Assedic Pas-de-Calais v Dumon and Froment* [1998] ECR I–4531.

(iv) *Facts are Insufficiently Clear*

Closely allied to this third rationale is a fourth, where the facts are insufficiently clear for the Court to be able to apply the relevant legal rules. It is often thought that the ECJ merely responds in an abstract manner to very generally framed questions under Article 267. This is not so. The Court will normally be able to characterize the nature of the legal issue only if the reference has an adequate factual foundation. The ECJ established in *Telemarsicabruzzo* that a national court must provide sufficient factual and legal context in order that the ECJ can respond to the questions referred,[80] and the principle has been applied in subsequent cases.[81]

Case C–567/07 **Minister voor Wonen, Wijken en Integratie v Woningstichting Sint Servatius**
1 October 2009

[Note Lisbon Treaty renumbering: Art 87(1) is now Art 107(1) TFEU]

The national court asked whether, when a Member State provides financial resources to undertakings entrusted with the operation of services of general economic interest, the territorial scale of the activities of those undertakings should be limited in order to prevent those resources from constituting unlawful state aid and to prevent the undertakings, when employing those resources in another Member State, from distorting conditions of competition.

THE ECJ

49. [T]he presumption of relevance attaching to questions referred by the national courts for a preliminary ruling can be rebutted only in exceptional cases. Where the questions submitted concern the interpretation of Community law, the Court is in principle bound to give a ruling.

50. It is clear from well-established case-law, however, that the need to provide an interpretation of Community law which will be of use to the national court makes it necessary that the national court define the factual and legislative context of the questions it is asking or, at the very least, explain the factual circumstances on which those questions are based (Joined Cases C–320/90 to C–322/90 Telemarsicabruzzo …).

51. It is also important that the national court should set out the precise reasons why it was unsure as to the interpretation of Community law and why it considered it necessary to refer questions to the Court for a preliminary ruling. In that connection, it is essential that the referring court provide at the very least some explanation of the reasons for the choice of the Community provisions which it requires to be interpreted and of the link it establishes between those provisions and the national legislation applicable to the dispute in the main proceedings….

52. The information provided in the decision making the reference serves not only to enable the Court to give useful answers, but also to enable the governments of the Member States and other interested parties to submit observations in accordance with Article 23 of the Statute of the Court of Justice….

[80] Cases C–320–322/90 *Telemarsicabruzzo SpA v Circostel, Ministero delle Poste e Telecommunicazioni and Ministerio della Difesa* [1993] ECR I–393.

[81] Case C–386/92 *Monin Automobiles v France* [1993] ECR I–2049; Case C–458/93 *Criminal Proceedings against Saddik* [1995] ECR I–511; Case C–316/93 *Vaneetveld v Le Foyer SA* [1994] ECR I–763; Case C–2/96 *Criminal Proceedings against Sunino and Data* [1996] ECR I–1543; Case C–257/95 *Bresle v Préfet de la Région Auvergne and Préfet du Puy-le-Dôme* [1996] ECR I–233; Case C–567/07 *Minister voor Wonen, Wijken en Integratie v Woningstichting Sint Servatius*, 1 Oct 2009; Case C–378/08 *Raffinerie Mediterranee (ERG) SpA v Ministero dello Sviluppo economico*, 9 Mar 2010; Case C–384/08 *Attanasio Group Srl v Comune di Carbognano*, 11 Mar 2010.

53. It should also be added that the need for precision, in particular with regard to the factual and legislative context of the main proceedings, applies in particular in the area of competition, which is characterised by complex factual and legal situations…

54. In this instance, the seventh question is based on the premise that…if Servatius used public resources to implement a future project, that would constitute State aid within the meaning of Article 87(1) EC. Neither the decision making the reference nor the observations of the parties to the main proceedings contain any elements which might serve to establish that such an advantage would in fact have been granted in the context of the construction project at issue in the main proceedings – which in any event was not implemented as Servatius did not obtain the necessary prior authorisation.

….

56. Accordingly, the seventh question referred by the national court must be held to be inadmissible.

(D) INFORMATION NOTE ON PRELIMINARY REFERENCES

The ECJ has incorporated the results of its case law in its Information Note on References from National Courts for a Preliminary Ruling.[82] Paragraph 22 states that the order for reference should contain a statement of reasons which is succinct but sufficiently complete to give the Court a clear understanding of the factual and legal context of the main action.

It should include, in particular, a statement setting out the subject matter of the dispute and the essential facts; the relevant national law; identify as accurately as possible the EU provisions relevant to the case; the reasons why the national court referred the matter and the relationship between the provisions of EU law and national provisions applicable to the action; and a summary of the parties' arguments where appropriate.

(E) LIMITS OF THE POWER TO DECLINE A CASE

The ECJ is exerting greater control over the admissibility of references than in the early years of the Community. It has, however, made it clear that it will decline to give a ruling only if the issue of EU law on which an interpretation is sought is manifestly inapplicable to the dispute before the national court or bears no relation to the subject matter of that action.[83] The standard formulation now used by the ECJ is that a reference will be deemed inadmissible only where it is quite obvious that the interpretation of EU law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it.[84]

[82] [2009] OJ C297/01.

[83] Case C–118/94 *Associazione Italiana per il World Wildlife Fund v Regione Veneto* [1996] ECR I–1223; Case C–129/94 *Criminal Proceedings against Bernaldez* [1996] ECR I–1829; Case C–264/96 *ICI Chemical Industries plc (ICI) v Colmer (HM Inspector of Taxes)* [1998] ECR I–4695; Cases C–215 and 216/96 *Bagnasco v BPN and Carige* [1999] ECR I–135; Case C–379/98 *PreussenElektra AG* (n 71) [38]–[39]; Case C–138/05 *Stichting Zuid-Hollandse Milieufederatie v Minister van Landbouw, Natuur en Voedselkwaliktiet* [2006] ECR I–8339; Case C–295/05 *Asemfo v Transformacion Agraria SA* [2007] ECR I–2999.

[84] Case C–210/06 *Cartesio* (n 16) [67]; Case C–544/07 *Rüffler v Dyrektor Izby Skarbowej we Wrocławiu Ośrodek Zamiejscowy w Wałbrzychu* [2009] ECR I–3389, [38]; Case C–314/08 *Filipiak v Dyrektor Izby Skarbowej w Poznaniu*, 19 Nov 2009, [42]; Case C–484/08 *Caja de Ahorros y Monte de Piedad de Madrid v Asociación de Usuarios de Servicios Bancarios (Ausbanc),* 3 Jun 2010, [19] ; Case C–440/08 *Gielen v Staatssecretaris van Financiën*, 18 Mar 2010, [29].

Case C–314/08 **Filipiak v Dyrektor Izby Skarbowej w Poznaniu**
19 November 2009

The reference concerned the refusal of the Polish tax authorities to grant Filipiak entitlement to tax advantages in respect of the payment of social security and health insurance contributions in the tax year, in the case where the contributions were paid in a Member State other than the state of taxation, even though such tax advantages are granted to taxpayers whose contributions are paid in the Member State of taxation.

THE ECJ

40. According to settled case-law, in proceedings under Article 234 EC, it is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted concern the interpretation of Community law, the Court is in principle bound to give a ruling…

41. Nevertheless, the Court has also held that, in exceptional circumstances, it can examine the conditions in which the case was referred to it by the national court, in order to confirm its own jurisdiction (… Case 244/80 Foglia…paragraph 21; PreussenElektra , paragraph 39; and Rüffler , paragraph 37).

42. The Court may refuse to rule on a question referred for a preliminary ruling by a national court only where it is quite obvious that the interpretation of Community law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it…

43. In that regard, it is clear from the order for reference that, irrespective of the question of the constitutionality of the provisions at issue in the main proceedings, the dispute in the main proceedings and the first question in the reference relate to the compatibility with Community law of legislation under which the right to a tax reduction on the basis of payment of health insurance contributions and the right to deduct from the basis of assessment social security contributions which have been paid are refused where those contributions have been paid in another Member State.

44. The second question follows on from the first…The national court seeks to ascertain, in essence, whether, in the event that Article 43 EC precludes provisions such as those at issue in the main proceedings, the primacy of Community law obliges the national courts to apply Community law and not to apply the national provisions at issue, and to do so even before the judgment of 7 November 2007 of the Trybunał Konstytucyjny, in which that court held that those provisions were incompatible with certain provisions of the Polish Constitution, comes into effect.

45. In light of the foregoing, it is not manifestly obvious that the interpretation sought bears no relation to the actual facts of the main action or its purpose, that the problem is hypothetical, or that the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it.

(F) SUMMARY

i. The ECJ will decline to take a case under Article 267 in a number of situations. These are where the question referred is hypothetical, where it is not relevant to the substance of the dispute, where the question is not sufficiently clear for any meaningful legal response, and where the facts are insufficiently clear for the application of the legal rules.

ii. It will, however, decline to give a ruling only if it is quite obvious that the interpretation of EU law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it.

iii. The rhetoric in Article 267 cases will often be phrased in traditional terms: the judgment will speak of the cooperation between national courts and the ECJ and of the fact that it is for the national court to decide whether to refer or not.[85] This language is still meaningful. The relationship under Article 267 is cooperative.

iv. It is, however, now common for the traditional formula to be supplemented by appropriately drawn caveats which make it clear that the ECJ will not adjudicate if the questions are not relevant, or if they are hypothetical, etc.[86]

v. With changes in the rhetoric have come changes in reality. The cooperation between national courts and the ECJ still exists, but the latter is no longer the passive receptor of anything thrust before it. It has exercised more positive control over its own jurisdiction in the manner redolent of most superior courts.

7 THE DECISION ON THE REFERENCE: INTERPRETATION VERSUS APPLICATION

The preceding discussion has considered whether a reference should be made from the perspective of the national court, and whether the reference should be accepted from the perspective of the ECJ. We now consider the effect of the ECJ's decision when it rules on a reference.

Article 267 gives the ECJ power to interpret the Treaty, but does not specifically empower it to apply the Treaty to the facts of a particular case. The very distinction between interpretation and application is said to characterize the division of authority between the ECJ and national courts: the former interprets the Treaty, the latter apply that interpretation to the facts of a particular case. This distinction is said to differentiate the relationship between national courts and the ECJ from that in a more truly federal, appellate system, where the superior court may well decide the actual case.

Theory and reality have not, however, always marched hand in hand. The dividing line between interpretation and application can be perilously thin, more especially because many of the questions submitted to the Court are, by their nature, very detailed, and are capable of being answered only by a specific response. The more detailed is the interpretation provided by the ECJ, the closer it approximates to application. It is moreover common for the ECJ to give 'guidance' to the national court as to how the point of law should be applied in the instant case, and this further diminishes the line between interpretation and application.

Litigants have often argued that the Court should decline to give a ruling because the question posed was not seeking an interpretation, but rather an application, of the Treaty. The ECJ has not been deterred by such objections. Thus in *Van Gend en Loos*[87] it was argued that the question presented concerning the tariff classification of urea-formaldehyde required, not an interpretation of the Treaty, but rather an application of the relevant Dutch customs legislation. The Court rejected the argument, stating that the question related to interpretation: the meaning to be attributed to the notion of duties existing before the coming into force of the Treaty.

[85] See, eg, Case C–435/97 *World Wildlife Fund (WWF) v Autonome Provinz Bozen* [1999] ECR I–5613.
[86] See, eg, Cases C–332, 333, and 335/92 *Eurico Italia Srl v Ente Nazionale Risi* [1994] ECR I–711.
[87] Case 26/62 [1963] ECR 1.

A willingness to respond in detail can be perceived in other cases. *Cristini*[88] was concerned with the meaning of Article 7(2) of Regulation 1612/68, which provides that a Community worker who is working in another Member State should be entitled to the same 'social advantages' as workers of that state. The question put by the French court was whether this meant that a provision which allowed large French families to have reduced rail fares was a social advantage within the ambit of Article 7(2). The ECJ denied that it had power to determine the actual case, but in reality it did just that, and responded to the question by stating that the concept of a social advantage included this fare reduction.

Marleasing[89] provides another example of the detailed nature of the ECJ's rulings. The ECJ produced a detailed response to the question whether Article 11 of Directive 68/151 was exhaustive of the types of case in which the annulment of the registration of a company could be ordered. The judgment furnished the national court with a very specific answer, which simply required the Spanish court to execute the ECJ's ruling.

The ECJ's willingness to provide very specific answers to questions serves to blur the line between interpretation and application. It also renders the idea of the ECJ and the national courts being separate but equal, each with their own assigned roles, more illusory. The more detailed the ECJ's ruling, the less there is for the national court to do, other than execute the ruling in the instant case.

The ECJ will be particularly motivated to provide 'the answer' where it wishes to maintain maximum control over development of an area of the law, as exemplified by cases concerning damages liability of Member States. Thus the ECJ has furnished 'guidance' to the national court on whether there has been a serious breach for the purposes of the test.[90] It has also gone further, and stated that it has sufficient information to dispose of this aspect of the case in its entirety.[91] Tridimas has, in more general terms, discerned three approaches in the ECJ's case law.

T Tridimas, Constitutional Review of Member State Action: The Virtues and Vices of an Incomplete Jurisdiction, forthcoming[92]

One may distinguish three categories of cases depending on the specificity of the ruling. The ECJ may give an answer so specific that it leaves the referring court no margin for manoeuvre and provides it with a ready-made solution to the dispute (*outcome cases*); it may, alternatively, provide the referring court with guidelines as to how to resolve the dispute *(guidance cases)*; finally, it may answer the question in such general terms that, in effect, it defers to the national judiciary on the point in issue *(deference cases)*.

...

The outcome approach presents some clear advantages. The ECJ ruling concludes the Community law-related aspects of the dispute and avoids further delays and costs ... But it is not without disadvantages. Used inappropriately, it may bring the ECJ close to applying the law on the facts thus exceeding its function under the preliminary reference procedure. National courts may resent what they perceive as the usurpation of their own jurisdiction although it appears that, in practice, this is rarely a problem. More importantly, over-zealous specificity may lead the court to be pre-occupied with the facts of the case, encourage over-centralisation, and detract from the Court's fundamental function which is to promote uniform interpretation of the law and oversee the Community's judicial universe. Although it may be favoured by the parties to the dispute, excessive recourse to the outcome approach might in fact reduce rather than help legal certainty. The more specific the ruling, the more difficult it becomes to derive the elements of principle in the judgment and the less the precedential value of its rulings ....

[88] Case 32/75 *Cristini v SNCF* [1975] ECR 1085, [19].
[89] Case C–106/89 *Marleasing SA v La Comercial Internacional de Alimentacion SA* [1990] ECR I–4135.
[90] Cases C–46 and 48/93 *Brasserie du Pêcheur SA v Germany* [1996] ECR I–1029.
[91] Case C–392/93 *R v HM Treasury, ex p British Telecommunications plc* [1996] ECR I–1631.
[92] Italics in the original.

> The guidance approach, on the other hand, has its own mix of merits and drawbacks. The referring court, and the litigants, may be left with a feeling of incompleteness. The more general and vague the ruling, the higher the risk that national courts will hesitate to make references patriating instead concepts of Community law and thus prejudicing its uniform interpretation. Such drawbacks are extenuated in the case of deference. On the positive side, guidance offers the national courts a stake not only in the application of Community law, which in many cases they will be best equipped to do, but also in the shaping of the Community legal order. In constitutional terms, guidance is a means of inviting the national courts to partake in the construction of the EU edifice and giving them a stake in the articulation of the rule of law. The national judiciaries have the opportunity to mould EU principles to the particularities and sensitivities of their legal system . . . It should be noted, in this context, that a reference is not a dialogue between the ECJ and the referring court but a conversation with all national polities. A case referred from a court of one Member State may have equally, or even more, profound repercussions in other States. Guidance accommodates experimentation at national level and seems more in keeping with the model of cooperative federalism.

8 DEVELOPMENT OF AN EU JUDICIAL SYSTEM: NATIONAL COURTS AND THE ECJ

The discussion thus far has considered the different aspects of the preliminary reference system. It is, however, important to stand back and consider in more general terms the implications of the development of precedent, the *acte clair* concept, and sectoral delegation of functions to national courts for the EU judicial system.

(A) PRECEDENT

Let us begin by considering precedent. The *Da Costa* decision was a rational step for the ECJ to have taken. Rasmussen correctly pointed out that the authority of the Court's decisions was thereby enhanced, since they became authoritative rulings for national courts.[93] The relationship between national courts and the ECJ was altered. It was no longer bilateral, where rulings were of relevance only to the national court that requested them. It became multilateral, in the sense that ECJ rulings had an impact on all national courts. The decision in *CILFIT* to reinforce precedent was similarly significant: the ECJ's rulings were to be authoritative in situations where the point of law was the same, even though the questions posed in earlier cases were different, and even though the types of legal proceeding in which the issue arose differed.

This development of precedent was largely inevitable. The original bilateral conception of the relationship between the ECJ and national courts, whereby the ECJ's rulings were relevant only for the national court that requested them, was unrealistic. Taken literally it would have meant that a ruling would have to be given even if the inquiry sought by a national court replicated that in an earlier case that had already been decided by the ECJ. The Court would be 'forced' solemnly to hear the matter, only to reach the same conclusion as it had done previously. A judicial system could not be supposed to exist on such terms. The ECJ would quickly tire of the waste of time and resources. The national courts would not see the sense of a system which placed pressure on them to allow issues to be litigated again where the ECJ had already given a considered judgment.

[93] Rasmussen (n 45).

It is true that the regime of precedent means that a national court might misinterpret past ECJ authority. This does not, however, undermine the rationality of the precedent system, since it leads in aggregate to a more effective regime of EU law. A system of precedent inevitably entails certain 'error costs', the possibility of mistakes by national courts. Precedent also has substantial 'benefits'. Most fundamentally, national courts become enforcers of EU law in their own right. When the ECJ has decided an issue, national courts apply that ruling without further resort to the ECJ. The national courts are, in this sense, 'enrolled' as part of a network of courts adjudicating on EU law, with the ECJ at the apex of that network. They become 'delegates' in the enforcement of EU law, and part of a broader EU judicial hierarchy. The costs of precedent must, therefore, be weighed against the benefits. These include the increased volume of EU law which can be litigated, mostly correctly, at any one time, and also the important symbolic advantage that flows from the recognition that the national courts are part of an EU judicial hierarchy. It is therefore unsurprising that the ECJ should have stated in its report for the 1996 IGC that 'national courts are called upon to play a central role as courts with general jurisdiction for Community law'.[94] It should be noted that a study found a high rate of national implementation of ECJ rulings: 96.3 per cent.[95]

(B) *ACTE CLAIR*

Let us now move to *acte clair*. The Court in *CILFIT* had a choice. It could have rejected the *acte clair* doctrine in EU law, the view espoused by Advocate General Capotorti.[96] The Court declined to follow this approach, and instead gave the doctrine limited support. It might be contended, as seen above, that the real objective was to deal it a death-blow, by hedging it around with multiple restrictions or, more moderately, to convince national courts to be responsible when using *acte clair*.

We should, however, distinguish purpose and effect. Thus even if we accept the Mancini/Keeling thesis as to the Court's purpose, the effect is to leave 'clear' cases that fall within these conditions to the national courts. For such cases, the national courts operate once again as the delegates of the ECJ for the application of EU law. The ECJ can then utilize its time in resolving more problematic cases. The conditions in *CILFIT* help to ensure that national courts will not readily regard cases as *acte clair* unless they really are free from interpretive doubt, although it is doubtless true that national courts can interpret these conditions rather differently.[97]

The qualified approval given to the concept can nonetheless be regarded as rational, since the cost/benefit analysis discussed above applies equally here. The fact that a national court might, on occasion, misapply the criteria, intentionally or unintentionally, does not render the exercise a failure. These costs have to be balanced against the benefits: straightforward cases can be disposed of expeditiously by national courts. Moreover, this method of dealing with such cases further emphasizes the role of national courts as but part of a broader judicial hierarchy, with the ECJ at the apex.

There are moreover 'safety' devices built into the system, independently of the conditions in *CILFIT*, so the danger of incorrect interpretation made by national courts becoming embedded should not be over-stated. The concern is that a national court may refuse to make a reference, even though the conditions in *CILFIT* are not met. A national court minded to do this intentionally would, however, now be aware of the possibility of damages liability pursuant to *Köbler*.[98] There is the further possibility that the Member State might be subject to an enforcement action under Article 258 TFEU. In any

event, the matter might still come before the ECJ via a different court from the same legal system, or from a different legal system. It would also be open to the ECJ to correct aberrant interpretations by national courts, in the context of a case on a related point that has come before it, although the implications of this for prior decisions at national level would be subject to *Kühne*.[99]

(c) SECTORAL DELEGATION

This discussion would be incomplete if it did not take into account what is in effect sectoral delegation of responsibility to national courts: a conscious choice made by the EU to devolve certain application and enforcement functions to the national courts, as occurred in the context of competition policy.[100]

The rationale for this devolution was instructive. Prior to reforms, the Commission was charged with the initial role in the enforcement of competition policy. It did not, however, possess the resources necessary for this task and therefore called on the national courts. These always played a role in the enforcement of competition law, but this was consciously generalized, so that straightforward competition violations could be dealt with at national level, thereby allowing the Commission and EU Courts to deal with more difficult cases, or those which raised new issues of principle. Such sectoral delegation was facilitated because of the accumulated weight of EU precedent.

9 DEVELOPMENT OF AN EU JUDICIAL SYSTEM: ECJ, GENERAL COURT, AND NATIONAL COURTS

The development of the preliminary ruling system has therefore enrolled national courts as part of the EU judicial system broadly conceived, with both the power and duty to apply EU law in cases that come before them. This has been crucial in making the system 'work'. There are, nonetheless, problems with the current regime which have prompted discussion concerning reform.

The catalyst was the ECJ's increasing workload, which inevitably had implications for the length of time to process a preliminary ruling. The information can be readily gleaned from the Court's annual reports.[101] The number of references for a preliminary ruling rose from 221 in 2005 to 302 in 2009. The time taken to secure a preliminary ruling has, however, fallen from a high of twenty-five months in 2003, to just over seventeen months in 2009, but there were still 438 preliminary references pending in December 2009.

The reduction in the time to secure a preliminary ruling was in part due to changes made to expedite the process. Thus there is now an obligation on the ECJ to decide cases with a minimum of delay where a person is in custody.[102] There is provision for expedited hearings in case of urgency.[103] Preliminary rulings can be given by reasoned order where the ECJ refers to prior case law in certain types of cases: those where the request is identical to a point dealt with by existing case law, or where the answer can clearly be deduced from existing case, or where the answer admits of no reasonable doubt.[104] A case can moreover be decided without an Opinion from the Advocate General,[105] and

this power was used in approximately 52 per cent of cases in 2009.[106] The reduction in time to secure a preliminary ruling was also in part due to the increase in the number of ECJ judges as a result of enlargement. The net increase of twelve judges has allowed a greater through-put of cases.

There are, however, reasons to question whether the recent and welcome diminution in the time taken for preliminary rulings can be maintained in the coming years. The benefits of extra judges from the newer accession countries will be offset by an increase in the number of references from those national courts, as the lawyers in those countries become more accustomed to the possibilities of using EU law. The impact of the Lisbon Treaty is equally important. The fact that the Charter of Rights is now legally binding, and that the Area of Freedom, Security, and Justice is now subject to the normal Article 267 procedure, will mean a net increase in preliminary references, more especially because many AFSJ measures are controversial and touch on civil liberties.

It is therefore important to consider possible reforms to the preliminary ruling system.[107] The range of such reforms was canvassed in two papers prior to the Nice Treaty: one was written by those then in the ECJ and CFI,[108] and will be referred to hereafter as the Courts' paper; the other was produced by a Working Party composed largely of former judges of the ECJ at the behest of the Commission,[109] and it will be referred to as the Due Report after the name of its chairman. The catalyst for the papers was the rise in the number of preliminary references and the strain thereby placed on the ECJ.

(A) LIMITING THE NATIONAL COURTS EMPOWERED TO MAKE A REFERENCE

While there was some 'precedent' for the idea that a preliminary ruling could only be sought by a national court against whose decisions there is no judicial remedy in national law,[110] the Courts' paper and the Due Report came down firmly against any general use of this to limit preliminary rulings.[111] This is unsurprising. The ability of any national court to refer to the ECJ has been central to the development of EU law in practical and conceptual terms.

In practical terms, it has been common for cases raising important points of EU law to come from lower level national courts. To limit the ability to refer would result in cases being fought to the apex of national judicial systems merely to seek a reference to the ECJ. The ability to refer by any national court is also a safeguard against the possibility that the court of final resort may be 'conservative or recalcitrant' and hence reluctant to refer.

In conceptual terms, the ability of any national court to refer has emphasized the penetration of EU law to all points of the national legal system. It is true that even if references were limited to courts of last resort, lower courts would still have the ability to apply existing EU precedent. The fact that any national court can refer, however, emphasizes that an individual can rely on directly effective EU rights at any point in the national legal system.

(B) A FILTERING MECHANISM BASED ON THE NOVELTY, COMPLEXITY, OR IMPORTANCE OF THE QUESTION

This reform would allow the ECJ 'to concentrate wholly upon questions which are fundamental from the point of view of the uniformity and development of Community law'.[112] The Due Report advocated some constraints of this kind.[113] It suggested that national courts of final resort should be obliged to refer only questions which are 'sufficiently important for Community law', and where there is still 'reasonable doubt' after examination by lower courts. The idea also received tentative support from the Association of the Councils of State.[114] There are two problems with this suggestion.

First, 'national courts and tribunals might well refrain from referring questions to the Court of Justice, in order to avoid the risk of their references being rejected for lack of interest'.[115] This could jeopardize the machinery for ensuring that EU law is interpreted uniformly in the Member States.

Secondly, those who favour this approach commonly point to the USA where the Supreme Court will decide the cases it is willing to hear. The crucial difference is that the US is an appellate system, and the EU is a referral system. In the USA, if the Supreme Court declines to hear a case there will be a decision on the point of law from a lower federal court or state court. The situation in the EU is markedly different. The national court has not decided the case. It has referred a question and if the ECJ declines to answer because it is not sufficiently important or novel there is no decision by a Union Court at all. This places the national court in a difficult position. It could attempt to decide the matter of EU law itself. The national court could alternatively decline to decide the EU point, the effect being that the party who sought to rely on the EU point would be unable to do so, and the case would be decided on the assumption that this point was unproven.

(C) THE NATIONAL COURT PROPOSES AN ANSWER TO THE QUESTION

The national court could include in its reference a proposed reply to the question referred. The advantages were said, in the Courts' paper, to be that it would 'lessen the adverse effect of the filtering mechanism on the co-operation between the national court and the Court of Justice, while the proposed reply could at the same time serve as the basis for deciding which questions need to be answered by the Court of Justice and which can be answered in the terms indicated'.[116] A similar proposal was advanced in the Due Report.[117] This idea has been incorporated in the guidance given to national courts, which states that 'the referring court may, if it considers itself able, briefly state its view on the answer to be given to the questions referred for a preliminary ruling'.[118]

There are, however, limits to how far this proposal can be taken. Most national courts are not specialists in EU law. It is one thing for the national court to identify a question that is necessary for the resolution of the case. It is another thing to be able to answer it. Higher level national courts may be able to furnish some answer to the question posed. This proposal would none the less transform the task of such courts. There would have to be detailed argument before the national court of the EU

[118] Information Note (n 82) [23].

issues in order to provide the judge with the requisite material from which to give an answer to the question posed.

Nor is it clear that this proposal would in reality relieve much of the ECJ's work load. Even if national courts are required or encouraged to provide an answer, the ECJ still has to give the matter detailed consideration, in order to decide whether the question can be answered in the terms indicated by the national court.

(D) TOWARDS AN APPELLATE SYSTEM

A more radical option considered in the Courts' paper would transform the system from one which is reference based, to one which is more appellate in nature.[119]

> A more radical variant of the system would be to alter the preliminary ruling procedure so that national courts which are not bound to refer questions to the Court of Justice would be required, before making any reference, first to give judgment in cases raising questions concerning the interpretation of Community law. It would then be open to any party to the proceedings to request the national court to forward its judgment to the Court of Justice and to make a reference for a ruling on those points of Community law in respect of which that party contests the validity of the judgment given. This would give the Court of Justice the opportunity of assessing, at the filtering stage, whether it needed to give its own ruling on the interpretation of Community law arrived at in the contested judgment.

The Due Report was however strongly opposed to this change, stating that 'such a proposal would debase the entire system of co-operation established by the Treaties between national courts and the Court of Justice'.[120]

If this proposal were to be adopted it would fundamentally alter the current regime from a reference system to an appellate one. This is not an objection in and of itself, but we should none the less be aware of the change thereby entailed. The national court would give a decision on the case, and it would then be for the parties to 'require' the national court to make a reference to the ECJ. This was acknowledged in the Courts' paper.[121]

> [S]uch a procedure would involve a fundamental change in the way in which the preliminary ruling system currently operates. Judicial co-operation between the national courts and the Court of Justice would be transformed into a hierarchical system, in which it would be for the parties to an action to decide whether to require the national court to make a reference to the Court of Justice, and in which the national court would be bound, depending on the circumstances, to revise its earlier judgment so as to bring it into line with a ruling by the Court of Justice. From the point of view of national procedural law this aspect of the system would doubtless raise problems which could not easily be resolved.

There are a number of difficulties with this proposal. To require national courts to decide the point of EU law would impose a burden on them that many lower-tier courts would find difficult to discharge. It would be unlikely to relieve the ECJ's caseload, since there would always be an incentive on the losing party to seek a reference to the ECJ.[122] It would seem to involve the overruling of *Foto-Frost*,[123] since the national court might well be adjudicating on the validity of an EU law norm. It

[119] FJS (n 108) 26.

[123] Case 314/85 *Firma Foto-Frost v Hauptzollamt Lübeck-Ost* [1987] ECR 4199.

is, moreover, unclear in the Court's paper whether the losing party can request or require the national court to refer the matter to the ECJ.[124]

We should also consider the possible advantages of this proposal. An appellate system is more characteristic of a developed federal or confederal legal system, and it could be argued that the EU is ready for such a change. National courts have become more familiar with EU law, and it may be time to move towards an appellate regime where the national court gives judgment on the case, subject to appeal to the ECJ. We should not however go down this road on the assumption that it will thereby radically limit the ECJ's caseload.

(E) CREATION OF DECENTRALIZED JUDICIAL BODIES

The ECJ's burden would be eased if decentralized courts were created. This would also bring legal redress physically closer to citizens, who could obtain a preliminary ruling without the necessity of travelling to Luxembourg. The Courts' paper and the Due Report were, however, concerned that such decentralized courts would jeopardize the uniformity of EU law,[125] and the Due Report was against this option largely for this reason.[126] The Courts' paper sought to meet this concern by allowing a case to go to the ECJ from one of the decentralized courts.

The creation of regional courts to supplement the EU judicial architecture has been advocated in the past,[127] but has generally been opposed by the CFI.[128] The suggestion was not taken up in the Nice Treaty or the Lisbon Treaty. It may nonetheless be inevitable at some time in the future. If such courts were to be created they should be part of the EU judicial machinery operating at national or regional level.

(F) GENERAL COURT TO HAVE JURISDICTION TO GIVE PRELIMINARY RULINGS

Prior to the Nice Treaty only the ECJ could hear preliminary rulings. The possibility of conferring such jurisdiction on the CFI, now the General Court, was canvassed positively, albeit cautiously, in the Courts' paper.[129] The Due Report was however opposed to this change, except in a limited number of special areas.[130]

The Nice Treaty gave the CFI some power over preliminary rulings and the schema has been taken over in the Lisbon Treaty.[131] There was regrettably no broad-ranging discussion of the EU's judicial architecture. The General Court is empowered to hear preliminary rulings in specific areas laid down by the Statute of the Court of Justice. Where the General Court believes that the case requires a decision of principle, likely to affect the unity or consistency of EU law, it may refer the case to the ECJ. Preliminary rulings given by the General Court can, exceptionally, be subject to review by the ECJ, under the conditions laid down in the Statute, where there is a serious risk of the unity or consistency of EU law being affected.[132]

[124] FJS (n 108) 26 is ambiguous in this respect.

[129] FJS (n 108) 27.
[130] WP (n 109) 22.
[131] Art 256(3) TFEU.
[132] Arts 62, 62b of the Statute of the Court of Justice of the European Union.

There is much to be said for the idea that the General Court should be able to give preliminary rulings. Some Article 267 TFEU cases involve indirect challenge to the validity of EU norms, where the non-privileged applicants cannot satisfy the standing criteria under Article 263 TFEU. The cases raise issues that would be heard by the General Court in a direct action under Article 263. The General Court should be able to hear such cases if they emerge indirectly via national courts as requests for preliminary rulings, although it is open to debate whether the current rules concerning onward recourse to the ECJ should be modified.[133] There are, moreover, many Article 267 cases that involve no issue of principle, but are concerned with the detailed interpretation of a particular provision of a regulation or directive. These cases require judicial resolution. They do not require resolution by the ECJ.

There has, however, been no move as yet to activate the power given by Article 256(3) TFEU in order to assign preliminary rulings in certain areas to the General Court.[134] This is in part because it is difficult to decide on the nature of such areas, more especially because there is no necessary correlation between subject matter area and the importance of the point of EU law raised by the case. It might well therefore have been more desirable to give the General Court jurisdiction over all preliminary rulings, subject to the dual mechanisms in Article 256(3) for shifting the case to the ECJ. This would perforce require some increase in the number of judges in the General Court, but this is possible under the Lisbon Treaty.[135]

10 CONCLUSIONS

i. The ECJ is not a fully developed federal Supreme Court, either procedurally or institutionally. In procedural terms, individuals have no right of appeal to the ECJ. The ECJ will not actually decide the case, but rules on the point referred to it. In institutional terms, notwithstanding the creation of the General Court, the EU does not yet have the judicial hierarchy characteristic of federal systems. In countries such as the United States, there is a system of federal courts existing below the Supreme Court, which exercise jurisdiction over a particular area of the country.

ii. The original conception of the relationship between national courts and the ECJ does not however capture reality. Many of the developments have transformed this from a *horizontal* and *bilateral*, to a *vertical* and *multilateral*, relationship. These include: the assertion of EU law supremacy; the development of precedent; the *acte clair* doctrine; the sectoral devolution of responsibility to national courts; the ECJ's exercise of control over the cases that it will hear; and the blurring of the line between interpretation and application. These changes evidence the evolution of an EU judicial hierarchy in which the ECJ sits at the apex, as the ultimate Constitutional Court for the EU, assisted by national courts, which apply and interpret EU law.

iii. Reform of the EU's judicial architecture will remain on the agenda, notwithstanding the Lisbon Treaty. It remains to be seen whether the General Court will be given some power over preliminary rulings. If this does not occur then workload pressures on the ECJ will increase once again.

REVIEW OF LEGALITY: ACCESS

1 CENTRAL ISSUES

i. The EU develops policy through regulations, directives, and decisions. Any developed legal system must have a mechanism for testing the legality of such measures. This chapter is, therefore, concerned with access to justice and review of legality by the EU Courts. There are, as will be seen, a number of ways in which EU norms can be challenged, but the principal Treaty provision is Article 263 TFEU (ex Article 230 EC).

ii. Five conditions must be satisfied before an act can successfully be challenged. The relevant body must be amenable to judicial review; the act has to be of a kind which is open to challenge; the institution or person making the challenge must have standing to do so; there must be illegality of a type mentioned in Article 263(2); and the challenge must be brought within the time limit indicated in Article 263(6).

iii. The judicial interpretation of Article 230 EC was problematic, and it has in the past been very difficult for individuals to challenge the legality of EU action directly before the EU Courts. Article 263 TFEU was designed to alleviate this difficulty through amendment of Article 230 EC in the ways considered below. How far this renders it easier for non-privileged applicants to use Article 263 TFEU will be considered below.

iv. It is also possible for the validity of EU action to be challenged indirectly, via Article 267 TFEU. The inter-relationship between direct challenge under Article 263 and indirect challenge is important. The EU Courts defended their narrow interpretation of standing for direct actions by arguing that the Treaty provided a complete system of legal protection through a combination of Articles 263 and 267 TFEU. There are however, as will be seen, difficulties with this hypothesis.

2 ARTICLE 263(1): BODIES SUBJECT TO REVIEW

Article 263 TFEU is the lead provision concerning direct challenge to the legality of EU acts. Article 263(1) defines the bodies that are amenable to review.

> The Court of Justice of the European Union shall review the legality of legislative acts, of acts of the Council, of the Commission and of the European Central Bank, other than recommendations and opinions, and of acts of the European Parliament and of the European Council intended to produce legal effects *vis-à-vis* third parties. It shall also review the legality of acts of bodies, offices or agencies of the Union intended to produce legal effects *vis-à-vis* third parties.

It shall for this purpose have jurisdiction in actions brought by a Member State, the European Parliament, the Council or the Commission on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the Treaties or of any rule of law relating to their application, or misuse of powers.

The Court shall have jurisdiction under the same conditions in actions brought by the Court of Auditors, by the European Central Bank and by the Committee of the Regions for the purpose of protecting their prerogatives.

Any natural or legal person may, under the conditions laid down in the first and second paragraphs, institute proceedings against an act addressed to that person or which is of direct and individual concern to them, and against a regulatory act which is of direct concern to them and does not entail implementing measures.

Acts setting up bodies, offices and agencies of the Union may lay down specific conditions and arrangements concerning actions brought by natural or legal persons against acts of these bodies, offices or agencies intended to produce legal effects in relation to them.

The proceedings provided for in this Article shall be instituted within two months of the publication of the measure, or of its notification to the plaintiff, or, in the absence thereof, of the day on which it came to the knowledge of the latter, as the case may be.

Article 263(1) covers acts of the Council and Commission, including legislative acts, and acts of the European Central Bank, other than recommendations and opinions. It also covers acts of the European Parliament, European Council, and EU bodies, offices, or agencies intended to produce legal effects against third parties. The novelty of the Lisbon Treaty is the explicit inclusion of the European Council and EU bodies, offices, or agencies as amenable to judicial review, although prior jurisprudence had already brought agencies within the remit of judicial review.[1]

Article 263(5) stipulates that the acts setting up such EU bodies, offices, and agencies may lay down specific conditions and arrangements concerning actions brought by natural or legal persons against acts of these bodies, etc, intended to produce legal effects in relation to them. It remains to be seen what is the nature of the conditions specified in the legislation creating such bodies.

3 ARTICLE 263(1): ACTS SUBJECT TO REVIEW

(A) GENERAL PRINCIPLES

Article 263(1) allows the Court to review the legality of acts,[2] other than recommendations and opinions, taken by the institutions listed in Article 263(1).[3] This clearly covers regulations, decisions, and directives, which are listed in Article 288 TFEU. The ECJ has, however, held that this list is not

[1] Case T–411/06 *Sogelma–Societá generale lavori manutenzioni appalti Srl v European Agency for Reconstruction (AER)* [2008] ECR II–2771.

[2] The Court may review acts of the Council which are intended to have legal effects irrespective of whether they have been passed pursuant to Treaty provisions: Case C–316/91 *European Parliament v Council* [1994] ECR I–625. However, decisions adopted by representatives of the Member States acting not as the Council, but as representatives of their governments, and thus collectively exercising the powers of the Member States, are not reviewable under Art 263: Cases C–181 and 248/91 *European Parliament v Council and Commission* [1993] ECR I–3685. It will be for the Court to decide whether a measure really was an act of the institutions or whether it was an act of the Member States acting independently: ibid.

[3] The orginal formulation of Art 173 EEC only formally applied to the Council and the Commission, but the ECJ held that the acts of the European Parliament were also susceptible to review: Case 294/83 *Parti Ecologiste 'Les Verts' v European Parliament* [1986] ECR 1339.

exhaustive, and that other acts which are *sui generis* can also be reviewed, provided that they have binding force or produce legal effects.[4]

Case 22/70 **Commission v Council**
[1971] ECR 263

[Note Lisbon Treaty renumbering: Arts 173 and 228 are now Arts 263 and 218 TFEU]

The Member States acting through the Council adopted a Resolution on 20 March 1970 to coordinate their approach to the negotiations for a European Road Transport Agreement (ERTA/AETR). The Commission disliked the negotiating procedure established in the Resolution, and sought to challenge it before the ECJ under Article 173.

THE ECJ

48. As regards negotiating, the Council decided, in accordance with the course of action decided upon at its previous meetings, that the negotiations should be carried on and concluded by the six Member States, which would become contracting parties to the AETR.

49. Throughout the negotiations and at the conclusion of the agreement, the States would act in common and would constantly coordinate their positions according to the usual procedure in close association with the Community institutions, the delegation of the Member State currently occupying the Presidency of the Council acting as spokesman.

50. It does not appear from the minutes that the Commission raised any objections to the definition by the Council of the objective of the negotiations.

51. On the other hand, it did lodge an express reservation regarding the negotiating procedure, declaring that it considered that the position adopted by the Council was not in accordance with the Treaty, and more particularly with Article 228.

52. It follows from the foregoing that the Council's proceedings dealt with a matter falling within the power of the Community, and that the Member States could not therefore act outside the framework of the common institutions.

53. It thus seems that in so far as they concerned the objective of the negotiations as defined by the Council, the proceedings of 20 March 1970 could not have been simply the expression or the recognition of a voluntary coordination, but were designed to lay down a course of action binding on both the institutions and the Member States, and destined ultimately to be reflected in the tenor of the regulation.

54. In the part of its conclusions relating to the negotiating procedure, the Council adopted provisions which were capable of derogating in certain circumstances from the procedure laid down by the Treaty regarding negotiations with third countries and the conclusion of agreements.

55. Hence, the proceedings of 20 March 1970 had definite legal effects both on relations between the Community and the Member States and on the relationship between institutions.

It is clear from *IBM* that the test as to whether an act is reviewable is one of substance, not form, and that the challenged measure must be final and not preparatory.

[4] Case C–57/95 *France v Commission (Re Pension Funds Communication)* [1997] ECR I–1627; Case C–370/07 *Commission v Council (CITES)* [2009] ECR I–8917, [42]. Moreover, if an EU institution which has the power to take reviewable decisions delegates that power to another institution, the Court will not be prevented from reviewing the acts of such a delegate.

Case 60/81 **International Business Machines Corporation v Commission** [1981] ECR 2639

[Note Lisbon Treaty renumbering: Arts 86 and 173 are now Arts 102 and 263 TFEU]

IBM sought the annulment of a Commission letter notifying it of the fact that the Commission had initiated competition proceedings against it, in order to determine whether it was in breach of Article 86. The letter was accompanied by a statement of objections, with a request that the company reply to it within a specified time. The Commission objected that the impugned letter was not an act challengeable under Article 173.

THE ECJ

9. In order to ascertain whether the measures in question are acts within the meaning of Article 173 it is necessary, therefore, to look to their substance. According to the consistent case-law of the Court any measure the legal effects of which are binding on, and capable of affecting the legal interests of, the applicant by bringing about a distinct change in his legal position is an act or decision which may be the subject of an action under Article 173 for a declaration that it is void. However, the form in which such acts or decisions are cast is, in principle, immaterial as regards the question whether they are open to challenge under that article.

10. In the case of acts or decisions adopted by a procedure involving several stages, in particular where they are the culmination of an internal procedure, it is clear from the case-law that in principle an act is open to review only if it is a measure definitively laying down the position of the Commission or the Council on the conclusion of that procedure, and not a provisional measure intended to pave the way for the final decision.

11. It would be otherwise only if acts or decisions adopted in the course of the preparatory proceedings not only bore all the legal characteristics referred to above but in addition were themselves the culmination of a special procedure distinct from that intended to permit the Commission or the Council to take a decision on the substance of the case.

12. Furthermore, it must be noted that whilst measures of a purely preparatory character may not themselves be the subject of an application for a declaration that they are void, any legal defects therein may be relied upon in an action directed against the definitive act for which they represent a preparatory step.

The applicant failed.[5] The letter was merely the initiation of the competition procedure, a preparatory step leading to the real decision at a later stage. The statement of objections did not, in itself, alter IBM's legal position, although it might indicate, as a matter of fact, that it was in danger of being fined later.[6]

(B) NON-EXISTENT ACTS

The general principle is that a reviewable act will have legal effect until it is set aside by the ECJ or the General Court,[7] and the challenge must be brought within the time limit specified in Article 263(6). The exception is where acts are tainted by particularly serious illegality, and are deemed to be 'non-existent'. Three consequences flow from the ascription of this label: the normal time limits for challenge do not apply, since the act cannot be cloaked with legality by the passage of time; such acts do not have any provisional legal effects; and non-existent acts are not actually susceptible to annulment, because there is no 'act' to annul.

A judicial finding that an act is non-existent will, however, have the same effect in practice as if it had been annulled. Thus in *BASF*[8] the CFI found that a Commission decision in competition proceedings against the PVC cartel was non-existent because: the Commission could not locate an original copy of the decision duly authenticated in the manner required by the Rules of Procedure; it appeared that the Commissioners had not agreed on the precise text of the decision; and it had been altered after it had been formally adopted. The non-existence of a measure should, said the CFI, be raised by the Court of its own motion at any time during the proceedings. The ECJ[9] took a different view on appeal: the defects were not so serious as to make the act non-existent, but the decision was tainted by sufficient irregularity to be annulled.

(C) LIMITATIONS ON REVIEW

(i) *Area of Freedom, Security, and Justice*

Prior to the Lisbon Treaty the ECJ had only limited power to review the legality of acts under what was the Third Pillar dealing with Police and Judicial Cooperation in Criminal Matters (PJCC). The ECJ was nonetheless creative in the construction of its powers.[10] The Lisbon Treaty has now brought the provisions concerning the Area of Freedom, Security, and Justice within the main fabric of the Treaty.[11] The normal principles of judicial review apply to this area, subject to the caveat that the ECJ cannot review the validity or proportionality of operations by the police or law enforcement agencies, or the exercise of responsibilities of Member States with regard to the maintenance of law and order, and the safeguarding of internal security.[12]

(ii) *Common Foreign and Security Policy*

The Lisbon Treaty has, as we have seen, 'de-pillarized' the Treaties, but the rules pertaining to the Common Foreign and Security Policy (CFSP) remain distinct. The general principle is that the Union Courts have no jurisdiction over CFSP acts.[13] This is subject to two exceptions.

First, the ECJ has jurisdiction to monitor compliance with Article 40 TEU, which provides in essence that exercise of power under the CFSP shall not encroach on competences under the TFEU, and vice versa.

Secondly, the Union Courts can also rule on proceedings, brought in accordance with Article 263(4) TFEU, to review the legality of decisions providing for restrictive measures against natural or legal

[7] Case C–137/92 P *Commission v BASF AG* [1994] ECR I–2555.

[11] Arts 67–89 TFEU.
[12] Art 276 TFEU.
[13] Art 24 TEU, Art 275 TFEU.

persons adopted by the Council on the basis of Chapter 2 of Title V of the TEU, which is concerned with the CFSP. It is moreover clear from *Kadi*[14] that review of such measures will not be precluded because they were adopted pursuant to Security Council Resolutions of the United Nations: it was not for the Union Courts to review such Resolutions, but the existence of such Resolutions could not prevent review of the EU regulations giving effect to them within the EU, since that would offend against the notion that all EU acts were amenable to judicial review.

4 ARTICLE 263(2)–(3): STANDING FOR PRIVILEGED AND QUASI-PRIVILEGED APPLICANTS

Article 263(2) states that the action may be brought by a Member State, the European Parliament, the Council, or the Commission. It appears from this that these applicants are always allowed to bring an action, even where the decision is addressed to some other person or body. EU law does not oblige a Member State to bring an action under Article 263 or 265 TFEU for the benefit of one of its citizens, although EU law does not preclude national law from containing such an obligation.[15]

The status accorded to the European Parliament in review proceedings has altered over time. Prior to the Maastricht Treaty it was not accorded any formal privileged status. In the '*Comitology*' case[16] the ECJ rejected the Parliament's argument that it should have the same unlimited standing as other privileged applicants. The issue was considered again in the '*Chernobyl*' case,[17] where the ECJ took a different view, and held that the EP could have a quasi-privileged status so as to protect its own prerogatives. Article 173(3) EEC was re-drafted so as to reflect the legal position in the *Chernobyl* judgment: the Parliament had standing to defend its own prerogatives.[18] The Nice Treaty then added the European Parliament to the list of privileged applicants.

The Court of Auditors, the European Central Bank (ECB), and the Committee of the Regions are covered by Article 263(3) TFEU, so that they have standing only to defend their own prerogatives.

The European Council is included in the bodies amenable to review. It is not, however, listed among either the privileged or quasi-privileged applicants who are entitled to seek judicial review. There is thus an asymmetry built into Article 263 TFEU, which does not apply to the other EU institutions. The European Council is accorded the right to bring an action for failure to act under Article 265 TFEU, which makes the position under Article 263 TFEU look all the more odd. There could well be instances in which the European Council might wish to bring an action.[19] The ECJ in the past interpreted the predecessor to Article 263 TFEU so as to enable the European Parliament to defend its prerogatives, justifying this on the ground that it was necessary to safeguard the institutional balance under the Treaty. It could draw on this precedent and afford the European Council claimant status, at the very least as a quasi-privileged applicant.

Bodies, offices, and agencies of the Union also suffer from the infirmity of being defendants without any separate recognition as applicants. There could be instances in which an EU agency might wish to argue that Union legislation or a delegated act had wrongfully impinged on its terrain, as laid down in

[19] P Craig, *The Lisbon Treaty, Law, Politics and Treaty Reform* (Oxford University Press, 2010) ch 4.

its empowering legislation. These bodies, offices, or agencies might seek to bring an action as a non-privileged applicant. Most agencies have legal personality and could therefore count as legal persons for the purposes of Article 263(4) TFEU. They would however then have to satisfy the criteria in that Article, including the test for standing.

5 ARTICLE 263(4): STANDING FOR NON-PRIVILEGED APPLICANTS

Article 263(4) allows a natural or legal person to bring an action in three types of case. The first is straightforward: the addressee of a decision can challenge it before the ECJ or General Court (GC). The second is where the act is of direct and individual concern to the natural or legal person or persons, the assumption being that the person or persons are not the immediate addressees of the act. The third type of case is where there is a regulatory act, which does not entail implementing measures, in which case the claimant must show direct concern, but does not need to prove individual concern.

(A) DIRECT CONCERN

An applicant must show that the act was of direct concern if it is to be accorded standing. The general principle is that a measure will be of direct concern where it directly affects the legal situation of the applicant and leaves no discretion to the addressees of the measure, who are entrusted with its implementation. This implementation must be automatic and result from EU rules without the application of other intermediate rules.[20] It can be difficult to determine whether there is some autonomous exercise of will between the original decision and its implementation.[21]

Cases 41–44/70 **NV International Fruit Company v Commission**
[1971] ECR 411

[Note Lisbon Treaty renumbering: Art 173 is now Art 263 TFEU]

The Community adopted a regulation which limited the import of apples from third countries from 1 April 1970 to 30 June 1970. The regulation provided for a system of import licences, which were granted to the extent to which the Community market allowed. Under this system, a Member State notified the Commission, at the end of each week, of the quantities for which import licences were requested during the preceding week. The Commission then decided on the issue of licences in the light of this information. The challenge was to a regulation applying this scheme to a particular week. The ECJ found individual concern and then considered whether the applicant was directly concerned.

[20] Case C–386/96 *Société Louis Dreyfus & Cie v Commission* [1998] ECR I–2309; Case T–54/96 *Oleifici Italiana SpA and Fratelli Rubino Industrie Olearie SpA v Commission* [1998] ECR II–3377; Case T–69/99 *Danish Satellite TV (DSTV) A/S (Eurotica Rendez-vous Television) v Commission* [2000] ECR II–4039; Case C–486/01 P *National Front v European Parliament* [2004] ECR I–6289, [34]; Case 15/06 P *Regione Siciliana v Commission* [2007] ECR I–2591, [31]; Cases C–445 and 455/07 P *Ente per le Ville Vesuviane v Commission* [2009] ECR I–7993, [45]; Case C–343/07 *Bavaria NV and Bavaria Italia Srl v Bayerischer Brauerbund eV* [2009] ECR I–5491, [43]; Case T–16/04 *Arcelor SA v European Parliament and Council*, 2 Mar 2010, [97].

[21] Case T–12/93 *Comité Central d'Entreprise de la Société Anonyme Vittel v Commission* [1995] ECR II–1247; Case T–96/92 *Comité Central d'Entreprise de la Société Générale des Grands Sources v Commission* [1995] ECR II–1213; Case T–509/93 *Richco Commodities Ltd v Commission* [1996] ECR II–1181; Cases T–172, 175, and 177/98 *Salamander and others v European Parliament and Council* [2000] ECR II–2487.

THE ECJ

23. Moreover, it is clear from the system introduced by Regulation No 459/70, and particularly from Article 2(2) thereof, that the decision on the grant of import licences is a matter for the Commission.

24. According to this provision, the Commission alone is competent to assess the economic situation in the light of which the grant of import licences must be justified.

25. Article 1(2) of Regulation No 459/70, by providing that the 'Member States shall in accordance with the conditions laid down in Article 2, issue the licence to any interested party applying for it', makes it clear that the national authorities do not enjoy any discretion in the matter of the issue of licences and the conditions on which applications by the parties concerned should be granted.

26. The duty of such authorities is merely to collect the data necessary in order that the Commission may take its decision in accordance with Article 2(2) of that regulation, and subsequently adopt the national measures needed to give effect to that decision.

27. In these circumstances as far as the interested parties are concerned, the issue of or refusal to issue the import licences must be bound up with this decision.

28. The measure whereby the Commission decides on the issues of the import licences thus directly affects the legal position of the parties concerned.

29. The applications thus fulfil the requirements of the second paragraph of Article 173 of the Treaty, and are therefore admissible.

The decision in the *International Fruit* case[22] can be compared to the following judgment by the Court.[23]

Case 222/83 **Municipality of Differdange v Commission**
[1984] ECR 2889

The Commission authorized Luxembourg to grant aid to steel firms, on the condition that they undertook reductions in capacity. The applicant municipality argued that it was directly and individually concerned by this decision, *inter alia*, on the ground that the reduction in production capacity and closure of factories would lead to a reduction in local taxes.

THE ECJ

10. In this case the contested measure, which is addressed to the Grand Duchy of Luxembourg, authorizes it to grant certain aids to the undertakings named therein provided that they reduce their production capacity by a specified amount. However, it neither identifies the establishments in which the production must be reduced or terminated nor the factories which must be closed as a result of the termination of production. In addition, the Decision states that the Commission was to be notified of the closure dates only by 31 January 1984 so that the undertakings affected were free until that date to fix, where necessary with the agreement of the Luxembourg government, the detailed rules for the restructuring necessary to comply with the conditions laid down in the Decision.

11. That conclusion is, moreover, confirmed by Article 2 of the Decision according to which the capacity reductions may also be carried out by other undertakings.

[22] See also Case 207/86 *Apesco v Commission* [1988] ECR 2151, [12]; Cases T–132 and 143/96 *Freistaat Sachsen and others v Commission* [1999] ECR II–3663, [89]–[90]; Cases T–366/03 and 235/04 *Land Oberösterreich and Austria v Commission* [2005] ECR II–4005, [29].

[23] See also, eg, Case 69/69 *Alcan Aluminium Raeren v Commission* [1970] ECR 385; Case 62/70 *Bock v Commission* [1971] ECR 897.

12. It follows that the contested Decision left to the national authorities and undertakings concerned such a margin of discretion with regard to the manner of its implementation and in particular with regard to the choice of factories to be closed, that the Decision cannot be regarded as being of direct and individual concern to the municipalities with which the undertakings affected, by virtue of the location of their factories, are connected.

(B) INDIVIDUAL CONCERN: LEGAL ACTS UNDER THE LISBON TREATY

Applicants must, as seen above, prove individual concern under Article 263(4) TFEU in relation to an act addressed to another person, unless it is a regulatory act that does not entail implementing measures. The meaning of this exception, which was introduced by the Lisbon Treaty, will be considered below. The present discussion will focus on the meaning of individual concern. Analysis of the existing law must however take account of changes to the categories of legal act by the Lisbon Treaty. The typology and hierarchy of legal acts were considered in a previous chapter, to which reference should be made.[24]

The relevance of this for present purposes is as follows. Article 230(4) EC was the predecessor to Article 263(4) TFEU, but the wording was subtly different. Article 230(4) stated that a decision addressed to another person might be of individual concern to the applicant, and that an act in the form of a regulation might in reality be a decision that was of direct and individual concern to the applicant. It therefore contained an invitation to look behind the form of the measure to its substance, in the sense that the ECJ or CFI could decide that a measure in the form of a regulation was in reality a decision that was of direct and individual concern.

Article 263(4) TFEU contains nothing expressly equivalent to this, *and* the structure of the provisions on legal acts renders this more difficult for the following reason. This is primarily because the test for a legislative act is formalistic, not substantive, in nature: enactment by a legislative procedure.[25] It is also because there are requirements that must be satisfied for the passage of delegated acts,[26] and thus the consequence of re-classifying a legislative act as a delegated act, or vice versa, would inevitably be to condemn it as invalid, since it would not have been enacted by the proper procedure or subject to the proper conditions. It will therefore be difficult for an individual to contend that the Union Courts should look to the substance of a measure *across* the categories of legal act.

It would still be possible in principle for the Courts to undertake this task *within* a particular category of legal act. Thus an applicant might contend that although a regulation was a legislative act because it was made in accordance with the legislative procedure, it was nonetheless of direct and individual concern. The very fact that the definition of a legislative act is formalistic might assist the applicant in this respect, but it is nonetheless likely to face an uphill task in proving individual concern, given the meaning of this term explained below, and given also the label 'legislative act' attached to such measures. To take another example, an applicant might contend that a delegated act in the form of a regulation was of direct and individual concern to it.

(C) INDIVIDUAL CONCERN: *PLAUMANN* AND DECISIONS

Applicants must prove individual concern under Article 263(4) in relation to acts addressed to another person, unless the act is a regulatory act that does not entail implementing measures. The present

[24] Ch 4.
[25] Art 289 TFEU.
[26] Art 290 TFEU.

discussion focuses on the meaning of individual concern, and we begin by considering its application to cases where the legal act takes the form of a decision addressed to another.

Case 25/62 **Plaumann & Co v Commission**
[1963] ECR 95

[Note Lisbon Treaty renumbering: Art 173 is now Art 263 TFEU]

In 1961 the German Government requested the Commission to authorize it to suspend the collection of duties on clementines imported from non-member countries. The Commission refused the request, and addressed its answer to the German Government. The applicant was an importer of clementines, who contested the legality of the Commission's decision.

THE ECJ

Under the second paragraph of Article 173 of the EEC Treaty 'any natural or legal person may … institute proceedings against a decision … which, although in the form of…a decision addressed to another person, is of direct and individual concern to the former'. The defendant contends that the words 'other person' in this paragraph do not refer to Member States in their capacity as sovereign authorities and that individuals may not therefore bring an action for annulment against the decisions of the Commission or of the Council addressed to Member States.

However the second paragraph of Article 173 does allow an individual to bring an action against decisions addressed to 'another person' which are of direct and individual concern to the former, but this article neither defines nor limits the scope of these words. The words and the natural meaning of this provision justify the broadest interpretation. Moreover provisions of the Treaty regarding the right of interested parties to bring an action must not be interpreted restrictively. Therefore, the treaty being silent on the point, a limitation in this respect may not be presumed.

…

Persons other than those to whom a decision is addressed may only claim to be individually concerned if that decision affects them by reason of certain attributes which are peculiar to them or by reason of circumstances in which they are differentiated from all other persons and by virtue of these factors distinguishes them individually just as in the case of the person addressed. In the present case the applicant is affected by the disputed Decision as an importer of clementines, that is to say, by reason of a commercial activity which may at any time be practised by any person and is not therefore such as to distinguish the applicant in relation to the contested Decision as in the case of the addressee.

For these reasons the present action for annulment must be declared inadmissible.

(i) *The* Plaumann *Test: Pragmatic and Conceptual Difficulties*

The *Plaumann* test is still the leading authority and remains so after the Lisbon Treaty for those cases where individual concern must be proven. It is therefore important to dwell on the test and its application so as to understand why private applicants have found it so difficult to succeed.

The *test* stipulates that applicants can only be individually concerned by a decision addressed to another if they are in some way differentiated from all other persons, and by reason of these distinguishing features singled out in the same way as the initial addressee. There can however be more than one applicant who is individually concerned. The *application of the test* to the facts is equally important: the applicant failed because it practised a commercial activity that could be carried on by any person at any time. This reasoning can be criticized on both pragmatic and conceptual grounds.

In *pragmatic terms* the application of the test is economically unrealistic. If a limited number of firms is pursuing a trade this is the result of the ordinary principles of supply and demand. If there were a sudden surge of desire for clementines, the existing firms would normally import more of the produce. The argument that the activity of importing clementines can be undertaken by any person, that the number may alter significantly, and that therefore the applicant is not individually concerned is thus unconvincing. Moreover, even if there were incentives for other traders to enter the relevant industry, this might take a considerable time, and might well not occur during the period of application of the contested decision.[27]

The ECJ's reasoning is also open to criticism in *conceptual terms*, since it renders it literally impossible for an applicant to succeed, except in a very limited category of retrospective cases. The *Plaumann* test has to be applied at some point in time. There are only three choices. The relevant question could be asked when the contested determination was made, when the application for review was lodged, or at some future, undefined date. It has been held that the test for standing must be judged when the application for review is lodged.[28] This is sensible. However it is scant comfort to the applicant in a *Plaumann*-type case to be told that standing will be judged at the time the application is lodged, but then to be told the application fails because the activity of clementine-importing could be carried out by anyone at any time. On this reasoning no applicant could ever succeed, subject to the caveat considered below, since it could always be argued that others might engage in the trade at some juncture. This serves, in reality, to shift the focus to choice three: some future, ill-defined date. The possibility of *locus standi* is like a mirage in the desert, ever receding and never capable of being grasped.

The *Plaumann* test effectively prevented virtually all direct actions by private parties to challenge decisions addressed to others,[29] except where the challenged decision had a retrospective impact.[30] The ECJ and CFI reiterated the *Plaumann* test for individual concern and applied it in the same manner as in *Plaumann* itself. Many of the cases concerned challenges to decisions made under the Common Agricultural Policy. The EU Courts however applied the test in other areas.[31]

(ii) *Open and Closed Categories: Pragmatic and Conceptual Difficulties*

The preceding argument might be opposed by contending that the applicant in *Plaumann* was properly rejected, since he was a member of an open rather than closed category of applicants, and hence was not individually concerned. An open category is regarded as one where the membership is not fixed at the time of the decision. A closed category is one in which it is thus fixed. There are however practical and conceptual problems with this reasoning.

In *practical terms*, the language of open categories is used to rule out standing for any applicant, even if there is only a very limited number presently engaged in that trade, on the ground that others

[27] A point made by the applicants in Case 11/82 *AE Piraiki-Patraiki v Commission* [1985] ECR 207, although ignored by the ECJ.

[28] Case T–16/96 *Cityflyer Express Ltd v Commission* [1998] ECR II–757, [30].

[30] Cases 106 and 107/63 *Alfred Toepfer and Getreide-Import Gesellschaft v Commission* [1965] ECR 405; Case 62/70 *Bock v Commission* [1971] ECR 897; Case 11/82 *Piraiki-Patraiki* (n 27).

[31] Case T–585/93 *Stichting Greenpeace Council (Greenpeace International) v Commission* [1995] ECR II–2205, upheld on appeal, Case C–321/95 P *Stichting Greenpeace Council (Greenpeace International) v Commission* [1998] ECR I–1651. See also Case T–117/94 *Associazione Agricoltori della Provincia di Rovigo v Commission* [1995] ECR II–455; Case T–60/96 *Merck & Co Inc v Commission* [1997] ECR II–849; Case T–192/95 R *Danielsson v Commission* [1995] ECR II–3051.

might undertake the trade thereafter. If the presence of such notional, future traders renders the category open, this ignores the practical economics that determine the number of those who supply a product.

In *conceptual terms*, to regard any category as open merely because others might notionally undertake the trade leads to bizarre results, since any decision with a future impact would be unchallengeable because the category would be regarded as open. The *Plaumann* test is based on the assumption that some people have attributes that distinguish them from others, and that they possess these attributes when the contested decision is made. The fact that others might acquire these attributes later, by joining that trade, does not mean that they are presently part of that category. The matter can be put quite simply. The fact that I may wish to become striker for England, a great pianist, or a clementine importer does not mean that I currently have the attributes associated with any of these roles in life.

(D) INDIVIDUAL CONCERN: *PLAUMANN*, REGULATIONS, AND DIRECTIVES

An applicant may also claim to be individually concerned by a legal act that takes the form of a regulation or a directive.

(i) *The Abstract Terminology Test*

There were initially two tests in the case law: the closed category test[32] and the abstract terminology test. The latter was stricter than the former, and became the general test applied by the Court. It is exemplified by *Calpak*, and many other judgments:[33]

Cases 789 and 790/79 **Calpak SpA and Società Emiliana Lavorazione Frutta SpA v Commission**
[1980] ECR 1949

[Note Lisbon Treaty renumbering: Arts 173 and 189 are now Arts 263 and 288 TFEU]

The applicants were producers of William pears, and they complained that the calculation of production aid granted to them was void. Under the terms of an earlier regulation, production aid was to be calculated on the basis of the average production over the previous three years, in order to avoid the risk of over-production. The applicants alleged that the Commission had abandoned this method of assessing aid, and had based its aid calculation on one marketing year, in which production was atypically low. The applicants also claimed that they were a closed and definable group, the members of which were known to, or identifiable by, the Commission.

[32] The ECJ adopted a closed-category approach in cases that dealt with a completed set of past events: Cases 41–44/70 *International Fruit Company BV v Commission* [1971] ECR 411; Case 100/74 *Société CAM SA v Commission* [1975] ECR 1393; Case C–354/87 *Weddel v Commission* [1990] ECR I–3487.

[33] Cases 103–109/78 *Beauport v Council and Commission* [1979] ECR 17; Case 162/78 *Wagner v Commission* [1979] ECR 3467; Case 45/81 *Alexander Moksel Import-Export GmbH & Co Handels KG v Commission* [1982] ECR 1129; Cases 97, 99, 193 and 215/86 *Asteris AE and Greece v Commission* [1988] ECR 2181; Case 160/88 R *Fédération Européenne de la Santé Animale v Council* [1988] ECR 4121; Case C–298/89 *Gibraltar v Council* [1993] ECR I–3605; Case C–309/89 *Codorniu SA v Council* [1994] ECR I–1853.

THE ECJ

7. The second paragraph of Article 173 empowers individuals to contest, *inter alia*, any decision which, although in the form of a regulation, is of direct and individual concern to them. The objective of that provision is in particular to prevent the Community institutions from being in a position, merely by choosing the form of a regulation, to exclude an application by an individual against a decision which concerns him directly and individually; it therefore stipulates that the choice of form cannot change the nature of the measure.

8. By virtue of the second paragraph of Article 189 of the Treaty the criterion for distinguishing between a regulation and a decision is whether the measure is of general application or not. . . .

9. A provision which limits the granting of production aid for all producers in respect of a particular product to a uniform percentage of the quantity produced by them during a uniform period is by nature a measure of general application within the meaning of Article 189 of the Treaty. In fact the measure applies to objectively determined situations and produces legal effects with regard to categories of persons described in a generalized and abstract manner. The nature of the measure as a regulation is not called in question by the mere fact that it is possible to determine the number or even identity of the producers to be granted the aid which is limited thereby.

The abstract terminology test placed those who challenged an act in the form of a regulation in a difficult position. The purpose of allowing such challenge was, as the ECJ recognized in *Calpak*, to prevent the Community institutions from immunizing matters from attack by the form of their classification. This was the rationale for permitting a challenge when the regulation was in reality a decision, which was of direct and individual concern to the applicant. This required, as acknowledged in *Calpak*, the Court to look behind the *form* of the measure in order to determine whether in *substance* it really was a regulation or not.

The problem with the abstract terminology test was that, rather than looking behind form to substance, it came perilously close to looking behind form to form. A regulation would be accepted as a true regulation if, as stated in *Calpak*, it applied to 'objectively determined situations and produces legal effects with regard to categories of persons described in a generalized and abstract manner'. However, it was always possible to draft norms in this manner, and thus to immunize them from attack, more especially as the Court made clear that knowledge of the number or identity of those affected would not prevent the norm from being regarded as a true regulation.

The ECJ made it clear prior to the Lisbon Treaty that a non-privileged applicant could in principle challenge the legality of a directive, even though Article 230(4) EC did not make this explicit. This conclusion has been reinforced by Article 263(4) TFEU, which is framed in terms of challenge to legal acts, and this clearly includes directives. The applicant nonetheless has an uphill struggle to show individual concern.[34]

(ii) Codorniu *and* Plaumann

If a regulation was found to be a 'true regulation' on the basis of the abstract terminology test then traditionally the Court would simply conclude that the applicant was not individually concerned. The Union Courts modified this legal stance and became willing in principle to admit that a regulation

[34] Case C–298/89 *Gibraltar v Council* [1993] ECR I–3605; Case T–99/94 *Asociacion Española de Empresas de la Carne (ASOCARNE) v Council* [1994] ECR II–871; upheld on appeal, Case C–10/95 P [1995] ECR I–4149; Case T–135/96 *UEAPME v Council* [1998] ECR II–2335, [63]; Cases T–172, 175, and 177/98 *Salamander AG v Parliament and Council* [2000] ECR II–2487; Case T–94/04 *EEB v Commission* [2005] ECR II–4919; Case T–16/04 *Arcelor* (n 20) [100]–[123].

might be a 'true' regulation as judged by the abstract terminology test, but to accept that none the less it might be of individual concern to an applicant.

Case C–309/89 **Codorniu SA v Council**
[1994] ECR I–1853

The applicant challenged a regulation which stipulated that the term *crémant* should be reserved for sparkling wines of a particular quality coming from France or Luxembourg. The applicant made sparkling wine in Spain and held a trade mark which contained the word *crémant*. However, other Spanish producers also used this term. The Council argued that the measure was a regulation within the *Calpak* test, and that it could not be challenged, irrespective of whether it was possible to identify the number or identity of those affected by it.

THE ECJ

18. As the Court has already held, the general applicability, and thus the legislative nature, of a measure is not called in question by the fact that it is possible to determine more or less exactly the number or even identity of the persons to whom it applies at any given time, so long as it is established that it applies to them by virtue of objective legal or factual situation defined by the measure in question in relation to its purpose....

19. Although it is true that according to the criteria in the second paragraph of Article 173 of the Treaty the contested provision is, by nature and by virtue of its sphere of application, of a legislative nature in that it applies to the traders concerned in general, that does not prevent it from being of individual concern to some of them.

20. Natural or legal persons may claim that a contested provision is of individual concern to them only if it affects them by reason of certain attributes which are peculiar to them or by reason of circumstances in which they are differentiated from all other persons (... *Plaumann*...).

21. Codorniu registered the graphic trade mark 'Gran Cremant de Codorniu' in Spain in 1924.... By reserving the right to use the term 'crémant' to French and Luxembourg producers, the contested provision prevents Codorniu from using its graphic trade mark.

22. It follows that Codorniu has established the existence of a situation which from the point of view of the contested provision differentiates it from all other traders.

The willingness to accept that a legal act could be a true regulation as judged by the abstract terminology test and yet that it could be of individual concern was a liberalizing move. However an applicant still had to show individual concern in accordance with the *Plaumann* test. While there were some exceptions,[35] the dominant approach post-*Codorniu* was 'pure *Plaumann*'. Applicants were denied standing because the ECJ and CFI applied the *Plaumann* test in the same manner as in *Plaumann* itself. The fact that the applicant operated a trade which could be engaged in by any other person served to deny individual concern. The possibility of determining the number or identity of the persons to whom a measure applied did not suffice for individual concern.[36]

Thus in *Buralux*[37] the applicants were linked companies which challenged a regulation concerning shipment of waste. The ECJ held that the mere fact that it was possible to determine the number

[35] Cases T–480 and 483/93 *Antillean Rice Mills NV v Commission* [1995] ECR II–2305, [70], [76]; Cases T–32 and 41/98 *Government of the Netherlands Antilles v Commission* [2000] ECR II–20; Case T–33/01 *Infront WM AG v Commission* [2005] ECR II–5897.

[36] Case C–362/06 P *Markku Sahlstedt v Commission* [2009] ECR I–2903.

[37] Case C–209/94 P *Buralux SA v Council* [1996] ECR I–615. See also Case T–472/93 *Campo Ebro Industrial SA v Council* [1995] ECR II–421; Case T–489/93 *Unifruit Hellas EPE v Commission* [1994] ECR II–1201; Case T–116/94 *Cassa*

or even identity of those affected did not mean that the regulation was of individual concern to them, so long as the measure was abstractly formulated.[38] Individual concern was determined by the *Plaumann* test.[39] The applicants failed to satisfy this test since they were affected only as 'economic operators in the business of waste transfer between Member States, in the same way as any other operator in that business'.[40] The fact that the applicants were the only companies engaged in shipment of waste between France and Germany was not relevant, since the regulation applied to all waste shipments in the EC.[41] The laudable hope[42] that *Codorniu* might lead to a test for standing based on adverse impact, judged on the facts of the case, was not therefore realized.[43]

(iii) Plaumann, *Regulations, Directives, and the Lisbon Treaty*

If the applicant cannot take advantage of the exception in Article 263(4) for regulatory acts where individual concern is not required, the difficulties of showing such concern in relation to regulations and directives in the post-Lisbon world may well be greater for the reasons set out above.[44] Legislative acts are those made in accordance with a legislative procedure. This does not preclude an applicant from claiming that a legislative act in the form of a regulation or directive is of direct and individual concern, and the very fact that the test for a legislative act is formalistic may assist the applicant in this respect. The GC and ECJ may however be reluctant to conclude that a provision termed a 'legislative act' will be of individual concern in the sense demanded by the *Plaumann* test. An applicant may well face equal difficulties in convincing the Union Courts that a delegated act in the form of a regulation or directive is of individual concern as judged by the rigorous requirements of the *Plaumann* test, given that delegated acts are defined as non-legislative acts of general application.

(E) INDIVIDUAL CONCERN: ANTI-DUMPING, COMPETITION, AND STATE AIDS

The ECJ has been more liberal in according standing in certain areas, those concerning anti-dumping, competition, and state aids. The relevant Treaty Articles and regulations had a marked impact on judicial decisions, since the procedure in these areas explicitly or implicitly envisaged a role for the individual complainant, who could alert the Commission to the breach of EU law. The EU interest in these areas was moreover relatively clear, and the Union Courts were therefore receptive to arguments that, for example, a state had infringed EU law by illegal state aid.

(i) *Anti-Dumping*

We can begin by considering anti-dumping. The EU passes anti-dumping regulations to prevent those outside the EU from selling goods within the EU at too low a price, to the detriment of Union

Nazionale di Previdenza a Favore degli Avvocati e Procuratori v Council [1995] ECR II–1; Case T–138/98 *Armement Coopératif Artisanal Vendéen (ACAV) v Council* [2000] ECR II–341; Cases T–38–50/99 *Sociedade Agricola dos Arinhos, Ld v Commission* [2001] ECR II–585; Case T–155/02 *VVG International Handelsgesellschaft mbH v Commission* [2003] ECR II–1949; Case T–139/01 *Comafrica SpA and Dole Fresh Fruit Europe Ltd and Co v Commission* [2005] ECR II–409, [100], [107]–[116].

traders. Whether a firm is dumping may be controversial. There was the added complication that anti-dumping duties had to be imposed by regulation, as opposed to decision. If, therefore, the Court held that the regulation was not a regulation at all, then it was arguable that the Commission had no power to impose the measure. Three types of applicant might wish to challenge an anti-dumping duty.

The first type is the firm which initiated the complaint about dumping, as exemplified by the *Timex* case[45] where the company that initiated the complaint was unhappy with the resultant regulation because it felt that the anti-dumping duty was too low. The ECJ held that as the principal complainant and a leading watch maker in the EU it had standing to contest the level of duty imposed.

The second type of applicant is the producer of the product that is subject to the anti-dumping duty. In the *Allied Corporation* case[46] the ECJ confirmed that the producers and exporters who were charged with dumping could also be regarded as individually concerned, at least in so far as they were identified in the measure adopted by the Commission or involved in the preliminary investigation.

The third category of applicant who might wish to contest the legality of an anti-dumping regulation is the importer of the product against which the anti-dumping duty has been imposed. Some such applications were rejected on the ground that the importer could challenge the measure indirectly under what is now Article 267 TFEU in an action against the national agency which collected the duty. The *Extramet* case indicated when an importer would be held to have standing.[47]

Case C–358/89 **Extramet Industrie SA v Council**
[1991] ECR I–2501

Extramet (E) imported calcium from outside the EC, which it then processed itself. There was only one Community producer of calcium, P, which refused to supply the raw material to E. P also claimed that E's supplies from outside the EC were being dumped in the EC and a dumping duty was imposed. It was this duty which E then sought to have annulled. The ECJ held that an anti-dumping regulation could still be of individual concern to certain traders who satisfied the *Plaumann* test. E satisfied that test for the following reasons.

THE ECJ

17. The applicant has established the existence of factors constituting such a situation . . . The applicant is the largest importer of the product forming the subject-matter of the anti-dumping measure and, at the same time, the end-user of the product. In addition, its business activities depend to a very large extent on those imports and are seriously affected by the contested regulation in view of the limited number of manufacturers of the product concerned and of the difficulties which it encounters in obtaining supplies from the sole Community producer, which, moreover, is its main competitor for the processed product.

[45] Case 264/82 *Timex Corporation v Council and Commission* [1985] ECR 849. It seems however that participation in the procedure leading to the anti-dumping regulation and being named therein will not in itself secure standing: Case T–598/97 *British Shoe Corporation Footwear Supplies Ltd v Council* [2002] ECR II–1155.

[46] Cases 239 and 275/82 *Allied Corporation v Commission* [1984] ECR 1005; Case T–155/94 *Climax Paper Converters Ltd v Council* [1996] ECR II–873; Case T–147/97 *Champion Stationery Mfg Co Ltd v Council* [1998] ECR II–4137.

[47] Case T–161/94 *Sinochem Heilongjiang v Commission* [1996] ECR II–695; Case T–2/95 *Industrie des Poudres Sphériques v Council* [1998] ECR II–3939.

(ii) *Competition*

A second area in which the ECJ has been more liberal in according standing is competition policy, regulated by Articles 101 and 102 TFEU. Under what was Article 3(2) of Regulation 17,[48] a Member State, or any natural or legal person who claimed to have a legitimate interest, could make an application to the Commission, putting forward evidence of a breach of what are now Articles 101 and 102 TFEU.

Case 26/76 **Metro-SB-Großmärkte GmbH & Co KG v Commission**[49]
[1977] ECR 1875

[Note Lisbon Treaty renumbering: Arts 85, 86, and 173 are now Arts 101, 102, and 263 TFEU]

Metro argued that the distribution system operated by SABA was in breach of Article 85 of the Treaty. It initiated a complaint under Article 3(2) of Regulation 17. The Commission decided that certain aspects of the distribution system were not in breach of Article 85, and it was this decision, addressed to SABA, that Metro sought to annul. The question arose whether Metro could claim to be individually concerned by a decision addressed to another.

THE ECJ

The contested decision was adopted in particular as the result of a complaint submitted by Metro and it relates to the provisions of SABA's distribution system, on which SABA relied and continues to rely as against Metro in order to justify its refusal to sell to the latter or to appoint it as a wholesaler, and which the applicant had for this reason impugned in its complaint.

It is in the interests of a satisfactory administration of justice and of the proper application of Articles 85 and 86 that natural or legal persons who are entitled, pursuant to Article 3(2)(b) of Regulation No 17, to request the Commission to find an infringement of Articles 85 and 86 should be able, if their request is not complied with wholly or in part, to institute proceedings in order to protect their legitimate interests.

In those circumstances the applicant must be considered to be directly and individually concerned, within the meaning of the second paragraph of Article 173, by the contested decision and the application is accordingly admissible.

(iii) *State Aid*

Similar considerations are apparent in the case law on state aids. The provision of such aid is regulated by Articles 107 to 109 TFEU to prevent competition from being distorted by a firm receiving assistance from its government, thereby giving it an unfair advantage against competitors.[50] The

[48] The regime for the enforcement of competition policy has now changed: see below, 1005–1009.

[49] See also Case T–37/92 *Bureau Européen des Unions des Consommateurs v Commission* [1994] ECR II–285, although the result was different if the applicant had not taken part in the complaints procedure: Case C–70/97 *Kruidvart BVBA v Commission* [1998] ECR I–7183. See also in relation to mergers Case T–12/93 *Vittel* (n 21); Case T–96/92 *Comité Central d'Entreprise de la Société Générale des Grands Sources v Commission* [1995] ECR II–1213; Cases T–528, 542, 543 and 546/93 *Métropole Télévision SA v Commission* [1996] ECR II–649; Case T–158/00 *ARD v Commission* [2003] ECR II–3825.

[50] Ch 29.

Commission decides whether the aid is compatible with the Treaty, and addresses a decision to the state, which can challenge it under Article 263 TFEU. The Treaty was less clear whether complainants could also do so. There was nothing directly comparable in state aids to the complaints procedure that operated in competition law. Notwithstanding this, the ECJ in *COFAZ*[51] reasoned by analogy from the *Metro* case in competition law and the *Timex* case in anti-dumping. The applicants in *COFAZ* played a comparable role in the procedure under what is now Article 108 TFEU, more especially because Article 108(2) recognized in general terms that the undertakings concerned were entitled to submit their comments to the Commission. They were therefore granted standing, subject to the further condition that their position on the market was significantly affected by the aid that was the subject of the contested decision.[52]

(F) INDIVIDUAL CONCERN: REFORM AND THE COURTS

Article 263(4) TFEU amended Article 230(4) EC by providing that individual concern is not required in relation to regulatory acts that do not entail implementing measures. The scope of this exception will be considered below. Before doing so, we should consider attempts at more general reform of the test for individual concern through judicial means.

The very fact that the case law on dumping, competition, and state aids was more liberal cast into sharp relief the restrictive approach that dominated the majority of cases on standing. It is therefore not surprising that the generality of the Courts' jurisprudence on standing for non-privileged applicants was criticized as being too restrictive. The ECJ defended its jurisprudence on the ground that the Treaty provided a comprehensive mechanism for legal protection: applicants who did not have standing for a direct action under Article 263 could test the legality of the measure indirectly through Article 267 TFEU. Advocate General Jacobs questioned this reasoning in the *Extramet* case.[53] In the *UPA* case he subjected the hypothesis to more searching scrutiny, found it to be unconvincing, and suggested that standing should be accorded where the contested measure had a substantial adverse effect on the applicant.

Case C–50/00 P **Unión de Pequeños Agricultores v Council** [2002] ECR I–6677

[Note Lisbon Treaty renumbering: Arts 230 and 234 are now Arts 263 and 267 TFEU]

An association of farmers, UPA, sought the annulment of Regulation 1638/98, which amended the common organization of the olive oil market. The CFI dismissed the application because the members of the association were not individually concerned by the Regulation under Article 230(4). The UPA argued, *inter alia*, that it was denied effective judicial protection because it could not readily attack the measure via Article 234. The following extract contains the Advocate General's summary of his Opinion.

[51] Case 169/84 *Compagnie Française de l'Azote (COFAZ) SA v Commission* [1986] ECR 391; Case T–435/93 *ASPEC v Commission* [1995] ECR II–1281; Case T–380/94 *AIUFFASS v Commission* [1996] ECR II–2169; Case T–88/01 *Sniace, SA v Commission* [2005] ECR II–1165, [56]–[57].

[52] The case law on standing in relation to state aids is complex. For more detail see 1103–1104, and U Soltesz and H Bielesz, 'Judicial Review of State Aid Decisions—Recent Developments' [2004] ECLR 133.

[53] Case C–358/89 *Extramet Industrie SA v Council* [1991] ECR I–2501, AG Jacobs, [70]–[74].

ADVOCATE GENERAL JACOBS

102 ...

(1) The Court's fundamental assumption that the possibility for an individual applicant to trigger a reference for a preliminary ruling provides full and effective judicial protection against general measures is open to serious objections:

— under the preliminary ruling procedure the applicant has no right to decide whether a reference is made, which measures are referred for review or what grounds of invalidity are raised and thus no right of access to the Court of Justice; on the other hand, the national court cannot itself grant the desired remedy to declare the general measure in issue invalid;

— there may be a denial of justice in cases where it is difficult or impossible for an applicant to challenge a general measure indirectly (e.g. where there are no challengeable implementing measures or where the applicant would have to break the law in order to be able to challenge ensuing sanctions);

— legal certainty pleads in favour of allowing a general measure to be reviewed as soon as possible and not only after implementing measures have been adopted;

— indirect challenges to general measures through references on validity under Article 234 present a number of procedural disadvantages in comparison to direct challenges under Article 230 before the Court of First Instance as regards for example the participation of the institution(s) which adopted the measure, the delays and costs involved, the award of interim measures or the possibility of third party intervention.

(2) Those objections cannot be overcome by granting standing by way of exception in those cases where an applicant has under national law no way of triggering a reference for a preliminary ruling on the validity of the contested measure. Such an approach

— has no basis in the wording of the Treaty;

— would inevitably oblige the Community Courts to interpret and apply rules of national law, a task for which they are neither well prepared nor even competent;

— would lead to inequality between operators from different Member States and to a further loss of legal certainty.

(3) Nor can those objections be overcome by postulating an obligation for the legal orders of the Member States to ensure that references on the validity of general Community measures are available in their legal systems. Such an approach would

— leave unresolved most of the problems of the current situation such as the absence of remedy as a matter of right, unnecessary delays and costs for the applicant or the award of interim measures;

— be difficult to monitor and enforce; and

— require far-reaching interference with national procedural autonomy.

(4) The only satisfactory solution is therefore to recognise that an applicant is individually concerned by a Community measure where the measure has, or is liable to have, a substantial adverse effect on his interests. That solution has the following advantages:

— it resolves all the problems set out above: applicants are granted a true right of direct access to a court which can grant a remedy, cases of possible denial of justice are avoided, and judicial protection is improved in various ways;

— it also removes the anomaly under the current case-law that the greater the number of persons affected the less likely it is that effective judicial review is available;

— the increasingly complex and unpredictable rules on standing are replaced by a much simpler

test which would shift the emphasis in cases before the Community Courts from purely formal questions of admissibility to questions of substance;

— such a re-interpretation is in line with the general tendency of the case-law to extend the scope of judicial protection in response to the growth of powers of the Community institutions (*ERTA*, *Les Verts*, *Chernobyl*);

(5) The objections to enlarging standing are unconvincing. In particular:

— the wording of Article 230 does not preclude it;

— to insulate potentially unlawful measures from judicial scrutiny cannot be justified on grounds of administrative or legislative efficiency: protection of the legislative process must be achieved through appropriate substantive standards of review;

— the fears of over-loading the Court of First Instance seem exaggerated since the time-limit in Article 230(5) and the requirement of direct concern will prevent an insuperable increase of the case-load; there are procedural means to deal with a more limited increase of cases.

(6) The chief objection may be that the case-law has stood for many years. There are however a number of reasons why the time is now ripe for change. In particular:

— the case-law in many borderline cases is not stable, and has been in any event relaxed in recent years, with the result that decisions on admissibility have become increasingly complex and unpredictable;

— the case-law is increasingly out of line with more liberal developments in the laws of the Member States;

— the establishment of the Court of First Instance, and the progressive transfer to that Court of all actions brought by individuals, make it increasingly appropriate to enlarge the standing of individuals to challenge general measures;

— the Court's case-law on the principle of effective judicial protection in the national courts makes it increasingly difficult to justify narrow restrictions on standing before the Community Courts.

The hope that standing rules might be liberalized proved short-lived, since the ECJ declined to follow the lead of Advocate General Jacobs.

Case C–50/00 P **Unión de Pequeños Agricultores v Council**
[2002] ECR I–6677

The ECJ accepted the principle from *Codorniu* that a true regulation could be challenged, provided the applicant could show individual concern in accordance with the *Plaumann* test. It continued as follows.

THE ECJ

37. If that condition is not fulfilled, a natural or legal person does not, under any circumstances, have standing to bring an action for the annulment of a regulation.

38. The European Community is, however, a Community based on the rule of law in which its institutions are subject to judicial review of the compatibility of their acts with the Treaty and with the general principles of law which include fundamental rights.

39. Individuals are therefore entitled to effective judicial protection of the rights they derive from the Community legal order, and the right to such protection is one of the general principles of law stemming from the constitutional traditions common to the Member States…

40. [T]he Treaty has established a complete system of legal remedies and procedures designed to ensure judicial review of the legality of acts of the institutions . . . Under that system, where natural or legal persons cannot, by reason of the conditions for admissibility laid down in the fourth paragraph of Article 173 of the Treaty, directly challenge Community measures of general application, they are able, depending on the case, either indirectly to plead the invalidity of such acts before the Community courts under Article 184 of the Treaty or to do so before the national courts and ask them, since they have no jurisdiction themselves to declare those measures invalid . . . , to make a reference to the Court of Justice for a preliminary ruling on validity.

41. Thus it is for the Member States to establish a system of legal remedies and procedures which ensure respect for the right to effective judicial protection.

42. In that context, in accordance with . . . Article 5 of the Treaty, the national courts are required, so far as possible, to interpret and apply national procedural rules governing the exercise of rights of action in a way that enables natural and legal persons to challenge before the courts the legality of any decision or other national measure relative to the application to them of a Community act of general application, by pleading the invalidity of such an act.

43. [I]t is not acceptable to adopt an interpretation of the system of remedies . . . to the effect that a direct action for annulment before the Community courts will be available if it can be shown, following examination by that Court of the particular national procedural rules, that those rules do not allow the individual to bring proceedings to contest the validity of the Community measure at issue. Such an interpretation would require the Community court, in each individual case, to examine and interpret national procedural law. That would go beyond its jurisdiction when reviewing the legality of Community measures.

44. Finally, it should be added that, according to the system for judicial review of legality established by the Treaty, a natural or legal person can bring an action challeneging a regulation only if it is concerned both directly and individually. Although this last condition must be interpreted in the light of the principle of effective judicial protection by taking account of the various circumstances that may distinguish an applicant individually . . . such an interpretation cannot have the effect of setting aside the condition in question, expressly laid down in the Treaty, without going beyond the jurisdiction conferred by the Treaty on the Community Courts.

45. While it is, admittedly, possible to envisage a system of judicial review of the legality of Community measures different from that established by the founding Treaty and never amended as to its principles, it is for the Member States, if necessary, in accordance with Article 48 EU, to reform the system currently in force.

The ECJ in *Jégo-Quéré* followed its reasoning and decision in *UPA*.[54] It acknowledged the right to effective judicial protection, but held once again that the Treaty established a complete system of legal protection through the combination of Articles 263 and 267. It was for the Member States to ensure that individuals should be able to challenge Union measures at national level, even where no implementing measures were involved. The criteria for standing under Article 230(4) EC would not be relaxed even where it was apparent that the national rules did not allow the individual to contest the validity of the measure without having contravened it. The right to effective judicial protection could not, said the ECJ, have the effect of setting aside a condition expressly laid down by the Treaty. The

[54] Case C–263/02 P *Commission v Jégo-Quéré & Cie SA* [2004] ECR I–3425, [29]–[39]. ECJ rejected the alternative test proposed by the CFI,[55] which the latter had given after the Opinion of Advocate General Jacobs in *UPA*, but before the Court's decision.

Although the ECJ regarded reform as a matter for Treaty amendment, there was indirect pressure from the European Court of Human Rights, since there were indications that the restrictive standing rules might be inconsistent with Article 6 ECHR.[56] It was not therefore fortuitous that this issue was raised in a number of EU cases. Thus in the *Ocalan* case[57] the applicant claimed that the EC's restrictive standing rules violated Article 6 ECHR, and the ECJ self-consciously 'checked' whether the applicants would be regarded as victims under the ECHR.

The premise underlying the ECJ's decisions in *UPA* and *Jégo-Quéré* is that the Treaty provided for a complete regime of legal protection in terms of access to court, via Articles 267 and 263 TFEU. There are however real difficulties with this hypothesis.[58]

i. The ECJ largely ignored the Advocate General's analysis of the difficulties faced by individuals who seek to use Article 267. They are in part procedural: proceeding via the national court can have implications for participation of the institutions that adopted the contested measure; delays; costs; the award of interim measures; and the possibility of third party intervention. They are in part inherent in the very nature of Article 267: it is a reference system; the applicant must therefore convince the national court that a reference is required; and may have to fight through more than one national court. The difficulties with Article 267 are also substantive: the national court is precluded from invalidating the measure, and hence the applicant has to proceed to the ECJ; and an individual may not be able to challenge the illegality of the measure in the national court without placing itself in contravention of it.

ii. The ECJ exhorted national courts, in accordance with what is now Article 4(3) TFEU, to interpret national procedural rules so as to enable applicants to challenge EU norms of general application before the national courts. This strategy is however of limited utility. It cannot resolve the procedural difficulties adverted to above. It cannot overcome, although it may alleviate, the difficulties flowing from the discretionary nature of the Article 267 system. It provides no answer to the critique that it is wrong for an applicant to have to place itself in breach of an EU norm in order to challenge its validity.

iii. Indirect challenge via Article 267 has undesirable consequences for the division of competences between the ECJ and the GC. Preliminary rulings are the preserve of the ECJ.[59] Challenges to the validity of EU norms via Article 267 therefore go to the ECJ, while the same issues would be heard by the GC if they were admissible as a direct challenge under Article 263. This increases the ECJ's workload and means that its scarce resources are diverted to answering such preliminary rulings, which will often not involve any point of general importance for EU law.

iv. The ECJ's reasoning in *UPA* concerning Article 263 is equally problematic. It held that the boundaries of legitimate Treaty interpretation constrained any modification to the traditional case law on direct challenge. The right to effective judicial protection could influence the application of individual concern, but could not, said the ECJ, set aside that condition, which could only be done via a Treaty amendment. This is with respect unconvincing. The Treaty has always

[55] Case T–177/01 *Jégo-Quéré et Cie SA v Commission* [2002] ECR II–2365, where the CFI held that a person should be regarded as individually concerned by a Community measure of general application if the measure affected his legal position, in a manner which was both definite and immediate, by restricting his rights or by imposing obligations.

[56] App No 45036/98 *Bosphorus Hava Yollari Turizm Ve Ticaret Anonim Sirketi v Ireland* (2005).

[57] Case C–229/05 P *Osman Ocalan v Council* [2007] ECR I–439, [75]–[83].

[58] The argument in this section is developed in greater detail in P Craig, *EU Administrative Law* (Oxford University Press, 2006) 340–344.

[59] The Nice Treaty qualified this monopoly, but the power to accord the CFI power over preliminary rulings has not been acted on: see 481–482.

required proof of individual concern. It is the meaning to be given to that phrase that is the question in issue. The crucial issue is not whether the Treaty imposes limits on standing, but whether the interpretation of those limits has been overly restrictive. The *Plaumann* test is open to criticism, even given the language of what was Article 230(4) EC. The ECJ has often interpreted Treaty Articles and EU legislation teleologically. It is moreover not readily apparent why Advocate General Jacobs' interpretation of individual concern would involve any transgression of the bounds of normal Treaty interpretation, let alone that it would be akin to Treaty amendment through judicial fiat. This is more especially so given that the ECJ has literally filled gaps in relation to other parts of Article 263 where it was felt that this was warranted.[60] The ECJ gave no explanation as to why it felt that the Advocate General's test would be incompatible with the wording of Article 263. There is in reality no reason why a test framed in terms of substantial adverse impact could not be a legitimate reading of individual concern.

v. A legal system may have impressive principles of judicial review, but these will be of scant comfort to those who cannot access the system because the standing rules are unduly narrow. It is right in normative terms that those who have suffered some substantial adverse impact should have access to judicial review. This test is no more liberal than that which prevails in most domestic legal orders and is fitting for a legal system based on the rule of law. The idea that the more people are affected by a provision the less chance there is for any challenge is contrary to principle.

vi. The ECJ in *UPA* said nothing about the practical consequences of a more liberal test under Article 263, but there is a sense that it was concerned with possible work-load problems. There is however no reason why there should necessarily be any significant net increase in the number of challenges. The very fact that Article 263 has been so restrictive forces applicants to use Article 267. The ECJ has however little control over the range of applicants that can challenge via Article 267 or the type of norm that can be challenged. The consequence of a more liberal interpretation of Article 263 would be to shift some of these cases back to direct challenge, and give the EU Courts scope for control through the determination of whether there was a substantial adverse impact. Moreover, the implicit assumption seems to be that there would be numerous challenges to a regulation by applicants, each of which would claim to have suffered substantial adverse impact. This does not accord with legal or practical reality. Some cases would be joined in a single action. In any event once the ECJ or GC pronounced on the legality of the regulation in relation to one action, that would be the end of the matter. The decision would resolve the issue in relation to any other possible claimant, unless he or she could raise some new legal argument that had not been addressed in the earlier case.

vii. There may well be valid reasons why the EU Courts are wary of intervening too far in the complex discretionary choices made by the EU institutions, and many of the standing cases involve such choices made pursuant to the Common Agricultural Policy.[61] The EU Courts can however influence the number of actions that are brought through the standards of review that are applied.[62] This will impact on the number of actions brought, since applicants will calculate their chances of success before embarking on the expense of litigation. It is of course true that a very strict test for standing may be less demanding on the Court's time. This however comes dangerously close to reductionism, since it says no more than that if a court declines to hear a case it will save more judicial resources than if the case had been heard.

(G) INDIVIDUAL CONCERN: REFORM AND THE LISBON TREATY

The framers of the Lisbon Treaty amended the rules on standing: individual concern is not required in relation to a regulatory act that is of direct concern and does not entail implementing measures. The significance of this reform depends on the meaning of 'regulatory act' and 'implementing measure'.[63]

(i) *Regulatory Act*

The same term was used in the analogous provision in the Constitutional Treaty.[64] Its meaning was uncertain, but the better view was that it applied only in relation to secondary norms and not to primary legislative acts.[65] There is also uncertainty in relation to the meaning of regulatory act under the Lisbon Treaty. The types of legal act specified by the Lisbon Treaty were considered above.[66] Legislative acts are those enacted by a legislative procedure, and can take the form of a regulation, decision, or directive.[67] A legislative act can delegate power to the Commission to adopt a non-legislative act, which may once again take the form of a regulation, decision, or directive, although it will normally be a regulation.[68] These are termed delegated acts.[69] There is also a separate category of implementing acts.[70]

The term 'regulatory act' does not fit easily with the Lisbon classification of legal acts. It could be construed broadly to cover any legally binding act, whether legislative, delegated, or implementing, provided that it does not entail implementing measures. It could be interpreted more narrowly to cover any legislative, delegated, or implementing act, provided that it takes the form of a regulation or decision that does not entail implementing measures. It could cover only delegated and implementing acts in the form of regulations or decisions, which do not entail implementing measures, or only delegated acts subject to the same condition.

The construction that best fits the intent of those who devised the Constitutional Treaty would be the last, which is the narrowest: it would only apply to delegated acts in the form of regulations or decisions that are of direct concern and do not entail implementing measures. If this interpretation were adopted it would have only a limited impact on the pre-existing problems of standing for non-privileged applicants. It would not apply to legislative acts that are of direct concern and do not entail implementing measures. This constraint on the ambit of the reformed provision would be all the more marked, given the formalistic nature of the definition of legislative act in the Lisbon Treaty, which covers any act passed by a legislative procedure. It is therefore perfectly possible for there to be a 'legislative act' that applies to a very narrow group of applicants, which is *de facto* a closed group, where no one could challenge the measure because they would not come within the scope of the reformed standing provision; they would hence have to show individual concern and would be unable to do so under existing case law.

If Article 263(4) is to alleviate the pre-existing difficulties for non-privileged applicants it will have to be interpreted to cover any legislative, delegated, or implementing act that does not entail implementing measures. This would in practice exclude directives in the form of legislative, delegated, or

[63] S Balthasar, 'Locus Standi Rules for Challenges to Regulatory Acts by Private Applicants: the New Article 263(4) TFEU' (2010) 35 ELRev 542.
[64] Art III–365(4) CT.
[65] Craig (n 19) ch 4.
[66] Ch 4.
[67] Art 289 TFEU.
[68] Art 290 TFEU.
[69] Art 290(3) TFEU.
[70] Art 291 TFEU.

implementing acts, since directives do require implementing measures. It remains to be seen whether the ECJ is willing to interpret the new provision in this manner.

It is important to recognize that where the exception in Article 263(4) TFEU does not apply an applicant will still need to show individual concern as that term has been interpreted in *Plaumann* and subsequent cases. This means that direct challenge in such cases will continue to be extremely difficult. Applicants will have to proceed indirectly via Article 267 TFEU and the Lisbon reforms have done nothing to address the difficulties with this method of challenge identified by Advocate General Jacobs in the *UPA* case.

(ii) *Implementing Measure*

The novel aspect of Article 263(4) whereby individual concern is not required only applies to a regulatory act that is of direct concern and does not entail implementing measures.

The most natural meaning of 'implementing measures' would be as follows. Regulations are directly applicable: once they are made by the EU they apply within the Member States without the need for transformation or adoption into national law. In that sense regulations do not 'entail' any measure to implement them into the national legal order. The same is true for the great majority of decisions, whether they are classic individualized decisions addressed to a particular person, or whether they are decisions of a more generic nature that are concerned with inter-institutional relations. Directives, by way of contrast, specify the ends to be achieved but leave the Member States with the choice of form and methods of implementation. Directives in that sense entail implementing measures.

It might be argued that even regulations or some decisions will lead to the modification of national rules in order that the demands of the regulation/decision are met within the particular Member State, and that where this is so such national measures should be regarded as implementing measures, with the consequence that an applicant could not take advantage of the liberalized standing rules in Article 263(4). The premise is correct, but the conclusion must be wrong.

It is certainly true that even though regulations are directly applicable and hence apply without the need for transformation or adoption, a Member State might still need to modify its prior laws to comply with or fulfil the demands of the regulation. It would nonetheless be regrettable if this were to preclude recourse to the liberalized standing rules under Article 263(4). The possibility of direct challenge of the same regulation would vary from state to state, since whether any particular state needed to modify its national rules, and if so how, would depend on the fit between the demands of the EU regulation and its pre-existing law, which will necessarily differ from state to state.

Such a result would moreover not fit well with the wording of Article 263(4), since it could not be said that the regulatory act itself 'entailed' implementing measures. The possibility of such national measures would, by way of contrast, be dependent on whether the particular Member State needed to modify its pre-existing rules in order to comply with the demands of the regulation, and that would depend on the national law, not the EU regulatory act itself.

(h) INDIVIDUAL CONCERN: REFORM AND THE CHARTER

It is doubtful whether the EU Charter of Fundamental Rights[71] will have much impact on the preceding analysis. Article 41 enshrines a right to good administration. Article 41(2) sets out certain more specific rights that are included in this right. Article 47 provides that everyone whose rights and freedoms guaranteed by EU law are violated has the right to an effective remedy before a tribunal in compliance with the conditions laid down in that Article. Standing rules are not explicitly mentioned in either Article.

[71] [2000] OJ C364/01; [2010] OJ C83/389.

It would be open to the EU Courts, if they wished to do so, to regard these provisions as the basis for expanding the existing standing rules. They are however unlikely to do so, given their approach to standing hitherto. This is especially so given that the explanatory memorandum stated in relation to Article 47 that there was no intention for this provision to make any change to the rules on standing other than those embodied in what is now Article 263(4) TFEU.[72]

There is nonetheless an uneasy tension between the Charter rights and the standing rules for direct actions. The Charter accords individual rights, yet the application of the standing rules means that a person who claims that his rights have been infringed by EU law will normally not be able to meet the requirements of individual concern.[73] There is something decidedly odd about the infringement of an individual right not counting as a matter of individual concern.

(I) SUMMARY

i. *Plaumann* remains the test for individual concern. The applicant must show that it has attributes or characteristics which distinguish it from all other persons and mark it out in the same manner as the addressee. The fact that the applicant operates a trade which could be engaged in by any other person will normally serve to deny individual concern, and it is this which makes it almost impossible for most applicants to succeed. The existence of particular factual injury to the applicant will not usually be relevant. Interest groups will not, in general, be in any better position than a private individual.

ii. *Plaumann* can, exceptionally, be interpreted more favourably to the applicant. This may be so where it can be shown that the challenged measure either infringed a right specific to the applicant or was in breach of a duty owed to the applicant. It will be rare for the GC or ECJ to allow a claim merely because of the factual injury suffered by the applicant.

iii. It was clear from *UPA*, *Jégo-Quéré,* and subsequent cases that the EU Courts were not willing to shift to the more liberal test for standing proposed by Advocate General Jacobs. The rationale for adherence to the status quo was that the Treaty provided a complete system of legal protection for individuals through Articles 263 and 267. There are however, as seen above, real difficulties with this view.

iv. The Lisbon Treaty reformed the standing rules by providing an exception for cases where individual concern is not required. This is to be welcomed, but how far it really alleviates previous problems depends on the interpretation of 'regulatory act'. The normal *Plaumann* test will have to be satisfied in cases where the exception does not apply.

6 ARTICLE 267: INDIRECT CHALLENGE TO THE LEGALITY OF EU ACTS

(A) THE RATIONALE FOR USING ARTICLE 267

Article 267 TFEU allows national courts to refer to the ECJ questions concerning the 'validity and interpretation of acts of the institutions, bodies, offices or agencies of the Union'. This provision

[72] Charte 4473/00, Convent 49, 11 Oct 2000, 41; CONV 828/03, Updated Explanations Relating to the Text of the Charter of Fundamental Rights, 9 July 2003, 41; Explanations Relating to the Charter of Fundamental Rights, 14 Dec 2007, [2007] OJ C303/17.

[73] Case C–258/02 P *Bactria* (n 54) [48]–[51].

assumed increased importance for private applicants because of the Court's narrow construction of the standing criteria under what was Article 230 EC.[74] Article 267 is often the only mechanism whereby such parties can contest the legality of Union norms. The limitations and difficulties of indirect challenge have been considered above. The present discussion will focus on the rationale for using Article 267 and the types of Union act that can be challenged.

An individual will often be affected by EU measures through their application at national level.[75] Thus the 'standard' scenario[76] is a Common Agricultural Policy (CAP) regulation which cannot be contested under Article 263, either because the applicant lacks standing or because of the time limit. These regulations will normally be applied by a national intervention agency. The regulation may, for example, require the forfeiture of a deposit given by a trader, who believes that this forfeiture is illegal because it is disproportionate or discriminatory. If the security is forfeited the trader may seek judicial review in the national court, claiming that the regulation is invalid. It will be for the national court to decide whether to refer the matter to the ECJ under Article 267. An alternative scenario is where a regulation demands a levy which the trader believes to be in breach of EU law. The trader's strategy might be to resist payment, be sued by the national agency, and then raise the alleged invalidity of the regulation by way of defence. It would be for the national court to decide whether to refer the matter to the ECJ.

(B) THE ACTS THAT CAN BE CHALLENGED UNDER ARTICLE 267

Article 267 allows a challenge to the validity of acts of the institutions, bodies, offices, or agencies of the Union. This enables challenge to regulations and directives via the national courts.

The situation with respect to individual decisions is more complex. A person who is not the addressee of an individual decision may contest this decision through the national courts. Thus, if a decision addressed to a Member State or state agency requires certain action to be taken, then an individual affected by this can contest the validity of the decision on which the action is based through the national courts.[77]

This is exemplified by the *Universität Hamburg* case.[78] The Commission issued a decision to all Member States refusing to allow exemption from customs duty in relation to scientific equipment imported from the United States. The German authorities applied this decision, and the applicant contested this before the national court. The ECJ held that the case could be brought via Article 267. It was influenced by the fact that the Commission decision did not have to be published, and that it did not have to be notified to the person applying for the tax exemption, which would have rendered challenge within the time limit under Article 263 virtually impossible.

The Court pronounced more generally on the point in *Rau*.[79] It held that the applicants, who were margarine producers, could contest in the national courts the legality of a scheme whereby the Community sold cheap butter on the German market to test consumer reaction. There was no need to ascertain whether or not the applicants had the possibility of challenging the decision directly before the ECJ.

[76] See, eg, Case 181/84 *R v Intervention Board for Agricultural Produce, ex p ED & F Man (Sugar) Ltd* [1985] ECR 2889; Case C–66/80 *ICC* [1981] ECR 1191.

[77] Case C–188/92 *TWD Textilwerke Deggendorf GmbH v Germany* [1994] ECR I–833.

[78] Case 216/82 *Universität Hamburg v Hauptzollamt Hamburg-Kehrwieder* [1983] ECR 2771.

[79] Cases 133–136/85 *Walter Rau Lebensmittelwerke v Bundesanstalt für Landwirtschaftliche Marktordnung* [1987] ECR 2289.

This ruling must, however, be seen in the light of the *TWD* case.[80] The Commission declared aid that Germany had granted to a firm to be incompatible with the common market. The aid had, therefore, to be repaid. The German Government informed the company, and told it also that the Commission's decision could be challenged under Article 263. The company did not do so, but instead sought to raise the legality of the Commission's decision via the German courts. The ECJ held that no indirect challenge was possible, since the company had been informed of its right to challenge under Article 263, and since it would 'without any doubt'[81] have had standing to do so.[82] A challenge under Article 267 will not therefore be possible if the matter could have been raised by a person who had standing under Article 263, and who knew of the matter within the time limits for a direct action. This same principle has been held to preclude reliance by a Member State on Article 267 to challenge a measure addressed to it that it could have challenged under Article 263, but had not done so within the time limits under Article 263(6).[83]

Where it is unclear whether the applicant would have had standing under Article 263 the ECJ is more willing to admit the indirect action. Thus in *Accrington Beef*[84] the ECJ distinguished *TWD*, and held that the failure to challenge a regulation under Article 263 was no bar to an Article 267 action, since it was not obvious that the Article 263 action would have been admissible. In *Eurotunnel* the ECJ held that a private party could challenge the validity of provisions of a directive in a national court, since the directive was addressed to Member States and it was not obvious that an action would have been possible under Article 263.[85] The ECJ is also likely to be more receptive to actions under Article 267 where the applicant would not have known of the relevant measure in time to challenge it under Article 263.[86]

7 ARTICLE 265: FAILURE TO ACT

An action for a wrongful failure to act is provided in Article 265 TFEU:

> Should the European Parliament, the European Council, the Council, the Commission or the European Central Bank, in infringement of the Treaties, fail to act, the Member States and the other institutions of the Union may bring an action before the Court of Justice of the European Union to have the infringement established. This Article shall apply, under the same conditions, to bodies, offices and agencies of the Union which fail to act.
>
> The action shall be admissible only if the institution, body, office or agency concerned has first been called upon to act. If, within two months of being so called upon, the institution, body, office or agency concerned has not defined its position, the action may be brought within a further period of two months.

[80] Case C–188/92 *TWD* (n 77); Case C–178/95 *Wiljo NV v Belgium* [1997] ECR I–585; Case C–239/99 *Nachi Europe GmbH v Hauptzollamt Krefeld* [2001] ECR I–1197.

[81] Ibid [24].

[82] The ECJ distinguished *Rau* on the ground that the applicants in that case had in fact brought an annulment action before the ECJ, and that therefore the issue of the time bar under Art 230 and the effect of this on a possible Art 234 action did not arise.

[83] Case C–241/01 *National Farmers' Union v Secretariat Général du Gouvernment* [2002] ECR I–9079, [36].

[84] Case C–241/95 *R v Intervention Board for Agricultural Produce, ex p Accrington Beef Co Ltd* [1996] ECR I–6691. See also Case C–222/04 *Ministero dell'Economia e delle Finanze v Cassa di Risparmio di Firenze SpA* [2006] ECR I–289, [72]–[74]; Cases C–346 and 529/03 *Atzeni v Regione Autonoma della Sardegna* [2006] ECR I–1975, [30]–[34]; Case C–441/05 *Roquette Frères v Ministre de l'Agriculture, de l'Alimentation, de la Pêche et de la Ruralité* [2007] ECR I–1993; Case C–343/09 *Afton Chemical Limited v Secretary of State for Transport*, 8 July 2010, [19]–[26].

[85] Case C–408/95 *Eurotunnel SA v Sea France* [1997] ECR I–6315.

[86] See the ground on which the Court distinguished the *Universität Hamburg* case in *TWD* (n 77) [23].

Any natural or legal person may, under the conditions laid down in the preceding paragraphs, complain to the Court that an institution, body, office or agency of the Union has failed to address to that person any act other than a recommendation or an opinion.

(A) REVIEWABLE OMISSIONS

There is a close relationship between Articles 263 and 265 TFEU. This should be reflected in the omissions that are reviewable under Article 265. It seems, in principle, that the only failures to act which should come within Article 265 are failures to adopt a reviewable act, in the sense of an act which has legal effects. Article 265 refers, however, simply to failure to act. An argument could, therefore, be made that this allows the action to be used in relation to the failure to adopt a non-binding act, such as a recommendation or an opinion. There are, however, conceptual and practical objections to this view, which would create an odd distinction between the action for annulment and that for failure to act.[87] Notwithstanding this the Court stated in *Comitology*[88] that Parliament could bring an Article 265 action for failure to adopt a measure that was not itself a reviewable act. If this is indeed so it will apply only in the context of Article 265(1), since Article 265(3) makes it clear that the action cannot be brought by private individuals with respect to recommendations or opinions.

Article 265 requires the applicant to show that there was an obligation to act. The existence of wide discretionary powers in the Commission will, therefore, normally preclude such a finding.[89] Article 265 has, moreover, been held to refer to a failure to act in the sense of a failure to take a decision or to define a position. It does not refer to the adoption of a measure different from that desired by the applicant.[90]

The interrelationship between Articles 263 and 265, and the scope of reviewable omissions, is evident in the *Eridania* case.

Cases 10 and 18/68 **Società 'Eridania' Zuccherifici Nazionali v Commission** [1969] ECR 459

[Note Lisbon Treaty renumbering: Arts 173, 175, and 176 are now Arts 263, 265, and 266 TFEU]

The applicants sought the annulment of Commission decisions granting aid to certain sugar refineries in Italy. They claimed that their competitive position on the sugar market would be deleteriously affected by the grant of such aid. The Court rejected this action on the ground that the applicants were not individually concerned by the decision in question. The same applicants brought an action under Article 175, arguing that there had been a failure to act, this being the failure to revoke the decisions in question.

THE ECJ

15. This application concerns the annulment of the implied decision of rejection resulting from the silence maintained by the Commission in respect of the request addressed to it by the applicants

[87] T Hartley, *The Foundations of European Union Law* (Oxford University Press, 7th edn, 2010) 396–398.

[88] Case 302/87 (n 16).

[89] Case 247/87 *Star Fruit Company v Commission* [1989] ECR 291; Case C–301/87 *France v Commission* [1990] ECR I–307; Case T–277/94 *Associazone Italiana Tecnico Economica del Cemento (AITEC) v Commission* [1996] ECR II–351.

[90] Cases 166 and 220/86 *Irish Cement v Commission* [1988] ECR 6473; Case T–387/94 *Asia Motor France SA v Commission* [1996] ECR II–961; Case T–420/05 *Vischim Srl v Commission* [2009] ECR II–3841, [252]–[255].

seeking the annulment or revocation of the three disputed decisions for illegality or otherwise because they are inappropriate.

16. The action provided for in Article 175 is intended to establish an illegal omission as appears from that Article, which refers to a failure to act 'in infringement of this Treaty' and from Article 176 which refers to a failure to act declared to be 'contrary to this Treaty'.

Without stating under which provision of Community law the Commission was required to annul or revoke the said decisions, the applicants have confined themselves to alleging that those decisions were adopted in infringement of the Treaty and that this fact alone would thus suffice to make the Commission's failure to act subject to the provisions of Article 175.

17. The Treaty provides, however, particularly in Article 173, other methods of recourse by which an allegedly illegal Community measure may be disputed and if necessary annulled on the application of a duly qualified party.

To admit, as the applicants wish to do, that the parties concerned could ask the institution from which the measure came to revoke it and, in the event of the Commission's failing to act, refer such failure to the Court as an illegal omission to deal with the matter would amount to providing them with a method of recourse parallel to that of Article 173, which would not be subject to the conditions laid down by the Treaty.

18. This application does not therefore satisfy the requirements of Article 175 of the Treaty and must thus be held to be inadmissible.

The ECJ's reference to the use of what is now Article 265 to evade limits placed on Article 263 includes the ability to bypass the time limits for contesting an action under Article 263.[91]

(B) PROCEDURE

Article 265 requires the applicant to call upon the institution to act, since it may not be easy, in the context of an omission, to say when it came into existence and its content. Thus the omission is deemed to have taken place at the end of the first two-month period and its content is defined by the terms of the request. The Treaties do not specify any time limit within which the procedure for failure to act should be initiated. The Court has, however, specified that this procedure must be initiated within a reasonable time.[92] Once the request to act has been made, the institution has a period of two months within which to define its position. If it has not done this, the applicant has a further two months within which to bring the action under Article 265.

(C) STANDING

Article 265, like Article 263, draws a distinction between privileged and non-privileged applicants. The former are identified in Article 265(1): the Member States and other institutions of the EU. The latter are covered by Article 265(3), which allows a natural or legal person to complain of a failure to address an act, other than a recommendation or an opinion, to that person.[93] Some argued that standing might be accorded for a failure to act only where the act would by its very nature be addressed to the applicant. This view has not prevailed. The ECJ held in *ENU*[94] that standing under Article 148 of

[91] See also Cases 21–26/61 *Meroni v High Authority* [1962] ECR 73, 78.

See, however, Case T–277/94 *AITEC* (n 89) [58]; Case T–167/04 *Asklepios Kliniken GmbH v Commission* [2007] ECR II–2379, [45].

the Euratom Treaty, the equivalent of Article 265, would be available to an applicant provided that it was directly and individually concerned: it was not necessary for the applicant to be the actual addressee of the decision.[95] This test, is, however, applied in the same restrictive manner as under Article 263.[96]

8 ARTICLE 277: THE PLEA OF ILLEGALITY

Article 277 TFEU is the relevant Treaty provision.

> Notwithstanding the expiry of the period laid down in Article 263, sixth paragraph, any party may, in proceedings in which an act of general application adopted by an institution, body, office or agency of the Union is at issue, plead the grounds specified in Article 263, second paragraph, in order to invoke before the Court of Justice of the European Union the inapplicability of that act.

(A) THE ACTS THAT CAN BE CHALLENGED

The essence of Article 277 is as follows.[97] An individual may wish, in the course of proceedings initiated for a different reason, to call into question the legality of some other measure. Thus, for example, the applicant may challenge a decision which is of direct and individual concern, in the course of which it wishes to raise the legality of a regulation on which the decision is based. Article 277 does not therefore constitute an independent cause of action.[98] Article 277 cannot moreover be used in proceedings before a national court. A declaration of the inapplicability of a regulation pursuant to Article 277 can only be sought in proceedings brought before the Court of Justice under some other provision of the Treaty, and then only incidentally and with limited effect.[99] The most common usage of Article 277 is an additional, incidental challenge in an annulment action brought under Article 263 as exemplified by *Simmenthal*.[100]

Moreover the applicant must still meet the time limit for the principal action. Thus while Article 277 allows the applicant incidentally to raise the illegality of a regulation outside the time limits in Article 263, the applicant must still be within those time limits in relation to the primary challenge to the decision that is of direct and individual concern.

Article 277 can only be used to challenge acts of general application. The most common form of such acts would be regulations or directives made pursuant to either Article 289 or 290 TFEU, but might also include generic decisions. There must, moreover, be some real connection between the individual decision which is the subject matter of the action and the general measure the legality of which is being contested.[101] However it is the substance of the measure, and not its form, which is

decisive: if the Court decides that the measure is in substance an act of general application Article 241 can be used. This is demonstrated by the *Simmenthal* case:

Case 92/78 **Simmenthal SpA v Commission**
[1979] ECR 777

[Note Lisbon Treaty renumbering: Arts 173 and 184 are now Arts 263 and 277 TFEU]

The applicant sought to annul a Commission Decision concerning the minimum selling prices for frozen beef. In support of its claim, the applicant wished to use Article 184 to challenge the legality of certain regulations and notices which formed the legal basis of the contested decision. The ECJ held that the applicant was directly and individually concerned by the primary decision, even though it was actually addressed to the Member State. The Court then considered the arguments concerning Article 184.

THE ECJ

34. While the applicant formally challenges Commission Decision No 78/258 it has at the same time criticized, in reliance on Article 184 of the EEC Treaty, certain aspects of the 'linking' system in the form in which it has been implemented pursuant to the new Article 14 of Regulation No 805/68, by Regulation No 2900/77 and No 2901/77 and also by the notices of invitations to tender of 13 January 1978.

...

36. There is no doubt that this provision (Article 184) enables the applicant to challenge indirectly during the proceedings, with a view to obtaining the annulment of the contested decision, the validity of the measures laid down by Regulation which form the legal basis of the latter.

37. On the other hand there are grounds for questioning whether Article 184 applies to the notices of invitations to tender of 13 January 1978 when according to its wording it only provides for the calling in question of 'regulations'.

38. These notices are general acts which determine in advance and objectively the rights and obligations of the traders who wish to participate in the invitations to tender which these notices make public.

39. As the Court in its judgment ... in Case 15/57, *Compagnie des Hauts Fourneaux de Chasse* ..., and in its judgment ... in Case 9/56, *Meroni* ..., has already held in connexion with Article 36 of the ECSC Treaty, Article 184 of the EEC Treaty gives expression to a general principle conferring upon any party to proceedings the right to challenge, for the purpose of obtaining the annulment of a decision of direct and individual concern to that party, the validity of previous acts of the institutions which form the legal basis of the decision which is being attacked, if that party was not entitled under Article 173 of the Treaty to bring a direct action challenging those acts by which it was thus affected without having been in a position to ask that they be declared void.

40. The field of application of the said article must therefore include acts of the institutions which, although they are not in the form of a Regulation, nevertheless produce similar effects and on those grounds may not be challenged under Article 173 by natural or legal persons other than Community institutions and Member States.

41. This wide interpretation of Article 184 derives from the need to provide those persons who are precluded by the second paragraph of Article 173 from instituting proceedings directly in respect of general acts with the benefit of judicial review of them at the time when they are affected by implementing decisions which are of direct and individual concern to them.

42. The notices of invitations to tender of 13 January 1978 in respect of which the applicant was unable to initiate proceedings are a case in point, seeing that only the decision taken in consequence of the tender which it had submitted in answer to a specific invitation to tender could be of direct and individual concern to it.

43. There are therefore good grounds for declaring that the applicant's challenge during the proceedings under Article 184, which relates not only to the above-mentioned regulations but also to the notices of invitations to tender of 13 January 1978, is admissible, although the latter are not in the strict sense measures laid down by Regulation.

(B) THE PARTIES WHO CAN USE ARTICLE 277

Private parties can use Article 277, subject to the qualification that they cannot do so if it is clear that the act could have been challenged via Article 263 as in substance a decision in relation to which the applicant is directly and individually concerned.[102]

Commentators were divided as to whether Article 277 could be used by privileged applicants. Bebr was against privileged applicants using Article 277 because such applicants could challenge any binding act of EU law under Article 263 within the time limit.[103] However, as Barav noted,[104] the irregularities in a general act might appear only after the relevant implementation measures had been adopted, and hence the state may not have realized the necessity for challenging the general act until the time limit under Article 263 had passed. The ECJ has now resolved the matter, concluding that a Member State can invoke Article 277 even if it did not contest the measure within the time limit under Article 263.[105] It reached this conclusion for two reasons.

First, the wording of Article 277 is framed in terms of 'any party' being able to raise the plea of illegality. Secondly, given that Member States are privileged applicants they can always challenge EU acts. If this possibility were to deny Member States recourse to Article 277 then it would never be possible for them to make use of this Article, which would be problematic, since there might be good reasons why the Member State did not seek to challenge the measure within the time limits of Article 263.

9 CONCLUSIONS

i. The rules concerning standing are of considerable importance in any legal system. They constitute the main gateway through which individuals gain access to the principles of judicial review in order to render public decision-making accountable. If therefore the standing rules are drawn too narrowly it will be difficult for individuals to take advantage of these administrative law principles.

ii. The standing rules on direct actions under Article 263 have generated significant case law since the very inception of the EEC. In many cases applicants have failed to secure standing, even though they would have done so in many such cases in national legal systems. The primary reason for this

[102] Case C–188/92 *TWD* (n 77); Case C–310/97 P *Commission v AssiDomän Kraft Products AB* [1999] ECR I–5363, [60]; Case C–239/99 *Nachi Europe* (n 80) [35]–[37]; Case C–241/01 *National Farmers' Union* (n 83); Case C–441/05 *Roquette Frères* (n 84) [39]–[40]; Case C–343/07 *Bavaria NV* (n 20) [38]–[39].

[105] Case C–442/04 *Spain v Council* [2008] ECR I–3517, [22].

'failure rate' has been the requirement of individual concern as interpreted in the *Plaumann* case, which renders it exceedingly difficult for non-privileged applicants to succeed, even where they have been significantly affected by the contested measure. There are empirical and conceptual problems with this interpretation of individual concern, and it would be desirable to shift to a test of the kind elaborated by Advocate General Jacobs in the *UPA* case.

iii. The ECJ seeks to justify the status quo by arguing that the Treaty provides a complete system of legal protection, with indirect challenge through Article 267 supplementing direct actions under Article 263. There are, however, real difficulties with accepting this hypothesis.

iv. It remains to be seen how far the amendment to Article 263, whereby individual concern does not have to be shown in relation to regulatory acts that are of direct concern and do not entail implementing measures, makes a difference for non-privileged applicants. This will depend on the interpretation given to 'regulatory act' and 'implementing measure'.

REVIEW OF LEGALITY: GROUNDS OF REVIEW

1 CENTRAL ISSUES

i. The previous chapter considered standing to seek judicial review. If the applicant has standing and is within the time limits for bringing an action it will still have to show why the Union act should be annulled or declared invalid. Four grounds are specified in Article 263 TFEU: lack of competence; infringement of an essential procedural requirement; infringement of the Treaty or any rule of law relating to its application; and misuse of power. The same grounds are relevant for indirect actions under Article 267 TFEU. Judicial review, whether direct through Article 263 or indirect through Article 267, is designed to ensure that decision-making is legally accountable.

ii. The Union Courts have used the heads of review in Article 263 as the framework through which to develop general principles of law, which function as principles of administrative legality, drawing on concepts found within national legal systems. These include fundamental rights, proportionality, legitimate expectations, non-discrimination, transparency, and more recently the precautionary principle.

iii. The status of general principles of law within the EU's hierarchy of norms was considered within an earlier chapter, to which reference should be made.[1]

iv. The dividing line between these principles is far from absolute: there are certain principles, such as the right to a fair hearing or legal and professional privilege, which some might classify as fundamental rights, while others would characterize them as principles of administrative legality. Moreover, when reading this chapter the earlier discussion of subsidiarity should not be forgotten.[2] This is in certain respects a general principle of EU law, albeit one which goes principally to the initial legality of Union conduct.

v. Some of the principles, such as non-discrimination, have a textual foundation in the Treaty, while others have been developed in Union legislation. However, the ECJ has played a key role in developing all these general principles.

vi. The principles discussed in this chapter serve a number of functions. They can be used as interpretative guides when construing Treaty provisions and EU legislation. Breach of a general principle of EU law can also serve as the ground for annulling an EU legislative, delegated, or implementing act. Breach of a general principle in the areas covered by EU law may in addition be the reason why a national rule is found to be in violation of EU law.

[1] Ch 4.
[2] Ch 3.

2 LACK OF COMPETENCE

The general issue of competence has been considered in detail above, to which reference should be made.[3] The EU institutions must be able to point to a power within the Treaty which authorizes their action. If they cannot do so then the act will be declared void for lack of competence. This ground of review has been used relatively rarely. The ECJ has interpreted the EU's powers broadly and purposively, in order to achieve the Treaty objectives.[4]

The Lisbon Treaty introduced categories of competence for different subject matter areas. The categories matter: distinct legal consequences flow from the categorization in terms of the relative power of the Union and Member States. A claimant may therefore argue that the EU lacked competence in the sense that, for example, it acted under the heading of exclusive competence, which would mean that Member States could not take any legally binding act in that area, whereas it should have proceeded via shared competence.

3 INFRINGEMENT OF AN ESSENTIAL PROCEDURAL REQUIREMENT

(A) RIGHT TO BE HEARD

It is for the Union Courts to decide what constitutes an essential procedural requirement. They have read into the Treaty many of the requirements of procedural due process, insofar as this relates to individualized decisions.[5]

The Union Courts have imposed a right to be heard as a general rule of EU law, irrespective of whether this was specified in the relevant Treaty Article, regulation, directive, or decision. A hearing is normally required even where no sanction is imposed, provided that there is some adverse impact, or some significant effect, on the applicant's interests.[6] The right to be heard has been held to be part of the fundamental rights jurisprudence.[7] It cannot be excluded or restricted by any legislative provision, and the principle must be protected where there is no specific EU legislation and also where legislation exists, but does not take sufficient account of the principle.[8] The claimant does not have to show that the Commission's decision would have been different, but simply that such a possibility cannot be totally ruled out, since it would have been better able to defend itself had there been no procedural error.[9] The right to be heard before an individual measure is taken that would affect a person adversely is included within the Charter of Fundamental Rights.[10]

[10] Charter of Fundamental Rights of the European Union [2010] OJ C83/2, Art 41(2).

The Union Courts have also imposed other more particular procedural requirements. They have insisted that notice should be given of the nature of the case and that the individual should have a right to respond.[11] The individual is accorded access to the file in an increasing range of cases,[12] and this is recognized in the Charter of Rights.[13] The Union Courts have moreover imposed an obligation to take care when making discretionary determinations in individual cases, which can apply even where the individual is not accorded a hearing.[14]

(B) CONSULTATION AND PARTICIPATION

Where a duty to consult is provided by the Treaty or Union legislation it will be enforced through the courts.[15] The ECJ has, however, consistently resisted claims to procedural rights, such as a right to participate or be consulted, in the making of Union legislation, unless this is expressly provided by a Treaty Article or another EU norm.[16] It has also been generally unwilling to accept that the fact of participation in the making of the legislative measure accords the applicant any enhanced prospects of being given standing to challenge it.[17]

This is regrettable. Participation is one way of imbuing decisions with greater legitimacy. It renders decision-making more accessible to those affected, and enables them to have direct participatory input into the decision reached. The European Council's 1993 Inter-institutional Declaration on Democracy, Transparency and Subsidiarity proposed the creation of a notification procedure, in which the Commission would publish a brief summary of the draft measure in the Official Journal and there would be a deadline by which interested parties could submit their comments. There is a clear analogy between this formulation and the US Administrative Procedure Act 1946, which established a notice and comment procedure for rules made by agencies.

The Commission's response to this idea was, however, limited.[18] It did not bring forward any general measure for the EU akin to the APA, and the discussion of participation rights in its report for the 1996 IGC was exiguous to say the least.[19] The Commission has broadened consultation through increasing use of Green and White Papers when important areas of EU policy are being developed.[20]

It has also created Interactive Policy Making, IPM, a principal component of 'Your Voice in Europe',[21] which consists of two internet-based instruments to collect feedback from citizens, consumers, and business, although the number of initiatives subjected to this process is limited. The Commission nonetheless continues to resist the creation of legally enforceable participatory rights as against itself,[22] while at the same time pressing for such rights as against the Member States.[23]

It remains to be seen whether Article 11 TEU introduced by the Lisbon Treaty makes any difference in this respect. It provides that:

> 1. The institutions shall, by appropriate means, give citizens and representative associations the opportunity to make known and publicly exchange their views in all areas of Union action.
>
> 2. The institutions shall maintain an open, transparent and regular dialogue with representative associations and civil society.
>
> 3. The European Commission shall carry out broad consultations with parties concerned in order to ensure that the Union's actions are coherent and transparent.
>
> 4. Not less than one million citizens who are nationals of a significant number of Member States may take the initiative of inviting the European Commission, within the framework of its powers, to submit any appropriate proposal on matters where citizens consider that a legal act of the Union is required for the purpose of implementing the Treaties.

Article 11 is expressed in mandatory language and legislation has been enacted concerning the citizens' initiative in Article 11(4) TEU.[24] The salient issue is therefore whether the inclusion of this Article will signal any change in legal and political terms from the previous position. Article 11 will almost inevitably be relied on by claimants in litigation, and the ECJ will necessarily be compelled to face difficult interpretative issues as to the concrete implications that are drawn from these principles. The ECJ may choose to interpret the Article narrowly, thereby effectively leaving the matter to the political institutions, but this would be regrettable and problematic. It does not sit well with the wording of Article 11 TEU and would send a very negative message about the nature of participatory democracy in the EU. It would risk turning a provision that was meant to convey a positive feeling about the inclusive nature of the EU and its willingness to engage with its citizenry into one that carried the opposite connotation.

(c) DUTY TO GIVE REASONS

Article 296 TFEU is the successor to Article 253 EC and imposes a duty to provide reasons,[25] breach of which constitutes a violation of an essential procedural requirement for the purposes of review.[26] It imposes a duty to give reasons not only for administrative decisions, but for all legal acts,

including legislative, delegated, and implementing acts. This is noteworthy, since many national legal systems do not impose an obligation to furnish reasons for legislative acts, or do so only in limited circumstances.

(i) *Policy Rationale*

There are a number of policy rationales for the duty to provide reasons. From the perspective of affected parties, it renders the decision-making process more transparent, so that they can know why a measure has been adopted. From the perspective of the decision-maker, an obligation to give reasons helps to ensure that the rationale for the action has been thought through. From the perspective of the ECJ, the existence of reasons facilitates judicial review by, for example, enabling the Court to determine whether a decision was disproportionate. In the words of the ECJ:[27]

> In imposing upon the Commission the obligation to state reasons for its decisions, Article 190 is not taking mere formal considerations into account but seeks to give an opportunity to the parties defending their rights, to the court of exercising its supervisory functions and to Member States and to all interested nationals of ascertaining the circumstances in which the Commission has applied the Treaty.

(ii) *Content*

The general principle is that the duty to give reasons must show in a clear and unequivocal manner the reasoning of the author of the act, thereby enabling the persons concerned to ascertain the reasons for it so that they can defend their rights and ascertain whether or not the measure is well-founded, and also enable the Court to exercise its power of review.[28] The more particular content of the obligation to give reasons will vary depending on the nature of the measure.[29]

Where it is of a general legislative nature it will be necessary for the EU authority to show the reasoning which led to its adoption, but it will not be necessary for it to go into every point of fact and law. Where the essential objective of the measure has been clearly disclosed there is no need for a specific statement of the reasons for each technical choice that has been made.[30]

The Court may demand greater particularity where the measure challenged is of an individual, rather than legislative, nature. Thus in *Germany v Commission*,[31] the Commission made a decision restricting the amount of wine that Germany could import at a lower rate of duty, because there was ample production of wine in the EC and because the grant of the requested quota would lead to serious disturbances on the relevant product market. The ECJ annulled the decision. It held that the Commission's reasoning was insufficiently specific concerning the size of any Community surplus, and that it was unclear from the Commission's decision why there would be serious disturbances in the market.

The content of the duty to provide reasons will also be affected by the extent to which the Court requires the Union institutions to respond to arguments advanced by the parties: what has been

[31] Case 24/62 (n 25); Case T–5/93 *Tremblay v Commission* [1995] ECR II–185.

termed the dialogue dimension.[32] The ECJ has been cautious in this respect. In the *Sigarettenindustrie* case[33] the Court held that, although Article 253 EC required the Commission to state its reasons, it was not required to discuss all the issues of fact and law raised by every party during the administrative proceedings. It therefore dismissed the claim that the Commission had ignored the applicants' arguments, none of which had featured in the decision. While the Union Courts have affirmed that the Commission is under no obligation to respond to all the parties' arguments, they have also emphasized that the reasons given must suffice to enable it to exercise its judicial review function, and they will annul the decision if it does not withstand examination.[34]

Shapiro explains why the ECJ has been reluctant to move in this direction, and also why, none the less, it might be pushed to do so, based on the fostering of participation. The limits to which the EU Courts and political institutions foster dialogue and participation have however been noted above.[35] The references to Article 190 should now be read as referring to Article 296 TFEU.

M Shapiro, The Giving Reasons Requirement[36]

The basic reason that the parties push and the ECJ resists dialogue lies in the difference between transparency and participation. Courts are likely to be initially hostile to demands for dialogue. Such requests are the last resort of regulated parties who have no substantive arguments left. Moreover, if dialogue claims are judicially accepted, they lead to a more and more cumbersome administrative process because the regulated parties will be encouraged to raise more and more arguments to which the agency will have to respond. If the only instrumental value for giving reasons is transparency, the courts will resist dialogue demands. One can discover an agency's actions and purposes without the agency rebutting every opposing argument.

...

If the ECJ sticks closely to transparency as the sole goal of Article 190, the ECJ is unlikely to move towards a dialogue requirement. Yet participation in government by interests affected by government decisions presents an increasingly compelling value in contemporary society, particularly where environmental matters are involved. The ECJ has already, however unintentionally, opened one avenue for linking participation to Article 190 by stating that the Council need not give full reasons to the Member States where they have participated in the decisions. To be sure, these ECJ opinions are transparency-based. They require that those Member States already know what was going on because they were there. Nevertheless they create an opening for counter-arguments from complainants who were not present and claim that, therefore, they need the Commission to be responsive. In short, full transparency can only be achieved through participation or through dialogue as a form of participation.

4 INFRINGEMENT OF THE TREATY OR ANY RULE OF LAW RELATING TO ITS APPLICATION

(A) SCOPE

This ground of review has provided the foundation for the development of the principles of judicial review. Infringement of the Treaty includes all provisions of the constitutive treaties as amended. The absence of the *travaux préparatoires* means that we do not know what 'any rule of law relating to their application' was meant to connote.

The intent might have been simply to ensure that decision-making should comply not only with the primary Treaty Articles, but also regulations, directives, etc passed pursuant thereto. If this had been the intent it could however have been expressed more simply. The intent might alternatively have been to capture compliance not only with EU legislation, but also with other 'rules of law relating to the application' of the Treaty that might be developed by the Courts. The ambiguity in the phrase provided the ECJ with a window through which to justify the imposition of general principles of law, which function as grounds of review.

This strategy was reinforced by what is now Article 19(1) TEU, ex Article 220 EC, which charges the Union Courts with the duty of ensuring that in the interpretation and application of the Treaty the law should be observed. The judicial task of elaborating principles of judicial review was further facilitated by more specific Treaty Articles, which made reference to, for example, non-discrimination. The ECJ then read these Articles as indicative of a more general principle of non-discrimination that underpinned the legal order.[37] Moreover Article 2 TEU[38] provides that the Union is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law, and human rights.

The ECJ developed a rich body of jurisprudence on general principles of law, covering topics such as process rights, fundamental rights, equal treatment and non-discrimination, proportionality, and legal certainty and legitimate expectations.[39] In developing these concepts the ECJ drew on national administrative law doctrine. German law was perhaps the most influential in this regard, providing the inspiration for the introduction of, for example, proportionality and legitimate expectations into the Community legal order.

The general principles are used in a number of different ways. They function as interpretative guides in relation to primary Treaty Articles and other Union acts. The general principles also operate as grounds of review. The Union Courts cannot invalidate primary Treaty Articles. They can, however, annul other EU acts, and breach of a general principle is ground for annulment. The principles can also be used against national measures that fall within the scope of EU law, although the range of measures caught in this manner is not free from doubt.[40] Breach of a general principle may also form the basis for a damages action. Judicial review for violation of fundamental rights is considered as a separate topic.[41] The discussion in this chapter will consider other important general principles of law.

(B) GENERAL PRINCIPLES OF LAW: PROPORTIONALITY

(i) *Meaning*

The concept of proportionality is most fully developed within German law. It appeared initially in the context of policing, as a ground for challenging measures that were excessive or unnecessary in relation to the objective being pursued.[42] Some notion of proportionality also features within the legal systems of other Member States such as France, although one should be cautious about ascribing the same meaning to the concept whenever the word 'proportionality' is to be found in any guise within differing legal systems.[43]

Proportionality is now well established as a general principle of EU law. A version of the principle is enshrined in Article 5(4) TEU, which provides that the content and form of Union action shall not go beyond what is necessary to achieve the objectives of the Treaty, and its requirements are further fleshed out in a Protocol to the Treaty. Proportionality can be used to challenge EU action, and Member State action that falls within the sphere of EU law.

In any proportionality inquiry the relevant interests must be identified, and there will be some ascription of weight or value to those interests, since this is a necessary condition precedent to any balancing operation. There will normally be three stages in a proportionality inquiry.

i. Whether the measure was suitable to achieve the desired end.
ii. Whether it was necessary to achieve the desired end.
iii. Whether the measure imposed a burden on the individual that was excessive in relation to the objective sought to be achieved (proportionality *stricto sensu*).

There has been some doubt whether stage three is part of the ECJ's proportionality inquiry.[44] The reality is that the ECJ will consider part three when an applicant addresses an argument concerning this stage of the inquiry. It may not do so where no such specific argument has been raised, more especially where the case can be resolved at one of the earlier stages. Moreover, in some cases the ECJ may distinguish stages two and three of the inquiry; in others it may in effect 'fold' stage three of the inquiry back into stage one or two. The Court will moreover have to decide how intensively it is going to apply the proportionality test.

G de Búrca, The Principle of Proportionality and its Application in EC Law[45]

It becomes apparent that in reaching decisions, the Court of Justice is influenced not only by what it considers to be the nature and the importance of the interest or right claimed by the applicant, and the nature and importance of the objective alleged to be served by the measure, but by the relative expertise, position and overall competence of the Court as against the decision-making authority in assessing those factors. It becomes apparent that the way the proportionality principle is applied by the Court of Justice covers a spectrum ranging from a very deferential approach, to quite a rigorous and searching examination of the justification for a measure which has been challenged.

. . . Courts are generally prepared to adjudicate on issues involving traditionally categorized individual rights, where interference with a discretionary policy decision can be explained not on the ground that it is not the most sensible or effective measure, but on the ground that it unjustifiably restricts an important legally recognized right, the protection of which is entrusted to the court. Courts are accepted as

[45] (1993) 13 YBEL 105, 111–112.

having a legitimate role in deciding on civil liberties and personal rights even in controversial contexts such as euthanasia, abortion and freedom of speech. But in certain specific political contexts, in the case of measures involving, for example, national security, economic policy or national expenditure concerns, courts tend to be considerably more deferential in their review. They are more reluctant to adjudicate if the interest affected is seen as a collective or general public interest rather than an individual right, and if the interest of the State is a mixed and complex one, e.g. in an area involving national economic and social policy choices … The ways in which a court may defer in such circumstances range from deeming the measure to be non-justiciable, to refusing to look closely at the justification for the restrictive effects of the measure, to placing the onus of proof on the challenger who is claiming that the measure is disproportionate. Courts tend to be deferential in their review in cases which highlight the non-representative nature of the judiciary, the limited evidentiary and procedural processes of adjudication, and the difficulty of providing a defined individual remedy in contexts which involve complex political and economic policies.

We can distinguish three broad types of case that may be subject to challenge on grounds of proportionality and the intensity of review may differ in each.[46]

(ii) *Challenge to Union Action: Proportionality and Discretionary Policy Choices*

The most common type of case is where the individual argues that the very policy choice made by the administration is disproportionate. The judiciary is cautious in this type of case: the administrative/political arm of government makes policy choices, and it is recognized that the courts should not overturn these merely because they believe that a different way of doing things would have been better. They should not substitute their judgment for that of the administration. This does not mean that proportionality is ruled out in such instances. It does mean that the courts are likely to apply the concept less intensively than in the previous categories, and will overturn the policy choice only if it is clearly or manifestly disproportionate. The guiding principle is, as stated in the *British American Tobacco* case,[47] that this measure of review will be deemed appropriate whenever the EU legislature exercises a broad discretion involving political, economic, or social choices requiring it to make complex assessments.

Many of the cases arise from the Common Agricultural Policy (CAP), the objectives of which are set out at a high level of generality in Article 39 TFEU. These objectives can clash, with the result that the Commission and Council will have to make difficult discretionary choices. The *Fedesa* case provides a good example of such a challenge. The Court frequently emphasized that the EU institutions possessed a wide discretion in the operation of the CAP, and that review would not therefore be intensive.[48] This more deferential approach applies equally to challenges based on proportionality.

Case C–331/88 **R v Minister for Agriculture, Fisheries and Food, ex p Fedesa** [1990] ECR I–4023

Council Directive 81/602 provided that the Council would take a decision as soon as possible on the prohibition of certain hormone substances for administration to animals, but that in the meantime any arrangements made by Member States in relation to such substances would continue to apply. In 1988 Council Directive 88/146 was adopted as an approximating measure, prohibiting the use in livestock farming of certain of these hormonal substances. An earlier identical directive adopted in 1985 had been declared void by the ECJ on grounds of an infringement by the Council of an essential procedural requirement. The applicants were manufacturers and distributors of veterinary medicine who challenged the validity of the national legislative measure implementing the 1988 Directive on the ground that the Directive itself was invalid. They argued that the Directive infringed the principles of legal certainty, proportionality, equality, and non-retrospectivity. The following extract considers the ECJ's reasoning on proportionality.

THE ECJ

12. It was argued that the Directive infringes the principle of proportionality in three respects. In the first place, the outright prohibition on the administration of the five hormones in question is inappropriate in order to attain the declared objectives, since it is impossible to apply in practice and leads to the creation of a dangerous black market. In the second place, outright prohibition is not necessary because consumer anxieties can be allayed simply by the dissemination of information and advice. Finally, the prohibition in question entails excessive disadvantages, in particular considerable financial losses on the part of the traders concerned, in relation to the alleged benefits accruing to the general interest.

13. The Court has consistently held that the principle of proportionality is one of the general principles of Community law. By virtue of that principle, the lawfulness of the prohibition of an economic activity is subject to the condition that the prohibitory measures are appropriate and necessary in order to achieve the objectives legitimately pursued by the legislation in question; when there is a choice between several appropriate measures recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued.

14. However, with regard to judicial review of compliance with those conditions it must be stated that in matters concerning the common agricultural policy the Community legislature has a discretionary power which corresponds to the political responsibilities given to it by . . . the Treaty. Consequently, the legality of a measure adopted in that sphere can be affected only if the measure is manifestly inappropriate having regard to the objective which the competent institution is seeking to pursue. (See in particular the judgment in Case 265/87, *Schräder* [1989] ECR 2237, paras. 21 and 22).

The applicants had therefore to show that the measure was manifestly inappropriate, and the Court concluded that they had not discharged this burden.[49] The prohibition, even though it caused financial loss to some traders, could not be regarded as manifestly inappropriate.

[49] See also, eg, Case C–8/89 *Zardi v Consorzio Agrario Provinciale di Ferrara* [1990] ECR I–2515; Cases C–133, 300, and 362/93 *Crispoltoni v Fattoria Autonoma Tabacchi* [1994] ECR I–4863; Case C–4/96 *Northern Ireland Fish Producers' Federation and Northern Ireland Fishermen's Federation v Department of Agriculture for Northern Ireland* [1998] ECR I–681; Case C–434/02 *Arnold Andre GmbH & Co KG v Landrat des Kreises Herford* [2004] ECR I–11825, [46]–[56]; Case C–41/03 P *Rica Foods (Free Zone) NV v Commission* [2005] ECR I–6875, [85]–[86]; Case T–158/03 *Industrias Quimicas del Valles, SA v Commission* [2005] ECR II–2425, [136]; Cases C–37 and 58/06 *Viamex Agrar Handels GmbH and Zuchtvieh-Kontor GmbH (ZVK) v Hauptzollamt Hamburg-Jonas* [2008] ECR I–69, [36]; Case T–334/07 *Denka International BV v Commission* [2009] ECR II–4205, [139].

It would nonetheless be wrong to assume that proportionality when interpreted in this manner necessarily has the same meaning as *Wednesbury* irrationality in UK law. The reality is that the former is still generally more exacting than the latter. The ECJ will look closely at the reasoning used when reaching the contested decision and the evidentiary foundation for it, even for cases coming within this category.[50]

(iii) *Challenge to EU Action: Proportionality and Rights*

A second category of case is where an individual argues that her rights have been unduly restricted by Union action. The courts are likely to engage in vigorous scrutiny. Society may well accept that these rights cannot be regarded as absolute, but the very denomination of certain interests as Union rights means that any interference should be kept to a minimum. Proportionality is therefore a natural adjunct to the recognition of such rights. Moreover, courts regard it as a proper part of their legitimate function to adjudicate on the boundary lines between state action and individual rights, even though this line may be controversial.

This is exemplified by *Hautala*.[51] The applicant was an MEP, who sought access to a Council document concerning arms exports. The Council refused to grant access, because this could be harmful to the EU's relations with third countries. It sought to justify this under Article 4(1) of Decision 93/731,[52] governing access to Council documentation. The ECJ held that the right of access to documents was to be broadly construed so as to include access to information contained in the document, not just the document itself. Proportionality required the Council to consider partial access to a document that contained information the disclosure of which could endanger one of the interests protected by Article 4(1). Proportionality also required that derogation from the right of access be limited to what was appropriate and necessary for achieving the aim in view.

Many cases concerning rights and proportionality are however more complex, because the argument arises as one ground of challenge to an EU discretionary policy choice. The applicant will allege that the discretionary policy infringed property rights, or the right to pursue a profession, trade, or occupation. The EU Courts acknowledge such rights within the Union legal order, but make it clear that they are not absolute and must be viewed in relation to their social function. The ECJ and General Court will therefore consider whether the restrictions imposed by the measure correspond to objectives of general interest pursued by the Union and whether they constitute a disproportionate and intolerable interference, which impairs the very substance of the rights guaranteed.[53]

Thus in *Hauer*[54] the applicant challenged a Community regulation limiting the planting of new vines. The Court found that this did not, in itself, constitute an invalid restriction on property rights. It then considered whether the planting restrictions were disproportionate, 'impinging upon the very substance of the right to property'.[55] The Court found that they were not, but in reaching this conclusion it carefully examined the purpose of the general scheme within which the contested regulation fell. The objects of this scheme were to attain a balanced wine market, with fair prices for consumers and a fair return for producers; the eradication of surpluses; and improvement in the quality of wine.

[54] Case 44/79 *Hauer v Land Rheinland-Pfalz* [1979] ECR 3727.

[55] Ibid [23].

The disputed regulation, which prohibited new plantings, was part of this overall plan. It was not disproportionate in the light of the legitimate, general Community policy for this area. This policy was designed to deal with an immediate problem of surpluses, while at the same time laying the foundation for more permanent measures to facilitate a balanced wine market.[56]

The preceding decision can be contrasted with *Kadi*,[57] where the applicant sought the annulment of a Regulation freezing the applicant's assets, pursuant to a Security Council resolution to curb Al-Qaeda. The applicant argued that the Regulation constituted a disproportionate infringement of his property rights. The ECJ reiterated its normal approach: property rights were not absolute and hence could be restricted, provided that the restrictions corresponded to objectives of Community public interest and did not constitute a disproportionate and intolerable interference, impairing the very substance of the right so guaranteed.[58] The ECJ concluded that the freezing of funds could not be regarded as *per se* disproportionate, given the importance of the fight against terrorism,[59] but the fact that the Regulation provided no means whereby the applicant could contest his inclusion within the list of those liable to sanctions meant that it constituted an infringement of his property rights.[60]

(iv) *Challenge to Union Action: Proportionality and Penalties*

A third type of case is where the attack is on the penalty imposed, the claim being that it is excessive. Courts are likely to be reasonably searching in this type of case. This is in part because penalties can impinge on personal liberties. It is in part also because a court can normally strike down a penalty without undermining the relevant administrative policy.

In *Man (Sugar)*[61] the applicant was required to give a security deposit to the Board when seeking a licence to export sugar outside the Community. The applicant was four hours late in completing the relevant paperwork. The Board, acting pursuant to a Community regulation, forfeited the entire deposit of £1,670,370. The Court held that this was too drastic, given the function performed by the system of export licences.[62]

In addition to cases dealing with penalties *stricto sensu* the Court has applied proportionality to scrutinize charges imposed by the EU institutions. Thus in *Bela-Mühle*[63] the Court held that a scheme whereby producers of animal feed were forced to use skimmed milk, rather than soya, in their product in order to reduce a milk surplus was unlawful. Skimmed milk was three times more expensive than soya: the obligation to purchase the milk imposed a disproportionate burden on the animal feed producers. In *Portugal v Commission*[64] Portugal argued that an export ban on meat products, imposed in response to mad cow disease, was disproportionate. This was because Portugal was not a significant meat exporter, and it was therefore easier to regulate low-volume exports as compared to the large-volume exports from the UK. The ECJ rejected the argument. Beef exports from the UK had not been allowed until the UK had put in place export arrangements of a kind

advocated by a certain health code. This had not been done at the time when the ban was imposed on Portugal.

While the general approach is that set out above there are cases concerned with penalties where the ECJ has applied the manifestly disproportionate test derived from *Fedesa*. This approach seems to be adopted when the penalty is an integral substantive part of a discretionary policy, which is itself subject to the *Fedesa* test.[65]

(v) *Challenge to Member State Action: Case Law*

There have been many cases dealing with proportionality and Member State action.[66] Proportionality will, for example, often be relevant in equality cases. Thus in *Kreil*[67] it was held that a German rule requiring that all armed units in the Bundeswehr be male contravened the principle of proportionality.

The proportionality principle is also used extensively in cases concerned with free movement. Thus the ECJ insisted that derogation from the principle of free movement of workers can be sanctioned only in cases that pose a genuine and serious threat to public policy, and the measure must be the least restrictive possible in the circumstances.[68] The same principle is evident in cases on freedom to provide services. In *Van Binsbergen*[69] the Court held that residence requirements limiting this freedom might be justified, but only where they were strictly necessary to prevent the evasion by those outside the territory of professional rules applicable to the activity in question. In *Canal*[70] the ECJ considered the legality of national legislation requiring operators of certain television services to register details of their equipment in a national register. It held that such a measure could not satisfy the necessity requirement of the proportionality test if the registration requirement duplicated controls already carried out either in the same state or in another Member State. The same approach is evident in relation to free movement of goods. Thus in the famous *Cassis de Dijon* case[71] the Court decided that a German rule which prescribed the minimum alcohol content for a beverage restricted free movement of goods. The Court then considered whether the rule was necessary to protect consumers from being misled. It rejected the defence, because the interests of consumers could be safeguarded in less restrictive ways, by displaying the alcohol content on the packaging of the drinks.[72]

The ECJ may pass the application of proportionality back to the national courts, subject to conditions or guidelines as to how the proportionality inquiry should be decided in a particular area. There is justifiable concern about the complexity of some issues that are sent back to national courts to be resolved through a proportionality inquiry.[73]

(vi) *Challenge to Member State Action: Intensity of Review and Balancing of Values*

The case law in this area has been criticized on the ground that the Union Courts have applied proportionality more intensively to Member State action as compared to Union action. There is however a rationale for intensive proportionality review of Member State action. The cases in the preceding section involve situations where there has been a breach of the four freedoms, and the Member State then raises a defence based on the relevant Treaty Article. The four freedoms are central to the very idea of market integration that lies at the economic heart of the EU. They also embody non-economic values. It is therefore unsurprising that the ECJ has closely monitored defences to free movement, including proportionality. Four more particular variables have shaped the Court's review in this type of case.

First, the ECJ has tended to review more intensively over time. Cases raising similar principles have been subject to more rigorous scrutiny, such that Member State action regarded as lawful in the earlier case has been held unlawful in a later action.[74]

Secondly, the intensity of the Court's review will depend on how seriously it takes the Member State's argument that measures really were necessary to protect, for example, public health. If the ECJ feels that these measures were really a 'front' for a national protective policy, designed to insulate its producers from foreign competition, then the ECJ will subject the Member State's argument to close scrutiny. Thus in *Commission v United Kingdom*[75] the ECJ rejected a claim by the United Kingdom Government that a ban on the import of poultry could be justified on grounds of public health, because it felt that the measures were aimed at protecting UK poultry producers from the effects of French imports before Christmas.

Thirdly, the EU Courts have been willing to interpret proportionality in the light of the Member State's particular values, notwithstanding that those values differ from those of other Member States.[76] This is exemplified by *Omega*.[77] The Bonn police issued an order forbidding the applicant company from allowing laser games that simulated the killing of opponents, because they infringed the right to human dignity in the German Constitution. The ECJ found that the police order limited the freedom to provide services and then considered the public policy justification. The ECJ held that the concept of public policy as a derogation from a fundamental freedom must be interpreted strictly. It accepted, however, that public policy could vary from country to country, and that the national authorities must be accorded a margin of discretion within the limits imposed by the Treaty.

Fourthly, proportionality can require the difficult balancing of social and economic values, as exemplified by *Viking Line*.[78] The case is considered in the discussion of freedom of establishment.[79] Suffice it to say for the present that Viking Line was originally incorporated in Finland. It was obliged under Finnish law and the terms of a collective bargaining agreement to pay its Estonian crew the same wages as those applicable in Finland. Estonian crew wages were lower than those in Finland.

[74] Compare, eg, Case 41/74 *Van Duyn v Home Office* [1974] ECR 1337 with Cases 115 and 116/81 *Adoui and Cornuaille v Belgian State* [1982] ECR 1665. Compare Case 34/79 *R v Henn and Darby* [1979] ECR 3795 with Case 121/85 *Conegate v Customs and Excise Commissioners* [1986] ECR 1007.

[75] Case 40/82 [1982] ECR 2793.

[76] Case C–384/93 *Alpine Investments BV v Minister van Financiën* [1995] ECR I–1141, [51]; Case C–3/95 *Reisebüro Broede v Gerd Sandker* [1996] ECR I–6511.

[77] Case C–36/02 *Omega Spielhallen- und Automatenaufstellungs-GmbH v Oberbürgermeisterin der Bundesstadt Bonn* [2004] ECR I–9609. [78] Case C–438/05, *International Transport Workers' Federation and Finnish Seamen's Union v Viking Line ABP and OÜ Viking Line Eesti* [2007] ECR I–10779.

[79] 786–787.

Viking Line therefore sought to re-flag one of its ships in Estonia. This was opposed by trade unions, which threatened strike action. Viking Line argued that this was in breach of freedom of establishment. The ECJ accepted that the right to strike was a fundamental right under EU law, but that its exercise had to be reconciled with other Treaty rights and with the principle of proportionality. It was for the national court to decide whether the strike action was proportionate, subject to guidance from the ECJ. While the ECJ acknowledged the social dimension of EU law, it was clear from the ECJ's guidance that strike action could not be objectively justified if it prevented Viking Line from flagging its vessel in a Member State other than that of which the vessel owners were nationals. In this respect the economic value of market integration trumped the social value of worker protection.

(c) GENERAL PRINCIPLES OF LAW: LEGAL CERTAINTY AND LEGITIMATE EXPECTATIONS

The connected concepts of legal certainty and legitimate expectations are found in many legal systems, although their content may vary.[80] These concepts are applied in a number of ways.[81]

(i) *Actual Retroactivity*

The most obvious application of legal certainty is in the context of rules with an actual retroactive effect. Following Schwarze,[82] 'actual retroactivity' covers the situation where a rule is introduced and applied to events which have already been concluded. This can occur either where the date of entry into force precedes the date of publication, or where the regulation applies to circumstances that have been concluded before the entry into force of the measure.

The arguments against allowing such measures to have legal effect are compelling. A basic tenet of the rule of law is that people can plan their lives with knowledge of the legal consequences of their actions. This is violated by measures that were not in force when the events took place. These concerns are particularly marked in the context of criminal penalties, where the effect may be to criminalize activity that was lawful when it was undertaken. The application of retrospective rules may also be damaging in commercial circumstances, upsetting the presuppositions on which transactions were based. It is therefore unsurprising that national legal systems take a very dim view of retroactive rules.

The EU is no different in this respect. The basic principle was enunciated in *Racke*.[83] The Commission introduced monetary compensatory amounts for a certain product by a regulation, and then in two further regulations altered the amounts. The later regulations stated that they would apply fourteen days before they were published. The Court held that it was a fundamental principle of the Community legal order that a measure should not be applicable before those concerned could become acquainted with it.[84] The Court then stated that:[85]

[80] S Schonberg, *Legitimate Expectations in Administrative Law* (Oxford University Press, 2000); Craig (n 5) ch 16; Schwarze (n 42) ch 6; Tridimas (n 46) ch 6.

[81] Legal certainty can have implications as to how far an administrative decision that has become final should be re-opened in the light of a subsequent ruling by the Union Courts: 454–455.

[82] Schwarze (n 42) 1120.

[84] Case 98/78 *Racke* (n 83) 84.

[85] Ibid 86.

Although in general the principle of legal certainty precludes a Community measure from taking effect from a point in time before its publication, it may exceptionally be otherwise where the purpose to be achieved so demands and where the legitimate expectations of those concerned are duly respected.

The Court has, in accordance with this proviso, upheld the validity of retroactive measures, particularly in the agricultural sphere where they were necessary to ensure market stability, or where the retroactivity placed the individual in a more favourable position.[86] The normal presumption is, however, against the validity of retroactive measures. This manifests itself in both procedural and substantive terms.

In procedural terms, the Court has made it clear that it will interpret norms as having retroactive effect only if this clearly follows from their terms, or from the objectives of the general scheme of which they are a part. The general principle of construction is, therefore, against giving rules any retroactive impact.[87]

In substantive terms, the Court will strike down measures that have a retroactive effect where there is no pressing Union objective that demands this temporal dimension, or where the legitimate expectations of those affected by the measure cannot be duly respected,[88] as the following case shows.

Case 63/83 **Regina v Kent Kirk**
[1984] ECR 2689

Criminal proceedings were brought in the United Kingdom for infringement of fisheries legislation. During the course of these proceedings the question arose whether Council Regulation 170/83 of 25 January 1983, by which, with retroactive effect from 1 January 1983, national measures contravening Community law prohibitions on discrimination were approved by way of transitional arrangements, could also retroactively validate national penal provisions. The ECJ said no, firmly.

THE ECJ

20. The Commission . . . contends that the Member States were empowered to adopt measures such as the Sea Fish Order 1982 by Article 6(1) of Regulation 170/83 of 25 January 1983 which authorises retroactively, as from 1 January 1983, the retention of the derogation regime defined in Article 100 of the 1972 Act of Accession for a further ten years, and which extends the coastal zones from six to twelve nautical miles. . . .

21. Without embarking upon an examination of the general legality of the retroactivity of Article 6(1) of that Regulation, it is sufficient to point out that such retroactivity may not, in any event, have the effect of validating ex post facto national measures of a penal nature which impose penalties for an act which, in fact, was not punishable at the time at which it was committed. That would be the case where at the time of the act entailing a criminal penalty, the national measure was invalid because it was incompatible with Community law.

22. The principle that penal provisions may not have retroactive effect is one which is common to all the legal orders of the Member States and is enshrined in Article 7 of the European Convention for the Protection of Human Rights and Fundamental Freedoms as a fundamental right; it takes its place among the general principles of law whose observance is ensured by the Court of Justice.

[86] Case T–7/99 *Medici Grimm KG v Council* [2000] ECR II–2671.

[87] Cases 212–217/80 *Salumi* [1981] ECR 2735; Case C–110/03 *Belgium v Commission* [2005] ECR I–2801, [73].

[88] Case 224/82 *Meiko-Konservenfabrik v Federal Republic of Germany* [1983] ECR 2539; Case C–459/02 *Willy Gerekens and Association agricole pour la promotion de la commercialisation laitière Procola v État du grand-duc de Luxembourg* [2004] ECR I–7315, [21]–[27]; Cases C–189, 202, 205, 208, and 213/02 P *Dansk Rorindustri A/S and others v Commission* [2005] ECR I–5425, [202]; Case C–550/09 *Criminal proceedings against E and F*, 29 June 2010, [59].

> 23. Consequently the retroactivity provided for in Article 6(1) of Regulation 170/83 cannot be regarded as validating ex post facto national measures which imposed criminal penalties, at the time of the conduct at issue, if those measures were not valid.

Where there is a pressing Union objective and where the legitimate expectations of those concerned are duly respected, then retroactivity may, exceptionally, be accepted in a non-criminal context. This is exemplified by *Fedesa*.[89] The applicants argued that the Directive was in breach of the principle of non-retroactivity because it was adopted on 7 March 1988 and stipulated that it was to be implemented by 1 January 1988 at the latest. The Court drew a distinction between the retroactive effect of penal provisions and retroactive effect outside the criminal sphere. As to the former, the Court affirmed *Kent Kirk*, but held that the Directive in the *Fedesa* case did not impose any criminal liability as such. As to the latter, the Court ruled that the Directive did not contravene the principle of non-retroactivity. It had been adopted to replace an earlier Directive that had been annulled. The time frame of the challenged Directive was necessary to avoid a temporary legal vacuum where there would be no Community legislation to back up the Member States' existing implementing provisions. It was for this reason that the Council had maintained the date of the earlier Directive when it passed the later Directive.[90]

(ii) *Legal Certainty, Legitimate Expectations, and Apparent Retroactivity*

Apparent retroactivity covers the situation where legislative acts are applied to events which occurred in the past, but which have not yet been definitively concluded.[91] These cases can be particularly difficult.[92] The moral arguments against allowing laws to have actual retroactive effect are powerful. Cases involving apparent retroactivity are more problematic, because the administration must have the power to alter policy for the future, even though this may have implications for the conduct of private parties, which was planned on the basis of the pre-existing legal regime.[93] The law in this area is complex and only an outline can be provided here.[94] The key elements in the ECJ's approach can be described as follows.

First, the protection of legitimate expectations developed initially in relation to the revocation of administrative decisions. The general principle is that favourable decisions bind the administration,[95] although this principle is subject to a number of exceptions.[96]

Secondly, the protection of legitimate expectations also applies to representations.[97] The general principle is that the protection of legitimate expectations extends to any individual who is in a situation from which it is clear that, in giving precise and specific assurances,[98] the Union institutions caused that

[89] Case C–331/88 [1990] ECR I–4023.

[90] The Court held that there was no infringement of the legitimate expectations, because the earlier dir was only annulled because of a procedural defect, and those affected by the national implementing legislation could not expect the Council to change its attitude on the substance of the matter in the dir during the short time between the annulment of the first dir and the notification of the second dir: ibid [47].

[91] It may sometimes be difficult to decide whether the case, in legal terms, concerns actual or apparent retroactivity: Case C–162/00 *Land Nordrhein-Westfalen v Beata Pokrzeptowicz-Meyer* [2002] ECR I–1049.

[92] Schwarze (n 42) 1121.

[98] Case T–72/99 *Meyer v Commission* [2000] ECR II–2521; Case T–290/97 *Mehibas Dordtselaan BV v Commission* [2000] ECR II–15.

person to entertain justified hopes.[99] This depends on the nature and wording of the representation.[100] In *CIRFS*[101] the ECJ was willing to accept that the Commission was bound by the terms of its policy framework, and in *Ijssel-Vliet*[102] it held that Commission guidelines which had been built into a Dutch aid scheme were binding upon the Dutch Government. Moreover, in *Vlaams Gewest*[103] the CFI held that the guidelines adopted by the Commission had to be applied in accordance with the principle of equal treatment, with the implication that like cases, as defined in the guidelines, had to be treated alike.

Thirdly, the claim will fail where the Court adjudges that the applicant's expectations were not legitimate. This will be so where: the challenged EU activity was designed to close a legal gap to prevent traders from making a speculative profit;[104] the expectations were not reasonable, because the contested measure should have been foreseen;[105] or the applicant had not met the conditions attached to a grant of funding.[106]

Fourthly, the mere fact that a trader is disadvantaged by a change in the law will not give cause for complaint based upon disappointment of legitimate expectations. A trader will not be held to have a legitimate expectation that an existing situation, which is capable of being altered by decisions taken by the institutions within the limits of their discretionary powers, will be maintained.[107] This is particularly so in the context of the CAP, where constant adjustments to meet new market circumstances are required.[108] It may also be so in other areas, such as competition policy, where the CFI emphasized that the Commission has discretion to alter the level of fines.[109]

Fifthly, the individual must be able to point either to a bargain between the individual and the authorities, or to a course of conduct or assurance by the authorities, which can generate the legitimate expectation. The *Mulder* case illustrates the first of these situations.

Case 120/86 **Mulder v Minister van Landbouw en Visserij** [1988] ECR 2321

The Community had an excess of milk. In order to reduce this excess it passed Regulation 1078/77, under which producers could cease milk production for a certain period in exchange for a premium for

[109] Case T–31/99 *ABB Asea Brown Boveri Ltd v Commission* [2002] ECR II–1881.

non-marketing of the milk. The applicant made such an arrangement in 1979 for five years. In 1984 he began to plan a resumption of production and applied to the Dutch authorities for a reference quantity of milk, which he would be allowed to produce without incurring the payment of any additional levy. He was refused on the ground that he could not prove milk production during the relevant reference year, which was 1983. This was impossible for Mulder, since he did not produce during that period, because of the bargain struck in 1979. He challenged Regulation 857/84, which was the basis of the Dutch authorities' denial of his quota, arguing that it infringed his legitimate expectations.

THE ECJ

23. It must be conceded . . . that a producer who has voluntarily ceased production for a certain period cannot legitimately expect to be able to resume production under the same conditions as those which previously applied and not to be subject to any rules of market or structural policy adopted in the meantime.

24. The fact remains that where such a producer, as in the present case, has been encouraged by a Community measure to suspend marketing for a limited period in the general interest and against payment of a premium he may legitimately expect not to be subject, upon the expiry of his undertaking, to restrictions which specifically affect him precisely because he availed himself of the possibilities offered by the Community provisions.

25. However, the regulations on the additional levy on milk give rise to such restrictions for producers who, pursuant to an undertaking entered into under Regulation 1078/77, did not deliver milk during the reference year. . . . Those producers may in fact be denied a reference quantity under the new system precisely because of that undertaking if they do not fulfil the specific conditions laid down in Regulation 857/84 or if the Member States have no reference quantity available.

26. . . . There is nothing in the provisions of Regulation 1078/77 or in its Preamble to show that the non-marketing undertaking entered into under that Regulation might, upon its expiry, entail a bar to resumption of the activity in question. Such an effect therefore frustrates those producers' legitimate expectations that the effect of the system to which they had rendered themselves would be limited.

The following cases illustrate the second type of situation, where the legitimacy of the applicant's expectation is based upon some course of conduct by the administration, or an assurance it has given.[110] In *Embassy Limousines*[111] it was held that there was a breach of legitimate expectations where a company submitting a tender was encouraged to make irreversible investments in advance of the contract being awarded, and thereby to go beyond the risks inherent in making a bid. In *CEMR*[112] it was held that the Commission could not, without infringing the principle of legitimate expectations, reduce the budgetary allocation for a project where the relevant work had been included in the original bid that had been accepted by the Commission. In *CNTA*[113] the applicant made export contracts on the supposition that monetary compensatory amounts, which were payments designed to compensate for fluctuations in exchange rates, would be payable. After the contracts were made, but before they were performed, the Commission passed a regulation abolishing such payments in that sector. The Court held that while these payments could not be said to insulate exporters from all fluctuations in exchange rates, they did shield them from such risks, such that even a prudent exporter might choose not to cover himself against them:[114]

[110] Case C–152/88 *Sofrimport Sàrl v Commission* [1990] ECR I–2477.
[111] Case T–203/96 *Embassy Limousines & Services v European Parliament* [1998] ECR II–4239.
[112] Cases 46 and 151/98 *Council of European Municipalities and Regions v Commission* [2000] ECR II–167.
[113] Case 74/74 *CNTA SA v Commission* [1975] ECR 533.
[114] Ibid [42].

> In these circumstances, a trader might legitimately expect that for transactions irrevocably undertaken by him because he has obtained, subject to a deposit, export licences fixing the amount of the refund in advance, no unforeseeable alteration will occur which could have the effect of causing him inevitable loss, by re-exposing him to the exchange risk.

Sixthly, even if the applicant is able to prove a *prima facie* legitimate expectation this may be defeated if there is an overriding public interest that trumps the expectation.[115] It is for the defendant to show the overriding public interest. The Union Courts will inquire whether the public interest was overriding.[116] Schonberg has argued that the Union Courts 'will restrict the application of a policy change if there is a *significant imbalance* between the interests of those affected and the policy considerations in favour of the change'.[117] There is force in this view, but the difference between this and a test of proportionality is not clear. Given that proportionality is used to determine whether infringement of a right can be justified, it could also be used to decide whether the trumping of an expectation is warranted.[118] The application of any such test will depend on the nature of the case.

Finally, the mere fact that an EU decision is unlawful will not necessarily prevent the individual from claiming a legitimate expectation.[119] Unreasonable delay by the administration can operate as a bar to the revocation of an unlawful administrative act.[120] The Union Courts balance the public interest in legality and the private interest in legal certainty. The former does not always trump the latter.[121] The position is however different in relation to unlawful representations, as opposed to unlawful decisions. The former have been held not to generate any legitimate expectations.[122] The Union Courts have provided no explanation for their differential treatment of unlawful decisions and unlawful representations.

(D) GENERAL PRINCIPLES OF LAW: NON-DISCRIMINATION

Equality and non-discrimination are universally recognized principles,[123] but the legal concept of discrimination can be problematic in its application. It is necessary to decide whether people are similarly situated such that a difference in treatment is discriminatory, and whether that apparent difference in treatment can be justified. These difficulties will be explored in later chapters.[124]

(i) *Treaty Foundations*

The principle of non-discrimination, although a general principle and therefore binding on both the EU and the Member States when acting in the scope of application of EU law, is expressly mentioned in a number of Treaty Articles.

i. Equality and non-discrimination are foundational values of the EU: Articles 2 and 3(3) TEU.

ii. There is a general prohibition on non-discrimination on grounds of nationality in Article 18 TFEU, which is reiterated in the free movement context in Articles 45, 49, and 56–57 TFEU.

iii. Equal treatment of men and women is covered in Articles 2 and 3(3) TEU, and in Article 157 TFEU.

iv. Non-discrimination as between producers or consumers in the field of agriculture is dealt with by Article 40(2) TFEU.

v. There are also specific provisions such as Article 110 TFEU, prohibiting discriminatory taxation.

vi. Article 19(1) TFEU,[125] the successor to Article 13 EC, empowers the EU, through a special legislative procedure, to take appropriate action to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age, or sexual orientation.[126] Article 19(2) TFEU empowers the EU to adopt non-harmonizing 'incentive measures' by the ordinary legislative procedure. Directives prohibiting discrimination on grounds of race or ethnic origin,[127] and on grounds of religion, belief, disability, age, or sexual orientation in the field of employment,[128] were adopted in 2000. In the same year, an action programme to combat discrimination on all the grounds listed in Article 19 (other than sex) was adopted,[129] and the Commission announced a policy of 'mainstreaming' so as to integrate anti-discrimination considerations such as race and disability in particular into other areas of EU policy formation.[130]

vii. Article 21(1) of the Charter of Fundamental Rights provides that any discrimination based on any ground such as sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age, or sexual orientation shall be prohibited. This provision establishes a broad general principle of non-discrimination with an open-ended list of prohibited grounds.

(ii) *Non-Discrimination as a 'General' Principle of EU Law*

While the principle of equality and the prohibition of discrimination are therefore found expressly within a number of Treaty Articles,[131] the ECJ held at an early stage that these were merely specific enunciations of the general principle of equality as one of the fundamental principles of EU law,[132]

[125] M Bell, 'The New Article 13 EC Treaty: A Sound Basis for European Anti-discrimination Law?' (1999) 6 MJ 5; L Waddington, 'Testing the Limits of the EC Treaty Article on Non-Discrimination' (1999) 28 ILJ 133.

which must be observed by any court.[133] The principle has been applied by the ECJ where there has been arbitrary or unjustifiably unequal treatment of two persons within an area of EU competence,[134] such as in the context of staff policy.[135]

The reach of this general principle can nonetheless be contentious, as exemplified by the case law on discrimination and sexual orientation.[136] The Advocates General in *P v S*[137] and *Grant*[138] argued that, prior to the enactment of what was Article 13 EC, the general principles of Community law imposed a requirement on the EC institutions and the Member States not to discriminate within the areas covered by Community law on arbitrary grounds, such as sexual orientation or gender reassignment. The Court in *P v S* held that Directive 76/207 on equal treatment of men and women in employment was simply the expression, in the relevant field, of the principle of equality, which was a fundamental principle of Community law.

The ECJ was more conservative in *Grant* concerning travel benefits for the same-sex partners of employees. It retreated from this broad principle of equality and decided that discrimination on grounds of sex in EC law did not cover discrimination on grounds of sexual orientation.[139] The Court ruled that ensuring respect for fundamental rights could not extend the scope of the Treaty provisions, which at the time required Member States only to ensure sex equality in employment, beyond the competences of the Community.

The ruling in *D v Council*[140] appeared to reinforce the cautious approach taken in *Grant*. In *D* there was no doubt about competence, since the case concerned the EU's treatment of its own employees. The case concerned the EU's refusal to pay a staff household allowance, which would have been payable to a married employee, to a homosexual employee who was in a stable partnership registered under Swedish law. The Court denied that there had been any discrimination on grounds of sex, and then held, somewhat obscurely, in relation to the claim that there had been discrimination on grounds of sexual orientation, that it was not the sex of the partner that determined whether the household allowance was granted, but the legal nature of the ties between the official and the partner. Thus, while ruling that there had been no unequal treatment on grounds of sexual orientation the Court did not actually deny the possible existence of a general principle of EC law prohibiting discrimination on grounds of sexual orientation within its field of application.[141]

(iii) *Justifying Discrimination*

To discriminate means to differentiate or to treat differently. In EU law discrimination is impermissible when done without adequate justification on one of the prohibited grounds, or when there is no relevant difference between two people or situations that would justify a difference in their treatment. These are not easy criteria to apply, since it is not always clear which factors may be taken into account in determining whether two people are 'similarly situated'. Nor is it clear whether, if differences in situation are taken into account to justify discriminatory treatment, this should be seen as a form of justified 'positive discrimination' or should be seen as not discriminatory at all.[142]

A straightforward example of discrimination on grounds of sex would be where a woman was paid a lower wage than a man for doing the same job, and a simple example of nationality discrimination would be where a UK employer refused to hire any employee who was not British. The more difficult situations arise where the discrimination is neither clear nor direct, but is indirect and disguised, or is unintentional but nonetheless discriminatory in its impact. Indirect and disguised discrimination would occur if, for example, a UK employer claimed to hire workers of any nationality so long as they had received their education in the UK, since in practice this requirement would not be fulfilled by most non-UK nationals. Indirect sex discrimination may occur where an employer pays part-time workers less per hour than full-time workers, where the overwhelming majority of part-time workers are women.[143]

In EU law, direct or deliberate disguised discrimination on grounds of sex or nationality is prohibited, subject to fairly limited exceptions, whereas indirect and unintentional discrimination may be justified on a variety of non-exhaustive grounds.[144] Thus in the context of nationality discrimination, a language requirement which is indirectly discriminatory may be justified if it is proportionate and genuinely required for the job to be undertaken.[145] Similarly in the context of sex discrimination, the payment of a higher hourly wage to full-time than to part-time workers may, even where it indirectly discriminates against women, be 'objectively justified' on grounds relating to the needs of the employer.[146] Indirect discrimination was expressly defined for the first time in the context of sex discrimination in the Burden of Proof Directive in 1997,[147] and differently again in the anti-discrimination directives adopted under what was Article 13 EC.[148] In addition to the 'objective justification' requirements, the Directives permitted other specific exceptions to the general non-discrimination principle.

(E) GENERAL PRINCIPLES OF LAW: TRANSPARENCY

(i) *Development*

Transparency encompasses a number of features, such as the holding of meetings in public, the provision of information, and the right of access to documents.[149] Whether or not transparency can be counted as a general principle of EU law will be considered in due course.

Transparency became of increased importance in EU law after the Maastricht Treaty.[150] The early years of the EEC were weak in terms of democracy, accountability, and accessibility to public scrutiny. There was a greater focus on transparency in the 1990s, not least as a result of the near failure to have the TEU ratified in Denmark and France. This was particularly apparent during the IGC preceding the Amsterdam Treaty.[151] Moreover, a number of Member States, such as the Netherlands, Denmark, and Sweden, increasingly objected to the secrecy surrounding the Council of Ministers, and were dissatisfied with the steps which the Council had taken.[152] The 1993 Inter-institutional Declaration on

(2000) 37 CMLRev 7.

Democracy, Transparency and Subsidiarity provided further impetus for reform.[153] The Council and Commission adopted a joint Code of Conduct on access to documents in 1993,[154] which was implemented into their rules of procedure by decision.[155] In 2001 a regulation on access to documents was adopted, which is analysed below.

The European Council agreed an overall policy on transparency in June 2006.[156] All Council deliberations on legislative acts to be adopted by co-decision were, in principle, to be open to the public, as were the votes and explanations of votes by Council members. So too were the initial deliberations on legislative acts other than those adopted by co-decision presented orally by the Commission, with the possibility of subsequent deliberations also being open to the public. The debate on the Commission's annual work programme was also open to the public.

The Commission launched a European Transparency Initiative in 2005.[157] It has now brought together a range of issues dealing with transparency including:[158] access to documents; separate registers relating to Comitology, experts, and interest representatives; civil society; and consultation. There is a detailed draft agreement between the Commission and European Parliament on a Joint Transparency Register, which will cover, subject to limited exceptions, all activities that seek to influence the EU policy and decision-making process. Those who engage in such activities are subject to a Code of Conduct.[159]

(ii) *Lisbon Treaty and EU Legislation*

The Lisbon Treaty makes provision for transparency in a number of different ways. The relevant provisions are found in the TEU and the TFEU.

i. Article 1 TEU states that the Lisbon Treaty 'marks a new stage in the process of creating an ever closer union among the peoples of Europe, in which decisions are taken as openly as possible and as closely as possible to the citizen'. This is reiterated in Article 10(3) TEU, which provides that every citizen has the right to participate in the democratic life of the Union, and that decisions shall be taken as openly and as closely as possible to the citizen.

ii. Article 11(2) TEU states that the EU institutions shall maintain an open, transparent, and regular dialogue with representative associations and civil society. This is reinforced by Article 15(1) TFEU, which states that in order to promote good governance and ensure the participation of civil society, the Union's institutions, bodies, offices, and agencies shall conduct their work as openly as possible.

iii. Article 11(3) TEU requires the Commission to carry out broad consultations with parties concerned in order to ensure that the Union's actions are coherent and transparent.

iv. Article 16(8) TEU imposes an obligation on the Council to meet in public when it deliberates and votes on a draft legislative act. Article 15(2) TFEU renders the EP subject to the same duty.

v. Article 15(3) TFEU[160] deals with access to documents.

> 3. Any citizen of the Union, and any natural or legal person residing or having its registered office in a Member State, shall have a right of access to documents of the Union's institutions, bodies, offices and agencies, whatever their medium, subject to the principles and the conditions to be defined in accordance with this paragraph. General principles and limits on grounds of public or private interest governing this right of access to documents shall be determined by the European Parliament and the Council, by means of regulations, acting in accordance with the ordinary legislative procedure.
>
> Each institution, body, office or agency shall ensure that its proceedings are transparent and shall elaborate in its own Rules of Procedure specific provisions regarding access to its documents, in accordance with the regulations referred to in the second subparagraph.
>
> The Court of Justice of the European Union, the European Central Bank and the European Investment Bank shall be subject to this paragraph only when exercising their administrative tasks.
>
> The European Parliament and the Council shall ensure publication of the documents relating to the legislative procedures under the terms laid down by the regulations referred to in the second subparagraph.

vi. Transparency is also relevant for the Member States. Thus, for example, Treaty Articles on free movement carry an obligation of equal treatment and this has been held to generate an obligation of transparency.[161]

vii. EU legislation frequently imposes an obligation of transparency on EU institutions and/or Member States.

viii. There can be clashes between transparency and Charter rights, such as the protection of personal data.[162]

(iii) *Transparency and Access to Documents*

Access to documents is an important aspect of transparency. The Community enacted a regulation pursuant to Article 255 EC, the predecessor to Article 15(3) TFEU, in 2001,[163] following a number of earlier more specific decisions. Regulation 1049/2001 improved the position on access to documents in several respects, by for example softening the nature of some of the exceptions and requiring a register of documents to be kept.[164] The new legislation was implemented by the three EU institutions into their own rules of procedure,[165] and has been applied to EU agencies.[166] The right of access to documents is also enshrined in Article 42 of the Charter of Fundamental Rights.[167]

[160] Art 255 EC, the predecessor to Art 15(3) TFEU, was held to lack direct effect in Case T–191/99 *Petrie v Commission* [2001] ECR II–3677.

[167] [2000] OJ C364/19.

The European Ombudsman has been central to the development of openness and transparency as broader principles of law.[168] He undertook an own-initiative inquiry into public access to documents addressed to fifteen Community institutions other than the Council and Commission.[169] The Ombudsman concluded that failure to adopt rules governing public access to documents and to make those rules easily available to the public constituted maladministration. The consequence was that most other important EU bodies including the Court of Auditors, ECB, and agencies adopted rules governing access to documents. The Ombudsman has moreover provided guidance on access to information via the Code of Good Administrative Behaviour.[170]

(iv) *Transparency, Access to Documents, and the Courts*

The ECJ and CFI were generally supportive of transparency even before the Treaty of Amsterdam reforms, but they refrained from far-reaching statements of principle that would enshrine a general right of transparency or access to information. The CFI stressed in *Carvel*[171] that when the Council exercised its discretion whether to release documents it had genuinely to balance the interests of citizens in gaining access to documents with the need to maintain confidentiality of its deliberations. It could not simply adopt a general blanket denial of access to a class of documents.

In *Netherlands v Council*[172] the Dutch government argued that the principle of openness of the legislative process was an essential requirement of democracy, and that the right of access to information was an internationally recognized fundamental human right. The ECJ confirmed the importance of the right of public access to information and its relationship to the democratic nature of the institutions, but rejected the argument that such a fundamental right should not be dealt with purely as a matter of the Council's internal Rules of Procedure.

In *Hautala*, the ECJ upheld the CFI's decision to annul the Council's refusal to consider granting partial access to politically sensitive documents, but the ECJ declared that it was not necessary for it to pronounce on whether or not EC law recognized a general 'principle of the right to information'.[173]

Nonetheless, despite the failure to articulate a general principle of transparency or a general right of access to information, the Courts played a significant role in elaborating the content of the right of access to information contained in the procedural rules and legislative decisions of the institutions. Thus the CFI and the ECJ annulled a number of decisions of the Council and Commission refusing access to their documents, not on the ground that the institutions had breached a 'general principle of transparency', but on other grounds such as the automatic application of non-mandatory exceptions, the inappropriate use of the authorship rule, the refusal to consider partial access, or the inadequacy of the reasons given for refusal.[174]

(v) *Transparency, Regulation 1049/2001, and the Courts*

The detailed regime for access to documentation is governed by Regulation 1049/2001.[175] It contains provisions defining the institutions covered, the meaning of the term document, the beneficiaries of the scheme, and the exceptions that limit access.

The EU Courts have been willing to protect the reality of access, as exemplified by *Hautala*.[176] This was evident once again in *Verein für Konsumenteninformation*.[177] The applicant sought access to documents held by the Commission concerning a cartel in the banking sector, in order to pursue legal actions in Austria for customers who might have been charged excessive rates of interest. The file was large and the Commission denied the request, stating that partial access was not possible since detailed examination of each document would entail excessive work. The CFI held that the Regulation required the Commission in principle to carry out an individual assessment of the documents requested, except where it was manifestly clear that access should be refused or granted. The refusal to undertake any concrete assessment was therefore manifestly disproportionate.[178] The CFI acknowledged that the relevant file was large, but nonetheless annulled the Commission's decision.[179]

The effectiveness of any regime for access to information will be crucially affected by the exceptions contained in the legislation and their judicial interpretation. The exceptions in Regulation 1049/2001 are listed in Article 4. Most are qualified by provisions allowing access even if the document relates to a protected interest, provided that there is an overriding public interest in disclosure.[180] There are, however, some exceptions that are mandatory: access is prohibited where disclosure would undermine the relevant interest, with no provision allowing access on grounds of public interest.[181]

The Union Courts exercise control in a number of ways. They can determine the legal standard of review; they can decide on the legal meaning of an exception; and they can adjudicate on whether the public interest warranted disclosure. The Union Courts state repeatedly that the exceptions should be interpreted narrowly. There are, however, contestable decisions, where the Union Courts have used the juridical techniques at their disposal sparingly to say the least.

The *Sison* case concerned the standard of judicial review.[182] The ECJ's decision as to the limited scope of review made it difficult for the claimant to succeed.

[177] Case T–2/03 *Verein für Konsumenteninformation v Commission* [2005] ECR II–1121.

[178] Ibid [100]. The CFI acknowledged that there could be cases where, because of the number of documents requested, the Commission had to retain the right to balance the interest in public access against the burden of work in order to safeguard the interests of good administration. This possibility was however applicable only in exceptional cases.

[179] The obligation to assess each document will not however apply where it is clear that access to the file via Reg 1049/2001 conflicts with the policy underlying a different reg: Case C–139/07 P *European Commission v Technische Glaswerke Ilmenau GmbH*, 29 June 2010, [61]–[63].

Case C–266/05 P **Jose Maria Sison v Council**
[2007] ECR I–1233

The applicant's assets were frozen pursuant to a regulation to combat terrorism and he sought access to documentation that had placed him on the relevant list. The Council refused access relying on Article 4(1)(a) of Regulation 1049/2001, on the ground that it would undermine public security and international relations.

THE ECJ

34. Contrary to the appellant's submission, the Court of First Instance, in line with that case-law, correctly held . . . as regards the scope of the judicial review of the legality of a decision of the Council refusing public access to a document on the basis of one of the exceptions relating to the public interest provided for in Article 4(1)(a) of Regulation No 1049/2001, that the Council must be recognised as enjoying a wide discretion for the purpose of determining whether the disclosure of documents relating to the fields covered by those exceptions could undermine the public interest. The Court of First Instance also correctly held . . . that the Community Court's review of the legality of such a decision must therefore be limited to verifying whether the procedural rules and the duty to state reasons have been complied with, whether the facts have been accurately stated, and whether there has been a manifest error of assessment or a misuse of powers.

35. In the first place, it must be accepted that the particularly sensitive and essential nature of the interests protected by Article 4(1)(a) of Regulation No 1049/2001, combined with the fact that access must be refused by the institution, under that provision, if disclosure of a document to the public would undermine those interests, confers on the decision which must thus be adopted by the institution a complex and delicate nature which calls for the exercise of particular care. Such a decision requires, therefore, a margin of appreciation.

36. Secondly, the criteria set out in Article 4(1)(a) of Regulation No 1049/2001 are very general, since access must be refused, as is clear from the wording of that provision, if disclosure of the document concerned would 'undermine' the protection of the 'public interest' as regards, inter alia, 'public security' or 'international relations'.

37. In that regard, it is clear from an examination of the preparatory documents which preceded the adoption of that regulation that various proposals intended to define more precisely the scope of the public-interest exceptions to which Article 4(1)(a) of that regulation refers, which would undoubtedly have enabled the opportunities for judicial review in regard to the institution's assessment to be correspondingly increased, were not accepted.

. . .

46. Moreover, it is clear from the wording of Article 4(1)(a) of Regulation No 1049/2001 that, as regards the exceptions to the right of access provided for by that provision, refusal of access by the institution is mandatory where disclosure of a document to the public would undermine the interests which that provision protects, without the need, in such a case and in contrast to the provisions, in particular, of Article 4(2), to balance the requirements connected to the protection of those interests against those which stem from other interests.

47. It follows from the foregoing that . . . the particular interest of an applicant in obtaining access to documents cannot be taken into account by the institution called upon to rule on the question whether the disclosure to the public of those documents would undermine the interests protected by Article 4(1)(a) of Regulation No 1049/2001 and to refuse, if that is the case, the access requested.

In *Sweden v Commission*[183] it was the legal meaning of an exception to Regulation 1049/2001 that came before the ECJ, and its judgment was more liberal than that of the CFI. The CFI[184] held that Article 4(5) of Regulation 1049/2001, which provides that a Member State may request the Union institution not to disclose a document originating from that Member State without its prior agreement, constituted an instruction from the Member State to the EU institution not to disclose the relevant document. The ECJ on appeal decided that Article 4(5) did not confer on the Member State a general and unconditional right of veto. Article 4(5) must, said the ECJ, be delimited by Article 4(1)–(3), such that the Member State was afforded the opportunity to show why its documents fell within those exceptions. If the Member State felt that this was so there should be a dialogue between it and the EU institutions, in which it was for the Member State to provide reasons to show why the document came within Article 4(1)–(3). It was then for the relevant EU institution to record these reasons, so that an individual seeking access could understand why it had been denied, which would also facilitate any subsequent legal challenge.

The *Turco* case concerned the legal meaning of an exception and the judicial approach to the balancing test.[185] The ECJ was again more liberal than the CFI.[186]

Cases C–39 and 52/05 P **Sweden and Turco v Council** [2008] ECR I–4723

The case concerned the exception for legal advice contained in Regulation 1049/2001,[187] which provides that the institutions shall refuse access to a document where disclosure would undermine the protection of court proceedings and legal advice, unless there is an overriding public interest in disclosure. Turco was refused access to documents from the Council legal service relating to a proposed directive on asylum.

THE ECJ

42. [T]he exception relating to legal advice . . . must be construed as aiming to protect an institution's interest in seeking legal advice and receiving frank, objective and comprehensive advice.

43. The risk of that interest being undermined must, in order to be capable of being relied on, be reasonably foreseeable and not purely hypothetical.

44. [I]f the Council takes the view that disclosure of a document would undermine the protection of legal advice as defined above, it is incumbent on the Council to ascertain whether there is any overriding public interest justifying disclosure despite the fact that its ability to seek legal advice and receive frank, objective and comprehensive advice would thereby be undermined.

45. In that respect, it is for the Council to balance the particular interest to be protected by non-disclosure of the document concerned against, inter alia, the public interest in the document being made accessible in the light of the advantages stemming . . . from increased openness, in that this enables citizens to participate more closely in the decision-making process and guarantees that the administration enjoys greater legitimacy and is more effective and more accountable to the citizen in a democratic system.

[183] Case C–64/05 P *Sweden v Commission* [2007] ECR II–11389.
[184] Case 168/02 *IFAW Internationaler Tierschutz-Fonds GmbH v Commission* [2004] ECR II–4135.
[185] See also Case T–403/05 *My Travel Group plc v Commission* [2008] ECR II–2027; Cases C–514, 528, 532/07 *Sweden v API and Commission*, 21 Sept 2010; Case T–471/08 *Toland v European Parliament*, 7 June 2011.
[186] Case T–84/03 *Turco v Council* [2004] ECR II–4061.
[187] Reg 1049/2001 (n 163) Art 4(2).

46. Those considerations are clearly of particular relevance where the Council is acting in its legislative capacity, as is apparent from recital 6 of the preamble to Regulation No 1049/2001, according to which wider access must be granted to documents in precisely such cases. Openness in that respect contributes to strengthening democracy by allowing citizens to scrutinize all the information which has formed the basis of a legislative act. The possibility for citizens to find out the considerations underpinning legislative action is a precondition for the effective exercise of their democratic rights.

. . .

49. If the Council decides to refuse access to a document which it has been asked to disclose, it must explain, first, how access to that document could specifically and effectively undermine the interest protected by an exception laid down in Article 4 . . . and, secondly, in the situations referred to in Article 4(2) and (3) of that regulation, whether or not there is an overriding public interest that might nevertheless justify disclosure of the document concerned.

50. It is, in principle, open to the Council to base its decisions in that regard on general presumptions which apply to certain categories of documents, as considerations of a generally similar kind are likely to apply to requests for disclosure relating to documents of the same nature. However, it is incumbent on the Council to establish in each case whether the general considerations normally applicable to a particular type of document are in fact applicable to a specific document which it has been asked to disclose.

. . .

59. As regards, first, the fear expressed by the Council that disclosure of an opinion of its legal service relating to a legislative proposal could lead to doubts as to the lawfulness of the legislative act concerned, it is precisely openness in this regard that contributes to conferring greater legitimacy on the institutions in the eyes of European citizens and increasing their confidence in them by allowing divergences between various points of view to be openly debated . . .

. . .

62. As regards, secondly, the Council's argument that the independence of its legal service would be compromised by possible disclosure of legal opinions issued in the course of legislative procedures, it must be pointed out that that fear lies at the very heart of the interests protected by the exception provided for in the second indent of Article 4(2) of Regulation No 1049/2001. As is apparent from paragraph 42 of this judgment, that exception seeks specifically to protect an institution's interest in seeking legal advice and receiving frank, objective and comprehensive advice.

63. However, in that regard, the Council relied before both the Court of First Instance and the Court on mere assertions, which were in no way substantiated by detailed arguments. In view of the considerations which follow, there would appear to be no real risk that is reasonably foreseeable and not purely hypothetical of that interest being undermined.

64. As regards the possibility of pressure being applied for the purpose of influencing the content of opinions issued by the Council's legal service, it need merely be pointed out that even if the members of that legal service were subjected to improper pressure to that end, it would be that pressure, and not the possibility of the disclosure of legal opinions, which would compromise that institution's interest in receiving frank, objective and comprehensive advice and it would clearly be incumbent on the Council to take the necessary measures to put a stop to it.

The 2001 Regulation was undoubtedly a step forward compared to the pre-existing position, but there was nonetheless concern about its scope and the exceptions. In 2008, the Commission proposed a modified regulation on access to documents,[188] but the European Parliament was not happy with the proposal and suggested numerous amendments.[189] The proposal is stalled at the

[188] Regarding Public Access to European Parliament, Council and Commission documents, COM(2008)229 final.

[189] On the proposal for a reg of the European Parliament and of the Council regarding public access to European Parliament, Council, and Commission documents, A6-0077/2009, Rapporteur Michael Cashman; T6-0114/2009, PE439/989, 12 May 2010, Rapporteur Michael Cashman.

time of writing, and it remains to be seen whether a new regulation emerges and, if so, what form it takes.[190]

(vi) *Conclusion*

Developments such as Treaty Articles on transparency, Regulation 1049/2001, and Article 42 of the Charter of Fundamental Rights led Judge Lenaerts, writing extra-judicially, to conclude that 'it can at present hardly be denied that the principle of transparency has evolved into a general principle of Community law'.[191] This view is reinforced by the ECJ's greater willingness to read EU legislation as subject to transparency, even where there is no explicit mention of this principle in the relevant articles of the legislation.[192] Even if transparency is regarded as a general principle of EU law, the impact of this on citizens will be crucially dependent on the detailed meaning accorded to the principle. In the post-Lisbon world it remains to be seen how the Treaty provisions dealing with transparency are interpreted both politically and legally.

(F) GENERAL PRINCIPLES OF LAW: PRECAUTIONARY PRINCIPLE

Risk regulation is an important part of the EU's activities, and this often has to be undertaken under conditions of scientific uncertainty. Article 191(2) TFEU mentions the precautionary principle in relation to environmental decision-making, and Article 11 TFEU mandates that environmental protection requirements must be integrated into other EU policies. The EU Courts have however elevated the precautionary principle into a general principle of EU law.

The foundations were laid by the ECJ. In the *BSE* case[193] the UK challenged the legality of a Commission decision banning export of beef from the UK in the wake of mad cow disease. The ECJ stated that when the contested decision was adopted there was great uncertainty as to the risks posed by such produce, and held that 'where there is uncertainty as to the existence or extent of risks to human health, the institutions may take protective measures without having to wait until the reality and seriousness of those risks become apparent'.[194]

It was however the CFI that elevated the precautionary principle to the status of a new general principle of EU law. *Pfizer*[195] and *Artegodan*[196] were the seminal judgments in this respect. The CFI began with the express mention of the precautionary principle in what was Article 174(2) EC concerning environmental policy. It then relied on Article 6 EC,[197] which stipulates that environmental protection must be integrated into the implementation of other Community policies. It followed, said the CFI, that the precautionary principle, being a part of environmental protection, should also be a factor in other Community policies.[198] This conclusion was reinforced through interpretation of other

[197] Now Art 11 TFEU.

[198] Case T–13/99 *Pfizer* (n 195) [114]; Cases T–74, 76, 83–85, 132, 137, and 141/00 *Artegodan* (n 196) [183].

more specific Treaty Articles as requiring a high level of protection for health and consumer protection, with the precautionary principle being the means to ensure this requisite level of protection.[199]

The CFI buttressed the argument from the Treaty by drawing on prior case law from the ECJ, such as the *BSE* case, where the existence of the precautionary principle 'has in essence and at the very least implicitly been recognized by the Court of Justice'.[200] The Treaty Articles combined with prior case law provided the foundations for the recognition of a new general principle of EU law.[201]

> It follows that the precautionary principle can be defined as a general principle of Community law requiring the competent authorities to take appropriate measures to prevent specific potential risks to public health, safety and the environment, by giving precedence to the requirements related to the protection of those interests over economic interests. Since the Community institutions are responsible, in all their spheres of activity, for the protection of public health, safety and the environment, the precautionary principle can be regarded as an autonomous principle stemming from the abovementioned Treaty provisions.

The precautionary principle is used to review the legality of EU action and also that of Member State action when it falls within the sphere of EU law.[202] It should nonetheless be recognized that the meaning and application of the principle are controversial.[203]

5 MISUSE OF POWER

Misuse of power is the final ground of review mentioned in Article 263 TFEU. The concept covers adoption by an EU institution of a measure with the exclusive or main purpose of achieving an end other than that stated, or evading a procedure specifically prescribed by the Treaty for dealing with the circumstances of the case.[204] There is a close connection between claims based on misuse of powers and those based on proportionality. The distinguishing feature is that in the former instance the object or purpose sought to be achieved will itself be improper, whereas in the latter instance the objective will be legitimate, and the issue will be whether it was achieved in a disproportionate manner.

The successful use of this head of review is exemplified by *Giuffrida v Council*.[205] The applicant sought the annulment of a decision appointing Martino to a higher grade in the Community service,

pursuant to a competition in which he and Martino were the two contestants for the post. He claimed that the competition was in reality an exercise to appoint Martino to the job, the rationale being that Martino had already been performing the duties associated with the higher grade. The Court quashed the appointment, stating that the pursuit of such a specific objective was contrary to the aims of the recruitment procedure and was, therefore, a misuse of power. Internal promotions should be based on selecting the best person for the job, rather than pre-selecting a particular candidate to whom the job would be given.

6 THE INTENSITY OF REVIEW

The discussion thus far has concentrated on the heads of review, but the intensity of judicial review is equally important. The issue is how far the ECJ will go in reassessing decisions, particularly those involving discretion. The ECSC Treaty contained explicit dictates on the matter.[206] There is no directly analogous provision in the EU Treaty, but the intensity of review has, nonetheless always been an issue.

Judicial review will entail challenge to law, fact, and discretion.[207] A paradigm question of law concerns the meaning of a term in a Treaty provision, regulation, directive, or decision. The Union Courts will normally treat the meaning of terms such as state aid, worker, services, goods, capital, agreement, and other such provisions as questions of law. The general approach is to substitute judgment on these questions of law. The EU Courts will lay down the meaning of the disputed term, and if the challenged interpretation is at variance with this it will be annulled.

The standard of judicial review for fact and discretion is different. The standard formula used by the Courts is that review should be confined to examining whether the exercise of the discretion was vitiated by a manifest error, misuse of power, or clear excess in the bounds of discretion. The intensity with which this standard of review has been deployed has however varied over time and in relation to different subject matter.

The ECJ's early approach was to apply this test with a very light touch, more especially when the provision being reviewed concerned the exercise of discretion in relation to the CAP. The foundational Treaty provisions of the CAP contained various objectives, which necessitated the making of discretionary choices by the Commission and the Council. The ECJ held that the Community institutions had wide discretionary power concerning the definition of the objectives to be pursued and the choice of the appropriate means of action.[208] The ECJ did not wish to second-guess evaluations made by the Community institutions.[209] The choice thus made would be annulled only if the applicant could show manifest error or misuse of power. The ECJ applied this test with a light touch. It would commonly devote only one or two paragraphs to the issue before finding against the applicant.[210]

The Union Courts continue to deploy the same test for the review of fact and discretion in the more modern case law. The applicant must still show manifest error, misuse of power, or clear excess in the bounds of discretion, but in some areas, such as risk regulation and competition, this test is applied with considerably more rigour than hitherto.

[206] Art 33 ECSC.

[207] Craig (n 5) ch 13.

[209] Lord Mackenzie Stuart, *The European Communities and the Rule of Law* (Stevens, 1977) 91, 96.

[210] Craig (n 5) 439–446.

Thus in *Pfizer*[211] the applicant challenged a regulation that withdrew authorization for an additive to animal feeding stuffs. The additive was an antibiotic that was added in very small quantities to animal feed to promote growth. The rationale for withdrawal of the authorization was the fear that such additives could reduce the animals' resistance to antibiotics, and that this lessening of resistance could be transmitted to humans. Pfizer argued that it could not be proven in the light of the scientific evidence. The CFI held that judicial review should be confined to examining whether the exercise of the discretion was vitiated by a manifest error, misuse of power, or clear excess in the bounds of discretion,[212] and that where a Community authority was required to make complex assessments, its discretion also applied to some extent to the factual basis of its action.[213] It was not for the CFI to substitute its factual assessment for that of the Community institution, but it should confine its review to manifest error, misuse of power, or clear excess in the bounds of discretion.[214] Notwithstanding this reiteration of orthodoxy, the CFI devoted nearly seventy pages of its judgment to a close assessment of the applicant's arguments concerning fact and discretion in a judgment which spanned nearly 200 pages overall. The CFI ultimately found against the applicants, but it applied the test of manifest error, etc, far more intensively than hitherto. The intensity of review in this area will also be affected by who has the burden of proof under the EU legislation.[215]

This is also evident in judicial review of competition decisions, more especially those concerning mergers. The CFI annulled a number of Commission merger decisions, concluding, after close and exacting scrutiny, that they were tainted by manifest error.[216] The Commission appealed *Tetra Laval* to the ECJ and argued that the CFI had interpreted the test of manifest error in such a way as to be tantamount to substitution of judgment. The ECJ in *Tetra Laval*[217] upheld the CFI's decision.[218]

> Whilst the Court recognises that the Commission has a margin of discretion with regard to economic matters, that does not mean that the Community courts must refrain from reviewing the Commission's interpretation of information of an economic nature. Not only must the Community courts, *inter alia*, establish whether the evidence relied on is factually accurate, reliable and consistent but also whether that evidence contains all the information which must be taken into account in order to assess a complex situation and whether it is capable of substantiating the conclusions drawn from it. Such a review is all the more necessary in the case of a prospective analysis required when examining a planned merger with conglomerate effect.

Space precludes detailed assessment of the broader implications of this judgment. This can be found elsewhere.[219] Suffice it to say for the present that this interpretation of manifest error is a long way from that found in the earlier case law, or from that which continues to be applied in the modern case law concerning common policies, state aids, and the like. There may well be justification

[219] Craig (n 5) 464–481.

for more intensive review in areas such as risk regulation and competition,[220] although this modern jurisprudence still leaves a number of questions unanswered.[221]

The varying intensity of judicial review is also evident in relation to, for example, the application of general principles of law, such as proportionality and non-discrimination. We have already seen that the application of proportionality differs depending upon the type of EU action being reviewed.[222] The same holds true for the way in which the EU Courts apply the principle of non-discrimination. This principle is applied more intensively in the context of Article 18 TFEU, especially when used with citizenship in Articles 20–21 TFEU, than it is when the Union Courts review claims for discrimination in the agricultural sphere pursuant to Articles 39–40 TFEU.[223]

7 THE CONSEQUENCES OF ILLEGALITY AND INVALIDITY

We now consider the consequences of finding illegality or invalidity. Where the addressee has not challenged[224] a decision within the time limits in Article 263 TFEU, it is definitive as against that person.[225] Article 264 TFEU provides that if the action under Article 263 is well founded, the Court shall declare the act void, although it may find that the illegality affects only part of the measure. The Court has power, if it considers it necessary, to state that certain effects of the act declared void shall be considered definitive.[226] Article 266 TFEU complements this by stating that the institution whose act has been declared void or whose failure to act has been declared contrary to the Treaty must take the necessary measures to comply with the judgment. This may involve eradicating the effects of the measure declared void and/or refraining from adopting an identical measure.[227] It does not require the Commission to re-examine identical or similar decisions allegedly affected by the same irregularity, addressed to persons other than the applicant.[228]

The general principle of EU law is that nullity is retroactive: once the act is annulled under Article 263 it is void *ab initio*.[229] Such a ruling has an effect *erga omnes*. In general terms, it is only annulment of lawmaking measures that can produce genuine *erga omnes* effects, affecting the public at large.[230] The meaning of the phrase can be more limited, particularly where decisions are in issue, as is clear from the *Kraft Products* case.[231] The ECJ held that the scope of any annulment could not go further than that sought by the applicants. The *erga omnes* authority of its annulment ruling attached to the

[222] See above, 527–533.

[223] Craig (n 5) ch 15.

[224] Normally an act will have to be challenged for its invalidity to be established. There are, however, limited instances in which the act will be treated as absolutely void or non-existent, where the act may be treated as if it were never adopted. In general, however, proceedings will be required to establish the illegality of the act: 489 above.

[225] Case C–310/97 P *Commission v AssiDomän Kraft Products AB* [1999] ECR I–5363, [57].

[226] The ECJ has power to prescribe interim measures under Art 279 TFEU: Case C–149/95 P(R) *Commission* v *Atlantic Container Line AB* [1995] ECR I–2165, and it also has power to order the suspension of the contested act: Art 278 TFEU.

operative part and the *ratio decidendi* of its judgment.[232] It did not however entail annulment of an act not challenged before the ECJ, even where it was alleged to be vitiated by the same illegality.

The principle of retroactive nullity can cause hardship, particularly where the measure is a regulation that has been relied on by many, which may be the basis of later measures. This is the rationale for Article 264(2), which allows the Court to qualify the extent of the nullity.[233] This Article has been used to limit the temporal effect of the Court's ruling. Thus, in *Commission v Council*[234] the Court annulled part of a regulation concerning staff salaries. However, if the regulation had been annulled retroactively then the staff would not have been entitled to any salary increases until a new regulation had been adopted. The Court, therefore, ruled that the regulation should have effect until a new regulation had been promulgated.

A finding of invalidity pursuant to Article 267 TFEU is, in theory, different from a decision made pursuant to Article 263. The former is addressed only to the national court that requested the ruling. However the Court has held that its rulings on Article 267 references concerning validity have an *erga omnes* effect, and provide a sufficient reason for any other national court to regard that act as void.[235] Moreover, the Court has applied the principles of Articles 264 and 266 TFEU, which technically operate only in the context of Articles 263 and 265 TFEU, by analogy to cases arising under Article 267.[236]

Case 112/83 **Société de Produits de Maïs v Administration des Douanes** [1985] ECR 719

[Note Lisbon Treaty renumbering: Arts 173, 174, 176, and 177 are now Arts 263, 264, 266, and 267 TFEU]

The case concerned the effects of a ruling by the ECJ on the validity of a regulation, following a reference from the French courts under Article 177.

THE ECJ

16. It should in the first place be recalled that the Court has already held in its judgment . . . (Case 66/80, *International Chemical Corporation* . . .) that although a judgment of the Court given under Article 177 of the Treaty declaring an act of an institution, in particular a Council or Commission Regulation, to be void is directly addressed only to the national court which brought the matter before the Court, it is sufficient reason for any other national court to regard that act as void for the purposes of a judgment which it has to give.

17. Secondly, it must be emphasised that the Court's power to impose temporal limits on the effects of a declaration that a legislative act is invalid, in the context of preliminary rulings under indent (b) of the first paragraph of Article 177, is justified by the interpretation of Article 174 of the Treaty having regard to the necessary consistency between the preliminary ruling procedure and the action for annulment provided for in Articles 173, 174 and 176 of the Treaty, which are two mechanisms provided by

[232] Case 3/54 *ASSIDER v High Authority* [1955] ECR 63; Case 2/54 *Italy v High Authority* [1954–6] ECR 37, 55.

[233] The ECJ has extended the principle of Art 264(2) to dirs: Case C–295/90 *European Parliament v Council* [1992] ECR I–4193, and to decs, Case C–22/96 *European Parliament v Council (Telematic Networks)* [1998] ECR I–3231.

[234] Case 81/72 [1973] ECR 575; Case C–41/95 *European Parliament v Council* [1995] ECR I–4411, [43]–[45].

[235] Case 66/80 *International Chemical Corporation v Amministrazione delle Finanze dello Stato* [1981] ECR 1191. The national court may make a reference on the same point if it is unclear about the scope, grounds, or consequences of the original ruling.

[236] Cases 4, 109 and 145/79 *Société Co-opérative 'Providence Agricole de la Champagne' v ONIC* [1980] ECR 2823; Cases C–38 and 151/90 *R v Lomas* [1992] ECR I–1781.

the Treaty for reviewing the legality of acts of the Community institutions. The possibility of imposing temporal limits on the effects of the invalidity of a Community Regulation, whether under Article 173 or Article 177, is a power conferred on the Court by the Treaty in the interest of the uniform application of Community law throughout the Community. . . .

18. It must be pointed out that where it is justified by overriding considerations the second paragraph of Article 174 gives the Court discretion to decide, in each particular case, which specific effects of a Regulation which has been declared void must be maintained. It is therefore for the Court, where it makes use of the possibility of limiting the effect of past events of a declaration in proceedings under Article 177 that a measure is void, to decide whether an exception to that temporal limitation of the effect of its judgment may be made in favour of the party which brought the action before the national court or of any other trader which took similar steps before the declaration of invalidity or whether, conversely, a declaration of invalidity applicable only to the future constitutes an adequate remedy even for traders who took action at the appropriate time with a view to protecting their rights.

The effect of a preliminary ruling which calls into question the compatibility of national law with EU law requires separate consideration. The general principle is that the ruling defines the legal position as it must have been understood from the time when the EU norm came into force.[237] The EU norm must, therefore, be applied by national courts to situations that occurred before the ECJ's ruling was given, provided that an action relating to that rule could have been brought before the courts having jurisdiction. This proposition will be qualified only in exceptional circumstances.[238]

8 CONCLUSIONS

i. The Union Courts have played the major role in fashioning principles of judicial review to render accountable decision-making by EU institutions and Member States when the latter act in the sphere of EU law. The ECJ and General Court have to this end developed principles of procedural and substantive judicial review within the framework of the heads of review listed in Article 263 TFEU.

ii. The EU Courts have developed a broad set of general principles of EU law, which continues to develop, as exemplified by the case law on the precautionary principle. The most familiar have been drawn from national constitutional and administrative traditions and have been adapted by the ECJ to the EU context.

iii. A key characteristic of the general principles of EU law is that they function both as aids to interpretation and as grounds for judicial review.

iv. Some principles, such as transparency and the principle of non-discrimination on grounds such as sexual orientation, race, and age, have been implemented and concretized in detailed secondary legislation, and their legal status has been gradually enhanced in this way.

v. The Charter of Fundamental Rights is now formally binding after the Lisbon Treaty. The fact that it contains rights such as access to documents and freedom from discrimination, and articulates them in reasonably strong terms, reinforces the recognition of such principles by the EU Courts and in EU legislation.

[237] Cases 66, 127, and 128/79 *Salumi v Amministrazione delle Finanze* [1980] ECR 1237, [9]–[10]; Case C–50/96 *Deutsche Telekom AG v Schröder* [2000] ECR I–743, [43]; Cases C–387, 391 and 403 *Criminal proceedings against Silvio Berlusconi* [2005] ECR I–3565, [138], AG Kokott.

[238] Cases C–197 and 252/94 *Société Bautiaa v Directeur des Services Fiscaux des Landes* [1996] ECR I–505; Case 61/79 *Denkavit Italiana* [1980] ECR 1205; Case C–137/94 *R v Secretary of State for Health, ex p Richardson* [1995] ECR I–3407.

vi. The EU Courts have considerable discretion concerning the standard and intensity of review adopted. The case law reveals continuing developments in this regard, as the Union Courts re-evaluate the intensity with which they wish to apply the principles of judicial review which they have created.

DAMAGES ACTIONS AND MONEY CLAIMS

1 CENTRAL ISSUES

i. In any developed legal system there must be a mechanism whereby losses caused by governmental action may be recovered in an action brought by an individual.

ii. Compensation against the EU is governed by Article 340 TFEU[1] (ex Article 288 EC).

iii. The Article leaves the ECJ with considerable room for interpretation,[2] and directs it to consider the general principles common to the laws of the Member States.

iv. The key issue is as to the test for liability where losses are caused by EU acts that are illegal.

v. It will be seen that the ECJ has fashioned different tests for cases where the challenged act is of a discretionary nature and for those where it is not.

vi. In doing so it has drawn on its jurisprudence on state liability in damages.

2 DISCRETIONARY ACTS

Article 340 TFEU is the Treaty Article that governs damages actions against the EU. This section of the chapter considers the application of Article 340 in relation to discretionary EU acts.

> In the case of non-contractual liability, the Union shall, in accordance with the general principles common to the laws of the Member States, make good any damage caused by its institutions or by its servants in the performance of their duties.

(A) THE GENERAL TEST

The cases considered here are those where the decision-maker has a significant element of discretion. The norms challenged will normally be legislative, but an individualized norm, which contains a significant element of discretion, will also be subject to the legal test discussed below.

[1] The original Treaty Art was numbered Art 215(2) EEC, which was renumbered Art 288(2) EC after the Amsterdam Treaty.

[2] Liability cannot be founded on the primary Treaty Arts, since these do not constitute 'acts of the institutions' but are international agreements: Case T–113/96 *Edouard Dubois et Fils v Council & Commission* [1998] ECR II–125.

The norm may not have been annulled because of the restrictive interpretation of *locus standi*. The ECJ's early approach did not augur well for individuals, for it was held in *Plaumann*[3] that annulment of the norm was a necessary condition precedent to using Article 340 TFEU. If this requirement had been retained the Article would have been of little use, given the difficulty for an individual to prove *locus standi* for annulment. The necessity for annulment was, however, generally discarded in later cases, and the action for damages came to be regarded as an independent, autonomous cause of action.[4] This is clear from *Schöppenstedt*.

Case 5/71 **Aktien-Zuckerfabrik Schöppenstedt v Council** [1971] ECR 975

[Note Lisbon Treaty renumbering: Arts 40 and 215 are now Arts 40 and 340 TFEU]

The applicant claimed that Regulation 769/68, concerning the sugar market, was in breach of Article 40(3) EC because it was discriminatory in the way in which it established the pricing policy for the product.

THE ECJ

11. In the present case the non-contractual liability of the Community presupposes at the very least the unlawful nature of the act alleged to be the cause of the damage. Where legislative action involving measures of economic policy is concerned, the Community does not incur non-contractual liability for damage suffered by individuals as a consequence of that action, by virtue of the provisions contained in Article 215, second paragraph, of the Treaty, unless a sufficiently flagrant violation of a superior rule of law for the protection of the individual has occurred. For that reason the Court, in the present case, must first consider whether such a violation has occurred.

The ECJ decided that no breach of a superior rule of law could be proven on the facts. The test laid down established the general conditions for liability in this area.

(B) LEGISLATIVE AND NON-LEGISLATIVE DISCRETIONARY ACTS

The ECJ held in *Bergaderm*[5] and *Antillean Rice*[6] that the crucial factor in determining the applicability of the *Schöppenstedt* test was the degree of discretion possessed by the institution in relation to the

[3] Case 25/62 *Plaumann v Commission* [1963] ECR 95.

[4] Case 5/71 *Aktien-Zuckerfabrik Schöppenstedt v Council* [1971] ECR 975; Cases 9 and 11/71 *Compagnie d'Approvisionnement de Transport et de Crédit SA et Grands Moulins de Paris SA v Commission* [1972] ECR 391; Case T–178/98 *Fresh Marine Company SA v Commission* [2000] ECR II–3331, [45]–[50]; Cases T–3/00 and 337/04 *Athanasios Pitsiorlas v Council and European Central Bank* [2007] ECR II–4779, [281]–[284]. There may, however, be instances where the failure to proceed with an Art 263 TFEU action will have consequences for an Art 340(2) TFEU action where the individual was directly and individually concerned by the offending norm and could have successfully challenged it under Art 263 TFEU, but either failed to do so entirely or failed to do so within the period for challenge laid down in Art 263: Cases C–199 and 200/94 *Pesqueria Vasco-Montanesa SA (Pevasa) and Compania Internacional de Pesca y Derivados SA (Inpesca) v Commission* [1995] ECR I–3709; Case T–93/95 *Laga v Commission* [1998] ECR II–195; Case C–310/97 P *Commission v AssiDomän Kraft Products AB* [1999] ECR I–5363, [59]; P Mead, 'The Relationship between an Action for Damages and an Action for Annulment: The Return of *Plaumann*' in T Heukels and A McDonnell (eds), *The Action for Damages in Community Law* (Kluwer, 1997) ch 13.

[6] Case C–390/95 P *Antillean Rice Mills NV v Commission* [1999] ECR I–769, [56]–[62].

challenged measure. The general or individual nature of the measure was not a decisive criterion for identifying the limits of the discretion enjoyed by the institution.[7]

This must be correct in principle. Many administrative measures involve discretionary choices which are just as difficult as those made in the context of legislative action. The very line between the two can be difficult to draw in substantive terms. This means that the *Schöppenstedt* test can apply to individualized acts which entail a significant element of discretion. It will also apply to legislative acts which involve an element of discretionary choice by the Union authorities. Many legislative acts will have this feature, but there is no logical reason why this should be so for all acts of a legislative nature.

It was clear prior to the Lisbon Treaty that whether an act was legislative for the purposes of the *Schöppenstedt* test was dependent on the substance of the measure, and not the legal form in which it was expressed.[8] Thus an applicant in an Article 340(2) action could claim that the measure, although called a regulation, was in reality an administrative decision.[9] The converse was also true: it was possible for a measure to be a decision for some purposes, but to be a legislative act for the purposes of Article 340(2).[10] Moreover, the mere fact that an applicant had a sufficient interest for a challenge under Article 263 TFEU did not preclude a measure from being legislative for the purposes of the Article 340(2) action.[11]

It is however clear after the Lisbon Treaty that the definition of a legislative act is a matter of form: any act that is passed in accordance with a legislative procedure is a legislative act for the purposes of the Lisbon Treaty, and acts not enacted in accordance with such a procedure do not qualify as legislative acts, irrespective of their substance.[12]

(c) SUPERIOR RULE OF LAW

The case law shows that three differing types of norms can, in principle, qualify as superior rules of law for the protection of the individual.

First, many Treaty provisions fall within this category. A commonly cited ground in cases under Article 340(2) TFEU is the ban on discrimination in Article 40(2) TFEU, in the context of the Common Agricultural Policy (CAP). This is not surprising, given that many damages actions are brought pursuant to CAP regulations.[13]

A second ground of claim is that a regulation is in breach of a hierarchically superior regulation.[14] The regulations made pursuant to, for example, the CAP may relate to a prior network of regulations on the same topic. There may therefore be regulations enacted pursuant to more general regulations on the same topic.

[12] Art 289 TFEU. See Ch 4.

[13] See, eg, Case 43/72 *Merkur-Aussenhandels-GmbH v Commission* [1973] ECR 1055; Case 153/73 *Holtz und Willemsen GmbH v Commission* [1974] ECR 675.

[14] Case 74/74 *Comptoir National Technique Agricole (CNTA) SA v Commission* [1975] ECR 533.

A third ground is that the Union legislation is held to infringe general principles of law such as proportionality,[15] fundamental rights,[16] legal certainty, or legitimate expectations, although the duty to give reasons does not qualify in this respect.[17]

The ECJ does not articulate why the above might constitute superior rules of law, nor what other matters might be added to the list. The rules of the World Trade Organization (WTO) cannot, subject to limited exceptions, be relied on in this context.[18] It is often left to the Advocate General to question the wisdom of adding to the list of such rules.[19] Superior sometimes seems to be equated with 'important', and sometimes with a more formalistic conception of one rule being higher than another, as in the case of the regulation being in breach of a parent regulation. These various grounds of claim are evident in the *CNTA* case.

Case 74/74 **Comptoir National Technique Agricole (CNTA) SA v Commission** [1975] ECR 533

The applicant claimed that it had suffered loss by the withdrawal of monetary compensatory amounts (MCAs) by Regulation 189/72. The system of MCAs was designed to compensate traders for fluctuations in exchange rates. Regulation 189/72, which entered into force on 1 February 1972, abolished these MCAs in so far as they had been applicable to colza and rape seeds, because the Commission decided that the market situation had altered, thereby rendering the MCAs unnecessary. The applicant had, however, entered into contracts before the Regulation was passed, even though these contracts were to be performed after the ending of the scheme. It argued that it had made these contracts on the assumption that the MCAs would still be payable, and that it had set the price on that hypothesis. The sudden termination of the system in this area, without warning, was said by the applicant to have caused it loss. The ECJ began by citing the general principle from the *Schöppenstedt* case and then continued in the following vein.

THE ECJ

17. In this connection the applicant contends in the first place that by abolishing the compensatory amounts by Regulation 189/72 the Commission has infringed basic Regulation 974/71 of the Council.

18. That Regulation, it contends, while conferring on the Commission the power to ascertain that the conditions for the application of the compensatory amounts are met, does not allow it to take a decision withdrawing compensatory amounts once instituted and it requires in any event that the Commission's decision be taken on the basis of an assessment of solely monetary factors to the exclusion of economic factors which in this case the Commission has taken into consideration.

19. It follows from the last sentence of Article 1(2) of Regulation No 974/71 that the option for Member States to apply compensatory amounts may only be exercised where the monetary measures in question would lead to disturbances to trade in agricultural products.

[15] Case T–16/04 *Arcelor* (n 7).

[16] Cases C–120–121/06 P *FIAMM v Council and Commission* [2008] ECR I–6513, [184].

[17] Case 106/81 *Julius Kind KG v EEC* [1982] ECR 2885; Case C–119/88 *Aerpo* (n 9); Cases T–466, 469, 473, 474 and 477/93 *O'Dwyer v Council* [1996] ECR II–207; Cases T–64 and 65/01 *Afrikanische Frucht-Compagnie GmbH v Council and Commission* [2004] ECR II–521, [128].

[18] Case C–149/96 *Portugal v Council* [1999] ECR I–8395; Case T–18/99 *Cordis Obst und Gemüse Grosshandel GmbH v Commission* [2001] ECR II–913; Case T–383/00 *Beamglow Ltd v EP, Council and Commission* [2005] ECR II–5459; Cases C–120–121/06 P *FIAMM* (n 16) [111]–[112].

[19] AG Trabbuchi *CNTA* (n 14) 560–561.

20. As the application of compensatory amounts is a measure of an exceptional nature, this provision must be understood as enunciating a condition not only of the introduction but also of the maintenance of compensatory amounts for a specific product.

21. The Commission has a large measure of discretion for judging whether the monetary measure concerned might lead to disturbances to trade in the product in question.

22. In order to judge the risk of such disturbances, it is permissible for the Commission to take into account market conditions as well as monetary factors.

23. It has not been established that the Commission exceeded the limits of its power thus defined when it considered towards the end of January 1972 that the situation on the market in colza and rape seeds was such that the application of compensatory amounts for those products was no longer necessary.

[*The ECJ then considered whether the withdrawal of the compensatory amounts violated certain general principles of law. It held that Regulation 189/72 was not retroactive, as had been claimed by the applicants. The Court then considered whether this withdrawal had violated the principle of legitimate expectations. It held that the object of the regime for the fixing of refunds in advance on export orders could not be regarded as tantamount to a guarantee for traders against the risk of movements in exchange rates. It continued as follows:*]

41. Nevertheless the application of the compensatory amounts in practice avoids the exchange risk, so that a trader, even a prudent one, might be induced to omit to cover himself against such a risk.

42. In these circumstances, a trader may legitimately expect that for transactions irrevocably undertaken by him because he has obtained, subject to a deposit, export licences fixing the amount of the refund in advance, no unforeseeable alteration will occur which could have the effect of causing him inevitable loss, by re-exposing him to the exchange risk.

43. The Community is therefore liable if, in the absence of an overriding matter of public interest, the Commission abolished with immediate effect and without warning the application of compensatory amounts in a specific sector without adopting transitional measures which would at least permit traders either to avoid the loss which would have been suffered in the performance of export contracts, the existence and irrevocability of which are established by the advance fixing of the refunds, or to be compensated for such loss.

44. In the absence of an overriding matter of public interest, the Commission has violated a superior rule of law, thus rendering the Community liable, by failing to include in Regulation 189/72 transitional measures for the protection of the confidence which a trader might legitimately have had in the Community rules.

The ECJ stated, however, that the Community was not liable to pay the full cost of the MCAs that would have applied to the transactions, but rather that the extent of the applicant's legitimate expectation was merely that of not suffering loss by reason of the withdrawal of the MCAs. In later proceedings it was held that the applicant had not in fact suffered such losses.[20]

(D) FLAGRANT VIOLATION/SERIOUS BREACH

It is evident from *Schöppenstedt* that the individual must prove not only breach of a superior rule of law for the protection of the individual, but also that the breach was flagrant. This term was restrictively construed in the early case law, such that it was difficult for the applicant to succeed in a damages action. The result of *Bayerische HNL*[21] and *Amylum*[22] was that an applicant had to show that the

effects of the breach were serious, in terms of the quantum of loss suffered, and also that the *manner* of the breach was arbitrary. These hurdles were not easy to surmount, particularly the second. Claimants did however occasionally win.[23]

More recent cases have taken a less restrictive interpretation of the term flagrant violation. *Bergaderm* is now the leading modern authority. In *Brasserie du Pêcheur*,[24] the ECJ stated that the test for state liability in damages should not be different from that of the Union under Article 340(2) TFEU.[25] The ECJ's interpretation of the term 'serious breach' in *Brasserie du Pêcheur* therefore shaped the Article 340(2) jurisprudence. This was confirmed by *Bergaderm*, where the ECJ completed the circle by explicitly drawing on the factors mentioned in *Brasserie du Pêcheur* to determine the meaning of flagrant violation for the purposes of liability under Article 340(2).[26]

Case C–352/98 P **Laboratoires Pharmaceutiques Bergaderm SA and Goupil v Commission**
[2000] ECR I–5291

[Note Lisbon Treaty renumbering: Art 215 is now Art 340 TFEU]

This was an appeal from the CFI to the ECJ. The applicant sought damages for losses suffered by the passage of a directive which prohibited the use of certain substances in cosmetics. It claimed, *inter alia*, that the Directive should be regarded as an administrative act, since it only concerned the applicant, the consequence being that illegality *per se* would suffice for liability, rather than having to prove a sufficiently serious breach.

THE ECJ

40. The system of rules which the Court has worked out with regard to [Article 215] takes into account, *inter alia*, the complexity of situations to be regulated, difficulties in the application or interpretation of the texts and, more particularly, the margin of discretion available to the author of the act in question (*Brasserie du Pêcheur*, para. 43).

41. The Court has stated that the conditions under which the State may incur liability for damage caused to individuals by a breach of Community law cannot, in the absence of particular justification, differ from those governing the liability of the Community in like circumstances. The protection of the rights which individuals derive from Community law cannot vary depending on whether a national authority or a Community authority is responsible for the damage (*Brasserie du Pêcheur*, para. 42).

42. As regards Member State liability for damage caused to individuals, the Court has held that Community law confers a right to reparation where three conditions are met: the rule of law infringed must be intended to confer rights on individuals; the breach must be sufficiently serious; and there must be a direct causal link between the breach of the obligation resting on the State and the damage sustained by the injured parties (*Brasserie du Pêcheur*, para. 51).

43. As to the second condition, as regards both Community liability under Article 215 . . . and Member State liability for breaches of Community law, the decisive test for finding that a breach of Community law is sufficiently serious is whether the Member State or the Community institution concerned manifestly and gravely disregarded the limits on its discretion (*Brasserie du Pêcheur*, para. 55 . . .).

[23] Cases 64, 113/76, 167, 239/78, 27, 28 and 45/79 *Dumortier Frères SA v Council* [1979] ECR 3091.

[24] Cases C–46 and 48/93 *Brasserie du Pêcheur SA v Germany*; *R v Secretary of State for Transport, ex p Factortame Ltd* [1996] ECR I–1029.

[25] Ch 8.

[26] T Tridimas, 'Liability for Breach of Community Law: Growing Up and Mellowing Down?' (2001) 38 CMLRev 301.

> 44. Where the Member State or the institution in question has only considerably reduced, or even no discretion, the mere infringement of Community law may be sufficient to establish the existence of a sufficiently serious breach (*Hedley Lomas*, para. 28).
>
> 45. It is therefore necessary to examine whether . . . the Court of First Instance erred in law in its examination of the way in which the Commission exercised its discretion when it adopted the Adaptation Directive.
>
> 46. In that regard, the Court finds that the general or individual nature of a measure taken by an institution is not a decisive criterion for identifying the limits of the discretion enjoyed by the institution in question.
>
> 47. It follows that the first ground of the appeal, which is based exclusively on the categorisation of the Adaptation Directive as an individual measure, has in any event no bearing on the issue and must be rejected.

The change brought about by *Bergaderm* is to be welcomed. It means that under Article 340(2) the seriousness of the breach will be dependent upon factors such as: the relative clarity of the rule which has been breached; the measure of discretion left to the relevant authorities; whether the error of law was excusable or not; and whether the breach was intentional or voluntary. It is not necessary for a claimant to show arbitrariness as a pre-condition of liability.[27] Nor will the possibility of a large number of claimants preclude an Article 340(2) action.[28] The nature of the discretion residing with the EU will inevitably impact on the success of any damages action: the broader and more complex the discretion, the more difficult will it be for the claimant to show the serious breach. This is apparent from recent case law.

Thus in *Arcelor*[29] the claimant sought damages for loss caused by a directive concerned with greenhouse gas emissions. The CFI reiterated the test from *Bergaderm* and held that it was for the claimant to show the serious breach. This required it to show a manifest and serious failure to have regard for the limits of the broad discretion enjoyed by the Union legislature when exercising its environmental powers. The CFI emphasized the breadth of the EC's discretionary power in this area, stating that it required the Union legislature to evaluate 'ecological, scientific, technical and economic changes of a complex and uncertain nature' and to balance 'the various objectives, principles and interests set out in Article 174 EC'.[30]

The same point is evident in *My Travel*,[31] which concerned EU competition law. The CFI held that the concept of a serious breach to establish non-contractual liability did not comprise all errors, even if of some gravity, in the application of competition rules, which were 'complex, delicate and subject to a considerable degree of discretion'.[32] Thus the mere fact that the CFI had annulled a Commission decision holding a concentration incompatible with the common market could not be equated to the finding of a sufficiently serious breach. Mere errors of assessment in the context of an annulment action could not suffice to show a manifest and grave infringement of the limits imposed on the Commission's discretion for the purposes of non-contractual liability, since this would inhibit the Commission as a regulator of competition.[33] The CFI emphasized the complex evaluative assessments that had to be made by the Commission in this area, and the discretion it possessed as to how to determine whether a concentration was in breach of the relevant EU legal rules.[34]

(E) ASSESSMENT

The initial question is whether there are valid reasons for limiting liability under Article 340(2). Views on this will undoubtedly differ, but we believe that there are good arguments for doing so. Many of the major cases arise out of the CAP, under which the EU has to make difficult discretionary choices of a legislative nature, balancing the conflicting variables identified in Article 39 TFEU. A finding of illegality *per se* should not suffice as the basis for a damages action. Such a strict standard of liability would render the decision-makers susceptible to a potentially wide liability, and would run the risk that the Court might be 'second-guessing' the Council and Commission as to how the variables in Article 39 should be balanced.[35] Analogous considerations have influenced UK courts in similar types of case.[36] It would be feasible to regard illegality *per se* as the appropriate test under Article 340(2) if such illegality were to be taken as proven only where the conduct of the Union institutions was particularly flagrant. Such a test would however incorporate an element of serious breach into the definition of illegality.[37]

If this is accepted the crucial issue is how to interpret the phrase 'flagrant violation' or 'serious breach'. In the past this was interpreted too restrictively to require something akin to arbitrary action. The approach in *Brasserie du Pêcheur* and *Bergaderm* is more nuanced, and is to be welcomed. The existence of such a serious breach requires attention to the very factors identified in those cases. The mere fact that the general aim being pursued by the EU is legitimate should not serve to shield it from liability, if it can be shown that there was a serious breach in the manner of attaining this end, when judged by the *Brasserie du Pêcheur* criteria.

Where loss has been caused by sufficiently serious illegal action the applicant should not have to prove that the loss was particularly serious. The applicant will have to show that the illegality *caused* the loss, but there should be no requirement over and above this.[38] The ordinary 'economics of litigation' should ensure that claims are, in general, pursued only when it is economically worthwhile to do so.

(F) SUMMARY

i. For an applicant to succeed it is necessary to show that there has been a violation of a superior rule of law for the protection of individuals, that it was manifest and grave, or sufficiently serious, and that it caused the damage.

ii. The key criterion as to whether it is necessary to show that the breach was sufficiently serious is the margin of discretion accorded to the author of the act. Where such discretion exists it will be necessary for the applicant to prove a serious breach. This is so irrespective of whether the measure is general/legislative or individual/administrative in nature.

iii. The factors mentioned in *Brasserie du Pêcheur* and *Bergaderm* which determine whether the breach was sufficiently serious will be determinative in the Article 340(2) case law.

iv. The applicant should not have to show that the loss suffered was serious. It is not part of the *Brasserie du Pêcheur* test, and should not, as a matter of principle, be required.

v. It is no longer fatal to a claim that there are a large number of potential applicants.

3 NON-DISCRETIONARY ACTS

(A) THE GENERAL PRINCIPLE: ILLEGALITY, CAUSATION, DAMAGE

The discussion thus far has focused on liability in damages for legislative and non-legislative acts which involve an element of discretion. The test that applies to liability for non-discretionary acts has been subtly altered.

The traditional approach was that where an act did not entail any meaningful discretionary choice then it would normally suffice to show illegality, causation, and damage.[39] Successful claims were relatively rare. The more recent jurisprudence continues to distinguish between discretionary and non-discretionary acts, but does so within the framework of the sufficiently serious breach test. The modern formulation in *Bergaderm* is that the applicant must prove that the rule of law infringed was intended to confer rights on individuals, there must be a sufficiently serious breach, and a causal link between the breach and the resultant harm. Where however the EU institution has considerably reduced or no discretion, the mere infringement of EU law *may* be sufficient to establish the existence of the sufficiently serious breach.[40]

(B) APPLICATION OF THE GENERAL PRINCIPLE

The Court will inevitably have to decide whether there is discretion such that the applicant must satisfy the sufficiently serious breach test, or whether in the absence of discretion the mere infringement of EU law may suffice for liability.[41]

Case C–390/95 P **Antillean Rice Mills NV v Commission** [1999] ECR I–769

The applicants challenged, *inter alia*, aspects of the basic Council Decision which governed the relationship between the overseas countries and territories (OCTs) and the EC. They also challenged a Commission Decision which introduced safeguard measures for rice originating in the Dutch Antilles for breach of the Council Decision. The CFI dismissed most of the claim. On appeal to the ECJ the applicants argued, *inter alia*, that the CFI was wrong to have required proof of a sufficiently serious breach, since the contested measures were decisions.

THE ECJ

57. It must be noted, first, that it is settled case-law that in a legislative context involving the exercise of a wide discretion, the Community cannot incur liability unless the institution concerned has manifestly and gravely disregarded the limits on the exercise of its powers. . . .

58. Second, . . . the CFI proceeded on the basis that the Commission enjoyed a wide discretion in the field of economic policy, which means that the stricter criterion of liability must be applied, namely the requirements of a sufficiently serious breach of a superior rule of law for the protection of the individual.

59. It follows that the CFI correctly applied the stricter criterion of liability.

60. The fact that the contested measure is in the form of a decision, and hence in principle capable of being the subject of an action for annulment, is not sufficient to preclude its being legislative in character. In the context of an action for damages, that character depends on the nature of the measure in question, not its form.

. . .

62. . . . [I]t must be stated that the fact they are individually concerned has no effect on the character of the measure in the context of an action for damages, since that action is an independent remedy. . . .

(c) THE MEANING OF ILLEGALITY

It is also important to address the meaning of 'illegality' in this context. In one sense any infringement of law can constitute illegality.[42] It is therefore possible to list types of error which *might* lead to liability, including: failure to gather the facts before reaching a decision, taking a decision based on irrelevant factors, failure to accord appropriate procedural rights, and inadequate supervision of bodies to which power has been delegated. The mere proof of such an error will not, however, always ensure success in a damages action. It is open to a court to construe illegality narrowly, or to define it so as to preclude liability unless there has been some error, or something equivalent thereto. The point is exemplified by the following cases.

Cases 19, 20, 25 and 30/69 **Denise Richez-Parise and Others v Commission** [1970] ECR 325

The applicants were Community officials who had been given incorrect information concerning their pensions. This information was supplied as a consequence of a request by the Commission to the officials concerned that they should contact the relevant department to obtain information concerning their financial provisions on termination of employment. The information given was based on an interpretation of the relevant regulation which was believed correct at that time. The department which gave the information later had reason to believe that its interpretation of the regulation was incorrect, but no immediate steps were taken to inform the applicants of this. This was done only later, by which time the applicants had already committed themselves as to the way in which they would take their pension entitlements. The applicants sought compensation for their losses.

[42] Case T–79/96 *Camar Srl* (n 39) [205].

THE ECJ

36. Apart from the exceptional instance, the adoption of an incorrect interpretation does not constitute in itself a wrongful act.

37. Even the fact that the authorities request those concerned to obtain information from the competent departments does not necessarily involve those authorities in an obligation to guarantee the correctness of the information supplied and does not therefore make them liable for any injury which may be occasioned by incorrect information.

38. However, whilst it may be possible to doubt the existence of a wrongful act concerning the supply of incorrect information, the same cannot be said of the department's delay in rectifying the information.

39. Although such rectification was possible as early as April 1968 it was deferred without any justification until the end of 1968.

...

41. A correction made shortly before or after 16 April, that is to say, before the time when those concerned had to make their decision, would have certainly enabled the defendant to avoid all liability for the consequences of the wrong information. The failure to make such a correction is, on the other hand, a matter of such a nature as to render the Communities liable.

Thus in *Richez-Parise* the ECJ construed illegality for the purposes of damages liability so as to exclude a mere incorrect interpretation of a regulation. Such regulations are often complex, and are open to more than one construction. To render the EU liable in damages whenever such a construction proved to be incorrect would open the EU to strict liability, where the only condition for recovery would be proof that the interpretation was incorrect, even if it was plausible and the decision-maker had taken due care.[43]

The ability to shape illegality for the purposes of damages liability is also apparent in other cases.[44] In *Fresh Marine*[45] the applicant sought damages because the Commission had erroneously decided that the company was in breach of an undertaking it had given in relation to the dumping of salmon. The CFI held that it was not necessary for the applicant to prove a sufficiently serious breach, since the alleged error did not involve complex discretionary choices. A mere infringement of EC law would suffice. However it then defined the relevant error leading to illegality to be the lack of ordinary care and diligence by the Commission, and took account of the applicant's contributory negligence.[46]

(D) SUMMARY

i. The traditional test for liability for non-discretionary acts was proof of illegality, causation, and damage. The more modern case law continues to distinguish between liability for discretionary and non-discretionary acts, but does so from within the framework of the sufficiently serious breach test: where the Union institution has considerably reduced or no discretion, the mere infringement of EU law *may* be sufficient to establish the existence of the sufficiently serious breach.

ii. The General Court and ECJ will necessarily have to make a judgment as to whether an act, general or individual, falls to be judged by this test, rather than the test discussed in the previous section.

iii. The General Court and ECJ will also have to decide what constitutes illegality for the purposes of liability for non-discretionary acts.

4 OFFICIAL ACTS OF UNION SERVANTS

Article 340 TFEU allows for loss to be claimed where it has been caused either by the EU institutions or by the acts of its servants 'in the performance of their duties'. Not every act performed by a servant will be deemed to be an act in the performance of his or her duties. The matter is rendered more complex by the fact that Article 12 of the Protocol on the Privileges and Immunities of the European Communities stated that 'officials and other servants of the Community shall…be immune from legal proceedings in respect of acts performed by them in their official capacity'.[47]

Case 9/69 **Sayag v Leduc**
[1969] ECR 329

Sayag was an engineer employed by Euratom. He was instructed to take Leduc, a representative of a private firm, on a visit to certain installations. He drove him there in his own car, and obtained a travel order which enabled him to claim the expenses for the trip from the Community. An accident occurred and Leduc claimed in the Belgian courts damages against Sayag for the injuries which he had suffered. It was argued that Sayag was driving the car in the performance of his duties, and that therefore the action should have been brought against the Community. Article 188(2) of the Euratom Treaty was equivalent to 340(2) TFEU.

THE ECJ

By referring at one and the same time to damage caused by the institutions and to that caused by the servants of the Community, Article 188 indicates that the Community is only liable for those acts of its servants which, by virtue of an internal and direct relationship, are the necessary extension of the tasks entrusted to the institutions.

In the light of the special nature of this legal system, it would not therefore be lawful to extend it to categories of acts other than those referred to above.

A servant's use of his private car for transport during the course of his duties does not satisfy the conditions set out above.

A reference to a servant's private car in a travel order does not bring the driving of such car within the performance of his duties, but is basically intended to enable any necessary reimbursement of the travel expenses involved in this means of transport to be made in accordance with the standards laid down for this purpose.

Only in the rare case of *force majeure*, or in exceptional circumstances of such overriding importance that without the servant's using private means of transport the Community would have been unable to carry out the tasks entrusted to it, could such use be considered to form part of the servant's performance of his duties, within the meaning of the second paragraph of Article 188 of the Treaty.

It follows from the above that the driving of a private car by a servant cannot in principle constitute the performance of his duties within the meaning of the second paragraph of Article 188 of the EAEC Treaty.

The range of acts done by its servants for which the EU will accept responsibility is therefore narrow,[48] and more limited than that in most Member States. No real justification for the limited nature of this liability is provided by the ECJ. If the EU is not liable then an action can be brought

[47] See now, Protocol (No 7) On the Privileges and Immunities of the European Union, Art 11.
[48] Case T–124/04 *Jamal Ouariachi v Commission* [2005] ECR II–4653.

against the servant in his or her personal capacity, and any such action is brought in national courts and is governed by national law.

However, the Protocol on the Privileges and Immunities of the European Union provides that servants have immunity from suit in national courts in relation to 'acts performed by them in their official capacity'. This language differs from Article 340(2), which speaks in terms of servants acting in 'performance of their duties'. Normally one would expect that where the EU is liable under Article 340(2) because the servant was acting in the performance of his or her duties, then the servant would not be personally liable, since he or she would be acting in an official capacity.

The interrelationship between these two provisions may, none the less, be more problematic, and the ECJ has held that the servant's personal immunity and the scope of the EU's liability for the acts of the servant are separate issues.[49] There is however much to be said for the view of Schermers and Swaak that acts of servants in the performance of their duties (leading to EU liability) include, but are not limited to, acts performed by them in their official capacity (leading to the servants' immunity).[50]

It has been assumed thus far that the EU will be liable for the acts of its institutions, and for the acts of its servants, subject to the limitations of the *Sayag* case. Where the EU establishes agencies it is common for the regulation establishing the agency to contain a provision equivalent to Article 340(2).[51] The EU may well be responsible even in the absence of such an express provision where it has delegated functions to an EU body, since the acts of that body, at least those of a governmental nature, will be imputed to the EU.[52]

5 VALID LEGISLATIVE ACTS

(A) THE NATURE OF THE PROBLEM

Individuals may well suffer loss flowing from lawful EU acts, as well as from those tainted with some illegality. This problem can occur in any legal system, but the potential for its occurrence in the EU is particularly marked.

HJ Bronkhorst, The Valid Legislative Act as a Cause of Liability of the Communities[53]

There are many reasons why private individuals may have a particular interest in the existence of a clearly defined principle concerning Community liability for legal acts which result in damage for them . . . Does a fisherman, who, on very short notice, has to make very important changes to his vessel, thus incurring substantial financial costs, have an action for compensation even if the Community measures as such cannot be challenged on the ground of illegality?

[P]rivate individuals, operating in the field of the Common Agricultural Policy, may easily suffer financial injury because of the fact that competing producers are favoured by Community measures. Producers of vegetable fats may very well undergo the effects of (uneven) competition if producers of butter or milk powder are able to dispose of large quantities of their products on the European markets with the help of Community subsidies.

[49] Case 5/68 *Sayag v Leduc* [1968] ECR 395, 408.

[50] HG Schermers and RA Swaak, 'Official Acts of Community Servants and Article 215(4)' in Heukels and McDonnell (n 4) 177.

[51] P Craig, *EU Administrative Law* (Oxford University Press, 2006) ch 5.

[52] Case 18/60 *Worms v High Authority* [1962] ECR 195.

[53] Heukels and McDonnell (n 4) 153–154.

The problem of loss being caused by lawful governmental action is not peculiar to the EU. Thus, French law recognizes a principle of *égalité devant les charges publiques*, and German law has the concept of *Sonderöpfer*, whereby loss caused by lawful governmental action can be recovered, albeit in limited circumstances.[54] While there is hardship for individuals in the situations postulated by Bronkhorst, the difficulties of deciding when to grant such compensation should not be underestimated.

PP Craig, Compensation in Public Law[55]

Legislation is constantly being passed which is explicitly or implicitly aimed at benefiting one section of the population at the expense of another. It is a matter of conscious legislative policy. This may be in the form of tax changes or in a decision to grant selective assistance to one particular type of industry rather than another. Any incorporation of state liability arising out of legislation as part of a risk theory would necessitate the drawing of a difficult line. It would be between cases where the deleterious effect on a firm or group was the aim of the legislation or a necessary correlative of it, and where legislation is passed which incidentally affects a particular firm in a serious manner, but where there is no legislative objection to compensating the firm for the loss suffered.

The drawing of such a line in the context of the EU is particularly problematic, given that within, for example, the CAP there will often be 'winners and losers' as the result of attempts to give effect to the conflicting objectives of that policy.

(B) THE CASE LAW

Claims to recover for lawfully caused loss have been advanced on a number of occasions, and have been rejected.[56] The leading case is now *Dorsch Consult*.[57]

Case T–184/95 **Dorsch Consult Ingenieurgesellschaft mbH v Council** [1998] ECR II–667

The case arose out of the Gulf war. The EC, acting pursuant to a resolution of the United Nations Security Council, passed a regulation banning trade with Iraq. The Iraqi government retaliated with a law which froze all assets and rights of companies doing business in Iraq, where those companies were based in countries that had imposed the embargo. The applicant was such a company. It argued that it should be compensated by the EC for the loss it had incurred, even if the EC had acted lawfully.

THE CFI

59. At the outset, the Court would point out that if the Community is to incur non-contractual liability as the result of a lawful or unlawful act, it is necessary in any event to prove that the alleged damage is real and the existence of a causal link between that act and the alleged damage. . . .

[54] Ibid 155–159.

[55] (1980) 96 LQR 413, 450.

[56] Cases 9 and 11/71 *Compagnie d'Approvisionnement de Transport et de Crédit SA and Grands Moulins de Paris SA v Commission* [1972] ECR 391, [45]; Cases 54–60/76 *Compagnie Industrielle et Agricole du Comté de Loheac v Council and Commission* [1977] ECR 645, [19]; Case 59/83 *SA Biovilac NV v EEC* [1984] ECR 4057, 4080–4081; Case 265/85 *Van den Bergh & Jurgens BV and Van Dijk Food Products (Lopik) BV v EEC* [1987] ECR 1155; Case 81/86 *De Boer Buizen v Council and Commission* [1987] ECR 3677.

[57] Case T–383/00 *Beamglow* (n 18).

...

80. It is clear from the ... case law of the Court of Justice that, in the event of the principle of Community liability for a lawful act being recognised in Community law, such liability can be incurred only if the damage alleged, if deemed to constitute a 'still subsisting injury', affects a particular circle of economic operators in a disproportionate manner in comparison with others (unusual damage) and exceeds the economic risks inherent in operating in the sector concerned (special damage), without the legislative measure that gave rise to the alleged damage being justified by a general economic interest (*De Boer Buizen, Compagnie d'Approvisionnement, Biovilac*).

81. As regards the unusual nature of the alleged damage ... [N]ot only the applicant's claims ... were affected but also those of all Community undertakings which ... had not yet been paid. ...

82. ... It cannot therefore claim to have suffered special damage or to have made exceptional sacrifice. ...

83. ... It is common ground that Iraq ... was already regarded ... as a 'high risk country'. In those circumstances, the economic and commercial risks deriving from the possible involvement of Iraq in renewed warfare ... and the suspension of payment of its debts ... constituted foreseeable risks inherent in any provision of services in Iraq. ...

...

85. It follows that the risks involved in the applicant's providing services in Iraq formed part of the risks inherent in operating in the sector concerned.

It should not be assumed from the preceding case that EU law recognizes a principle for recovery of losses caused by lawful activity. The CFI's judgment in paragraph 80 is framed conditionally: if such liability were to exist then the conditions listed would have to be satisfied. This was stressed on the appeal to the ECJ.[58] It has been emphasized again more recently in *FIAMM*,[59] where the ECJ was even more wary about admitting the existence of any such principle of liability in EU law. It reiterated that no such principle yet existed in EU law and that if it did it would be subject to the stringent conditions set out above. The ECJ noted moreover that there was no consensus in the laws of the Member States as to whether liability for lawful acts of a legislative nature existed.[60]

6 CAUSATION AND DAMAGE

(A) CAUSATION

AG Toth, The Concepts of Damage and Causality as Elements of Non-Contractual Liability[61]

[T]he establishment of the necessary causality may give rise to difficult problems in practice. This is particularly so in the field of economic and commercial relations where the cause of an event can usually be traced back to a number of factors, objective as well as subjective, operating simultaneously or successively and producing direct as well as indirect effects. Broadly speaking, it may be said that there is no causality involving liability where the same result would have occurred in the same way even in the absence of the wrongful Community act or omission in question. The converse proposition, i.e., that the requisite causality exists whenever it can be shown that the damage would not have

[58] Case C–237/98 P *Dorsch Consult Ingenieurgesellschaft mbH v Council* [2000] ECR I–4549, [19].
[59] Cases C–120–121/06 P *FIAMM* (n 16) [164]–[176].
[60] Ibid [175].
[61] Heukels and McDonnell (n 4) 192.

occurred without the Community action, is, however not always correct. Although in theory it is true that any circumstance, near or remote, without which an injury would not have been produced may be considered to be its cause, the fact that a Community act or omission is one only of several such circumstances may not in itself be sufficient to establish a causal connection entailing non-contractual liability. For that purpose, the causality must be 'direct, immediate and exclusive' which it can be only if the damage arises directly from the conduct of the institutions and does not depend on the intervention of other causes, whether positive or negative.

The difficulties of proving that it was the EU's action that caused the loss can be exemplified by *Dumortier*.[62]

Cases 64, 113/76, 167, 239/78, 27, 28 and 45/79 **Dumortier Frères SA v Council** [1979] ECR 3091

Council regulations provided that production refunds should be payable for maize starch, but that they should be abolished in the case of maize groats and meal (gritz), which were used in the production of beer. This differential treatment had been held to be in breach of what are now Articles 39 and 40 TFEU,[63] and the applicants claimed damages. The subsidies had been restored in the light of the ECJ's decision, but only for the future, and therefore losses had still been suffered in the intervening period. The Court found that there had been a manifest and grave breach by the Community. Some of the applicants claimed that they should be compensated because they were forced to close their factories.

THE ECJ

21. [T]he Council argued that the origin of the difficulties experienced by those undertakings is to be found in the circumstances peculiar to each of them, such as the obsolescence of their plant and managerial or financial problems. The data supplied by the parties in the course of the proceedings are not such as to establish the true cause of the further damage alleged. However, it is sufficient to state that even if it were assumed that the abolition of the refunds exacerbated the difficulties encountered by those applicants, those difficulties would not be a sufficiently direct consequence of the unlawful conduct of the Council to render the Community liable to make good the damage.

The applicant must show not only that EU action caused the loss, but also that the chain of causation has not been broken by the Member State or the applicant. The ECJ has held that where the loss arises from an independent/autonomous act by the Member State, the EU is no longer liable.[64] If, however, this conduct has been made possible by an illegal failure of the Commission to exercise its supervisory powers, then this failure will be considered to be the cause of the damage.[65] There may be instances where both the Union and the Member State are responsible. This complex issue will be considered below.

[62] See also Case T–193/04 *Tillack v Commission* [2006] ECR II–3995; Case T–304/01 *Perez v Council* [2006] ECR II–4857; Case T–42/06 *Bruno Gollnisch v European Parliament*, 19 Mar 2010, [110].

It is not entirely clear what conduct by the individual will break the chain of causation. Negligence, or contributory negligence, will suffice either to defeat the claim or to reduce the award of damages.[66] It has also been held that if the individual ought to have foreseen the possibility of certain events which might cause loss, then the damages claim will be diminished or lost.[67] Moreover, an individual who believes that a wrongful act of the EU caused loss has been encouraged by the Court to challenge the measure through Article 267 TFEU.[68]

(B) DAMAGE

The general objective when awarding compensation for loss in the context of non-contractual liability is to place the victim in the situation that would have pertained if the wrong had not been committed.[69] Although Article 340(2) speaks of the duty of the EU to make good 'any damage', losses will be recoverable only if they are certain and specific, proven and quantifiable.[70]

While the damage claimed must in general be *certain*, the Court held in *Kampffmeyer* that it is possible to maintain an action 'for imminent damage foreseeable with sufficient certainty even if the damage cannot yet be precisely assessed'.[71] The rationale was that it might be necessary to pursue an action immediately in order to prevent even greater damage.

The idea that the damage suffered must be *specific*, in the sense that it affects the applicant's interests in a special and individual way, is to be found in various guises in ECJ decisions. Thus in *Bayerische HNL* the Court emphasized that the effects of the regulation did not exceed the bounds of economic risk inherent in the activity in question.[72] Similar themes concerning the special nature of the burden imposed on a particular trader can be found in the case law concerning possible recovery for lawful governmental action.[73] The question whether an applicant should have to prove abnormal or special damage in a case concerning unlawful Union action has already been discussed.

The injured party will have the onus of *proving* that the damage occurred. In general the individual will have to show that the injury was actually sustained.[74] This may not be easy, and it is not uncommon for cases to fail for this reason.[75]

The damage must also be *quantifiable* if the applicant is to succeed. In order to decide whether the loss is quantifiable, one needs to know what *types* of damage are recoverable. Advocate General Capotorti put the matter as follows:[76]

> It is well known that the legal concept of 'damage' covers both a material loss *stricto sensu*, that is to say, a reduction in a person's assets, and also the loss of an increase in those assets which would have occurred if the harmful act had not taken place (these two alternatives are known respectively as *damnum emergens* and *lucrum cessans*).... The object of compensation is to restore the assets

> of the victim to the condition in which they would have been apart from the unlawful act, or at least to the condition closest to that which would have been produced if the unlawful nature of the act had not taken place: the hypothetical nature of that restoration often entails a certain degree of approximation. . . . These general remarks are not limited to the field of private law, but apply also to the liability of public authorities, and more especially to the non-contractual liability of the Community.

The ECJ will grant damages for losses actually sustained and will exceptionally award for non-material damage.[77] It is willing in principle to give damages for lost profits, but is reluctant to do so. Thus, in *Kampffmeyer*, while the Court admitted that lost profit was recoverable, it did not grant such damages to traders who had abandoned their intended transactions because of the unlawful act of the Community, even though these transactions would have produced profits.[78] In *CNTA* it was held that lost profits were not recoverable where the claim was based on the concept of legitimate expectations, since that concept only served to ensure that losses were not suffered owing to an unexpected change in the legal position; it did not serve to ensure that profits would be made.[79] However, in *Mulder*[80] the ECJ was prepared to compensate for lost profit, although it held that any such sum must take into account the income which could have been earned from alternative activities, applying the principle that there is a duty to mitigate loss.

In quantifying the applicant's loss the EU institutions have argued that damages should not be recoverable if the loss has been passed on to the consumers. This was accepted in principle by the ECJ in the *Quellmehl and Gritz* litigation.[81] Toth has justly criticized this reasoning. He points out that whether a firm could pass on a cost increase to consumers would depend upon many variables, which might operate differently for different firms, and which would be difficult to assess. He argues, moreover, that such an idea is wrong in principle, since it would mean that losses would be borne by consumers, rather than by the institutions which had committed the wrongful act.[82]

7 JOINT LIABILITY OF THE EU AND MEMBER STATES

The joint liability of the Union and the Member States gives rise to complex problems which can be dealt with only in outline.[83] The approach of Oliver, which distinguishes between procedural and substantive issues, will be adopted here.[84]

(A) PROCEDURAL ISSUES

In procedural terms it is not possible for Union non-contractual liability to be decided by national courts. Article 268 TFEU confers this jurisdiction on the ECJ and, while it does not state that this

[77] Case T–84/98 *C v Council* [2000] ECR IA–113, [98]–[103]; Case T–307/01 *Jean-Paul François v Commission* [2004] ECR II–1669, [107]–[111]; Case T–48/01 *François Vainker and Brenda Vainker v European Parliament* [2004] ECR II–197, [180]; Case T–309/03 *Grau v Commission* [2006] ECR II–1173.

[84] P Oliver, 'Joint Liability of the Community and the Member States' in Heukels and McDonnell (n 4) ch 16.

jurisdiction is exclusive, this is implied by Article 274 TFEU.[85] Conversely, it is not possible for an individual to bring a direct action against a Member State before the ECJ, since there is no provision for this in the Treaty.

When an action is brought before the ECJ under Article 340(2), EU law is applied. An action brought against a Member State in the national court will be governed by national law. This will, however, include EU law. The national courts are under an obligation to provide an effective remedy for the enforcement of directly effective EU provisions; and the rights against the state in such actions must be no less favourable than those which exist in domestic matters.[86]

(B) SUBSTANTIVE ISSUES

Joint liability of the Union and the Member States can arise in different situations, two of which will be explored here.

The *first is where the Union has taken inadequate steps to prevent a breach of Union law by national authorities*. This issue arose in *Lütticke* where the Court appeared to accept that, in principle, such an action was possible.[87] However, there are considerable obstacles with any such action. It is doubtful whether the Commission has a duty to bring an action under Article 258 TFEU against a Member State which is in breach of EU law.[88] The position may well be different where the Commission has adopted a more formal measure, which approves of the illegal national action, as in *Kampffmeyer*.

Cases 5, 7 and 13–24/66 **Kampffmeyer v. Commission** [1967] ECR 245

The case arose from the gradual establishment of a common market in cereals. On 1 October 1963 the German intervention board issued a notice stating that the levy for the import of such products would be zero. On that same day, the applicants applied for import licences for the import of maize from France, with the levy having been set at zero for January 1964. Some of the applicants had actually bought maize from France. The German government on the same day, 1 October 1963, then suspended the zero-rated import licences for maize. Under Article 22 of Regulation 19 the German Government could refuse such applications only if there was a threat of a serious disturbance to the market in question. Such a decision had to be confirmed by the Commission, and the Commission on 3 October duly authorized this to remain in force until 4 October. This decision was annulled by the ECJ.[89] The applicants then sought compensation from the Commission. Some of them had paid the duties imposed by the German authorities and imported the maize on these terms; others had repudiated their contracts to buy the maize, after the German Government had refused to issue the zero-rated licences. These are the two categories of applicants referred to by the ECJ in the following extract.

THE ECJ

However, with regard to any injury suffered by the applicants belonging to the first and second categories above-mentioned, those applicants have informed the Court that the injury alleged is the

[85] Art 274 TFEU: 'save where jurisdiction is conferred on the Court of Justice of the European Union by the Treaties, disputes to which the Union is a party shall not on that ground be excluded from the jurisdiction of the courts or tribunals of the Member States': Cases 106–120/87 *Asteris v Greece and EEC* [1988] ECR 5515; Case T–18/99 *Cordis* (n 18) [27].

[87] Case 4/69 *Alfons Lütticke GmbH v Commission* [1971] ECR 325.

[88] Ch 12.

[89] Cases 106 and 107/63 *Toepfer v Commission* [1965] ECR 405.

subject of two actions for damages, one against the Federal Republic of Germany before a German court and the other against the Community before the Court of Justice. It is necessary to avoid the applicants' being insufficiently or excessively compensated for the same damage by the different assessment of two different courts applying different rules of law. Before determining the damage for which the Community should be held liable, it is necessary for the national court to have the opportunity to give judgment on any liability on the part of the Federal Republic of Germany. This being the case, final judgment cannot be given before the applicants have produced the decision of the national court on this matter, which may be done independently of the evidence asked of the applicants in the first category to the effect that they have exhausted all possible methods of recovery of the amounts improperly paid by way of levy. Furthermore, if it were established that such recovery was possible, this fact might have consequences bearing upon the calculation of the damages concerning the second category. However, the decisive nature of the said evidence required does not prevent the applicants from producing the other evidence previously indicated in the meantime.

It is clear from *Kampffmeyer* that the EU can, therefore, be liable when it has wrongfully authorized a measure taken by a national body. The procedural aspect of the case has, however, been criticized. It has been argued that there was no reason to require the applicants to proceed initially in the German courts, and that the ECJ's rationale for doing so was based implicitly on the assumption that the German authorities were primarily liable, with the Union bearing only a residual liability.[90]

This criticism may be overstated, and it may be necessary to distinguish the claim for the return of the levies paid from the more general tort action. As regards the former, the idea that the primary liability rested with Germany may well have substance, given that it was Germany which imposed the levy and it was Germany to which the funds were paid. As regards the latter, there is no particular reason why the EU's liability should be seen as somehow secondary to that of the Member State.

The *second situation in which the issue of joint liability may arise is where the Member State applies unlawful Union legislation*. This can arise, for example, in the context of the Common Agricultural Policy, where Union regulations will often be applied by national intervention boards. The general rule is that it is the national intervention boards, and not the Commission, which are responsible for the application of the CAP, and that an action must normally be commenced in the national courts.

Case 96/71 **R and V Haegeman Sprl v Commission**
[1972] ECR 1005

[Note Lisbon Treaty renumbering: Art 177 is now Art 267 TFEU]

Haegeman was a Belgian company which imported wine from Greece which was at the time outside the Community. It alleged that it suffered loss because of a countervailing charge imposed on the import of wine from Greece to Belgium. This charge was imposed by a Council regulation and was levied by the Belgian authorities.

THE ECJ

7. Disputes concerning the levying on individuals of the charges and levies referred to by this provision must be resolved, applying Community law, by the national authorities and following the practices laid down by the law of the Member States.

[90] Oliver (n 84).

8. Issues, therefore, which are raised during a procedure as to the interpretation and validity of regulations establishing the Communities' own resources must be brought before the national courts which have at their disposal the procedure under Article 177 of the Treaty in order to ensure the uniform application of Community law.

...

14. The applicant maintains further that by reason of the defendant's behaviour it has suffered exceptional damage as a result of loss of profit, unforeseen financial outlay and losses on existing contracts.

15. The question of the possible liability of the Community is in the first place linked with that of the legality of the levying of the charge in question.

16. It has just been found that, in the context of the relationship between individuals and the taxation authority which has levied the charge in dispute, the latter question comes under the jurisdiction of the national courts.

17. Accordingly, at the present stage the claim for compensation for possible damage must be dismissed.

The decision in *Haegman* can be criticized since the money levied went into the EU's funds. The sums were imposed by the EU and were collected on its behalf by the Member State. It is nonetheless the case that an action to recover such a charge must be commenced in the national courts, and that this is also so where a trader is seeking payment of a sum to which he believes himself to be entitled under EU law.[91] This principle applies even where the Commission has sent telexes to the national board setting out its interpretation of the relevant regulations.[92] The authorities of a Member State may, however, be able to recover from EU funds where they have paid for losses which are the EU's responsibility.[93]

There are, however, a number of situations in which it is possible to proceed against the Union directly. First, if the Commission sends a telex which is interpreted, in the context of the relevant legislation, as an instruction to the national agency to act in a particular manner, then an action may be brought against the Commission for damages.[94] Secondly, it is possible to proceed against the EU where no action could be brought against any national authority and hence there would be no remedy in the national courts.[95] Thirdly, it is possible to bring an action in the ECJ where the substance of the claim is that the EU has committed a tortious wrong to the applicant. Thus in *Dietz*[96] the essence of the claim was that the EU authorities had introduced a levy without transitional provisions and had thereby caused loss to the applicant in breach of its legitimate expectations. This claim could be pursued in the ECJ since the wrong alleged was entirely directed towards the EU's behaviour, and not that of the Member State.

8 CONTRACT

The discussion thus far has focused on the EU's non-contractual liability under Article 340(2). The Union will obviously also make contracts,[97] and Article 340(1) provides that contractual liability shall be governed by the law applicable to the contract in question.

[96] Case 126/76 *Dietz v Commission* [1977] ECR 2431; Case T–18/99 *Cordis* (n 18) [26].

[97] T Heukels, 'The Contractual Liability of the European Community Revisited' in Heukels and McDonnell (n 4) ch 5.

The meaning of this phrase requires explanation. Contracts are often made between parties in different countries, and therefore it is necessary to determine which law should govern the contract. The body of law dealing with this issue is known as the conflict of laws or private international law. Contracts often have choice-of-law clauses, specifying the law to be applied. The Commission always inserts such a clause in its contracts. It has been held that this clause prevails, and cannot be displaced by arguments that the contract was more closely connected with a different country from that specified in the choice-of-law clause.[98]

It would be possible in principle for a choice-of-law clause to specify EU law as that applicable to the contract. Article 340(1), in contrast to Article 340(2), does not state that the Union is to develop a system of law by drawing on the relevant general principles common to the laws of the Member States, but such a development of contract law may occur in the future.

This can be seen indirectly in staff cases. The Court has characterized contracts of employment of certain Union officials as public law contracts, emphasizing that the work performed was of a governmental nature, with the consequence that the contracts were governed by administrative law. The Court did not state that any system of national administrative law was to be applied.[99]

It can also be seen more directly in recent initiatives[100] to develop a Common Frame of Reference[101] for contract, which aim to provide the EU with a 'toolbox' of fundamental principles of contract law for the revision of existing and the preparation of new legislation in the area of contract law. To this end, the Commission established an expert group on a Common Frame of Reference, the group's main task being to deliver a user-friendly and legally certain set of rules, which could serve as a future instrument in European Contract Law. Whether this step is taken will, however, depend on the outcome of the expert group's work, combined with public consultation.

If the parties to a contract choose a particular legal system to govern the substance of their contractual obligations, this still leaves open which court will have jurisdiction to determine the dispute. Article 272 TFEU states that the Court of Justice of the European Union shall have jurisdiction to give judgment pursuant to any arbitration clause contained in a contract concluded by or on behalf of the Union, whether that contract be governed by public or private law.

9 RESTITUTION

Most legal systems recognize liability in restitution or quasi-contract, in addition to that based on contract or tort. The precise nature of this liability continues to divide academics, but the better view is that it is distinct from both contract and tort. Restitution is not based upon promise, but rather on unjust enrichment by the defendant, hence its difference from contractual liability. Restitution does not normally require a wrongful act by the defendant, in the sense of fault, and the measure of recovery is normally determined by the extent of the defendant's unjust enrichment rather than the extent of the loss to the plaintiff, hence its difference from most forms of tort liability.

A common restitutionary claim arises from payments made to public bodies when they have no right to the money. This is of considerable importance in the EU.[102] It can arise in two types of situation.

[98] Case 318/81 *Commission v CO.DE.MI. SpA* [1985] ECR 3693.

[99] Case 1/55 *Kergall v Common Assembly* [1955] ECR 151; Cases 43, 45 and 48/59 *Von Lachmüller v Commission* [1960] ECR 463.

[100] http://ec.europa.eu/justice_home/fsj/consumer/fsj_consumer_intro_en.htm.

[101] http://ec.europa.eu/justice_home/fsj/civil/fsj_civil_contract_en.htm.

[102] A Jones, *Restitution and European Community Law* (Mansfield Press, 2000); R Williams, *Unjust Enrichment and Public Law, A Comparative Study of England, France and the EU* (Hart, 2010) chs 6–7.

There can, on the one hand, be cases where a Member State has, for example, imposed a levy that is illegal under EU law, as exemplified by *Van Gend en Loos*. The matter will be remitted to the national court once the ECJ has found that the levy was in breach of EU law. It will be for the national court to devise a remedy to effectuate the EU right, which will often be return of the sum paid to the national authority.[103]

There may, on the other hand, be instances under, for example, the Common Agricultural Policy where money is paid into EU funds where there is in reality no legal obligation to pay the sum. The EU Courts have held that unjust enrichment is a general principle of EU law,[104] and that proof of some independent unlawful act by the defendant is not required.[105] Thus where a fine imposed for breach of the competition rules is annulled there is an obligation to return the money plus interest.[106] The ECJ has also applied restitutionary principles in cases where there has been unjust enrichment by an individual against the EU.[107] It is clearly correct in principle that a remedy should be available in favour of an individual where the EU has been unjustly enriched at his or her expense, as where the EU has imposed an unlawful charge. If a levy imposed by a Member State is recoverable because it is in breach of the Treaty, the same should be true for an illegal charge levied by the EU. The matter is, however, complicated in two different ways.

First, there is the case law discussed above, which has held that, in many such instances, the action should be commenced in the national court against the national collecting agency, even where the funds are treated as EU funds.[108]

Secondly, there is the difficulty of locating restitutionary claims within the Treaty. The wording of Article 340(2), which requires the EU to 'make good any damage caused' by its institutions, does not fit perfectly with the idea of a restitutionary action. It is, however, framed in terms of 'non-contractual liability', and this is wide enough to cover restitutionary relief. The ECJ affirmed in *Masdar* that it would be contract to priciple if Articles 274 and 340(2) were construed to preclude such recovery.[109]

10 CONCLUSIONS

i. The ECJ's jurisprudence under Article 340 has, in the past, been criticized for being overly restrictive. The case law was, until recently, unclear about the precise criterion for the application of the *Schöppenstedt* test.

ii. It is now clear that the crucial issue is the discretionary or non-discretionary nature of the act. Discretionary acts will be subject to the *Schöppenstedt* test. This requires proof of a breach of a superior rule of law for the protection of the individual; the breach must be sufficiently serious; there must be causation and damage. It is clear that the factors laid down in the case law on state liability in damages will be directly relevant when deciding whether there has been a sufficiently serious breach under Article 340.

[108] See 575–577.

[109] Case C–47/07 P *Masdar* (n 104).

iii. Where the challenged act is not discretionary the traditional test for liability was proof of illegality, causation, and damage. The more modern case law continues to distinguish between liability for discretionary and non-discretionary acts, but does so from within the framework of the sufficiently serious breach test: where the EU institution has considerably reduced or no discretion, the mere infringement of EU law *may* be sufficient to establish the existence of the sufficiently serious breach. It would be regrettable if this shift rendered it more difficult to recover than hitherto.

THE SINGLE MARKET

1 CENTRAL ISSUES

i. The single market is central to the EU and is still its principal economic rationale.

ii. This chapter considers the forms and techniques of economic integration, the limits of integration prior to 1986, and the subsequent steps taken to complete the single market. There is both a substantive and an institutional dimension to this story.

iii. In substantive terms, it is important to understand the economic dimension to the single market. It is equally important to understand that the realization of the single market in economic terms necessarily raises issues about the inter-relationship of the economic and social dimensions of EU policy. This has now come to the forefront of EU policy. The single market has been reconceptualized to take account of broader social, consumer, and environmental issues. There are nonetheless continuing tensions between the economic and social dimensions of the single market.

iv. In institutional terms, a subtle mix of legislative, administrative, and judicial initiatives has furthered evolution of the single market. The legislative procedures were changed to facilitate the passage of harmonization legislation. The focus of this legislation altered, through the new approach to harmonization. These developments were facilitated by judicial doctrine, based on the principle of mutual recognition, which framed the legislative and administrative initiatives.

2 ECONOMIC INTEGRATION: FORMS AND TECHNIQUES

(A) FORMS OF ECONOMIC INTEGRATION

The discussion in the previous chapters focused on EU institutional law. The remainder of the book is concerned with EU substantive law, although we shall stress the links between the two. It is important to understand the nature of a common market and how it differs from other forms of economic integration.

D Swann, The Economics of the Common Market[1]

> Economic integration can take various forms and these can be ranged in a spectrum in which the degree of involvement of participating economies, one with another, becomes greater and greater.

[1] (Penguin, 7th edn, 1992), 11–12, italics in the original.

The *free trade area* is the least onerous in terms of involvement. It consists in an arrangement between states in which they agree to remove all customs duties (and quotas) on trade passing between them. Each party is free, however, to determine unilaterally the level of customs duty on imports coming from outside the area. The next stage is the *customs union*. Here tariffs and quotas on trade between members are also removed but members agree to apply a *common* level of tariff on goods entering the union from without. The latter is called the common customs, or common external, tariff. Next comes the *common market* and this technical term implies that to the free movement of *goods* within the customs union is added the free movement of the *factors of production*—labour, capital and enterprise. Finally there is the *economic union*. This is a common market in which there is also a complete unification of monetary and fiscal policy. There would be a common currency which would be controlled by a central authority and in effect the member states would become regions within the union.

Part Three of the TFEU contains many of the fundamental principles for the establishment of a customs union and common market. It sets out the 'four freedoms': free movement of goods, workers, establishment and the provision of services, and capital. These Articles have, as will be seen, social as well as economic objectives. The basic economic aim is the optimal allocation of resources for the EU. This is facilitated by allowing the factors of production to move to the area where they are most valued.

Thus the provisions on the free movement of goods ensure that goods can move freely, with the consequence that those most favoured by consumers will be most successful, irrespective of the country of origin, thereby maximizing wealth-creation in the EU. The same is true for free movement of workers. Labour as a factor of production may be valued more highly in some areas than in others. If there is an excess of supply over demand for labour in southern Italy, and an excess of demand over supply in certain parts of Germany, labour is worth more in Germany than it is in Italy. The value of labour within the EU is maximized if workers can move to the area where they are most valued. The same idea is applicable to freedom of establishment. If a firm established in Holland believes that it could capture part of the French market, then it should not be prevented from so doing by French law that discriminates on grounds of nationality.

(B) TECHNIQUES OF ECONOMIC INTEGRATION

There are two principal techniques that can be used to attain a single market. EU law can prohibit national rules that hinder cross-border trade, because they discriminate against goods or labour, etc, from other Member States, or because they render market access more difficult. This is the classic way in which the four freedoms operate. The approach is essentially negative and deregulatory: EU law prohibits national rules that hinder cross-border trade. This is reinforced through what is known as mutual recognition, which requires a Member State to accept, subject to certain exceptions, goods that have been made in accordance with the regulatory rules of another Member State.

The creation of a single market also requires positive integration. Barriers to integration may flow from diversity in national rules on matters such as health, safety, technical specification, consumer protection, and the like. Many such barriers may only truly be overcome through harmonization of diverse national laws through an EU directive. This is known as positive integration, which is attained principally through Articles 114 and 115 TFEU, and other more sector-specific Treaty Articles.

3 PRE-1986: LIMITS OF INTEGRATION

Prior to 1986 the process of single market integration had been advanced by legislative and judicial means. The most important *legislative contribution* was harmonization of laws. The existence of divergences in national provisions can create barriers to trade. Article 115 TFEU now provides that:

> Without prejudice to Article 114, the Council shall, acting unanimously in accordance with a special legislative procedure and after consulting the European Parliament and the Economic and Social Committee, issue directives for the approximation of such laws, regulations or administrative provisions of the Member States as directly affect the establishment or functioning of the internal market.

There were, however, difficulties with this legislative mechanism, since it requires unanimity. This difficulty was exacerbated in the 1970s and early 1980s because harmonization directives were drafted in great detail, thereby rendering agreement more problematic. Technical developments meant, moreover, that the Commission was fighting a losing battle: as fast as it secured the passage of a directive to cover one technical problem, so ten more would emerge, resulting from technical innovation and the emergence of new products.

The *judicial contribution* to market integration will be considered in subsequent chapters. Suffice it to say for the present that the ECJ, through Article 258 TFEU and direct effect, interpreted the Treaty so as to promote the single market. Judicial decisions such as *Cassis de Dijon*[2] were of particular importance, by invalidating trade barriers, even if they were not discriminatory, unless they could be justified on certain limited grounds. The decision was of seminal importance, but it was nonetheless essentially negative and deregulatory.

There was therefore still much to be done by the early 1980s. The Community fell behind its agenda in the late 1970s and early 1980s, and single market integration appeared to be no closer. This problem was not lost on the European Council, which, in the early 1980s, considered various techniques for expediting Community initiatives. It was in one such meeting that the seeds of the Single European Act (SEA) were sown. In 1985 the European Council called on the Commission to draw up a detailed programme with a specific timetable for achieving a single market by 1992. The Commission, under the leadership of Jacques Delors, responded.

4 SINGLE EUROPEAN ACT 1986: THE ECONOMICS AND POLITICS OF INTEGRATION

(A) THE ECONOMIC DIMENSION: THE COMMISSION'S WHITE PAPER

The Commission's White Paper addressed the problem in strident tones. It set out to establish the 'essential and logical consequences'[3] of commitment to a single market. The Commission noted that the Community had lost momentum 'partly through recession, partly through a lack of confidence and vision',[4] but it said that the mood had now changed: the 'time for talk has now passed. The time for action has come. That is what this White Paper is about.'[5]

[2] Case 120/78 *Rewe-Zentral AG v Bundesmonopolverwaltung für Branntwein* [1979] ECR 649.
[3] COM(85)310, [3].
[4] Ibid [5].
[5] Ibid [7].

Completing the Internal Market COM(85)310, 14 June 1985[6]

10. For convenience the measures that need to be taken have been classified in this Paper under three headings:

— Part One: the removal of physical barriers
— Part Two: the removal of technical barriers
— Part Three: the removal of fiscal barriers

11. The most obvious example of the first category are customs posts at frontiers. Indeed most of our citizens would regard the frontier posts as the most visible example of the continued division of the Community and their removal as the clearest sign of the integration of the Community into a single market. Yet they continue to exist mainly because of the technical and fiscal divisions between Member States. Once we have removed those barriers, and found alternative ways of dealing with other relevant problems such as public security, immigration and drug controls, the reasons for the existence of the physical barriers will have been eliminated.

. . .

13. While the elimination of physical barriers provides benefits for traders . . . it is through the elimination of technical barriers that the Community will give the large market its economic and industrial dimension by enabling industries to make economies of scale and therefore to become more competitive. An example of this second category—technical barriers—are the different standards for individual products adopted in different Member States for health and safety reasons, or for environmental or consumer protection. . . The general thrust of the Commission's approach in this area will be to move away from the concept of harmonization towards that of mutual recognition and equivalence. But there will be a continuing role for the approximation of Member States' laws and regulations as laid down in Article 100 of the Treaty. Clearly, action under this Article would be quicker and more effective if the Council were to agree not to allow the unanimity requirement to obstruct progress where it could otherwise be made.

[*The Commission explained that the White Paper was not intended to cover every possible issue of relevance to the integration of the Member States' economies. Matters such as the coordination of economic polices and competition policy were relevant in this respect; while other important areas of Community action, such as transport, the environment, and consumer protection, interacted with, and would benefit from, the completion of the internal market. The next extract looks more closely at the Commission's reasoning in relation to the second type of barrier, that arising from differing technical rules.*]

58. [S]ubject to certain important constraints (see paragraph 65), the general principle should be approved that, if a product is lawfully manufactured and marketed in one Member State, there is no reason why it should not be sold freely throughout the Community. . . .

60. Whilst the physical barriers dealt with in Part One impede trade flows and add unacceptable administrative costs (ultimately paid by the consumer), barriers created by different national product regulations and standards have a double-edged effect: they not only add extra costs, but they also distort production patterns; increase unit costs; increase stock holding costs; discourage business cooperation; and fundamentally frustrate the creation of a common market for industrial products. Until . . .

The Need for a New Strategy

61. The harmonization approach has been the cornerstone of Community action in the first 25 years and has produced unprecedented progress in the creation of common rules on a Community-wide basis. However, over the years, a number of shortcomings have been identified and it is clear that a

[6] References to Arts 30–36 and 100 should now be read as to Arts 34–36 and 115 TFEU.

genuine common market cannot be realised by 1992 if the Community relies exclusively on Article 100 of the EEC Treaty. There will certainly be a continuing need for action under Article 100; but its role will be reduced as new approaches, resulting in quicker and less troublesome progress, are agreed.... Clearly, action under this Article would be quicker and more effective if the Council were to agree not to allow the unanimity requirement to obstruct progress where it could otherwise be made.

63. In principle,... mutual recognition could be an effective strategy for bringing about a common market in a trading sense. This strategy is supported in particular by Articles 30 to 36 of the EEC Treaty, which prohibit national measures which would have excessively and unjustifiably restrictive effects on free movement.

64. But while a strategy based on mutual recognition would remove barriers to trade and lead to the creation of a genuine common trading market, it might well prove inadequate for the purposes of the building-up of an expanding market based on the competitiveness which a continental-scale uniform market can generate. On the other hand experience has shown that the alternative of relying on a strategy based totally on harmonization would be over-regulatory, would take a long time to implement, would be inflexible and could stifle innovation. What is needed is a strategy that combines the best of both approaches but that, above all, allows for progress to be made more quickly than in the past.

The Chosen Strategy

65. The Commission takes into account the underlying reasons for the existence of barriers to trade, and recognises the essential equivalence of Member States' legislative objectives in the protection of health and safety, and of the environment. Its harmonization approach is based on the following principles:

— a clear distinction needs to be drawn in future internal market initiatives between what it is essential to harmonize, and what may be left to mutual recognition of national regulations and standards; this implies that, on the occasion of each harmonization initiative, the Commission will determine whether national regulations are excessive in relation to the mandatory requirements pursued and, thus, constitute unjustified barriers to trade according to Articles 30 to 36 of the EEC Treaty;

— legislative harmonization (Council Directives based on Article 100) will in future be restricted to laying down essential health and safety requirements which will be obligatory in all Member States. Conformity with this will entitle a product to free movement;

— Harmonization of industrial standards by the elaboration of European standards will be promoted to the maximum extent, but the absence of European standards should not be allowed to be used as a barrier to free movement. During the waiting period while European Standards are being developed, the mutual acceptance of national standards, with agreed procedures, should be the guiding principle.

The Commission's White Paper did not rest content with the enunciation of general strategies. The Annex listed 279 legislative measures, the object being to complete this process by 31 December 1992. The momentum behind the proposals gathered force with economic studies, which estimated that cost savings for the Community of twelve Member States could be somewhere between 70 billion ECU, 2.5 per cent of Gross Domestic Product (GDP) based on a relatively narrow conception of the benefits of removing the remaining internal market barriers, to around 125 to 190 billion ECU, 4.25 to 6.5 per cent of GDP, on the hypothesis of a much more competitive, integrated market.[7]

[7] M Emerson, M Aujean, M Catinat, P Goybet, and A Jacquemin, *The Economics of 1992, The EC Commission's Assessment of the Economic Effects of Completing the Internal Market* (Oxford University Press, 1988) 1–10. See also P Cecchini, *The European Challenge 1992, The Benefits of a Single Market* (Gower, 1988).

(B) THE POLITICAL DIMENSION: THE POLITICS OF INTEGRATION

The compelling economic case for reform does not explain why the Commission's initiative succeeded, given that other reforms posited in the late 1970s and early 1980s failed. There are differing views on who were the key players and why were they willing to accept reform.[8]

Sandholtz and Zysman[9] rejected explanations based on neofunctionalist integration theories and on the domestic politics of the Member States, although they admitted that elements of these theories were relevant even under their own explanation.[10] They argued that the success of the 1992 initiative should instead be viewed in 'terms of elite bargains formulated in response to international structural change and the Commission's policy entrepreneurship'.[11] There were three factors in this regard: the domestic political context, the Commission's initiative, and the role of the business elite.

W Sandholtz and J Zysman, 1992: Recasting the European Bargain[12]

The question is why national government policies and perspectives have altered. Why, in the decade between the mid-1970s and the mid-1980s, did the European governments become open to European-level, market-oriented solutions? The answer has two parts: the failure of national strategies for economic growth and the transformation of the left in European politics. First, the traditional models of growth and economic management broke down. The old political strategies for the economy seemed to have run out. After the growth of the 1960s, the world economy entered a period of stagflation in the 1970s....

...the second aspect of the changed political context was the shift in government coalitions in a number of EC Member States. Certainly the weakening of the left in some countries and a shift from the communist to the market-socialist left in others helped to make possible a debate about market solutions (including unified European markets) to Europe's dilemma....

...

In an era when deregulation—the freeing of the market—became the fad, it made intuitive sense to extend the European market as a response to all ailments....

This was the domestic political soil into which the Commission's initiatives fell. Traditional models of economic growth appeared to have played themselves out, and the left had been transformed in such a way that socialist parties began to seek market-oriented solutions to economic ills. In this setting, the European Community provided more than the mechanisms of intergovernmental negotiation. The Eurocracy was a standing constituency and a permanent advocate of European solutions and greater unity. Proposals from the European Commission transformed this new orientation into policy, and more importantly, into a policy perspective and direction. The Commission perceived the international structural changes and the failure of existing national strategies and seized the initiative.

...

The third actor in the story, besides the governments and the Commission, is the leadership of the European multinational corporations. The White Paper and the Single European Act gave the appearance that changes in the EC market were irreversible and politically unstoppable. Businesses have been acting on that belief. Politically, they have taken up the banner of 1992, collaborating with the Commission and exerting substantial influence on their governments. The significance of the role of business, and of its collaboration with the Commission, must not be underestimated....

Moravcsik told a different tale. He disagreed with the previous thesis, and argued that the reform was principally due to inter-state bargains between Britain, France, and Germany. This was made possible by the convergence of European economic-policy preferences in the early 1980s, combined with the bargaining leverage which France and Germany used against Britain by threatening a two-track Europe, with Britain in the slow lane. For Moravcsik it was regime theory that best explained the SEA.

A Moravcsik, Negotiating the Single European Act: National Interests and Conventional Statecraft in the European Community[13]

An alternative approach to explaining the success of the 1992 initiative focuses on inter-state bargains between heads of government in the three larger Member States of the EC. This approach, which can be called 'intergovernmental institutionalism', stresses the central importance of power and interests, with the latter not simply dictated by position in the intergovernmental system. . . . Intergovernmental institutionalism is based on three principles: intergovernmentalism, lowest common denominator bargaining, and strict limits on future transfers of sovereignty.

Intergovernmentalism. From its inception, the EC has been based on inter-state bargains between its leading Member States. Heads of government, backed by a small group of ministers and advisers, initiate and negotiate major initiatives in the Council of Ministers or the European Council. Each government views the EC through the lens of its own policy preferences; EC politics is the continuation of domestic politics by other means. . . .

Lowest-common-denominator bargaining. Without a 'European hegemony' capable of providing universal incentives or threats to promote regime formation and without the widespread use of linkages and logrolling, the bargains struck in the EC reflect the relative power positions of the Member States. Small states can be bought off with side-payments, but larger states exercise a de facto veto over fundamental changes in the scope or rules of the core element of the EC, which remains economic liberalization. Thus, bargaining tends to converge toward the lowest common denominator of large state interests. The bargains initially consisted of bilateral agreements between France and Germany; now they consist of trilateral agreements including Britain.

The only tool that can impel a state to accept an outcome on a major issue that it does not prefer to the status quo is the threat of exclusion . . . If two major states can isolate the third and credibly threaten it with exclusion and if such exclusion undermines the substantive interests of the excluded state, the coercive threat may bring about an agreement at a level of integration above the lowest common denominator.

Protection of sovereignty. The decision to join a regime involves some sacrifice of national sovereignty in exchange for certain advantages. Policymakers safeguard their countries against the future erosion of sovereignty by demanding the unanimous consent of regime members to sovereignty-related reforms. They also avoid granting open-ended authority to central institutions that might infringe on their sovereignty, preferring instead to work through intergovernmental institutions such as the Council of Ministers, rather than through supranational bodies such as the Commission and Parliament.

There is no need to decide unequivocally between these two theories. Most would agree that there were two connected conditions for the success of the new initiatives. There had to be *legislative reform* to facilitate the passage of measures designed to complete the internal market. There had also to be a *new approach to harmonization* which would expedite the process of breaking down the technical barriers to intra-Community trade. These will be considered in turn.

[13] (1991) 45 International Organization 19, 25–27. Italics in the original.

5 THE INTERNAL MARKET: LEGISLATIVE REFORM AND THE SEA

The European Council endorsed the Commission's White Paper in June 1985. The SEA was signed on 17 February 1986 and entered into force on 1 July 1987. The Act contained new procedures designed to facilitate legislation to complete the internal market. It should not, however, be thought that the SEA was uncontroversial. The Commission pressed for more far-reaching changes than the Member States were willing to accept. The SEA introduced two major legislative innovations for the single market project. They are now found in Articles 26 and 114 TFEU.

(A) ARTICLE 26: THE OBLIGATION STATED

> 1. The Union shall adopt measures with the aim of establishing or ensuring the functioning of the internal market, in accordance with the relevant provisions of the Treaties.
>
> 2. The internal market shall comprise an area without internal frontiers in which the free movement of goods, persons, services and capital is ensured in accordance with the provisions of the Treaties.
>
> 3. The Council, on a proposal from the Commission, shall determine the guidelines and conditions necessary to ensure balanced progress in all the sectors concerned.

We can begin by considering the *content of the obligation* contained in Article 26(1) TFEU. Article 14 EC, the predecessor to Article 26(1) TFEU, specified that the internal market should be attained by 31 December 1992. This deadline has been dropped in Article 26(1), thereby recognizing, as acknowledged by the Commission,[14] that establishment of the internal market was an ongoing task, rather than one that could be deemed 'completed' by a particular date.

Article 26(2) *defines the internal market*. It contains a two-part formulation: it was to be an area without internal frontiers, in which there could be free movement of goods, persons, etc. Attainment of an area without internal frontiers can be judged by whether border controls exist on the free movement of goods or persons, etc. It is more difficult to determine how freely goods, persons, and capital can move within the EU, even when border controls have been removed. The attainment of the internal market is not a once-and-for-all, static objective, since technological developments pose new challenges for the internal market ideal, as do external economic factors.

We must now consider the *legal effect* of Article 26. The Commission, in an early working paper for the Intergovernmental Conference leading to the SEA, intended Article 14 EC to have direct effect and proposed that if national rules on free movement were not removed by the agreed date, then they would automatically be recognized as equivalent. These suggestions 'stunned the participants at the Intergovernmental Conference'.[15] The Commission was forced to modify its suggestions,[16] and the Member States attached a Declaration to Article 14 EC, making clear that the deadline of 31 December 1992 did not create an automatic legal effect. The deadline has been removed from the Lisbon Treaty, and so too has the Declaration.

[14] http://ec.europa.eu/internal_market/top_layer/index_3_en.htm.
[15] C-D Ehlermann, 'The Internal Market Following the Single European Act' (1987) 24 CMLRev 361, 371.
[16] Ibid 371–372.

It is possible that Article 26 may have *legal effects against the EU itself*,[17] given its mandatory wording. The possibility of using Article 265 TFEU in the event of Commission or Council inaction would depend on whether the criteria for such actions were met.[18] This would not be easy, since it would have to be shown that the measures that it is claimed should have been enacted were defined with sufficient specificity for them to be identified individually, and adopted pursuant to Article 266 TFEU.[19] This will not be so where the relevant institutions possess discretionary power, with consequential policy options, the content of which cannot be identified with precision. A damages claim will be even more difficult to prove.[20]

There is also the possibility that Article 26 may have *legal consequences for the Member States*. This could mean that, even if the relevant EU measures had not been enacted, an individual might argue that Member States' rules which constituted a barrier to the completion of the internal market should not be applied if they were incompatible with Article 26. It would, however, have to be shown that Article 26 fulfilled the conditions for direct effect,[21] the most problematic of which is that there must be no further action required before the norm can have direct effect. The ECJ has been willing to accord direct effect to certain Treaty Articles, notwithstanding the fact that further action is required to flesh out the Article,[22] but it would nonetheless be bold for the Court to hold that Article 26 is directly effective. The Court was reluctant to accord direct effect to Article 14 EC, the predecessor to Article 26 TFEU.[23] The argument for the direct effect of Article 14 was, moreover, premised on the existence of the deadline of 31 December 1992, specified in that Article. The fact that Article 26 TFEU contains no such deadline would make it even more difficult for such an argument to succeed.

(B) ARTICLE 27: THE OBLIGATION QUALIFIED

Article 27 TFEU qualifies Article 26. It requires the Commission, when drawing up proposals pursuant to Article 26, to take into account the extent of the effort that certain economies showing differences in developments will have to sustain during the period of establishment of the internal market, and it may propose appropriate provisions. If the provisions take the form of derogations, they must be temporary and cause the least possible disturbance to the functioning of the common market.[24]

(C) ARTICLE 114(1): FACILITATING THE PASSAGE OF HARMONIZATION MEASURES

A major difficulty in enacting harmonization measures was the unanimity requirement under what is now Article 115 TFEU, which gives a general power to pass directives for the approximation of laws of the Member States that affect the establishment or functioning of the internal market. The SEA

[17] Ehlermann (n 15) 372.

[24] In a study from 2000 de Búrca found 41 dirs that provided some degree of differentiation. In some instances there were objective reasons for this, in others the reasons were not readily apparent: G de Búrca, 'Differentiation within the Core: The Case of the Common Market' in G de Búrca and J Scott (eds), *Constitutional Change in the EU: From Uniformity to Flexibility?* (Hart, 2000) 143–145.

therefore provided in what is now Article 114 TFEU a general legislative power akin to Article 115, without the unanimity requirement. Article 114(1) reads as follows:

> Save where otherwise provided in the Treaties, the following provisions shall apply for the achievement of the objectives set out in Article 26. The European Parliament and the Council shall, acting in accordance with the ordinary legislative procedure and after consulting the Economic and Social Committee, adopt the measures for the approximation of the provisions laid down by law, regulation or administrative action in Member States which have as their object the establishment and functioning of the internal market.

Whereas Article 115 authorizes only the passage of directives, Article 114 empowers enactment of measures, which includes directives but also covers regulations, which are made by the ordinary legislative procedure.[25] Two more general features of Article 114 should be appreciated.

(i) *Article 114: A Residual Provision*

Article 114 is a residual provision. It operates only 'save where otherwise provided in this Treaty'. This means that other, more specific Treaty provisions, such as Articles 43, 50, 53, and 91 TFEU, should be used for measures designed to attain the internal market where they fall within the subject matter areas of those Articles.[26] This can generate boundary-dispute problems about the correct legal basis for EU legislation. Such disputes arose in the past normally because the European Parliament wished to ensure that its legislative rights under Article 114 TFEU were not by-passed by legislation enacted on a different Treaty Article, which gave it less extensive rights in the legislative process.[27]

The general test propounded by the ECJ for the resolution of such boundary disputes was that regard should be had to the nature, aim, and content of the act in question.[28] Where these factors indicated that the measure was concerned with more than one area of the Treaty, then it might be necessary to satisfy the legal requirements of two Treaty Articles.[29] This would not however be insisted upon where the relevant legal bases under the two Articles prescribed procedures that were incompatible.[30] Boundary disputes are less likely to occur now, since the ordinary legislative procedure, the successor to the co-decision procedure, is applicable to many Treaty Articles.

(ii) *Article 114: The Limits*

Article 114 is broadly framed, but the ECJ confirmed in *Tobacco Advertising* that it has limits.[31] The ECJ struck down a directive[32] designed to harmonize the law relating to the advertising and sponsorship of tobacco products. It read Article 95 EC in the light of Articles 3(1)(c) and 14 EC and concluded that the measures must be intended to improve the conditions for the establishment and functioning of the internal market.

[25] For an expansive interpretation of 'measures' see Case C–359/92 *Germany v Council* [1994] ECR I–3681.

[26] Case C–388/01 *Commission v Council* [2004] ECR I–4829, [54]–[60]; Case C–533/03 *Commission v Council* [2006] ECR I–1025, [43]–[48].

[27] See, eg, Case 68/86 *United Kingdom v Council* [1988] ECR 855; Case 11/88 *Commission v Council* [1989] ECR 3799; Case C–151/91 *Commission v Council* [1993] ECR I–939; Case C–187/93 *European Parliament v Council* [1994] ECR I–2857.

[28] Case C–300/89 *Commission v Council* [1991] ECR I–2867; Case C–426/93 *Germany v Council* [1995] ECR I–3723; Case C–271/94 *European Parliament v Council* [1996] ECR I–1689.

[29] Case 165/87 *Commission v Council* [1988] ECR 5545.

[30] Case C–338/01 (n 26).

[31] Case C–376/98 *Germany v European Parliament and Council* [2000] ECR I–8419; T Hervey, 'Up in Smoke? Community (Anti)-Tobacco Law and Policy' (2001) 26 ELRev 101.

[32] [1998] OJ L 213/9.

Article 95 EC did not, as argued by the Commission, Council, and EP,[33] give any general power of market regulation. This would, said the ECJ, be contrary to Articles 3(1)(c) and 14 EC, and be incompatible with the principle in Article 5 EC that the Community's powers were limited to those specifically conferred on it.[34] The ECJ held that a measure enacted pursuant to Article 95 EC must genuinely have as its object the improvement of the conditions for the establishment and functioning of the internal market. If mere disparities between national rules, and the abstract risk of obstacles to the exercise of fundamental freedoms, or distortions of competition could justify the use of Article 95 EC, then judicial review of compliance with the proper legal basis would be rendered 'nugatory'.[35] Any distortion of competition had to be appreciable, since otherwise 'the powers of the Community legislature would be practically unlimited'.[36] The ECJ had to verify whether a measure enacted under Article 95 EC pursued the objectives stated by the legislature,[37] and whether the distortion of competition which the measure purported to eliminate was appreciable.[38] The ECJ concluded that the Directive had not been validly made under Article 95.

While there are therefore limits to what is now Article 114 TFEU, subsequent case law[39] has shown that the ECJ is willing to accept Article 114 as the legal basis for the enacted measure.[40] This is evident especially in the 2006 *Tobacco Advertising* case,[41] where the ECJ upheld the validity of a revised Directive on tobacco advertising, which included prohibitions on advertising in the press and radio. The Court concluded that this measure could be validly adopted under Article 114, since there were disparities between the relevant national laws on advertising and sponsorship of tobacco products which could affect competition and inter-state trade. The ECJ also stated more generally the circumstances in which Article 114 could be used. The 'criterion' is broad.[42]

> It follows . . . that when there are obstacles to trade, or it is likely that such obstacles will emerge in the future, because the Member States have taken, or are about to take, divergent measures with respect to a product or a class of products, which bring about different levels of protection and thereby prevent the product or products concerned moving freely within the Community, Article 95 EC authorises the Community legislature to intervene by adopting appropriate measures, in compliance with Article 95(3) EC and with the legal principles mentioned in the EC Treaty or identified in the case law, in particular the principle of proportionality.

(D) ARTICLE 114(2)–(10): QUALIFICATIONS TO ARTICLE 114(1)

The remainder of Article 114 qualifies Article 114(1). *Article 114(2)* encapsulates an exception to Article 114(1), by providing that the latter shall not apply to fiscal provisions, to those relating to

the free movement of persons, or to those relating to the rights and interests of employed persons. These areas were felt by the Member States to be particularly sensitive, hence their exclusion from Article 114(1). Legislation for these areas will therefore have to be passed under either Article 115, or a more specific Treaty provision.[43]

Article 114(3) instructs the Commission, when proposing measures under Article 114(1) relating to health, safety, environmental protection, and consumer protection, to take as a base a high level of protection, taking into account in particular any new development based on scientific facts. The European Parliament and the Council must also use their respective powers to achieve this objective. Article 114(3) was included to placate countries such as Germany and Denmark, which were concerned that the harmonization measures might not be stringent enough. The wording of Article 114(3) does not, however, compel enactment of a measure in accordance with the standards pertaining in the countries with high levels of protection. It merely requires that a high level of protection should be taken as the base.

Article 114 paragraphs (4)–(9) have received most critical attention. The provisions are complex and therefore should be set out in full:

> 4. If, after the adoption of a harmonisation measure by the European Parliament and the Council, by the Council or by the Commission, a Member State deems it necessary to maintain national provisions on grounds of major needs referred to in Article 36, or relating to the protection of the environment or the working environment, it shall notify the Commission of these provisions as well as the grounds for maintaining them.
>
> 5. Moreover, without prejudice to paragraph 4, if, after the adoption of a harmonisation measure by the European Parliament and the Council, by the Council or by the Commission, a Member State deems it necessary to introduce national provisions based on new scientific evidence relating to the protection of the environment or the working environment on grounds of a problem specific to that Member State arising after the adoption of the harmonisation measure, it shall notify the Commission of the envisaged provisions as well as the grounds for introducing them.
>
> 6. The Commission shall, within six months of the notifications as referred to in paragraphs 4 and 5, approve or reject the national provisions involved after having verified whether or not they are a means of arbitrary discrimination or a disguised restriction on trade between Member States and whether or not they shall constitute an obstacle to the functioning of the internal market.
>
> In the absence of a decision by the Commission within this period the national provisions referred to in paragraphs 4 and 5 shall be deemed to have been approved.
>
> When justified by the complexity of the matter and in the absence of danger for human health, the Commission may notify the Member State concerned that the period referred to in this paragraph may be extended for a further period of up to six months.
>
> 7. When, pursuant to paragraph 6, a Member State is authorised to maintain or introduce national provisions derogating from a harmonisation measure, the Commission shall immediately examine whether to propose an adaptation to that measure.
>
> 8. When a Member State raises a specific problem on public health in a field which has been the subject of prior harmonisation measures, it shall bring it to the attention of the Commission which shall immediately examine whether to propose appropriate measures to the Council.
>
> 9. By way of derogation from the procedure laid down in Articles 258 and 259, the Commission and any Member State may bring the matter directly before the Court of Justice of the European Union if it considers that another Member State is making improper use of the powers provided for in this Article.

[43] For fiscal provisions Art 113 TFEU requires unanimity in the Council and consultation with the EP; for free movement of persons Art 21(2) TFEU applies the ordinary legislative procedure, except that Art 21(3) applies to provisions relating to social security or social protection, and requires Council unanimity and consultation with the EP; for the rights of employed persons see Arts 46 and 48 TFEU.

Article 114(5), (7), and (8) were new provisions introduced by the Treaty of Amsterdam, whereas the other paragraphs modified pre-existing provisions. The inclusion of Article 114(4) gave rise to much critical comment.[44] The genesis of Article 114(4) is evident in the following extract.

C-D Ehlermann, The Internal Market Following the Single European Act[45]

> Whereas paragraph 1[46] is the most significant provision of the Single European Act, paragraph 4 is the most problematic. Its purpose is the same as that of the preceding paragraph, namely to protect any Member State in a minority position from being forced to accept the majority line. However, the method devised is completely different. Whereas paragraph 3 is in keeping with the approach followed by the Community in the past, paragraph 4 represents a radical new departure.
>
> It goes back to the fact that the United Kingdom, and later Ireland, wished to safeguard certain special measures connected with their island status against the threat of majority voting. Neither country was satisfied with the safeguard offered by paragraph 3. But they both accepted that retention of the unanimity requirement would have emasculated Article 100a.
>
> The way out of this dilemma was paragraph 4, which was drafted by the European Council itself. . . .

Any assessment of Article 114(4)–(9) must take into account political and legal issues. In *political terms* many of the more dramatic fears about the impact of Article 114(4) have not been borne out. Concerns that Member States would routinely seek to invoke the Article to prevent the application of harmonization measures have proven unfounded.

In *legal terms* the Member State concerns which can trigger Article 114(4) are finite: the matters covered by Article 36 TFEU, plus the environment and working environment. The Treaty of Amsterdam further limited Article 114(4). It had previously been framed in terms of a Member State 'applying' national provisions on one of the specified grounds, but is now framed in terms of 'maintaining' such provisions. A Member State cannot, therefore, invoke the Article to justify *new* national provisions that derogate from the harmonization measure, but only to justify the *retention* of existing provisions.[47] Article 114(5), by way of contrast, deals with the situation where the Member State seeks to *introduce a new national measure* after the adoption of the harmonization directive. The Member State concerns that can trigger Article 114(5) are more limited: there must be new scientific evidence relating to the environment, etc, and there must be a problem specific to that state.[48]

Article 114 paragraphs (4) and (5) are exceptions that derogate from the principles of the Treaty and will therefore be restrictively construed by the Commission and the ECJ. The Member State has the burden of proving that the conditions for their application exist.[49] The Commission's powers of scrutiny have been reinforced by Article 114(6). Prior to the Treaty of Amsterdam, Article 100a(4) spoke in terms of the Commission 'confirming' the national provisions. Article 114(6) now speaks of the Commission 'approving or rejecting' them. This shift in emphasis has been reinforced by changes to Article 114(4) by the Treaty of Amsterdam, requiring the state to explain the reasons for maintaining the national provisions.[50] The ECJ has, moreover, confirmed that it can judicially review invocation of Article 114(4).[51] The process under Article 114 is not however wholly adversarial. Article 114

paragraphs (7) and (8), introduced by the Treaty of Amsterdam, are designed to facilitate a negotiated solution to the problem.

Article 114(10) is the final qualification to Article 114(1). It provides that harmonization measures may include safeguard clauses authorizing Member States to take, for one of the non-economic reasons in Article 36 TFEU, provisional measures subject to Union control procedures. Recourse to Article 36 is normally precluded when EU harmonization measures have been enacted. The purpose of Article 114(10) is to allow a Member State, subject to the Union control procedure, to adopt temporary measures in the event of a sudden and unforeseen danger to health, life, etc.

6 THE INTERNAL MARKET: THE NEW LEGISLATIVE APPROACH TO MARKETING OF PRODUCTS AND HARMONIZATION

(A) THE RATIONALE FOR THE NEW APPROACH

We noted earlier that the completion of the single market was dependent upon two conditions. There had to be reform of the legislative procedure to facilitate legislation to complete the internal market. There also had to be a new approach to harmonization to make it easier to secure the passage of these measures.

Reforms in the legislative process would not have been sufficient to secure the internal market, even though harmonization measures could now be passed more easily. This was because traditional harmonization techniques had disadvantages.[52] They were slow, and generated excessive uniformity. There was a failure to develop links between harmonization and standardization, thereby leading to inconsistencies and wastage of time. Problems of certification and testing were not sufficiently addressed, and implementation within Member States was imperfect.

The Commission recognized these shortcomings in its White Paper.[53] Thus in its proposals for a New Approach to Technical Harmonization and Standards,[54] the Commission acknowledged that experience had shown the difficulties with the existing approach, which was predicated on attempts to harmonize through detailed technical specification. The Commission admitted that the results of harmonization had been negligible in certain fields, given the multiplicity of national technical regulations and the speed of technological change.

(B) THE ELEMENTS OF THE NEW APPROACH

The general direction of the new approach to harmonization is apparent in the extract from the Commission's White Paper on Completing the Internal Market. There was to be mutual recognition through the *Cassis de Dijon* principle.[55] National rules that did not come within a mandatory requirement would be invalid; legislative harmonization was to be restricted to laying down health and safety standards; and there would be promotion of European standardization. A number of elements can be identified in the new legislative approach to marketing of products[56] and harmonization.[57]

[57] Enhancing the Implementation of New Approach Directives, COM(2003)240.

(i) *Provision of Information: National Rules that might Impede Free Movement*

Member States are obliged to provide information by Directive 83/189,[58] now overtaken by Directive 98/34.[59] This measure, known as the Mutual Information or Transparency Directive, obliges a state to inform the Commission before it adopts any legally binding regulation setting a technical specification, except where it transposes a European or international standard. The Commission then notifies the other states, and adoption of the national measure is delayed for a minimum of three months, in order that possible amendments can be considered. A year's delay can result if the Commission decides to press ahead with a harmonization directive on the issue. The Directive was given added force by the ECJ's decision in the *CIA* case[60] that a national measure which had not been notified in accordance with the Directive could not be relied on. Pelkmans has shown the importance of this regime for scrutiny of draft national rules that might, if enacted, impede free movement, and the work done by the 98/34 committee in preventing such barriers from becoming a reality.[61] The procedure resolves approximately 95 per cent of cases so as to ensure that the proposed state regulation is consistent with EU law.

(ii) *Provision of Information: Obstacles to Free Movement and Serious Trade Disruption*

A further obligation to furnish information is found in Regulation 2679/98, which requires Member States that have relevant information concerning obstacles to free movement of goods that can lead to serious trade disruption and loss to individuals, and which requires immediate action to prevent any continuation, to notify the Commission.[62] The Member State has an obligation to take all necessary and proportionate action to ensure the free movement of goods and to notify the Commission of the action thus taken.

(iii) *Mutual Recognition: Normative Dimension*

Mutual recognition[63] is the core of the ECJ's and Commission's strategy.[64] There are normative and practical dimensions to this strategy, which will be examined in turn. It is generally acknowledged that mutual recognition entails a governance strategy,[65] and embodies a choice as to how to achieve market integration.[66]

[66] Schmidt (n 63).

Such integration might be furthered by according primacy to host state control, subject to non-discrimination. Thus Member States open their borders to goods from elsewhere, provided that the importers meet the standards of the host country, the only obligation being not to discriminate against such imports. The political sovereignty of the host state remains unchallenged, and it sets the regulatory requirements, but the consequence is that producers based in other countries have to adapt their goods to the requirements of each state into which they wish to sell.

A second strategy for market integration is harmonization at the EU level, thereby overcoming national regulatory diversity. This entails, however, significant negotiation costs and a 'vertical transfer of sovereignty' to the supranational level.[67] Politics remains the mode of setting the regulatory regime, but the politics now take place at the supranational rather than national level.

Mutual recognition constitutes a third mode of market integration. A product lawfully manufactured in a Member State should be capable of being sold in any other Member State. The underlying assumption is that Member States' regulations address 'alternative solutions to the same underlying problems'.[68] Producers no longer have to adapt their goods to each market in which they are sold, and the costs of detailed harmonization are also avoided. It is, however, central to mutual recognition that regulatory control is vested in the home state. This in turn implies a 'horizontal transfer of sovereignty', in the sense that the Member States no longer retain control over the regulatory regime in their own countries. The host state must *prima facie* accept the goods lawfully marketed in accordance with the regulatory requirements of the home state, which requires national governments to trust the regulatory regime of other Member States.[69] This is, however, tempered by the public interest defences that can be made by the host state under Article 36 TFEU, and by the mandatory requirements recognized by the ECJ in its *Cassis* judgment. Harmonization efforts are then concentrated on measures that are still lawful under these.

(iv) *Mutual Recognition: Practical Dimension*

Mutual recognition has been central to EU market integration. The general assumption is that this works just fine. Matters are not so simple. Pelkmans has pointed to the practical difficulties in realizing the ideal.[70] This is largely because the judicial elaboration of mutual recognition in the *Cassis* judgment lacks visibility for many traders, especially small and medium-sized enterprises, with the consequence that they adapt their products to the requirements of the host states, even though they are not required to do so under EU law.

This problem was recognized by the Commission,[71] which acknowledged that mutual recognition did not always operate effectively, and made proposals to improve it.[72] There should be increased monitoring of mutual recognition by the Commission, complemented by measures to improve awareness of mutual recognition by producers of goods and services. Member States should deal with requests concerning mutual recognition within a reasonable period of time, and should include mutual recognition clauses in national legislation.

(v) *Mutual Recognition: Control over Member State Derogation*

The Commission has more recently resorted to hard law in order to improve the efficacy of mutual recognition, by imposing tighter controls over Member States' derogations from free movement. The previous approach was based on exchange of information about national measures which derogated from free movement of goods. Decision 3052/95[73] imposed an obligation on a Member State to notify the Commission where it took steps to prevent goods lawfully produced in another Member State from being placed on its market.

This strategy was not, however, successful and it was replaced in 2008[74] by a more strident approach. A Member State that decides to prevent or hinder free movement of goods lawfully marketed in another Member State on grounds listed in Article 36 TFEU, or because of the *Cassis* mandatory requirements, must give written notice to the importer, who has twenty days in which to proffer comments contesting the decision. The Member State then makes a final decision in the light of those comments, and this must be notified to the importer and the Commission. If the Member State abides by its decision to refuse or hinder import it must give reasons. This decision must be open to challenge before national courts. The Member States are, moreover, obliged to establish 'Product Contact Points', which provide information to importers as to the technical rules applicable to particular types of product, and information about the principle of mutual recognition in that Member State.

(vi) *New Approach: Harmonization*

The 'New Approach' to legislative harmonization is used for those national rules that survive scrutiny under Article 36 TFEU and/or the *Cassis* mandatory requirements. Where this is so EU harmonization is limited to laying down essential health and safety requirements.[75] Thus far approximately thirty such directives have been enacted on the New Approach or principles analogous thereto.[76] Each measure deals with a general product area, such as personal protective equipment, toys, construction products, explosives, medical devices, and the like. A directive can therefore apply to hundreds or thousands of products that fall within the relevant generic category. The trading volume of products covered by the major sectors where the new approach has been applied has been estimated to be in excess of 1,500 billion euros *per annum*. The essence of this approach is brought out by Pelkmans.

J Pelkmans, The New Approach to Technical Harmonization and Standardization[77]

> — harmonization of legislation is limited to the adoption . . . of the essential safety requirements . . . with which the products brought on the market must comply in order to qualify for free movement in the Community;
>
> — it is the task of the competent (private) standardization organs, given technical progress, to formulate the technical specifications, on the basis of which industry needs to manufacture and market products complying with the fundamental requirements of the directives;

[73] Decision 3052/95/EC of the European Parliament and of the Council establishing a procedure for the exchange of information on national measures derogating from the principle of the free movement of goods within the Community [1995] OJ L321/1.

[74] Regulation (EC) No 764/2008 of the European Parliament and of the Council of 9 July 2008 laying down procedures relating to the application of certain national technical rules to products lawfully marketed in another Member State and repealing Decision No 3052/95/EC [2008] OJ L218/21.

[77] (N 52), italics in the original.

— these technical specifications are not binding and retain their character of voluntary (European) standards;

— but, at the same time, the governments are *obliged to presume* that the products manufactured in accordance with the European standards comply with the 'fundamental requirements' stipulated in the directive. It is this presumption that guarantees business free market access.

When a standard has been approved by the Commission and published in the Official Journal all Member States must accept goods which conform to it. If a Member State disputes whether the standard conforms to the safety objectives set out in the directive, the burden of proof will be on the State to substantiate its contentions. An analogous reversal of the burden of proof operates in the case of producers in the following sense. It is open to producers to manufacture according to specifications other than those laid down. The burden of proof will, however, then be on the producer to show that the goods meet the essential requirements specified in the directive.

European standardization is central to the 'New Approach' to harmonization.[78] It reduces barriers to intra-EU trade and increases the competitiveness of European industry.[79] The principal bodies are the European Committee for Standardization (CEN),[80] the European Committee for Electrotechnical Standardization (CENELEC),[81] and the European Telecommunications Standards Institute (ETSI).[82] These bodies are private organizations, with CEN and CENELEC being non-profit-making technical organizations established under Belgian law in 1961 and 1973 respectively, and ETSI being a non-profit-making organization set up under French law in 1986. They 'ensure that standardization processes take place in parallel with harmonization at Council level and are based on "essential requirements"'.[83] The standardization is very likely to be approved, provided that it complies with the 'essential requirements' laid down in the directive. The standard will be drafted by a Technical Committee of the standardization body. Standards may be mandated or unmandated. The former are created when the Commission calls for the standardization bodies to draw up a standard, the latter where the initiative comes from the standardization body itself. Compliance with a mandated standard means that the product is presumed to be safe under the General Product Liability Directive,[84] and that it can, subject to certain qualifications, circulate freely within the EU. The standards are published in the Official Journal.[85]

The Commission published an Action Plan for European Standardisation in 2006, developing ideas canvassed in its 2004 Communication. The Action Plan is designed to enhance the use of standardization in different policy areas, and improve its efficiency and coherence, including in this respect strategies to promote the effective participation of interested parties.[86]

It is important to be clear about the relationship between EU harmonization of essential requirements and the standardization process. A directive passed pursuant to the New Approach establishes in general terms the health and safety requirements that the goods must meet. The setting of standards helps manufacturers to prove conformity to these essential requirements, and to allow inspection to test for conformity with them. Promoting EU standards fosters this process by encouraging consensus on the relevant standards in a particular area. Allowing a manufacturer to show that its goods comply with the essential safety requirements, even if they do not comply with the EU standard, provides flexibility.

The New Approach to harmonization has considerable advantages. Directives can be drafted more easily since they are less detailed. The excessive 'Euro-uniformity' of the traditional approach is avoided by combining stipulated safety objectives with flexibility as to the standards through which this compliance can be achieved. The need for unanimity is obviated through Article 114. Harmonization and standardization are related. More EU directives can be made, and hence the gap between EU harmonization and the volume of national technical regulations can be reduced. Incentives for Member States' implementation of directives have been increased through judicial doctrine such as state liability in damages.[87] This is not to say that the New Approach has been problem-free, as will be seen below.[88]

(vii) *New Approach to Harmonization: 2008 Reforms*

The New Approach has recently been reformed to make it more effective, following a wide-ranging consultation exercise.[89] The Decision[90] establishes certain general principles that are intended to apply across sectoral legislation in order to foster coherence. It therefore constitutes a general horizontal framework for future harmonizing legislation and a reference text for existing legislation, although the specific needs of a particular sectoral area may dictate a different regulatory approach.[91]

The basic principle is that EU harmonization legislation is restricted to setting out the essential requirements determining the level of such protection, subject to the caveat that where recourse to essential requirements is not possible or not appropriate, in view of the objective of ensuring the adequate protection of consumers, public health and the environment, or other aspects of public interest protection, detailed specifications may then be set out in the harmonization legislation.[92] Compliance with essential requirements is *prima facie* through compliance with adopted standards, while preserving the possibility of complying by other means.[93] Where harmonization legislation requires conformity assessment in respect of a particular product, the procedures to be used should be chosen from modules specified in Annex II to the Decision.[94]

The Annexes to the Decision set out in detail a 'boilerplate' of provisions that can be used in New Approach directives. These cover: the obligations of the manufacturer, importer, and distributor of goods covered by any such directive; formal objection to harmonized standards; the declaration

that the product has been made in conformity with the essential requirements in the directive; affixing of the CE mark; rules relating to conformity assessment bodies; and conformity assessment procedures.

(viii) *Harmonization: Minimum and Maximum*

The EU has choices when it enacts harmonization legislation.[95] It may pass legislation that sets minimum standards, which do not preclude Member State from setting more exacting standards. Minimum harmonization enables Member States to maintain more stringent regulatory standards than those prescribed by EU standards, provided that these are compatible with the Treaty. The EU legislation sets a floor and the Treaty a ceiling, with Member States free to pursue their own policies within these boundaries. The EU can alternatively pass maximal legislation that covers the entire area. This entails exhaustive regulation of the given field, with the EU rules setting both the floor and the ceiling of regulatory protection, the corollary being the pre-emption of national action. There is evidence that the Commission now favours maximum harmonization, at least in areas such as consumer policy.[96]

Whether the harmonization measure is intended to preclude any national measures that differ from the EU directive may, however, be a contentious issue. In *Ratti*[97] the ECJ had to decide whether Directive 73/173 on the packaging and labelling of dangerous substances precluded a state from prescribing 'obligations and limitations which are more precise than, or at all events different from, those set out in the directive'. The Italian rules required that more information should be attached to the packaging than specified in the Directive. The Court held that the Directive was intended to prevent the state from laying down stricter rules of its own.

It may, by way of contrast, be apparent that the directive only partially regulates the area. In *Grunert*[98] a French producer of food preservative containing lactic and citric acid was prosecuted for selling the preservative for use in the making of certain pork meats. French law prohibited the use of preservatives unless authorized by the national authorities, and the acids used were not on the national list. Directives 64/54 and 70/357 did, however, list the two acids as among those that could be used to protect food against deterioration. This was Grunert's defence. The Directives went on to provide that, subject to certain conditions, they were not to affect provisions of national law specifying the foodstuffs to which the preservatives listed could be added. The ECJ decided therefore that the Member States had discretion as to the foodstuffs to which listed preservatives could be added.

7 THE INTERNAL MARKET: TENSIONS AND CONCERNS

The analysis thus far has shown the advantages of the New Approach to harmonization. It would, however, be wrong to imagine that the single market strategy has been problem-free. Commentators have perceived a number of tensions.

(A) CONSUMER INTERESTS AND COMMERCIAL POWER

One concern is whether consumer interests are sufficiently protected in the process of attaining a single market. Many national rules that impede intra-EU trade are designed to protect consumers. This has been recognized in the Treaty, through provisions such as Article 36 TFEU, and in the ECJ's jurisprudence through the *Cassis* mandatory requirements. It has been accepted by the Commission, since harmonization under the New Approach will be necessary where Member States have legitimate health and safety interests. The problem is whether such directives adequately balance consumer and manufacturing interests.

A McGee and S Weatherill, The Evolution of the Single Market—Harmonisation or Liberalisation[99]

It is submitted that there are structural reasons why the New Approach might serve the European consumer ill. The difficulty lies in the privatisation of the standards making process which supports the New Approach. For financial reasons it is likely that business will capture the standardisation process within CEN. Consumer organisations lack resources to participate fully in CEN committee work; in any event, consumer representation is ill-organized and haphazard in several Member States.... If standards making becomes the province of business alone, the balance between consumer protection and free trade will be distorted, prejudicing overall public confidence in the Community.

[*The authors return to the theme in their conclusion:*]

Not surprisingly, national governments appear to be the most effective at controlling developments.... Business and commercial interests have proved less successful in blocking developments, but have been highly effective in getting control of the standard-setting process, as in the case of Toy Safety, and in ensuring that other provisions take the form which they want. Thus, the EEIG Regulation[100] excluded worker participation, the Product Liability Directive allowed for the inclusion of the development risks defence and the Merger Regulation ignores all considerations of social policy. Again, it is not surprising to find that the highly motivated, well organised and generously resourced interests at work here have proved effective. Far less successful have been the consumer and employee interests, whose concerns seem largely to have been overridden. This too need not be a cause for surprise, but it is important to ask the fundamental question, what sort of Single Market is being created here? The answer seems to be that it is a Market in which business flourishes, relatively free from protective regulation, but the legitimate interests of other social groups are at risk of being ignored.

[99] (N 95) 585, 595.
[100] European Economic Interest Grouping.

These concerns should be taken seriously.[101] They were addressed in part by the establishment in 1992 of ANEC, the European Association for the Coordination of Consumer Representation in Standardization, a body which is independent of the European standards agencies themselves. This has served to alleviate the concerns expressed above, but not to dispel them. This is especially significant given that the standardization bodies have considerable interpretative latitude in fixing standards that are in accordance with the essential requirements specified in the empowering directive. The need for transparency and procedural input from affected stakeholders is commensurately all the more important. Problems still remain concerning access to the standardization bodies, as recognized by the Commission,[102] and confirmed by a study undertaken at its behest in 2009.[103] ANEC made a number of telling observations on the report.[104] It noted in particular that if the European Standardization System was to respond adequately to real European standards needs, then the governance bodies and the technical bodies had to feature representatives of European economic and societal actors with an equal strength of voice alongside the national delegations; the mere 'observership' of those from outside national delegations should therefore come to an end in CEN/CENELEC. As Russell, the Secretary-General of ANEC, astutely observed, 'access may be important. But access without influence is meaningless'.[105]

We should at the same time recognize that these concerns also exist when regulations about product safety and the like are made at national level. Tensions resulting from the imbalance in power between consumer and commercial interests are not created because harmonization measures are passed at EU rather than national level. They are endemic in most Western-style market economies. Whether consumer interests fare better in the regulatory process at national or EU level will therefore depend on the relative capacities of commercial and consumer interests to influence the legislative process within the EU and the nation state, and the relative costs involved in operating within these differing polities.

(B) THE SINGLE MARKET, MARKET FREEDOM, AND STRUCTURAL BALANCE

A second tension inherent in the single market project is that between an EU free market and its impact on the weaker economies of the Union. The SEA addressed this problem through Article 27 TFEU.[106] Whether this sufficed to meet the difficulty is more contestable.

R Dehousse, Completing the Internal Market: Institutional Constraints and Challenges[107]

At some point…a major challenge will have to be faced, for the objective of market integration itself remains unacceptable, politically speaking, for some Member States if it is not accompanied by specific effort to improve the social and economic cohesion within the Community. It is worth recalling in this respect that economically weaker countries have been reluctant to accept majority voting, precisely because they are those who might suffer most in the short term from the creation of a single market. Of the many problems linked to the completion of the internal market, this one is perhaps the most difficult: unlike the concerns for a high level of health, consumer safety or the environment, this kind of fear cannot be allayed by derogatory measures alone. A parallel in the Community's allocative and redistributive policies has been strongly advocated by recent studies, both from a theoretical and from a practical viewpoint. The Single Act pledges the Community to reinforce its action in favour of backward areas; it even explicitly states that the completion of the internal market should be pursued taking into account the existence of different levels of development within the Community.…

However, it fails to give the Community additional means to reach that end. The crucial point is that, at a given stage, progress towards the single European market might be conditioned by the capacity to tackle the problem of structural imbalances: if the Community does not find a way to offer some compensation to those countries which feel they have more to lose, market integration could be severely hampered. More than institutional pragmatism will be needed in order to cut this Gordian knot.

Fulfillment of the single market project can generate macro-economic and social tensions between rich, poor, and middle-class economies within the EU. This should come as no surprise. Reflect on experience within nation states. A market-driven national economic policy will often create regional problems within a particular country, with areas of high unemployment and relative poverty. It is not therefore surprising that a vigorous EU policy of increased competitiveness and breaking down trade barriers will produce similar tensions, albeit on a larger scale. Some countries will be concerned about their ability to survive and prosper within this barrier-free, competitive environment. Dehousse is therefore right to point to the connections between the single market project and the need to tackle structural imbalances within the EU. Articles 174–178 TFEU provide the foundation for structural policies to address this problem. The balance between the single market and structural intervention will, however, always be problematic.

(c) THE CHALLENGE TO POSITIVE INTEGRATION

The assumption in the earlier part of this chapter was that the single market project required both negative and positive integration, and that insofar as the SEA and subsequent reforms facilitated the latter, by rendering it easier to enact harmonization measures, this was a 'good thing'. Majone has challenged this assumption. He argues that the real costs of such regulations are borne by those who have to comply with them and not by those who make them, and hence that budgetary constraints have limited impact on the regulators, with the consequence that the 'volume, detail and complexity of Community regulations are often out of proportion with the benefits that they may reasonably be expected to produce'.[108] He argues moreover that Member States often enjoy a comparative advantage in devising regulations in areas such as telecommunications, consumer protection, and environmental

protection, because they are not tied to the lowest common denominator approach that often limits EU regulatory provisions, and because Member States have superior implementation mechanisms to the EU.[109]

Space precludes detailed analysis of this thesis. Suffice it to say for the present that while we should be mindful of the scope and application of EU regulatory competence, Majone's argument in this respect is but part of a broader and controversial thesis concerning the interpretation of EU competence, which is premised on distinctions between positive and negative rights, and between economic and social regulation.[110]

(D) POLITICS, ECONOMICS, AND THE SINGLE MARKET ENTERPRISE

Conceptions of market freedom are not value-free. The meaning of this phrase and the appropriate limits to free markets are contestable. These are key issues that divide political parties. There is sound economic evidence that removing barriers to intra-EU trade will bring economic benefits. There is nonetheless still room for difference of opinion about the desirable scope of protective EU measures, even among those of differing political persuasions who are committed to the European ideal. The politicization which accompanies market integration has been noted by commentators, such as Pelkmans, who states that an internal-market strategy that cuts deeply into the regulatory environment, severely limiting the options available to Member States, cannot pretend to be entirely apolitical.[111] Weiler develops the same theme.

J Weiler, The Transformation of Europe[112]

It is an article of faith for European integration that the Commission is not meant to be a mere secretariat, but an autonomous force shaping the agenda and brokering the decisionmaking of the Community. And yet at the same time, the Commission, as broker, must be ideologically neutral, not favouring Christian Democrats, Social Democrats or others.

This neutralization of ideology has fostered the belief that an agenda could be set for the Community, and the Community could be led towards an ever closer union among its peoples, without having to face the normal political cleavages present in the Member States. In conclusion, the Community political culture which developed in the 1960s and 1970s led…to an habituation of all political forces to thinking of European integration as ideologically neutral in, or transcendent over, the normal debates on the left–right spectrum. It is easy to understand how this will have served the process of integration, allowing a nonpartisan coalition to emerge around its overall objectives.

1992 changes this in two ways. The first is a direct derivation from the turn to majority voting. Policies can be adopted now within the Council that run counter not simply to the perceived interests of a Member State, but more specifically to the ideology of the government in power. The debates about the European Social Charter and the shrill cries of 'Socialism through the backdoor', as well as the emerging debate about Community adherence to the European Convention on Human Rights and abortion rights are harbingers of things to come….

The second impact of *1992* on ideological neutrality is subtler. The entire program rests on two pivots: the single market plan encapsulated in the White Paper, and its operation through the

> instrumentalities of the Single European Act. . . . It is not simply a technocratic program to remove the remaining obstacles to the free movement of all factors of production. It is at the same time a highly politicized choice of ethos, ideology and political culture: the culture of 'the market'. It is also a philosophy, at least one version of which—the predominant version—seeks to remove barriers to the free movement of factors of production, and to remove distortion to competition as a means to maximize utility. The above is premised on the assumption of formal equality of individuals. It is an ideology the contours of which have been the subject of intense debate within the Member States in terms of their own political choices. . . . A successful single market requires widespread harmonization of standards and environmental protection, as well as the social package of employees. This need for a successful market not only accentuates the pressure for uniformity, but also manifests a social (and hence ideological) choice which prizes market efficiency and European-wide neutrality of competition above other competing values.

The continuing relevance of this issue was starkly exemplified by the French negative vote in the referendum on the Constitutional Treaty, a result, in part, of the perception that the EU was too dominated by market considerations, thereby endangering traditional French social values. The same theme is apparent in the passage of the Services Directive,[113] which was radically revised because of pressure from the EP, which felt that it jeopardized the provision of traditional public services by giving undue weight to market competition.

8 THE INTERNAL MARKET: RECONCEPTUALIZATION

The single market project did not magically come to an end in December 1992. There was a continuing flow of internal market legislation post-1992. This was matched by a number of reports that addressed various aspects of the regulatory process.[114]

There were many reports focusing on attainment of the internal market in the economic sense of the term. In 1993 the Commission produced its strategic programme on 'Making the Most of the Internal Market',[115] in which it reviewed issues such as the completion of the legal framework and management of the single market. In 1996 the Commission undertook a wide-ranging study on the 'Impact and Effectiveness of the Single Market'.[116] The study measured the economic gains from the internal market and highlighted areas where further action was required, such as public procurement, tax harmonization, company law, and the transposition of directives. The Commission developed these themes in its 'Single-Market Action Plan',[117] in which it identified four principal goals for the development of the single market: making the rules more effective, dealing with market distortions, removing sectoral obstacles to market integration, and delivering a single market for all citizens. The Amsterdam European Council officially endorsed these goals in 1997. The 1997 Action Plan led to further reports that focused on matters such as making mutual recognition more effective.[118] Single market reform has focused heavily on the services sector.[119] This is exemplified by initiatives relating to financial services,[120]

mutual recognition of professional qualifications,[121] and the more general market for services.[122] The financial and banking crisis that began in 2008 led to new initiatives in this area.[123]

A broader conception of the internal market is however also to be found in a number of the papers from the Commission and the European Council. The internal market is conceptualized in more holistic terms, to include not only economic integration, but also consumer safety, social rights, labour policy, and the environment. This material is therefore of relevance for the concerns voiced in the previous section. This shift did not occur at any single moment. It developed across time. Certain important steps can nonetheless be identified.

The 1997 Action Plan was significant in this respect. The fourth strategic target was to deliver a single market for the benefit of all citizens. The Commission's introduction to the *Action Plan* consciously stressed that 'the single market was not simply an economic structure', but included basic standards of health and safety, equal opportunities, and labour law measures.[124] This theme was carried over in the 1997 Action Plan itself. The strategic target of delivering a single market for the benefit of all citizens was particularized through action directed towards protection of social rights, consumer rights, health and the environment, and the right of residence.[125]

The Lisbon European Council constituted another important stage in the reconfiguration of the internal market agenda. The meeting in March 2000 focused on employment, economic reform, and social cohesion. It set a 'new' strategic goal: the Union was to become 'the most competitive and dynamic knowledge-based economy in the world, capable of sustainable economic growth with more and better jobs and greater social cohesion'.[126] Completion of the internal market was one way of achieving this strategy,[127] and modernization of the European social model through an active welfare state was another. This was crucial to ensure that 'the emergence of this new economy does not compound the existing social problems of unemployment, social exclusion, and poverty'.[128] This objective was further particularized in terms of better education, an active employment policy, modernizing social protection, and promoting social inclusion.[129] These commitments were reiterated at the Feira European Council.[130] The same theme permeated the Nice European Council.[131] It considered a 'New Impetus for an Economic and Social Europe'. It approved the European Social Agenda developed by the Commission, which was characterized by the 'indissoluble link between economic performance and social progress'.[132] This link had been forged by the Commission and endorsed by the European Parliament.[133] Economic growth and social cohesion were seen as mutually reinforcing.[134] The Stockholm European Council echoed the same idea. There was 'full agreement that economic reform, employment and social policies were mutually reinforcing';[135] a 'dynamic Union should consist of active welfare states'.[136]

The principal Commission reports concerning the internal market in 2000 developed the ideas of the European Council. Thus the 2000 'Review of the Internal Market Strategy'[137] took the strategic remit of the Lisbon European Council as its starting point. The internal market should be made economically effective, but it should also foster job creation, social cohesion, and safety.[138] The interconnection between the economic and social aspects of the internal market is also apparent in the later report on the 'Functioning of Community Product and Capital Markets'.[139] In economic terms, a properly functioning internal market was the key to prosperity for EU citizens. In social terms, the internal market was seen as the guarantee of rights to safe, high-quality products.[140] The Commission accepted the conclusions of the Internal Market Council of March 2000 that high levels of consumer protection were needed for a well-functioning internal market,[141] and acknowledged that environmental concerns required a 'reinforced, symbiotic integration of environmental policy and economic reforms inside the Internal Market'.[142] The revised Commission Communication on 'Services of General Interest'[143] consciously drew on the conclusions of the Lisbon and Feira European Councils, and stressed the economic and social aspects of such services.

The willingness to consider the internal market in more holistic terms is to be welcomed. The Treaty does not, moreover, preclude taking account of non-market values, such as health and safety, even within internal market legislation, provided that the initial economic hurdle is met.

B de Witte, Non-market Values in Internal Market Legislation[144]

> The conclusion is . . . that internal market legislation, to be constitutionally valid, *must* satisfy a specific internal market test, in the sense that the authors of the act must make a plausible case that the act either helps to remove disparities between national provisions that hinder the free movement of goods, services or persons, or helps to remove disparities that cause distorted conditions of competition. However these need not be, and cannot logically be, the only purposes of internal market legislation. Such legislation also invariably and legitimately pursues other public policy objectives . . . Internal market legislation is always *also* about 'something else', and that something else may, in fact, be the main reason why the internal market measure was adopted. The multifaceted nature of internal market legislation is one of the inherent characteristics of that legislation and not a perverse ploy of European actors to extend the range of their competences.

There are, nonetheless, continuing tensions between the economic and social dimensions of the internal market. Thus the priorities in the 'Internal Market Strategy' for 2003–2006 were heavily economic in nature.[145] The passage of the Services Directive is a further timely reminder of the tensions that exist between the economic and social dimensions of the internal market.[146] The Commission's proposal[147] was

strongly criticized by the EP,[148] on the ground that it was too economic in its orientation and jeopardized the provision of public services. The Commission was forced to revise its proposals significantly,[149] as reflected in the final version of the Services Directive.[150] It is also the case that the balance between the economic and social dimensions of the Lisbon Strategy has altered over time. While both remain part of the Strategy,[151] the economic focus has often predominated, although the French rejection of the Constitutional Treaty because it was too economic in its orientation led to some renewed emphasis on the social dimension, albeit still within a 'tight' economic frame.[152] There have been subsequent Commission initiatives designed to facilitate single market integration.[153] In 2009 the President of the Commission asked Mario Monti to report on the single market. The report notes the significant challenges that lie ahead.

Monti Report 2010: A New Strategy for the Single Market, At the Service of Europe's Economy and Society[154]

The report highlights that today the single market is at a critical juncture, as it faces three challenges… The first challenge comes from the erosion of the political and social support for market integration in Europe. The single market is seen by many Europeans—citizens as well as political leaders—with suspicion, fear and sometimes open hostility. Two mutually reinforcing trends are at work: an 'integration fatigue', eroding the appetite for more Europe and for a *single* market; and more recently, a 'market fatigue', with a reduced confidence in the role of the *market*. The single market today is less popular than ever, while Europe needs it more than ever.

The second challenge comes from uneven policy attention given to the development of the various components of an effective and sustainable single market. Some of the difficulties encountered by the single market in recent years can be traced back not only to the incomplete 'welding together' of the national markets into one European market, but also to the unfinished business on two other fronts: the expansion to new sectors to accompany a fast changing economy and the effort to ensure that the single market is a space of freedom and opportunity that works for all, citizens, consumers and SMEs.

A third challenge comes from a sense of complacency that gained strength in the past decade, as if the single market had been really completed and could thus be put to rest as a political priority. The single market was felt to be 'yesterday's business', in need of regular maintenance but not of active promotion. The shift of attention away from the single market was further strengthened by the need to concentrate the EU's political energy on other challenging building blocks of the European construction: monetary union, enlargement and institutional reforms. With the entry into force of the Lisbon Treaty in January 2010, all the three major priorities have been achieved, and there is no reason to deflect attention away from the single market. On the contrary, the correct functioning of the monetary union and of enlargement call the single market back on stage.

[154] http://ec.europa.eu/internal_market/strategy/index_en.htm, 6.

The Monti Report is premised on the need for initiatives that will generate a stronger single market, foster consensus about the single market project, and deliver the single market ideal. The Report contains a valuable analysis of the economic challenges facing the single market project, recognizes the tensions between the economic and social dimensions of the single market, and seeks to address them.

9 CONCLUSIONS

i. The most significant contribution of the SEA and the single market project to the process of European integration may, in the long term, be that it jolted the Community out of the Euro-pessimism of the 1970s and early 1980s. If there had been no SEA, the new approach to harmonization might never have taken hold. The SEA laid the foundations for the institutional and substantive changes which have occurred since then. Causality in international affairs is difficult to determine. But it is doubtful whether the Maastricht Treaty would have been negotiated had the SEA not preceded it.

ii. The focus in the 1980s and early 1990s was, not unnaturally, on the economic dimensions of the single market. Legislative, administrative, and judicial initiatives contributed to the breaking down of the economic barriers to the single market. This is still a central aspect of single market policy.

iii. The focus from the mid-1990s onwards has shifted. The internal market is now felt to embrace broader concerns relating to social, environmental, and consumer policy. This has been a conscious shift by the EC, anxious to avoid the criticism that pursuit of the single market has undercut social, etc, protections within the Member States. There are nonetheless continuing tensions between the economic and social dimensions of the internal market.

FREE MOVEMENT OF GOODS: DUTIES, CHARGES, AND TAXES

1 CENTRAL ISSUES

i. This and the following chapter are concerned with the free movement of goods. This can be impeded in different ways. The most obvious form of protectionism will occur through customs duties or charges which have an equivalent effect, with the object of rendering foreign goods more expensive than their domestic counterparts. This is dealt with by Articles 28–30 TFEU. A state may also attempt to benefit domestic goods by taxes that discriminate against imports. This is covered by Articles 110–113 TFEU. These issues will be considered within this chapter.

ii. A state may, however, seek to preserve advantages for its own goods by imposing quotas or measures which have an equivalent effect on imports, thereby reducing the quantum of imported products. This is dealt with in Articles 34–37 TFEU, and is addressed in the next chapter.

iii. These two chapters are concerned with Member State action that creates barriers to trade. Such action can also result from aid granted by a Member State to a specific industry, which will disadvantage competing products from other Member States. EU law therefore regulates the grant of such aid through Articles 107–109 TFEU.[1] Private parties may also take action that partitions the market along national lines, and hence impedes realization of the single market. This can occur when private parties use industrial property rights to divide the EU on the basis of national divisions, or when firms agree not to compete in each other's markets. EU law addresses both issues in order to prevent private action from recreating barriers to trade analogous in their effect to duties or quotas.[2]

iv. The abolition of customs duties and charges having an equivalent effect is central to the idea of a customs union and a single market. As the Commission has stated, the Customs Union is a foundation of the EU and essential to the functioning of the single market, with the implication that the 'twenty seven Customs administrations of the EU must act as though they were one'.[3]

v. The ECJ has therefore interpreted Articles 28–30 strictly in order to ensure that this fundamental aim is fulfilled. It looks to the effect of a duty, and not its purpose, and has given a broad reading to 'charges having equivalent effect' to a customs duty. It has allowed only very limited exceptions to these Articles, and any breach will be unlawful *per se*.

[1] See Ch 29.
[2] See Chs 26–28.
[3] http://ec.europa.eu/taxation_customs/customs/policy_issues/customs_strategy/index_en.htm.

vi. The prohibition of taxes that discriminate against imports is equally central to the single market ideal. Customs duties apply when goods cross the border, and are caught by Articles 28–30 TFEU. A state may however discriminate against imports through differential taxes once the goods are in its country. Articles 110–113 TFEU proscribe such conduct.

vii. The case law concerning Articles 110–113 can be controversial. This is in part because the Treaty language requires the ECJ to make decisions about difficult matters, such as whether goods are similar to each other, or whether a differential tax regime is protective of home state products. It is also in part because tax rules may be used to foster national preferences in relation to matters such as the environment. The ECJ has to adjudicate on whether such rules are compatible with Articles 110–113.

viii. It is essential when reading the materials in this chapter to have some idea of the broader context into which they fit. The discussion of the legal materials will therefore be placed within the context of the more general issues concerning the customs union and taxation respectively.

2 ARTICLES 28–30: DUTIES AND CHARGES

Article 28(1) TFEU[4] is the foundational provision of this part of the Treaty:

> 1. The Union shall comprise a customs union which shall cover all trade in goods and which shall involve the prohibition between Member States[5] of customs duties on imports and exports and of all charges having equivalent effect, and the adoption of a common customs tariff in their relations with third countries.[6]

It is important to understand the structure of the other provisions in this part of the Treaty. The old Article 12 EEC prohibited the imposition of *new* customs duties and charges equivalent thereto,[7] while the old Article 13 EEC obliged Member States to abolish *existing* duties within the transitional period, in accordance with Articles 13–15; the old Article 16 EEC concerned the abolition of duties on exports. The passage of time has rendered the distinction between new and existing duties redundant. Article 30 TFEU now relates to any customs duties and charges equivalent thereto, whether concerning imports or exports, with no distinction being drawn as to when such duties were imposed:

> Customs duties on imports and exports and charges having equivalent effect shall be prohibited between Member States. This prohibition shall also apply to customs duties of a fiscal nature.

[4] Art 28 will almost always be used in conjunction with one of the other Treaty Arts in this area. When it is employed in this manner it will have direct effect: see, eg, Case 18/71 *Eunomia di Porro & Co v Italian Ministry of Education* [1971] ECR 811.

[5] The ECJ has interpreted Art 28 to prohibit customs duties, etc, even when they are applied within a Member State and are imposed on goods which enter or leave a particular region of that state: Cases C–363, 407, 409 and 411/93 *René Lancry SA v Direction Générale des Douanes* [1994] ECR I–3957; Case C–72/03 *Carbonati Apuani Srl* v *Commune di Carrara* [2004] ECR I–8027.

[6] The goods which benefit from the provisions on free movement are those which originate in a Member State and those which come from outside the EU but are in free circulation within the Member States: Art 28(2) TFEU. The criteria for goods which come from outside the EU to be in free circulation within the EU are contained in Art 29 TFEU: the goods must have complied with import formalities, and any customs duties and charges must have been paid by the trader and not have been reimbursed.

[7] It was Art 12 EEC, now Art 30 TFEU, that was in issue in the famous *Van Gend* case, which laid the foundations for the concept of direct effect within EU law: Ch 7.

(A) DUTIES AND CHARGES: EFFECT NOT PURPOSE

The Court made it clear from the outset that the application of what is now Article 30 TFEU depends upon the effect of the duty or charge, and not on its purpose.

Case 7/68 **Commission v Italy**
[1968] ECR 423

[Note Lisbon Treaty renumbering: Art 169 is now 258 TFEU;
Art 16 has been repealed, but the substance is now covered by Art 30 TFEU]

Italy imposed a tax on the export of artistic, historical, and archæological items. The Commission brought an action under Article 169 EEC alleging that this was in breach of Article 16 EEC, which prohibited duties and charges on exports. Italy argued that the items should not be regarded as goods for the purpose of the rules on the customs union and that the purpose of the tax in question was not to raise revenue, but to protect the artistic etc. heritage of the country. The Court rejected these arguments.

THE ECJ

2. The Classification of the Disputed Tax Having Regard to Article 16 of the Treaty

In the opinion of the Commission the tax in dispute constitutes a tax having an effect equivalent to a customs duty on exports and therefore the tax should have been abolished, under Article 16 of the Treaty, no later than the end of the first stage of the common market, that is to say, from 1 January 1962. The defendant argues that the disputed tax does not come within the category, as it has its own particular purpose which is to ensure the protection and safety of the artistic, historic and archaeological heritage which exists in the national territory. Consequently, the tax does not in any respect have a fiscal nature, and its contribution to the budget is insignificant.

Article 16 of the Treaty prohibits the collection in dealings between Member States of any customs duty on exports and of any charge having an equivalent effect, that is to say, any charge which, by altering the price of an article exported, has the same restrictive effect on the free circulation of that article as a customs duty. That provision makes no distinction based on the purpose of the duties and charges the abolition of which it requires.

It is not necessary to analyse the concept of the nature of the fiscal system on which the defendant bases its argument upon this point, for the provisions of the section of the Treaty concerning the elimination of customs duties between the Member States exclude the retention of customs duties and charges having an equivalent effect without distinguishing in that respect between those which are and those which are not of a fiscal nature.

The disputed tax falls within Article 16 by reason of the fact that export trade in the goods in question is hindered by the pecuniary burden which it imposes on the price of the exported articles.

When a tax is caught by Article 30 TFEU as a duty or charge that is of equivalent effect then it is in effect *per se* unlawful. Thus, attempts by Italy to argue that its tax could be defended on the basis of what is now Article 36 TFEU were rejected by the Court, since this can be used as a defence only in relation to quantitative restrictions which are caught by Article 34 TFEU. It cannot validate fiscal measures that are prohibited by Article 30 TFEU.

The emphasis in the *Italian Art* case on effect as opposed to purpose is clearly justifiable. The peremptory force of what is now Article 30 TFEU would be significantly weakened if a state could argue that a duty or charge should not be prohibited because its purpose was in some sense non-fiscal

in nature. Had the Court proved receptive to this argument it would, moreover, have required the judiciary to adjudicate on which types of social policy should be regarded as possessing a legitimate purpose sufficient to take them outside the Treaty.

The ECJ reaffirmed its emphasis on effect rather than purpose in other cases. It also made it clear that the Treaty provisions can be applicable even if the state measure was not designed with protectionism in mind. Thus in *Diamantarbeiders*[8] the Court considered the legality of a Belgian law requiring 0.33 per cent of the value of imported diamonds to be paid into a social fund for workers in the industry. The fact that the purpose of the fund was neither to raise money for the exchequer nor to protect domestic industry[9] did not save the charge in question. It was sufficient that the charge was imposed on goods because they had crossed a border.

(B) CHARGES HAVING AN EQUIVALENT EFFECT: GENERAL PRINCIPLES

Article 30 TFEU prohibits not only customs duties, but also charges having an equivalent effect (CEE).[10] The reason is obvious. It is designed to catch protectionist measures that create a similar barrier to trade to customs duties *stricto sensu*. It is therefore unsurprising that the ECJ has interpreted the term expansively.

Case 24/68 **Commission v Italy** [1969] ECR 193

[Note Lisbon Treaty renumbering: Arts 9 and 12 are now Arts 28 and 30 TFEU; Arts 13 and 16 have been repealed]

Italy imposed a levy on goods which were exported to other Member States with the ostensible purpose of collecting statistical material for use in discerning trade patterns. The Court reiterated its holding that customs duties were prohibited irrespective of the purpose for which the duties were imposed, and irrespective of the destination of the revenues which were collected. It then continued as follows.

THE ECJ

8. The extension of the prohibition of customs duties to charges having an equivalent effect is intended to supplement the prohibition against obstacles to trade created by such duties by increasing its efficiency.

The use of these two complementary concepts thus tends, in trade between Member States, to avoid the imposition of any pecuniary charge on goods circulating within the Community by virtue of the fact that they cross a national border.

9. Thus, in order to ascribe to a charge an effect equivalent to a customs duty, it is important to consider this effect in the light of the objectives of the Treaty, in the Parts, Titles and Chapters in which Articles 9, 12, 13 and 16 are to be found, particularly in relation to the free movement of goods.

[8] Cases 2 and 3/69 *Sociaal Fonds voor de Diamantarbeiders v SA Ch Brachfeld & Sons* [1969] ECR 211. See also Cases 485 and 486/93 *Maria Simitzi v Municipality of Kos* [1995] ECR I–2655; Cases C–441 and 442/98 *Michailidis AE v IKA* [2000] ECR I–7145; Case C–293/02 *Jersey Produce Marketing Association Ltd v States of Jersey and Jersey Potato Marketing Board* [2005] ECR I–9543, [55]–[56]; Case C–72/03 *Carbonati Apuani* (n 5) [30]–[31].

[9] Belgium did not produce diamonds.

[10] R Barents, 'Charges Having an Equivalent Effect to Customs Duties' (1978) 15 CMLRev 415.

> Consequently, any pecuniary charge, however small and whatever its designation and mode of application, which is imposed unilaterally on domestic or foreign goods by reason of the fact that they cross a frontier, and which is not a customs duty in the strict sense, constitutes a charge having equivalent effect within the meaning of Articles 9, 12, 13 and 16 of the Treaty, even if it is not imposed for the benefit of the State, is not discriminatory or protective in effect and if the product on which the charge is imposed is not in competition with any domestic product.
>
> 10. It follows . . . that the prohibition of new customs duties or charges having equivalent effect, linked to the principle of the free movement of goods, constitutes a fundamental rule which, without prejudice to the other provisions of the Treaty, does not permit of any exceptions.

This clear message was repeated in *Diamantarbeiders*.[11] The ECJ reiterated the broad definition of a CEE. It made it clear that this would bite whether those affected by the charge were all Community citizens, those from the importing state, or only the nationals from the state that was responsible for passing the measure under scrutiny.

These decisions signalled the Court's intention that the Articles of the Treaty concerned with customs duties and CEEs were to be taken seriously.[12] They were not to be circumvented by the form in which the charge was imposed. They were applicable whether the duty/charge discriminated or not. They had an impact irrespective of whether the product on which the charge was imposed was in competition with domestic goods, and they admitted of no exceptions.

The ECJ's strident approach was unsurprising and warranted, given the centrality of abolishing customs duties and CEEs to the very notion of a single market. The abolition of such measures goes to the very heart of this ideal. It was a necessary first step in the attainment of market integration. The eradication of customs duties and the like was vital if the broader aims of the common market were to be fulfilled. It is moreover clear that a charge which is imposed not on a product as such, but on a necessary activity in connection with the product, can be caught by Articles 30 and 110 TFEU.[13]

(c) CHARGES HAVING AN EQUIVALENT EFFECT; INSPECTIONS AND THE 'EXCHANGE EXCEPTION'

A common defence is that the charge imposed on imported goods is justified because it is merely payment for a service which the state has rendered to the importer, and that therefore it should not be regarded as a CEE. The Court has been willing to accept this argument in principle. It has, however, been equally alert to the fact that a state might present a charge in this way when in reality it was seeking to impede imports, or in circumstances where there was no commercial exchange at all. The Court has therefore closely scrutinized such claims from states and has not readily accepted them.

Thus in *Commission v Italy*,[14] considered above, the Italian Government argued that the charge should be seen as the consideration for the statistical information which it collected. The government contended that this information 'affords importers a better competitive position in the Italian market whilst exporters enjoy a similar advantage abroad';[15] and that therefore the charge should be viewed as

[11] Cases 2 and 3/69 (n 8).

[12] Case 29/72 *Marimex SpA v Italian Finance Administration* [1972] ECR 1309; Case 39/73 *Rewe- Zentralfinanz v Direktor der Landwirtschaftskammer Westfalen-Lippe* [1973] ECR 1039; Case C–130/93 *Lamaire NV v Nationale Dienst voor Afzet van Land- en Tuinbouwprodukten* [1994] ECR I–3215; Case C–16/94 *Edouard Dubois et Fils SA v Garonor Exploitation SA* [1995] ECR I–2421; Case C–72/03 *Carbonati Apuani* (n 5) [20]; Case C–234/99 *Niels Nygard v Svineafgiftsfonden* [2002] ECR I–3657, [19].

[13] Case C–206/06 *Essent Netwerk Noord BV v Aluminium Delfzijl BV* [2008] ECR I–5497, [44].

[14] Case 24/68 [1969] ECR 193, [15]–[16].

[15] Ibid [15].

consideration for a service rendered, as a *quid pro quo*, and not as a CEE. The Court was unconvinced. It held that the statistical information was beneficial to the whole economy and to the administrative authorities. It then continued in the following vein:[16]

> Even if the competitive position of importers and exporters were to be particularly improved as a result, the statistics still constitute an advantage so general, and so difficult to assess, that the disputed charge cannot be regarded as the consideration for a specific benefit actually conferred.

The same theme is to be found in other ECJ decisions.[17] Even when the charge *is* more directly related to some action taken by the state with respect to specific imported goods, the Court has been reluctant to accept that the charge can be characterized as consideration for a service rendered. This is apparent from the *Bresciani* case.

Case 87/75 **Bresciani v Amministrazione Italiana delle Finanze**
[1976] ECR 129

The Italian authorities imposed a charge for the compulsory veterinary and public-health inspections which were carried out on imported raw cowhides. Was this to be regarded as a CEE or not?

THE ECJ

6. The national court requests that the three following considerations be taken into account:

First, the fact that the charge is proportionate to the quantity of the goods and not to their value distinguishes a duty of the type at issue from charges which fall within the prohibition under Article 13 of the EEC Treaty. Second, a pecuniary charge of the type at issue is no more than the consideration required from individuals who, through their own action in importing products of animal origin, cause a service to be rendered. In the third place, although there may be differences in the method and time of its application, the duty at issue is also levied on similar products of domestic origin.

. . .

8. The justification for the obligation progressively to abolish customs duties is based on the fact that any pecuniary charge, however small, imposed on goods by reason of the fact that they cross a frontier constitutes an obstacle to the free movement of such goods.

The obligation progressively to abolish customs duties is supplemented by the obligation to abolish charges having equivalent effect in order to prevent the fundamental principle of the free movement of goods within the common market from being circumvented by the imposition of pecuniary charges of various kinds by a Member State.

The use of these two complementary concepts thus tends, in trade between Member States, to avoid the imposition of any pecuniary charge on goods circulating within the Community by virtue of the fact that they cross a national frontier.

9. Consequently, any pecuniary charge, whatever its designation and mode of application, which is unilaterally imposed on goods imported from another Member State by reason of the fact that they cross a frontier, constitutes a charge having an effect equivalent to a customs duty. In appraising a duty of the type at issue it is, consequently, of no importance that it is proportionate to the quantity of the imported goods and not to their value.

10. Nor, in determining the effects of the duty on the free movement of goods, is it of any importance that a duty of the type at issue is proportionate to the costs of a compulsory public health inspection

[16] Ibid [16].
[17] Case 63/74 *W Cadsky SpA v Istituto Nazionale per il Commercio Estero* [1975] ECR 281.

carried out on entry of the goods. The activity of the administration of the State intended to maintain a public health inspection system imposed in the general interest cannot be regarded as a service rendered to the importer such as to justify the imposition of a pecuniary charge. If, accordingly, public health inspections are still justified at the end of the transitional period, the costs which they occasion must be met by the general public which, as a whole benefits from the free movement of Community goods.

11. The fact that the domestic production is, through other charges, subjected to a similar burden matters little unless those charges and the duty in question are applied according to the same criteria and at the same stage of production, thus making it possible for them to be regarded as falling within a general system of internal taxation applying systematically and in the same way to domestic and imported products.

The ECJ's judgment in *Bresciani* indicates clearly its reluctance to accede to arguments that will take pecuniary charges outside the Treaty. In paragraph 9 it rejected the *first* of the Italian arguments: the fact that the charge was proportionate to the quantity of imported goods made no difference, since Article 30 TFEU prohibited *any* charge imposed by reason of the fact that goods crossed a frontier.[18] The rejection of the *second* argument in paragraph 10 was equally significant. The state's argument had some plausibility: if you wish to import a product that requires health inspection, then you, the importer, should bear the cost. The Court's response was, however, unequivocal: the cost of inspections to maintain public health should be borne by the general public. It is doubtful whether this makes sense in micro-economic terms.[19] The ECJ's conclusion was, however, designed to limit the ambit of any exceptions to what are now Articles 28–30 TFEU. This is equally apparent in the way in which the Court disposed of the state's *third* contention. The ECJ's response is to be found in paragraph 11 and required a strict equivalence between the charges levied on domestic and imported goods. Other attempts to employ the exchange argument have not generally proven successful.[20]

(D) CHARGES HAVING AN EQUIVALENT EFFECT: INSPECTIONS AND FULFILMENT OF MANDATORY LEGAL REQUIREMENTS

Where EU legislation *permits* an inspection to be undertaken by a state, the national authorities cannot recover any fees charged from the traders.[21] The Court has, however, accepted that a charge imposed by a state will escape the prohibition contained in Articles 28–30 TFEU when it is levied to cover the cost of a *mandatory* inspection required by EU law.[22]

[18] A charge will be deemed to be a CEE if it is a flat-rate charge which is based on the value of the goods: Case 170/88 *Ford España v Spain* [1989] ECR 2305.

[19] By placing the cost on the general public it means that the importer of the product will not have to bear what is in reality one of the costs of making that product.

[20] See, eg, Case 43/71 *Politi SAS v Italian Ministry of Finance* [1971] ECR 1039; Case 132/82 *Commission v Belgium* [1983] ECR 1649; Case 340/87 *Commission v Italy* [1989] ECR 1483; Case C–209/89 *Commission v Italy* [1991] ECR I–3533; Case C–272/95 *Bundesantalt für Landwirtschaft und Ernährung v Deutsches Milch-Kontor GmbH* [1997] ECR I–1905.

[21] Case 314/82 *Commission v Belgium* [1984] ECR 1543.

[22] Case 46/76 *Bauhuis v Netherlands* [1977] ECR 5; Case 1/83 *IFG v Freistaat Bayern* [1984] ECR 349; Case C–389/00 *Commission v Germany* [2003] ECR I–2001. The costs of checks carried out pursuant to mandatory obligations imposed by international conventions to which all the Member States are party are treated in the same way: Case 89/76 *Commission v Netherlands* [1977] ECR 1355.

Case 18/87 **Commission v Germany**
[1988] ECR 5427

[Note Lisbon Treaty renumbering: Arts 9–12 and 36 are now Arts 28–30 and 36 TFEU]

German regional authorities charged certain fees on live animals imported into the country. These charges were to cover the cost of inspections undertaken pursuant to Directive 81/389. The question arose whether they should be regarded as CEEs. The ECJ began by stating the now orthodox proposition that any pecuniary charge imposed as a result of goods crossing a frontier was caught by the Treaty, either as a customs duty or as a CEE. It then recognized an exception to this basic principle.

THE ECJ

6. However, the Court has held that such a charge escapes that classification if it relates to a general system of internal dues applied systematically and in accordance with the same criteria to domestic products and imported products alike (...Case 132/78 *Denkavit* v *France*...), if it constitutes payment for a service in fact rendered to the economic operator of a sum in proportion to the service (...Case 158/82 *Commission* v *Denmark*...), or again, subject to certain conditions, if it attaches to inspections carried out to fulfil obligations imposed by Community law (...Case 46/76 *Bauhuis* v *Netherlands*...).

7. The contested fee, which is payable on importation and transit, cannot be regarded as relating to a general system of internal dues. Nor does it constitute payment for a service rendered to the operator, because this condition is satisfied only if the operator in question obtains a definite specific benefit..., which is not the case if the inspection serves to guarantee, in the public interest, the health and life of animals in international transport....

8. Since the contested fee was charged in connection with inspections carried out pursuant to a Community provision, it should be noted that according to the case law of the Court...such fees may not be classified as charges having an effect equivalent to a customs duty if the following conditions are satisfied:

(a) they do not exceed the actual costs of the inspections in connection with which they are charged;

(b) the inspections in question are obligatory and uniform for all the products concerned in the Community;

(c) they are prescribed by Community law in the general interest of the Community;

(d) they promote the free movement of goods, in particular by neutralizing obstacles which could arise from unilateral measures of inspection adopted in accordance with Article 36 of the Treaty.

9. In this instance these conditions are satisfied by the contested fee. In the first place it has not been contested that it does not exceed the real cost of the inspections in connection with which it is charged.

10. Moreover, all the Member States of transit and destination are required, under, *inter alia*, Article 2(1) of Directive 81/389/EEC...to carry out the veterinary inspections in question when the animals are brought into their territories, and therefore the inspections are obligatory and uniform for all the animals concerned in the Community.

11. Those inspections are prescribed by Directive 81/389/EEC, which establishes the measures necessary...for the protection of live animals during international transport, with a view to the protection of live animals, an objective which is pursued in the general interest of the Community and not a specific interest of individual states.

> 12. Finally, it appears in the preambles to the . . . directives that they are intended to harmonize the laws of the Member States regarding the protection of animals in international transport in order to eliminate technical barriers resulting from disparities in the national laws. . . . In addition, failing such harmonization, each Member State was entitled to maintain or introduce, under the conditions laid down in Article 36 of the Treaty, measures restricting trade which were justified on grounds of the protection of the health and life of animals. It follows that the standardization of the inspections in question is such as to promote the free movement of goods.

(E) RECOVERY OF UNLAWFUL CHARGES

The general principle[23] is that a Member State must repay charges that have been unlawfully levied.[24] The procedural conditions for such repayment may be less favourable than those applying in actions between private individuals, provided that they apply in the same way to actions based on EU law and national law, and provided also that they do not make recovery impossible or excessively difficult.[25] There is, however, an exception to this general rule for circumstances in which the trader has passed on the loss to customers, since reimbursement could lead to the trader being unjustly enriched. This very exception may itself be qualified where the trader can, nonetheless, show that it has suffered loss.[26] The burden of proving that the duties have not been passed on to others cannot however be placed on the taxpayer.[27]

(F) THE CUSTOMS UNION: THE BROADER PERSPECTIVE

The discussion thus far has focused on the important legal issues surrounding Articles 28–30 TFEU, and the limits placed on the capacity of Member States to impose duties or charges when goods cross a frontier. It would, however, be mistaken to believe that this constitutes the entirety of EU law in this area.

The *substantive importance of* customs law is far greater than this.[28] The consequence of the breaking down of customs barriers between Member States is that once goods are in the EU they move freely. The corollary is that 'the ring fence around the single market is only as strong as its weakest link', and that there is no 'second chance' to impose limits on goods coming from a third country.[29] The maintenance of effective customs control for goods coming from outside the EU is important for a number of reasons. Such goods will be subject to a tariff, which is a significant part of the EU's own resources. The EU has, therefore, a strong interest in combating fraud. The fact that there is in effect only ever one customs barrier for goods to enter the EU also has implications for the battle against organized crime, counterfeit goods, and the like. It is clear that customs have a role to play in the fight

against terrorism.[30] These objectives are reflected in the 2008 modernized customs code,[31] and in the attendant Commission strategy document.[32]

This has led to a number of *organizational initiatives* designed to meet these new challenges. There is no EU customs service. The EU works through and with the customs authorities in the Member States. Much time was spent on implementing the Customs 2002 Programme,[33] the object of which was that the Member States' customs administrations should operate as efficiently and as effectively as would a single administration.[34] This was especially important in the light of enlargement. Commission initiatives from 2003,[35] endorsed by the Council,[36] were designed to expedite customs checks through increased use of electronic communication that could be applied by the customs authorities of all Member States.[37] These have been combined with initiatives designed to use customs in order to combat crime, fraud, and terrorism and the creation of a Customs Security Programme.[38]

3 ARTICLES 110–113: DISCRIMINATORY TAX PROVISIONS

The preceding discussion has focused on Articles 28–30 TFEU. The focus now shifts to discriminatory taxes. Article 110 TFEU is the central provision and has been directly effective since 1 January 1962.[39]

> No Member State shall impose, directly or indirectly, on the products of other Member States any internal taxation of any kind in excess of that imposed directly or indirectly on similar domestic products.
>
> Furthermore, no Member State shall impose on the products of other Member States any internal taxation of such a nature as to afford indirect protection to other products.

(A) THE PURPOSE OF ARTICLE 110

The aim of Article 110 TFEU can be stated quite simply: it is to prevent the objectives of Articles 28–30 from being undermined by discriminatory internal taxation. We have already seen that Articles 28–30 are designed to prevent customs duties, or charges equivalent thereto, from impeding the free flow of goods. The Treaty outlaws such measures, whatever legal form they assume, when they are imposed as a result of a product crossing a frontier. These provisions would, however, be of little avail if it were open to a state to prejudice foreign products once they were inside its own territory by

levying discriminatory taxes, thereby disadvantaging those imported products in competition with domestic goods. Article 110 is designed to prevent this from happening, and this has been recognized by the ECJ, which demands complete neutrality of internal taxation as regards domestic and imported products.[40]

(B) ARTICLE 110(1): DIRECT DISCRIMINATION

Article 110(1) does not stipulate that a Member State must adopt any particular regime of internal taxation. It requires only that whatever system is chosen should be applied without discrimination to similar imported products.

Thus in *Commission v Italy*[41] the Italian Government charged lower taxes on regenerated oil than on ordinary oil. The policy was motivated by ecological considerations, but imported regenerated oil did not benefit from the same advantage. In its defence Italy argued that it was not possible to determine whether imported oil was regenerated or not. This argument was rejected by the ECJ, which held that it was for the importers to show that their oil came within the relevant category, subject to a reasonable standards of proof, and that a certificate from the state of export could be used to identify the nature of the oil. Similarly in *Hansen*[42] the ECJ insisted that a German rule making tax relief available to spirits made from fruit by small businesses and collective farms must be equally applicable to spirits in the same category coming from elsewhere in the EU.[43]

The rules relating to non-discrimination with respect to the payment of taxes will also be broken if the procedure for tax collection treats domestic goods and those which come from another Member State unequally.[44] This is demonstrated by *Commission v Ireland*.[45] In this case, although the tax applied to all goods irrespective of origin, domestic producers were treated more leniently as regards payment, being allowed a number of weeks before payment was actually demanded, whereas importers had to pay the duty directly on importation.

(C) ARTICLE 110(1): INDIRECT DISCRIMINATION

Article 110(1) covers indirect as well as direct discrimination. There may well be tax rules that do not explicitly differentiate between the tax liability of goods based on country of origin, but which none the less place a greater burden on commodities coming from another Member State. The ECJ has emphasized that a tax system will be compatible with Article 110 only if it excludes 'any possibility' of imported products being taxed more heavily than similar domestic goods.[46]

Case 112/84 **Humblot v Directeur des Services Fiscaux**
[1985] ECR 1367

[Note Lisbon Treaty renumbering: Art 95 is now Art 110 TFEU]

French law imposed an annual car tax. The criterion for the amount of tax to be paid was the power rating of the car. Below a 16CV rating the tax increased gradually to a maximum of 1,100 francs. For cars above 16CV in power there was a flat rate of 5,000 francs. There was no French car which was rated above 16CV, and therefore the higher charge was borne only by those who had imported cars. Humblot was charged the 5,000 francs on a 36CV imported vehicle, and argued that this tax violated Article 95.

THE ECJ

12. It is appropriate in the first place to stress that as Community law stands at present the Member States are at liberty to subject products such as cars to a system of road tax which increases progressively in amount depending on an objective criterion, such as the power rating for tax purposes, which may be determined in various ways.

13. Such a system of domestic taxation is, however, compatible with Article 95 only in so far as it is free from any discriminatory or protective effect.

14. That is not true of a system like the one at issue in the main proceedings. Under that system there are two distinct taxes: a differential tax which increases progressively and is charged on cars not exceeding a given power rating for tax purposes and a fixed tax on cars exceeding that rating which is almost five times as high as the highest rate of the differential tax. Although the system embodies no formal distinction based on the origin of the products it manifestly exhibits discriminatory or protective features contrary to Article 95, since the power rating determining liability to the special tax has been fixed at a level such that only imported cars, in particular from other Member States, are subject to the special tax whereas all cars of domestic manufacture are liable to the distinctly more advantageous differential tax.

15. In the absence of considerations relating to the amount of the special tax, consumers seeking comparable cars as regards such matters as size, comfort, actual power, maintenance costs, durability, fuel consumption and price would naturally choose from among cars above and below the critical power rating laid down by French law. However, liability to the special tax entails a much larger increase in taxation than passing from one category of car to another in a system of progressive taxation embodying balanced differentials like the system on which the differential tax is based. The resultant additional taxation is liable to cancel out the advantages which certain cars imported from other Member States might have in consumers' eyes over comparable cars of domestic manufacture, particularly since the special tax continues to be payable for several years. In that respect the special tax reduces the amount of competition to which cars of domestic manufacture are subject and hence is contrary to the principle of neutrality with which domestic taxation must comply.

The *Humblot* case provides a good example of the ECJ's determination to catch indirect as well as direct discrimination. Its reasoning is cogent, demonstrating as it does the way in which such tax provisions can distort the competitive process in the car market. The French authorities duly revised the tax rules in the light of the Court's decision, but the new scheme was challenged and found to be in breach of Community law. Under this new regime the French authorities replaced the 5,000 franc tax for cars above 16CV with nine more specific tax bands, the application of which was dependent on the power of the car. Although this scheme was less obviously discriminatory than that condemned

in *Humblot*, it was still the case that the tax rate increased sharply above 16CV. This new tax system was therefore condemned in *Feldain*.[47]

(D) ARTICLE 110: NATIONAL AUTONOMY AND FISCAL CHOICES

While the Treaty prohibits indirect as well as direct discrimination under Article 110(1), it may be necessary to determine which is in issue in any particular case, because while direct discrimination on grounds of nationality cannot be justified, tax rules of a Member State that tend none the less to favour the national producers may be saved if there is some objective justification. The idea of objective justification is relevant to other Articles concerning, for example, free movement of goods, free movement of workers, and equal treatment.[48] The Court will allow the defence to plead that there was some objective policy reason, which is acceptable to the EU, to justify the state's action. In this way such Treaty Articles are prevented from becoming too harsh or draconian in their application. The *Chemial* case exemplifies this judicial approach.

Case 140/79 **Chemial Farmaceutici v DAF SpA**
[1981] ECR 1[49]

Italy taxed synthetic ethyl alcohol more highly than ethyl alcohol obtained from fermentation, even though the products could be used interchangeably. Italy was not a major producer of the synthetic product. The object was to favour the manufacture of ethyl alcohol from agricultural products, and to restrain the processing into alcohol of ethylene, a petroleum derivative, in order to reserve that raw material for more important economic uses. The Court made the following observations on this policy choice.

THE ECJ

13. ...It accordingly constitutes a legitimate choice of economic policy to which effect is given by fiscal means. The implementation of that policy does not lead to any discrimination since although it results in discouraging imports of synthetic alcohol into Italy, it also has the consequence of hampering the development in Italy itself of production of alcohol from ethylene, that production being technically perfectly feasible.

14. As the Court has stated on many occasions...in its present stage of development Community law does not restrict the freedom of each Member State to lay down tax arrangements which differentiate between certain products on the basis of objective criteria, such as the nature of the raw materials used or the production process employed. Such differentiation is compatible with Community law if it pursues economic policy objectives which are themselves compatible with the requirements of the Treaty and its secondary law and if the detailed rules are such as to avoid any form of discrimination, direct or indirect, in regard to imports from other Member States or any form of protection of competing domestic products.

15. Differential taxation such as that which exists in Italy for denatured synthetic alcohol on the one hand and denatured alcohol obtained by fermentation on the other satisfies these requirements. It appears in fact that that system of taxation pursues an objective of legitimate industrial policy in that it is such as to promote the distillation of agricultural products as against the manufacture of alcohol

[47] Case 433/85 *Feldain v Directeur des Services Fiscaux* [1987] ECR 3536; Case 76/87 *Seguela v Administration des Impôts* [1988] ECR 2397; Case C–265/99 *Commission v French Republic* (n 46).

[48] See Chs 19, 21, 24.

[49] See also Case 46/80 *Vinal SpA v Orbat SpA* [1981] ECR 77.

from petroleum derivatives. That choice does not conflict with the rules of Community law or the requirements of a policy decided within the framework of the Community.

16. The detailed provisions of the legislation at issue before the national court cannot be considered as discriminatory since, on the one hand, it is not disputed that imports from other Member States of alcohol by fermentation qualify for the same tax treatment as Italian alcohol produced by fermentation and, on the other hand, although the rate of tax prescribed for synthetic alcohol results in restraining the importation of synthetic alcohol originating in other Member States, it has an equivalent economic effect in the national territory in that it also hampers the establishment of profitable production of the same product in Italian industry.

The Court predicates its acceptance of the Italian policy on the basis that it does not result in any discrimination, whether direct or indirect. Notwithstanding this, the ECJ's reasoning bears testimony to its willingness to accept objective justifications where the national policy is acceptable from the EU's perspective, even if this benefits domestic traders more than importers. It is clear, as the Court points out, that the Italian policy would hamper an Italian producer that wished to make synthetic ethylene alcohol. However, there was little domestic production of that product, and therefore the Italian tax hit importers harder than firms based in Italy. The same reasoning can be seen in other decisions.

Thus in *Commission v France* the Commission[50] alleged that a French rule which taxed sweet wines produced in a traditional manner at a lower rate than liqueur wines was contrary to what is now Article 110 TFEU. The Court disagreed. It found that there was no direct discrimination on grounds of origin or nationality. Sweet wines made in the natural manner tended to be produced in areas where the growing conditions were less than optimal, since there would often be poor soil and low rainfall. The rationale for the French policy was to provide some fiscal incentives for production in these areas. The Court was willing to accept that this could constitute an objective justification. In *Outokumpu Oy*[51] the ECJ held that it was legitimate for a Member State to tax the same or similar product differentially, provided that this was done on the basis of objective criteria, such as the nature of the raw materials used or the production process employed. Article 110 did not preclude differential tax rates on electricity, where they were based on environmental considerations, provided that there was no discrimination against imports.[52]

It is, moreover, possible for differential tax rates on cars, the *Humblot* case notwithstanding, to escape the prohibition of Article 110. This could be so if the differential rates were to encourage the use of more environmentally friendly models, provided that they did not discriminate against imports. This is exemplified by *Commission v Greece*.[53] The ECJ was once again faced with a national fiscal measure that imposed a progressively higher tax based on the cylinder capacity of the car. It held that this would not constitute a breach of what is now Article 110 unless it was discriminatory, and this would not be the case unless it both discouraged customers from buying highly taxed imported cars and encouraged them to buy domestic cars instead. The mere fact that all cars in the highest tax bracket were imported was not sufficient to establish a violation of Article 110. EU law did not prohibit the use of tax policy to attain social ends, provided that the tax was based on an objective criterion, was not discriminatory, and did not have a protective effect.

(E) THE RELATIONSHIP BETWEEN ARTICLE 110(1) AND (2)

Article 110(1) TFEU prohibits the imposition of internal taxes on products from other Member States in excess of those levied on *similar* domestic products. Thus once the two relevant products are judged similar then Article 110(1) bites, with the consequence that excessive taxes levied on the imported goods are banned. The dividing line between Article 110(1) and (2) may be problematic, since it can be contestable whether goods are deemed to be similar or not. This issue will be addressed below.

Article 110(2) is designed to catch national tax provisions that apply unequal tax ratings to goods that may not be strictly similar, but which may nonetheless be in competition with each other. The object is to prevent these differential tax ratings from affording indirect protection to the domestic goods. Thus, wine and beer may not be similar goods, but there may be some competition between them. Economists term this relationship cross-elasticity of demand: as the price of one product rises in relation to another, so consumers switch to the lower-priced product. The extent to which they switch will depend on factors such as the price difference between the products and the degree to which consumers perceive them to be interchangeable. If a state that produces little wine, but much beer, taxes the former considerably more highly than the latter, then wine sellers will be relatively disadvantaged and beer producers afforded indirect protection. The relationship between Article 110(1) and (2) is brought out in the following case.

Case 168/78 **Commission v France**
[1980] ECR 347

[Note Lisbon Treaty renumbering: Arts 9–17 have been replaced by Arts 28–30 TFEU; Art 95 is now Art 110 TFEU; Art 169 is now 258 TFEU]

France had higher tax rates for spirits based on grain, such as whisky, rum, gin, and vodka, than those based on wine or fruit, such as cognac, calvados, and armagnac. France produced very little of the former category of drinks, but was a major producer of fruit-based spirits. The Commission brought an Article 169 action alleging that the French tax regime violated Article 95. The ECJ emphasized the connection between Article 95 and Articles 9–17: Article 95 was to supplement the provisions on customs duties and charges by prohibiting internal taxation which discriminated against imported products. It continued as follows.

THE ECJ

5. The first paragraph of Article 95, which is based on a comparison of the tax burdens imposed on domestic products and on imported products which may be classified as 'similar', is the basic rule in this respect. This provision, as the Court has had occasion to emphasize in its judgment . . . in Case 148/77, *H. Hansen* v. *Haupzollamt Flensburg* [1978] ECR 1787, must be interpreted widely so as to cover all taxation procedures which conflict with the principle of the equality of treatment of domestic products and imported products; it is therefore necessary to interpret the concept of 'similar products' with sufficient flexibility. The Court specified in the judgment . . . in the *Rewe* case (Case 45/75 [1976] ECR 181) that it is necessary to consider as similar products those which 'have similar characteristics and meet the same needs from the point of view of consumers'. It is therefore necessary to determine the scope of the first paragraph of Article 95 on the basis not of the criterion of the strictly identical nature of the products but on that of their similar and comparable use.

6. The function of the second paragraph of Article 95 is to cover, in addition, all forms of indirect tax protection in the case of products which, without being similar within the meaning of the first

paragraph, are nevertheless in competition, even partial, indirect or potential, with certain products of the importing country. The Court has already emphasized certain aspects of that provision in . . . Case 27/77, *Firma Fink-Frucht GmbH* . . . [1978] ECR 223, in which it stated that for the purposes of the application of the first paragraph of Article 95 it is sufficient for the imported product to be in competition with the protected domestic production by reason of one of several economic uses to which it may be put, even though the condition of similarity for the purposes of the first paragraph of Article 95 is not fulfilled.

7. Whilst the criterion indicated in the first paragraph of Article 95 consists in the comparison of tax burdens, whether in terms of the rate, the mode of assessment or other detailed rules for the application thereof, in view of the difficulty of making sufficiently precise comparisons between the products in question, the second paragraph of that Article is based upon a more general criterion, in other words the protective nature of the system of internal taxation.

(F) ARTICLE 110(1) AND (2): THE DETERMINATION OF SIMILARITY

The first step is therefore to determine whether the products are similar. If they are then Article 110(1) applies. If they are not then the tax rules may still be caught by Article 110(2). This issue has arisen in a number of cases. In an early judgment the ECJ held that products would be regarded as similar if they came within the same tax classification.[54] However, in some cases the ECJ condemned the tax without too detailed an analysis of whether this was because of Article 110(1) or (2). This approach is particularly apparent in the early 'spirits cases', in which the Commission brought enforcement actions against Member States, alleging that their tax rules on spirits infringed what is now Article 110.[55] The reason the ECJ did not trouble unduly whether the condemnation should be based on Article 110(1) or (2) is apparent in the following extract:

Case 168/78 **Commission v France**
[1980] ECR 347

[Note Lisbon Treaty renumbering: Art 95 is now Art 110 TFEU]

The facts have been set out above. The Commission argued that all spirits constituted a single market. France responded by contending that they should be broken down into more specific markets, depending on their composition, physical characteristics, and consumer usages. The ECJ, having considered the characteristics of the spirits, decided, on the one hand, that they possessed certain generic features (such as high alcohol content); and on the other hand, that they were made from differing materials, and were consumed in different ways.

THE ECJ

12. Two conclusions follow from this analysis of the market in spirits. First, there is, in the case of spirits considered as a whole, an indeterminate number of beverages which must be classified as 'similar products' within the meaning of the first paragraph of Article 95, although it may be difficult to

[54] Case 27/67 *Fink-Frucht GmbH v Hauptzollamt München-Landsbergerstrasse* [1968] ECR 327.
[55] Case 169/78 *Commission v Italy* [1980] ECR 385; Case 171/78 *Commission v Denmark* [1980] ECR 447.

decide this in specific cases, in view of the nature of the factors implied by distinguishing criteria such as flavour and consumer habits. Secondly, even in cases in which it is impossible to recognize a sufficient degree of similarity between the products concerned, there are nevertheless, in the case of all spirits, common characteristics which are sufficiently pronounced to accept that in all cases there is at least partial or potential competition. It follows that the application of the second paragraph of Article 95 may come into consideration in cases in which the relationship of similarity between the specific varieties of spirits remains doubtful or contested.

13. It appears from the foregoing that Article 95, taken as a whole, may apply without distinction to all the products concerned. It is sufficient therefore to examine whether the application of a given national tax system is discriminatory or, as the case may be, protective, in other words whether there is a difference in the rate or the detailed rules for levying the tax and whether that difference is likely to favour a given national production.

[*The Court then considered various arguments adduced by the French authorities designed to show that the spirits differed in terms of taste, use, and the like*.]

39. After considering all these factors the Court deems it unnecessary for the purposes of solving this dispute to give a ruling on the question whether or not the spirituous beverages concerned are wholly or partially similar products within the meaning of the first paragraph of Article 95 when it is impossible reasonably to contest that without exception they are in at least partial competition with the domestic products to which the application refers and that it is impossible to deny the protective nature of the French tax system within the second paragraph of Article 95.

40. In fact, as indicated above, spirits obtained from cereals have, as products obtained from distillation, sufficient characteristics in common with other spirits to constitute at least in certain circumstances an alternative choice for consumers. . . .

41. As the competitive and substitution relationships between the beverages in question are such, the protective nature of the tax system criticized by the Commission is clear. A characteristic of that system is in fact that an essential part of domestic production, . . . spirits obtained from wine and fruit, come within the most favourable tax category whereas at least two types of product, almost all of which are imported from other Member States, are subject to higher taxation under the 'manufacturing tax'.

These early 'spirits' cases demonstrate that the Court will not be overly concerned whether a case is characterized as relating to Article 110(1) or (2), if the nature of the products renders such classification difficult (paragraph 12) and if the Court feels that the tax should be condemned because the goods are in competition and the tax is protective (paragraph 39).

This approach can however be problematic. The consequence of 'globalizing'[56] Article 110(1) and (2) in this manner is that it obscures the appropriate response of the infringing state. A breach of Article 110(1) means that the Member State has to equalize the taxes on domestic and imported goods. Breach of Article 110(2) requires the state to remove the protective effect, but this may not entail equalization of the tax burdens on the respective goods.

Later Courts have been more careful to determine whether the analysis should proceed under Article 110(1) or (2), as exemplified by the *John Walker* case.[57] The issue was whether liqueur fruit wine was similar to whisky for the purposes of what is now Article 110(1). The ECJ analysed the objective characteristics of the products, their alcohol content and method of manufacture, and consumer perceptions of the product. It decided that the goods were not similar, since they did not possess the same alcohol content, nor was the process of manufacture the same. Further scrutiny of the tax would therefore have to be pursuant to Article 110(2).[58]

[56] Easson (n 52) 521, 535.
[57] Case 243/84 *John Walker v Ministeriet for Skatter og Afgifter* [1986] ECR 875.
[58] Cf Case 106/84 *Commission v Denmark* [1986] ECR 833.

The same approach can be perceived in *Commission v Italy*.[59] The Commission brought an action against Italy claiming that its consumption tax on fruit was discriminatory under what is now Article 110. Italy produced large amounts of fruit, such as apples, pears, peaches, plums, and oranges, but almost no bananas, which were imported from France. Italy imposed a consumption tax on bananas that was almost half the import price, and other fruit was not subject to the tax. The Court considered whether bananas and other fruit were similar for the purposes of Article 110(1). It found that they were not, taking account of the objective characteristics of the products, including their organoleptic properties and the extent to which they could satisfy the same consumer need.[60] The Italian tax would therefore be examined under Article 110(2).

(G) ARTICLE 110(2): THE DETERMINATION OF PROTECTIVE EFFECT

The Commission brought an enforcement action against the United Kingdom for discriminatory taxation of wine with respect to beer. This was more difficult than the other 'spirits' cases, since there is undoubtedly a greater difference between wine and beer than between two spirits. It is for this reason that the ECJ initially declined to rule that the United Kingdom provisions were in breach of Article 110, and required further information on the nature of the competitive relationship between the two products. Its judgment was finally delivered some years later..

Case 170/78 **Commission v United Kingdom**
[1983] ECR 2265

[Note Lisbon Treaty renumbering: Arts 95 and 169 are now Arts 110 and 258 TFEU]

The United Kingdom levied an excise tax on certain wines roughly five times that levied on beer. The tax on wine represented about 38 per cent of the sale price of the product, as compared to the tax on beer which was 25 per cent of the product's price. The United Kingdom produces considerable amounts of beer, but very little wine. The Commission brought an Article 169 action, claiming that the differential excise tax was in breach of Article 95.

THE ECJ

8. As regards the question of competition between wine and beer, the Court considered that, to a certain extent at least, the two beverages in question were capable of meeting identical needs, so that it had to be acknowledged that there was a degree of substitution for one another. It pointed out that, for the purpose of measuring the possible degree of substitution, attention should not be confined to consumer habits in a Member State or in a given region. Those habits, which were essentially variable in time and space, could not be considered to be immutable; the tax policy of a Member State must not therefore crystallize given consumer habits so as to consolidate an advantage acquired by national industries concerned to respond to them.

9. The Court nonetheless recognized that, in view of the substantial differences between wine and beer, it was difficult to compare the manufacturing processes and the natural properties of those beverages, as the Government of the United Kingdom had rightly observed. For that reason, the Court

[59] Case 184/85 [1987] ECR 2013.

[60] Bananas do not have the same water content as other fruit, and therefore their thirst-quenching qualities are not the same; and bananas were perceived to have a nutritional value in excess of other fruit: ibid [10].

requested the parties to provide additional information with a view to dispelling the doubts which existed concerning the nature of the competitive relationship between the two products.

...

11. The Italian Government contended in that connection that it was inappropriate to compare beer with wines of average alcoholic strength or, *a fortiori*, with wines of greater alcoholic strength. In its opinion, it was the lightest wines with an alcoholic strength in the region of 9, that is to say the most popular and cheapest wines, which were genuinely in competition with beer....

12. The Court considers that observation by the Italian Government to be pertinent. In view of the substantial differences in the quality and, therefore, in the price of wines, the decisive competitive relationship between beer, a popular and widely consumed beverage, and wine must be established by reference to those wines which are the most accessible to the public at large, that is to say, generally speaking the lightest and cheapest varieties. Accordingly, that is the appropriate basis for making fiscal comparisons by reference to the alcoholic strength or to the price of the two beverages in question.

[*The Commission, Italy, and the United Kingdom differed as regards the criteria which should be used to determine whether the tax on the two products was discriminatory. The Commission argued that assessment of the tax burden should be based on volume plus alcohol content; Italy contended that volume alone should be determinative; while the United Kingdom argued that the true basis of comparison was product price net of tax. The ECJ held that none of these tests was sufficient in itself, but that all three could provide 'significant information for the assessment of the contested tax system'*.]

26. After considering the information provided by the parties, the Court has come to the conclusion that, if a comparison is made on the basis of those wines which are cheaper than the types of wine selected by the United Kingdom and of which several varieties are sold in significant quantities on the United Kingdom market, it becomes apparent that precisely those wines which, in view of their price, are most directly in competition with domestic beer production are subject to a considerably higher tax burden.

27. It is clear, therefore,...—whatever criterion for comparison is used, there being no need to express a preference for one or the other—that the United Kingdom's tax system has the effect of subjecting wine imported from other Member States to an additional burden so as to afford protection to domestic beer production...Since such protection is most marked in the case of the most popular wines, the effect of the United Kingdom tax system is to stamp wine with the hallmarks of a luxury product which, in view of the tax burden which it bears, can scarcely constitute in the eyes of the consumer a genuine alternative to the typically produced domestic beverage.

28. It follows...that, by levying excise duty on still light wines made from fresh grapes at a higher rate, in relative terms, than on beer, the United Kingdom has failed to fulfil its obligations under the second paragraph of Article 95 of the EEC Treaty.

This case casts interesting light on the Court's methodology when adjudicating on Article 110(2). Its judgment proceeds in two stages.[61]

At the first stage the ECJ is concerned to establish that there is some competitive relationship between the two products so as to render Article 110(2) applicable at all (paragraphs 8 to 12). The ECJ rightly accepted that the meaningful comparison was between beer and the cheaper end of the wine market. Product substitutability is central in this respect, but consumer preferences are not regarded as immutable, and are affected by the relative tax rates of the two products (paragraph 8). If the varying taxes levied on the commodities serve to place them artificially within separate categories in consumers' eyes, this will reduce the extent to which the public perceives the products to be substitutable. It is this which the Court has in mind when castigating the United Kingdom tax policy for stamping wine with the hallmark of being a luxury product which is in a different category from beer (paragraph 27).

[61] The same two stages can be perceived in other decisions concerning Art 110(2): Case 184/85 (n 59) [11]–[15].

At the second stage, the Court then considered whether the tax system was protective of beer. It was willing to apply varying criteria suggested by the parties to decide whether a protective effect had been established or not. It was difficult to contest the conclusion that the United Kingdom tax was indeed discriminatory. Where the disparity in tax rates between the two products is less dramatic than that between wine and beer, more finely tuned analysis may be required to determine whether there is any protective effect.[62] Thus it may, for example, be necessary to determine the degree of cross-elasticity between the two products. If this is low, then only a 'large difference in tax burdens will have a protective tendency'.[63] Similarly, if the level of tax is low with respect to the final selling price of the goods, then it will take a very significant tax differential to have any protective impact.[64]

The existence of harmonization will not preclude the application of Article 110 where it is only minimum harmonization. Thus in *Socridis*[65] Community legislation was held to require only that Member States imposed a minimum duty on beer. It did not preclude the application of Article 110 to determine whether a state was being protectionist in its treatment of beer as opposed to wine.

(H) TAXATION: THE BROADER LEGAL PERSPECTIVE

The discussion thus far has been concerned with taxation and Article 110. It is however important to realize that tax issues can be judged for compliance with other Treaty provisions concerning free movement.[66] This is significant because, while the approach under Article 110 is discrimination-based, the case law on free movement has moved beyond this to catch national rules that impede trade even if they are not discriminatory. This has placed the ECJ in something of a dilemma, having to choose whether to preserve coherence in its case law on free movement, even when concerned with fiscal or tax measures; or whether to follow the disparate impact approach in accord with Article 110 when dealing with analogous situations that arise relating to, for example, capital or services.[67] The case law is not entirely clear, but the ECJ has been cautious about applying the full force of its case law on free movement to national fiscal rules, although commentators remain divided as to the 'best' interpretation of this jurisprudence.[68]

(I) TAXATION: THE BROADER POLITICAL PERSPECTIVE

The discussion thus far has concentrated on the legal constraints imposed by the Treaty on the taxation policies of the Member States in order to prevent discrimination against imports. It is important, as in the case of the customs union, to place this material in a broader perspective.

Taxation can be direct or indirect. The paradigm of direct taxation is income tax; the paradigm of indirect taxation is a tax on sales. The EU does not exercise any general control over direct taxation. This is regarded as central to national sovereignty. EU law will be relevant only to prevent cross-border discrimination, interference with free movement, and the like, although some tax matters have been dealt with through Articles 114 and 115 TFEU, where the conditions laid down therein have been satisfied.[69] The sensitivity of tax matters is reflected in the requirement of unanimity which still prevails after the Lisbon Treaty.[70] EU law has a much greater impact on indirect taxation. Value Added Tax (VAT) was the first such tax to be harmonized in 1977. This was because the 'proper functioning of the internal market requires VAT and excise systems that are efficient and fully reflect the needs of EU businesses and consumers'.[71]

The EU is now striving for a more coherent tax policy.[72] In the context of indirect taxation, this is manifest in proposed improvements to the regimes governing VAT, excise duty, and the like. In the context of indirect and direct taxation, there is the growing realization of the extent to which national tax policy can impact on other policies, over which the EU does have competence. These include employment, the environment, economic and monetary union, health, and consumer protection.[73]

The tension this produces is readily apparent in the Commission's language. It recognized that there is no need for 'across the board harmonization of Member States' tax systems', that Member States are free to choose the 'tax systems they consider most appropriate and according to their preferences'.[74] It cautioned, however, that the level of public expenditure was a matter for national preference, so long as the budget remained in balance. It emphasized that Member States' choices did not take place in isolation and that international aspects should be taken into account. It reaffirmed the need for a high degree of harmonization in relation to indirect taxation. It admitted also that some harmonization of the tax treatment accorded to pay might be necessary,[75] in order to remove obstacles to free movement, as in the case of occupational pensions.

The Commission was candid about the difficulties of securing the passage of EU legislation, given the obstacle of unanimity. It is unsurprising that the Commission has always advocated a shift to qualified-majority voting,[76] all the more so in the light of enlargement. What is particularly interesting is the Commission's willingness to talk openly about other mechanisms for achieving its objectives, given the difficulties of securing agreement in the Council.[77] The Commission considered in detail a range of options including greater use of Article 258 TFEU, resort to soft law, and use of the enhanced cooperation procedure.[78]

4 THE BOUNDARY BETWEEN ARTICLES 28–30 AND 110–113

The relationship between Articles 28–30 and Articles 110–113 TFEU has been touched on in the preceding analysis. It is now time to consider this in more detail.

The general principle is that the two sets of Articles are mutually exclusive.[79] They both concern the imposition of fiscal charges by the state. Articles 28–30 bite on those duties or charges levied as a result of goods crossing a border. The duty or charge is exacted at the time of, or on account of, the importation, and is borne specifically by the imported product to the exclusion of similar domestic products.[80] Articles 110–113, by way of contrast, are designed to catch fiscal policy which is internal to the state. They prevent discrimination against goods once they have entered a particular Member State. The Court has construed both sets of provisions so as to ensure that there is no gap between them.

Which set of Treaty Articles is applicable is, however, of importance, since the result can be significant for the legal test that is applied.[81] If a state fiscal measure is caught by Article 30 TFEU then it will be unlawful. This reflects the importance of breaking down trade barriers. Customs duties or charges are the quintessential barriers to establishment of a customs union, and hence the Treaty's insistence that they should be removed. If, by way of contrast, a fiscal measure falls within Article 110 TFEU then the obligation on the state is different. The taxation levels set by the state are not unlawful under the Treaty, and thus the inquiry will be whether the tax discriminates against the importer under Article 110(1), or has a protective effect under Article 110(2). In most circumstances there will be little difficulty in determining whether the case should fall under Article 30 or under Article 110. Three situations are however more difficult.

(A) LEVIES IMPOSED ON IMPORTERS

The first type of case which can be problematic is that in which a state imposes a levy on an importer. Such a case would normally be decided on the basis of Article 30, and the levy would be deemed to be a CEE. The state would be condemned unless it could show that the levy was consideration for a service given to the importer, or that it was imposed pursuant to mandatory requirements of EU law.[82] Attempts to argue that the levy should instead be considered under Article 110, because domestic producers also had to pay, have not been notably successful, as the *Bresciani* case demonstrates.[83]

In exceptional circumstances the Court may, however, decide that although the charge or levy is taken at the border it is not to be characterized as a CEE within Article 30, but as a tax, the legality of which will be tested under Article 110. In *Denkavit*[84] the applicant was an importer of feedingstuffs from Holland into Denmark. Danish law required that the importer obtain an authorization from the Ministry of Agriculture, *and* charged an annual levy to meet the costs of checking samples of the goods. The ECJ held that the requirement of an authorization was caught by what is now Article 34

Progress to date and next steps towards a Common Consolidated Corporate Tax Base (CCCTB), COM(2006)157; Promoting Good Governance in Tax Matters, COM(2009)201 final.

[79] Case 10/65 *Deutschmann v Federal Republic of Germany* [1965] ECR 469; Case 57/65 *Lütticke* (n 39); Case 105/76 *Interzuccheri SpA v Ditta Rezzano e Cavassa* [1977] ECR 1029.

[80] Case 193/85 *Cooperative Co-Frutta Srl v Amministrazione delle Finanze dello Stato* [1987] ECR 2085, [8]; Cases C–290 and 333/05 *Nadasdi* (n 44) [39]–[42].

[83] See 616–617 above.

[84] Case 29/87 *Dansk Denkavit ApS v Danish Ministry of Agriculture* [1988] ECR 2965.

TFEU,[85] but that it could be justified under Article 36 TFEU. The Court then considered whether the levy was lawful. This levy was imposed on all those engaged in the feedingstuffs trade, whether importers or domestic producers. The ECJ held that it related to a general system of internal dues applied systematically and in accordance with the same criteria to domestic products and imported products alike, and therefore came within Article 110.[86]

The ECJ, however, made it clear in *Michailidis*[87] that a charge levied at the border will be regarded as an internal tax, rather than a CEE, only where the comparable charge levied on national products is applied at the same rate, at the same marketing stage, and on the basis of an identical chargeable event.

(B) IMPORTS TAXED BUT NOT MADE BY THE STATE OF IMPORT

The second type of case in which there can be boundary-line problems between Articles 30 and 110 is that in which the importing state does not make the imported product, but imposes a tax on it nonetheless. Should this be considered to be a charge within Article 30 or a tax within Article 110? One might have thought that the ECJ would choose the former characterization, since there are no similar domestic goods. This will not always be so, as demonstrated by *Co-Frutta*.

Case 193/85 **Cooperative Co-Frutta Srl v Amministrazione delle Finanze dello Stato**
[1987] ECR 2085

[Note Lisbon Treaty renumbering: Arts 12, 95, and 177 are now Arts 30, 110, and 267 TFEU]

This was another case which arose from the imposition by Italy of a consumption tax on bananas, even though no such tax was levied on other fruit produced in Italy. It will be remembered from the earlier discussion that Italy produced only a negligible number of bananas. This action was brought by a banana importer via Article 177 to test the legality of the tax. The Court considered whether the tax should be viewed as a CEE within Article 12 or as a tax to be assessed under Article 95.

THE ECJ

8. According to established case law of the Court, the prohibition laid down by Articles 9 and 12 of the Treaty in regard to charges having an equivalent effect covers any charge exacted at the time of or on account of importation which, being borne specifically by an imported product to the exclusion of the similar domestic product, has the result of altering the cost price of the imported product, thereby producing the same restrictive effect on the free movement of goods as a customs duty.

9. The essential feature of a charge having an effect equivalent to a customs duty which distinguishes it from an internal tax therefore resides in the fact that the former is borne solely by an imported product as such whilst the latter is borne both by imported and domestic products.

10. The Court has however recognized that even a charge which is borne by a product imported from another Member State, when there is no identical or similar domestic product, does not constitute a charge having equivalent effect but internal taxation within the meaning of Article 95 of the Treaty

[85] As a measure having equivalent effect to a quantitative restriction, on which see Ch 19.

[86] Case 29/87 *Denkavit* (n 84) [33]. See also Case C–130/93 *Lamaire* (n 12); Case C–90/94 *Haahr Petroleum Ltd v Abenra Havn* [1997] ECR I–4085; Case C–72/03 *Carbonati Apuani* (n 5) [17]–[18]; Case C–387/01 *Weigel* (n 40) [64].

[87] Cases C–441 and 442/98 (n 8) [24].

if it relates to a general system of internal dues applied systematically to categories of products in accordance with objective criteria irrespective of the origin of the products.

11. Those considerations demonstrate that even if it were necessary in some cases, for the purpose of classifying a charge borne by imported products, to equate extremely low domestic production with its non-existence, that would not mean that the levy in question would necessarily have to be regarded as a charge having an effect equivalent to a customs duty. In particular, that will not be so if the levy is part of a general system of internal dues applying systematically to categories of products according to the criteria indicated above.

12. A tax on consumption of the type at issue in the main proceedings does form part of a general system of internal dues. The 19 taxes on consumption are governed by common tax rules and are charged on categories of products irrespective of their origin in accordance with an objective criterion, namely the fact that the product falls into a specific category of goods. Some of those taxes are charged on products intended for human consumption, including the tax on the consumption of bananas. Whether those goods are produced at home or abroad does not seem to have a bearing on the rate, the basis of assessment or the manner in which the tax is levied. The revenue from those taxes is not earmarked for a specific purpose; it constitutes tax revenue identical to other tax revenue and, like it, helps to finance State expenditure generally in all sectors.

13. Consequently, the tax at issue must be regarded as being an integral part of a general system of internal dues within the meaning of Article 95 of the Treaty and its compatibility with Community law must be assessed on the basis of that Article rather than Articles 9 and 12 of the Treaty.

The ECJ's reasoning makes good sense. If any charge imposed by a state on a product which it did not make at all, or only in negligible quantities, were to be classified as a CEE under Article 30 then the charge would be automatically unlawful,[88] and the importing state could not tax goods which it did not produce itself, since any such tax would be condemned under Article 30. This draconian conclusion would make little social, economic, or political sense, and it is not therefore surprising that the Court avoided this result.[89]

There may be good reasons why a state should choose to tax, for example, a luxury product even if there is no domestic production. The criterion adopted by the ECJ provides a sensible resolution of this problem. If the test propounded by the ECJ is met the charge will not necessarily be regarded as lawful. It will still fall to be assessed under Article 110 TFEU. In the instant case the tax was in fact held to be in breach of what is now Article 110(2), for the same reasons as given in the action brought against Italy by the Commission.[90]

(c) SELECTIVE TAX REFUND

The third type of case arises when a state chooses to make a selective refund of a tax or if it uses the money to benefit a particular group. The position appears to be as follows. If the money from a tax flows into the national exchequer and is then used for the benefit of a particular domestic industry, this could be challenged as a state aid: Articles 107–109 TFEU.[91]

Classification problems as between Articles 30 and 110 TFEU arise when the money that has been refunded can be linked to what has been levied pursuant to a specific tax. The correct classification will then depend upon whether the refund or other benefit to the national producers wholly or

[88] Assuming of course that it could not be saved on the ground that it represented consideration for a service, etc.

[89] See also Case 90/79 *Commission v France* [1981] ECR 283; Case C–383/01 *De Danske Bilimportorer v Skatteministeriet* [2003] ECR I–6065, [35]–[42].

[90] See 628 above.

[91] Cases C–78–83/90 *Compagnie Commerciale de l'Ouest v Receveur Principal des Douanes de la Pallice Port* [1992] ECR I–1847.

partially offsets the tax. If the former, then the tax will be treated under Article 30, the rationale being that what in effect exists is a charge levied only on the imported or exported product.[92] If, however, the refund or benefit is only partial the matter will fall to be assessed under Article 110, the rationale being that the partial refund in effect means that there could be a discriminatory tax.[93] Barents, summarizing the early case law,[94] identifies three conditions for a charge to be considered under Article 30 rather than Article 110:[95]

> Firstly, the charge must be destined exclusively for financing activities which very largely benefit the taxed domestic product; secondly, there must exist identity between the taxed product and the domestic product benefiting from the charge; and thirdly, the charges imposed on the domestic product must be completely compensated.

This approach is exemplified by *Scharbatke*.[96] There was a challenge to mandatory contributions levied in Germany when slaughtered animals were presented for inspection. The contribution was applied under the same conditions to national and imported products, and the money was assigned to a marketing fund for agricultural, forestry, and food products. The ECJ held that the mandatory contribution constituted a parafiscal charge.[97] Where the resulting revenue benefited solely national products, so that the advantages accruing *wholly* offset the charge imposed on the products, then the charge would be regarded as a CEE within Article 30.[98] If the advantages which accrued only *partially* offset the charges imposed on national products, then the charge might constitute discriminatory internal taxation under Article 110.[99]

5 CONCLUSIONS

i. The ECJ's decisions on duties and taxation have made a significant contribution to the realization of a single market. The Court's jurisprudence has consistently looked behind the form of a disputed measure to its substance, and the ECJ has interpreted the relevant Articles in the manner best designed to ensure that the Treaty objectives are achieved.

ii. In relation to the customs union, the main challenges in the years ahead are concerned with the need to forge an efficient and effective customs force from the twenty-seven Member State authorities so as to be able to fight fraud, the import of illegal goods, terrorism, and the like.

iii. In relation to taxation, the issues are more complex. The original Rome Treaty left a considerable degree of autonomy to Member States in the fiscal field, albeit subject to the constraints

[92] Note in this respect that Art 30 expressly includes customs duties of a fiscal nature.

[93] Where the benefits from the activities financed by the charge accrue to both domestic producers and importers, but the former obtain proportionately greater benefits, the charge will fall under Art 30 or Art 110, depending on whether the advantage accruing to domestic producers fully or partially offsets their burdens: Case C–28/96 *Fazenda Publica v Fricarnes SA* [1997] ECR I–4939.

[94] Case 77/76 *Fratelli Cuchi v Avez* [1977] ECR 987; Case 94/74 *Industria Gomma Articoli Vari v Ente Nazionale per la Cellulosa e per la Carta* [1975]ECR 699; Case 105/76 *Interzuccheri* (n 79).

[95] (N 10) 430.

[96] Case C–72/92 *H Scharbatke GmbH v Federal Republic of Germany* [1993] ECR I–5509. See also Cases C–78–83/90 *Compagnie Commerciale* (n 91); Case C–234/99 *Niels Nygard* (n 12) [23]; Case C–517/04 *Visserijbedrijf v Productschap Vis* [2006] ECR I–5015, [18]–[20].

[97] The ECJ held that the charge which was levied might also constitute state aid under Art 107 TFEU.

[98] It is not entirely clear whether *Scharbatke* is intended to modify earlier cases, which had held that in order for the charge to be regarded as a CEE within Art 30 there must, *inter alia*, be a strict coincidence between the product which was being taxed and that which was receiving the benefit: Case 105/76 *Interzuccheri* (n 79).

[99] See also Case 73/79 *Commission v Italy* [1980] ECR 1533; Case C–347/95 *Fazenda Publica v Uniao das Cooperativas Abastecedoras de Leite de Lisboa, URCL (UCAL)* [1997] ECR I–4911.

imposed by Articles 30 and 110. Many of the problems concerning divergences between national taxation systems could only ever be fully resolved if legislative harmonization occurred. Taxation is however regarded as central to national sovereignty, and hence any extension of EU competence over tax is a hotly contested issue.

iv. It should, however, be noted that in this area, as in many others, there is often a link between judicial doctrine and legislative initiatives. The very fact that a challenged national tax policy will, according to the ECJ's decisions in *Chemial* and the *French Sweet Wines* case,[100] be upheld only if the Court deems it to be compatible with the Treaty can lead to paradoxical results. It has been noted[101] that the absence of harmonization has led to the ironic result that the Commission, abetted by the ECJ, has managed to wield perhaps more influence over Member States' tax policies, and thus their economic and social policies, than would be the case if the Council had agreed on a uniform tax regime.

v. The Commission has more recently emphasized the contribution of taxation and customs policy to the implementation of the Lisbon Strategy.[102]

FREE MOVEMENT OF GOODS: QUANTITATIVE RESTRICTIONS

1 CENTRAL ISSUES

i. The discussion in the previous chapter focused on duties, taxes, and the like. This is, however, only part of the strategy for an integrated single market. The free movement of goods is dealt with in Articles 34–37 TFEU (ex Articles 28–31 EC). Article 34 is the central provision and states that: 'quantitative restrictions on imports and all measures having equivalent effect shall be prohibited between Member States'. Article 35 contains similar provisions relating to exports, while Article 36 provides an exception for certain cases in which a state is allowed to place restrictions on the movement of goods.

ii. It is necessary to understand the way in which Articles 34–37 fit into the more general strategy concerning the free movement of goods. Articles 28–33 TFEU provide the foundations for a customs union by eliminating customs duties between Member States and by establishing a Common Customs Tariff. If matters rested there free movement would be only imperfectly attained, since Member States could still place quotas on the amount of goods that could be imported, and restrict the flow of goods by measures that have an equivalent effect to quotas. The object of Articles 34–37 is to prevent Member States from engaging in these strategies.

iii. The ECJ's interpretation of Articles 34–37 has been important in achieving single market integration. It has given a broad interpretation to the phrase 'measures having equivalent effect' to a quantitative restriction (MEQR), and has construed the idea of discrimination broadly to capture both direct and indirect discrimination.

iv. The ECJ also held that Article 34 could apply even where there was no discrimination. The famous *Cassis de Dijon* case[1] decided that Article 34 can bite, subject to certain exceptions, when the same rule applies to domestic goods and imports, where the rule inhibits the free flow of goods within the EU. Discrimination is therefore a sufficient, but not necessary, condition for the invocation of Article 34. There are, however, six central issues in this area.

v. First, the ECJ's jurisprudence led to difficult issues about where this branch of EU law 'stops'. The ECJ's decision that Article 34 is applicable to trade rules even where they do not discriminate led to difficulties about the outer boundaries of EU law.

[1] Case 120/78 *Rewe-Zentral AG v Bundesmonopolverwaltung für Branntwein* [1979] ECR 649.

vi. Secondly, there is a problem concerning the relationship between negative and positive integration. The ECJ's approach in *Cassis de Dijon* fostered 'negative integration': indistinctly applicable rules were unenforceable when they hindered cross-border trade unless they came within one of the exceptions. Integration was essentially negative, in the sense that the national rules were held not to apply. This can be contrasted with 'positive integration', which resulted from EU legislative measures, stipulating which rules should apply across the Union. There are, as will be seen, important consequences that flow from developing EU policy by these differing strategies.

vii. Thirdly, there is a tension between EU integration and national regulatory autonomy. Article 34 will normally render national regulatory measures inapplicable. It is therefore a tool for policing the borderline between legitimate and illegitimate national regulation, and the nature of this border may well be contestable.[2]

viii. Fourthly, the choice between a 'discrimination approach' and 'a rule of recognition approach of the kind introduced by *Cassis*' is important for the following reason. The former approach vests control in the host state, normally the country into which the firm is trying to import. Provided that the host state does not discriminate its rules remain lawful. The '*Cassis* approach' reverses the onus: the host state must accept the regulatory provisions of the home state, subject to the exceptions discussed below.

ix. Fifthly, this topic also exemplifies the interconnection between judicial and legislative initiatives for attaining the EU's objectives, a theme stressed throughout this book. One way of dealing with trade rules that differ between Member States is through legislative harmonization. The process of such harmonization was, however, slow, a difficulty exacerbated by the requirement of unanimity in the Council.[3] The ECJ's jurisprudence constituted an alternative means for ensuring the free flow of goods even in the absence of EU harmonizing legislation. The message was clear: attainment of this central part of EU policy was not to be held up indefinitely by the absence of harmonization legislation. The Court's approach to Article 34 was welcomed by the Commission, which decided that harmonization would be used for those rules that were still lawful under the *Cassis* formula, on the grounds that, for example, they were necessary to protect consumers or safeguard public health. The judicial approach, therefore, caused the Commission to reorient its own legislative programme.

x. Finally, the EU Courts have also maintained tight control over the application of Article 36, which is concerned with defences against a *prima facie* breach of Article 34. The ECJ has interpreted Article 36 strictly to ensure that discriminatory restrictions on the free movement of goods are not easily justified. There are, however, difficulties concerning the relationship between defences to discrimination and defences to indistinctly applicable rules.

2 DIRECTIVE 70/50 AND *DASSONVILLE*

Article 34 will catch quantitative restrictions and all measures that have an equivalent effect. It can apply to EU measures,[4] as well as those adopted by Member States. The notion of a quantitative restriction was defined broadly in the *Geddo* case[5] to mean 'measures which amount to a total or partial

[2] WPJ Wils, 'The Search for the Rule in Article 30 EEC: Much Ado About Nothing?' (1993) 18 ELRev 475, 478; M Maduro, *We the Court, the European Court of Justice and the European Economic Constitution* (Hart, 1998) 54–58.

[5] Case 2/73 *Geddo v Ente Nazionale Risi* [1973] ECR 865.

restraint of, according to the circumstances, imports, exports or goods in transit'. MEQRs are more difficult to define. The Commission and the Court have taken a broad view of such measures.

Guidance on the Commission's view can be found in Directive 70/50. This Directive was only applicable during the Community's transitional period, but it continues to furnish some idea of the scope of MEQRs. The list of matters which can constitute an MEQR are specified in Article 2 and include:[6] minimum or maximum prices for imported products; less favourable prices for imported products; lowering the value of the imported product by reducing its intrinsic value or increasing its costs; payment conditions for imported products which differ from those for domestic products; conditions in respect of packaging, composition, identification, size, weight, etc, which apply only to imported goods or which are different and more difficult to satisfy than in the case of domestic goods; the giving of a preference to the purchase of domestic goods as opposed to imports, or otherwise hindering the purchase of imports; limiting publicity in respect of imported goods as compared with domestic products; prescribing stocking requirements which are different from and more difficult to satisfy than those which apply to domestic goods; and making it mandatory for importers of goods to have an agent in the territory of the importing state.

Article 2, therefore, lists a number of ways in which the importing state can discriminate against goods. It should be noted that, even as early as 1970, the Commission was thinking of the potential reach of Article 34 to indistinctly applicable rules, since Article 3 of the Directive, which will be considered below, regulates such rules to some degree.

The seminal early judicial decision on the interpretation of MEQRs is *Dassonville*.

Case 8/74 **Procureur du Roi v Dassonville**
[1974] ECR 837

[Note Lisbon Treaty renumbering: Art 36 EEC is now Art 36 TFEU]

Belgian law provided that goods bearing a designation of origin could only be imported if they were accompanied by a certificate from the government of the exporting country certifying their right to such a designation. Dassonville imported Scotch whisky into Belgium from France without being in possession of the certificate from the British authorities. The certificate would have been very difficult to obtain in respect of goods which were already in free circulation in a third country, as in this case. Dassonville was prosecuted in Belgium and argued by way of defence that the Belgian rule constituted an MEQR.

THE ECJ

5. All trading rules enacted by Member States which are capable of hindering, directly or indirectly, actually or potentially, intra-Community trade are to be considered as measures having an effect equivalent to quantitative restrictions.

6. In the absence of a Community system guaranteeing for consumers the authenticity of a product's designation of origin, if a Member State takes measures to prevent unfair practices in this connection, it is however subject to the condition that these measures should be reasonable and that the means of proof required should not act as a hindrance to trade between Member States and should, in consequence, be accessible to all Community nationals.

7. Even without having to examine whether such measures are covered by Article 36, they must not, in any case, by virtue of the principle expressed in the second sentence of that Article, constitute a means of arbitrary discrimination or a disguised restriction on trade between Member States.

[6] Dir 70/50, [1970] OJ L13/29, Art 2(3).

> 8. That may be the case with formalities, required by a Member State for the purpose of proving the origin of a product, which only direct importers are really in a position to satisfy without facing serious difficulties.
>
> 9. Consequently, the requirement by a Member State of a certificate of authenticity which is less easily obtainable by importers of an authentic product which has been put into free circulation in a regular manner in another Member State than by importers of the same product coming directly from the country of origin constitutes a measure equivalent to a quantitative restriction as prohibited by the Treaty.

Two aspects of the ECJ's reasoning should be noted. First, it is clear from paragraph 5 that the crucial element in proving an MEQR is its effect: a discriminatory intent is not required. The ECJ takes a broad view of measures that hinder the free flow of goods, and the definition does not even require that the rules actually discriminate between domestic and imported goods. *Dassonville* thus sowed the seeds which bore fruit in *Cassis de Dijon*,[7] where the ECJ decided that Article 34 could apply to rules which were not discriminatory. Secondly, the ECJ indicates, in paragraph 6, that reasonable restraints may not be caught by Article 34. This is the origin of what became known as the 'rule of reason', the meaning of which will be examined below. We can now consider the application of Article 34 to cases involving discrimination, both direct and indirect.

3 DISCRIMINATORY BARRIERS TO TRADE

Article 34 can bite if the national rule favours domestic goods over imports, even if the case, on its facts, is confined to products and parties from one Member State.[8] Article 34 can also apply to a national measure preventing import from one to another part of a Member State.[9] There are numerous types of case involving direct or indirect discrimination between domestic and imported goods.

(A) IMPORT AND EXPORT RESTRICTIONS

The ECJ has always been particularly harsh on discriminatory import or export restrictions. Thus import or export licences are caught by Article 34.[10] So, too, are provisions which subject imported goods to requirements that are not imposed on domestic products. This is exemplified by *Commission v Italy*,[11] in which the ECJ held that procedures and data requirements for the registration of imported cars, making their registration longer, more complicated, and more costly than that of domestic vehicles, were prohibited by Article 34.[12] The same approach is apparent with respect to discriminatory export rules. Thus in *Bouhelier*[13] a French rule which imposed quality checks on watches for export, but not on those intended for the domestic market, was in breach of Article 35.

(B) PROMOTION OR FAVOURING OF DOMESTIC PRODUCTS

Article 34 prohibits action by a state that promotes or favours domestic products to the detriment of competing imports. This can occur in a number of different ways.

The most obvious is where a *state engages in a campaign to promote the purchase of domestic as opposed to imported goods*.

Case 249/81 **Commission v Ireland**
[1982] ECR 4005

[Note Lisbon Treaty renumbering: Arts 30, 92, 93, and 169 are now Arts 34, 107, 108, and 258 TFEU]

The Irish government sought to promote sales of Irish goods, the object being to achieve a switch of 3 per cent in consumer spending from imports to domestic products. It adopted a number of measures including: an information service indicating to consumers which products were made in Ireland and where they could be obtained (the Shoplink Service); exhibition facilities for Irish goods; the encouragement of the use of the 'Buy Irish' symbol for goods made in Ireland; and the organization of a publicity campaign by the Irish Goods Council in favour of Irish products, designed to encourage consumers to buy Irish products. The first two of these activities were subsequently abandoned by the Irish Government, but the latter two strategies continued to be employed. The Commission brought Article 169 proceedings, alleging that the campaign was an MEQR. Ireland argued that it had never adopted 'measures' for the purpose of Article 30, and that any financial aid given to the Irish Goods Council should be judged in the light of Articles 92 to 93, and not Article 30. The members of the Irish Goods Council were appointed by an Irish Government minister and its activities were funded in proportions of about six to one by the Irish Government and private industry respectively. The ECJ held that the Irish Government was responsible under the Treaty for the activities of the Council even though the campaign was run by a private company, and then continued as follows.

THE ECJ

21. The Irish government maintains that the prohibition against measures having an effect equivalent to quantitative restrictions in Article 30 is concerned only with 'measures', that is to say, binding provisions emanating from a public authority. However, no such provision has been adopted by the Irish government, which has confined itself to giving moral support and financial aid to the activities pursued by the Irish industries.

22. The Irish government goes on to emphasise that the campaign has had no restrictive effect on imports since the proportion of Irish goods to all goods sold on the Irish market fell from 49.2% in 1977 to 43.4% in 1980.

23. The first observation to be made is that the campaign cannot be likened to advertising by private or public undertakings . . . to encourage people to buy goods produced by those undertakings. Regardless of the means used to implement it, the campaign is a reflection of the Irish government's considered intention to substitute domestic products for imported products on the Irish market and thereby to check the flow of imports from other Member States.

. . .

25. Whilst it may be true that the two elements of the programme which have continued in effect, namely the advertising campaign and the use of the 'Guaranteed Irish' symbol, have not had any significant success in winning over the Irish market to domestic products, it is not possible to overlook the fact that, regardless of their efficacy, those two activities form part of a government programme

which is designed to achieve the substitution of domestic products for imported products and is liable to affect the volume of trade between Member States.

. . .

27. In the circumstances the two activities in question amount to the establishment of a national practice, introduced by the Irish government and prosecuted with its assistance, the potential effect of which on imports from other Member States is comparable to that resulting from government measures of a binding nature.

28. Such a practice cannot escape the prohibition laid down by Article 30 of the Treaty solely because it is not based on decisions which are binding upon undertakings. Even measures adopted by the government of a Member State which do not have binding effect may be capable of influencing the conduct of traders and consumers in that State and thus of frustrating the aims of the Community as set out in Article 2 and enlarged upon in Article 3 of the Treaty.

29. That is the case where, as in this instance, such a restrictive practice represents the implementation of a programme defined by the government which affects the national economy as a whole and which is intended to check the flow of trade between Member States by encouraging the purchase of domestic products, by means of an advertising campaign on a national scale and the organization of special procedures applicable solely to domestic products, and where those activities are attributable as a whole to the government and are pursued in an organized fashion throughout the national territory.

30. Ireland has therefore failed to fulfil its obligations under the Treaty by organizing a campaign to promote the sale and purchase of Irish goods within its territory.

The ECJ's reasoning exemplifies its general strategy under Article 34. It looks to substance, not form, rebutting the Irish argument that only formally binding measures are caught by the Article, (paragraphs 21 and 28), and rejecting the argument that, as the campaign appeared to have failed, therefore EU law should be unconcerned with it (paragraph 25).[14]

A second type of case caught by Article 34 is where *a state has rules on the origin-marking of certain goods*.

Case 207/83 **Commission v United Kingdom**
[1985] ECR 1201

[Note Lisbon Treaty renumbering: Arts 30 and 169 are now Arts 34 and 258 TFEU]

The Commission brought an Article 169 action, arguing that United Kingdom legislation which required that certain goods should not be sold in retail markets unless they were marked with their country of origin was in breach of Article 30, as an MEQR. The United Kingdom argued that the legislation applied equally to imported and national products, and that this information was of importance to consumers since they regarded origin as an indication of the quality of the goods. The extract relates to the first of these arguments.

THE ECJ

17. [I]t has to be recognized that the purpose of indications of origin or origin-marking is to enable consumers to distinguish between domestic and imported products and that this enables them to

[14] The campaign may have had some impact, since the diminution in sales of Irish goods might have been greater had the campaign not existed. Not all measures which promote domestic goods will, however, be caught by the Treaty: Case 222/82 *Apple and Pear Development Council v KJ Lewis Ltd* [1983] ECR 4083.

assert any prejudices which they may have against foreign products. As the Court has had occasion to emphasise in various contexts, the Treaty, by establishing a common market . . . seeks to unite national markets in a single market having the characteristics of a domestic market. Within such a market, the origin-marking requirement not only makes the marketing in a Member State of goods produced in other Member States in the sectors in question more difficult; it also has the effect of slowing down economic interpenetration in the Community by handicapping the sale of goods produced as the result of a division of labour between Member States.

18. It follows from those considerations that the United Kingdom provisions in question are liable to have the effect of increasing the production costs of imported goods and making it more difficult to sell them on the United Kingdom market.

Member State legislation which contains rules on origin-marking will normally be acceptable only if the origin implies a certain quality in the goods, that they were made from certain materials or by a particular form of manufacturing, or where the origin is indicative of a special place in the folklore or tradition of the region in question.[15]

The Court's clear intent to stamp firmly on national measures that favour domestic over imported products is equally apparent in a third type of case: *public procurement* cannot be structured so as to favour domestic producers.[16]

Case 45/87 **Commission v Ireland**
[1988] ECR 4929

[Note Lisbon Treaty renumbering: Arts 30 and 169 are now Arts 34 and 258 TFEU]

Dundalk Council put out to tender a contract for water supply. One of the contract clauses (4.29) was that tenderers had to submit bids based on the use of certain pipes which complied with a particular Irish standard (IS 188: 1975). One of the bids was based on the use of a piping which had not been certified by the Irish authorities, but which complied with international standards. The Council refused to consider it for this reason. The Commission brought an Article 169 action claiming a breach of Article 30.

THE ECJ

19. [I]t must first be pointed out that the inclusion of such a clause (as 4.29) in an invitation to tender may cause economic operators who produce or utilize pipes equivalent to pipes certified with Irish standards to refrain from tendering.

20. It further appears . . . that only one undertaking has been certified by the IIRS[17] to IS 188: 1975 to apply the Irish Standard Mark to pipes of the type required for the purposes of the public works contract at issue. That undertaking is located in Ireland. Consequently, the inclusion of Clause 4.29 had the effect of restricting the supply of the pipes needed for the Dundalk scheme to Irish manufacturers alone.

21. The Irish government maintains that it is necessary to specify the standards to which materials must be manufactured, particularly in a case such as this where the pipes utilized must suit the existing

[15] Case 12/74 *Commission v Germany* [1975] ECR 181; Case 113/80 *Commission v Ireland* [1981] ECR 1625.

[16] Case C–21/88 *Du Pont de Nemours Italiana SpA v Unità Sanitaria Locale No 2 Di Carrara* [1990] ECR I–889; Case 72/83 *Campus Oil Ltd v Minister for Industry and Energy* [1984] ECR 2727; Case C–254/05 *Commission v Belgium* [2007] ECR I–4269.

[17] Institute for Industrial Research and Standards.

network. Compliance with another standard, even an international standard such as ISO 160: 1980, would not suffice to eliminate technical difficulties.

22. That technical argument cannot be accepted. The Commission's complaint does not relate to compliance with technical requirements but to the refusal of the Irish authorities to verify whether those requirements are satisfied where the manufacturer of the materials has not been certified by the IIRS to IS 188. By incorporating in the notice in question the words 'or equivalent' after the reference to the Irish standard, as provided for by Directive 71/305 where it is applicable, the Irish authorities could have verified compliance with the technical conditions without from the outset restricting the contract to tenderers proposing to utilize Irish materials.

A fourth type of case is where *the discrimination in favour of domestic goods is evident in administrative practice*, as exemplified by *Commission v France*.[18] French law discriminated against imported postal franking machines. The law was changed, but a British company claimed that, notwithstanding this, the French authorities repeatedly refused to approve its machines. The ECJ held that general administrative discrimination against imports could be caught by Article 34. The discrimination could, for example, take the form of delay in replying to applications for approval, or refusing approval on the grounds of various alleged technical faults that were inaccurate.

(c) PRICE FIXING

A state cannot treat imported goods less favourably in law or fact than domestic products through price-fixing regulations.[19]

Case C–531/07 **Fachverband der Buch- und Medienwirtschaft v LIBRO Handelsgesellschaft mbH** [2009] ECR I–3717

Austrian law provided in effect that an importer of books could not fix a price below the retail price fixed or recommended by the publisher for the state of publication.

THE ECJ

21. In that regard, it should be noted that Paragraph 3(2) of the BPrBG, by prohibiting Austrian importers of German-language books from fixing a retail price below that fixed or recommended by the publisher for the State of publication, less any VAT comprised in it, provides for a less favourable treatment for imported books . . . since it prevents Austrian importers and foreign publishers from fixing minimum retail prices according to the conditions of the import market, whereas the Austrian publishers are free to fix themselves, for their goods, such minimum retail prices for the national market.

22. Consequently, such provisions are to be regarded as a measure having equivalent effect to an import restriction contrary to Article 28 EC, in so far as they create, for imported books, a distinct regulation which has the effect of treating products from other Member States less favourably . . .

[18] Case 21/84 *Commission v France* [1985] ECR 1356.

[19] Case 181/82 *Roussel Laboratoria BV v The State of The Netherlands* [1983] ECR 3849; Case 56/87 *Commission v Italy* [1988] ECR 2919; Case 82/77 *Openbaar Ministerie v Van Tiggele* [1978] ECR 25; Case 65/75 *Riccardo Tasca* [1976] ECR 291.

23. The German Government contended, at the hearing, that all the considerations concerning the restrictive effects of the Austrian provisions are unfounded because the importation into Austria of books from Germany covers in reality the majority of the Austrian market and that the Austrian market for German-language books cannot be considered independently from the German market. There is, in fact, a single market in which, as the difference in the retail price is minimal, there is no competition between the different editions of the same book sold in those two Member States.

24. These facts, which are, moreover, not contested, cannot be taken into consideration. Even assuming that the publishing houses of German-language books, in particular those established in Germany, are not disadvantaged by the Austrian provisions on the price of imported books, those provisions allow them to exercise control over the prices charged on the Austrian market and also to ensure that those prices are not lower than those charged in the State of publication, such considerations do not allow it to be ruled out that provisions such as those at issue in the main proceedings have the effect of restricting the ability of Austrian importers to compete, as the latter cannot act freely on their market unlike the Austrian publishers who are their direct competitors.

(D) MEASURES WHICH MAKE IMPORTS MORE DIFFICULT OR COSTLY

There are numerous ways in which a Member State can render it more difficult for importers to break into that market, as exemplified by the *Schloh* case.

Case 50/85 **Schloh v Auto Contrôle Technique** [1986] ECR 1855

[Note Lisbon Treaty renumbering: Arts 30 and 36 are now Arts 34 and 36 TFEU]

Schloh bought a car in Germany and obtained from a Ford dealer in Belgium a certificate of conformity with vehicle types in Belgium. Under Belgian law he was required to submit his car to two roadworthiness tests, for which fees were charged. He challenged the tests, arguing that they were an MEQR. The extract concerns the first roadworthiness test.

THE ECJ

12. . . . Roadworthiness testing is a formality which makes the registration of imported vehicles more difficult and more onerous and consequently is in the nature of a measure having an effect equivalent to a quantitative restriction.

13. Nevertheless, Article 36 may justify such a formality on grounds of the protection of human life and health, provided that it is established, first, that the test at issue is necessary for the attainment of that objective and, secondly, that it does not constitute a means of arbitrary discrimination or a disguised restriction on trade between Member States.

14. As far as the first condition is concerned, it must be acknowledged that roadworthiness testing required prior to the registration of an imported vehicle may . . . be regarded as necessary for the protection of human health and life where the vehicle in question has already been put on the road. In such cases roadworthiness testing performs a useful function inasmuch as it makes it possible to check that the vehicle has not been damaged and is in a good state of repair. However such testing cannot be

justified on those grounds where it relates to an imported vehicle carrying a certificate of conformity which has not been placed on the road before being registered in the importing Member State.

15. As far as the second condition is concerned, it must be stated that the roadworthiness testing of imported vehicles cannot, however, be justified under the second sentence of Article 36 of the Treaty if it is established that such testing is not required in the case of vehicles of national origin presented for registration in the same circumstances. If that were the case it would become apparent that the measure in question was not in fact inspired by a concern for the protection of human health and life but in reality constituted a means of arbitrary discrimination in trade between Member States. It is for the national court to verify that such non-discriminatory treatment is in fact ensured.

The ECJ held that the Belgian rule was contrary to Article 34, save in relation to cars which were already on the road, provided that in this type of case the rules were applied in a non-discriminatory fashion.

(E) NATIONAL MEASURES VERSUS PRIVATE ACTION

It seems clear that Article 34 applies to measures taken by the state,[20] as opposed to those taken by private parties.[21] Other Treaty provisions, notably Articles 101 and 102 TFEU, apply to action by private parties that restricts competition and has an impact on inter-state trade.[22]

This means that the issue of what is a state entity has to be addressed. Thus in the '*Buy Irish*'[23] case we have already seen that the ECJ rejected the argument that the Irish Goods Council was a private body and therefore immune from Article 34. The Irish Government's involvement with funding the organization and appointment of its members rendered it public for these purposes, while in the *Apple and Pear Development Council* case[24] the existence of a statutory obligation on fruit growers to pay certain levies to the Council sufficed to render the body public for these purposes. Institutions concerned with trade regulation may come within the definition of the state for these purposes even if they are nominally private, provided that they receive a measure of state support or 'underpinning'.[25]

Article 34 can also apply against the state even though private parties have taken the main role in restricting the free movement of goods, as exemplified by *Commission v France*.[26] The Commission brought an Article 258 TFEU action against the French Government for breach of what is now Article 34 TFEU combined with Article 4(3) TEU, because the government had taken insufficient measures to prevent French farmers from disrupting imports of agricultural produce from other Member States. The ECJ held that it was incumbent on a government to take all necessary and appropriate measures to ensure that free movement was respected in its territory, even where the obstacles were created by private parties.[27]

[27] See also Regulation 2679/98 of 7 December 1998 on the functioning of the internal market in relation to the free movement of goods among the Member States [1998] OJ L337/8, but for the weakness of this Reg see Report from the Commission to the Council and European Parliament on the application of Regulation 2679/98, COM(2001)160 final.

(F) SUMMARY

i. If a polity decides to embrace a single market, then discriminatory or protectionist measures will be at the top of the list of those to be caught, since they are directly opposed to the single market ideal.

ii. The court entrusted with policing such a regime must be mindful of the many different ways in which a state can seek to discriminate against imported goods.

iii. The ECJ has been aware of this, and has made sure that indirect as well as direct discrimination is caught by Article 34.

4 INDISTINCTLY APPLICABLE RULES: *CASSIS DE DIJON*

(A) FOUNDATIONS: *CASSIS DE DIJON*

The removal of discriminatory trade barriers is a necessary, but not sufficient, condition for single market integration. There are many rules that do not discriminate between goods dependent upon country of origin, but which nevertheless create barriers to trade between Member States.

The Commission appreciated this when framing Directive 70/50.[28] Article 2 was concerned with discriminatory measures. Article 3 provided that the Directive also covered measures governing the marketing of products which deal with shape, size, weight, composition, presentation, and identification, where the measures were equally applicable to domestic and imported products, and where the restrictive effect of such measures on the free movement of goods exceeded the effects intrinsic to such rules.

The possibility that Article 34 could be applied to indistinctly applicable rules was also apparent in *Dassonville*.[29] The definition of an MEQR in paragraph 5 did not require a measure to be discriminatory. The seeds that were sown in Directive 70/50 and *Dassonville* came to fruition in the seminal *Cassis de Dijon* case.

Case 120/78 **Rewe-Zentral AG v Bundesmonopolverwaltung für Branntwein**
[1979] ECR 649

[Note Lisbon Treaty renumbering: Art 30 is now Art 34 TFEU]

The applicant intended to import the liqueur 'Cassis de Dijon' into Germany from France. The German authorities refused to allow the importation because the French drink was not of sufficient alcoholic strength to be marketed in Germany. Under German law such liqueurs had to have an alcohol content of 25 per cent, whereas the French drink had an alcohol content of between 15 and 20 per cent. The applicant argued that the German rule was an MEQR, since it prevented the French version of the drink from being lawfully marketed in Germany.

THE ECJ

8. In the absence of common rules relating to the production and marketing of alcohol . . . it is for the Member States to regulate all matters relating to the production and marketing of alcohol and alcoholic beverages on their own territory.

[28] Dir 70/50, [1970] OJ L13/29, Art 2(3).
[29] Case 8/74 *Procureur du Roi v Dassonville* [1974] ECR 837.

Obstacles to movement within the Community resulting from disparities between the national laws relating to the marketing of the products in question must be accepted in so far as those provisions may be recognized as being necessary in order to satisfy mandatory requirements relating in particular to the effectiveness of fiscal supervision, the protection of public health, the fairness of commercial transactions and the defence of the consumer.

9. The Government of the Federal Republic of Germany . . . put forward various arguments which, in its view, justify the application of provisions relating to the minimum alcohol content of alcoholic beverages, adducing considerations relating on the one hand to the protection of public health and on the other to the protection of the consumer against unfair commercial practices.

10. As regards the protection of public health the German Government states that the purpose of the fixing of minimum alcohol contents by national legislation is to avoid the proliferation of alcoholic beverages on the national market, in particular alcoholic beverages with a low alcohol content, since, in its view, such products may more easily induce a tolerance towards alcohol than more highly alcoholic beverages.

11. Such considerations are not decisive since the consumer can obtain on the market an extremely wide range of weakly or moderately alcoholic products and furthermore a large proportion of alcoholic beverages with a high alcohol content freely sold on the German market is generally consumed in a diluted form.

12. The German Government also claims that the fixing of a lower limit for the alcohol content of certain liqueurs is designed to protect the consumer against unfair practices on the part of producers and distributors of alcoholic beverages.

This argument is based on the consideration that the lowering of the alcohol content secures a competitive advantage in relation to beverages with a higher alcohol content, since alcohol constitutes by far the most expensive constituent of beverages by reason of the high rate of tax to which it is subject.

Furthermore, according to the German Government, to allow alcoholic products into free circulation wherever, as regards their alcohol content, they comply with the rules laid down in the country of production would have the effect of imposing as a common standard within the Community the lowest alcohol content permitted in any of the Member States, and even of rendering any requirements in this field inoperative since a lower limit of this nature is foreign to the rules of several Member States.

13. As the Commission rightly observed, the fixing of limits to the alcohol content of beverages may lead to the standardization of products placed on the market and of their designations, in the interests of a greater transparency of commercial transactions and offers for sale to the public.

However, this line of argument cannot be taken so far as to regard the mandatory fixing of minimum alcohol contents as being an essential guarantee of the fairness of commercial transactions, since it is a simple matter to ensure that suitable information is conveyed to the purchaser by requiring the display of an indication of origin and of the alcohol content on the packaging of products.

14. It is clear from the foregoing that the requirements relating to the minimum alcohol content of alcoholic beverages do not serve a purpose which is in the general interest and such as to take precedence over the requirements of the free movement of goods, which constitutes one of the fundamental rules of the Community.

In practice, the principal effect of requirements of this nature is to promote alcoholic beverages having a high alcohol content by excluding from the national market products of other Member States which do not answer that description.

It therefore appears that the unilateral requirement imposed by the rules of a Member State of a minimum alcohol content for the purposes of the sale of alcoholic beverages constitutes an obstacle to trade which is incompatible with the provisions of Article 30 of the Treaty.

There is therefore no valid reason why, provided that they have been lawfully produced and marketed in one of the Member States, alcoholic beverages should not be introduced into any other Member State; the sale of such products may not be subject to a legal prohibition on the marketing of beverages with an alcohol content lower than the limits set by the national rules.

The significance of *Cassis de Dijon* can hardly be overstated, and it is therefore worth dwelling upon the result and the reasoning.

In terms of *result* the Court's ruling in *Cassis* affirmed and developed the *Dassonville* judgment. It *affirmed* paragraph 5 of *Dassonville*: what is now Article 34 could apply to national rules that did not discriminate against imported products, but which inhibited trade because they were different from the trade rules applicable in the country of origin. The fundamental assumption was that when goods had been lawfully marketed in one Member State, they should be admitted into any other state without restriction, unless the state of import could successfully invoke one of the mandatory requirements. The *Cassis* judgment encapsulated therefore a principle of *mutual recognition*, paragraph 14(4). The *Cassis* ruling also *built* upon paragraph 6 of *Dassonville*, in which the ECJ introduced the rule of reason: in the absence of harmonization, reasonable measures could be taken by a state to prevent unfair trade practices. Paragraph 8 of *Cassis* developed this idea. Four matters (fiscal supervision, etc) were listed that could prevent a trade rule which inhibited the free movement of goods from being caught by what is now Article 34. This list is not, as will be seen below, exhaustive. The mandatory requirements that constitute the rule of reason are taken into account within the fabric of Article 34, and are separate from what is now Article 36.

The *reasoning* in *Cassis* is as significant as the result. The core is to be found in paragraph 8 of the judgment. The ECJ began by affirming the right of the states to regulate all matters that had not yet been the subject of Community harmonization. Yet within half a dozen lines the whole balance shifted. State regulation of such areas must be accepted, together with any obstacles to trade which might follow from disparities in national laws, *but* only insofar as these trade rules could be justified by one of the mandatory requirements listed in paragraph 8. What began by an assertion of states' rights was transformed into a conclusion that required the state to justify the indistinctly applicable rules under the rule of reason.

The ECJ scrutinized closely assertions that the mandatory requirements applied. The German Government's claim in paragraph 10 was weak. The substance of the main claim in paragraph 12 was little better, and was countered in paragraph 13. The point of real substance raised by the German Government was to be found in paragraph 12(3), and it elicited no direct response from the Court. The effect of *Cassis* was deregulatory: it rendered inapplicable trade rules that prevented goods lawfully marketed in one state from being imported into another state. The result might be a common standard based on the country with the least demanding rules, what is often referred to as the 'regulatory race to the bottom'.[30] The implications of this will be considered below.[31]

(B) APPLICATION: THE POST-*CASSIS* JURISPRUDENCE

There were numerous cases applying *Cassis* to various trade rules.[32] In *Déserbais*[33] an importer of Edam cheese from Germany into France was prosecuted for unlawful use of a trade name. In Germany such cheese could be lawfully produced with a fat content of only 34.3 per cent, whereas in France the name Edam was restricted to cheese with a fat content of 40 per cent. The importer relied on Article 34 by way of defence to the criminal prosecution. The ECJ held, in accord with *Cassis*, that the French rule was incompatible with this Article, and could not be saved by the mandatory requirements.

[30] This will not always be so: see 688–689.

[31] See below, 688–689.

[32] Case 298/87 *Smanor* [1988] ECR 4489; Case 407/85 *Drei Glocken v USL Centro-Sud* [1988] ECR 4233; Case C–362/88 *GB-INNO-BM v Confédération du Commerce Luxembourgeois Asbl* [1990] ECR I–667; Case C–30/99 *Commission v Ireland* [2001] ECR I–4619; Case C–123/00 *Criminal Proceedings against Bellamy and English Shop Wholesale SA* [2001] ECR I–2795; Case C–14/02 *ATRAL SA v Belgium* [2003] ECR I–4431; Case C–170/04 *Klas Rosengren v Riksåklagaren* [2007] ECR I–4071; Case C–265/06 *Commission v Portugal* [2008] ECR I–2245.

[33] Case 286/86 *Ministère Public v Déserbais* [1988] ECR 4907.

The same result was reached in *Gilli and Andres*[34] where importers of apple vinegar from Germany into Italy were prosecuted for fraud because they had sold vinegar in Italy which was not made from the fermentation of wine. The rule hampered Community trade and did not benefit from the mandatory requirements, since proper labelling could alert consumers to the nature of the product, thereby avoiding consumer confusion.

The same approach was apparent in *Rau*,[35] which was concerned with national rules on packaging rather than content. Belgian law required all margarine to be marketed in cube-shaped packages, irrespective of where it had been made, but it was clearly more difficult for non-Belgian manufacturers to comply without incurring cost increases. The ECJ held that Article 34 was applicable, and that the Belgian rule could not be justified on the basis of consumer protection, since any consumer confusion could be avoided by clear labelling.

(c) INDISTINCTLY APPLICABLE RULES: ARTICLE 35

Article 35 prohibits quantitative restrictions and MEQRs in relation to exports in the same manner as does Article 34 in relation to imports. The ECJ has, however, held that there is a difference in the scope of the two provisions. Whereas Article 34 will apply to discriminatory provisions and also to indistinctly applicable measures, Article 35 will, it seems, apply only if there is discrimination.[36] An exporter faced with a national rule on, for example, quality standards for a product to be marketed in that state cannot use Article 35 to argue that such a rule renders it more difficult for that exporter to penetrate other markets. The rationale for making Article 34 applicable to measures which do not discriminate is that they impose a dual burden on the importer, which will have to satisfy the relevant rules in its own state and also the state of import. This will not normally be so in relation to Article 35.[37]

This was established in *Groenveld*.[38] Dutch legislation prohibited all manufacturers of meat products from having in stock or processing horsemeat. The purpose was to safeguard the export of meat products to countries that prohibited the marketing of horseflesh. It was impossible to detect the presence of horsemeat within other meat products, and therefore the ban was designed to prevent its use by preventing meat processors from having such horsemeat in stock at all. The sale of horsemeat was not actually forbidden in the Netherlands. Nonetheless the Court held that the Dutch rule did not infringe what is now Article 35. The Article was aimed at national measures which had as their specific object or effect the restriction of exports, so as to provide a particular advantage for national production at the expense of the trade of other Member States. This was not the case here, said the Court, since the prohibition applied to the production of goods of a certain kind without drawing a distinction depending on whether such goods were intended for the national market or for export.[39]

It has however been argued that Article 35 should be conceptualized in terms of market access, and that it should be capable of applying to indistinctly applicable rules.[40] It is moreover clear from

Gysbrechts that the ECJ is willing to find a breach of Article 35 even where the rule applies to all traders if it has a greater effect on exports than on domestic traders.[41] Belgian law prohibited a supplier in a distant selling contract from requiring that the consumer provide his payment card number, even though the supplier undertook not to use it to collect payment before expiry of the period in which the consumer could return the goods. The ECJ cited *Groenveld* for the proposition that Article 35 caught national measures which treated differently the domestic and export trade of a Member State so as to provide an advantage for the domestic market at the expense of trade of other Member States. It noted that the consequences of the prohibition in this case were generally more significant in cross-border sales made directly to consumers, because of the obstacles to bringing legal proceedings in another Member State against consumers who defaulted. The ECJ therefore concluded that even if the prohibition was applicable to all traders active in the national territory, its actual effect was nonetheless greater on goods leaving the market of the exporting Member State than on the marketing of goods in the domestic market of that Member State and was therefore caught by Article 35. It held moreover that although consumer protection could constitute a justification, the challenged rule was disproportionate.

(D) INDISTINCTLY APPLICABLE RULES: THE LIMITS OF ARTICLE 34

Cassis signalled the ECJ's willingness to extend Article 34 to catch indistinctly applicable rules. The difficulty is that all rules that concern trade, directly or indirectly, could be said to affect the free movement of goods in various ways. Thus, as Weatherill and Beaumont note, it could be said that rules requiring the owner of a firearm to have a licence, or spending limits imposed on government departments, reduce the sales opportunities for imported products.[42] It would, as they say, seem absurd to bring such rules within Article 34, yet they could be caught by the *Dassonville* formula.[43]

A distinction can however be drawn, as Weatherill and Beaumont note,[44] between what may be termed dual-burden rules and equal-burden rules. *Cassis* is concerned with dual-burden rules. State A imposes rules on the content of goods. These are applied to goods imported from state B, even though such goods have already complied with the trade rules in state B. *Cassis* prevents state A from imposing its rules in such instances unless they can be saved by the mandatory requirements. Equal-burden rules are those applying to all goods, irrespective of origin, which regulate trade in some manner. They are not designed to be protectionist. These rules may have an impact on the overall volume of trade, but there will be no greater impact for imports than for domestic products.

A key issue is whether rules of this nature should be held to fall within Article 34, subject to a possible justification, or whether they should be deemed to be outside Article 34 altogether. The result may be the same, in that the rule may be held lawful. The choice is nonetheless important. If these rules are within Article 34 they are *prima facie* unlawful, and the burden is on those seeking to uphold the rule to show objective justification. Both strategies were evident in the ECJ's jurisprudence prior to *Keck*.[45]

In some cases the ECJ held that rules which did not relate to the *characteristics* of the goods and did not impose a dual burden on the importer, but concerned only the conditions on which all goods were *sold*, were outside Article 34. Thus in *Oebel*[46] the Court held that a rule which prohibited the delivery

of bakery products to consumers and retailers, but not wholesalers, at night was not caught, since it applied in the same way to all producers wherever they were established.[47]

In other cases the Court held, however, that Article 34 applied to rules that were not dissimilar to those in the preceding paragraph. Thus in *Cinéthèque*[48] the ECJ held that a French law banning the sale or hire of videos of films during the first year in which the film was released, the objective being to encourage people to go to the cinema and hence protect the profitability of cinematographic production, was caught by Article 34 even though it did not favour domestic production and did not seek to regulate trade. The ECJ held that the French law could however be justified, since it sought to encourage the creation of films irrespective of their origin.[49] The same approach to Article 34 is apparent in the *Sunday Trading* cases.

Case 145/88 **Torfaen BC v B & Q plc**
[1989] ECR 3851

B & Q was prosecuted for violation of the Sunday trading laws which prohibited retail shops from selling on Sundays, subject to exceptions for certain types of products. B & Q claimed that these laws constituted an MEQR within Article 30. The effect of the laws was to reduce total turnover by about 10 per cent, with a corresponding diminution of imports from other Member States. But imported goods were, in this respect, in no worse a position than domestic goods: the reduction in total turnover affected all goods equally.

THE ECJ

11. The first point which must be made is that national rules prohibiting retailers from opening their premises on Sunday apply to imported and domestic products alike. In principle, the marketing of products imported from other Member States is not therefore made more difficult than the marketing of domestic products.

12. Next, it must be recalled that in its judgment . . . in Joined Cases 60 and 61/84 (*Cinéthèque*) the Court held, with regard to a prohibition of the hiring of video-cassettes applicable to domestic and imported products alike, that such a prohibition was not compatible with the principle of the free movement of goods provided for in the Treaty unless any obstacle to Community trade thereby created did not exceed what was necessary in order to ensure the attainment of the objective in view and unless that objective was justified with regard to Community law.

13. In those circumstances it is therefore necessary in a case such as this to consider first of all whether rules such as those at issue pursue an aim which is justified with regard to Community law. As far as this question is concerned the Court has already stated in its judgment . . . in Case 155/80 (*Oebel* [1981] ECR 1993) that national rules governing the hours of work, delivery and sale in the bread and confectionery industry constitute a legitimate part of economic and social policy, consistent with the objectives of public interest pursued by the Treaty.

14. The same consideration must apply as regards national rules governing the opening hours of retail premises. Such rules reflect certain political and economic choices in so far as their purpose is to ensure that working and non-working hours are so arranged as to accord with national or regional socio-cultural characteristics, and that, in the present state of Community law, is a matter for Member States. Furthermore such rules are not designed to govern the patterns of trade between Member States.

[47] See also Case 148/85 *Direction Générale des Impôts and Procureur de la République v Forest* [1986] ECR 3449, [11]; Case 75/81 *Belgian State v Blesgen* [1982] ECR 1211; Case C–23/89 *Quietlynn Ltd v Southend-on-Sea BC* [1990] ECR I–3059.

[48] Cases 60 and 61/84 *Cinéthèque SA v Fédération Nationale des Cinémas Français* [1985] ECR 2605.

[49] The ECJ's approach can be contrasted with that taken by AG Slynn, who argued that the French law should fall outside Art 34, since it did not impose any additional requirement on importers: ibid 2611.

15. Secondly, it is necessary to ascertain whether the effects of such national rules exceed what is necessary to achieve the aim in view. As is indicated in Article 3 of Commission Directive 70/50 . . . the prohibition laid down in Article 30 covers national measures governing the marketing of products where the restrictive effect of such measures on the free movement of goods exceeds the effects intrinsic to trade rules.

16. The question whether the effects of specific national rules do in fact remain within that limit is a question to be determined by the national court.

17. The reply to the first question must therefore be that Article 30 of the Treaty must be interpreted as meaning that the prohibition which it lays down does not apply to national rules prohibiting retailers from opening their premises on Sunday where the restrictive effects on Community trade which may result therefrom do not exceed the effects intrinsic to rules of that kind.

The approach in *Torfaen* was conceptually identical to that in *Cinéthèque*. The rule was *prima facie* caught by what is now Article 34, but it could escape prohibition if there was some objective justification and the effects of the rule were proportionate, the latter issue to be determined by national courts. Subsequent case law within the United Kingdom attested to the difficulty in applying the ECJ's test.[50] The ECJ sought to resolve these difficulties by making it clear that Sunday trading rules were proportionate.[51] The fundamental approach nonetheless remained the same: such rules were *prima facie* within Article 34. The post-*Torfaen* case law simply made things easier for national courts by providing guidance on proportionality.

The ECJ's case law provided academics with much material concerning the proper boundaries of Article 34. Some saw little wrong with the ECJ's approach in *Cinéthèque* and *Torfaen*. Others were less happy with the Court's approach.[52] White distinguished between the characteristics of the goods and selling arrangements, a theme picked up by the ECJ in *Keck*.

E White, In Search of the Limits to Article 30 of the EEC Treaty[53]

[A]s the judgment of the Court in *Cassis de Dijon* clearly shows, Member States are not entitled to require that imported products have the same characteristics as are required of, or are traditional in, domestic products unless this is strictly necessary for the protection of some legitimate interest. There is not, however, the same need to require the rules relating to the circumstances in which certain goods may be sold or used in the importing Member State to be overridden for this purpose as long as imported products enjoy equal access to the market of the importing Member State compared with national goods. In such a case the imported product is not deprived of any advantage it derives from the different legal and economic environment prevailing in the place of production. In fact, any reduction of total sales (and therefore imports) which may result from restrictions on the circumstances in which they may be sold does not arise from disparities between national rules but rather out of the existence of the rules in the importing Member State.

5 INDISTINCTLY AND DISTINCTLY APPLICABLE RULES: *KECK* AND SELLING ARRANGEMENTS

(A) *KECK*: SELLING ARRANGEMENTS

Cases C–267 and 268/91 **Criminal Proceedings against Keck and Mithouard** [1993] ECR I–6097

[Note Lisbon Treaty renumbering: Arts 30 and 177 are now Arts 34 and 267 TFEU]

Keck and Mithouard (K & M) were prosecuted in the French courts for selling goods at a price which was lower than their actual purchase price (resale at a loss), contrary to a French law of 1963 as amended in 1986. The law did not ban sales at a loss by the manufacturer. K & M claimed that the French law was contrary to Community law concerning free movement of goods.

THE ECJ

12. It is not the purpose of national legislation imposing a general prohibition on resale at a loss to regulate trade in goods between Member States.

13. Such legislation may, admittedly, restrict the volume of sales, and hence the volume of sales of products from other Member States, in so far as it deprives traders of a method of sales promotion. But the question remains whether such a possibility is sufficient to characterize the legislation in question as a measure having equivalent effect to a quantitative restriction on imports.

14. In view of the increasing tendency of traders to invoke Article 30 of the Treaty as a means of challenging any rules whose effect is to limit their commercial freedom even where such rules are not aimed at products from other Member States, the Court considers it necessary to re-examine and clarify its case law on this matter.

15. In '*Cassis de Dijon*' . . . it was held that, in the absence of harmonization of legislation, measures of equivalent effect prohibited by Article 30 include obstacles to the free movement of goods where they are the consequence of applying rules that lay down requirements to be met by such goods (such as requirements as to designation, form, size, weight, composition, presentation, labelling, packaging) to goods from other Member States where they are lawfully manufactured and marketed, even if those rules apply without distinction to all products unless their application can be justified by a public-interest objective taking precedence over the free movement of goods.

16. However, contrary to what has previously been decided, the application to products from other Member States of national provisions restricting or prohibiting certain selling arrangements is not such as to hinder directly or indirectly, actually or potentially, trade between Member States within the meaning of the *Dassonville* judgment . . . provided that those provisions apply to all affected traders operating within the national territory and provided that they affect in the same manner, in law and fact, the marketing of domestic products and of those from other Member States.

17. Where those conditions are fulfilled, the application of such rules to the sale of products from another Member State is not by nature such as to prevent their access to the market or to impede access any more than it impedes the access of domestic products. Such rules therefore fall outside the scope of Article 30 of the Treaty.

18. Accordingly, the reply to be given to the national court is that Article 30 of the EEC Treaty is to be interpreted as not applying to legislation of a Member State imposing a general prohibition on resale at a loss.

It is clear that the decision was based in part upon the distinction between dual-burden rules and equal-burden rules (paragraphs 15 to 17).

Cassis-type *rules relating to the goods themselves* were within Article 34 because they would have to be satisfied by the importer *in addition* to any such provisions existing within its own state (paragraph 15). Such rules were by their very nature[54] likely to impede access to the market for imported goods.

Rules concerning selling arrangements, by way of contrast, imposed an equal burden on all those seeking to market goods in a particular territory (paragraph 17). They did not impose extra costs on the importer,[55] their purpose was not to regulate trade (paragraph 12), and they did not prevent access to the market. They were therefore not within Article 34, *provided* that they affected in the same manner in law or fact domestic and imported goods (paragraph 16).

It is unclear precisely which earlier cases were being reassessed (paragraph 16), because the Court did not name specific cases. It appeared to encompass decisions such as *Torfaen* and probably *Cinéthèque*,[56] since the challenged rules concerned selling arrangements which affected importers no more than domestic producers and the effect was a reduction in the volume of sales.

The ECJ's desire to exclude selling arrangements from the ambit of Article 34 is apparent from later case law. In *Tankstation*[57] the Court held that national rules that provided for the compulsory closing of petrol stations were not caught by Article 34. The ECJ concluded that the rules related to selling arrangements that applied equally to all traders. In *Punto Casa*[58] and *Semeraro*[59] the Court reached the same conclusion in relation to Italian legislation on Sunday closing of retail outlets. The rule applied equally to domestic and imported products, and therefore was outside the scope of Article 34. The same theme is apparent in *Hunermund*,[60] where the ECJ held that a rule prohibiting pharmacists from advertising para-pharmaceutical products that they were allowed to sell was not caught by Article 34: the rule was not directed towards intra-Community trade, it did not preclude traders other than pharmacists from advertising such goods, and it applied evenly as between all traders. The ECJ also held that national provisions restricting the number of outlets for a given product, or imposing a licensing requirement, were outside Article 34. This was either because the rule related to selling arrangements or because the impact was too indirect and uncertain.[61]

(B) *KECK*: STATIC AND DYNAMIC SELLING ARRANGEMENTS

The ECJ's desire to limit Article 34 is readily understandable, but the distinction drawn in *Keck* between rules that go to the nature of the product itself and those which relate to the selling arrangements for that product is problematic. The problem resides in ambiguity about the meaning of the term 'selling arrangements'.

This could connote only what may be termed *static selling arrangements*: rules relating to the hours at which shops may be open, the length of time for which people may work, or the type of premises in which certain goods may be sold. *Non-static or dynamic selling arrangements* include the ways in

[54] Cases C–401 and 402/92 *Criminal Proceedings against Tankstation 't Heustke vof and JBE Boermans* [1994] ECR I–2199, 2220.

[55] Ibid.

[56] In Cases C–401 and 402/92 *Tankstation* (n 54) AG van Gerven felt that *Cinéthèque* would be decided differently now in the light of *Keck*.

[57] Ibid.

[58] Cases C–69 and 258/93 *Punto Casa SpA v Sindaco del Commune di Capena* [1994] ECR I–2355.

[59] Cases C–418/93 *Semeraro* (n 51).

[60] Case C–292/92 *R Hunermund v Landesapothekerkammer Baden-Württemberg* [1993] ECR I–6787.

[61] Case C–387/93 *Banchero* [1995] ECR I–4663; Case C–379/92 *Peralta* [1994] ECR I–3453; Cases C–140–142/94 *Dip SpA v Commune di Bassano del Grappa* [1995] ECR I–3257.

which a manufacturer chooses *to market this specific product*, through a certain form of advertising, free offers, and the like.

The objection to taking the latter out of Article 34 is that they may relate more closely to the definition of the product itself. Legislation that restricted certain forms of advertising or sales-promotion might limit intra-EU trade, even if the rules were indistinctly applicable. It might force a producer to adopt sales promotion or advertising schemes which differed as between states or to discontinue an effective scheme.[62] Non-static selling arrangements can therefore form an integral aspect of the goods, in much the same way as do rules relating to composition, labelling, or presentation.

It is, however, clear from *Keck* that the Court regarded some such rules as selling arrangements, and hence as outside Article 34. Thus it admitted that a rule prohibiting sales at a loss deprived traders of a method of sales promotion, and hence reduced the volume of sales, and yet treated this rule as a selling arrangement that was outside Article 34. While in *Hunermund*[63] and *Leclerc-Siplec*[64] a limited ban on advertising was characterized as a method of sales promotion and held to be outside Article 34, and in *Schmidt*[65] a prohibition on doorstep sales of silver jewellery was held *prima facie* to fall outside Article 34.

(c) *KECK* AND SELLING ARRANGEMENTS: TWO QUALIFICATIONS

(i) *Rules Concerning Sales Characterized as Relating to the Product*

It is open to the ECJ to characterize rules which affect selling as part of the product itself,[66] and hence within the ambit of Article 34. This is exemplified by *Familiapress*.[67]

Case C–368/95 **Vereinigte Familiapress Zeitungsverlags- und Vertreibs GmbH v Heinrich Bauer Verlag**
[1997] ECR I–3689

[Note Lisbon Treaty renumbering: Art 30 is now Art 34 TFEU]

Familiapress, an Austrian newspaper publisher, sought to restrain HBV, a German publisher, from publishing in Austria a magazine containing crossword puzzles for which the winning readers would receive prizes. Austrian legislation prohibited publishers from including such prize competitions in their papers. Austria argued that its legislation was not caught by Article 30, since the national law related to a method of sales promotion, and was therefore, according to *Keck*, outside Article 30.

[65] Case C–441/04 *A-Punkt Schmuckhandels GmbH v Schmidt* [2006] ECR I–2093.

[66] If the national rule requires the alteration of packaging or labelling of the imported products this generally precludes it from being a selling arrangement within *Keck:* Case C–12/00 *Commission v Spain* [2003] ECR I–459, [76]; Case C–416/00 *Morellato v Commune di Padova* [2003] ECR I–9343, [29]–[30]. Compare Case C–159/00 *Sapud Audic* (n 21) [72]–[75].

[67] See also Case C–67/97 *Criminal Proceedings against Bluhme* [1998] ECR I–8033, [21]; Cases C–158 and 159/04 *Alfa Vita Vassilopoulos AE and Carrefour Marinopoulos AE v Elliniko Dimosio and Nomarchiaki Aftodioikisi Ioanninon* [2006] ECR I–8135; Case C–244/06 *Dynamic Medien Vertriebs GmbH v Avides Media AG* [2008] ECR I–505, [24]–[32].

THE ECJ

11. The Court finds that, even though the relevant national legislation is directed against a method of sales promotion, in this case it bears on the actual content of the products, in so far as the competitions in question form an integral part of the magazine in which they appear. As a result, the national legislation in question as applied to the facts of the case is not concerned with a selling arrangement within the meaning of the judgment in *Keck and Mithouard*.

12. Moreover, since it requires traders established in other Member States to alter the contents of the periodical, the prohibition at issue impairs access of the products concerned to the market of the Member State of importation and consequently hinders free movement of goods. It therefore constitutes in principle a measure having equivalent effect within the meaning of Article 30 of the Treaty.

(ii) *Differential Impact in Law or Fact*

The ruling in *Keck* is also subject to a second qualification: even if a national regulation is categorized as being about selling, it will still be caught by Article 34 if it has a differential impact, in law or fact, for domestic traders and importers.[68] This is made clear in paragraph 16 of *Keck* and is exemplified by the following cases.[69]

Cases C–34–36/95 **Konsumentombudsmannen (KO) v De Agostini (Svenska) Forlag AB and TV-Shop i Sverige AB**
[1997] ECR I–3843

[Note Lisbon Treaty renumbering: Arts 30 and 36 are now Arts 34 and 36 TFEU]

The case concerned a Swedish ban on television advertising directed at children under 12 and a ban on commercials for skincare products. It was argued that this was in breach of Article 30, and hence could not be applied in relation to advertising broadcast from another Member State. The ECJ, following *Leclerc-Siplec*, characterized the Swedish law as one concerning selling arrangements. It then continued as follows.

THE ECJ

40. In . . . *Keck* . . . at paragraph 16, the Court held that national measures restricting or prohibiting certain selling arrangements are not covered by Article 30 . . . so long as they apply to all traders operating within the national territory and as long as they affect in the same manner, in law and fact, the marketing of domestic products and of those from other Member States.

41. The first condition is clearly fulfilled in the cases before the national court.

42. As regards the second condition, it cannot be excluded that an outright ban, applying in one Member State, of a type of promotion for a product which is lawfully sold there might have a greater impact on products from other Member States.

43. Although the efficacy of the various types of promotion is a question of fact to be determined in principle by the referring court, it is to be noted that . . . de Agostini stated that television advertising was the only effective form of promotion enabling it to penetrate the Swedish market since it had no other advertising methods for reaching children and their parents.

[68] The determination of this possible differential impact will often be left to the national court: see, eg, Case C–20/03 *Burmanjer* [2005] ECR I–4133; Case C–441/04 *Schmidt* (n 65).

[69] P Koutrakos, 'On Groceries, Alcohol and Olive Oil: More on Free Movement of Goods after *Keck*' (2001) 26 ELRev 391.

44. Consequently, an outright ban on advertising aimed at children less than 12 years of age and of misleading advertising . . . is not covered by Article 30 . . . , unless it can be shown that the ban does not affect in the same way, in fact and in law, the marketing of national products and of products from other Member States.

45. In the latter case, it is for the national court to determine whether the ban is necessary to satisfy overriding requirements of general public importance or one of the aims listed in Article 36 of the Treaty, if it is proportionate to that purpose and if those aims or requirements could not have been attained or fulfilled by measures less restrictive of intra-Community trade.

Case C–405/98 **Konsumentombudsmannen (KO) v Gourmet International Products AB (GIP)**

[2001] ECR I–1795

[Note Lisbon Treaty renumbering: Art 30 is now Art 34 TFEU]

The Swedish Consumer Ombudsman sought an injunction restraining GIP from placing advertisements for alcohol in magazines. Swedish law prohibited advertising of alcohol on radio and television, and prohibited advertising of spirits, wines, and strong beer in periodicals other than those distributed at the point of sale. The prohibition on advertising did not apply to periodicals aimed at traders such as restaurateurs. GIP published a magazine containing advertisements for alcohol. 90 per cent of the subscribers were traders, and 10 per cent were private individuals. GIP argued that the advertising ban was contrary to Article 30. It contended that the advertising ban had a greater effect on imported goods than on those produced in Sweden.

THE ECJ

18. It should be pointed out that, according to paragraph 17 of its judgment in *Keck and Mithouard*, if national provisions restricting or prohibiting selling arrangements are to avoid being caught by Article 30 of the Treaty, they must not be of such a kind as to prevent access to the market by products from another state or to impede access any more than they impede the access of domestic products.

19. The Court has also held, in paragraph 42 of . . . *De Agostini* . . . that it cannot be excluded that an outright prohibition, applying in one Member State, of a type of product which is lawfully sold there might have a greater impact on products from other Member States.

20. It is apparent that a prohibition on advertising . . . not only prohibits a form of marketing a product but in reality prohibits producers and importers from directing any advertising messages at consumers, with a few insignificant exceptions.

21. Even without its being necessary to carry out a precise analysis of the facts characteristic of the Swedish situation, which it is for the national court to do, the Court is able to conclude that, in the case of products like alcoholic beverages, the consumption of which is linked to traditional social practices and to local habits and customs, a prohibition of all advertisements in the press, on the radio and on television, the direct mailing of unsolicited material or the placing of posters on the public highway is liable to impede access to the market by products from other Member States more than it impedes access by domestic products, with which consumers are instantly more familiar.

. . .

25. A prohibition on advertising such as that in issue . . . must therefore be regarded as affecting the marketing of products from other Member States more heavily than the marketing of domestic products and as therefore constituting an obstacle to trade between Member States caught by Article 30 of the Treaty.

In *de Agostini* and *Gourmet* the advertising ban was total. However the ECJ has also brought cases which impeded market access within Article 34. In *Franzen* Swedish law required a licence for those, including importers, engaged in the making of alcohol, or in wholesaling. This was held to infringe Article 34 since it imposed additional costs on importers and because most licences had been issued to Swedish traders.[70] In *Heimdienst* the ECJ showed that it was willing to consider the proviso to paragraph 16 of *Keck* in relation to a selling arrangement that impeded, rather than prevented, access to the market.[71]

Case C–254/98 **Schutzverband gegen unlauteren Wettbewerb v TK-Heimdienst Sass GmbH** [2000] ECR I–151

The case concerned an Austrian rule relating to bakers, butchers, and grocers. They could make sales on rounds in a given administrative district only if they traded from a permanent establishment in that district or an adjacent municipality, where they offered for sale the same goods as they did on their rounds. The ECJ classified the rule as one relating to selling arrangements, since it specified the geographical areas in which such operators could sell their goods in this manner. The ECJ found that the legislation had a differential impact on domestic traders and others. Local economic operators would be more likely to have a permanent establishment in the administrative district or an adjacent municipality, whereas others would have to set up such an establishment, thereby incurring additional costs.

THE ECJ

29. It follows that the application to all operators trading in the national territory of national legislation such as that in point in the main proceedings in fact impedes access to the market of the Member State of importation for products from other Member States more than it impedes access for domestic products (see to this effect . . . *Alpine Investments* . . .).

6 INDISTINCTLY AND DISTINCTLY APPLICABLE RULES: PRODUCT USE

We shall summarize and assess the current state of the law below, but before we do so it is necessary to consider recent case law on product use. The distinction drawn between selling arrangements and product characteristics generated further questions as to how cases concerned with the 'use' of products should be regarded. This issue has arisen in two major cases.

Case C–110/05 **Commission v Italy** [2009] ECR I–519

Italy prohibited motorcycles, mopeds, etc from towing trailers, even those specifically designed for use with such vehicles. The Commission argued that this was in breach of what is now Article 34 TFEU.

[70] Case C–189/95 *Criminal Proceedings against Franzen* [1997] ECR I–5909.

[71] See also Case C–322/01 *Deutscher Apothekerverband v 0800 Doc Morris NV and Jacques Waterval* [2003] ECR I–14887, [68]–[75]; Case C–20/03 *Burmanjer* (n 68); Case C–141/07 *Commission v Germany* [2008] ECR I–6935, [37]–[38].

THE ECJ

33. It should be recalled that, according to settled case-law, all trading rules enacted by Member States which are capable of hindering, directly or indirectly, actually or potentially, intra-Community trade are to be considered as measures having an effect equivalent to quantitative restrictions and are, on that basis, prohibited by Article 28 EC (see, in particular, Dassonville , paragraph 5).

34. It is also apparent from settled case-law that Article 28 EC reflects the obligation to respect the principles of non-discrimination and of mutual recognition of products lawfully manufactured and marketed in other Member States, as well as the principle of ensuring free access of Community products to national markets (see, to that effect, Case 174/82 Sandoz [1983] ECR 2445, paragraph 26; Case 120/78 Rewe-Zentral ('Cassis de Dijon') [1979] ECR 649, paragraphs 6, 14 and 15; and Keck and Mithouard , paragraphs 16 and 17).

35. Hence, in the absence of harmonisation of national legislation, obstacles to the free movement of goods which are the consequence of applying, to goods coming from other Member States where they are lawfully manufactured and marketed, rules that lay down requirements to be met by such goods constitute measures of equivalent effect to quantitative restrictions even if those rules apply to all products alike (see, to that effect, ' Cassis de Dijon', paragraphs 6, 14 and 15; Case C–368/95 Familiapress [1997] ECR I–3689, paragraph 8; and Case C–322/01 Deutscher Apothekerverband [2003] ECR I–4887, paragraph 67).

36. By contrast, the application to products from other Member States of national provisions restricting or prohibiting certain selling arrangements is not such as to hinder directly or indirectly, actually or potentially, trade between Member States for the purposes of the case-law flowing from Dassonville, on condition that those provisions apply to all relevant traders operating within the national territory and that they affect in the same manner, in law and in fact, the marketing of domestic products and of those from other Member States. Provided that those conditions are fulfilled, the application of such rules to the sale of products from another Member State meeting the requirements laid down by that State is not by nature such as to prevent their access to the market or to impede access any more than it impedes the access of domestic products (see Keck and Mithouard , paragraphs 16 and 17).

37. Consequently, measures adopted by a Member State the object or effect of which is to treat products coming from other Member States less favourably are to be regarded as measures having equivalent effect to quantitative restrictions on imports within the meaning of Article 28 EC, as are the measures referred to in paragraph 35 of the present judgment. Any other measure which hinders access of products originating in other Member States to the market of a Member State is also covered by that concept.

The ECJ held that the Italian rule fell within Article 34, but concluded that it could be justified on grounds of public safety.[72] The Court returned to the issue in the following case.

Case C–142/05 **Åklagaren v Percy Mickelsson and Joakim Roos**
[2009] ECR I–4273

[Note Lisbon Treaty renumbering: Arts 28 and 30 are now Arts 34 and 36 TFEU]

The ECJ considered whether Article 28 should be interpreted as precluding national regulations which prohibited the use of personal watercraft on waters other than designated waterways.

[72] Case C–110/05 [2009] ECR I–519, [69]; See also Case C–433/05 *Criminal proceedings against Lars Sandström*, 15 Apr 2010.

THE ECJ

24. It must be borne in mind that measures taken by a Member State, the aim or effect of which is to treat goods coming from other Member States less favourably and, in the absence of harmonisation of national legislation, obstacles to the free movement of goods which are the consequence of applying, to goods coming from other Member States where they are lawfully manufactured and marketed, rules that lay down requirements to be met by such goods, even if those rules apply to all products alike, must be regarded as 'measures having equivalent effect to quantitative restrictions on imports' for the purposes of Article 28 EC (see to that effect, Case 120/78 Rewe-Zentral (Cassis de Dijon) [1979] ECR 649, . . . Any other measure which hinders access of products originating in other Member States to the market of a Member State is also covered by that concept (see Case C–110/05 Commission v Italy [2009] ECR I–0000, paragraph 37).

25. It is apparent from the file sent to the Court that, at the material time, no waters had been designated as open to navigation by personal watercraft, and thus the use of personal watercraft was permitted on only general navigable waterways. However, the accused in the main proceedings and the Commission of the European Communities maintain that those waterways are intended for heavy traffic of a commercial nature making the use of personal watercraft dangerous and that, in any event, the majority of navigable Swedish waters lie outside those waterways. The actual possibilities for the use of personal watercraft in Sweden are, therefore, merely marginal.

26. Even if the national regulations at issue do not have the aim or effect of treating goods coming from other Member States less favourably, which is for the national court to ascertain, the restriction which they impose on the use of a product in the territory of a Member State may, depending on its scope, have a considerable influence on the behaviour of consumers, which may, in turn, affect the access of that product to the market of that Member State (see to that effect, Commission v Italy , paragraph 56).

27. Consumers, knowing that the use permitted by such regulations is very limited, have only a limited interest in buying that product (see to that effect, Commission v Italy , paragraph 57).

28. In that regard, where the national regulations for the designation of navigable waters and waterways have the effect of preventing users of personal watercraft from using them for the specific and inherent purposes for which they were intended or of greatly restricting their use, which is for the national court to ascertain, such regulations have the effect of hindering the access to the domestic market in question for those goods and therefore constitute, save where there is a justification pursuant to Article 30 EC or there are overriding public interest requirements, measures having equivalent effect to quantitative restrictions on imports prohibited by Article 28 EC.

The ECJ accepted, however, that the national rule could be justified for the protection of the environment, provided that certain conditions were met.[73]

7 THE CURRENT LAW: SUMMARY

The academic reaction to the recent case law on product use has been mixed, with commentators divided as to its impact on the previous law and as to the desirability of the tests used by the ECJ.[74] This

[73] Case C–142/05 *Åklagaren v Percy Mickelsson and Joakim Roos* [2009] ECR I–4273, [35]–[44].

area is indeed complex. This section will therefore attempt to summarize the existing law, which will then be assessed in the section that follows.

It is clear from the formulation used by the ECJ in the two cases on product use that Article 34 covers three types of national rules: those that discriminate, those that impose product requirements, and those that hinder or inhibit market access.[75] National rules concerning sales are not regarded *per se* as inhibiting market access and are only caught insofar as they apply differentially in law or fact to the marketing of domestic products and those from other Member States.[76] It remains to be seen whether selling arrangements disappear as a separate category of case, and are determined merely in terms of market access. Even if this does occur, cases concerned with selling arrangements will remain a prominent type of case in which issues of market access are considered.

The differences of view between commentators as to the current state of the positive law are ultimately explicable according to how one regards the interrelationship between the three types of case covered by Article 34. There are two possible 'readings' of the current law.

The first view regards market access as the overarching principle. On this view discrimination and product requirements are simply the principal examples of national rules that inhibit market access, without thereby precluding the possibility that there may be other cases that can have the same effect. The case law could be read in this manner.[77]

The second view sees market access merely as a residual category. On this view discrimination and product requirements are the primary categories of case that fall within Article 34, with market access simply being used as the criterion to capture other cases that do not fall within the first two. The case law could also be read in this manner.[78]

8 THE CURRENT LAW: ASSESSMENT

The two views as to the reading of the current law are reflected in contrasting normative assessments of what Article 34 ought to cover.

(A) MARKET ACCESS AS OVERARCHING PRINCIPLE

(i) *The Argument*

The view that market access is and should be the overarching principle that determines the reach of Article 34 can be seen in the reaction to the *Keck* decision, which was not generally favourable.[79] It was argued that *Keck* placed too much emphasis on factual and legal equality at the expense of market access. The approach in *Keck* was to deny that rules relating to selling arrangements came within

The Remarkable Judgment in *Keck & Mithouard*' [1994] EBLRev 63; S Weatherill, 'After *Keck*: Some Thoughts on how to Clarify the Clarification' (1996) 33 CMLRev 885; Maduro (n 2) 83–87; C Barnard, 'Fitting the Remaining Pieces into the Goods and Persons Jigsaw?' (2001) 26 ELRev 35.

Article 34, provided that such rules did not discriminate in law or fact between traders from different Member States. It was argued that this ignored the importance of market access: trading rules could be formally equal in the preceding sense, and still operate so as to inhibit market access. In so far as this may be so, it would, therefore, be misguided to exclude them from Article 34.

The concern was voiced judicially by Advocate General Jacobs in *Leclerc-Siplec*.[80] The case concerned a prohibition on television advertising imposed by French law on the distribution sector, the purpose being to protect the regional press by forcing the sector to advertise through that medium. He felt that advertising could play an important part in breaking down barriers to inter-state trade, and was therefore concerned that it should always fall outside Article 34.[81]

Advocate General Jacobs' starting point was that all undertakings engaged in legitimate economic activity should have unfettered access to the market. If there was a *substantial* restriction on that access then it should be caught by Article 34. When the measure affected the goods themselves, as in *Cassis*-type cases, then it would be *presumed to have this* substantial impact. If, however, the contested measure affected selling arrangements and was not discriminatory, the substantiality of the impact would depend, *inter alia*, on: the range of goods affected, the nature of the restriction, whether the impact was direct or indirect, and the extent to which other selling arrangements were available. If there was no substantial impact, or the effect on trade was *de minimis*, then such measures would not be within Article 34. The ECJ, however, declined to follow the Advocate General and applied *Keck* to the case.

The approach of Advocate General Jacobs nonetheless influenced the ECJ in its later jurisprudence. The ECJ has been willing to consider market access more seriously,[82] by considering whether the selling rule could have the same factual impact for the importer. It was not fortuitous that Advocate General Jacobs wrote the Opinions in *de Agostini*[83] and *Gourmet International*,[84] and that the ECJ adopted much of his reasoning. Market access also featured, as we have seen, in the reasoning in the product use cases.[85] The approach based on market access has been supported by Advocates General Maduro, Bot, and Trstenjak.[86]

Thus on this view market access is the dominant principle that determines the ambit of Article 34, while recognizing that its application may differ in different types of case. Discriminatory rules are caught not merely because they are protectionist, but because they thereby inhibit access to the relevant market. *Cassis*-type indistinctly applicable product rules are caught because they impose supplementary costs on cross-border activity that impedes market access and hence requires justification.[87] Other types of case, whether concerned with selling arrangements or product use, are caught insofar as they impede market access.

There was also academic support for an approach based on market access. Weatherill[88] drew on the reasoning of Advocate General Jacobs, and on jurisprudence concerned with Articles 56 and 45 TFEU.[89] He argued that national measures that applied equally in law and in fact to all goods and

services without reference to origin, and which imposed no direct or substantial hindrance to the access of imported goods or services to the market of that Member State should not be caught by Articles 34 and 56 TFEU. The academic argument in favour of market access was reinforced by Barnard.[90]

C Barnard, Fitting the Remaining Pieces into the Goods and Persons Jigsaw?[91]

> [A]n approach based on the access to the market provides us with a more sophisticated framework for analysing the goods and persons case law. . . . [T]his is the approach advocated by Advocate General Jacobs in *Leclerc*. Non-discriminatory measures which directly and substantially impede access to the market (including the extreme case of preventing access to the market altogether) breach the Treaty provision unless they can be justified under one of the public interest grounds or the express derogations and are proportionate (*Schindler, Alpine* and *Bosman*). In the case of non-discriminatory measures which do not substantially hinder access to the market the Court will say either that the impediment is too uncertain and remote and so does not breach the Treaty provision at all (*Graf, Krantz*), or that the measure has no effect whatsoever on inter-state trade and so is not caught by EC law at all—the outcome is the same. This means that national restrictions on, for example, planning or the green belt, which were introduced for a variety of environmental and social reasons not directly concerned with inter-state trade, can be dealt with adequately. They are not 'certain selling arrangements' in the formal sense, but they are not discriminatory and they do not substantially hinder access to the market. Similarly, national restrictions on the opening hours of shops do not substantially hinder access to the market but merely curtail the exercise of that freedom. However extreme limits on opening hours may well substantially hinder access to the market and so should breach Article 28 and need to be justified.

(ii) *Market Access: Meaning and Application*

Market access may well be the idea underlying the jurisprudence on free movement. It is, however, necessary to clarify its meaning and application. Market access can be viewed from the perspective of both producer and consumer. For the producer, free movement facilitates sales of goods into different national markets, with the primary objective of challenging existing producers in the country of import. Market access is a means to an end, the end being to maximize sales/profits for the individual producer, and to enhance the optimal allocation of resources in the EU. From the perspective of the consumer, free movement increases choice. If Germans are given the option of drinking Dutch beer then some may prefer it to the domestic product.

Given that this is so, it is doubtful whether a rigid distinction can be drawn between dynamic and static selling arrangements so far as market access is concerned. The market-access approach is normally thought to apply to dynamic selling arrangements. There is, however, a reluctance to apply the reasoning to static selling arrangements, in the sense of shop hours, locations, and the like. If, however, 'limitations' on the mode of marketing/advertising are to be regarded as going to market access, then it is difficult to see why this should not also be so in terms of 'limitations' on points of sale. The success of the producer in penetrating new markets may be affected by limitations on where and when goods can be sold as by constraints on marketing.[92] It may be argued that restrictions

[90] See however Barnard, 'Restricting Restrictions' (n 74) for a somewhat more cautious approach.

[91] (2001) 26 ELRev 35, 52.

[92] This was the argument made, unsuccessfully, in Cases C–418–421, 460–462, and 464/93, 9–11, 14–15, 23–24, and 332/94 *Semeraro* (n 51).

on where and when goods can be sold would not have a direct and substantial impact on market access. This is, however, contingent on the factual circumstances of the particular case. It cannot be regarded as an *a priori* proposition. It is similarly difficult to maintain a rigid distinction between rules going to access and those that merely affect the volume of sales. A producer perceives rules that limit advertising as detrimental *because* they will lead to a reduction in sales. There is no difference between a rule prohibiting certain forms of marketing or advertising leading to a diminution in sales of 30 per cent and a rule which limits the number or operating hours of shops, leading to the same sales reduction. Both rules can affect the volume of sales and penetration of the new market. Non-discriminatory static selling arrangements may therefore, as Barnard rightly notes, substantially hinder market access.[93]

It is important moreover to be cognizant of the difficulties of applying a test based on market access. Proponents of the test recognize that this can be difficult to estimate.[94] A court may have to take into account the range of goods affected, the existence or not of alternative selling arrangements, and the nature of the restriction itself. This will not be an easy task for the ECJ. It will be even more difficult for national courts,[95] although the ECJ may provide guidance to the national court, as in *Agostini*,[96] or it may go further and state there has been an impediment to market access, as in *Gourmet International*.[97] It is true that the EU and national courts face not dissimilar tasks in competition law, when deciding whether an agreement has an effect on competition. There are, however, real differences between the two areas. In competition law the backdrop to the inquiry is a developed micro-economic theory about cartels that deviate from perfect or imperfect competition. In free movement of goods there is no ready consensus on what does and does not come within the meaning of market access. In competition law private agreements are at stake. In free movement it is national regulations.

(B) MARKET ACCESS AS SLOGAN

(i) *The Argument*

There are, however, other commentators who are sceptical as to whether the concept of market access can or should be regarded as the overarching principle for free movement of goods, or more generally for the law of free movement.[98]

Thus Snell argues that if the concern is in reality that imported goods are affected more than domestic products then we should simply speak in terms of factual, legal, or indirect discrimination, or differential impact, the conclusion being that the concept of market access adds little, if anything, to such analysis.[99] He contends that, when pressed, the concept of market access collapses into economic freedom or anti-protectionism. It collapses into economic freedom in the sense that national regulation of economic activity often imposes a burden on cross-border situations, commonly through an impact on profitability. All limits to economic freedom therefore have more or less significant effects on market access, which depend ultimately on their impact on profits, with the consequence that if 'the law were to prohibit each and every hindrance to market access, it would as a matter of logic

[93] Barnard (n 91) 52.

[94] Weatherill (n 88) 898–901; Barnard (n 91) 55–56; Snell (n 74) 459.

[95] National courts are intended to apply Art 34 and hence to disapply conflicting national law of their own initiative, subject to the possibility of an Art 267 reference: Case C–358/95 *Tommaso Morellato v Unità Sanitairia Locale (USL) No 11 di Pordenone* [1997] ECR I–1431.

[96] Cases C–34–36/95 (n 62).

[97] Case C–405/98 (n 84).

have to ban all rules limiting the commercial freedom of traders'.[100] Snell maintains that the concept of market access might alternatively collapse into anti-protectionism. Measures that impede new entrants to a market necessarily protect established operators, which usually means domestic actors, the conclusion being that all impediments to market access 'can be portrayed as a weapon in the fight against protectionism'.[101] He concludes in the following vein.

J Snell, The Notion of Market Access: A Concept or a Slogan?[102]

> The notion of market access obscures rather than illuminates. The most fundamental question for free movement law remains whether the law is about discrimination and anti-protectionism, in which case a relative or comparative test based on a perceptible disparate impact is appropriate, or whether it is about economic freedom, in which case an absolute test not involving comparisons is necessary. The notion of market access promises that this stark choice does not have to be made. It envisages a third way between anti-protectionism and economic freedom. Yet the more than fifteen years of case law following the ruling in *Keck* has failed to clarify where exactly this middle ground might be between the right not to be discriminated against and the right not to be subjected to unjustified regulation lies. Currently, the Court's analysis in the main seems to focus on the significance of the impact of the measure, with all the uncertainties this approach entails. At the same time, it denies that rules with an insignificant effect fall outside the scope of the Treaty . . . As a result the precise meaning of market access remains elusive. It may be that the notion of market access simply conceals the need to choose between the competing paradigms of free movement law. If so, the term should be abandoned as an unhelpful slogan.

(ii) *Market Access: Form and Substance*

Snell presents a powerful counter to those who regard market access as the overarching principle to govern free movement of goods. It is nonetheless debatable how far this critique is one of form or substance.

It is common for judges and commentators to seek the background principle that explicates the more detailed rules that apply within any body of law. The background principle embodies the value or values that the more particular doctrinal rules are designed to effectuate and serves as a reference point when deciding whether there should be incremental extension of those doctrinal rules. The relationship between the background value and the doctrine is symbiotic, in the sense that the former will inform the latter, but doctrinal development may also lead to re-evaluation of the background value or values.

Market access could be said to be the overarching principle in relation to free movement of goods, in the manner articulated in the previous section. Let us imagine that in accord with Snell's argument we drop all mention of the term, and excise it from our jurisprudence. We talk instead, for example, about discrimination, differential impact, or anti-protectionism. It is questionable whether this would be preferable for the following reasons.

First, if discrimination or differential impact were to be regarded as the background value this invites the further inquiry as to why we are concerned about such matters. A response cast in terms of, for example, anti-protectionism likewise prompts the inquiry as to what such protectionism hinders,

[100] Ibid 468.
[101] Ibid 468.
[102] (2010) 47 CMLRev 437, 470–471.

and such inquiries lead us back in substance to market access, even if we are reluctant to use that precise phrase.

Secondly, it is not self-evident that casting the background value or principle in terms of, for example, anti-protectionism is preferable to market access. The core doctrinal component within free movement of goods is indeed discrimination, direct and indirect. The doctrine was, however, extended in *Cassis* to indistinctly applicable product rules that nonetheless have a differential impact on importers, and it has been applied further in cases on sale and use in the manner considered above. If anti-protectionism were to be regarded as the background value we would then have to acknowledge that its meaning differed in the more discrete bodies of doctrine that comprise free movement of goods. Protectionism is a pejorative term, the paradigm being direct discrimination against foreign goods. It is not self-evident that protectionism is an apt background value to capture other doctrinal elements of free movement, or at the very least it would bear a different meaning. Indistinctly applicable rules embody national regulatory choices about particular products, sales, or use, irrespective of who produces them. The existence of such rules can impose extra costs on the importer, hence the decision to bring such rules within the remit of Article 34. It is nonetheless questionable whether such rules should be described as 'protectionist', and if they are so described the term would not bear the same meaning that it has in the paradigm instance of direct discrimination.

Thirdly, there are indubitably problems about the application of the market access test, as we have seen above. The adjudicative difficulties would not be obviated if that concept were to be excised from the law. Insofar as current doctrine requires the analysis of differential impact the difficulties that beset such determinations would remain.

(c) SUMMARY AND CHOICES

i. The case law prior to *Keck* exemplified the difficulties in defining the outer boundaries of Article 34. *Keck* itself was criticized for being overly formalistic, by drawing a distinction between rules relating to the characteristics of the product and those concerning selling arrangements, which is unsatisfactory. This dissatisfaction led to the call to focus on market access. Article 34 now covers three types of national rule: those that discriminate, those that impose product requirements, and those that inhibit market access, although the interrelationship between them is contestable in the manner described above. There are in essence four choices concerning the approach to Article 34.

ii. The first choice is to *use prevention, or direct and substantial hindrance, of access to the market as the background principle for the applicability of Article 34*. This would, subject to the preceding discussion, focus attention on a key background value underlying free movement of goods. The need to consider whether there has been some substantial restriction of market access does, however, inevitably entail costs, both for courts applying the test and for private parties who may be uncertain about the legality of their planned conduct.

iii. The second choice is *for a test based on substantial hindrance to market access, subject to presumptions based on the type of case*. This was the approach of Advocate General Jacobs in *Leclerc-Siplec*.[103] When the measure affected the goods themselves, as in *Cassis*-type cases, then it would be presumed to have this substantial impact. If, however, the contested measure affected selling arrangements and was not discriminatory, the substantiality of the impact would depend on a range of factors.

[103] (N 64).

iv. The third choice *would be to persist with the three categories of case currently held to fall within Article 34 and regard market access merely as a residual category and not the overarching principle.*

v. The fourth choice *would be to discard market access and focus instead on discrimination and differential impact as the organizing criteria*. The adjudicative difficulties in deciding on the application of this test would not, however, be less significant than for the other tests.

9 DEFENCES TO DISCRIMINATORY MEASURES: ARTICLE 36

If trade rules are found to be discriminatory[104] they can be saved through Article 36 TFEU:

> The provisions of Articles 34 and 35 shall not preclude prohibitions or restrictions on imports, exports or goods in transit justified on grounds of public morality, public policy or public security; the protection of health and life of humans, animals or plants; the protection of national treasures possessing artistic, historic or archaeological value; or the protection of industrial and commercial property. Such prohibitions or restrictions shall not, however, constitute a means of arbitrary discrimination or a disguised restriction on trade between Member States.

It will come as no surprise to learn that the Court has construed Article 36 strictly. Discriminatory rules will be closely scrutinized to ensure that the defence pleaded is warranted. They must also pass a test of proportionality: the discriminatory measure must be the least restrictive possible to attain the end in view. The burden of proof under Article 36 rests with the Member State.[105] Member State application of the justifications listed in Article 36 is now subject to important new conditions laid down by EU legislation discussed below.[106]

(A) PUBLIC MORALITY

Two of the main precedents concerned challenges to laws dealing with pornography. In *Henn and Darby*[107] the ECJ was willing to accept that a UK ban on the import of pornography could be justified under Article 36, notwithstanding the fact that domestic law did not ban absolutely the possession of such material. The ECJ concluded that the overall purpose of UK law was to restrain pornography, and that there was no lawful trade in such goods within the United Kingdom. However, a different result was reached in *Conegate*.

[104] It may be debatable whether a rule really is discriminatory, and therefore whether it is caught by Art 34 and requires justification under Art 36. A good example is Case C–2/90 *Commission v Belgium* [1992] ECR I–4431, noted by L Hancher and H Sevenster, (1993) 30 CMLRev 351, and D Geradin, (1993) 18 ELRev 144.

[105] Case C–17/93 *Openbaar Ministerie v Van der Veldt* [1994] ECR I–3537; Case C–110/05 *Commission v Italy* [2009] ECR I–519, [62]; Case C–165/08 *Commission v Poland* [2009] ECR I–6843, [53].

[106] Regulation (EC) No 764/2008 of the European Parliament and of the Council of 9 July 2008 laying down procedures relating to the application of certain national technical rules to products lawfully marketed in another Member State and repealing Decision No 3052/95/EC [2008] OJ L218/21, discussed 599–600, 686.

[107] Case 34/79 *R v Henn and Darby* [1979] ECR 3795.

Case 121/85 **Conegate Ltd v Commissioners of Customs and Excise**
[1986] ECR 1007

[Note Lisbon Treaty renumbering: Arts 30, 36, and 177 are now Arts 34, 36, and 267 TFEU]

Conegate imported life-size inflatable dolls from Germany into the United Kingdom. The invoice for the dolls claimed that they were for window displays, but the Customs officials were unconvinced, particularly when they found items described as 'love love dolls'. They seized the goods, and magistrates ordered them to be forfeit. Conegate argued that this was in breach of Article 30. The national court asked whether a prohibition on imports could be justified even though the state did not ban the manufacture or marketing of the same goods within the national territory. The ECJ repeated its reasoning from *Henn and Darby* that it was for each Member State to decide upon the nature of public morality for its own territory. It continued as follows.

THE ECJ

15. However, although Community law leaves the Member States free to make their own assessments of the indecent or obscene character of certain articles, it must be pointed out that the fact that goods cause offence cannot be regarded as sufficiently serious to justify restrictions on the free movement of goods where the Member State concerned does not adopt, with respect to the same goods manufactured or marketed within its territory, penal measures or other serious and effective measures intended to prevent the distribution of such goods in its territory.

16. It follows that a Member State may not rely on grounds of public morality to prohibit the importation of goods from other Member States when its legislation contains no prohibition on the manufacture or marketing of the same goods on its territory.

17. It is not for the Court, within the framework of the powers conferred on it by Article 177 . . . to consider whether, and to what extent, the United Kingdom legislation contains such a prohibition. However, the question whether or not such a prohibition exists in a State comprised of different constituent parts which have their own internal legislation can be resolved only by taking into consideration all the relevant legislation. Although it is not necessary, for the purposes of the application of the above-mentioned rule, that the manufacture and marketing of the products whose importation has been prohibited should be prohibited in the territory of all the constituent parts, it must at least be possible to conclude from the applicable rules, taken as a whole, that their purpose is, in substance, to prohibit the manufacture and marketing of those products.

18. In this instance . . . the High Court took care to define the substance of the national legislation the compatibility of which with Community law is a question which it proposes to determine. Thus it refers to rules in the importing Member State under which the goods in question may be manufactured freely and marketed subject only to certain restrictions . . . namely an absolute prohibition on the transmission of such goods by post, a restriction on their public display and, in certain areas of the Member States concerned, a system of licensing of premises for the sale of those goods to customers aged 18 years and over. Such restrictions cannot however be regarded as equivalent in substance to a prohibition on manufacture and marketing.

The United Kingdom's defence failed. The distinction between *Conegate* and *Henn and Darby* lies in the ECJ's evaluation of whether the banned imported goods were being treated more harshly than similar domestic goods. In *Henn and Darby* the ECJ was willing to find that UK law restrained pornography sufficiently to enable it to conclude that there was no lawful trade in such goods within the United Kingdom. In *Conegate*, by way of contrast, the ECJ reached the opposite conclusion. It is

clear, therefore, that while Member States are free to determine the public morality applicable within their territory, they cannot place markedly stricter burdens on goods coming from outside than those applied to equivalent domestic goods.

(B) PUBLIC POLICY

Public policy constitutes a separate head of justification within Article 36. The ECJ has, however, resisted attempts to interpret it too broadly. The Court has, for example, rejected arguments that the term 'public policy' can embrace consumer protection. The ECJ has reasoned that since Article 36 derogates from a fundamental rule of the Treaty enshrined in Article 34, it must be interpreted strictly, and cannot be extended to objectives not expressly mentioned therein.[108] A public policy justification must, therefore, be made in its own terms, and cannot be used as a means to advance what amounts to a separate ground for defence. It is for this reason that relatively few cases contain detailed examination of the public policy argument. The issue was considered in *Centre Leclerc*:

Case 231/83 **Cullet v Centre Leclerc**
[1985] ECR 305

[Note Lisbon Treaty renumbering: Arts 30 and 36 are now Arts 34 and 36 TFEU]

French legislation imposed minimum retail prices for fuel fixed primarily on the basis of French refinery prices and costs. The Court found that this constituted an MEQR within Article 30, since imports could not benefit fully from lower cost prices in the country of origin. The French Government sought to justify its action on the basis, *inter alia*, of public policy within Article 36. It argued that, in the absence of the pricing rules, there would be civil disturbances, blockades, and violence. Both the Advocate General and the ECJ rejected this argument, but for different reasons.

ADVOCATE GENERAL VERLOREN VAN THEMAAT[109]

However, I would add that the acceptance of civil disturbances as justification for encroachments upon the free movement of goods would, as is apparent from experiences of last year (and before, during the Franco–Italian 'wine war') have unacceptably drastic consequences. If roadblocks and other effective weapons of interest groups which feel threatened by the importation and sale at competitive prices of certain cheap products or services, or by immigrant workers or foreign businesses, were accepted as justification, the existence of the four fundamental freedoms of the Treaty could no longer be relied upon. Private interest groups would then, in the place of the Treaty and Community (and, within the limits laid down by the Treaty, national) institutions, determine the scope of those freedoms. In such cases, the concept of public policy requires, rather, effective action on the part of the authorities to deal with such disturbances.

THE ECJ

32. For the purpose of applying Article 36, the French Government has invoked the disturbances to law and order (*ordre public*) and public security caused by violent reactions which should be expected from retailers affected by unrestricted competition.

[108] Case 113/80 *Commission v Ireland* [1981] ECR 1625; Case 177/83 *Kohl v Ringelhan* [1984] ECR 3651; Case 229/83 *Leclerc v Au Blé Vert* [1985] ECR 1.

[109] [1985] 2 CMLR 524, 534.

33. On this point it is sufficient to observe that the French Government has not shown that an amendment of the regulations in question in conformity with the principles set out above would have consequences for law and order (*ordre public*) and public security which the French Government would be unable to meet with the resources available to it.

The Advocate General rejected the French argument on principle, but the ECJ appeared to accept that it could be pleaded under Article 36, while rejecting it on the facts. The ECJ's approach might well have been simply a more diplomatic way of disposing of the point, but the Advocate General is more convincing as a matter of principle. If interest-group pressure leading to potential violence could constitute justification under Article 36 then fundamental EU freedoms would be placed in jeopardy.[110]

(c) PUBLIC SECURITY

Case 72/83 **Campus Oil Ltd v Minister for Industry and Energy**
[1984] ECR 2727

[Note Lisbon Treaty renumbering: Arts 30 and 36 are now Arts 34 and 36 TFEU]

Irish law required importers of petrol into Ireland to buy 35 per cent of their requirements from a state-owned oil refinery at prices fixed by the Irish government. This rule was held to constitute an MEQR within Article 30. In defence Ireland relied on public policy and security within Article 36. It argued that it was vital for Ireland to maintain its own oil refining capacity. The challenged rule was the means of ensuring that its refinery products could be marketed. The ECJ held that recourse to Article 36 would not be possible if there were Community rules providing the necessary protection for oil supplies. Certain Community measures existed, but they were not comprehensive. The Court continued as follows.

THE ECJ

31. Consequently, the existing Community rules give a Member State whose supplies of petroleum products depend totally or almost totally on deliveries from other countries certain guarantees that deliveries from other Member States will be maintained in the event of a serious shortfall in proportions which match those of supplies to the market of the supplying State. However, this does not mean that the Member State concerned has an unconditional assurance that supplies will in any event be maintained at least at a level sufficient to meet its minimum needs. In those circumstances, the possibility for a Member State to rely on Article 36 to justify appropriate complementary measures at national level cannot be excluded, even where there exist Community rules on the matter.

[*The Court then considered whether the term 'public security' could cover this situation.*]

34. It should be stated in this connection that petroleum products, because of their exceptional importance as an energy source in the modern economy, are of fundamental importance for a country's existence since not only its economy but above all its institutions, its essential public services and even the survival of the inhabitants depend upon them. An interruption of supplies of petroleum products, with the resultant dangers for the country's existence, could therefore seriously affect the public security that Article 36 allows States to protect.

[110] In Case C–265/95 *Commission v France* [1997] ECR I–6959, the ECJ accepted that serious disruption to public order could justify non-intervention by the police in relation to a specific incident, but that it could not justify any general policy of this nature. See also *R v Chief Constable of Sussex, ex p International Traders' Ferry Ltd* [1997] 2 CMLR 164.

> 35. It is true that, as the Court has held on a number of occasions, most recently in . . . (Case 95/81, *Commission* v *Italy*), Article 36 refers to matters of a non-economic nature. A Member State cannot be allowed to avoid the effects of measures provided for in the Treaty by pleading the economic difficulties caused by elimination of barriers to intra-Community trade. However, in the light of the seriousness of the consequences that an interruption in supplies of petroleum products may have for a country's existence, the aim of ensuring a minimum supply of petroleum products at all times is to be regarded as transcending purely economic considerations and thus as capable of constituting an objective covered by the concept of public security.

While the ECJ accepted the public-security argument in *Campus Oil*, the circumstances to which it will be applicable are limited.[111] There is little enthusiasm for extending the reasoning, and in *Centre Leclerc* Advocate General VerLoren van Themaat distinguished *Campus Oil* from the situation in *Centre Leclerc*.[112] It should not, however, be forgotten in this respect that Member States can take certain measures relating to national security pursuant to what are now Articles 346–348 TFEU.

(D) PROTECTION OF HEALTH AND LIFE OF HUMANS, ANIMALS, OR PLANTS

(i) *Health Protection as Real Purpose or Disguised Trade Restriction*

There have been numerous cases in which states have defended measures on this ground. The ECJ closely scrutinizes such claims. It will determine whether protection of public health is the Member States' real purpose, or whether the measure was designed to protect domestic producers. This is exemplified by *Commission v United Kingdom*.[113] The United Kingdom in effect banned poultry meat imports from most other Member States, on the ground that it was necessary to protect public health by preventing the spread of Newcastle disease that affected poultry. The ECJ held that the import ban was in fact motivated more by commercial reasons, to block French poultry, than by considerations of public health. The ECJ will also closely examine the arguments concerning public health to determine whether they make sense on the facts.[114]

(ii) *The Determination of Public Health Claims*

The ECJ may have to decide whether a public-health claim is sustainable where there is no perfect consensus on the scientific or medical impact of particular substances. The ECJ's approach is exemplified by the *Sandoz* decision.

Case 174/82 Officier van Justitie v Sandoz BV
[1983] ECR 2445

> Authorities in Holland refused to allow the sale of muesli bars that contained added vitamins because the vitamins were dangerous to public health. The muesli bars were readily available in Germany and

[111] Case C–367/89 *Richardt* [1991] ECR I–4621; Case C–398/98 *Commission v Greece* [2001] ECR I–7915, [29]–[30]; Case C–174/04 *Commission v Italy* [2005] ECR I–4933, [40]–[41].

[112] [1985] 2 CMLR 524, 535–536.

[113] Case 40/82 [1982] ECR 2793; Case 42/82 *Commission v France* [1983] ECR 1013; Case C–434/04 *Criminal proceedings against Jan-Erik Anders Ahokainen and Mati Leppik* [2006] ECR I–9171, [30].

[114] Case 124/81 *Commission v United Kingdom* [1983] ECR 203.

Belgium. It was accepted that vitamins could be beneficial to health, but it was also acknowledged that excessive consumption could be harmful to health. Scientific evidence was not, however, certain as regards the point at which consumption of vitamins became excessive, particularly because vitamins consumed in one source of food might be added to those eaten from a different food source. There had been some Community legislation which touched on the general issue of food additives.

THE ECJ

15. The above mentioned Community measures clearly show that the Community legislature accepts the principle that it is necessary to restrict the use of food additives to the substances specified, whilst leaving the Member States a certain discretion to adopt stricter rules. . . .

16. As the Court found in its judgment . . . in Case 272/80 (*Frans-Nederlandse Maatschappij voor Biologische Producten* [1981] ECR 3277), in so far as there are uncertainties at the present state of scientific research it is for the Member States, in the absence of harmonization, to decide what degree of protection of the health and life of humans they intend to assure, having regard however for the requirements of the free movement of goods within the Community.

17. Those principles also apply to substances such as vitamins which are not as a general rule harmful in themselves but may have special harmful effects solely if taken to excess as part of the general nutrition, the composition of which is unforeseeable and cannot be monitored. In view of the uncertainties inherent in the scientific assessment, national rules prohibiting, without prior authorization, the marketing of foodstuffs to which vitamins have been added are justified on principle within the meaning of Article 36 of the Treaty on the grounds of the protection of human health.

18. Nevertheless the principle of proportionality which underlies the last sentence of Article 36 of the Treaty requires that the power of the Member States to prohibit imports of the products in question from other Member States should be restricted to what is necessary to attain the legitimate aim of protecting public health. . . .

19. Such an assessment is, however, difficult to make in relation to additives such as vitamins the above mentioned characteristics of which exclude the possibility of foreseeing or monitoring the quantities consumed as part of the general nutrition and the degree of harmfulness of which cannot be determined with sufficient certainty. Nevertheless, although in view of the present stage of harmonization of national laws at the Community level a wide discretion must be left to the Member States, they must, in order to observe the principle of proportionality, authorize marketing when the addition of vitamins to foodstuffs meets a real need, especially a technical or nutritional one.

20. The first question must therefore be answered to the effect that Community law permits national rules prohibiting without prior authorization the marketing of foodstuffs marketed in another Member State to which vitamins have been added, provided that the marketing is authorized when the addition of the vitamins meets a real need, especially a technical or nutritional one.

The ECJ's approach in *Sandoz* is finely tuned. It will decide whether the public-health claim is sustainable in principle. If there is uncertainty about the medical implications of some substance it will,[115] in the absence of harmonization measures, be for the Member State to decide upon the appropriate degree of protection for its citizens. This will, however, be subject to the principle of proportionality: paragraph 18.[116] When assessing proportionality the EU Courts will pay special attention

[115] See, however, Case 178/84 *Commission v Germany* [1987] ECR 1227.

[116] See also Case 53/80 *Officier van Justitie v Koniklijke Kaasfabriek Eyssen BV* [1981] ECR 409; Case 94/83 *Albert Heijin BV* [1984] ECR 3263; Case 304/84 *Ministère Public v Muller* [1986] ECR 1511; Case C–62/90 *Commission v Germany* [1992] ECR I–2575; Case C–192/01 *Commission v Denmark* [2003] ECR I–9693, [42]; Case C–24/00 *Commission v France* [2004] ECR I–1277, [49]; Case C–95/01 *Criminal Proceedings against John Greenham and Leonard Abel* [2004] ECR I–1333; Case C–366/04 *Schwarz v Bürgemeister der Landeshauptstadt Salzburg* [2005] ECR I–10139, [30]–[38]; Case C–170/04 *Klas Rosengren* (n 32) [37]–[58].

to the factual basis of the defence. It is not enough for a Member State simply to assert that a measure is warranted on grounds of public health. The ECJ has, in later case law, demanded more from the Member States in terms of evidence or data to substantiate this claim.[117] This is so even where there may be some scientific uncertainty about the matter in issue.[118] The ECJ will, however, also accept, subject to proportionality, that Member States legitimately differ in the degree of protection that they accord to public health.[119]

(iii) *Health Checks and Double Checks*

A Member State may not ban imports, but it may subject them to checks, even though the goods were checked in the state of origin. This problem of double-checking has arisen frequently, and the ECJ has become stricter over time.

The early approach in *Denkavit*[120] was to urge national authorities to cooperate to avoid dual burdens. National authorities had a duty to ascertain whether the documents from the state of export raised a presumption that the goods complied with the demands of the importing state. The Court admitted, however, that a second set of checks in the state of import might be lawful, provided that the requirements were necessary and proportionate.

The Court's later case law exhibits a healthy scepticism regarding whether a second set of controls is really required. This is evident from *Commission v United Kingdom*[121] concerning UHT milk. The ECJ held that the United Kingdom's concerns about the product could be met by less restrictive means than the import ban and marketing system it had instituted. The United Kingdom could, said the Court, lay down requirements that imported milk had to meet, and could demand certificates from the authorities of the exporting state.[122] If such certificates were produced then it would be for the authorities within the importing state to ascertain whether these certificates raised a presumption that the imported goods complied with the demands of domestic legislation. The ECJ concluded that the conditions for such a presumption existed in this case.[123] A similar unwillingness to subject goods to a second set of checks can be seen in the *Biologische Producten* case.[124] Dual checks would not be lawful where they unnecessarily imposed technical tests that had already been done in the state of origin, nor where the practical effect of the tests in the exporting state met the demands of the importing state.[125]

(E) OTHER GROUNDS FOR VALIDATING DISCRIMINATORY MEASURES

The nature of this problem will be explored here and then considered in more detail below.[126] The defences for discriminatory rules caught by Article 34 are contained in Article 36. The ECJ has extended

[117] Case C–270/02 *Commission v Italy* [2004] ECR I–1559.

[118] Case C–41/02 *Commission v Netherlands* [2004] ECR I–11375; Case C–192/01 *Commission v Denmark* (n 116); Case C–24/00 *Commission v France* (n 116); Case C–333/08 *Commission v France*, 28 Jan 2010, [83]–[110].

[119] Case C–141/07 *Commission v Germany* (n 71) [51]; Case C–434/04 *Ahokainen and Mati Leppik* (n 113) [32]–[33].

[120] Case 251/78 *Denkavit Futtermittel v Minister für Ernährung, Landwirtschaft und Forsten des Landes* [1979] ECR 3369.

[121] Case 124/81 *Commission v United Kingdom* [1983] ECR 203.

[122] Ibid [27]–[28].

[123] Ibid [30].

[124] Case 272/80 *Frans-Nederlandse Maatschappij voor Biologische Producten* [1981] ECR 3277.

[125] Ibid [14]–[15]; Case C–400/96 *Criminal Proceedings against Jean Harpegnies* [1998] ECR I–5121; Case C–432/03 *Commission v Portugal* [2005] ECR I–9665, [46].

[126] See below, 677–678; P Oliver, 'Some Further Reflections on the Scope of Articles 28–30 (ex 30–36)' (1999) 36 CMLRev 738; J Scott, 'Mandatory or Imperative Requirements in the EU and WTO' in Barnard and Scott (n 20) ch 10; P Oliver and W-H Roth, 'The Internal Market and the Four Freedoms' (2004) 41 CMLRev 407, 434–436.

Article 34 to indistinctly applicable rules, and created defences that overlap with, but are not identical to, those found in Article 36. The salient issue is therefore whether justification for discriminatory rules is limited to the specific matters listed in Article 36, or whether a rule that is discriminatory might also be defended on one of the grounds listed in *Cassis*,[127] as developed by subsequent case law. The traditional view was that a Member State could not justify a discriminatory measure on grounds other than those listed in Article 36. This was so even if the justification was in the list that could be invoked for indistinctly applicable measures.[128]

It was questionable whether *Commission v Belgium*[129] was an exception to this proposition. The Commission challenged a Belgian regional decree which banned importation of waste into that area. The decree could be seen as discriminatory, since it did not cover disposal of locally produced waste. Notwithstanding this, the Court allowed environmental protection to be taken into account when considering the legality of the regional decree. The case could, therefore, be seen as allowing justifications to be pleaded that are not found in Article 36. However, the ECJ in effect held that the decree was not discriminatory, notwithstanding appearances to the contrary in the challenged instrument. This was because of the special nature of the subject matter, waste. There were strong arguments, the Court said, for disposing of such material locally, and each area had the responsibility for disposing of its own waste. Thus, although the decree applied only to imports it was not discriminatory.[130]

The relationship between Article 36 and the exceptions in *Cassis* is complicated by the fact that the dividing line between cases involving indirect discrimination and indistinctly applicable rules can be a fine one. This is exemplified by *Commission v Austria*,[131] which concerned an Austrian rule banning lorries in excess of a certain weight from using certain roads in order to protect the environment and air quality. Advocate General Geelhoed acknowledged that it was open to question whether the rule should be regarded as indirectly discriminatory or indistinctly applicable, and accepted that this could have implications for whether protection of the environment could be pleaded by way of defence. The ECJ implicitly assumed that the Austrian rule was indistinctly applicable and that therefore protection of the environment could constitute an objective justification.

Advocate General Jacobs in *PreussenElektra*[132] questioned whether the list in Article 36 really is exhaustive. He argued that the approach in the *Walloon Waste* case was flawed, in the sense that whether a measure was discriminatory was logically distinct from whether it could be justified. He suggested moreover that there could be good reasons for allowing environmental protection to be pleaded as a justification, even in cases where there was direct discrimination. He argued more generally for a relaxation in the distinction between the justifications that could be pleaded under Article 36 and the rule of reason exceptions to *Cassis*. The ECJ did not, as Advocate General Jacobs suggested, give general guidance on the relationship between Article 36 and the exceptions to *Cassis*. It did however allow the national measure to be justified on environmental grounds.[133]

The ECJ has, more recently, evinced willingness to allow environmental protection to be pleaded as a defence without too close an inquiry into whether this should be rationalized under Article 36 or as

[127] Case 120/78 (n 1).

[128] See 677–678 below.

[129] Case C–2/90 [1992] ECR I–4431.

[130] For indications that protection of the environment can however be raised in discrimination cases see, eg, Case C–203/96 *Chemische Afvalstoffen Dusseldorp BV v Minister van Volkshuisvesting, Ruimtelijke Ordening en Milieubeheer* [1998] ECR I–4075, [50].

[131] Case C–320/03 [2005] ECR I–9871.

[132] Case C–379/98 *PreussenElektra AG v Schleswag AG* [2001] ECR I–2099, [225]–[238]. See also Case C–320/03 *Commission v Austria* [2005] ECR I–9871, [96]–[108], AG Geelhoed.

[133] See also Case C–389/98 *Aher-Waggon GmbH v Bundesrepublik Deutschland* [1998] ECR I–4473.

a mandatory requirement for the purpose of the *Cassis* exceptions.[134] It will be argued below that the same justifications should be applicable irrespective of whether the measure is discriminatory or not, although the application of the justification could be affected by this factor.[135]

(F) THE RELATIONSHIP BETWEEN HARMONIZATION AND ARTICLE 36

EU harmonization measures may make recourse to Article 36 inadmissible. This will be so where the EU measure is intended to harmonize the area totally. Member State action is thereby pre-empted. Thus in *Moormann*[136] the ECJ held that the existence of harmonization measures for poultry health inspections meant that a state could no longer use Article 36 to legitimate national rules on the matter. In *Commission v Germany*[137] it was held that directives had harmonized the measures that could be taken 'for the detection of a pronounced sexual odour in uncastrated male pigs', thereby preventing Germany from applying different measures.

Many EU measures are, however, not intended to harmonize an area totally. The objective will be minimum harmonization. It will be for the ECJ to decide, in the case of doubt, whether the harmonization measure covers the whole field or whether it leaves room for national regulatory initiatives.[138] In the case of minimum harmonization, Member States are permitted to 'maintain and often to introduce more stringent regulatory standards than those prescribed by Community legislation, for the purposes of advancing a particular social or welfare interest, and provided that such additional requirements are compatible with the Treaty'.[139] Thus in *de Agostini* it was held that Community directives on 'Television without Frontiers' only partially harmonized the relevant law. They did not preclude national rules to control television advertising designed to protect consumers.[140] In the case of exhaustive harmonization, any national measure relating thereto must be assessed in the light of the harmonizing measure rather than the Treaty provisions.[141]

The ECJ will ensure that such national regulations are proportionate and do not constitute a means of arbitrary discrimination.[142] Difficult issues can however arise, even in the context of minimum harmonization, as to whether a Member State can impose more stringent welfare standards on goods entering its territory than those prescribed by the directive.[143]

[134] Case C–524/07 *Commission v Austria* [2008] ECR I–187, [57]; Case C–142/05 *Åklagaren* (n 73) [31]–[32].

10 DEFENCES TO INDISTINCTLY APPLICABLE RULES: THE MANDATORY REQUIREMENTS

(A) THE RATIONALE FOR THE MANDATORY REQUIREMENTS

It is necessary to consider separately defences to indistinctly applicable rules, although, as we shall see below, it is questionable whether there should be a separate set of defences for discriminatory and non-discriminatory rules.

The rationale for the mandatory requirements is that many rules that regulate trade are also capable of restricting trade, yet some serve objectively justifiable purposes. The 'list' of mandatory requirements in *Cassis* is sometimes referred to as the rule of reason, drawing upon the earlier hint in *Dassonville* that, in the absence of EU measures, reasonable trade rules would be accepted in certain circumstances. A similar approach is evident in other areas of EU law.[144] Thus Advocate General VerLoren van Themaat[145] regarded the rule of reason as a general principle of interpretation designed to mitigate the effects of strict prohibitions laid down in the Treaty provisions on free movement.[146] The burden of proving justification rests on the state relying on the mandatory requirement.[147] Member States' application of the mandatory requirements is now subject to important new conditions laid down by EU legislation discussed below.[148]

(B) THE RELATIONSHIP BETWEEN THE MANDATORY REQUIREMENTS AND ARTICLE 36

The traditional view has been that the *Cassis* mandatory requirements are separate from the justifications under Article 36. The ECJ held that the *Cassis* exceptions could be used only in respect of rules that were not discriminatory.[149] The *Cassis* list of mandatory requirements includes matters, such as the protection of consumers and the fairness of commercial transactions, which are not mentioned within Article 36, and the *Cassis* list is not exhaustive. The ECJ's willingness to create a broader category of justifications for indistinctly applicable rules is explicable because discriminatory rules strike at the very heart of the EU, and hence any possible justifications should be narrowly confined. The distinction between Article 36 and the mandatory requirements in *Cassis* has, however, come under increasing strain in recent years for three reasons.

First, there has, as we have seen, been discussion about whether the list in Article 36 should be regarded as exhaustive.[150] It has been argued that there might be instances where, for example, environmental considerations should be able to be pleaded even in cases of discrimination.

Secondly, the distinction has also become less tenable because of the difficulty of distinguishing between cases involving indirect discrimination and indistinctly applicable rules.[151] The ECJ may well characterize a case as within the *Cassis* category because it wishes to allow the state to use a mandatory requirement, even though, as in *Aher-Waggon*,[152] the measure appears to be discriminatory or distinctly applicable.

[144] See Chs 21, 22, 24.
[145] Case 286 /81 *Oosthoek* (n 62).
[146] See also the discussion of the rule of reason in competition law, Ch 26.
[147] Case C–14/02 *ATRAL* (n 32) [67]–[68].
[148] Reg 764/2008 (n 106).
[149] Case 788/79 *Gilli and Andres* (n 34) [6]; Case 113/80 *Commission v Ireland* [1981] ECR 1625, [5]–[8].
[150] See above, 674–676.
[151] See, eg, Case C–110/05 *Commission v Italy* (n 72) [35], [37], [59].
[152] See AG Jacobs in Case C–379/98 *PreussenElektra* (n 132) [227], commenting on Case C–389/98 *Aher-Waggon* (n 133).

Thirdly, the reasoning in *Keck* has contributed to confusion in this respect. Selling arrangements are outside Article 34 provided that they apply to all traders in the national territory, and they affect in the same manner, in law and fact, the marketing of domestic and imported products. Later cases have focused on the possible differential impact of national selling arrangements. If this is proven then Article 34 is applicable, subject to possible justifications raised by the state. In some instances it will not matter whether the justification is considered within the mandatory requirements, or under Article 36, since it is covered by both, as in the case of public health.[153] In other instances it will be relevant, since the alleged justification falls only within the *Cassis* list. The ECJ has equivocated in some cases. Thus in *de Agostini*[154] the ECJ held that the advertising ban might satisfy a mandatory requirement *or* one of the aims listed in Article 36. Consumer protection and fair trading are in the former list, but not the latter.

There is much to be said for simplification. It would be best for the same justifications to be available in principle, irrespective of whether the measure is discriminatory or indistinctly applicable. This should only be relevant to the application of the justification in the instant case, in the sense that greater justification should be required for discriminatory measures.

It might be argued that this is not possible, given the wording of Article 36. This objection is not convincing. There is no reason why phrases within Article 36, such as protection of the health and life of humans, could not be interpreted to include matters such as consumer protection and the environment. The ECJ has construed other Treaty provisions in a far more expansive manner when it wished to do so. Moreover, if it was legitimate for the ECJ in *Cassis* to create an open-ended list of mandatory exceptions, not mentioned in the Treaty, then it is difficult to see why it would not be legitimate for the ECJ to read Article 36 to include matters such as the environment or consumer protection.

(c) THE MANDATORY REQUIREMENTS: CONSUMER PROTECTION

Case 178/84 **Commission v Germany**
[1987] ECR 1227

German law prohibited the marketing of beer which was lawfully manufactured in another Member State unless it complied with sections 9 and 10 of the Biersteuergesetz (Beer Duty Act 1952). Under this law only drinks which complied with the German Act could be sold as '*Bier*', and this meant that the term could be used only in relation to those drinks which were made from barley, hops, yeast, and water. The German Government argued that the reservation of the term '*Bier*' to beverages made only from these substances was necessary to protect consumers who associated the term '*Bier*' with beverages made from such ingredients. It also argued that its legislation was not protectionist in aim, in that any trader who made beer from such ingredients could market it freely in Germany. The ECJ cited the principles from *Dassonville* and *Cassis*; it found that the German rule constituted an impediment to trade and then considered whether the rule was necessary to protect consumers.

THE ECJ

31. The German Government's argument that section 10 of the Biersteuergesetz is essential in order to protect German consumers because, in their minds, the designation 'Bier' is inseparably

[153] See, eg, Case C–189/95 *Franzen* (n 70); Case C–405/98 *Gourmet International* (n 84); Case C–322/01 *Deutscher Apothekerverband* (n 71).

[154] Cases C–34–36/95 *De Agostini* (n 62) [45]–[47].

linked to the beverage manufactured solely from the ingredients laid down in section 9 . . . must be rejected.

32. Firstly, consumers' conceptions which vary from one Member State to the other are also likely to evolve in the course of time within a Member State. The establishment of the Common Market is, it should be added, one of the factors that may play a major contributory role in that development. Whereas rules protecting consumers against misleading practices enable such a development to be taken into account, legislation of the kind contained in section 10 . . . prevents it from taking place. As the Court has already held in another context (Case 170/78, *Commission* v *United Kingdom*), the legislation of a Member State must not 'crystallize given consumer habits so as to consolidate an advantage acquired by national industries concerned to comply with them'.

33. Secondly, in the other Member States of the Community the designations corresponding to the German designation 'Bier' are generic designations for a fermented beverage manufactured from barley, whether malted barley on its own or with the addition of rice or maize. The same approach is taken in Community law as can be seen from heading 22.03 of the Common Customs Tariff. The German legislature itself utilises the designation 'Bier' in that way in section 9(7) and (8) of the Biersteuergesetz in order to refer to beverages not complying with the manufacturing rules laid down in section 9(1) and (2).

34. The German designation 'Bier' and its equivalents in the languages of the other Member States may therefore not be restricted to beers manufactured in accordance with the rules in force in the Federal Republic of Germany.

35. It is admittedly legitimate to seek to enable consumers who attribute specific qualities to beers manufactured from particular raw materials to make their choice in the light of that consideration. However, as the Court has already emphasised (Case 193/80, *Commission* v *Italy*) that possibility may be ensured by means which do not prevent the importation of products which have been lawfully manufactured and marketed in other Member States and, in particular, 'by the compulsory affixing of suitable labels giving the nature of the product sold' . . .

The ECJ therefore held the German law to be in breach of Article 34. The argument concerning consumer protection was closely scrutinized to determine whether it really 'worked' on the facts of the case, and the ECJ assessed whether the interests of consumers could be safeguarded by less restrictive means: paragraph 35. The same approach is apparent in other cases.[155]

The ECJ has often rejected justifications based on consumer protection by stating that adequate labelling requirements can achieve the national objective with less impact on intra-EU trade. However, even labelling requirements may not escape Article 34. Thus in *Fietje*[156] the ECJ held that the obligation to use a certain name on a label could make it more difficult to market goods coming from other Member States, and would therefore have to be justified on the ground of consumer protection. Labelling requirements which demanded that the purchaser was provided with sufficient information about the product in order to prevent confusion with similar products could, said the Court, be justified, even if the effect was to make it necessary to alter the labels of some imported goods.[157] However, such protection would not be justifiable if the details given on the original labels of the goods contained the same information as required by the state of import, and that information was just as capable of being understood by consumers. Whether there was such equivalence was for the national court to determine.[158]

[155] See, eg, Case 261/81 *Rau* (n 35); Case 94/82 *De Kikvorsch Groothandel-Import-Export BV* [1983] ECR 947; Case C–293/93 *Ludomira Neeltje v Barbara Houtwipper* [1994] ECR I–429; Case C–470/93 *Verein gegen Unwesen in Handel und Gewerbe Köln eV v Mars GmbH* [1995] ECR I–1923; Case C–315/92 *Verband Sozialer Wettbewerb eV v Clinique Laboratoires SNC* [1994] ECR I–317; Case C–14/00 *Commission v Italy* [2003] ECR I–513.

[156] Case 27/80 *Fietje* [1980] ECR 3839.

[157] Ibid [11].

[158] Ibid [12]. See also Case 76/86 *Commission v Germany* [1989] ECR 1021.

(D) THE MANDATORY REQUIREMENTS: FAIRNESS OF COMMERCIAL TRANSACTIONS

There is an overlap between consumer protection and the fairness of commercial transactions. This particular mandatory requirement has been used to justify national rules that seek to prevent unfair marketing practices, such as the selling of imported goods that are imitations of familiar domestic goods. It seems, however, that in order to be justified on this ground the national rule must not prohibit the marketing of goods which have been made according to fair and traditional practices in state A merely because they are similar to goods which have been made in state B.[159]

(E) THE MANDATORY REQUIREMENTS: PUBLIC HEALTH

The traditional view was, as we have seen, that only indistinctly applicable rules could take advantage of the mandatory requirements. However, the ECJ has, on occasion, not been too concerned about whether it treats a justification within Article 36 or within the list of mandatory requirements, provided that the justification comes within both lists, more especially where it is unclear whether the impugned rule is discriminatory or indistinctly applicable. Public health is in the list of *Cassis* mandatory requirements and in Article 36. The following extract from the *German Beer* case provides an apt example of this, and the ECJ concluded that the challenged national rule was disproportionate:[160]

Case 178/84 **Commission v Germany**
[1987] ECR 1227

[Note Lisbon Treaty renumbering: Arts 36 and 169 are now Arts 36 and 258 TFEU]

A second rule of German law was challenged in the *German Beer* case. Under the German Foodstuffs Act 1974 there was an absolute ban on the marketing of beer which contained additives. In essence this Act prohibited non-natural additives on public-health grounds. The Commission challenged this rule.

THE ECJ

41. The Court has consistently held (in particular in Case 174/82, *Criminal Proceedings Against Sandoz BV*) that 'in so far as there are uncertainties at the present state of scientific research it is for the Member States, in the absence of harmonization, to decide what degree of protection of the health and life of humans they intend to assure, having regard to the requirements of the free movement of goods within the Community.'

42. As may also be seen from the decision of the Court (and especially the *Sandoz* case, cited above, in Case 247/84, *Motte*, and in Case 308/84, *Ministère Public* v *Muller*), in such circumstances Community law does not preclude the adoption by Member States of legislation whereby the use of additives is subjected to prior authorisation granted by a measure of general application for specific additives, in respect of all products, for certain products only or for certain uses. Such legislation meets a genuine need of health policy, namely that of restricting the uncontrolled consumption of food additives.

[159] Case 58/80 *Dansk Supermarked v Imerco* [1981] ECR 181; Case 16/83 *Karl Prantl* [1984] ECR 1299.

[160] See also Case 53/80 *Koniklijke Kaasfabriek Eyssen* (n 116); Case 97/83 *Criminal Proceedings against Melkunie BV* [1984] ECR 2367.

43. However, the application to imported products of prohibitions on marketing products containing additives which are authorised in the Member State of production but prohibited in the Member State of importation is permissible only in so far as it complies with the requirements of Article 36 of the Treaty as it has been interpreted by the Court.

44. It must be borne in mind, in the first place, that in its judgments in *Sandoz, Motte* and *Muller,* the Court inferred from the principle of proportionality underlying the last sentence of Article 36 of the Treaty that prohibitions on the marketing of products containing additives authorised in the Member State of production but prohibited in the Member State of importation must be restricted to what is actually necessary to secure the protection of public health. The Court also concluded that the use of a specific additive which is authorised in another Member State must be authorised in the case of a product imported from that Member State where, in view, on the one hand, of the findings of international scientific research, and in particular the work of the Community's Scientific Committee for Food, the Codex Alimentarius Committee of the Food and Agriculture Organisation of the United Nations (FAO) and the World Health Organisation, and, on the other, of the eating habits prevailing in the importing Member State, the additive in question does not present a risk to public health and meets a real need, especially a technical one.

45. Secondly, it should be remembered that, as the Court held in *Muller,* by virtue of the principle of proportionality, traders must also be able to apply, under a procedure which is easily accessible to them and can be concluded within a reasonable time, for the use of specific additives to be authorised by a measure of general application.

[*The Court pointed out that the German rule prohibited all additives; that there was no procedure whereby traders could obtain authorization for a specific additive; and that additives were permitted by German law in beverages other than beer. The German Government argued that such additives would not be needed in the manufacture of beer if it were made in accordance with section 9 of the Biersteuergesetz. The ECJ responded as follows*:]

51. It must be emphasised that the mere reference to the fact that beer can be manufactured without additives if it is made from only the raw materials prescribed in the Federal Republic of Germany does not suffice to preclude the possibility that some additives may meet a technological need. Such an interpretation of the concept of technological need, which results in favouring national production methods, constitutes a disguised means of restricting trade between Member States.

(F) OTHER MANDATORY REQUIREMENTS

The list of mandatory requirements in *Cassis* is not exhaustive, as is evident from the fact that the ECJ stated that the mandatory requirements included *in particular* those mentioned in the judgment.[161] This has been confirmed by later cases. It can, in the absence of harmonization measures, include the protection of the environment.[162]

Case 302/86 **Commission v Denmark**
[1988] ECR 4607

[Note Lisbon Treaty renumbering: Art 30 is now Art 34 TFEU]

Danish law required that containers for beer and soft drinks should be returnable and that a certain proportion should be re-usable. A national environmental agency had to approve containers to ensure

[161] [1979] ECR 649, [8].

[162] See also Case C–379/98 *PreussenElektra* (n 153); Case C–309/02 *Radlberger* (n 136) [75]; Case C–142/05 *Åklagaren* (n 73) [32].

compliance with these criteria. There was also a deposit-and-return system for empty containers. The Danish government argued that the rule was justified by a mandatory requirement related to the protection of the environment.

THE ECJ

8. The Court has already held in . . . Case 240/83, *Procureur de la République* v *Association de Défense des Brûleurs d'Huiles Usagées* . . . that the protection of the environment is 'one of the Community's essential objectives', which may as such justify certain limitations of the principle of free movement of goods. That view is moreover confirmed by the Single European Act.

9. In view of the foregoing, it must therefore be stated that the protection of the environment is a mandatory requirement which may limit the application of Article 30 of the Treaty.

[*The Commission argued that the Danish laws were disproportionate*.]

13. First of all, as regards the obligation to establish a deposit-and-return system for empty containers, it must be observed that this requirement is an indispensable element of a system intended to ensure the re-use of containers and therefore appears necessary to achieve the aims pursued by the contested rules. That being so, the restrictions which it imposes on the free movement of goods cannot be regarded as disproportionate.

14. Next it is necessary to consider the requirement that producers and importers must use only containers approved by the National Agency for the Protection of the Environment.

[*The Danish Government argued that the number of approved containers had to be limited because otherwise retailers would not take part in the system. This meant that a foreign producer might have to manufacture a type of container already approved, with consequent increases in costs. To overcome this problem the Danish law was amended to allow a producer to market up to 3,000 hectolitres a year in non-approved containers, provided that a deposit-and-return system was established. The Commission argued that the limit of 3,000 hectolitres was unnecessary to achieve the objectives of the scheme*.]

20. It is undoubtedly true that the existing system for returning approved containers ensures a maximum rate of re-use and therefore a very considerable degree of protection of the environment since empty containers can be returned to any retailer of beverages. Non-approved containers, on the other hand, can be returned only to the retailer who sold the beverages, since it is impossible to set up such a comprehensive system for those containers as well.

21. Nevertheless, the system for returning non-approved containers is capable of protecting the environment and, as far as imports are concerned, affects only limited quantities of beverages compared with the quantity of beverages consumed in Denmark owing to the restrictive effect which the requirement that containers should be returnable has on imports. In those circumstances, a restriction of the quantity of products which may be marketed by importers is disproportionate to the objective pursued.

22. It must therefore be held that by restricting . . . the quantity of beer and soft drinks which may be marketed by a single producer in non-approved containers to 3,000 hectolitres a year, the Kingdom of Denmark has failed, as regards imports of those products from other Member States, to fulfil its obligations under Article 30 of the EEC Treaty.

Environmental protection is not the only new addition to this catalogue. In *Familiapress*[163] the ECJ recognized pluralism of the press as a value that could legitimate a national measure that was in breach of Article 34. The offering of prizes for games in magazines could drive out smaller papers which could not afford to make such offers. In *Cinéthèque*[164] the ECJ was willing to recognize that the

[163] Case C–368/95 *Vereinigte Familiapress Zeitungsverlags- und vertriebs GmbH v Heinrich Bauer Verlag* [1997] ECR I–368.

[164] Cases 60 and 61/84 [1985] ECR 2605.

fostering of certain forms of art could constitute a justifiable objective in EU law. While in *Torfaen*[165] it accepted that rules governing the opening hours of premises pursued a justifiable aim, in that such rules reflected social and political choices that might differ between Member States.[166] Road safety can also be a justification.[167] It is clear moreover from *Schmidberger* that the protection of fundamental rights can be relevant as justification of an indistinctly applicable measure.

Case C–112/00 **Eugen Schmidberger, Internationale Transporte und Planzuge v Austria**
[2003] ECR I–5659

The ECJ held that a decision by Austria not to ban a demonstration by an environmental group that led to the closure of the Brenner motorway was caught by what is now Article 34 insofar as it impeded trade for the relevant period. The ECJ then considered whether the restriction was justified, more especially because the Austrian government in allowing the demonstration was influenced by considerations relating to freedom of expression and assembly as enshrined in the ECHR and the Austrian Constitution. The ECJ accepted that fundamental rights were part of the Community legal order, but that these rights and the principles concerning free movement of goods were not absolute.

THE ECJ

81. In those circumstances, the interests involved must be weighed having regard to all the circumstances of the case in order to determine whether a fair balance was struck between those interests.

82. The competent authorities enjoy a wide margin of discretion in that regard. Nevertheless, it is necessary to determine whether the restrictions placed upon intra-Community trade are proportionate in the light of the legitimate objectives pursued, namely . . . the protection of fundamental rights.

[*The ECJ emphasized that the demonstrators had sought permission from the Austrian Government, and that the demonstration was limited in scope and time.*]

86. [I]t is not in dispute that by the demonstration, citizens were exercising their fundamental rights by manifesting in public an opinion which they considered to be of importance in society; it is also not in dispute that the purpose of that public demonstration was not to restrict trade in goods of a particular type or from a particular source . . .

87. [I]n the present case various administrative and supporting arrangements were taken by the competent authorities in order to limit as far as possible the disruption to road traffic. . . .

88. Moreover, it is not in dispute that the isolated incident in question did not give rise to a general climate of insecurity such as to have a dissuasive effect on intra-Community trade flows as a whole . . . .

89. Finally . . . the competent national authorities were entitled to consider that an outright ban on the demonstration would have constituted unacceptable interference with the fundamental rights of the demonstrators to gather and express peacefully their opinion in public.

[*The ECJ accepted that alternative solutions would have been liable to lead to more serious disruption of trade, such as unauthorized demonstrations.*]

93. [T]he national authorities were reasonably entitled, having regard to the wide discretion which must be accorded to them in the matter, to consider that the legitimate aim of that demonstration could not be achieved in the present case by measures less restrictive of intra-Community trade.

[165] Case 145/88 [1989] ECR 3851.

[166] While *Cinéthèque* and *Torfaen* would probably now fall outside Art 34, the recognition of these grounds of objective justification could be of relevance in cases that do fall within Art 34 even after *Keck*.

[167] Case C–110/05 *Commission v Italy* (n 72) [60].

(G) MANDATORY REQUIREMENTS AND HARMONIZATION

An EU harmonization measure may render it impossible for a state to rely on a mandatory requirement.[168] Whether it has this effect will depend upon whether the measure is directed at total or only a minimum harmonization. The previous discussion of this issue is applicable here.[169]

(H) SUMMARY

i. The ECJ was creative in *Cassis* when it set out the mandatory requirements, and it has shown similar flexibility since then by adding new defences to the list. The Court has, not surprisingly, interpreted the requirements strictly, obliging Member States to satisfy it that a defence is really warranted in the circumstances. There are however two causes for concern.

ii. First, the dividing line between the mandatory requirements and Article 36 is problematic. It has been argued that the same public interest defences should be available irrespective of whether the measure is discriminatory or not. Whether the measure was discriminatory or not would simply be of relevance in the application of the defences to the facts of the particular case.

iii. Secondly, the decision on whether the mandatory requirements provide a defence for the Member State can involve difficult balancing exercises for the ECJ, and for the national courts, to which many such issues are delegated by the ECJ. This issue will be examined more fully in the following section

11 FREE MOVEMENT OF GOODS AND *CASSIS*: THE BROADER PERSPECTIVE

(A) THE COMMISSION'S RESPONSE TO *CASSIS*

The Court's judgment in *Cassis* was, in part, a response to the difficulties faced by the Commission in securing acceptance by the Member States of harmonization measures. The judgment in *Cassis* rendered indistinctly applicable rules which impeded trade incompatible with Article 34 unless they could be saved by a mandatory requirement. This was so even in the absence of relevant harmonization provisions. *Cassis* therefore fostered single market integration, and obviated the need for many harmonization provisions.

The ECJ's jurisprudence cannot be viewed in isolation. It had an impact upon how the other Community institutions perceived their role. The Commission was not slow to respond to the Court's initiative. It published a Communication setting out its interpretation of the *Cassis* decision, and its legislative role in this area.

Commission Communication 3 October 1980, [1980] OJ C256/2

Any product imported from another Member State must in principle be admitted to the territory of the importing Member State if it has been lawfully produced, that is, conforms to rules and processes of

[168] See, e.g., Case C–383/97 *Criminal Proceedings against Van der Laan* [1999] ECR I–731.
[169] See above, 676.

manufacture that are customarily and traditionally accepted in the exporting country, and marketed in the territory of the latter.

. . .

Only under very strict conditions does the Court accept exceptions to this principle; barriers to trade resulting from differences between commercial and technical rules are only admissible:

— if the rules are necessary, that is appropriate and not excessive, in order to satisfy mandatory requirements . . . ;

— if the rules serve a purpose in the general interest which is compelling enough to justify an exception to a fundamental rule of the Treaty such as the free movement of goods;

— if the rules are essential for such a purpose to be attained, ie. are the means which are the most appropriate and at the same time least hinder trade.

[*The Commission then set out a number of guidelines in the light of the Court's judgment.*]

— The principles deduced by the Court imply that a Member State may not in principle prohibit the sale in its territory of a product lawfully produced and marketed in another Member State even if the product is produced according to technical or quality requirements which differ from those imposed on its domestic products. Where a product 'suitably and satisfactorily' fulfils the legitimate objective of a Member State's own rules (public safety, protection of the consumer or the environment, etc.), the importing country cannot justify prohibiting its sale in its territory by claiming that the way it fulfils the objective is different from that imposed on domestic products.

In such a case, an absolute prohibition of sale could not be considered 'necessary' to satisfy a 'mandatory requirement' because it would not be an 'essential guarantee' in the sense defined in the Court's judgment.

The Commission will therefore have to tackle a whole body of commercial rules which lay down that products manufactured and marketed in one Member State must fulfill technical or qualitative conditions in order to be admitted to the market of another and specifically in all cases where the trade barriers occasioned by such rules are inadmissible according to the very strict criteria set out by the Court.

The Commission is referring in particular to rules covering the composition, designation, presentation and packaging as well as rules requiring compliance with certain technical standards.

— The Commission's work of harmonization will henceforth have to be directed mainly at national laws having an impact on the functioning of the common market where barriers to trade to be removed arise from national provisions which are admissible under the criteria set out by the Court.

The Commission will be concentrating on sectors deserving priority because of their economic relevance to the creation of a single internal market.

There are two important themes in the Commission's Communication. The first is the principle of *mutual recognition*.[170] Goods lawfully marketed in one Member State should, in principle, be admitted to the market of any other state. This leads to competition among rules, or regulatory competition. A producer will normally have to comply with the national rules of only one state for its goods to move freely in the EU. Firms are then able to choose between different national regulations. Consumers can choose between the products that comply with those rules. This creates a 'competitive process among the different national rules: the choice of producers of where to produce and of consumers of what to buy will determine the "best rules"'.[171]

[170] K Armstrong, 'Mutual Recognition' in Barnard and Scott (n 20) ch 9; MP Maduro, 'So Close and Yet so Far: the Paradoxes of Mutual Recognition' (2007) 14 JEPP 814; K Nicolaïdis, 'Trusting the Poles? Constructing Europe through Mutual Recognition' (2007) 14 JEPP 682; J Pelkmans, 'Mutual Recognition in Goods. On Promises and Disillusions' (2007) 14 JEPP 699.

[171] Maduro (n 2) 132.

The second theme concerns the Commission's enforcement and legislative strategy for trade rules post-*Cassis*. This was to be double-edged. It would tackle trade rules that were *inadmissible* in the light of *Cassis*, by using its powers under Article 258 TFEU against recalcitrant Member States. The harmonization process would be directed towards those trade rules that were *admissible* under the *Cassis* test. *Cassis* therefore caused the Commission to re-orient its legislative programme, and concentrate on national rules that were still valid under the Court's case law. There is now a package of measures,[172] which constitute the 'New Legislative Framework for Marketing of Products',[173] which is considered in more detail in the chapter on the single market.[174]

(B) PROBLEMS WITH REALIZING THE *CASSIS* STRATEGY

Mutual recognition is the core of the ECJ's and Commission's strategy.[175] The general assumption is that this works just fine. Matters are not so simple. The Commission's paper on Mutual Recognition[176] emphasized that it did not always operate effectively, and it made a number of proposals to improve it.[177] There should be increased monitoring of mutual recognition by the Commission, complemented by measures to improve awareness of mutual recognition by producers of goods and services. Member States should deal with requests concerning mutual recognition within a reasonable time, and should include mutual recognition clauses in national legislation.

Legislation has now been enacted to enhance free movement and mutual recognition. The initial approach[178] was based on exchange of information about national measures that derogated from the free movement of goods. This strategy was not, however, successful and it was replaced in 2008[179] by a more strident approach. A Member State that decides to prevent or hinder free movement of goods lawfully marketed in another Member State on grounds listed in Article 36 TFEU, or because of one of the *Cassis* mandatory requirements, must given written notice to the importer, who has twenty days in which to proffer comments contesting the decision. The Member State then makes a final decision in the light of those comments, and this must be notified to the importer and the Commission. If the Member State sticks to its decision to refuse or hinder import it must give reasons. This decision must be open to challenge before national courts. The Member States are, moreover, obliged to establish 'Product Contact Points', which provide information to importers about the technical rules applicable to particular types of product and information about the principle of mutual recognition in that Member State.

[172] Decision No 768/2008/EC of the European Parliament and of the Council of 9 July 2008 on a common framework for the marketing of products, and repealing Council Decision 93/465/EEC [2008] OJ L218/82; Regulation (EC) No 765/2008 of the European Parliament and of the Council of 9 July 2008 setting out the requirements for accreditation and market surveillance relating to the marketing of products and repealing Regulation (EEC) No 339/93 [2008] OJ L218/30; Reg 764/2008 (n 106).

[177] Mutual Recognition (n 176) 7–12; Commission interpretative communication on facilitating the access of products to the markets of other Member States: the practical application of mutual recognition [2003] OJ C265/2.

[178] Decision 3052/95/EC of the European Parliament and of the Council of 13 December 1995 establishing a procedure for the exchange of information on national measures derogating from the principle of free movement of goods within the Community [1995] OJ L321/1.

[179] Reg 764/2008 (n 106).

This Regulation should be viewed in tandem with Directive 98/34[180] on the provision of information on technical standards and regulations. This measure, known as the Mutual Information or Transparency Directive, imposes an obligation on a state to inform the Commission before it adopts any legally binding regulation setting a technical specification. The Commission notifies the other states, and may require that the adoption of the national measure be delayed by up to six months in order that possible amendments can be considered. A further delay can result if the Commission decides to push ahead with a harmonization directive on the issue.

Legislative intervention to secure free movement and mutual recognition has been complemented by judicial initiatives, more especially the obligation to insert mutual recognition clauses in legislation, which derives from the *Foie Gras* case.[181] The French imposed requirements on the composition of *foie gras*. The Commission argued that the French Decree containing the requirements for *foie gras* must also contain a mutual recognition clause in the legislation itself, permitting preparations for *foie gras* that had been lawfully marketed in another Member State to be marketed in France. The ECJ agreed.[182] Henceforth any state which imposes requirements as to product characteristics and the like must also include a mutual recognition clause in the enabling legal instrument. The Commission acknowledged their importance: 'it is through such clauses that not only individuals, but also the competent national authorities and the heads of inspection and control bodies become aware of how mutual recognition has to be applied in a given area'.[183] Such clauses are especially important, given the difficulties that persist with mutual recognition of complex technical products, foodstuffs, and the like.[184]

(c) PROBLEMS FLOWING FROM THE *CASSIS* STRATEGY

The effect of *Cassis* was that policy would be developed through a mixture of adjudication and rule-making. Adjudication by the ECJ pursuant to *Cassis* resulted in negative integration: trade rules would be incompatible with Article 34 unless they could be saved by a mandatory requirement. Rule-making would be used for national rules that survived because of the mandatory requirements, and therefore still posed a problem for market integration. This resulted in positive integration, in the sense that there would be EU rules which would bind all states. There are, however, four problems with this general strategy.

The *first problem* is that it is dependent on agreement as to the outcome of the adjudicative process. If the challenged rule failed the *Cassis* test then it would have to be removed from national law. This conclusion was fine, provided that one agreed with it. The result was less satisfactory if one felt that the trade rule should have been saved by a mandatory requirement. Thus the ECJ has, for example, generally held that national rules on food standards are not saved by the mandatory requirements, because the policy of the importing state can be met by less restrictive rules on product labelling.[185] Weatherill has argued forcefully that the ECJ often takes a robust view of consumers, and has given relatively little attention to the prospects of consumer confusion.[186] Lasa has also argued that labelling requirements, as opposed to food standards, may not adequately protect the consumer.

[180] Directive 98/34/EC of the European Parliament and of the Council of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards and regulations [1998] OJ L204/37; Case C–194/94 *CIA Security International SA v Signalson SA and Securitel SPRL* [1996] ECR I–2201; The Operation of Directive 98/34 from 2002-2005, COM(2007)125 final.

[186] S Weatherill, 'Recent Case Law Concerning the Free Movement of Goods: Mapping the Frontiers of Market Deregulation' (1999) 36 CMLRev 51.

H-C von Heydebrand u d Lasa, Free Movement of Foodstuffs, Consumer Protection and Food Standards in the European Community: Has the Court of Justice Got it Wrong?[187]

First of all, the Court might simply not be right that consumers are adequately informed through labels. After all, the majority of the consumers apparently do not pay much attention to the information given on the label. . . .

Secondly, the Court's approach can confer an unfair competitive advantage on the importer . . . The consumer associates with the name or presentation of the product a familiar domestic product of a certain quality which is not met by the imported product, and will therefore perhaps be misled. . . .

Fourthly, the Court's case law, if implemented strictly in the long run, may well result in a 'labelling jungle' which even judges would find difficult to penetrate . . .

Fifthly, while administrative resources are saved by foregoing harmonization, authorities of the Member States have to struggle with the food standards of the various Member States, since the imported product must still be 'lawfully produced and marketed' in the Member States of export. . . .

Sixthly, depending on the market of the foodstuff in question, mutual recognition can lead to discrimination against manufacturers situated in the importing Member State, if that Member State does not timely adjust the food standard . . .

More important . . . the Member State of export can by way of the economic damage caused by inverse discrimination impose de facto its food standard or standard free food law on the Member State of import. Relocation of production to the exporting Member State in an effort to secure market share at home has already occurred in practice. . . .

Seventhly, the preference of the Court for labelling is not sufficiently responsive to the local needs of the people of the importing Member State to define and classify the food they eat according to their conceptions, expectations and habits . . .

The *second problem* relates to the balancing exercise performed pursuant to Article 36 and the mandatory requirements. The ECJ has to adjudicate on the balance between market integration and the attainment of other societal goals when deciding on the legitimacy of such defences. This can also be problematic for national courts, as is readily apparent from the *Sunday Trading* cases and more recent jurisprudence. Thus in *de Agostini*[188] the national court had to decide whether the advertising ban affected imported goods differentially from domestic goods, whether the ban might satisfy a mandatory requirement, and whether it was proportionate. In *Familiapress*[189] the ban on import of newspapers offering prizes was held to breach Article 34. It was for the national court to decide whether the ban could be saved because it was a proportionate method of preserving press diversity, and whether that objective could be achieved by less restrictive means. The national court was, moreover, required to decide on the degree of competition between papers offering prizes and those small newspapers that could not afford to do so, and to estimate the extent to which sales of the latter would decline if the former could be offered for sale.

The *third problem* concerns the balance between market integration and the protective function played by national rules. EU legislative initiatives may be required to ensure that the protective function of certain trade rules is not lost sight of in the desire to enhance single market integration.[190]

[187] (1991) 16 ELRev 391, 409–413. See also O Brouwers, 'Free Movement of Foodstuffs and Quality Requirements: Has the Commission Got it Wrong?' (1988) 25 CMLRev 237; C MacMaoláin, 'Waiter! There's a Beetle in my Soup. Yes Sir, that's E120: Disparities between Actual Individual Behaviour and Regulating Food Labelling for the Average Consumer in EU Law' (2008) 45 CMLRev 1147.

[188] Cases C–34–36/95 (n 62).

[189] Case C–368/95 (n 163).

[190] See, however, Case C–320/93 *Lucien Ortscheit GmbH v Eurim-Pharm Arzneimittel GmbH* [1994] ECR I–5243 for judicial recognition of this problem.

Thus consumer groups were worried that trade liberalization could have negative consequences on consumer safety.[191] It is true that safety and the like can be taken into account under the *Cassis* mandatory requirements. There is, however, as Weatherill and Beaumont note, a risk inherent in the *Cassis* line of authority. The risk is 'that the Court has introduced a legal test that tends to tip the balance away from legitimate social protection towards a deregulated (perhaps unregulated) free market economy in which standards of, *inter alia*, consumer protection will be depressed'.[192] Positive harmonization through EU rules may be required to ensure the appropriate level of protection in the relevant area.

The *final problem* concerns the allocation of regulatory competence between the EU and the Member States. The interpretation of Article 34 serves to define the sphere of regulatory competence left to the Member States, and the extent to which EU harmonization is required. This entails important choices.

M Maduro, We the Court, the European Court of Justice and the European Economic Constitution[193]

[Art 30 should be read as Art 34 TFEU]

The institutional choices, regarding the allocation of regulatory powers, that can be detected in different interpretations of Article 30 [28] and its co-ordination with Treaty rules on harmonisation may be represented in three ideal constitutional models of the European Economic Constitution: the centralised constitutional model, the competitive constitutional model and the decentralised constitutional model. The centralised model reacts to the erosion of national regulatory powers through Article 30 by favouring a process of market integration by means of the replacement of national laws with Community legislation. The competitive model promotes 'competition among national rules', notably through the principle of mutual recognition of national legislation. In the decentralised model, States will retain regulatory powers, but are, at the same time, prevented from developing protectionist policies. These models are heuristic devices. They are all present—and compete with each other—in the European Union. . . . These, in turn, can be linked with three different visions of the European Economic Constitution and its legitimation.

The first argues that negative integration, deriving from the application of market integration rules, must be followed by positive integration which is legitimised through the development of traditional democratic mechanisms in the European Union.

The second argues for the constitutionalisation of negative integration. No traditional democratic developments are required for the European Union institutions since powers are left to the market. . . . This vision protects market freedom and individual rights against public power.

The third vision still sees the highest source of legitimacy in national democratic legitimacy. The legitimacy of the European Economic Constitution derives therefrom and is thus conditioned. . . .

The disputes over Article 30 and European regulation are basically disputes over these different economic constitutional models and the different legitimacy they presuppose.

12 CONCLUSIONS

i. The ECJ had certain fundamental choices when interpreting Article 34. It could have limited its remit to measures that were discriminatory or protectionist. It chose not to do so, and extended

[191] K Alter and S Meunier-Aitsahalia, 'Judicial Politics in the European Community: European Integration and the Pathbreaking Cassis de Dijon Decision' (1994) 26 Comparative Political Studies 535, 544.

[192] (N 42) 600.

[193] (Hart, 1998) 108–109.

Article 34 to cover indistinctly applicable rules. Consequences flow from any choice, and this applies as much to those made by courts as other decision-makers.

ii. The *legislative consequence* of *Cassis* was far-reaching. The decision facilitated the creation of a single market. The Commission re-oriented its legislative strategy to concentrate on trade rules that were still lawful in the light of *Cassis* and could be justified by the mandatory requirements. There would be harmonization pursuant to Article 114.

iii. The *judicial consequence* of *Cassis* was equally significant. Litigants challenged all manner of national trade rules claiming that they constituted an impediment, direct or indirect, actual or potential, to EU trade. This led the ECJ to re-think its jurisprudence in *Keck* in an attempt to stem the tide. The distinction between rules going to the characteristics of the goods and those pertaining to selling arrangements proved fragile. The ECJ increasingly brought selling arrangements within Article 34 either by treating them as going to the character of the goods or because they applied unevenly, in fact or law, to imports. Market access has come closer to centre stage in the ECJ's reasoning, as is evident in the case law on product use.

iv. *Cassis* also had a *second-order judicial consequence*. The ECJ had to decide whether a Member State could legitimately plead a mandatory requirement. It was forced to make difficult decisions between the imperatives of market integration and the pursuit of other social goals. National courts are often faced with complex empirical and normative issues when deciding on the application of mandatory requirements.

v. *Cassis* had significant *regulatory consequences*. Member States lost regulatory competence. They could no longer apply national rules to imported goods. These had to be admitted because of mutual recognition unless they could be saved by a mandatory requirement. The EU acquired regulatory competence, since the existence of a proven mandatory requirement brought Article 114 into play.

FREE MOVEMENT OF CAPITAL AND ECONOMIC AND MONETARY UNION

1 CENTRAL ISSUES

i. This chapter is concerned with free movement of capital and economic and monetary union (EMU).

ii. The initial discussion will focus on the free movement of capital. This is one of the four freedoms enshrined in the original Rome Treaty. The Treaty Articles were altered radically by the Maastricht Treaty. There is now a growing body of case law on these provisions. This jurisprudence raises similar issues to those encountered in the context of goods, persons, establishment, and services.

iii. The remainder of the discussion will be devoted to EMU. There will be an analysis of the movement towards EMU, and the Treaty provisions that set the legal framework for EMU. There will be consideration of the arguments for and against EMU. The position of the European Central Bank (ECB) will be analysed. The discussion will conclude with an overview of the stresses and strains of EMU in the light of the banking and financial crisis.

iv. The Treaties contain provisions on both monetary and economic union. The former, monetary union, means in essence a single currency overseen by the ECB.

v. The meaning of the latter, economic union, is more diffuse. The essence of the idea, which will be explained more fully in the course of the chapter, is however as follows. The health of individual Member States' economies can have real implications for the overall health of the EU economy and for the value of the single currency, as potently exemplified by the financial crisis for the Euro precipitated by concerns over the Greek economy. The Treaties therefore contain provisions to monitor in various ways the health of Member States' economies. The extent of these controls is however a sensitive matter, since they entail EU intrusion into domestic economic policy. The weakness of the existing controls is however problematic, since the relative 'health' of national economies, as perceived by the market, can have very serious implications for the economies of other Member States.

vi. It is for this reason that the recent financial crisis led to various strategies for strengthening the Treaty provisions on economic union.

2 FREE MOVEMENT OF CAPITAL

(A) THE ORIGINAL TREATY PROVISIONS

While Articles 67–73 EEC contained provisions on the free movement of capital,[1] they were less peremptory than those applicable to the free movement of goods, workers, services, and establishment. Thus while Article 67(1) EEC imposed an obligation to abolish progressively restrictions on capital movements during the transitional period, this was only to the extent necessary to ensure the proper functioning of the common market. This theme was carried over to Article 71, which required Member States to endeavour to avoid the introduction of new exchange restrictions on capital movements. The wording of these Treaty Articles necessarily had an impact on the ECJ's approach to this area.[2] The Council enacted various directives pursuant to these Treaty provisions, the most important being Council Directive 88/361.[3]

(B) THE CURRENT PROVISIONS: THE BASIC PRINCIPLE

The Maastricht Treaty completely revised the provisions on free movement of capital, with effect from 1 January 1994.[4] Article 63 TFEU (ex Article 56 EC) now provides:

> 1. Within the framework of the provisions set out in this Chapter, all restrictions on the movement of capital between Member States and between Member States and third countries shall be prohibited.
> 2. Within the framework of the provisions set out in this Chapter, all restrictions on payments between Member States and between Member States and third countries shall be prohibited.[5]

What is now Article 63 was held to have direct effect in *Sanz de Lera*.[6] The ECJ held that it laid down a clear and unconditional prohibition for which no implementing measure was required. The existence of Member State discretion to take all measures necessary to prevent infringement of national law and regulations contained within what is now Article 65(1)(b) TFEU did not prevent Article 63 from having direct effect, because the exercise of such discretion was subject to judicial review. This ruling concerned an action against the state. Treaty Articles often have vertical and horizontal direct effect, and thus can be used against the state and private individuals, and there is nothing in *Sanz de Lera* to indicate the contrary. It would not be difficult, as Usher states,[7] to envisage a situation in which the unilateral conduct of a financial institution could restrict payments between states. This interpretation

[5] This does not cover national procedural rules governing actions by a creditor seeking payment from a recalcitrant debtor: Case C–412/97 *ED Srl v Italo Fenocchio* [1999] ECR I–3845.

[6] Cases C–163, 165, and 250/94 *Criminal Proceedings against Lucas Emilio Sanz de Lera* [1995] ECR I–4821, [41]–[47]; Case C–101/05 *Skatteverket v A* [2007] ECR I–11531, [20]–[27]; Case C–201/05 *Test Claimants in the CFC and Dividend Group Litigation v Commissioners of Inland Revenue* [2008] ECR I–2875, [90]–[91].

[7] Usher (n 1) 27.

is reinforced by the fact that Article 63 does not refer only to the state.[8] The argument to the contrary would be derived by way of analogy with Article 34 on the free movement of goods, which has been largely confined to actions against the state.[9]

The Treaty provisions do not define movement of capital, but the ECJ held that reference can be made to the non-exhaustive list in Directive 88/361.[10] It will be for the ECJ to decide, with the aid of the Directive, whether a measure constitutes a restriction on the movement of capital. Thus a national prohibition on the creation of a mortgage in a foreign currency was prohibited by Article 63.[11] The ECJ has held that restrictions on share dealings and 'golden shares'[12] come within Article 63.[13] So too do restrictions on the acquisition and disposal of property,[14] such as requirements of prior administrative authorization.[15] Measures taken by a Member State that are liable to dissuade its residents from obtaining loans or making investments in other Member States constitute restrictions on the movement of capital.[16]

While direct taxation remains within Member States' competence, they must exercise that competence consistently with EU law and avoid discrimination on the grounds of nationality.[17] It is clear moreover that Article 63 covers not only measures that discriminate on grounds of nationality, but also measures that may impede capital movements, even though they are not discriminatory.[18] The ECJ has, by way of contrast, held that a Member State can apply a tax to income, notwithstanding the fact that it has already been taxed in another Member State,[19] with the consequence that double taxation is not contrary to free movement of capital.[20]

Article 63 gives the impression that capital movements within the EU, and between Member States and non-member countries, are treated the same. This is not so, since other Treaty Articles qualify the application of Article 63 to non-member countries. Article 64(1) in effect allows lawful restrictions

[8] In Case C–464/98 *Westdeutsche Landesbank Girozentrale v Stefan and Republik Österreich* [2001] ECR I–173 a private defendant relied on Art 63, and in Case C–213/04 *Burtscher v Stauderer* [2005] ECR I–10309, the defendant was a private individual, although the case concerned a state measure.

[9] The rationale for this limitation on Art 34 is, however, based in large part on the overlap which would otherwise occur between Art 34 and Arts 101 and 102.

on capital movements which existed on 31 December 1993 to remain in being, and Article 64(2) only requires the Council to endeavour to achieve free movement with non-member countries to the greatest extent possible. The Council is also empowered under Article 66 to take safeguard measures in exceptional circumstances where capital movements to or from non-member countries cause, or threaten to cause, serious difficulties for the operation of economic and monetary union. Such measures cannot last longer than six months, and can be taken only where strictly necessary.

(c) THE CURRENT PROVISIONS: THE EXCEPTIONS

Article 65(1)(a) concerns taxation and constitutes one of the main exceptions to Article 63. It provides that the provisions of Article 63 shall be without prejudice to the right of Member States:

> to apply the relevant provisions of their tax law which distinguish between taxpayers who are not in the same situation with regard to their place of residence or with regard to the place where their capital is invested.

Article 65(1)(a) is expressly made subject to Article 65(3), which stipulates that the measures taken must not constitute a means of arbitrary discrimination or a disguised restriction on the free movement of capital and payments. The ECJ will decide whether, for example, residents and non-residents are in a comparable position, and whether there has been discrimination.[21] For a difference in treatment not to be regarded as arbitrary for the purposes of Article 65(3) it must be objectively justified.[22] The Member State must show, for example, that the differential treatment was intended to protect the integrity of the tax system and was necessary to achieve this end. The ECJ interprets this requirement strictly. Thus in *Verkooijen*[23] it was held that a national provision making the grant of exemption from income tax on dividends paid to shareholders conditional on the company having its seat in the Netherlands was contrary to EU law. The ECJ rejected the defence that the rule was justified to encourage investment in the Netherlands, since such purely economic objectives could not justify a limit placed on a fundamental freedom. The ECJ also rejected arguments that the contested rule was justified on the ground that it was necessary to preserve the cohesion of the Netherlands' tax system.[24]

Article 65(1)(b) provides that the provisions of Article 63 shall be without prejudice to the right of Member States:

> to take all requisite measures to prevent infringements of national law and regulations, in particular in the field of taxation and the prudential supervision of financial institutions, or to lay down procedures for the declaration of capital movements for purposes of administrative or statistical information, or to take measures which are justified on grounds of public policy or public security.

[23] Case C–35/98 *Staatssecretaris van Financiën v Verkooijen* [2000] ECR I–4071; Case C–512/03 *Blanckaert* [2005] ECR I–7685, [42].

[24] See also Case C–251/98 *Baars* (n 17); Case C–319/02 *Manninen* [2004] ECR I–7477; Case C–265/04 *Bouanich v Skatteverket* [2006] ECR I–923; Case C–386/04 *Centro di Musicologia v Finanzamt München für Körperschaften* [2006] ECR I–8203; Case C–292/04 *Meilicke, Wiede, Stoffler v Finanzamt Bonn-Innenstedt* [2007] ECR I–1835; Case C–43/07 *Arens-Sikken v Staatssecretaris van Financiën* [2008] ECR I–6887.

Article 65(1)(b) is also subject to Article 65(3): the restrictions cannot constitute a means of arbitrary discrimination etc. Article 65(1)(b) divides into two parts.

The first part covers the whole of the Article apart from the reference to public policy and public security. It has been convincingly argued[25] that this 'relates to the effective administration and enforcement of the tax system and the effective supervision of, for example, banks and insurance companies, rather than to matters of underlying economic policy', the latter being dealt with under Articles 143 and 144. The ECJ will inquire closely before accepting this defence. In *Commission v Belgium*[26] the ECJ held that a national rule forbidding Belgian residents from subscribing to securities of a loan on the Eurobond market was caught by Article 63. The Belgian government argued that the measure was justified under Article 65(1)(b) because it preserved fiscal coherence. This argument was rejected because there was no direct link between any fiscal advantage and disadvantage which should be preserved in order to ensure such coherence. The Belgian government argued moreover that the contested measure prevented tax evasion by Belgian residents, and ensured effective fiscal supervision. The ECJ disagreed, and held that the national rule was disproportionate: a general presumption of tax evasion could not justify a measure that compromised a Treaty Article.

The second part of Article 65(1)(b) covers public policy and public security. The ECJ draws on its jurisprudence from other freedoms when interpreting these terms. This exception is interpreted narrowly and the Member State has the burden of proof. The restriction must be justified in terms of national public interest of a kind referred to in Article 65(1), or by grounds of overriding public interest.[27] The restriction must also be proportionate, and will be struck down if a less restrictive measure could have achieved the desired end. In *Scientology International*[28] the ECJ held that a national law requiring prior authorization for capital investments that threatened public policy or security could, in principle, come within Article 65(1)(b). However, the particular French rule, which did not specify further details about the threat to public security, was regarded as too imprecise, and hence could not come within this Article.[29] However in *Commission v Belgium*[30] a national rule vesting the government with a 'golden share' in gas and electricity companies that had been privatized, enabling it to control certain subsequent dispositions of strategic assets, was held to fall within Article 65(1)(b) because it guaranteed energy supplies in the event of a crisis, and hence fell within public security.[31]

Article 65(2) states that the provisions of this Chapter shall be without prejudice to the applicability of restrictions on the right of establishment which are compatible with the Treaty. This Article is once again made subject to Article 65(3). These restrictions therefore include the exception in the case of official activities contained in Article 51.

Articles 143 and 144 contain a different type of qualification from Article 63. These Articles cease to operate from the third stage of EMU, except for states with a derogation, and deal with balance-of-payments crises. The 'strategy' is to look initially to an EU-sponsored solution via

Article 143, and then to authorize unilateral action by the state if this is not forthcoming via Article 144.

3 EMU AND THE EUROPEAN MONETARY SYSTEM: EARLY ATTEMPTS

Discussion of EMU must be seen in its historical context. In 1969 the Heads of State resolved that a plan should be drawn up in relation to EMU.[32] A committee was established under the chairmanship of Werner, the Luxembourg Prime Minister. It concluded[33] that EMU would entail either the total convertibility of the Community currencies, free from fluctuations in exchange rates, or that preferably such currencies would be replaced by a single Community currency. The report recognized that EMU would entail the centralization of monetary policy, and that there would have to be some Community system for national central banks. The report was followed by a Council Resolution on the attainment of EMU by stages.[34] Progress was, however, halted as a result of changed economic circumstances.

The Werner Report was premised on the assumption of fixed exchange rates, and this was undermined by developments in the early 1970s.[35] Largely as a result of problems with the US economy,[36] European currencies began to float and there was an urgent need to prevent them from floating too far apart. This was the catalyst for the initiation of the 'snake', which established the principle that the difference between the exchange rates of two Member States should not be greater than 2.25 per cent. Economic pressures on particular Member States resulted in departures from the 'snake', such that by 1977 only half of the ten Member States remained within it. This early attempt to forge some form of EMU was furthered hampered by lack of progress towards coordination of national economic policies, a step seen as vital to the success of the enterprise.[37]

A more general attempt to engender monetary stability occurred in 1978 through the establishment, by a Resolution of the European Council,[38] of the European Monetary System (EMS).[39] There was growing dissatisfaction with floating exchange rates, which were perceived to have a detrimental impact on cross-border investment. Foreign currency movements were, moreover, having a destabilizing effect on European currencies.[40] The EMS instituted the Exchange Rate Mechanism (ERM) and the European Currency Unit (ECU). The ECU rate was determined against a basket of currencies of the Member States. The ERM operated by setting for each participating state a currency rate against the ECU. These values, once determined collectively, could only be altered in the same manner. Once the value of each currency was specified against the ECU it was then possible to determine the worth of any particular national currency against all other national currencies. These relative values were known as the bilateral central rates. Any participant country would not allow its exchange rate to fluctuate by more than 2.25 per cent above or below these bilateral central rates, with an exceptional band of 6 per cent. When a currency reached its bilateral limits against another currency, intervention was required by the relevant central banks to redress the matter.

[32] For earlier developments see F Snyder, 'EMU Revisited: Are We Making a Constitution? What Constitution Are We Making' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 1999) 421–424.

[38] Bull EC 12–1978. This Resolution was reinforced by an Agreement between the national central banks.

[39] Snyder (n 32) 428–433.

[40] Swann (n 36) 209–210.

The normal workings of the ERM were, however, thrown into disarray by the currency crises of 1992–1993. Currency dealers speculated that certain weaker currencies could not be sustained within the relatively narrow bands of the ERM. Central banks sought to preserve the integrity of the ERM, but could not ultimately resist market pressures. The lira and the pound were suspended from the ERM. Further market pressures led to the widening of the bilateral bands to 15 per cent,[41] and to the devaluation of certain currencies which stayed within the ERM. These measures preserved the ERM in formal terms, but undermined its primary rationale, since they significantly weakened the search for exchange rate stability.

4 ECONOMIC AND MONETARY UNION: THE THREE STAGES[42]

(A) STAGE ONE AND THE DELORS REPORT

While the Single European Act (SEA) contained no commitment to EMU, it stated in a preamble that in 1972 the Heads of State approved the objective of progressing towards EMU. This was the catalyst for bringing the issue back onto the political agenda at the Hanover Summit of 1988. A committee, chaired by Jacques Delors, the President of the Commission, was established to assist the European Council, and reported to the Madrid Summit in 1989.[43] It recommended that EMU should be approached in three stages.[44]

Stage One was the completion of the internal market, closer economic convergence, and the membership of all states of the ERM. This did not require new Treaty powers. In Stage Two a European System of Central Banks (ESCB) would be created to coordinate national monetary policies and formulate a common monetary policy for the Community. Stage Three would see the locking of exchange rates and a single currency managed by the ESCB. The ESCB was to be independent and have price stability as a primary goal. The Delors Report also recognized that there would have to be central control over national fiscal policy, since otherwise the action of a particular state could have deleterious consequences for inflation or interest rates in all states.

(B) STAGE TWO AND THE TREATY ON EUROPEAN UNION

The Maastricht Treaty laid the foundations for progress towards EMU, and stipulated that the second stage should begin on 1 January 1994.[45] It contained three kinds of provisions.

First, it added a new Treaty objective. Article 4(1) EC stipulated that the activities of the Member States and the Community should include the adoption of an economic policy based on the close coordination of Member States' economic policies, on the internal market, and on the definition of the common objectives, conducted in accordance with the principle of an open market economy with free competition. Article 4(2) EC provided that the activities of the states and the Community should

[41] Subject to a special agreement between Germany and the Netherlands to retain the 2.25 per cent fluctuation band.

[45] Art 116(1) EC.

include the irrevocable fixing of exchange rates leading to the introduction of a single currency, the ECU, and the definition of a single monetary and exchange-rate policy.

Secondly, there were provisions dealing with economic policy. The connection between economic and monetary policy was correctly perceived by the Werner and Delors Reports. Monetary union is not plausible without some measure of centralized control over fiscal policy, and in particular over budgetary matters. This was the rationale for Articles 98–104 EC, which gave the EC some control over Member States' economic policies. The nature of this control will be examined below.[46]

Thirdly, there were provisions dealing with monetary policy. A European Monetary Institute (EMI) was established.[47] This was the forerunner to the ECB, which came into being at Stage Three of EMU. The EMI helped to pave the way to Stage Three of EMU. The EMI had, by 31 December 1996, to specify the regulatory, organizational, and logistical framework necessary for the ESCB to perform its tasks in the third stage. Member States had to ensure that their central bank was independent,[48] and were instructed to treat their exchange rate policy as a matter of common interest.[49]

(c) STAGE THREE AND THE LEGAL FRAMEWORK

The third stage of EMU had, according to the Treaty,[50] to start no later than 1 January 1999. There were detailed criteria concerning the shift from Stage Two to Stage Three, which were contained in Article 121 EC. The Commission and the EMI had to report to the Council on the progress made by the states towards EMU. These reports would examine the extent to which the states had made their central banks independent, and whether the convergence criteria had been met. Meeting these criteria was a condition precedent for a state to adopt the single currency.[51] The four criteria were set out in Article 121(1), and were fleshed out by a Protocol. Member States that did not fulfil the criteria were referred to as 'Member States with a derogation'. On the basis of these reports the Council assessed whether each Member State fulfilled the conditions for the adoption of a single currency. The Council, meeting as the Heads of State or Government, had to decide by qualified majority, not later than 31 December 1996, whether a majority of the Member States fulfilled the conditions for the adoption of a single currency. If the date for the beginning of the third stage had not been set by the end of 1997 then the third stage was deemed to start on 1 January 1999.[52]

The formal decision of the Council, meeting as the Heads of State or Governments, that the applicant states, apart from Greece, had met the convergence criteria was made on 2 May 1998. The third stage of EMU duly began on 1 January 1999. The exchange rates of the participating countries were irrevocably set, and the Euro became a currency in its own right, notwithstanding those who doubted whether some states really would meet the convergence criteria,[53] given the high debt levels in Italy and Belgium. The UK negotiated an opt-out Protocol, which was appended to the TEU, the import of which is that it was not bound to move to the third stage of EMU even if it met the convergence criteria. On 1 January 2002 the new banknotes and coins were introduced, and national currencies were withdrawn from circulation towards the end of February 2002. There are currently sixteen Member

5 EMU: ECONOMIC FOUNDATIONS

It is important before examining the detailed provisions concerning economic and monetary union to understand the economic arguments for and against a single currency.[54] What follows is an outline of some of the main themes in this debate.

(A) THE CASE FOR EMU

The case for EMU rests on two connected foundations. It is argued that EMU will foster economic growth and engender greater price stability through low inflation.

The argument that EMU will enhance *economic growth* is based on a number of factors, the most important being the *saving of transaction costs*. A single currency removes the cost of exchange-rate conversions when money moves within the EU. The Commission calculated that the total savings would be approximately €25 billion.[55]

An equally important, albeit contested, factor was the *link between the single market and a single currency*. This was captured most vividly in the Commission's slogan of 'one market, one money'. It is possible to have a single market without a single currency, but it was argued that the single market would work better with a single currency than without. The link between the single market and a single currency was explicitly drawn in Commission publications.[56] By having a single currency businesses save on 'menu costs', and do not have to maintain different sets of prices for each market. From the manufacturer's perspective, this facilitates the development of marketing strategies for the EU as a whole. From the consumer's perspective, it enables direct price comparisons to be made of products in different countries.

The existence of a single currency was also said to protect against the *costs associated with large exchange-rate changes and competitive devaluation*, which could 'distort the single market by unpredictable shifts of advantage between countries unrelated to fundamentals'.[57] In this sense 'the single market needs a single currency not just to push it forwards, but to stop it sliding backwards'.[58] Such currency fluctuations could slow economic growth by creating uncertainty for business, which was not conducive to investment.[59] The existence of wide price differentials fuelled in part by different currencies led moreover to attempts by Member States to prevent parallel imports and impede intra-EU trade.

It was argued that a single currency would in addition foster growth by *lowering interest rates and stimulating investment*. Countries would no longer have to raise their interest rates above German levels in order to stop their currencies from falling in relation to the Deutschmark.[60] Investment projects 'will become economic which were not so when they had to earn higher returns to repay expensive borrowed money, compensate for exchange rate uncertainty, and hand out high dividends to share-holders'.[61]

[59] The Impact of Currency Fluctuations on the Internal Market, COM(95)503 final.
[60] Johnson (n 57).
[61] Ibid 55.

The case for EMU was also based on the argument that it fostered *stable prices and low inflation*. Savers tend to gain from low inflation, since their money retains its purchasing power for longer. Inflation makes it more difficult to maintain long-term business plans, and redistributes income in an arbitrary manner. Businesses incur 'menu costs' when inflation rates are high or constantly changing. The ERM exerted some discipline over inflation rates by the very fact that countries, in effect, linked their exchange rates to the Deutschmark, and limited their use of devaluation. There was, however, a tendency for some countries to have overvalued exchange rates, which was in part the rationale for the currency crises in 1992 and 1993. It was argued that EMU offered a better, cheaper, and more stable way of reducing inflation, particularly when monetary policy was run by an independent central bank, which was not subject to short-term political pressures.

(B) THE CASE AGAINST EMU

There are a number of differing arguments made against EMU. These can for the sake of analysis be divided into 'contingent disapproval' and 'outright rejection'.

The essence of the *contingent disapproval argument* was that the Member States were not ready for EMU, since they could not meet the convergence criteria, except by creative accounting that threw the whole enterprise into disrepute. This was exemplified by the letter signed by 155 German university professors, arguing that the time was not yet ripe for EMU,[62] and it was exemplified more recently by the difficulties created for the Euro by the financial crisis in Greece, examined below. It is moreover reasonably clear that EMU may well suit some states more than others.[63]

The *outright rejection argument* was more complex, and was part political, part symbolic, and part economic.

In political terms, it was argued by some that a single currency was a major step towards a European super state.[64] Important facets of economic policy were shifted from the domestic to the EU arena. National governments no longer had the ultimate option of devaluation. There would no longer be any point in having parliamentary debates on matters such as inflation, interest rates, and unemployment, since power over such matters would be taken from national polities and given to the ECB. This would, so it was said, exacerbate problems of democratic deficit within the EU, given that the demise of national parliamentary power over such matters would not be offset by any meaningful control through the European Parliament.[65]

In symbolic terms, a national currency was felt by some to be part of the very idea of nationhood. This point is captured well by Johnson:[66]

> Advocates of monetary and exchange rate autonomy argue that it may not be perfect, but it is preferable to the alternative. The dishonour of a national currency may seem better than its death. Monetary sovereignty is sometimes felt to be part of a national sovereignty, so that giving it up involves a loss of political independence, and ultimately political union. It is almost a case of 'my country, right or wrong'.

In economic terms, it was argued that a single currency would lead to a variety of undesirable consequences. Prices would increase, since businesses would take advantage of the change from national

currencies to the Euro to raise prices before consumers were accustomed to the new money.[67] A single currency could moreover create tensions because economic conditions in Member States followed different cycles, and hence removing the possibility of exchange rate fluctuation eliminated a significant mechanism for economic adjustment between states.

(c) EMU: ECONOMICS, POLITICS, AND LAW

It is readily apparent that the debates about EMU are only in part economic. The economic dimension shades into the political, and these often manifest themselves in legal form.

F Snyder, EMU Revisited[68]

The legal aspects of EMU are sometimes extremely controversial, either in public or behind the closed doors of diplomatic and monetary negotiations. Legal and other technical debates often act as a kind of shorthand for political disagreement. Competing economic theories frequently play the same role. This was the case long before EMU was set as a priority European Union objective. This does not mean, of course, that all legal aspects of EMU have been or are politically controversial. But, in the future also, political conflicts about EMU are likely often to appear in legal camouflage. This dialectical relationship between politics and law, political discourse and monetary discourse, and political discourse and legal discourse should not be surprising. The driving force in EMU, including its main legal aspects, has always been politics.

6 EMU: MONETARY UNION AND THE ECB

The provisions concerning monetary and economic union are complex. The former will be addressed in this section, the latter in the section which follows. Article 119 TFEU is the lead provision.

1. For the purposes set out in Article 3 of the Treaty on European Union, the activities of the Member States and the Union shall include, as provided in the Treaties, the adoption of an economic policy which is based on the close coordination of Member States' economic policies, on the internal market and on the definition of common objectives, and conducted in accordance with the principle of an open market economy with free competition.

2. Concurrently with the foregoing, and as provided in the Treaties and in accordance with the procedures set out therein, these activities shall include a single currency, the euro, and the definition and conduct of a single monetary policy and exchange-rate policy the primary objective of both of which shall be to maintain price stability and, without prejudice to this objective, to support the general economic policies in the Union, in accordance with the principle of an open market economy with free competition.

3. These activities of the Member States and the Union shall entail compliance with the following guiding principles: stable prices, sound public finances and monetary conditions and a sustainable balance of payments.

[67] Redwood (n 64) 22.
[68] Snyder (n 32) 468.

(A) ECB AND ESCB

The ECB together with the national central banks whose currency is the Euro, have the primary responsibility for monetary policy.[69] The ECB has legal personality.[70] It has an Executive Board and a Governing Council. The Executive Board is composed of a President, Vice-President, and four other members, who must be recognized experts in monetary or banking matters. They serve for eight years and the posts are non-renewable.[71] The Governing Council consists of the Executive Board plus the Governors of the national central banks whose currency is the Euro.[72] The President of the ECB is invited to Council meetings for discussion of matters that impact on the ESCB,[73] and for areas falling within its responsibilities the ECB shall be consulted on all proposed Union acts, and all proposals for regulation at national level, and may give an opinion.[74] There is in addition provision for the President and other members of the Executive Board to be heard before the European Parliament.[75]

The independence of the ECB is enshrined in Article 130 TFEU, which stipulates that the ECB shall not take any instruction from EU institutions, Member States, or any other body, and this is further affirmed by Article 282(3) TFEU. This independence is reflected in the ECB's decision-making structure: the President of the Council and a member of the Commission may participate in meetings of the ECB's Governing Council, but they do not have the right to vote.[76] The ECB has the power to make regulations and take decisions. It is also empowered to make recommendations and deliver opinions.[77] The ECB is entitled, subject to certain conditions, to impose fines or periodic penalty payments on undertakings for failure to comply with obligations contained in its regulations and decisions.[78]

The ESCB is composed of the ECB and the national central banks, although it is the ECB and the national central banks whose currency is the Euro which conduct the EU's monetary policy.[79] The ESCB is governed by the decision-making bodies of the ECB.[80] The Statute of the ESCB and ECB is attached to the Treaties as a Protocol.[81]

The start of the third stage of EMU saw the establishment of the Economic and Financial Committee, composed of no more than two members drawn from the Member States, the Commission, and the ECB. This Committee has a number of tasks, including:[82] delivering opinions to the Council or Commission; keeping under review the economic and financial situation of the Member States and the EU; examining the situation regarding free movement of capital; and contributing to the preparation of Council work.

[82] Art 134(2) TFEU.

(B) MONETARY POLICY

The objectives of EU monetary policy are set out in Article 127 TFEU. The primary objective of the ESCB is to maintain price stability. Without prejudice to this objective, the ESCB must support the general economic policies of the EU with a view to attaining the objectives set out in Article 3 TEU. The ESCB is to act in accordance with the principle of an open market economy with free competition, and in compliance with the principles in Article 119 TFEU.

The basic tasks of the ESCB are:[83] to define and implement the EU's monetary policy; to conduct foreign-exchange operations; to hold and manage the official foreign reserves of the Member States; and to promote the smooth operation of the payment system. The ECB must be consulted on any EU act in its fields of competence and, subject to certain conditions, by national authorities regarding any draft legislative provision in its fields of competence.[84] The ECB has the exclusive right to authorize the issue of banknotes within the EU, although the actual issue of the notes may also be undertaken by national central banks.[85]

The ESCB is to 'contribute' to the smooth conduct of policies pursued by other competent authorities relating to the prudential supervision of credit institutions and the stability of the financial system.[86] It is in addition open to the Council, acting unanimously after consulting the European Parliament and the European Central Bank, to confer specific tasks on the ECB concerning policies relating to the prudential supervision of credit institutions and other financial institutions with the exception of insurance undertakings.[87]

(C) POLICY ISSUES: CENTRAL BANK INDEPENDENCE

The Treaty, as we have seen, places particular emphasis on the independence of the ECB.[88] The degree of independence possessed by national central banks varies.[89] Gormley and de Haan[90] identified five criteria that shape the division of responsibilities between national governments and their central banks.[91]

The first is the ultimate objective of monetary policy, which in many countries is price stability. The second feature is the specification of inflation targets. In some countries such as New Zealand this is agreed by the central bank with the government; in others, such as Germany, there is no obligation as such on the Bundesbank to announce or agree to any such targets. The third criterion is the degree of independence possessed by the bank and the juridical basis on which this rests. There will, for example, often be a statute dealing with such matters, which stipulates the extent to which the government can or cannot give any instructions to its central bank. The fourth criterion is the extent to which the

government can override the central bank's view. The final factor is the appointment of bank officials, and the extent to which the government has any real discretion over this matter.

When judged by these criteria the ECB has a high degree of independence. Its independence is enshrined in Articles 130 and 282(3) TFEU. The Treaty establishes the primary and secondary objectives of the ESCB. There is no formal requirement for the ECB to agree with the other Union institutions on the specification of price stability in particular economic circumstances, or on inflation targets. Nor is there is any formal provision allowing the other EU institutions to override the choices made by the ECB.[92] It should however be noted by way of contrast to the position prior to the Lisbon Treaty that many of the provisions of the Statute of the ESCB and ECB can now be amended through the ordinary legislative procedure, and do not require Treaty amendment.[93]

The Treaty has nonetheless accorded a constitutional status to the ESCB and ECB. This degree of independence was influenced by German desires to have an ECB which mirrored closely the powers and status of the Bundesbank. This sentiment was further strengthened because the ECB would be considering price stability, etc, for the EU as a whole. It was therefore important that the short-term interests of certain Member States, or even the EU institutions, could not sway the ECB. While political considerations, therefore, played a role in shaping the ESCB, there are also sound economic arguments for central bank independence.

L Gormley and J de Haan, The Democratic Deficit of the European Central Bank[94]

It is widely believed that the success of monetary policy in achieving a stable and low rate of inflation depends very much on the credibility of the monetary authorities. It makes quite a difference whether economic agents believe policy announcements and behave accordingly, or not. If a central bank with a high level of credibility indicates, for instance, that inflation is too high and that it will strive for a reduction, trade unions will take this announcement seriously in bargaining about wage levels. If the credibility of the central bank is low, trade unions may not believe that inflation will come down and demand higher wages, thereby fuelling the inflationary process.

By delegating monetary policy to an independent Central Bank with a clear mandate for price stability the credibility of the monetary authorities can be enhanced. A Central Bank which is independent will not be exposed to the same incentives to create unexpected inflation. The public can assume that the Central Bank will strive for a low level of inflation. Trade unions will lower their wage demands and investors will ask for lower interest rates as their inflationary expectations are reduced. Due to lower inflationary expectations, actual inflation will also decline.

There is not, however, only one way to structure a central bank, even given acceptance of independence as an ideal. Numerous factors can influence the precise degree of independence accorded to such an institution. In economic terms, it has been argued, for example, that the relationship between a central bank and government should be conceived in terms of an agent/principal contract, whereby the principal, the government, would establish inflation targets and make the agent, the central bank, responsible for attaining them.[95] In political terms, a fully independent central bank, with little provision for policy override by the government may well attain price stability, but at the expense of any

[92] The ECB's independence does not however render it immune from anti-fraud investigations via OLAF: Case C–11/00 *Commission v ECB* [2003] ECR I–7147.

[93] Art 129(3) TFEU.

[94] Gormley and de Haan (n 90) 110.

[95] Ibid 111–112.

real measure of democratic control. Monetary policy is, in this sense, taken off the normal political agenda, with a corresponding diminution in democratic control.[96]

L Gormley and J de Haan, The Democratic Deficit of the European Central Bank[97]

By now it is well-known that Central Bank independence may improve upon monetary policy. In that sense, the independence of the ESCB and its mandate to strive for price stability are to be applauded, given the virtues of a low and stable rate of inflation. An important problem is how Central Bank independence is related to democratic accountability. Some authors argue that monetary policy should be treated like other instruments of economic policy, like fiscal policy, and should be fully decided upon by democratically elected representatives. Such an approach implies, however, too much a direct involvement of politicians with monetary policy. . . . Nevertheless, it is respectfully submitted that monetary policy ultimately must be controlled by democratically elected politicians. . . . Some way or another, the Central bank has to be accountable, and in relation to the ECB, the European Parliament is undoubtedly the appropriate body. National parliaments are, of course, responsible for Central Bank legislation; so too, logically, should the European Parliament be responsible for the legislative framework of the ECB, at least by way of co-decision. In other words, the 'rules of the game' (i. e. the objective of monetary policy) are decided upon according to normal democratic procedures, but the 'game' (monetary policy) is delegated to the Central Bank.

7 EMU: COORDINATION OF ECONOMIC POLICY

Coordination of economic policy is the other limb of EMU. Such coordination has been especially important in the light of monetary union.[98] It is clear that the economic health of individual Member States' economies can have a marked impact on the valuation of the Euro,[99] and this is the broad rationale for coordination. This is exemplified by the EU's economic crisis precipitated by Greece's economic problems, which will be examined below.[100] It is important before we do so to be clear as to the two forms of coordination embodied in the Treaty.

[96] W Buiter, 'Alice in Euroland' (1999) 37 JCMS 181; O Issing, 'The Eurosystem Transparent and Accountable or "Willem in Euroland"' (1999) 37 JCMS 503.

[100] 710–711.

(A) MULTILATERAL SURVEILLANCE PROCEDURE

The softer version is the multilateral surveillance procedure. Member States are to regard their economic policies as a matter of common concern, and are to coordinate them in the Council.[101] The Council acting on a recommendation from the Commission, formulates a draft for the broad guidelines[102] of the economic policies of the Member States and the EU, and reports this to the European Council. The guidelines are discussed by the European Council, and its conclusion forms the basis for a Council recommendation setting out the broad guidelines.[103] It is then for the Council, on the basis of reports from the Commission, to monitor economic developments in the Member States.[104]

This constitutes the multilateral surveillance.[105] If it becomes apparent that the economic policies of the Member States are not consistent with the broad economic guidelines, or that they risk jeopardizing the proper functioning of EMU, the Commission may address a warning to the relevant Member States. The Council may make the necessary recommendations to the Member State concerned.[106] The Council acts without taking account of the vote of the Member State concerned.[107]

The Treaty provisions have been complemented by the Stability and Growth Pact (SGP). The Regulation[108] provides rules covering the content, submission, examination, and monitoring of the stability and convergence programmes so as to prevent at an early stage the occurrence of excessive government deficit, and to promote the surveillance and coordination of economic policies. Reform proposals in relation to this area will be considered below.[109]

(B) EXCESSIVE DEFICIT PROCEDURE

The harder version of coordination is embodied in the excessive deficit procedure. Member States are under an obligation to avoid excessive deficits.[110] The Commission monitors the budgetary situation and government debt in the Member States to identify 'gross errors'.[111] The Commission must in particular examine compliance with budget discipline on the basis of two criteria.[112]

The first criterion is whether the ratio of the planned or actual government deficit to gross domestic product exceeds a reference value, this being 3 per cent, unless either the ratio has declined substantially and continuously and reached a level that comes close to the reference value, or, alternatively, the excess over the reference value is only exceptional and temporary and the ratio remains close to the reference value. The second criterion is whether the ratio of government debt to gross domestic product exceeds such a reference value, this being 60 per cent, unless the ratio is sufficiently diminishing and approaching the reference value at a satisfactory pace. These reference values are specified in the Protocol on the Excessive Deficit Procedure.[113]

[109] 710–711.
[110] Art 126(1) TFEU.
[111] Art 126(2) TFEU.
[112] Ibid.
[113] Protocol (No 12) Art 1.

The Commission reports where a Member State does not fulfil these criteria, and may do so if it believes that there is a risk of an excessive deficit in a Member State.[114] The Economic and Financial Committee gives an opinion on this report.[115] Where the Commission considers that there is an excessive deficit, or that it may occur, the Commission must address an opinion to the Member State concerned and inform the Council.[116] It is then for the Council, acting on a proposal from the Commission and having taken account of any observations from the Member State, to decide whether the excessive deficit exists.[117]

Where the Council decides that an excessive deficit does exist, it shall adopt, without undue delay, on a recommendation from the Commission, recommendations addressed to the Member State concerned with a view to bringing that situation to an end within a given period.[118] The general rule is that these recommendations are not made public, but where the Council establishes that the Member State has taken no effective action within the requisite period then the Council may make the recommendations public.[119]

The Treaty then contains provisions specifying what should happen if the Member State fails to put into practice the recommendations of the Council. If this occurs the Council can decide to give notice to the Member State to take, within a specified time limit, measures for the deficit reduction which is judged necessary by the Council in order to remedy the situation, and to submit reports to the Council so that it can examine the adjustment efforts of that Member State.[120]

If the Member State fails to comply with such a decision, the Council may then decide to apply or intensify one or more of the following measures:[121] it can require the Member State to publish additional information, specified by the Council, before issuing bonds and securities; it can invite the European Investment Bank to reconsider its lending policy towards that Member State; it can require the Member State to make a non-interest-bearing deposit of an appropriate size with the Union until the excessive deficit has, in the Council's view, been corrected; and it can impose fines of an appropriate size. The Council must abrogate the preceding decisions and recommendations to the extent that the excessive deficit in the Member State has, in the Council's view, been corrected.[122]

The Treaty provisions on excessive deficit have, like those on surveillance, been complemented by a regulation concerning excessive deficit,[123] this being the other limb of the Stability and Growth Pact.

(c) POLICY ISSUES: EFFECTIVENESS OF ECONOMIC POLICY COORDINATION

(i) *2002–2003*

There have always been concerns over the effectiveness of the surveillance and deficit procedures. The frailty of the latter was revealed in relation to the deficits run by France, Germany, Portugal, and Italy in 2002–2003. They undertook to balance their budgets over the medium term, but departed from their corrective programmes. This led to the Commission having recourse to legal action

[123] Reg 1467/97 (n 99).

when ECOFIN placed the excessive deficit procedure in abeyance for France and Germany.[124] The ECJ's judgment is complex and cannot be examined in detail here.[125] Suffice it to say that the Court held that the Council's decision to place the excessive deficit procedure in abeyance was unlawful, since there was no authority for this in the Treaty. The ECJ however rejected the other Commission claim, that the Council's failure to adopt the Commission's recommendations pursuant to what was then Article 104(8) and (9) EC was a decision that should be annulled. It held that where the requisite majority for the Commission recommendations was not secured in the Council there was no decision that could be reviewed under Article 230 EC.

The flouting of the system by France and Germany brought the Stability and Growth Pact into disrepute. The Commission was placed in a dilemma. If reforms were not made then resistance to the SGP was likely to continue. If however any reform significantly weakened the pre-existing regime then its practical effectiveness for the future would correspondingly diminish. Changes were made to the Stability and Growth Pact Regulations,[126] the net effect being to soften and render more discretionary the multilateral surveillance and excessive deficit procedures, thereby rendering it more unlikely that those soft or hard sanctions would be imposed. Analysis of these amendments revealed nonetheless that the Stability and Growth Pact actually worked somewhat better than hitherto, notwithstanding the softening of the obligations through the 2005 amendments.[127]

(ii) *2008–2011*

The EU's regime for coordination of economic policy was subject to more general strain as a result of the banking and financial crisis that began in 2008. The crisis and the EU's response can be traced through a Commission website.[128] Space precludes detailed analysis, but the essence of the specific problem for the EU began with the fact that Greece's rating to repay its debt was downgraded.[129] This then led to problems for the Euro, and to concerns about the budgetary health of some other countries that used this currency. The net impact of these developments was downward pressure on the Euro, which was alleviated only when the countries that used the currency provided a support package for Greece that satisfied the financial markets.

The crisis precipitated a rethinking of the EU strategy for economic coordination, the principal aim being to strengthen the relevant EU provisions in order to render any repeat of such a crisis less likely in the future. The European Council and Commission were the principal players devising this strategy, and to this end the latter put forward a package of six legislative proposals.[130] The legal foundation for the new proposals is the Treaty provisions concerned with the coordination of

economic policy, combined with Article 136 TFEU, which was a new addition in the Lisbon Treaty designed to facilitate the passage of measures to strengthen the coordination of Member States' economic policies.

The first concerned the monitoring of public finances, which is to be based on the new concept of prudent fiscal policy-making (PFPM). This will amend the preventive part of the SGP which is concerned with multilateral surveillance. The idea is to ensure that Member States follow prudent fiscal policies in good times to build up the necessary reserves for bad times.[131]

The second proposal relates to the corrective part of the SGP, which is concerned with excessive deficit.[132] This part of the SGP is designed to avoid serious error in budgetary policies. The amendments to the Regulation will enable developments in Member States' debt to be followed more closely, with more specific criteria as to the rate of debt reduction.

The third part of the new package is a regulation on the effective enforcement of budgetary surveillance in the Euro area, which will embody a new set of gradual financial sanctions for Euro-area Member States. There is to be a 'reverse voting mechanism', whereby the Commission's proposal for a sanction will be considered adopted unless the Council rejects it by qualified majority.[133]

The fourth element of the package is a new directive setting the minimum requirements for national budgetary frameworks, in terms of accounting systems, statistics, forecasting practices, fiscal rules, budgetary procedures, and the like. The rationale for this Directive is that the SGP can work properly only on the basis of accurate and reliable data from Member States.[134]

The fifth legislative proposal is for a new regulation on the prevention and correction of macroeconomic imbalances. There is to be an 'Excessive Imbalance Procedure' (EIP), which consists of regular assessment of the risks of imbalances based on a scoreboard composed of economic indicators. This will provide the basis for the Commission to review Member States at risk and identify underlying problems. A Member State under an EIP must have a corrective action plan, which is subject to deadlines, and failure to take corrective action may lead to fines.[135]

The final part of the legislative package is a regulation specifying fines if a Member State repeatedly fails to act on Council EIP recommendations to address excessive imbalances. It is proposed that the 'reverse voting' mechanism set out above will apply here too.[136]

The effectiveness of this package of proposals remains to be seen, more especially the efficacy of imposing fines and the like on countries that are already in financial difficulty. It should also be noted that in addition to this package there is to be a Treaty amendment, which will lay the foundations for the European Stability Mechanism (ESM) with the aim of obviating a repetition of the crisis that occurred following the problems in Greece.[137]

8 CONCLUSIONS

i. In terms of *free movement of capital*, there has been a growing body of case law testing the Treaty provisions. This case law should be viewed alongside that dealing with goods, persons, establishment, and services.

ii. There are a number of stresses and strains on EMU.

iii. In *monetary terms*, the Euro had a rocky introduction to the world of currency markets and fell considerably in relation to other currencies such as the pound and the dollar.[138] It then recovered relative to the strength of other currencies, prior to the financial crisis precipitated by the Greek debt problem.

iv. In *institutional terms*, there has been some criticism of the ECB for its general management of the Euro, and for individual decisions such as whether to cut interest rates, and by how much. There also continues to be debate about the optimum degree of control over the issues dealt with by the ECB.

v. The relationship between *monetary policy and broader economic policy* remains problematic. The EU has far greater control over monetary policy, as encapsulated in the Euro and the attendant ECB, than it does over broader economic policy. This is so notwithstanding the stability and growth pact.[139]

vi. The *EU is nonetheless caught in a conundrum* in this respect. It is generally recognized that there is an intimate relationship between monetary policy and economic policy: if countries run long-term budgetary deficits then this will cause the currency markets to take a poor view of the value of the Euro. There are however political difficulties for the EU in extending control over national economic policy, or even in making full use of the existing regime, lest it be accused of excessive centralization of economic decision-making.

vii. It remains to be seen whether the *Commission's package of legislative proposals*, combined with the Treaty amendment to legitimate the European Stability Mechanism, enter into force, and how effective they prove to be in avoiding any repetition of the recent crisis.

viii. In more practical terms the switch to the Euro *has implications for a range of EU policies*, such as the budget, agriculture, and the internal market, all of which are particularly affected by the introduction of the new currency.[140]

FREE MOVEMENT OF WORKERS

1 CENTRAL ISSUES

i. The free movement of persons is one of the four fundamental freedoms of EU law, along with the free movement of goods, services, and capital. This chapter deals primarily with the free movement of employed persons (workers), the next chapter with the free movement of the self-employed and of companies (establishment and services), and the following chapter with the more recent category of European citizens.

ii. There are several central legal issues that arise in the context of the free movement of workers. These include the scope of Article 45, the meaning accorded to 'worker', the rights of intermediate categories such as 'job-seeker', the kinds of restrictions which states may justifiably impose on workers and their families; and the rights which family members enjoy under EU law.

iii. There is an economic and a social dimension to free movement of workers. In economic terms, the rationale is to ensure what economists term the optimal allocation of resources within the EU.[1] Labour as a factor of production may be valued more highly in some areas than in others. If there is an excess of supply over demand for labour in southern Italy (unemployment), and an excess of demand over supply in certain parts of Germany (insufficient labour supply), labour is worth more in Germany than it is in Italy. The value of labour within the EU is maximized if workers can move to the area where they are most valued. In social terms, free movement of workers captures the idea that it should be regarded as natural within the Union for people to work in other Member States, and that this thereby fosters 'an ever closer Union of the peoples of Europe'. The policy of furthering the free movement of workers has therefore been linked with a broader notion of European solidarity, with the underlying aspiration of integration of the peoples of Europe.

iv. There can be tensions between the economic and the social dimensions of free movement of workers. The image of EU workers as mobile units of production contributing to the economic prosperity of Europe's single market contrasts with that of EU workers as human beings, exercising a personal right to live in another state and to enjoy equality of treatment for themselves and their families.

v. There can also be tensions between the realization of free movement and a Member State's desire to exercise control over entry into its country. This is especially so in relation to the entry of non-EU citizens, who may be within the family of the worker who has free movement rights.

vi. The creation of the status of EU citizenship, dealt with in Chapter 23, has influenced the development of the law on free movement of workers, affecting issues such as the rights of job-seekers. The

[1] Ch 17.

overlap between the two categories, workers and citizens, is reflected in the consolidation of the secondary legislation governing the free movement of persons in Directive 2004/38 on the rights of movement and residence of EU citizens. This Directive includes workers and self-employed persons and their families, as well as students and other kinds of non-economically active EU nationals.

vii. There is, as will be seen more fully in Chapter 23, a debate to be had as to whether citizenship is the principal organizing concept in this area, which has overtaken more discrete categories of workers and the like. The very nature of this discourse can however only be understood through comprehension of the development and meaning of the law relating to, *inter alia*, workers, and there are still areas where the economic status of the claimant matters, albeit less so than previously.

viii. The law relating to free movement of workers demonstrates particularly clearly the interplay between the Treaty provisions, EU legislation, and case law. When reading the materials in this Chapter note how the body of law that has emerged is the result of the subtle interplay of these sources of law.

2 ARTICLE 45: DIRECT EFFECT

The basic provision is set out in Article 45 TFEU, (ex Article 39 EC), which provides as follows:

> 1. Freedom of movement for workers shall be secured within the Union.
> 2. Such freedom of movement shall entail the abolition of any discrimination based on nationality between workers of the Member States as regards employment, remuneration and other conditions of work and employment.
> 3. It shall entail the right, subject to limitations justified on grounds of public policy, public security or public health:
>
> (a) to accept offers of employment actually made;
>
> (b) to move freely within the territory of Member States for this purpose;
>
> (c) to stay in a Member State for the purpose of employment in accordance with the provisions governing the employment of nationals of that State laid down by law, regulation or administrative action;
>
> (d) to remain in the territory of a Member State after having been employed in that State, subject to conditions which shall be embodied in regulations to be drawn up by the Commission.
>
> 4. The provisions of this Article shall not apply to employment in the public service.

The Court has repeatedly emphasized the central importance of the twin principles of freedom of movement and non-discrimination on grounds of nationality. Article 45 is said to represent an application, in the specific context of workers, of the general principle in Article 18 TFEU prohibiting discrimination on grounds of nationality.

The ECJ in *Walrave and Koch*[2] held that Article 45 would apply even where the work was done outside the Community, so long as the legal relationship of employment was entered within the Community. This was extended further in *Boukhalfa*, in which the Court ruled that the Article applied also to the employment of a Member State national which was entered into and primarily performed in a

[2] Case 36/74 *Walrave and Koch v Association Union Cycliste Internationale* [1974] ECR 1405.

non-member country in which the national resided, at least as regards all aspects of the employment relationship which were governed by the legislation of the employing Member State.[3]

The Court also ruled in *Walrave and Koch*[4] and in *Bosman*[5] that the provisions of Article 45 are not just of 'vertical' direct effect. The rules challenged in these cases were made by international sporting associations, concerning cycling and football respectively, which were neither public nor state bodies. However, the Court ruled that this did not exempt them from the application of Article 45:

> Prohibition of such discrimination does not only apply to the action of public authorities but extends likewise to rules of any other nature aimed at regulating in a collective manner gainful employment and the provision of services. . . .
>
> Since, moreover, working conditions in the various Member States are governed sometimes by means of provisions laid down by law or regulations and sometimes by agreements and other acts concluded or adopted by private persons, to limit the prohibitions in question to acts of a public authority would risk creating inequality in their application.[6]

The *Angonese* case subsequently went further and indicated that Article 45 is also horizontally applicable to the actions of individuals who, unlike the associations in *Walrave* and *Bosman*, do not have the power to make rules regulating gainful employment, such as a single employer who refuses to employ someone on the ground of their nationality.[7] In this way, *Angonese* introduces a distinction between the law on free movement of workers and that governing the free movement of goods, since the ECJ has made clear that Article 34 applies only to state measures, and not to those adopted by private actors.[8]

Case C–281/98 **Angonese v Cassa di Riparmio di Bolzano SpA**
[2000] ECR I–4139

[Note Lisbon Treaty renumbering: Arts 48 and 119 are now Arts 45 and 157 TFEU]

Angonese was an Italian national whose mother tongue was German. He applied to take part in a competition for a post with the Cassa di Riparmio bank in Bolzano, Italy. A condition for entry to the competition imposed by the bank was a certificate of bilingualism (in Italian and German). The certificate was to be issued by the public authorities in Bolzano after an examination held *only* in that province. The national court found as a fact that Angonese was bilingual, and that non-residents of Bolzano could face difficulties obtaining the certificate in good time. Since Angonese did not obtain the certificate the bank refused to admit him to the competition for the post, and he argued that the requirement to have the certificate was contrary to Article 48.

[3] Case C–214/95 *Boukhalfa v BRD* [1996] ECR I–2253.

[4] Case 36/74 (n 2).

[5] Case C–415/93 *Union Royale Belge des Sociétés de Football Association and others v Bosman* [1995] ECR I–4921, [82]–[84]; Case C–411/98 *Ferlini v Centre Hospitalier de Luxembourg* [2000] ECR I–8081, [50]; Case C–438/05 *International Transport Workers' Federation and Finnish Seamen's Union v Viking Line ABP and OÜ Viking Line Eesti* [2007] ECR I–10779; Case C–94/07 *Andrea Raccanelli v Max-Planck-Gesellschaft zur Förderung der Wissenschaften eV* [2008] ECR I–5939.

[6] Case 36/74 *Walrave* (n 2) [17]–[19].

[7] Reg 1612/68, [1968] English Spec Ed Series I, p. 475, Art 7(4) supports this reasoning by stipulating that clauses in individual contracts of employment will be void insofar as they discriminate on grounds of nationality.

[8] Ch 19.

THE ECJ

30. It should be noted at the outset that the principle of non-discrimination set out in Article 48 is drafted in general terms and is not specifically addressed to the Member States.

31. Thus, the Court has held that the prohibition of discrimination based on nationality applies not only to the actions of public authorities but also to rules of any other nature aimed at regulating in a collective manner gainful employment and the provision of services (see . . . *Walrave* . . .).

32. The Court has held that the abolition, as between Member States, of obstacles to freedom of movement would be compromised if the abolition of State barriers could be neutralised by obstacles resulting from the exercise of their legal autonomy by associations or organizations not governed by public law (see *Walrave*, paragraph 18 . . . and . . . *Bosman* . . . paragraph 83).

33. Since working conditions in the different Member States are governed sometimes by provisions laid down by law or regulation and sometimes by agreements and other acts concluded or adopted by private persons, limiting application of the prohibition of discrimination based on nationality to acts of a public authority risks creating inequality in its application (see *Walrave*, paragraph 19, and *Bosman*, paragraph 84).

34. The Court has also ruled that the fact that certain provisions of the Treaty are formally addressed to the Member States does not prevent rights from being conferred at the same time on any individual who has an interest in compliance with the obligations thus laid down (see . . . *Defrenne* . . .). The Court accordingly held . . . that the prohibition of discrimination applied equally to all agreements intended to regulate paid labour collectively, as well as to contracts between individuals. . . .

35. Such considerations must, *a fortiori*, be applicable to Article 48 . . ., which lays down a fundamental freedom and which constitutes a specific application of the general prohibition of discrimination contained in Article 6 (now . . . Article 12 EC). In that respect, like Article 119 . . . it is designed to ensure that there is no discrimination on the labour market.

36. Consequently, the prohibition of discrimination on grounds of nationality laid down in Article 48 . . . must be regarded as applying to private persons as well.

3 ARTICLE 45: WORKER AND THE SCOPE OF PROTECTION

Article 46 TFEU provides for the EP and Council to adopt secondary legislation to bring about the freedoms set out in Article 45. A range of directives and regulations were adopted under this provision to govern the conditions of entry, residence, and treatment of EU workers and their families. Many of these were consolidated by Directive 2004/38 on the free movement and residence of EU citizens and their families.[9]

The 2004 Directive has replaced Directive 64/221, which governed the main derogations from the rules on free movement, and has further tightened the extent to which Member States may derogate from free movement requirements. It also replaced Directive 68/360, which regulated the formalities and conditions of entry and residence of workers and self-employed persons, and sought to reduce and simplify further the bureaucratic hurdles which migrant workers and 'mobile' EU citizens face. The 2004 Directive amended Regulation 1612/68, which fleshed out the equal-treatment principle and

[9] Directive 2004/38/EC of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States [2004] OJ L158/77.

specified many of the substantive rights and entitlements of workers and their families. The Directive also replaced Regulation 1251/70 governing the conditions under which the worker and family may remain in the territory of a Member State following the worker's retirement, permanent incapacity to work, or death.

Apart from these changes, a major innovation of the 2004 Directive was to introduce the right of permanent residence for EU nationals and their families after five years of continuous legal residence in another Member State. This was significant because a fundamental issue which was not immediately apparent hitherto was whether 'workers of the Member States' in Article 45(2) covered only nationals of the Member States, or whether it included non-EU nationals resident and working within the EU.[10] The secondary legislation to implement Article 45, in particular Regulation 1612/68, specifically restricted its application to workers who were nationals of the Member States, and that was the interpretation adopted by the ECJ.

(A) DEFINITION OF 'WORKER': AN EU CONCEPT

Despite the array of secondary legislation which existed, many of the basic terms were not defined either in the Treaty or in the legislation itself, but have been shaped by the ECJ, including the meaning of the core term 'worker'. The Court insisted from the outset that the definition of a 'worker' was a matter for EU law, not national law.[11] The issue arose early in the case of *Hoekstra*, in the context of the interpretation of a Council social security regulation, where the ECJ declared that:

> If the definition of this term were a matter for the competence of national law, it would therefore be possible for each Member State to modify the meaning of the concept of 'migrant worker' and to eliminate at will the protection afforded by the Treaty to certain categories of person . . . Articles 48 to 51 [now 39–42] would therefore be deprived of all effect and the above-mentioned objectives of the Treaty would be frustrated if the meaning of such a term could be unilaterally fixed and modified by national law.

In requiring the term worker to be a Union concept, the Court was also claiming ultimate authority to define its meaning and scope. In the words of the late Federico Mancini, formerly Advocate General and Judge of the Court, the ECJ conferred on itself a 'hermeneutic monopoly' to counteract possible unilateral restrictions of the application of the rules on freedom of movement by the different Member States.[12] Thus the Court has held that a spouse can be employed by the other spouse as a worker,[13] and that Article 45 can be relied on by the employer,[14] or by a relevant third party,[15] rather than only by the employee. The Court has, as we shall see, consistently construed the term broadly, and has presented this freedom as part of the foundations of the EU.

To summarize the position: any person who pursues employment activities which are effective and genuine, to the exclusion of activities on such a small scale as to be regarded as purely marginal and ancillary, is treated as a worker.[16] For an economic activity to qualify as employment under Article 45,

[10] F Burrows, *Free Movement in European Community Law* (Clarendon Press, 1987) 124; R Plender, 'Competence, European Community Law and Nationals of Non-Member States' (1990) 39 ICLQ 599.

[16] Case C–337/97 *Meeusen* (n 13).

rather than self-employment under Article 49 TFEU, there must be a relationship of subordination.[17] However, we shall also see that there is no single EU concept of worker, and that it varies according to the EU law context in which it arises.[18]

(B) DEFINITION OF 'WORKER': MINIMUM-INCOME AND WORKING-TIME REQUIREMENTS

A number of cases have been concerned with the interplay between the economic aspect of free movement, as determined by the level of remuneration, and the social aspect underlying free-movement policy. This issue arose in *Levin*, in the context of part-time workers.[19]

Case 53/81 **Levin v Staatssecretaris van Justitie** [1982] ECR 1035

The appellant was a British citizen married to a non-EC national and living in the Netherlands, but whose application for a residence permit had been refused. She argued that she had sufficient income for her own and her husband's maintenance, and that she had taken up part-time employment as a chambermaid. The Staatssecretaris van Justitie argued that she was not an EC worker because her employment did not provide sufficient means for her support, not being equal at least to the minimum legal wage prevailing in the Netherlands. When the case was referred to the ECJ, the Court alluded to its argument in *Hoekstra* that Member States could not unilaterally restrict the scope and meaning of the term worker.

THE ECJ

12. Such would, in particular, be the case if the enjoyment of the rights conferred by the principle of freedom of movement for workers could be made subject to the criterion of what the legislation of the host State declares to be a minimum wage, so that the field of application *ratione personae* of the Community rules on this subject might vary from one Member State to another. The meaning and the scope of the terms 'worker' and 'activity as an employed person' should thus be clarified in the light of the principles of the legal order of the Community.

13. In this respect it must be stressed that these concepts define the field of application of one of the fundamental freedoms guaranteed by the Treaty and, as such, may not be interpreted restrictively.

14. In conformity with this view the recitals to Regulation No 1612/68 contain a general affirmation of the right of all workers in the Member States to pursue the activity of their choice within the Community, irrespective of whether they are permanent, seasonal or frontier workers or workers who pursue their activities for the purpose of providing services. Furthermore, although Article 4 of Directive 68/360 grants the right of residence to workers upon the mere production of the document on the basis of which they entered the territory and of a confirmation of engagement from the employer or a certificate of employment, it does not subject this right to any condition relating to the kind of employment or to the amount of income derived from it.

[18] Case C–256/01 *Allonby v Accrington and Rossendale College* [2004] ECR I–873, [63]; Case C–138/02 *Collins v Secretary of State for Work and Pensions* [2004] ECR I–2703.

[19] See also Cases C–22–23/08 *Vatsouras and Koupatantze v Arbeitsgemeinschaft (ARGE) Nürnberg 900* [2009] ECR I–4585, [28]–[29].

15. An interpretation which reflects the full scope of these concepts is also in conformity with the objectives of the Treaty which include, according to Articles 2 and 3, the abolition, as between Member States, of obstacles to freedom of movement for persons, with the purpose *inter alia* of promoting throughout the Community a harmonious development of economic activities and a raising of the standard of living. Since part-time employment, although it may provide an income lower than what is considered to be the minimum required for subsistence, constitutes for a large number of persons an effective means of improving their living conditions, the effectiveness of Community law would be impaired and the achievement of the objectives of the Treaty would be jeopardized if the enjoyment of rights conferred by the principle of freedom of movement for workers were reserved solely to persons engaged in full-time employment and earning, as a result, a wage at least equivalent to the guaranteed minimum wage in the sector under consideration.

. . .

17. It should however be stated that whilst part-time employment is not excluded from the field of application of the rules on freedom of movement for workers, those rules cover only the pursuit of effective and genuine activities, to the exclusion of activities on such a small scale as to be regarded as purely marginal and ancillary. It follows both from the statement of the principle of freedom of movement for workers and from the place occupied by the rules relating to that principle in the system of the Treaty as a whole that those rules guarantee only the free movement of persons who pursue or are desirous of pursuing a genuine economic activity.

There are a number of important aspects to this judgment. The ECJ begins by reaffirming that the rules on free movement of persons are fundamental to the Community, and must therefore be broadly interpreted (paragraphs 13 and 14). The freedom to take up employment is important not only as a means towards the creation of a single market for the benefit of the Member States' economies, but as a right for the worker to raise her or his standard of living. This is so even if the worker does not reach the minimum level of subsistence in a particular state (paragraph 15). Moreover, in response to the suggestion that Levin may only have sought work in order to obtain a residence permit to remain in the country, the Court ruled that the purpose or motive of the worker is immaterial, once he or she is pursuing or wishing to pursue a genuine and effective economic activity (paragraph 17).

The ECJ has consistently adopted this kind of response to allegations of 'abuse of rights' in the area of free movement, even while the Council insisted on the inclusion of a new 'abuse of rights' exception in Article 35 of the consolidating free movement Directive 2004/38. The articulated requirement in *Levin* that work be undertaken as a genuine economic activity was probably a response to Member States' concerns that their social security schemes would become overburdened. This might be so as a result of migrants entering from other countries, the systems of social benefits of which are less generous, who do not really intend to engage in effective work. Advocate General Slynn acknowledged this concern. However, he noted the increasing dependence on part-time work, especially in times of unemployment. He emphasized that the exclusion of part-time work from the protection of Article 45 would exclude not only women, the elderly, and disabled who, for personal reasons, might wish only to work part time, but also women and men who would prefer to work full time but were obliged to accept part-time work. *Levin* thus clarified that part-time workers were covered by free movement, and that it did not matter if workers chose to supplement their income from private sources.

In *Kempf*,[20] the issue was taken a step further. A German national who was living and working in the Netherlands as a music teacher, giving approximately twelve lessons a week, was refused a residence permit. The Dutch and Danish governments argued that work providing an income below the minimum means of subsistence in the host state could not be regarded as genuine and effective work if the person doing the work claimed social assistance from *public* funds. The Court disagreed, ruling

[20] Case 139/85 *Kempf v Staatsecretaris van Justitie* [1986] ECR 1741.

that when a genuine part-time worker sought to supplement earnings below the subsistence level, it was:

> [I]rrelevant whether those supplementary means of subsistence are derived from property or from the employment of a member of his family, as was the case in *Levin*, or whether, as in this instance, they are obtained from financial assistance drawn from the public funds of the Member State in which he resides.[21]

Member States' concerns about possible abuse of the Treaty provisions by those who were simply seeking a Member State with better social provision in which to reside did not, said Advocate General Slynn, justify the exclusion of part-time workers in Kempf's position from the scope of the Treaty.[22] The state could address these concerns in the criteria it set for access to certain kinds of social assistance, but it could not exclude the part-time employee from the status of 'worker' under EU law.

A similarly inclusive reading of the term 'worker' is evident in many cases where the economic dimension of the activity concerned was in question. Thus the Court has ruled that the practice of sport falls within EU law in so far as it constitutes an economic activity, although the composition of national teams could be a question of purely sporting and not of economic interest.[23] It has also ruled that fishermen who are paid a share of the proceeds of sale of their catches can be considered to be 'workers', despite the irregular nature of their remuneration.[24]

There have nonetheless been a steady flow of cases concerning the concrete application of criteria such as the need for 'genuine and effective work'. In *Lawrie-Blum*,[25] the Court was asked to rule on the compatibility of German measures restricting access for non-nationals to the preparatory service stage which was necessary for qualification as a secondary school teacher. Addressing the question whether a trainee teacher at this stage would qualify as a 'worker' for the purposes of the relevant Treaty provisions, the Court provided a more elaborate three-part definition of the term:

> That concept must be defined in accordance with objective criteria which distinguish the employment relationship by reference to the rights and duties of the persons concerned. The essential feature of an employment relationship, however, is that *for a certain period of time a person performs services for and under the direction of another person in return for which he receives remuneration.*[26]

The Court ruled that a trainee teacher qualified as a worker since, during the period of preparatory service, these three conditions would be fulfilled: she would perform services of economic value, under the direction of the school in question, and would receive a measure of remuneration in return.[27] The fact that the pay was less than a full teacher's salary was immaterial, for the same reasons given in *Levin* and *Kempf*: what mattered was the genuinely economic nature of the work plus remuneration, not the amount of the pay. In *Steymann*, the ECJ pushed the concept of remuneration, and hence of economic activity, a little further.

Case 196/87 **Steymann v Staatsecretaris van Justitie** [1988] ECR 6159

Steymann was a German national living in the Netherlands, where he had worked for a short time as a plumber. He then joined the Bhagwan Community, a religious community which provided for the material needs of its members. He participated in the life of the community by performing plumbing work, general household duties, and other commercial activity on the community's premises. His application for a residence permit to pursue an activity as an employed person was refused and, on his application for review of this, a reference was made to the Court.

THE ECJ

9. It must be observed *in limine* that, in view of the objectives of the European Economic Community, participation in a community based on religion or another form of philosophy falls within the field of application of Community law only in so far as it can be regarded as an economic activity within the meaning of Article 2 of the Treaty.

. . .

11. As regards the activities in question in this case, it appears from the documents before the Court that they consist of work carried out within and on behalf of the Bhagwan Community in connection with the Bhagwan Community's commercial activities. It appears that such work plays a relatively important role in the way of life of the Bhagwan Community and that only in special circumstances can the members of the community avoid taking part therein. In turn, the Bhagwan Community provides for the material needs of its members, including pocket-money, irrespective of the nature and the extent of the work which they do.

12. In a case such as the one before the national court it is impossible to rule out *a priori* the possibility that work carried out by members of the community in question constitutes an economic activity within the meaning of Article 2 of the Treaty. In so far as the work, which aims to ensure a measure of self-sufficiency for the Bhagwan Community, constitutes an essential part of participation in that community, the services which the latter provides to its members may be regarded as being an indirect *quid pro quo* for their work.

The fact that the work might be seen in conventional terms as being unpaid did not mean that it was not effective economic activity. Steymann provided services of value to the religious community which would otherwise have to be performed by someone else, and in return for which his material needs were satisfied.

(c) DEFINITION OF 'WORKER': PURPOSE OF THE EMPLOYMENT

The general rule is that the purpose for which the employment is undertaken will not be relevant in determining whether a person is a worker. Provided that the employment is genuine and not marginal it will benefit from Article 45. There are, however, cases where some account has been taken of the purpose of the employment.

In *Bettray* the ECJ ruled on the application of Article 45 to someone who was undertaking therapeutic work as part of a drug-rehabilitation programme under Dutch social employment law.[28] The aim of the programme was to reintegrate people who were temporarily incapacitated into the workforce. They would be paid a certain amount, and treated, insofar as possible, in accordance with normal conditions of paid employment. The ECJ began by noting that a job was being carried out under

[28] Case 344/87 *Bettray v Staatssecretaris van Justitie* [1989] ECR 1621.

supervision and in return for remuneration, and that the low pay from public funds and the low productivity of the worker would not in themselves prevent the application of Article 45. However, unlike in its judgment in *Levin* where the reason for undertaking work was said not to be relevant to its genuineness, the ECJ examined the purpose of the work performed:

> However, work under the Social Employment Law cannot be regarded as an effective and genuine economic activity if it constitutes merely a means of rehabilitation or reintegration for the persons concerned and the purpose of the paid employment, which is adapted to the physical and mental possibilities of each person, is to enable those persons sooner or later to recover their capacity to take up ordinary employment or to lead as normal as possible a life.
>
> It also appears from the order for reference that persons employed under the Social Employment Law are not selected on the basis of their capacity to perform a certain activity; on the contrary, it is the activities which are chosen in the light of the capabilities of the persons who are going to perform them in order to maintain, re-establish or develop their capacity for work. Finally, the activities involved are pursued in the framework of undertakings or work associations created solely for that purpose by local authorities.[29]

Clearly the purpose for undertaking the work was crucial to the ECJ's decision. The fact that the main or sole purpose of the work was to rehabilitate the person, and to find work suited to their capabilities, rather than to meet a genuine economic need, as was the case in *Steymann*, resulted in a ruling against Bettray. The case is open to criticism, because ensuring the mobility of a well-trained workforce would seem to be an important part of the Treaty's aims, and reintegration of people into the workforce through sheltered employment is a part of this. Further, if the *Bettray* ruling were to be applied to the case of sheltered employment for disabled people, this could exclude many disabled people from being workers under EU law.

In *Trojani*, however, where a French national worked in Belgium in a reintegration programme run by the Salvation Army, the ECJ seemed to distinguish *Bettray* on the ground that the applicant in that case had apparently been unable for an indefinite period, on account of his drug addiction, to work under normal conditions.

Case C–456/02 **Trojani v CPAS**
[2004] ECR I–7573

> 18. In this respect, the Court has held that activities cannot be regarded as a real and genuine economic activity if they constitute merely a means of rehabilitation or reintegration for the persons concerned (Bettray, paragraph 17).
>
> 19. However, that conclusion can be explained only by the particular characteristics of the case in question, which concerned the situation of a person who, by reason of his addiction to drugs, had been recruited on the basis of a national law intended to provide work for persons who, for an indefinite period, are unable, by reason of circumstances related to their situation, to work under normal conditions (see, to that effect, Case C–1/97 Birden [1998] ECR I–7747, paragraphs 30 and 31).
>
> 20. In the present case, as is apparent from the decision making the reference, Mr Trojani performs, for the Salvation Army and under its direction, various jobs for approximately 30 hours a week, as part of a personal reintegration programme, in return for which he receives benefits in kind and some pocket money.

[29] Ibid [17]–[19].

21. Under the relevant provisions of the decree of the Commission communautaire française of 27 May 1999 on the grant of authorisation and subsidies to hostels (Moniteur belge, 18 June 1999, p. 23101), the Salvation Army has the task of receiving, accommodating and providing psycho-social assistance appropriate to the recipients in order to promote their autonomy, physical well-being and reintegration in society. For that purpose it must agree with each person concerned a personal reintegration programme setting out the objectives to be attained and the means to be employed to attain them.

22. Having established that the benefits in kind and money provided by the Salvation Army to Mr Trojani constitute the consideration for the services performed by him for and under the direction of the hostel, the national court has thereby established the existence of the constituent elements of any paid employment relationship, namely subordination and the payment of remuneration.

23. For the claimant in the main proceedings to have the status of worker, however, the national court, in the assessment of the facts which is within its exclusive jurisdiction, would have to establish that the paid activity in question is real and genuine.

24. The national court must in particular ascertain whether the services actually performed by Mr Trojani are capable of being regarded as forming part of the normal labour market. For that purpose, account may be taken of the status and practices of the hostel, the content of the social reintegration programme, and the nature and details of performance of the services.

Thus although the ECJ left it ultimately to the national court to decide whether his employment was real and genuine, it made clear that the fact that social reintegration was the main purpose of the employment would not itself disqualify the employment from being considered as such. Instead, the crucial factor was whether the services 'are capable of being regarded as forming part of the normal labour market'.

In a somewhat different context in *Brown*, the ECJ took into account the purpose behind the employment.[30] The Court indicated that, although someone who engaged in genuine and effective work before leaving to begin a course of study will be considered to be a 'worker' within Article 45, the fact that the work was undertaken purely in order to prepare for the course of study, rather than to prepare for an occupation or employment, would mean that not all of the advantages provided for workers within EU law may be claimed. Brown was a dual national relying on his French nationality in the UK, who had worked for nine months for a company in Scotland as a form of 'pre-university industrial training', before beginning an electrical engineering degree at Cambridge University. The Court ruled that although he was a 'worker', since he satisfied the three criteria in *Lawrie-Blum*, he was not entitled to all the social advantages, in this case a maintenance grant, which would normally be open to workers. This was because his employment was merely 'ancillary' to his desired course of study. This conclusion can be seen as the ECJ's response to Member States' concerns about 'abuse' of the provisions on free movement of workers by those who wished to avail themselves of the generous educational provision in a particular Member State.

We shall see in the later chapter on EU citizenship that the ECJ in *Bidar* changed its position on the specific question of entitlement of a national who moves to study in another Member State to apply for a maintenance grant.[31] However, *Brown* remains an authority for the proposition that an EU national who undertakes work for a temporary period purely as a means to qualify for an educational course will not be entitled to all the same social advantages as a fully-fledged 'worker' under EU law.

In *Ninni-Oraschi*, the ECJ again reiterated the importance of 'objective' factors such as hours worked and remuneration over other more subjective factors such as motive and conduct, and dismissed

[30] Case 197/86 *Brown v Secretary of State for Scotland* [1988] ECR 3205.

[31] Case C–209/03 *Bidar v London Borough of Ealing* [2005] ECR I–2119; Case C–158/07 *Jacqueline Förster v Hoofddirectie van de Informatie Beheer Groep* [2008] ECR I–8507.

as irrelevant the argument that the applicant had 'abused' EC rights in order to gain the status of worker.[32]

Case C–413/01 **Ninni-Orasche v Bundesminister für Wissenschaft, Verkehr und Kunst**
[2003] ECR I–13187

[Note Lisbon Treaty renumbering: Art 48 is now Art 45 TFEU]

28. It should be stated that, with respect to the assessment whether employment is capable of conferring the status of worker within the meaning of Article 48 of the Treaty, factors relating to the conduct of the person concerned before and after the period of employment are not relevant in establishing the status of worker within the meaning of that article. Such factors are not in any way related to the objective criteria referred to in the case-law cited in paragraphs 23 and 24 of this judgment.

29. In particular, the three factors referred to by the national court, namely the fact that the person concerned took up employment as a waitress only several years after her entry into the host Member State, that, shortly after the end of her short term of employment, she obtained a diploma entitling her to enrol at university in that State and that, after that employment had come to an end, she attempted to find a new job, are not linked either to the possibility that the activity pursued by the appellant in the main proceedings was ancillary or to the nature of that activity or of the employment relationship.

30. For the same reasons, nor can the Court accept the argument put forward by the Danish Government that, in order to assess whether activities pursued as an employed person are effective and genuine, it is necessary to take account of the short term of the employment in relation to the total duration of residence by the person concerned in the host Member State, which, in the main proceedings, was two and a half years.

31. Finally, as regards the argument that the national court is under an obligation to examine, on the basis of the circumstances of the case, whether the appellant in the main proceedings has sought abusively to create a situation enabling her to claim the status of a worker within the meaning of Article 48 of the Treaty with the aim of acquiring advantages linked to that status, it is sufficient to state that any abusive use of the rights granted by the Community legal order under the provisions relating to freedom of movement for workers presupposes that the person concerned falls within the scope ratione personae of that Treaty because he satisfies the conditions for classification as a worker within the meaning of that article. It follows that the issue of abuse of rights can have no bearing on the answer to the first question.

While the ECJ agreed, as we shall see below, that the national court was entitled to investigate, for the purposes of deciding whether to grant or refuse educational assistance, whether the applicant had taken up (and subsequently left) employment purely in order to gain access to education in the host Member State, this was not relevant to the question whether or not she was a worker under Article 45 as a consequence of the period of employment.

(D) DEFINITION OF 'WORKER': THE JOB-SEEKER

The discussion thus far has been concerned with those who have a job of some kind. An important issue is how far those seeking work can benefit from Article 45. In *Royer*, the ECJ had referred to the right 'to look for or pursue an occupation'.[33] The issue was addressed more directly in *Antonissen*,

[32] Cases C–22–23/08 *Vatsouras* (n 19) [29].
[33] Case 48/75 *Royer* [1976] ECR 497, [31].

where the Court held that those who are actively seeking work do not have the full status of a worker, but are nonetheless covered by Article 45.

Case C–292/89 **R v Immigration Appeal Tribunal, ex p Antonissen** [1991] ECR I–745

[Note Lisbon Treaty renumbering: Art 48 is now Art 45 TFEU]

Antonissen was a Belgian national who had arrived in the UK in 1984, and had attempted unsuccessfully to find work. Following his imprisonment for a drug-related offence, the Secretary of State decided to deport him. Following his appeal, the case was referred to the ECJ where it was argued that only Community nationals in possession of a confirmation of engagement of employment were entitled to a right of residence in another Member State.

THE ECJ

9. In that connection it has been argued that, according to the strict wording of Article 48 of the Treaty, Community nationals are given the right to move freely within the territory of the Member States for the purpose only of accepting offers of employment actually made (Article 48(3)(a) and (b)) whilst the right to stay in the territory of a Member State is stated to be for the purpose of employment (Article 48(3)(c)).

10. Such an interpretation would exclude the right of a national of a Member State to move freely and to stay in the territory of the other Member States in order to seek employment there, and cannot be upheld.

. . .

12. Moreover, a strict interpretation of Article 48(3) would jeopardize the actual chances that a national of a Member State who is seeking employment will find it in another Member State, and would, as a result, make that provision ineffective.

13. It follows that Article 48(3) must be interpreted as enumerating, in a non-exhaustive way, certain rights benefiting nationals of Member States in the context of the free movement of workers and that that freedom also entails the right for nationals of Member States to move freely within the territory of the other Member States and to stay there for the purposes of seeking employment.

Antonissen provides a clear example of the Court's purposive approach, in suggesting a wider scope for Article 45 than the words of the Article convey. The ECJ examined the Article and identified its purpose: in this case, to ensure the free movement of workers. It then concluded that a literal interpretation of its terms would hinder that purpose. If nationals could move to another Member State only when they already held an offer of employment, the number of people who could move would be small, and many workers who could seek and find employment on arrival in a Member State would be prevented from so doing. A particularly interesting feature of *Antonissen* was the ECJ's statement that the rights expressly enumerated in Article 45 are not exhaustive. This approach leaves the Court power to adapt the scope of the Article through interpretation, in accordance with the EU's changing social, economic, and political climate.

However, the ECJ was clear that the status of an EU national searching for work was not the same as that of an EU national who was actually employed. Member States retain the power to expel a job-seeker who does not have prospects of finding work after a reasonable period of time, without needing to invoke Article 45(3). Moreover, there may be provisions, such as unemployment insurance, that cannot be used by someone who has never participated in the employment market.

This was seen in the earlier case of *Commission v Belgium*,[34] and also in *Lebon*, where the ECJ ruled that the social and tax advantages guaranteed to workers under EU law, in particular by Article 7(2) of Regulation 1612/68, were not available to those moving in search of work.[35] In the more recent *Collins* case, the ECJ confirmed the distinction between fully-fledged workers who can benefit from all provisions of Regulation 1612/68 concerning social advantages and equality of treatment with national workers, and job-seekers who, although covered by Article 45, can benefit only from the provisions of Regulation 1612/68 governing access to employment.[36] Nonetheless, the ECJ also departed from the strict implications of its earlier judgment in *Lebon* by ruling that when interpreted in the light of EU citizenship equal treatment in access to employment under Article 45(2) should include the right to apply for a job-seeker's allowance under the same conditions as nationals of the host state, if they are genuinely linked to the employment market of that state.[37]

The *Collins* ruling was confirmed in *Ioannidis*, in which the ECJ ruled that a Greek national seeking his first employment in Belgium was entitled in principle to a tideover allowance intended specifically to facilitate the transition from education to the employment market, and that a national eligibility condition requiring applicants to have completed their secondary education in Belgium was contrary to Article 45.[38]

(E) SCOPE OF PROTECTION: NEW MEMBER STATES

Workers as defined in the previous pages have a right to move in accordance with Article 45. This right was qualified in relation to the 2004 enlargement when ten Central and East European states joined. The EU took the unprecedented step of admitting new Members while denying them the immediate right to benefit from one of the four fundamental freedoms. A transitional regime for the free movement of workers from the new states was introduced, delaying the full implementation of their rights of free movement for up to seven years.[39] While this arrangement was made in order to allay the fears of existing Member States that their labour markets would be flooded with new migrant workers, the effective creation of a 'second-class' membership, however temporary, gave rise to an understandably critical reaction from the new Member States and from other commentators.[40] This transitional regime for the states involved in the 2004 enlargement ended on 30 April 2011. The transitional regime for Bulgaria and Romania, which joined the EU in 2007 will end on 31 December 2013.

4 ARTICLE 45: DISCRIMINATION, MARKET ACCESS, AND JUSTIFICATION

It is clear that rules which directly discriminate on the grounds of nationality will be caught by Article 45.[41] It is equally clear that indirect discrimination, and even impediments to market access

[34] Case C–278/94 *Commission v Belgium* [1996] ECR I–4307.

[35] Case 316/85 *Lebon* [1987] ECR 281. Compare Case C–57/96 *Meints v Minister van Landbouw* [1997] ECR I–6689.

[36] Case C–138/02 *Collins* (n 18) [30]–[33]. We shall see in Ch 23, however, that by interpreting the rights of the job-seeker in the light of the Treaty provisions on citizenship, the ECJ decided that a job-seeker under Art 45 should be entitled to apply for a job-seeker's allowance under the same conditions as nationals of the host Member State.

[37] Ibid [54]–[73]. The aspects of the judgment which deal with EU citizenship will be considered in Ch 23.

[38] Case C–258/04 *Office national de l'emploi v Ioannidis* [2005] ECR I–8275.

[41] See, eg, Case C–55/00 *Gottardo v INPS* [2002] ECR I–413.

which do not depend on a showing of unequal impact,[42] can also lead to infringement of Article 45.[43] Discrimination, whether direct or indirect, will, however, be found only where two groups which are comparable in relevant ways are treated differently, or where groups which are not comparable are treated in the same way.[44]

(A) DIRECT DISCRIMINATION

In proceedings brought by the Commission against France for failing to repeal provisions of the French Maritime Code, which had required a certain proportion of the crew of a ship to be of French nationality, the Court ruled that Article 45 was 'directly applicable in the legal system of every Member State' and would render inapplicable all contrary national law.[45] Further, a state can be held in breach of Article 45 where the discrimination is practised by any public body, including public universities. Thus Italy was responsible for the discriminatory practice of certain public universities, which did not recognize the acquired rights of former foreign-language assistants.[46] While cases involving direct discrimination on grounds of nationality are much less common, such cases do still arise but they raise a strong burden of justification.[47]

(B) INDIRECT DISCRIMINATION

Indirect discrimination is also prohibited by Article 45, so that a condition of eligibility for a benefit which is more easily satisfied by national than by non-national workers is likely to fall foul of the Treaty. The ECJ has relaxed the requirements for proof of indirect discrimination, ruling in *O'Flynn* that in order for indirect discrimination to be established, it was not necessary to prove that a national measure in practice affected a higher proportion of foreign workers, but merely that the measure was 'intrinsically liable' to affect migrant workers more than nationals.[48]

A common species of indirect discrimination is where benefits are made conditional, in law or fact, on residence, place-of-origin requirements, or place-of-education requirements that can more easily be satisfied by nationals than non-nationals.[49] In *Ugliola*, an Italian worker in Germany challenged a German law under which a worker's security of employment was protected by having periods of military service taken into account in calculating the length of employment.[50] The law in question applied only to those who had done their military service in the Bundeswehr, although the nationality of the worker was irrelevant. The Court stressed that Article 45 allowed for no restrictions on the principle

of equal treatment other than in paragraph 3. It concluded that the German law had created an unjustifiable restriction by 'indirectly introducing discrimination in favour of their own nationals alone', since the requirement that the service be done in the Bundeswehr would clearly be satisfied by a far greater number of nationals than non-nationals.[51]

In *Sotgiu* the German Post Office increased the separation allowance paid to workers employed away from their place of residence within Germany, but did not pay the increase to workers (whatever their nationality) whose residence at the time of their initial employment was abroad, and this was held by the ECJ to be contrary to the Treaty.[52] In *Commission v Belgium*[53] the ECJ held that a system of retirement pension points that could be more easily satisfied by workers possessing the nationality of that Member State than by workers from other Member States was indirectly discriminatory, and hence caught by Article 45. In *Zurstrassen*,[54] the Court held that national rules under which the joint assessment to tax of spouses was conditional on their both being resident on the national territory were incompatible with Article 45.[55]

A further form of indirect discrimination is the imposition of a language requirement for certain posts, since it is likely that a far higher proportion of non-nationals than nationals will be affected by it.[56] However, since such a requirement may well be legitimate, Article 3(1) of Regulation 1612/68 allows for the imposition of 'conditions relating to linguistic knowledge required by reason of the nature of the post to be filled'. The Court considered the scope of this exception in *Groener*, where a Dutch national working in Ireland as a part-time art teacher was rejected for the full-time art teaching post for which she was otherwise selected, because she did not pass an oral examination in the Irish language.[57] The ECJ ruled that even though the teaching was likely to be exclusively in English, the language requirement could, so long as it was not imposed in a disproportionate way, fall within Article 3(1) on account of the policy of the Irish government to promote the use of Irish as a means of expressing national identity and culture.

Another form of indirect discrimination frequently encountered in the law on free movement of goods and services, but which is equally relevant to the context of the free movement of workers, is the imposition of a 'double-burden' regulatory requirement, which does not recognize appropriate qualifications or certifications already received in the home state. Such a regulation was held to be contrary to Article 45 in *Commission v Portugal*.[58]

(c) OBSTACLES TO ACCESS TO THE EMPLOYMENT MARKET

It was for some time unclear whether Article 45 applied to national measures which restricted the freedom of movement of EU workers, but which were neither directly nor indirectly discriminatory on grounds of nationality. This central issue has arisen in relation to all the 'freedoms', but with greatest frequency in relation to free movement of goods. In the context of each of the freedoms, the ECJ has ruled that even non-discriminatory restrictions may breach the Treaty if they constitute an

excessive obstacle to freedom of movement. It is sometimes difficult to distinguish between cases of indirect discrimination and those where the ECJ intervenes to protect access to the employment market, but there are nonetheless cases that fall clearly within the latter category.

The issue was first addressed directly in the context of free movement of workers in the famous *Bosman* ruling, in which the transfer system developed by national and transnational football associations was found to be in breach of Article 45.[59] The system required a football club, which sought to engage a player whose contract with another club had come to an end, to pay money (often substantial) to the latter club. Bosman, who had been employed by a Belgian football club, was effectively prevented from securing employment with a French club. The fact that the transfer system applied equally to players moving from one club to another within a Member State as to players moving between states, and that a player's nationality was entirely irrelevant, did not prevent the system from falling foul of Article 45. This was so notwithstanding the reliance placed by the football associations on the *Keck* ruling,[60] which had narrowed the scope of the Treaty provisions on free movement of goods. According to the Court in *Bosman*:

> 103. It is sufficient to note that, although the rules in issue in the main proceedings apply also to transfers between clubs belonging to different national associations within the same Member State and are similar to those governing transfers between clubs belonging to the same national association, they still directly affect players' access to the employment market in other Member States and are thus capable of impeding freedom of movement for workers. They cannot, thus, be deemed comparable to the rules on selling arrangements for goods which in *Keck and Mithouard* were held to fall outside the ambit of Article 30 of the Treaty (see also, with regard to the freedom to provide services, Case C–384/93 *Alpine Investments* v. *Minister van Financiën* [1995] ECR I–1141, paras. 36–38).

In the absence of any sufficiently convincing public-interest justification for the rule, it was found by the ECJ to be contrary to Article 45. The fact that there was no discrimination was irrelevant: the existence of an obstacle to the access of workers from one Member State to employment in another Member State was enough to attract the application of Article 45.[61]

The principle established in *Bosman* was that non-discriminatory rules which nonetheless impeded the access of workers to the employment market of another state, whether imposed by the state of origin or destination, were caught by Article 45. It has been repeatedly applied in a steady stream of subsequent cases.[62] In *Terhoeve*, the ECJ ruled that provisions, such as a national law concerning the payment of social contributions, which could preclude or deter a national of a Member State from leaving his country of origin in order to exercise his free-movement rights constituted an obstacle to that freedom even if they applied without regard to the nationality of the workers concerned.[63] In *Commission v Denmark*[64] and *Van Lent*,[65] the Court condemned national rules which prohibited

workers domiciled in one particular state from using a vehicle registered in another Member State, on the basis that these rules might preclude workers from exercising their right to free movement or might impede access to employment between states.

The fact that non-discriminatory provisions which impede market access can be caught raises concerns about the outer boundaries of Article 45, just as we saw in the case law concerning free movement of goods under Article 34. The issue was thrown into sharp relief by *Graf*.[66] The applicant claimed that rules providing that compensation on termination of employment did not apply when the worker voluntarily ended the employment to take up employment elsewhere were in breach of Article 45. Advocate General Fennelly adverted to the dangers of regarding such rules as constituting a breach of Article 45. He argued that neutral national rules could be regarded as material barriers to market access only if it were established that they had actual effects on market actors akin to exclusion from the market.[67] The ECJ shared these concerns. It reiterated the principle from *Bosman* concerning market access. It held however on the facts that the impugned legislation did not offend this principle. The entitlement to compensation was not dependent on the worker's choosing whether or not to stay with his current employer. It was, rather, dependent on a future and hypothetical event, namely the subsequent termination of the contract without this being at his initiative. This was too uncertain and indirect a possibility for the legislation to be regarded as being in breach of Article 45.[68]

Similarly in *Weigel*, the ECJ ruled that the negative tax consequences for an individual who moves to work from one Member State to another will not necessarily be contrary to Article 45, even if it is likely to deter the worker from exercising rights of free movement, if it does not place that individual under any greater disadvantage than those already resident and subject to the same tax.[69]

(D) INTERNAL SITUATIONS

Article 45 does not prohibit discrimination in a so-called 'wholly internal' situation. This is sometimes referred to as a situation of 'reverse discrimination', since its effect is frequently that national workers cannot claim rights in their own Member State which workers who are nationals of other Member States could claim there. In *Saunders* the ECJ held that since there was 'no factor connecting' the defendant 'to any of the situations envisaged by Community law', she could not rely on Article 45 to challenge an order which effectively excluded her from part of her own national territory.[70]

There have been attempts to circumvent the 'internal situation' barrier by relying on the right to freedom of movement conferred by Article 21 TFEU on European citizens, as something over and above the rights of movement of EU workers, but these have not so far succeeded before the ECJ.[71] It will be seen below that this 'internal situation' approach by the Court has given rise to some invidious results in the context of the rights of workers and their families.[72]

[71] Cases C–64 and 65/96 *Uecker* and *Jacquet v Land Nordrhein-Westfalen* [1997] ECR I–3171; Case C–299/95 *Kremzow v Austria* [1997] ECR I–2629; Case 180/83 *Moser v Land Baden-Württemberg* [1984] ECR 2539. Compare however, Case C–148/02 *Garcia Avello* [2003] ECR I–11613, discussed further in Ch 23; Case C–34/09 *Ruiz Zambrano*, 30 Sept 2010, AG Sharpston; Draft Recommendation of the European Ombudsman to the Commission in Complaint 3317/2004/GG.

[72] See, eg, Cases 35 and 36/82 *Morson and Jhanjan v Netherlands* [1982] ECR 3723.

It is nonetheless clear, as exemplified by cases such as *Terhoeve*[73] and *De Groot,*[74] that a worker will be able to use Article 45 against his or her own state where the worker has been employed and resided in another Member State. Such a worker may then claim that he or she has been discriminated against in relation to, for example, social security contributions or taxation, when returning to work in his or her own Member State.

(E) OBJECTIVE JUSTIFICATION

The possible grounds for justifying indirect discrimination are broad, and not confined to the exceptions set out in the Treaty or in secondary legislation.[75] Thus in *Schumacker*, the Court ruled that indirect discrimination based on the residence of a worker, whereby an EU national employed but not resident in a particular Member State could not benefit from personal tax allowances, could in certain circumstances be justified.[76] This was because of the likely difference in position between workers from other Member States and resident workers, but such indirect discrimination could not be justified where, for example, the non-resident worker could not benefit from personal allowances in the Member State of residence either. There have been a number of other cases where the ECJ has held that differential tax rules are justified,[77] but in other cases the ECJ has rejected justificatory arguments cast in terms of the cohesion of the tax system, the need to supervise taxation or prevent tax avoidance.[78]

The ECJ undertakes close scrutiny of claims that restrictions are justified.[79] Thus in *Terhoeve*[80] the ECJ considered whether heavier social security contributions levied on a worker who transferred his residence from one Member State to another to take up work during the course of a year could be justified. The ECJ rejected justifications based on the need to simplify and coordinate the levying of such contributions, and technical difficulties preventing other methods of collection. In *Rockler*, the ECJ rejected arguments based on the supposed financial burden on the national social security scheme, ruling that justifications based on purely economic grounds could not be accepted, and that the justification put forward was not proportionate.[81] The ECJ's approach is also evident in the following case.

Case C–325/08 **Olympique Lyonnais SASP v Olivier Bernard and Newcastle UFC**
16 March 2010

The case involved challenge to a rule whereby young footballers who were trained by a particular club would then have to pay damages if they signed a contract with a different club. The ECJ held that the rule was caught by Article 45, and then considered justification.

[80] Case C–18/95 *Terhoeve* (n 63) [43]–[47].
[81] Case C–137/04 *Rockler* (n 62).

THE ECJ

39. In regard to professional sport, the Court has already had occasion to hold that, in view of the considerable social importance of sporting activities and in particular football in the European Union, the objective of encouraging the recruitment and training of young players must be accepted as legitimate (see Bosman, paragraph 106).

...

41. In that regard, it must be accepted that, as the Court has already held, the prospect of receiving training fees is likely to encourage football clubs to seek new talent and train young players (see Bosman, paragraph 108).

42. The returns on the investments in training made by the clubs providing it are uncertain by their very nature since the clubs bear the expenditure incurred in respect of all the young players they recruit and train, sometimes over several years, whereas only some of those players undertake a professional career at the end of their training, whether with the club which provided the training or another club (see, to that effect, Bosman, paragraph 109).

...

44. Under those circumstances, the clubs which provided the training could be discouraged from investing in the training of young players if they could not obtain reimbursement of the amounts spent for that purpose where, at the end of his training, a player enters into a professional contract with another club...

45. It follows that a scheme providing for the payment of compensation for training where a young player, at the end of his training, signs a professional contract with a club other than the one which trained him can, in principle, be justified by the objective of encouraging the recruitment and training of young players. However, such a scheme must be actually capable of attaining that objective and be proportionate to it, taking due account of the costs borne by the clubs in training both future professional players and those who will never play professionally (see, to that effect, Bosman, paragraph 109).

46. It is apparent from paragraphs 4 and 6 of the present judgment that a scheme such as the one at issue in the main proceedings was characterised by the payment to the club which provided the training, not of compensation for training, but of damages, to which the player concerned would be liable for breach of his contractual obligations and the amount of which was unrelated to the real training costs incurred by the club.

47. ...the damages in question were not calculated in relation to the training costs incurred by the club providing that training but in relation to the total loss suffered by the club.

48. Under those circumstances, the possibility of obtaining such damages went beyond what was necessary to encourage recruitment and training of young players and to fund those activities.

...

50. A scheme such as the one at issue in the main proceedings, under which a 'joueur espoir' who signs a professional contract with a club in another Member State at the end of his training period is liable to pay damages calculated in a way which is unrelated to the actual costs of the training, is not necessary to ensure the attainment of that objective.

5 ARTICLE 45(4): THE PUBLIC-SERVICE EXCEPTION

The ECJ has taken an expansive approach to the definition of worker. Conversely, its approach to the limiting clause in Article 45(4), which provides that Article 45 shall not apply to 'employment in the public service', has been restrictive. The ECJ has endeavoured to ensure that the scope of the exception does not go further than is necessary to fulfil the purpose for which it was included in the Treaty. This requires an analysis of why the exception was created. The case law provides a good example of

the contrast between a kind of 'original intent' interpretation argued for by the Member States and the less historically rooted 'purposive' interpretation employed by the Court. The ECJ does not confine its 'hermeneutic monopoly' to the right-conferring terms such as 'worker', but extends it to the public-service derogation: it is for the Court and not the Member State to decide what constitutes 'employment in the public service'. The battle over the scope of the public-service exception has been hard fought. An explanation for this was offered by Mancini, who attributed it to 'the widespread view that the functioning of the public service is an exercise of full-State sovereignty'.[82] Certain fundamentals concerning the interpretation of Article 45(4) emerge from the case law.

(A) THE MEANING DETERMINED BY THE COURT, NOT THE MEMBER STATES

In *Sotgiu* the ECJ made it clear that it, and not the Member States, would define the scope of the exception:[83]

> It is necessary to establish further whether the extent of the exception provided for by Article 48(4) [now Art 39(4)] can be determined in terms of the designation of the legal relationship between the employee and the employing administration.
>
> In the absence of any distinction in the provision referred to, it is of no interest whether a worker is engaged as a workman (*ouvrier*), a clerk (*employé*), or an official (*fonctionnaire*) or even whether the terms on which he is employed come under public or private law.
>
> These legal designations can be varied at the whim of national legislatures and cannot therefore provide a criterion for interpretation appropriate to the requirements of Community law.

Thus the Member States cannot deem a particular post to be 'in the public service' by the name or designation they give to that post, or by the mere fact that the terms of the post are regulated by public law. Further, it is irrelevant, according to the ECJ, whether the state's rules governing nationality as a necessary condition for entry to any post in the public service have constitutional status, in view of the need for the 'unity and efficacy' of EU law.[84]

(B) THE ECJ'S TEST FOR PUBLIC SERVICE

In the case extracted below, the Belgian Government, supported by the UK, German, and French Governments, argued that Article 45(4) differed from Article 51 TFEU. The latter provides a similar derogation in the context of freedom of establishment and freedom to provide services, when an activity involves the 'exercise of official authority'. This difference, according to the Belgian Government, was deliberately reflected in the wording of each. Article 51 specifically mentions the exercise of official authority, which implies a *functional* concept, whereas Article 45(4) refers to 'employment in the public service', which is an *institutional* concept. On the latter definition, what is important is the institution within which the worker is employed, rather than the nature of the work itself. The ECJ did not accept this argument.

[82] Mancini (n 12) 77.
[83] Case 152/73 *Sotgiu* (n 52) [5].
[84] [1980] ECR 3881, [18]–[19]; Case C–473/93 *Commission v Luxembourg* [1996] ECR I–3207, [38].

Case 149/79 **Commission v Belgium**
[1980] ECR 3881

[Note Lisbon Treaty renumbering: Art 48 is now Art 45 TFEU]

Possession of Belgian nationality was required as a condition of entry for posts with Belgian local authorities and public undertakings, regardless of the nature of the duties to be performed. Examples of such posts were those of unskilled railway workers, hospital nurses, and night-watchmen. The Belgian Government argued that, when the Treaties were drafted, there was no Community concept of the objectives and scope of public authorities and that the Member States' governments had wished the conditions of entry to public office to remain their preserve.

THE ECJ

10. That provision [Article 48(4)] removes from the ambit of Article 48(1) to (3) a series of posts which involve direct or indirect participation in the exercise of powers conferred by public law and duties designed to safeguard the general interests of the State or of other public authorities. Such posts in fact presume on the part of those occupying them the existence of a special relationship of allegiance to the State and reciprocity of rights and duties which form the foundation of the bond of nationality.

11. The scope of the derogation made by Article 48(4) to the principles of freedom of movement and equality of treatment laid down in the first three paragraphs of the article should therefore be determined on the basis of the aim pursued by that article. However, determining the sphere of application of Article 48(4) raises special difficulties since in the various Member States authorities acting under powers conferred by public law have assumed responsibilities of an economic and social nature or are involved in activities which are not identifiable with the functions which are typical of the public service yet which by their nature still come under the sphere of application of the Treaty. In these circumstances the effect of extending the exception contained in Article 48(4) to posts which, whilst coming under the States or other organizations governed by public law, still do not involve any association with tasks belonging to the public service properly so called, would be to remove a considerable number of posts from the ambit of the principles set out in the Treaty and to create inequalities between Member States according to the different ways in which the State and certain sectors of economic life are organized.

Thus a state cannot bring certain activities, for example of an economic or social kind, within the Treaty derogation simply by including them in the scope of the public law of the state and taking responsibility for their performance.[85] The ECJ held that the aim of the Treaty provision was to permit Member States to reserve for nationals those posts which would require a *specific bond of allegiance and mutuality of rights and duties between state and employee*.

The Court's description of the posts that could be said to require such allegiance and to depend upon the bond of nationality was twofold: (i) they must involve participation in the exercise of powers conferred by public law, and (ii) they must entail duties designed to safeguard the general interests of the state. The notion of 'powers conferred by public law' is rather vague, given the difficulties inherent in defining the scope of public law, but the idea of 'safeguarding the general interests of the State' is somewhat more concrete. It seems that the two requirements are cumulative rather than alternative.

[85] The converse, however, is also true: the application of the Art 45(4) exception is not excluded simply because the employer in question is a private party rather than a public body: Case C–405/01 *Colegio de Oficiales de la Marina Mercante Española v Administracion del Estado* [2003] ECR I–10391.

A post will benefit from the derogation in Article 45(4) only if it involves *both* the exercise of power conferred by public law *and* the safeguarding of the general interests of the state.[86]

There are two imperatives driving the ECJ's insistence on the functional as opposed to the institutional test. There is the justifiable fear that the institutional approach could immunize large sectors of the economy from the reach of free movement, more especially in those countries that take an expansive view of 'state employment'. There is however also the desire to break down pre-existing stereotypes, and to get Member States to think that employment of a non-national in many public sector jobs should, if that person were best qualified for the position, not be regarded as odd or unnatural.

(c) APPLICATION OF THE ECJ'S TEST

In the *Belgium* case[87] the ECJ ruled that it did not have enough information to identify which of the specified posts fell outside the Treaty derogation. It invited Belgium and the Commission to re-examine and resolve the issue in the light of its judgment, and to report any solution to the ECJ. When they failed to agree on certain of the posts, the case came back to the ECJ two years later. The Court ruled that, with the exception of a limited number of posts, including certain supervisory posts, night watchman, and architect with the municipality of Brussels, none of the other posts satisfied the criteria for the application of the public-service exception.[88]

A further argument made by the four governments represented in the *Belgium* case was that certain posts which may not at the outset involve participation in the powers conferred by public law require a certain flexibility of character. They argued that the duties and responsibilities of the post may change, or the holders of such initial posts may subsequently become eligible for careers at a higher grade with duties involving the exercise of public powers. This, too, was rejected as a reason for treating the initial post as being within the public-service exception, since that exception 'allows Member States to reserve to their nationals, by appropriate rules, entry to posts involving the exercise of such powers and such responsibilities within the same grade, the same branch, or the same class'.[89]

The point was made again by the ECJ in enforcement proceedings brought by the Commission against Italy, concerning laws protecting the security and tenure of researchers at the National Research Council (CNR), which were not applied to non-nationals.[90] Italy argued, first, that the work undertaken by the CNR involved satisfying the general interests of the state and was financed out of public funds. It argued, secondly, that if researchers became established members of staff, they could be promoted to higher managerial positions, which would entail participation in the exercise of public power. The ECJ rejected the first argument:[91]

> Simply referring to the general tasks of the CNR and listing the duties of all its researchers is not sufficient to establish that the researchers are responsible for exercising powers conferred by public law or for safeguarding the general interests of the State. Only the duties of management or of advising the State on scientific and technical questions could be described as employment in the public service within the meaning of Article 48(4).

[86] Case 66/85 *Lawrie-Blum* (n 25) [27]; Case C–473/93 *Commission v Luxembourg* (n 84) [18], AG Léger; D O'Keeffe, 'Judicial Interpretation of the Public Service Exception to the Free Movement of Workers' in Curtin and O'Keeffe (n 12) 89, 96.

[87] Case 149/79 *Commission v Belgium* [1980] ECR 3881.

[88] Case 149/79 *Commission v Belgium II* [1982] ECR 1845.

[89] Ibid [21].

[90] Case 225/85 *Commission v Italy* [1987] ECR 2625.

[91] Ibid [9].

The second argument was equally summarily dismissed, with reference being made to the Court's ruling in the *Belgium* case:[92]

> It is sufficient to point out that Community law does not prohibit a Member State from reserving for its own nationals those posts within a career bracket which involve participation in the exercise of powers conferred by public law or the safeguarding of the general interests of the State.

However, the Court also emphasized in a later case concerning posts as master and chief mate of merchant ships flying the Spanish flag, that the Article 45(4) exception could be validly used only if the rights under powers conferred by public law, for example the exercise of police powers in the event of danger on board, are in fact exercised on a regular basis by those holders and do not represent a very minor part of their activities.[93]

Member States have attempted to use the exception in numerous other cases.[94] There is no secondary legislation which attempts to clarify the concept. The Commission once proposed draft legislation to clarify the derogation, but its proposal was opposed by those who thought that the Member States might take advantage of detailed legislation to undermine the established case law, and also that such legislation could ossify the process of creating a 'citizens' Europe'.[95] The Commission instead, in 1988, published a document in the Official Journal on the scope of Article 45(4), providing some guidance on the sorts of state functions which it considered would or would not fall within that provision.[96] Those which probably would be covered included the armed forces, police, judiciary, tax authorities, and certain public bodies engaged in preparing or monitoring legal acts; and those which probably would not included nursing, teaching, and non-military research in public establishments.

The issue is still one which is fraught with ideological tensions, the underlying debate being about the relevance of nationality, and specifically about when it is legitimate for the Member States to require nationality as a condition for employment. The efforts of the Member States to define the public-service derogation in institutional terms by reference to the 'public sector' have repeatedly failed.[97] The Court has adhered to a rather more difficult but narrower 'functional' approach, which examines closely the character of posts which might be said to require the reciprocal bond of allegiance which is said to be characteristic of nationality. The debate provides a clear example of the federal tensions, which emerge in many areas of EU law, over the proper scope of national as opposed to EU jurisdiction and competence, in particular where the sensitive issue of nationality is concerned. Member State resistance to the ECJ's approach, and the judicial response thereto, is evident in Advocate General Mancini's critical and trenchant opinion in infringement proceedings involving public nursing posts in France:[98]

> The decisions to which I have referred gave rise to severe criticisms from academic lawyers and, what is more important, they have not been 'taken in' by numerous governments. Such resistance is not surprising if it is borne in mind how deep-rooted is the conviction that the public service is an area in

[98] Case 307/84 *Commission v France* [1986] ECR 1725, 1727–1733; O'Keeffe (n 86) 89, 101–103.

which the State should exercise full sovereignty and how wide-spread is the tendency, in times of high unemployment, to see the public service as a convenient reservoir of posts. Such resistance is a matter for concern and should be tackled head-on before cases similar to the present one multiply. . . .

. . . In short, in order to be made inaccessible to nationals of another State, it is not sufficient for the duties inherent in the post at issue to be directed specifically towards public objectives which influence the conduct and action of private individuals. Those who occupy the post must don full battle dress: in non-metaphorical terms, the duties must involve acts of will which affect private individuals by requiring their obedience or, in the event of disobedience, by compelling them to comply. To make a list . . . is practically impossible; but certainly the first examples which come to mind are posts relating to policing, defence of the State, the administration of justice and assessments to tax.

. . . It is a fact that an extremist disciple of Hegel might truly think that access to posts like the ones at issue here [nursing] should be denied to foreigners. But anyone who does not regard the State as 'the march of God in the world' must of necessity take the contrary view.

It was suggested, soon after the Maastricht Treaty was adopted, that the new provisions on citizenship might undermine the thinking behind, and reduce the importance of, the public-service exception, given the emphasis of the latter on a traditional notion of loyalty between the state and its own nationals, to the exclusion of foreigners.[99] However, the Commission has continued to bring infringement proceedings concerning misuse of the public-service exception, which have often been vigorously defended by the Member States.[100]

A valuable report by Ziller examined the way in which the public-service exception has been applied by the Member States.[101] He found that most Member States had adapted their national rules to comply with the ECJ's functional approach, but that there were nonetheless instances where the application of the test at national level was imperfect and posts were reserved to nationals that could not be justified in accordance with the ECJ's test. He made a number of recommendations to improve the existing system, and also proposed a test for free movement of workers in the public sector.

J Ziller, Free Movement of European Union Citizens and Employment in the Public Sector[102]

1) Standard common statistics should be assembled and published on a regular basis by Eurostat for a number of essential indicators . . .

2) Member States' authorities would be well advised to establish and maintain monitoring systems, which are indispensable in order to ensure compliance with EU law in the field of free movement of workers in the public sector . . .

3) Member States' authorities would be well advised to establish procedures and organisation for the purpose of facilitating free movement of workers and ensuring compliance with EU law . . .

4) Member States' authorities would be well advised to confirm the obligation to take into account professional experience acquired in other Member State in their legislation and regulations . . .

[99] D O'Keeffe, 'Judicial Interpretation of the Public Service Exception to the Free Movement of Workers' in Curtin and O'Keeffe (n 12).

[100] See the cases at (n 97).

[101] The Report is available at http://ec.europa.eu/social/main.jsp?catId=465&langId=en. See also Cross-Border Mobility of Public Sector Workers (DG III/Austrian Federal Chancellery, 2006) available at www.eupan.eu/files/repository/document/15_Cross_border_mobility_of_public_sector_workers_2nd_Edition.pdf.

[102] Ibid 106–109.

5) A special effort should be made by Member States in terms of procedural and organisational means in order to facilitate mutual recognition of professional experience. Such procedures and/or organizational devices for the purpose of mutual recognition should be set in legislation and regulations, or at least . . . indicated as a good practice in guidelines . . .

6) It would be useful in Member States' legislation regulations and practice, or at least in explanatory documents, to clearly distinguish between professional experience (which could be defined as the content of work accomplished) and seniority (which could be defined as the duration of previous working periods).

7) Member States' authorities would be well advised to confirm the portability of working periods acquired in other Member State in their legislation and regulations . . . Portability of working conditions means that seniority acquired in EU Member States in situations similar to those which are relevant in the host Member State has to be taken into account on the same footing as professional experience acquired in the host Member State—whether by citizens of other EU Member States or by the host Member State's own nationals.

8) It would be useful to involve the Committee of the Regions in promoting free movement of workers in the public sector. This would help overcoming the problems stemming from horizontal fragmentation of public authorities in the Member State.

9) It would be useful to involve ombudsmen in guaranteeing free movement of workers in the public sector . . .

(D) DISCRIMINATORY CONDITIONS OF EMPLOYMENT WITHIN THE PUBLIC SERVICE ARE PROHIBITED

It is clear from *Sotgiu* that Article 45(4) cannot be used to justify discriminatory conditions for employment within the public service. Germany had invoked Article 45(4) in an attempt to justify its provisions on separation allowances for post office workers, which worked to the disadvantage of non-nationals, and the ECJ responded as follows:[103]

The interests which this derogation [Article 39(4)] allows Member States to protect are satisfied by the opportunity of restricting admission of foreign nationals to certain activities in the public service.

On the other hand this provision cannot justify discriminatory measures with regard to remuneration or other conditions of employment against workers once they have been admitted to the public service.

The very fact that they have been admitted shows indeed that those interests which justify the exceptions to the principle of non-discrimination permitted by [Article 39(4)] are not at issue.

Thus the Treaty derogation must be confined to restricting the admission of non-nationals into the public service, and does not permit discrimination in conditions once they are admitted. If they are deemed sufficiently loyal to the state to be admitted to such employment, there can be no grounds for paying them less on account of their nationality.

[103] Case 152/73 *Sotgiu* (n 52) [4]; Case C–195/98 *Österreicher Gewerkschaftsbund, Gewerkschaft Offentlicher Dienst v Republik Österreich* [2000] ECR I–10497, [37].

6 DIRECTIVE 2004/38: RIGHT OF ENTRY AND RESIDENCE OF WORKERS AND THEIR FAMILIES

(A) FORMAL REQUIREMENTS FOR WORKERS

Directive 68/360 was adopted under Article 40 EC to facilitate freedom of movement and the abolition of restrictions on employed persons, in part by clarifying the formal requirements relating to the right of entry and residence of non-nationals.[104] This Directive has been repealed and replaced by the relevant provisions of Directive 2004/38[105] on the movement and residence of EU citizens and their families, with 'family members' defined in Articles 2 and 3 thereof.

It is important to be mindful of the ECJ's interpretive methodology in relation to Directive 2004/38. It held that the Directive aims to facilitate the exercise of the primary and individual right to move and reside freely within Member States that is conferred directly on Union citizens by the Treaty, and that it aims in particular to strengthen that right. The consequence is that EU citizens cannot derive lesser rights from Directive 2004/38 than from the instruments of secondary legislation which it amended or repealed, and that the Directive must not be interpreted restrictively.[106]

Article 6 of the 2004 Directive gives an initial right of entry and residence for up to three months to all EU citizens and their families without any conditions other than presentation of an ID card or passport. The interim status of job-seeker is also recognized in the preamble to the Directive, which implicitly confirms the ECJ case law on this subject.[107] Article 8 of the Directive provides that workers and their families may be required to register with the host state authorities, and upon presentation of a valid passport or ID card and confirmation of employment (and, in the case of family members, a document attesting to the existence of the relevant family relationship, dependency, etc), to receive a certification of registration as evidence of their underlying right of residence.[108] Thus the previous system of residence permits under Directive 68/360 has been replaced with a simpler registration procedure for workers and their families. However, family members who are not EU nationals are to be issued with a residence card under Articles 9 and 10.

Member States are required by Article 4 to grant citizens and their families the right to leave their territory to go and work in other Member States, simply on producing an identity card or passport of at least five years' validity, which their Member State must provide for them and which will be valid throughout the EU and any necessary transit countries between Member States. No exit visa requirement may be imposed. Article 5 sets out similar conditions for the right to enter another Member State: all that is required is a valid identity card or passport and a visa requirement is impermissible, except for certain third-country nationals. The conditions under which a visa can be imposed for family members who are third-country nationals have been tightened up by Article 5(2); they are to be issued free of charge and as soon as possible, and those holding a valid residence card issued by a Member State under Article 9 are exempt from the requirement.

It is made clear in the Directive, as it was under the previous legislation and as the ECJ repeatedly emphasized in its case law, that the rights to reside and to work are not conditional upon initial satisfaction of the formalities for which the Directive provides.[109] Various provisions of Directive 2004/38, including Articles 5(5), 8(2), and 9(3), follow this line of case law by referring to the right of

[104] Dir 68/360 [1968] II OJ Spec Ed 485; Dir 64/221 [1963–4] OJ Spec Ed 117.

[105] (N 9).

[106] Case C–127/08 *Metock* (n 70) [59], [82], [84]; Case C–162/09 *Secretary of State for Work and Pensions v Taous Lassal*, 7 Oct 2010, [30]–[31]; Case C–145/09 *Land Baden-Württemberg v Panagiotis Tsakouridis*, 23 Nov 2010, [23].

[107] 726–728.

[108] This provision was apparently intended to respond to Case 48/75 *Royer* (n 33), which indicated that the residence permit did not grant any rights, but was merely evidence of a pre-existing right under the Treaty.

[109] Case 48/75 *Royer* (n 33).

states to impose proportionate and non-discriminatory penalties for non-satisfaction of the formal requirements.[110] It is clear that deportation, refusal of entry, or revocation of the right of residence constitutes a disproportionate penalty for failure to fulfil administrative formalities.[111] Even with respect to the right to enter, Article 5(4) of the Directive, following the ECJ ruling on the relevant provisions of the predecessor Directive 68/360 in *MRAX*,[112] provides that where the EU national or family member does not have the requisite documents or visas, the Member State shall give them every reasonable opportunity to obtain the documents, to have them brought to them, or to prove their right to movement and residence by other means.

Some confusion was introduced by the ECJ's ruling in *Akrich* that a non-EU national spouse who was not lawfully resident in a Member State, who had, for example, entered unlawfully, could not avail of rights of movement and residence under EU law.[113] The decision was difficult to reconcile with the judgment in *MRAX*,[114] and in *Jia*[115] the ECJ confined *Akrich* to its own facts. The ECJ has now departed from *Akrich*.

Case C–127/08 **Metock and Others v Minister for Justice, Equality and Law Reform** [2008] ECR I–6241

THE ECJ

48. By its first question the referring court asks whether Directive 2004/38 precludes legislation of a Member State which requires a national of a non-member country who is the spouse of a Union citizen residing in that Member State but not possessing its nationality to have previously been lawfully resident in another Member State before arriving in the host Member State, in order to benefit from the provisions of that directive.

49. In the first place, it must be stated that, as regards family members of a Union citizen, no provision of Directive 2004/38 makes the application of the directive conditional on their having previously resided in a Member State.

50. As Article 3(1) of Directive 2004/38 states, the directive applies to all Union citizens who move to or reside in a Member State other than that of which they are a national, and to their family members as defined in point 2 of Article 2 of the directive who accompany them or join them in that Member State. The definition of family members in point 2 of Article 2 of Directive 2004/38 does not distinguish according to whether or not they have already resided lawfully in another Member State.

51. It must also be pointed out that Articles 5, 6(2) and 7(2) of Directive 2004/38 confer the rights of entry, of residence for up to three months, and of residence for more than three months in the host Member State on nationals of non-member countries who are family members of a Union citizen whom they accompany or join in that Member State, without any reference to the place or conditions of residence they had before arriving in that Member State.

. . .

54. In those circumstances, Directive 2004/38 must be interpreted as applying to all nationals of non-member countries who are family members of a Union citizen within the meaning of point 2 of

[110] Case 321/87 *Commission v Belgium* (n 59); Case C–24/97 *Commission v Germany* [1998] ECR I–2133; Case C–215/03 *Oulane v Minister voor Vreemdelingenzaken en Integratie* [2005] ECR I–1215.

[111] Case 118/75 *Watson and Belmann* [1976] ECR 1185; Case C–363/89 *Roux* [1991] ECR I–273; Case C–459/99 *MRAX v Belgium* [2002] ECR I–6591; Case C–215/03 *Oulane* (n 110).

[112] Case C–459/99 *MRAX* (n 111); Case C–157/03 *Commission v Spain* [2005] ECR I–2911.

[113] Case C–109/01 *Secretary of State for the Home Department v Akrich* [2003] ECR I–9607, [49]–[53].

[114] Case C–459/99 *MRAX* (n 111).

[115] Case C–1/05 *Jia v Migrationsverket*, 9 Jan 2007.

Article 2 of that directive and accompany or join the Union citizen in a Member State other than that of which he is a national, and as conferring on them rights of entry and residence in that Member State, without distinguishing according to whether or not the national of a non-member country has already resided lawfully in another Member State.

55. That interpretation is supported by the Court's case-law on the instruments of secondary law concerning freedom of movement for persons adopted before Directive 2004/38.

56. Even before the adoption of Directive 2004/38, the Community legislature recognised the importance of ensuring the protection of the family life of nationals of the Member States in order to eliminate obstacles to the exercise of the fundamental freedoms guaranteed by the EC Treaty . . .

. . .

58. It is true that the Court held in paragraphs 50 and 51 of Akrich that, in order to benefit from the rights provided for in Article 10 of Regulation No 1612/68, the national of a non-member country who is the spouse of a Union citizen must be lawfully resident in a Member State when he moves to another Member State to which the citizen of the Union is migrating or has migrated. However, that conclusion must be reconsidered. The benefit of such rights cannot depend on the prior lawful residence of such a spouse in another Member State (see, to that effect, MRAX , paragraph 59, and Case C–157/03 Commission v Spain, paragraph 28).

59. The same interpretation must be adopted a fortiori with respect to Directive 2004/38, which amended Regulation No 1612/68 and repealed the earlier directives on freedom of movement for persons . . .

60. [T]he above interpretation of Directive 2004/38 is consistent with the division of competences between the Member States and the Community.

61. It is common ground that the Community derives from Articles 18(2) EC, 40 EC, 44 EC and 52 EC—on the basis of which Directive 2004/38 inter alia was adopted—competence to enact the necessary measures to bring about freedom of movement for Union citizens.

. . .

63. Consequently, within the competence conferred on it by those articles of the Treaty, the Community legislature can regulate the conditions of entry and residence of the family members of a Union citizen in the territory of the Member States, where the fact that it is impossible for the Union citizen to be accompanied or joined by his family in the host Member State would be such as to interfere with his freedom of movement by discouraging him from exercising his rights of entry into and residence in that Member State.

. . .

65. It follows that the Community legislature has competence to regulate, as it did by Directive 2004/38, the entry and residence of nationals of non-member countries who are family members of a Union citizen in the Member State in which that citizen has exercised his right of freedom of movement, including where the family members were not already lawfully resident in another Member State.

66. Consequently, the interpretation put forward by the Minister for Justice . . . that the Member States retain exclusive competence, subject to Title IV of Part Three of the Treaty, to regulate the first access to Community territory of family members of a Union citizen who are nationals of non-member countries must be rejected.

67. Indeed, to allow the Member States exclusive competence to grant or refuse entry into and residence in their territory to nationals of non-member countries who are family members of Union citizens and have not already resided lawfully in another Member State would have the effect that the freedom of movement of Union citizens in a Member State whose nationality they do not possess would vary from one Member State to another, according to the provisions of national law concerning immigration, with some Member States permitting entry and residence of family members of a Union citizen and other Member States refusing them.

68. That would not be compatible with the objective set out in Article 3(1)(c) EC of an internal market characterised by the abolition, as between Member States, of obstacles to the free movement of

persons. Establishing an internal market implies that the conditions of entry and residence of a Union citizen in a Member State whose nationality he does not possess are the same in all the Member States. Freedom of movement for Union citizens must therefore be interpreted as the right to leave any Member State, in particular the Member State whose nationality the Union citizen possesses, in order to become established under the same conditions in any Member State other than the Member State whose nationality the Union citizen possesses.

The case reveals the tensions between the imperatives of free movement and Member States' desire to exercise 'first access control' on the entry into their territory of non-nationals, even where they are family members of an EU national. This is attested to by the fact that ten Member States submitted observations in the case, the decision prompted debate in the Council,[116] and led to heated criticism in some Member States, such as Denmark.[117] Costello and Currie reveal some of the more foundational issues raised by the case.

C Costello, *Metock*: Free Movement and 'Normal Family Life' in the Union[118]

In the absence of political voice, or EC protection for the static EU citizen, 'exit' to the transnational realm becomes the only option. *Metock* should thus prompt deeper reflection on agency, belonging and identity in the EU. National governments' reflex is to insist on discretionary control over TCN[119] entry to the EU. In contrast, the ECJ's rights-based approach supports a vision of residence rights in which origins and belonging in the EU are decoupled, and blended families benefit from secure rights and entry and residence along the model established for EU citizens themselves.

S Currie, Accelerated Justice or a Step too Far? Residence Rights for non-EU Family Members and the Court's Ruling in *Metock*[120]

This case illustrates especially clearly the tensions that can arise as a consequence of the extension of residence entitlement to family members of Union citizens. From a legal perspective, when the judgment is considered in light of the case law pre-dating *Akrich* on TCN family members, and subsequent developments which have placed an increasing emphasis on the protection of family life as a fundamental right, *Metock* is not unreasonable. If anything, *Akrich* can be classified as the erroneous judgment due to its apparent contradiction of the case law before it. *Metock* also represents recognition of the reality of family life in the context of mobility and accepts that family relationships which arise in the aftermath of migration are worthy of some protection. In essence, the ruling enshrines a more equitable approach to TCN family members of Union citizens in circumstances of genuine family union. Reasoning on the individual level, this is surely a fair result.

There is a clear disjuncture, though, between the view of *Metock* as a judgment which can be categorised as legally justified and the political reality (or perceived reality) which informs the application of national immigration law. *Metock* has brought to the fore Member State dissatisfaction with the ECJ's

[116] C Costello, '*Metock*: Free Movement and "Normal Family Life" in the Union' (2009) 46 CMLRev 587, 607–608.
[117] S Currie, 'Accelerated Justice or a Step too Far? Residence Rights for non-EU Family Members and the Court's Ruling in *Metock*' (2009) 34 ELRev 310, 324–325.

[119] Third country national.
[120] Currie (n 117) 325–326.

claim of Community competence to regulate the residence entitlement of family members and there are clearly questions about compliance in its aftermath. Given the recent finding by the Commission that implementation of Directive 2004/38 is less than meticulous in a significant number of Member States, *Metock* may prove to be the straw that broke the camel's back.

(B) JOB-SEEKERS AND THE UNEMPLOYED

Article 7(3) of Directive 2004/38 governs the position of former workers who, although they have ceased working, nevertheless retain some of the rights of workers for themselves and their families. This provision replaces the pertinent parts of Directive 68/380, and supplements them with the relevant case law of the ECJ on voluntary and involuntary unemployment.

It provides that EU citizens who are no longer workers shall retain the status of worker where they are temporarily unable to work as the result of an illness or accident; or where they are involuntarily unemployed after having been employed for more than one year and having registered with the employment office as jobseekers. Where involuntary unemployment follows employment of less than one year, the Directive provides that the status of worker is to be retained for at least six months, if the person registers as a job-seeker. Article 7 also provides, following ECJ case law,[121] that a worker who embarks on vocational training may retain the status of worker, but that in cases where the worker has voluntarily given up employment retention of this status is conditional upon the training being related to the previous employment.

The Directive does not otherwise deal with voluntary unemployment, and so the assumption may reasonably be made that a person will not retain the status of worker if they become voluntarily unemployed unless they are pursuing related vocational training.[122] However, as we have seen from the *Antonissen* and *Collins* cases,[123] a person who is seeking work enjoys certain rights under Article 45. By comparison with the category of persons in Article 7(3) who have become involuntarily employed in the host Member State, these job-seekers do not enjoy the status of 'worker' in the full sense of the term, although they enjoy a right of residence during the period they are seeking work, and access to certain benefits which are specifically intended to facilitate access to employment.[124]

As far as the length of this period is concerned, the ECJ in *Antonissen* left it somewhat flexible, ruling that while the period of six months allowed by the UK seemed reasonable, the right to remain in search of work must continue even after that period so long as the person concerned 'provides evidence that he is continuing to seek employment and that he has genuine chances of being engaged'.[125] Although this is not explicitly governed by the provisions of the Directive, recital 9 concerning the three-month right of residence for all EU citizens declares that it is without prejudice to the 'more favourable treatment applicable to job-seekers as recognized by the case-law of the Court of Justice'.

It should also be noted that the ECJ indicated in *Collins* that although rights linked to the status of worker may be retained even when someone is no longer in an employment relationship, the relevant links with the status of worker will not continue for an excessively lengthy period of time.[126] In

[121] Case C–3/90 *Bernini* (n 27); Case C–357/89 *Raulin* (n 27).

[122] In Case C–413/01 *Ninni-Orasche v Bundesminister für Wissenschaft, Verkehr und Kunst* [2003] ECR I–13187, the ECJ ruled that a worker would not necessarily be considered to be *voluntarily* unemployed upon expiry of a fixed-term contract, since the employee has little or no control over the duration of the contract he or she is offered.

[123] Case C–292/89 *R v Immigration Appeal Tribunal, ex p Antonissen* [1991] ECR I–745; Case C–138/02 *Collins* (n 18).

[124] Case C–138/02 *Collins* (n 18); Case C–258/04 *Ioannidis* (n 38).

[125] Case C–292/89 (n 123) [21].

[126] Case C–138/02 (n 18).

Collins itself, the applicant job-seeker could not rely on the fact that he had been employed as a worker seventeen years earlier to claim current entitlement to rights as a worker.

(c) THE RIGHT OF PERMANENT RESIDENCE

An important innovation in Directive 2004/38 was the introduction of the right of permanent residence for EU citizens and their families, including non-nationals, who have resided lawfully for a continuous period of five years in the host state. These provisions replace and build on the previous legislation allowing workers or their families under specific conditions to acquire a right of permanent residence in less than three years in the event of retirement, injury, or death.

Articles 16–18 indicate the conditions under which EU citizens may enjoy this right, which clearly covers EU workers and their families. Article 16(3) makes provision for temporary absences and Article 16(4) provides that the right of permanent residence may be lost only through absences of more than two consecutive years. Article 17 details the shorter qualifying period for workers and their families in the event of retirement, incapacity, or death, and Article 18 concerns the right of permanent residence of family members of EU nationals, including workers, who have satisfied the five-year legal residence requirement.

The administrative formalities are regulated by Articles 19–21. A document certifying permanent residence is to be issued as soon as possible to EU nationals who have verified their duration of residence. Non-EU national family members of workers who enjoy a derivative right of permanent residence are to be given a 'permanent residence card', which is to be automatically renewed every ten years, and the validity of the card will not be affected by absences of less than two consecutive years. Continuity of residence, for any person with the right of permanent residence, will be broken by an expulsion decision which has been enforced against the person.

(d) CONDITIONS FOR EXERCISE OF THE RIGHT TO RESIDENCE

Articles 22–26 regulate conditions under which the right of residence, including the right of permanent residence, is to be enjoyed. It is to cover the whole of the territory, and includes the right of equal treatment with nationals of the host state within the scope of the Treaty, subject to such exceptions as are provided for by the Treaty or in secondary law.[127] Article 23 guarantees the right to take up employment for EU and non-EU national family members alike, replacing the relevant provisions of Regulation 1612/68, which is discussed below.

7 REGULATION 1612/68: SUBSTANTIVE RIGHTS AND SOCIAL ADVANTAGES

(a) REGULATION 1612/68

The main focus thus far has been on the negative effects of Article 45 and associated legislation: the prohibition of discrimination and of barriers to freedom of movement, and the prohibition of entry visas or similar restrictions. The other side of the coin is that this Treaty Article confers positive, substantive rights of freedom of movement and equality of treatment on EU workers. These rights are,

[127] This would include exceptions such as 'employment in the public service', benefits such as rewards for war-time loyalty on which the ECJ has ruled, and the right to vote in national elections, which are discussed below.

to some extent, fleshed out by the secondary legislation, and in particular by Regulation 1612/68,[128] which has been amended by Directive 2004/38. The Commission has proposed a codification of Regulation 1612/68.[129]

The ECJ's approach to Regulation 1612/68 has been similar to that to other free movement legislation, in ruling that the legislation protects and facilitates the exercise of the primary rights conferred by the Treaty, rather than creating rights in itself. However, although the principle of equal treatment, which is now also expressly contained in Article 24 of Directive 2004/38, forms the backbone of the legislation, its degree of detail and specificity goes beyond what is expressed in the Treaty, and requires the Member States to ensure that Union workers enjoy a wide range of the substantive benefits available to nationals. In particular, the Regulation covers the families of EU workers, which are not mentioned in the Treaty chapter.

There are three titles within Part I of the Regulation: Title I (Articles 1–6) on eligibility for employment, Title II (Articles 7–9) on equality of treatment within employment, and Title III (formerly Articles 10–12, but Articles 10–11 have been repealed and replaced by Directive 2000/34) on workers' families. Part II of the Regulation contains detailed provisions which require cooperation amongst the relevant employment agencies of the Member States, and between the Member States' agencies, the Commission, and the European Coordination Office, on applications for employment and the clearance of vacancies. Part III of the Regulation established an Advisory Committee and a Technical Committee made up of Member States' representatives, to ensure close cooperation on matters concerning free movement of workers and employment. Parts II and III of the Regulation, which were amended several times over the years, have attracted comparatively little legal attention. Yet they may be very significant for a worker seeking to move to another Member State to find employment. The Member States' authorities are required to provide information on vacancies, working conditions, and the national labour market, and to cooperate with the Commission in conducting studies on various matters.

However, it is Part I of Regulation 1612/68 which has been the subject of most comment and litigation. Article 1 sets out the right of Member State nationals to take up employment in another Member State under the same conditions as its nationals, and Article 2 prohibits discrimination against such workers or employees in concluding and performing contracts of employment. Articles 3 and 4 prohibit certain directly or indirectly discriminatory administrative practices, such as reserving a quota of posts for national workers, restricting advertising or applications, or setting special recruitment or registration procedures for nationals of other Member States, but with an exception for genuine linguistic requirements. Article 5 guarantees the same assistance from employment offices to non-nationals as well as to nationals, and Article 6 prohibits discriminatory vocational or medical criteria for recruitment and appointment. Article 7 fleshes out Article 45(2) of the Treaty by providing for the same social and tax advantages for nationals and non-nationals, for equal access to vocational training, and declares void any discriminatory provisions of collective or individual employment agreements. Article 8 provides for equality of trade-union rights with nationals,[130] and Article 9 for the same access to all rights and benefits in matters of housing.

Prior to the adoption of Directive 2004/38, Article 10 of the Regulation set out the family members who had the right to install themselves with a worker who was employed in another Member State. These were the spouse and their descendants, who were either under 21 or dependent,[131] and

[128] [1968] OJ L257/2, [1968] OJ Spec Ed 475.

[129] Proposal for a Regulation of the European Parliament and of the Council on freedom of movement of workers within the Union, COM(2010)204 final.

[130] Case C–213/90 *ASTI* (n 94); Case C–118/92 *Commission v Luxembourg* [1994] ECR I–1891; Case C–465/01 *Commission v Austria* [2004] ECR I–8291.

[131] The notion of dependency in Art 10 includes a member of the family who is in fact supported by the worker, whatever the reason for the support: Case 316/85 *Lebon* (n 35).

dependent relatives in the ascending line of the worker and spouse.[132] This group has now been extended by Article 2(2) of Directive 2004/38 to include, along with spouses, a partner with whom an EU citizen has a registered partnership under the national legislation of a Member State, if the host Member State treats registered partnerships as equivalent to marriage. Similarly, the under-21 or dependent children of a registered partner and the dependent direct relatives in the ascending line of the registered partner are also now included by Article 2(2).

Article 3 of Directive 2004/38, extending the previous provision in Article 10(2) of Regulation 1612/68, requires Member States to 'facilitate entry and residence' for other family members whatever their nationality, who were, in the state of origin, dependants or members of the household of the EU citizen, in this case the worker. The two innovations introduced by Directive 2004/38 to this provision are that Member States must also facilitate the admission of (i) any family member where serious health issues strictly require personal care of that family member by the EU citizen, and (ii) the partner with whom the Union citizen has a durable relationship, duly attested. Article 3 provides that the obligation of the host state is to 'undertake an extensive examination of the personal circumstances' and to provide a justification for any denial of entry or residence to such persons. The provisions of Directive 2004/38 governing registered partners, and this second-tier category of partners in a 'durable relationship', represent the cautious outcome of a heated legislative debate concerning the definition of family and the need to move beyond traditional definitions by conferring rights also on same-sex and non-marital partners.

Article 11 of Regulation 1612/68, which provided that the spouse and children mentioned in Article 10 had the right to take up activity as employed persons in the host Member State, has been superseded by Article 23 of Directive 2004/38, discussed above, which grants this right to *all* family members covered by the Directive, whatever their nationality.[133] Moreover, Article 24 provides a new explicit equal treatment guarantee for all EU nationals and their family members who enjoy the right of residence, which clearly includes workers and their families. Article 12 of Regulation 1612/68, which has been updated by Directive 2004/38, in part to reflect ECJ case law on the subject, provides for equal access for the children of a resident worker to the state's educational courses.

Regulation 1612/68 provoked a good deal of litigation. Indeed, Article 7 has probably been the most fruitful provision for workers and their families, raising interesting questions about when, if at all, Member States are entitled to treat their own nationals more favourably than other EU nationals. Clearly, there are some advantages enjoyed by citizens of a state not available to others, for example the right to vote in national elections. The ECJ's evolving interpretation of this Article illustrates how the initial conferral of limited rights on economic actors has evolved into something more substantial, and this is reflected in the new Article 24 of Directive 2004/38, which extends the general equal treatment principle, subject to the exceptions provided for in the Treaty and secondary legislation, to all lawfully resident EU nationals and their families.

(B) ARTICLE 7(2) OF REGULATION 1612/68

Initially in *Michel S*, the Court read Article 7(2) in a limited way, ruling that it concerned only benefits connected with employment.[134] Shortly afterwards, however, the ECJ departed from this restrictive interpretation and ruled that Article 7(2) should be read so as to include all social and tax advantages,

[132] Case C–1/05 *Jia* (n 115).

[133] Art 11 of Reg 1612/68 was interpreted by the ECJ to mean that the non-EU national spouse of an EU national migrant worker in a Member State had the right to work only in the Member State in which the spouse was employed: Case C–10/05 *Mattern* (n 27).

[134] Case 76/72 *Michel S v Fonds National de Reclassement Handicapés* [1973] ECR 457.

whether or not attached to the contract of employment,[135] that it applied not just to workers but also to surviving family members of a deceased worker, and that although Article 7 refers only to advantages for workers, it covers any advantage to a family member which provides an indirect advantage to the worker.[136] The rationale for the ECJ's broad interpretation was, at its most fundamental, to ensure that nationals and workers from other Member States, including their families, were treated equally. The Court was not willing to tolerate an EU in which migrant workers were treated as second-class citizens in the Member States where they worked. This would not only act as a disincentive to free movement, but was also fundamentally at odds with the very *raison d'être* of the EU. Thus, for example, in *Reina*, an interest-free 'childbirth loan' granted under German law to German nationals in order to stimulate the birth rate of the population was held to be a social advantage within Article 7(2).[137] An Italian couple in Germany, one of whom was a worker, must be eligible for the loan, despite the argument made by the defendant bank that, being principally a matter of demographic policy, such a discretionary loan fell within the area of political rights linked to nationality. The Court however ruled that the loan was a social advantage since its main aim was to alleviate the financial burden on low-income families, even if was also a part of national demographic policy.

The limits to the rights which may be claimed by a worker under Article 7(2) were addressed in the case of *Even*, concerning preferential retirement-pension treatment given in Belgium to nationals who were in receipt of a Second World War service invalidity pension granted by an Allied nation.

Case 207/78 **Ministère Public v Even and ONPTS**
[1979] ECR 2019

THE ECJ

22. It follows from all its provisions and from the objective pursued that the advantages which this regulation extends to workers who are nationals of other Member States are all those which, whether or not linked to a contract of employment, are generally granted to national workers primarily because of their objective status as workers or by virtue of the mere fact of their residence on the national territory and the extension of which to workers who are nationals of other Member States therefore seems suitable to facilitate their mobility within the Community.

23. ...The main reason for a benefit such as that granted by the Belgian national legislation in question to certain categories of national workers is the services which those in receipt of the benefit have rendered in wartime to their own country and its essential objective is to give those nationals an advantage by reason of the hardships suffered for that country.

24. Such a benefit, which is based on a scheme of national recognition, cannot therefore be considered as an advantage granted to a national worker by reason primarily of his status of worker or resident on the national territory and for that reason does not fulfil the essential characteristics of the 'social advantages' referred to in Article 7(2) of Regulation No 1612/68.

Similarly in *de Vos* the ECJ ruled that the statutory obligation on an employer to continue paying pension insurance contributions on behalf of workers who were absent on military service was not a 'social advantage' to the worker within Article 7(2), since it was an advantage provided by the state as

[135] Case 32/75 *Cristini v SNCF* [1975] ECR 1085, [13].

[136] Case 63/76 *Inzirillo* [1976] ECR 2057; Case 94/84 *Deak* [1985] ECR 1873; Case 152/82 *Forcheri v Belgium* [1983] ECR 2323.

[137] Case 65/81 *Reina v Landeskreditbank Baden-Württemberg* [1982] ECR 33; Case C–111/91 *Commission v Luxembourg* [1993] ECR I–817; Case C–237/94 *O'Flynn* (n 48); Case C–212/05 *Hartmann v Freistaat Bayern* [2007] ECR I–6303; Case C–213/05 *Geven v Land Nordrhein-Westfalen* [2007] ECR I–6347.

partial compensation for the obligation to perform military service, rather than an advantage granted to workers by virtue of the fact of their residence in the Member State.[138]

By comparison, in *Ugliola*,[139] which concerned the taking into account of military service in calculating seniority at work, the Court found that there was impermissible discrimination under Article 7(2). The difference between the benefit which the employer was required to provide in *Ugliola* and that in *de Vos* is rather difficult to discern, since each was concerned with ensuring that workers who were away on military service would not be disadvantaged as a result. However, the ECJ seemed to treat the obligation to protect a worker's seniority and security of tenure as a condition of employment imposed by the state on employers in *Ugliola*, whereas the obligation on employers to continue paying pension contributions in *de Vos* was treated as part of the state's mechanism for compensating those undergoing military service rather than as being linked to the employment contract.

(c) ARTICLE 7(3) OF REGULATION 1612/68 AND EDUCATIONAL RIGHTS FOR WORKERS

Article 7(3) provides that EU workers shall 'by virtue of the same right and under the same conditions as national workers, have access to training in vocational schools and retraining centres'. The Article has been held to confer equal rights of access for non-national workers to all the advantages, grants, and facilities available to nationals.

It was restrictively interpreted by the ECJ in *Lair*, ruling that universities were not 'vocational schools' since the concept of a vocational school referred 'exclusively to institutions which provide only instruction either alternating with or closely linked to an occupational activity, particularly during apprenticeship'.[140] The ECJ however went on to hold that workers could also invoke the 'social advantages' provision of Article 7(2) to claim entitlement to any advantage available to improve their professional qualifications and social advancement, such as a maintenance grant in an educational institution not covered by Article 7(3).[141] Nonetheless, the Court imposed other limits on the ability of workers to invoke Article 7(2) by ruling that, although they did not have to be in the employment relationship just before or during the course of study, and although a fixed minimum period of employment could not be required by a state,[142] there must be some continuity or link between the previous work and the studies in question.[143] The one exception permitted was where a worker involuntarily became unemployed and was 'obliged by conditions on the job market to undertake occupational retraining in another field of activity'.[144] This case law is confirmed by Article 7(3)(d) of Directive 2004/38.

The likely reason for the limitations imposed by the ECJ on Article 7(2) and (3) is that the status of worker carries with it a substantial range of social and other benefits, and Member States wish to restrict those claiming such benefits to 'genuine' workers. If someone gives up work to pursue education or training, ceasing to be economically active, the states clearly fear that this could enable migrants to gain generous educational benefits after a short and purely instrumental period of employment. The Court also made clear in *Brown* that not only must there be a link between the

[143] Case 39/86 *Lair* (n 140) [37].

[144] Ibid.

previous employment and the subsequent studies, but the employment must not be 'ancillary' to the main purpose of pursuing a course of study.[145]

In *Ninni-Orasche*, however, the ECJ ruled that the conduct of a person who took up short-term employment as a waitress only several years after entering the host Member State, and who shortly after finishing that employment obtained a diploma entitling her to enrol at university in that state, was irrelevant to her status as worker or to the question whether the work was 'ancillary'.[146] The ECJ similarly, echoing its rulings in *Akrich*[147] and *Chen*[148] in which it dismissed the allegations of abuse of rights, ruled that there was no such thing as 'abusively creating' the situation where she became a worker for the purposes of EU law.[149] However, the Court also ruled that, while the fact that the fixed-term contract she had accepted had come to an end did not necessarily make her 'voluntarily unemployed', factors such as the short-term nature of the job and the fact that she obtained the diploma entitling her to enroll at university immediately afterwards might be relevant to the question whether she took up employment with the sole aim of benefiting from the system of student assistance in the host state.

Finally, there is now in Article 35 of Directive 2004/38 a novel exception permitting Member States to refuse or withdraw rights under the Directive 'in the case of abuse of rights or fraud'. The Court's case law so far has not however confirmed any example of abuse or fraud, other than the case of a sham marriage entered for the purpose of gaining EU rights.

(D) ARTICLE 12 OF REGULATION 1612/68: EDUCATIONAL RIGHTS FOR CHILDREN

Article 12 provides that 'the children of a national of a Member State, who is or has been employed in the territory of another Member State, shall be admitted to courses of general education, apprenticeship and vocational training under the same conditions as the nationals of that State, if those children reside in its territory'. Member States are to encourage 'steps allowing such children to follow the above mentioned courses under the best conditions'.

We saw in *Michel S*[150] that the ECJ interpreted Article 7(2) narrowly, but in the same case it interpreted Article 12 broadly, so that a benefit for disabled nationals was included in Article 12 on access to education for the children of workers.[151] This expansive reading was continued in *Casagrande*,[152] where the ECJ ruled that Article 12 applied not just to admission to courses but also to any 'general measures intended to facilitate educational attendance', including an educational grant. Thus Article 12 places the children of EU workers residing in a Member State in the same position as the children of nationals of that state so far as education is concerned, which means that they have more generous educational rights than their EU worker-parents. It has been held to require that, where grants are available to the children of nationals to study abroad, these must also be made available to the children of migrant EU workers, even if the studies abroad are to be in the Member State of the child's nationality.[153]

In *Gaal*, the ECJ ruled that the term children in Article 12 was wider than that in Article 10, so that Article 12 conferred educational rights on children who were over 21 and non-dependent, even

[145] Case 197/86 (n 30).

[152] Case 9/74 *Casagrande v Landeshauptstadt München* [1974] ECR 773.
[153] Case C–308/89 *Di Leo v Land Berlin* [1990] ECR I–4185.

though they were not covered by Article 10.[154] The ECJ held that the principle in Article 12 required the children of a migrant worker to be able to continue studies in order to complete their education successfully, so long as the children had lived with a parent in the Member State at a time when that parent resided there as a worker and, presumably, although the ECJ does not actually say this, at a time when the child was either dependent or under 21.

In *Echternach and Moritz*, the ECJ ruled that Article 12 covers the child's right to educational assistance even where the working parents have returned to their state of nationality.[155] While the rationale given in *Echternach* was that the child in question was obliged by reason of the non-compatibility of educational systems to remain and to complete the education in the host state, the ECJ moved beyond this in *Baumbast and R*, ruling that it would offend against both the letter and the spirit of Article 12 to limit the rights of children to remain in the host state to complete their education only to situations where they could not complete it in their Member State of origin.[156] The Court continued its expansive ruling in *Baumbast* by declaring that the fact that the parents of the children concerned had meanwhile divorced, the fact that only one parent was a citizen of the Union and that parent had since ceased to be a migrant worker in the host Member State, and the fact that the children were not themselves citizens of the Union were all irrelevant to the enjoyment of the rights under Article 12.[157] It is moreover clear from *Teixeira*[158] that the right of the primary carer to look after the child is derived directly from Article 12 and is not dependent on satisfying the residence conditions in Directive 2004/38.

This case law is now confirmed by Article 12(3) of Directive 2004/38, which also confirms the right of the children, and the right of residence of the carer-parent, to remain and complete their education after the death of the worker-parent. However, in a situation where the worker has left the host state and returned to the Member State of origin in which her children also live, EU law does not confer any right to have her children's studies financed by the former host state under the same conditions as those applying to nationals.[159]

(E) RIGHTS OF FAMILIES AS PARASITIC ON THE WORKERS' RIGHTS

Although the interpretation of 'social advantages' in Article 7 is broad, it is only workers and the family members covered by Directive 2004/38, formerly by Article 10 of Regulation 1612/68, who may avail themselves of them. In *Lebon*, the ECJ ruled that once the child of a worker reached 21 and was no longer dependent on the worker,[160] benefits to that child could not be construed as an advantage to the worker.[161] We have seen moreover how lawfully resident job-seekers are entitled under EU law only to those advantages which are specifically made available for job-seekers nationally.[162]

[154] Case C–7/94 *Gaal*, (n 151).
[155] Cases 389 and 390/87 *Echternach and Moritz* [1989] ECR 723.
[156] Case C–413/99 *Baumbast and R v Secretary of State for the Home Department* [2002] ECR I–7091.
[157] Ibid [56]–[63].
[158] Case C–480/08 *Teixeira v London Borough of Lambeth and Secretary of State for the Home Department*, 23 Feb 2010; Case C–310/08 *London Borough of Harrow v Nimco Hassan Ibrahim and Secretary of State for the Home Department*, 23 Feb 2010; P Starup and M Elsmor, Note (2010) 35 ELRev 571.
[159] Case C–33/99 *Fahmi and Cerdeiro-Pinedo Amado* [2001] ECR I–2415.
[160] Case C–1/05 *Jia* (n 115).
[161] Case 316/85 (n 35); Case C–243/91 *Belgium v Taghavi* [1992] ECR I–4401; Case C–33/99 *Fahmi* (n 159).
[162] Case C–138/02 *Collins* (n 18); Case C–258/04 *Ioannidis* (n 38).

The creative interpretation given by the ECJ to Article 7(2) is evident also in *Reed*, where the ECJ ruled that the possibility for a migrant worker to have his unmarried companion reside with him could constitute a social advantage under Article 7(2), where the host Member State treated stable companions as akin to spouses.[163] This was so even though Reed's companion would not have been covered by Article 10 of the Regulation at the time, since it covered only marital spouses. Since the case was decided, as we have seen, Directive 2004/38 has included registered partners, in states which recognize the status of registered partnerships, within the protected family, and also requires Member States generally to facilitate the admission of companions in a 'durable relationship'.

The 2004 Directive also clarifies a question which arose in *Diatta*[164] and *Singh*[165] concerning the status of a spouse, and in particular a spouse who lacks EU nationality, under Regulation 1612/68. The ECJ in those cases had indicated that, even where the spouses were separated or where a decree *nisi* of divorce had been granted, the non-working spouse did not lose the right of residence while the marriage was still formally in existence and had not actually been dissolved. The Court in *Baumbast* also ruled that a non-EU national spouse could, even after divorce, continue residing in the host Member State under EU law where the children, whether or not they had EU nationality, were exercising their educational rights under Article 12 of the Regulation and the divorced spouse was their primary carer.[166] Moreover in *Eind*[167] the ECJ ruled that a citizen is less likely to travel if he believes that he will not be able to return later to his home country with his family. This is so even if the members of the EU citizen's family included a third country national who did not have a right to reside in his home country when he initially left, and it was not material in this respect that the EU national returning home did not intend to engage in economic activity.

Article 13(1) of Directive 2004/38 now provides that even after divorce, annulment of marriage, or termination of a registered partnership, the right of residence of the family members who are EU nationals will not be affected. In the case of non-EU national family members, Article 13(2) provides that the right of residence will not be lost where (i) the marriage or registered partnership has lasted at least three years including one year in the host Member State; or (ii) where the spouse who is not an EU national retains custody of the EU citizen's children; or (iii) where it is warranted by particularly difficult circumstances such as the applicant having been a victim of domestic violence during the marriage/partnership; or (iv) where the non-EU national spouse or partner has the right of access to a minor child and where the court has ruled that such access must be in the host Member State, for as long as required.

Article 13 provides that such family members will retain the right of residence on an exclusively personal basis, and that if they are to go on to qualify for the right of permanent residence they must show that they are themselves workers or self-employed, or have sufficient resources to avoid becoming a burden on the host state. Article 35 of Directive 2004/38 makes clear, however, that a spouse will not gain any rights of residence or social advantages if the marriage is merely a marriage of convenience or a 'sham'.[168]

(F) FAMILY MEMBERS IN AN INTERNAL SITUATION

The ECJ's approach to the so-called 'wholly internal situation' has been the subject of considerable academic criticism.[169] In *Saunders*[170] the ECJ ruled that a national could not rely on Article 45 in his or her own Member State to challenge a restriction on freedom of movement, since there was no factor connecting the situation with Union law. The impact was harshly illustrated in *Morson and Jhanjan*, where it was held that two Dutch nationals working in the Netherlands had no right to bring their parents, of Surinamese nationality, into the country to reside with them.[171] Had they been nationals of any other Member State working in the Netherlands, they would have been so entitled under Article 10 of Regulation 1612/68, now Article 2 of Directive 2004/38. However, because they were nationals working in their own Member State 'who had never exercised the right to freedom of movement within the Community', they had no rights under Community law.[172]

This was confirmed in *Uecker and Jacquet*, despite the referring German court's invitation to the ECJ to depart from its previous position.[173] The case concerned two non-EC nationals who came to Germany to live with their spouses, both of whom were German nationals residing and working in Germany. They invoked Article 7 of Regulation 1612/68 to claim equal treatment with German nationals in their employment, but the ECJ reiterated its stance on wholly internal situations, despite the national court's suggestion that the sort of reverse discrimination brought about by that stance was in conflict with 'the fundamental principle of a Community moving towards European Union'.[174]

In *Singh*, however, the situation was somewhat different. An Indian national had married a British national, and had travelled with her to Germany where they had both worked for some years before returning to the UK. The UK argued that the British spouse's right to re-enter the UK derived from national law and not from EU law. However, the ECJ clearly considered that the period of working activity in another Member State made all the difference, and enabled Singh now to claim rights as the spouse of a Community worker.

Case C–370/90 **R v Immigration Appeal Tribunal and Surinder Singh, ex p Secretary of State for the Home Department**
[1992] ECR I–4265

19. A national of a Member State might be deterred from leaving his country of origin in order to pursue an activity as an employed or self-employed person as envisaged by the Treaty in the territory of another Member State if, on returning to the Member State of which he is a national in order to pursue an activity there as an employed or self-employed person, the conditions of his entry and residence were not at least equivalent to those which he would enjoy under the Treaty or secondary law in the territory of another Member State.

> 20. He would in particular be deterred from so doing if his spouse and children were not also permitted to enter and reside in the territory of his Member State of origin under conditions at least equivalent to those granted them by Community law in the territory of another Member State.

The Court subsequently confirmed this stance in *Akrich*, in which it rejected the suggestion that there was any 'abuse of rights' involved where a couple moved on a temporary basis to work in another Member State in order to avoid the 'internal situation' problem and to acquire rights for a non-EU national in the spouse's Member State of origin.[175] It was moreover made clear in *Metock* that Articles 2 and 3 of Directive 2004/38 applied to a national of a non-member country who was the spouse of a Union citizen residing in a Member State the nationality of which he did not possess, and who accompanied or joined that Union citizen, irrespective of when and where their marriage took place and of how the national of a non-member country entered the host Member State.[176]

8 DIRECTIVE 2004/38: PUBLIC POLICY, SECURITY, AND HEALTH RESTRICTIONS

(A) THREE LEVELS OF PROTECTION

Articles 27–33 of Directive 2004/38 govern the restrictions on the right of entry and residence which Member States may impose on grounds of public policy, security, or health. These provisions repeal and replace the previous Directive 64/221, and incorporate much of the relevant jurisprudence of the Court of Justice.

An innovations of Directive 2004/38 was the introduction of three different levels of protection against expulsion on these grounds: (i) a general level of protection for all individuals covered by EU law; (ii) an enhanced level of protection for individuals who have already gained the right of permanent residence on the territory of a Member State; and (iii) a super-enhanced level of protection for minors or for those who have resided for ten years in a host state. The Directive also simplifies the previous requirements of Directive 64/221 by making access to judicial and administrative redress procedures compulsory, and by eliminating references to comparability with national procedures.

(B) ARTICLE 27: GENERAL PRINCIPLES

Article 27(2) begins by setting out the general principles governing the exercise of the exceptions, specifying that all measures adopted on grounds of public policy or security shall comply with the principle of proportionality and shall be based exclusively on the personal conduct of the individual concerned. The Directive makes clear, as did its predecessor, that the public policy, security, and health exceptions cannot be invoked to serve economic ends, and that past criminal convictions are not in themselves grounds for taking such measures. This provision was earlier interpreted in *Santillo* to mean that such convictions may be relied on as a basis for expulsion only where the past conviction in some way provides evidence of a present threat,[177] and that the threat must be assessed by the Member State at the time of the decision ordering expulsion.[178]

[175] Case C–109/01 *Akrich* (n 113) [55]–[56].

[176] Case C–127/08 *Metock* (n 70) [81]–[89].

[177] The ECJ in Case 30/77 *Bouchereau* [1977] ECR 1999 also suggested that past conduct alone, rather than the likelihood of future conduct, might be sufficient to indicate that someone is a *present* threat to public policy, but it is not easy to imagine what this might be.

[178] Case 131/79 *Santillo* [1980] ECR 1585; Case C–441/02 *Commission v Germany* [2006] ECR I–3449.

Article 27(2) goes on to incorporate the case law of the ECJ in *Bouchereau*,[179] providing that the personal conduct of the individual must represent a 'genuine, present, and sufficiently serious threat affecting one of the fundamental interests of society'. It further stipulates, following ECJ case law, that general preventative measures, or justifications isolated from the particular facts of the case, are unacceptable.[180] *Calfa* in particular indicates that automatic expulsion for commission of a particular offence, without any consideration of whether any specific threat was posed by the individual in question, is prohibited.[181]

Article 27(3) sets a time limit after entry into the host Member State for the latter to seek, and for the Member State of origin to provide, information on an EU national's police record, and stipulates that such information shall not be sought on a routine basis. Article 27(4) provides that upon expulsion, the Member State of origin must re-admit the person in question.

Member States nonetheless retain discretion as regards the public policy exception (and, though perhaps to a lesser extent, the public security exception) since 'the particular circumstances justifying recourse to the concept of public policy may vary from one country to another and from one period to another',[182] or, as the ECJ phrased it more recently, no 'uniform code of values' is imposed by EU law.[183]

(c) ARTICLE 28: EXPULSION

There is a significant body of case law derived from Directive 64/221 concerning the circumstances in which Member States may expel EU nationals or their family members on public policy or security grounds.

In *Van Duyn*, the ECJ ruled that a Member State need not criminalize an organization the activities of which it considers to be socially harmful, in this case the Church of Scientology, in order to justify taking restrictive action against non-national members of the organization on grounds of public policy and security.[184] The case was controversial because it appeared to enable a state to take repressive measures against an EU migrant for conduct that did not give rise to any restriction against nationals of the host state.

Later cases emphasized the need for some kind of comparability, if not exactly equality, in the treatment of nationals and non-nationals as far as such alleged threats to public policy and security were concerned. In *Adoui and Cornuaille*,[185] the ECJ ruled that a Member State may not expel a national of another Member State from its territory or refuse entry by reason of conduct, in this case suspected prostitution, which, when attributable to its own nationals, did not give rise to measures intended to combat such conduct. Similarly in *Rutili*, the ECJ ruled that partial measures of territorial restriction, short of expulsion, could be imposed on EU nationals for reasons of public policy or security only to the same extent that such measures could be imposed against nationals.[186] In *Olazabal*[187] the ECJ ruled that it was not necessary for identical measures to be taken against nationals

and non-nationals,[188] and that a territorial restriction could be imposed on an EU migrant worker in circumstances in which it could not be imposed on a national. It however also ruled that a Member State could not adopt measures against a national of another Member State by reason of conduct which, when engaged in by nationals of the first Member State, did not give rise to punitive measures or other genuine and effective measures to combat that conduct.

The substantive and procedural protections for individuals subject to an expulsion order are now set out in Article 28 of Directive 2004/38. Article 28(1) builds on existing case law such as *Orfanopoulos*[189] and on European Court of Human Rights case law,[190] to provide that Member States must, before making an expulsion decision on public policy or security grounds, 'take account of considerations such as how long the individual concerned has resided on its territory, his/her age, state of health, family and economic situation, social and cultural integration into the host Member State and the extent of his/her links with the country of origin'. Article 28(2) sets out the enhanced level of protection for EU citizens and their families who have gained the right of permanent residence, by providing that they may be expelled only for 'serious grounds' of public policy or security. This requirement of 'serious grounds' is additional to the general requirement for all persons established in Article 27(2) that the personal conduct of an individual subject to expulsion must constitute a 'sufficiently serious threat affecting one of the fundamental interests of society'. Article 28(3) provides for an even more stringent level of protection for a minor[191] or an EU citizen and their family who have resided in the host state for the previous ten years, stipulating that an expulsion decision can be taken only 'on imperative grounds of public security'.

The following case reveals the ECJ's interpretation of Articles 27 and 28 of the Directive, and the conditions that must be satisfied for an expulsion to be lawful.

Case C–145/09 **Land Baden-Württemberg v Panagiotis Tsakouridis**
23 November 2010

THE ECJ

39. [T]he referring court seeks essentially to know whether and to what extent criminal offences in connection with dealing in narcotics as part of an organised group can be covered by the concept of 'imperative grounds of public security' [in]... Article 28(3) of Directive 2004/38, or the concept of 'serious grounds of public policy or public security' [in]... Article 28(2) of that directive.

40. It follows from the wording and scheme of Article 28 of Directive 2004/38... that by subjecting all expulsion measures in the cases referred to in Article 28(3) of that directive to the existence of 'imperative grounds' of public security, a concept which is considerably stricter than that of 'serious grounds' within the meaning of Article 28(2), the European Union legislature clearly intended to limit measures based on Article 28(3) to 'exceptional circumstances', as set out in recital 24 in the preamble to that directive.

[188] See, however, Art 22 of Dir 2004/38, which states that 'Member States may impose territorial restrictions on the right of residence and the right of permanent residence only where the same restrictions apply to their own nationals'.

[189] Cases C–482 and 493/01 (n 180); Case 36/75 *Rutili* (n 186); Case C–459/99 *MRAX* (n 111); Case C–50/06 *Commission v Netherlands* [2007] ECR I–4383.

[190] See, eg, App No 54273/00 *Boultif v Switzerland*, 2 Aug 2001, which was cited by the ECJ in Cases C–482 and 493/01 *Orfanopoulos* (n 180); App No 47160/99 *Ezzouhdi v France*, 13 Feb 2001. All ECtHR cases are available at http://cmiskp.echr.coe.int/tkp197/search.asp?skin=hudoc-en.

[191] Except if the expulsion is necessary for the best interests of the child as provided under the 1989 UN Convention on the Rights of the Child.

41. The concept of 'imperative grounds of public security' presupposes not only the existence of a threat to public security, but also that such a threat is of a particularly high degree of seriousness, as is reflected by the use of the words 'imperative reasons'.

42. It is in this context that the concept of 'public security' in Article 28(3) of Directive 2004/38 should also be interpreted.

43. As regards public security, the Court has held that this covers both a Member State's internal and its external security...

44. The Court has also held that a threat to the functioning of the institutions and essential public services and the survival of the population, as well as the risk of a serious disturbance to foreign relations or to peaceful coexistence of nations, or a risk to military interests, may affect public security...

45. It does not follow that objectives such as the fight against crime in connection with dealing in narcotics as part of an organised group are necessarily excluded from that concept.

46. Dealing in narcotics as part of an organised group is a diffuse form of crime with impressive economic and operational resources and frequently with transnational connections...

47. Since drug addiction represents a serious evil for the individual and is fraught with social and economic danger to mankind... trafficking in narcotics as part of an organised group could reach a level of intensity that might directly threaten the calm and physical security of the population as a whole or a large part of it.

48. It should be added that Article 27(2) of Directive 2004/38 emphasises that the conduct of the person concerned must represent a genuine and present threat to a fundamental interest of society or of the Member State concerned, that previous criminal convictions cannot in themselves constitute grounds for taking public policy or public security measures, and that justifications that are isolated from the particulars of the case or that rely on considerations of general prevention cannot be accepted.

49. Consequently, an expulsion measure must be based on an individual examination of the specific case (see, inter alia, Metock and Others, paragraph 74), and can be justified on imperative grounds of public security within the meaning of Article 28(3) of Directive 2004/38 only if, having regard to the exceptional seriousness of the threat, such a measure is necessary for the protection of the interests it aims to secure, provided that that objective cannot be attained by less strict means, having regard to the length of residence of the Union citizen in the host Member State and in particular to the serious negative consequences such a measure may have for Union citizens who have become genuinely integrated into the host Member State.

50. In the application of Directive 2004/38, a balance must be struck more particularly between the exceptional nature of the threat to public security as a result of the personal conduct of the person concerned, assessed if necessary at the time when the expulsion decision is to be made... by reference in particular to the possible penalties and the sentences imposed, the degree of involvement in the criminal activity, and, if appropriate, the risk of reoffending... on the one hand, and, on the other hand, the risk of compromising the social rehabilitation of the Union citizen in the State in which he has become genuinely integrated...

51. The sentence passed must be taken into account as one element in that complex of factors. A sentence of five years' imprisonment cannot lead to an expulsion decision, as provided for in national law, without the factors described in the preceding paragraph being taken into account, which is for the national court to verify.

52. In that assessment, account must be taken of the fundamental rights whose observance the Court ensures, in so far as reasons of public interest may be relied on to justify a national measure which is liable to obstruct the exercise of freedom of movement for persons only if the measure in question takes account of such rights... in particular the right to respect for private and family life as set forth in Article 7 of the Charter of Fundamental Rights of the European Union and Article 8 of the European Convention for the Protection of Human Rights and Fundamental Freedoms...

53. To assess whether the interference contemplated is proportionate to the legitimate aim pursued, in this case the protection of public security, account must be taken in particular of the nature and

> seriousness of the offence committed, the duration of residence of the person concerned in the host Member State, the period which has passed since the offence was committed and the conduct of the person concerned during that period, and the solidity of the social, cultural and family ties with the host Member State. In the case of a Union citizen who has lawfully spent most or even all of his childhood and youth in the host Member State, very good reasons would have to be put forward to justify the expulsion measure…

(D) ARTICLE 29: PUBLIC HEALTH

Article 29(1) governs the public health requirement, and tightens up the provisions of the earlier Directive 64/221 by specifying that the only diseases justifying measures restricting freedom of movement are diseases with epidemic potential as defined by the relevant instruments of the WTO, and other infectious diseases or contagious parasitic diseases if they are the subject of protection provisions applying to nationals of the host Member State. Article 29(2) sets a three-month period following arrival in the host state, after which diseases occurring cannot constitute grounds for expulsion.

Article 29(3) introduces a new provision, apparently in order to combat the practice in some Member States of carrying out medical examinations on beneficiaries of the right to residence, which stipulates that in cases where there are 'serious indications that it is necessary, Member States may, within 3 months of the date of arrival, require persons entitled to the right of residence to undergo, free of charge, a medical examination to certify that they are not suffering from any of the conditions referred to in paragraph 1'. Article 29(3) further stipulates that such medical examinations may not be required as a matter of routine.

(E) ARTICLE 30: NOTIFICATION OF DECISIONS

Article 30 deals with the notification of decisions to the persons concerned, and Article 30(1) incorporates the ruling in *Adoui and Cornuaille*[192] to provide that they must be notified in such a way that the people addressed can comprehend its content and implications. Building on the ECJ's ruling in *Rutili*,[193] Article 30(2) provides that the persons concerned are entitled to full and precise information about the grounds on which their case is based, unless it is contrary to public security to do so. Article 30(3) requires the notification to provide the person with information on how to appeal, the relevant administrative authority or court to which the appeal should be made, the time limit for appeal, and the time limit allowed for the person to leave the territory of the state. It specifies that, save in cases of urgency, the time allowed is not to be less than one month from the date of notification. This minimum period is intended to allow the person to fulfil the necessary formalities for making an appeal.

(F) ARTICLE 31: PROCEDURAL SAFEGUARDS

Article 31 builds on Article 30 by providing for procedural safeguards. It simplifies the predecessor Directive 64/221 and the complicated case law that it generated.[194] Article 31(1) provides for 'access to

[192] Cases 115 and 116/81 (n 180).

[193] Case 36/75 *Rutili* (n 186).

[194] Case 48/75 *Royer* (n 33); Case C–175/94 *Gallagher* [1995] ECR I–4253; Case 131/79 *Santillo* (n 178); Case C–357/98 *R v Secretary of State for the Home Department, ex p Yiadom* [2000] ECR I–9265; Case C–136/03 *Dorr v Sicherheitsdirektion für das Bundesland Kärnten* [2005] ECR I–4759.

judicial and, where appropriate, administrative redress procedures in the host Member State to appeal against or seek review' of an adverse decision taken on grounds of public policy, public security, or public health.

Article 31(2) is new and provides, subject to three specific exceptions, for automatic suspension of enforcement of an adverse measure until such time as a decision is taken on a person's application for an interim order to suspend the measure's enforcement.

Article 31(3) incorporates the ruling in *Adoui and Cornuaille*[195] that the judicial or administrative redress procedures must review not only the legality of the decision, but also the facts on which it is based, with a view to ensuring its proportionality in light of considerations including the human-rights criteria listed in Article 28(1).

Article 31(4), apparently based on the *Pecastaing* case,[196] provides that Member States may exclude an individual from their territory pending the redress procedure, but that they may not prevent such an individual from submitting his or her defence in person, except where such appearance may cause serious public policy or security difficulties or where the appeal concerns denial of entry to the territory.

(G) ARTICLES 32–33: DURATION OF EXCLUSION ORDERS AND EXPULSION

Article 32 deals with the duration of exclusion orders and reflects various aspects of the ruling in *Adoui and Cornuaille*,[197] as well as in *Calfa*,[198] providing that where someone has been validly excluded on public policy or security grounds they may apply to have the exclusion order lifted after a reasonable period, and no later than three years from the enforcement of the final exclusion order, by arguing that there has been a material change in the circumstances justifying their exclusion. States must decide on such applications for re-admission within six months, but the applicants have no right of entry to the territory while the application is being considered.

Article 33(1) contains an interesting new provision, which directly governs Member States' penal policies and criminal law powers, stipulating that expulsion orders may not be issued by the host state as a penalty, or as a legal consequence of a custodial sentence, other than in circumstances which fulfil the conditions set out in Articles 27–29, viz that the person's conduct constitutes a sufficiently serious threat etc. Finally, Article 33(2) provides that if an expulsion order is enforced more than two years after it was issued, the state must check that the person concerned is still a genuine threat to public policy or security and must assess whether there has been any material change in circumstances since the original order was issued.

9 FREE MOVEMENT OF WORKERS: CURRENT ASSESSMENT

According to the latest Eurostat data available for 2008, 2.3 per cent of EU citizens (11.3 million people) reside in a Member State other than the state of which they are citizens, and many more exercise this right at some point in their lives. The number of non-nationals in the EU has increased by

[195] Cases 115 and 116/81 (n 180).
[196] Case 98/79 *Pecastaing v Belgium* [1980] ECR 691.
[197] Cases 115 and 116/81 (n 180), concerning lifelong exclusion orders.
[198] Case C–348/96 (n 181).

42 per cent since 2001. According to a Eurobarometer survey, 10 per cent of people polled in the EU replied that they had lived and worked in another country at some point in the past, while 17 per cent intended to take advantage of free movement in the future.[199]

It is nonetheless still difficult to assess the overall effectiveness of the present regime embodied in Article 45 and the accompanying legislation. The Commission has noted the need for better enforcement of Regulation 1612/68[200] and better transposition of Directive 2004/38.[201] The following extract, which is based on assessment of national practice, is also of assistance in this respect.

K Groenendijk, E Guild, R Cholewinski, H Oosterom-Staples, and P Minderhoud, Annual European Report on the Free Movement of Workers 2009–2010[202]

- Few problems arise on entry of EU nationals to the territory of a Member State other than that of their nationality. While residence for three months seems to be fairly unproblematic, continued residence for job seekers raises some issues and their access to employment services is sometimes blocked by administrative hurdles relating to residence.
- The administrative treatment of EU nationals and their family members by the same authorities responsible for immigration by third country nationals appears to continue to hinder the enjoyment of rights by EU nationals. As many reports reveal, delay in the issue of documents, administrative cultures of zealous checking and suspicion are applied to EU nationals who have a prima facie right to presence on the territory and in respect of whom it is for the state authorities to prove a right to interfere with that residence. The German model where EU nationals have to report their arrival to the municipal authorities responsible for the population register in general is very appealing. It seems to result in a treatment of EU nationals and their families which is much closer to that intended by the EU legislation than other examples.
- Although disadvantageous treatment of third country national family members of EU workers is a problem only in a handful of Member States (among them Denmark, the Netherlands and the UK), the consequences for the families is most disproportionate. It appears that in too many cases these family members are treated with a certain suspicion which is not entirely consistent with the rights based approach of Directive 2004/38/EC. The fact that the CJEU has upheld the rights of third country national family members consistently and over many years is still only just permeating the national administrations of some Member States. Fortunately, this is not a problem in the majority of Member States for EU nationals though more so for their third country national family members.
- Cases of direct discrimination against EU workers in host Member States' legislation have consistently decreased . . . However, indirect discrimination and obstacles in sports are rife across the Member States. Similarly, the numbers of complaints of substandard treatment and discrimination of EU-12 workers by employers in other Member States is very worrying.

[202] 5–6, available at http://ec.europa.eu/social/main.jsp?catId=475&langId=en.

- Departure has raised substantial problems in 2009–2010—the expulsion of nationals of some Member States from France related to their ethnicity has shocked both politicians and the public in other Member States. The treatment of some ethnic minorities in the EU has drawn heavy criticism from a number of UN Human Rights rapporteurs and Committees. The Commission has now announced its intention to commence infringement proceedings against one Member State (France) on failure to transpose procedural remedies for workers and citizens and a reputable non-governmental organisation (the European Roma Rights Centre) is beginning legal proceedings against another (Denmark) on the basis of its treatment (specifically targeted expulsion) of Roma from Romania and Bulgaria.

10 CONCLUSIONS

i. The free movement of workers is of central importance to the EU, in both economic and social terms. This is reflected in the legislation which fleshes out the basic rights contained in Article 45 and in the ECJ's consistently purposive interpretation of the Treaty Articles and legislation to achieve the EU's objectives in this area.

ii. This is exemplified by the significant increase in the number of cases involving challenges to non-discriminatory national regulations. In this way, the case law on free movement of workers after the *Bosman* case is, albeit many decades later, following a similar path to that which the case law on free movement of goods took after *Dassonville*.[203]

iii. Directive 2004/38, which covers all EU citizens and not just workers and their families, has consolidated, simplified, and replaced most of the prior legislation on the subject. The Directive reflects the general approach of the ECJ in that it strengthens the substantive rights and procedural protections for migrant workers, expands slightly on the category of protected family members, and tightens up the circumstances in which Member States may derogate from or restrict free movement rights. It has also introduced a number of novel provisions, such as the right of permanent residence, and a provision allowing Member States to restrict rights in the case of abuse or fraud. Finally, the Directive also incorporates many of the ECJ's rulings concerning the relevant provisions of the prior legislation.

iv. The rights of workers and their families under EU law are very substantial, adding up to a right of equal treatment with nationals of the host Member State in almost every respect, apart from a few core areas, such as employment in the public service, rewards for loyalty during wartime, the right to vote in national elections, which reflect the special nature of the relationship between the state and its citizens.

v. The realization of these rights at national level is not however always perfect, as evidenced by the studies discussed in the course of this chapter which analysed Member States' interpretation of the public-service exception and more generally the degree of their compliance with the legal and administrative dictates of EU free movement law.

vi. The expansion of free movement law has moreover inevitably led to tensions with Member States, as exemplified by reaction to the *Metock* ruling. Control over borders and entry has always been sensitive for Member States, and legal reasoning concerning the imperatives of free movement law will not readily displace the political discomfort that some of these rulings create for the Member States.

FREEDOM OF ESTABLISHMENT AND TO PROVIDE SERVICES

1 CENTRAL ISSUES

i. In addition to the category of workers, the TFEU has two separate chapters on self-employed persons who move on a permanent or temporary basis between Member States. These are the chapters on freedom of establishment and freedom to provide services.

ii. The central principles governing freedom of establishment and the free movement of services are laid down in the TFEU and have been developed through case law. Important developments have also been brought about through secondary legislation in sectors such as insurance, broadcasting, financial services, electronic commerce, telecommunications, and other 'services of general economic interest'. However, with the exception of the two general directives mentioned in (iii), this chapter focuses on the broad constitutional principles applicable to every sector and not on the particularities of the secondary legislation in specific sectors.

iii. Two important general pieces of secondary legislation dealing with services and establishment were adopted in 2005 and 2006 respectively. In 2005, a consolidating directive on the recognition of professional qualifications replaced most of the previous general and sectoral legislation on this issue.[1] And in 2006, after a lengthy and politically heated debate, a general directive on services in the internal market was adopted.[2]

iv. Articles 49–54 TFEU (ex Articles 43–48 EC) on freedom of establishment require the removal of restrictions on the right of individuals and companies to maintain a permanent or settled place of business in a Member State. Establishment is defined as 'the actual pursuit of an economic activity through a fixed establishment in another Member State for an indefinite period'.[3]

v. Articles 56–62 TFEU (ex Articles 49–55 EC) on the free movement of services require the removal of restrictions on the provision of services between Member States, whenever a cross-border element is present. This element can result from the fact that the provider is not established in the state where the services are supplied, or that the recipient has travelled to receive services in a Member State other than that in which he or she is established. A movement of services within the scope of Articles 56–57 TFEU (ex Articles 49–50 EC) may also occur without the provider or the recipient

[2] Directive 2006/123/EC of the European Parliament and of the Council of 12 December 2006 on services in the internal market [2006] OJ L376/36.

[3] Case C–221/89 *R v Secretary of State for Transport, ex p Factortame* [1991] ECR I–3905, [20].

moving, for example, where the provision of the service takes place by telecommunication or electronically.[4]

vi. The Treaty provisions governing the free movement of services are residual, in that they apply only insofar as the provisions concerning capital,[5] persons, or goods do not apply. Nonetheless it is often difficult, in contexts such as broadcasting or telecommunications, to separate the issues concerning goods from those concerning services,[6] and several of the Treaty freedoms are often affected by a single national measure.[7]

vii. Although the principle of non-discrimination in Article 18 TFEU (ex Article 12 EC) is an important aspect of these two Treaty chapters,[8] the ECJ has ruled, just as in the case of the other internal market freedoms, that non-discriminatory obstacles are also *prima facie* caught by the relevant Treaty provisions. However, the concept of 'discriminatory measures' is not sharply defined, and the distinction between discriminatory and non-discriminatory measures is often unclear.

viii. In addition to the Treaty-based exceptions to freedom of movement on grounds of public policy, security, and health, the ECJ has ruled, just as in the cases of goods, workers, and citizens, that a range of other public-interest justifications may be invoked by Member States to restrict the free movement of services and freedom of establishment.

2 DIFFERENCES AND COMMONALITIES BETWEEN THE FREE MOVEMENT OF PERSONS, SERVICES, AND ESTABLISHMENT

(A) COMPARING THE TREATY CHAPTERS

There are several points of similarity between the various chapters on the free movement of persons and services, including also now the Treaty provisions on EU citizenship. Advocate General Mayras in *Van Binsbergen* pointed out that the principle of equal treatment on grounds of nationality underpinned the Treaty provisions on workers, services, and establishment alike.[9] They are comparable in that each requires equal treatment for persons who have *settled* in a Member State after exercising their freedom of movement,[10] the essential difference being whether they are working in an employed or a self-employed capacity.[11]

[4] See, eg, Case C–384/93 *Alpine Investments BV v Minister van Financiën* [1995] ECR I–1141; Case C–36/02 *Omega Spielhallen- und Automatenaufstellungs-GmbH v Oberbürgermeisterin der Bundesstadt Bonn* [2004] ECR I–9609.

[5] See, eg, Case C–423/98 *Albore* [2000] ECR I–5965.

[6] See, eg, Case C–390/99 *Canal Satélite Digital v Administracíon General del Estado* [2002] ECR I–607, [31]–[33]. For a case in which the ECJ treated the goods and services dimensions of a restriction on alcohol advertising separately, but reached the same conclusion in each case, see Case C–405/98 *Konsumentombudsmannen v Gourmet International Products* [2001] ECR I–1795. For fishing permits as services rather than goods see Case C–97/98 *Jägerskiöld v Gustafsson* [1999] ECR I–7319. For an early case on the relationship between goods and services see Case 155/73 *Sacchi* [1974] ECR 409.

[7] See, eg, Case C–150/04 *Commission v Denmark* [2007] ECR I–1163; Case C–522/04 *Commission v Belgium* [2007] ECR I–5701, including the Opinion of AG Stix-Hackl concerning taxation of pension benefits and insurance.

[8] Case 2/74 *Reyners v Belgium* [1974] ECR 631, [15]–[16].

[9] Case 33/74 *Van Binsbergen v Bestuur van de Bedrijfsvereniging voor de Metaalnijverheid* [1974] ECR 1299.

[10] See, eg, Case C–345/05 *Commission v Portugal* [2006] ECR I–10633; Case C–104/06 *Commission v Sweden* [2007] ECR I–671, dealing simultaneously with Arts 45 and 49 TFEU on workers and establishment, and Art 21 on citizenship.

[11] AG Mayras in Case 2/74 *Reyners* (n 8) and the ECJ in Case C–107/94 *Asscher v Staatsecretaris van Financiën* [1996] ECR I–3089; Case C–268/99 *Jany v Staatssecretaris van Justitie* [2001] ECR I–8615, [68]–[70], in the context of the EU–Poland Association Agreement.

The overlap between workers (Article 45) and temporary service providers (Article 56) can be seen in a series of cases concerning so-called 'posted workers' in which the ECJ has distinguished the two by ruling that 'workers employed by a business established in one Member State who are temporarily sent to another Member State to provide services do not, in any way, seek access to the labour market in that second State if they return to their country of origin or residence after completion of their work'.[12]

The similarities between establishment and services are evident when considering at what stage a self-employed person providing regular services into or within a Member State may be considered to be sufficiently connected with that state to be established, rather than merely providing services, there.[13] The factors which go to distinguish the temporary provision of services from the exercise of the right of establishment in a Member State were addressed by the ECJ in *Gebhard*:[14]

> 25. The concept of establishment within the meaning of the Treaty is therefore a very broad one, allowing a Community national to participate, on a stable and continuous basis, in the economic life of a Member State other than his State of origin and to profit therefrom, so contributing to economic and social interpenetration within the Community in the sphere of activities as self-employed persons (see *Reyners* para. 21).
>
> 26. In contrast, where the provider of services moves to another Member State, the provisions of the chapter on services, in particular the third paragraph of Article 60, envisage that he is to pursue his activity there on a temporary basis.
>
> 27. As the Advocate General has pointed out, the temporary nature of the activities in question has to be determined in the light, not only of the duration of the provision of the service, but also of its regularity, periodicity or continuity. The fact that the provision of services is temporary does not mean that the provider of services within the meaning of the Treaty may not equip himself with some form of infrastructure in the host Member State (including an office, chambers or consulting rooms) in so far as such infrastructure is necessary for the purposes of performing the services in question.

The crucial features of establishment are the 'stable and continuous basis' on which the economic or professional activity is carried on, and the fact that there is an established professional base within the host Member State.[15] For the provision of services, the temporary nature of the activity is to be determined by reference to its 'periodicity, continuity and regularity', and providers of services will not be deemed to be 'established' simply by virtue of the fact that they equip themselves with some form of infrastructure in the host Member State.[16] The ECJ's graduated distinction between establishment and temporary service provision has been adopted by the consolidating directive on the recognition of professional qualifications in 2005.[17]

In the past, it was suggested that Article 56 TFEU was more concerned with liberalizing the mobility of services and setting up a single market,[18] and had more in common with the Treaty provisions on free movement of goods[19] than with the Treaty provisions on workers and establishment,

[12] Case C–49/98 *Finalarte Sociedade Construçao Civil v Urlaubs- und Lohnausgleichskasse der Bauwirtschaft* [2001] ECR I–7831, [22]–[23].

[13] Case 205/84 *Commission v Germany* [1986] ECR 3755, [22]; Case 33/74 *Van Binsbergen* (n 9) [13]; Opinion of AG Jacobs in Case C–76/90 *Säger v Dennemeyer & Co Ltd* [1991] ECR I–4221.

[14] Case C–55/94 *Gebhard v Consiglio dell'Ordine degli Avvocati e Procuratori di Milano* [1995] ECR I–4165.

[15] Where a person or company establishes in a Member State to provide services to recipients there for an indefinite period, this does not fall within the Treaty provisions on freedom to provide services: Case C–70/95 *Sodemare v Regione Lombardia* [1997] ECR I–3395.

[16] Case C–215/01 *Schnitzer* [2003] ECR I–14847. Providers of services cannot be made subject to a particular type of mandatory 'employment' relationship, since that would deprive them of their self-employed status: see Case C–398/95 *SETTG v Ypourgos Ergasias* [1997] ECR I–3091; Case C–255/04 *Commission v France* [2006] ECR I–5251.

[17] Art 5(2) of Dir 2005/36 [2005] OJ L255/22, discussed below.

[18] AG Warner in Case 52/79 *Procureur du Roi v Debauve* [1980] ECR 833, 872.

[19] AG Jacobs in Case C–76/90 *Säger* (n 13) 4234–4235, and AG Gulmann in Case C–275/92 *HM Customs and Excise v Schindler* [1994] ECR I–1039, 1059; J Snell, *Goods and Services in EC Law* (Oxford University Press, 2002).

which were based primarily on the principle of non-discrimination. In recent years, however, a robust approach has been adopted to the rights of establishment (and workers) too, placing as much emphasis on liberalization and the removal of obstacles as on equal treatment, thereby bringing the law on the different freedoms closer together.[20] It will be evident from the discussion in this chapter that the gradual extension of EU rules to cover genuinely non-discriminatory restrictions on establishment and services has reached increasingly into sensitive areas of national social and economic policy, often with a deregulatory emphasis, and that many controversies have arisen as a result.

(B) ARE THE FREEDOMS HORIZONTALLY APPLICABLE?

We saw in Chapter 21 how the ECJ ruled that, unlike Article 34 TFEU on the free movement of goods, the provisions of Article 45 are binding not only on the state but also on private bodies.[21] In the field of services, the ECJ ruled in the early case of *Walrave and Koch* that the Treaty rules applied not only 'to the action of public authorities but extends likewise to rules of any other nature aimed at regulating in a collective manner gainful employment and the provision of services'.[22] It remained unclear however, even after the case of *Angonese* in the field of free movement of workers which explicitly deemed Article 45 TFEU to be applicable to private persons,[23] whether the Treaty provisions on establishment and services were equally fully horizontally applicable, in the sense of imposing legal obligations on all individuals and not just on powerful, self-regulating collective actors such as sporting organizations, which possess powers akin to public law. In *Wouters* the ECJ applied the *Walrave* ruling to a regulatory measure adopted by the Netherlands Bar Council concerning partnerships between barristers and accountants, but gave no further guidance on the applicability of the Treaty rules to purely individual private conduct.[24] The ECJ returned to this question in the famous *Laval* and *Viking* judgments,[25] where it ruled that Articles 49 and 56 TFEU were applicable to the organization of collective action by trade unions:

Case C–438/05 **International Transport Workers Federation (ITF) and Finnish Seamen's Union (FSU) v Viking Line ABP and OÜ Viking Line Eesti**
[2007] ECR I–0779

[Note Lisbon Treaty renumbering: Arts 39, 43, and 49 EC are now Arts 45, 49, and 56 TFEU]

THE ECJ

34. Since working conditions in the different Member States are governed sometimes by provisions laid down by law or regulation and sometimes by collective agreements and other acts concluded or

[20] Case C–212/97 *Centros Ltd v Erhvervs- og Selskabsstyrelsen* [1999] ECR I–1459; Case C–55/94 *Gebhard* (n 14); Case C–400/08 *Commission v Spain*, 24 Mar 2011.

[21] Case C–415/93 *Bosman* [1995] ECR I–4921, [83]–[84]; Case C–281/98 *Angonese v Cassa di Risparmio di Bolzano SpA* [2000] ECR I–4139, [32].

[22] Case 36/74 *Walrave and Koch* [1974] ECR 1405.

[23] Case C–281/98 (n 21). The employer in *Angonese* was a bank, but it might be argued that the field of free movement of workers differs from the other freedoms in that Art 7(4) of Reg 1612/68 expressly applies the Treaty rules to contracts between individual employers and employees.

[24] Case C–309/99 *Wouters et al v Algemene Raad van de Nederlandse Orde van Advocaten* [2002] ECR I–1577, [120]; Case C–411/98 *Ferlini v CHL* [2000] ECR I–8081, [50].

[25] Case C–438/05 *The International Transport Workers' Federation and The Finnish Seamen's Union v Viking Line ABP and OÜ Viking Line Eesti* [2007] ECR I–10779; Case C–341/05 *Laval un Partneri Ltd v Svenska Byggnadsarbetareförbundet and others* [2007] ECR I–11767, [98]–[100].

adopted by private persons, limiting application of the prohibitions laid down by these [Treaty] articles to acts of a public authority would risk creating inequality in its application (see, by analogy, *Walrave and Koch*, paragraph 19; *Bosman*, paragraph 84; and *Angonese*, paragraph 33).

. . . .

57 [T]he Court would point out that it is clear from its case-law that the abolition, as between Member States, of obstacles to freedom of movement for persons and freedom to provide services would be compromised if the abolition of State barriers could be neutralised by obstacles resulting from the exercise, by associations or organisations not governed by public law, of their legal autonomy.

. . .

60. In the present case, it must be borne in mind that . . . the collective action taken by FSU and ITF is aimed at the conclusion of an agreement which is meant to regulate the work of Viking's employees collectively, and, that those two trade unions are organisations which are not public law entities but exercise the legal autonomy conferred on them, inter alia, by national law.

61. It follows that Article 43 EC must be interpreted as meaning that . . . it may be relied on by a private undertaking against a trade union or an association of trade unions.

62. This interpretation is also supported by the case-law on the Treaty provisions on the free movement of goods, from which it is apparent that restrictions may be the result of actions by individuals or groups of such individuals rather than caused by the State (see Case C–265/95 *Commission* v *France*, paragraph 30, and *Schmidberger*, paragraphs 57 and 62).

63. The interpretation set out in paragraph 61 of the present judgment is also not called into question by the fact that the restriction at issue in the proceedings before the national court stems from the exercise of a right conferred by Finnish national law, such as, in this case, the right to take collective action, including the right to strike.

64. It must be added that, contrary to the claims, in particular, of ITF, it does not follow from the case-law of the Court . . . that that interpretation applies only to quasi-public organisations or to associations exercising a regulatory task and having quasi-legislative powers.

65. There is no indication in that case-law that could validly support the view that it applies only to associations or to organisations exercising a regulatory task or having quasi-legislative powers. Furthermore, it must be pointed out that, in exercising their autonomous power, pursuant to their trade union rights, to negotiate with employers or professional organisations the conditions of employment and pay of workers, trade unions participate in the drawing up of agreements seeking to regulate paid work collectively.

The case, together with the *Laval* ruling,[26] clearly states that the horizontal applicability of the Treaty provisions on establishment and services is not confined to entities exercising a regulatory task or having quasi-legislative powers. However, it is not entirely clear from the judgments just how far the horizontal applicability of the Treaty rules to 'private parties' extends, and in particular whether there is some threshold requirement as regards the scope, impact, or collective nature of private power before the Treaty rules apply. On the one hand, the reference in paragraph 62 to 'actions by individuals' in the context of free movement of goods could be taken to suggest that no collective dimension will be required, while on the other hand the emphasis in paragraph 65 on the power of trade unions to participate in the collective regulation of labour could be taken to suggest the contrary. Future rulings may reveal how far the ECJ is prepared to push the scope of the Treaty provisions on the free movement of services and establishment towards full horizontal applicability, but for now some uncertainty remains.

[26] Case C–341/05 (n 25).

(c) THE 'OFFICIAL AUTHORITY' EXCEPTION

Article 51 TFEU (ex Article 45 EC), which is extended by Article 62 TFEU to cover the chapter on services, states that the provisions of the chapter on freedom of establishment shall not apply 'so far as any given Member State is concerned, to activities which in that State are connected, even occasionally, with the exercise of official authority'. This provision has a similar role to that of the public-service derogation for workers in Article 45(4) TFEU. Advocate General Mayras in *Reyners* defined official authority as implying 'the power of enjoying the prerogatives outside the general law, privileges of official power, and powers of coercion over citizens'.[27]

The wording of Article 51 refers to those 'activities' which are connected with the use of official power, rather than to professions or vocations within which official authority might, under certain circumstances, be exercised. In *Reyners*, the ECJ was asked whether the whole of the legal profession of *avocat* was exempt from the Treaty rules.[28] According to the Luxembourg Government, the whole profession should be excepted because it was 'connected organically' with the public service of the administration of justice. The Court considered that it was possible to exclude a whole profession on the basis of Article 51 'only in cases where such activities were linked with that profession in such a way that freedom of establishment would result in imposing on the Member State concerned the obligation to allow the exercise, even occasionally, by non nationals of functions appertaining to official authority'.[29] If, however, within the framework of an independent profession, the activities connected with the exercise of official authority are separable from the professional activity in question taken as a whole, the exception allowed by Article 51 will not apply. In *Reyners* itself the professional activities of an *avocat*, involving regular and official contact and even compulsory cooperation with the courts, were held not to involve the necessary connection with the exercise of official authority, since the discretion of the judicial authority and the free exercise of judicial power were left intact.

The Court has continued to interpret the official-authority exception narrowly in response to Member States' attempts to invoke it for a wide range of professions.[30] In a recent case involving infringement proceedings against six Member States, the ECJ has been asked whether the profession of notary can be excluded from the scope of the freedom of establishment rules in Article 49.[31] The Member States concerned argued that since the core of a notary's activities consist in the power to authenticate, which entails the exercise of official authority, it falls within the scope of Article 51(1) and thereby permits the exclusion of non-nationals. While Advocate General Cruz Villalón agreed that the power of authentication is 'connected directly and specifically with the exercise of official authority' and that satisfied the conditions articulated in *Reyners* since it constitutes 'the inseparable core of the functions performed by notaries', he was unwilling to accept that this could permit the application of a nationality test. The ECJ however disagreed, and in a lengthy reasoned judgment ruled that the activities of notaries as defined in the Belgian legal system were not connected with the exercise of official authority within Article 51.[32]

[32] Ibid [81]–[124].

(D) THE PUBLIC POLICY, SECURITY, AND HEALTH EXCEPTIONS

Article 52 in the chapter on establishment and Article 62 in the chapter on services provide that the provisions of those chapters 'shall not prejudice the applicability of provisions laid down by law, regulation or administrative action providing for special treatment for foreign nationals on grounds of public policy, public security or public health'. In their application to natural persons these derogations are regulated, together with their application to other categories of EU citizen and their families, by the provisions of Directive 2004/38.[33] In their application to companies the derogations are governed by the Treaty and by the general principles of EU law,[34] and more recently by the relevant provisions of the Services Directive.[35] The general principles of EU law articulated by the ECJ include the principles of non-discrimination and of proportionality, which also govern the justification of public-interest-based restrictions on freedom of movement which have been judicially developed alongside the Treaty derogations.[36] Further, the ECJ has ruled that Article 52 does not permit a Member State to exclude an entire economic sector from the application of the principles on freedom of establishment and services.[37]

(E) LEGISLATION GOVERNING ENTRY, RESIDENCE, AND EXPULSION

As we saw in Chapter 21, Directive 2004/38 governs the terms and conditions of entry of all EU citizens and their families into a host Member State, as well as their right to remain there after having pursued an economic activity, and the conditions under which their rights may be restricted or revoked.[38] This includes self-employed persons and service providers, so that the discussion of Directive 2004/38 in Sections 6 and 8 of Chapter 21 is equally relevant here.

The provisions of the earlier legislation governing self-employed persons, Directive 73/148, which regulated rights of 'abode' and rights of temporary residence for the duration of the services, have been replaced with the simple right of residence for self-employed persons in Article 7(a) of Directive 2004/38. Further, as we shall see in Chapter 23 on citizenship, even where a self-employed person is no longer engaged in economic activity, the right of residence as an EU citizen continues unless that person has, through lack of sufficient resources, become an unreasonable burden on the host state.

3 THE RIGHT OF ESTABLISHMENT

Article 49 TFEU

Within the framework of the provisions set out below, restrictions on the freedom of establishment of nationals of a Member State in the territory of another Member State shall be prohibited. Such

[33] Ch 21, Section 8.

[34] For examples of the application of Arts 52 and 62 TFEU to companies see Case 3/88 *Commission v Italy* [1989] ECR 4035; Case 352/85 *Bond van Adverteerders v Netherlands* [1988] ECR 2085; Case C–114/97 *Commission v Spain* [1998] ECR I–6717; Case C–355/98 *Commission v Belgium* [2000] ECR I–1221. For a failed attempt see Case C–171/02 *Commission v Portugal* [2004] ECR I–5645.

[35] For further discussion see Section 6(b) below.

[36] On the role of EU law in a situation which was not covered by the Treaty's free-movement provisions, given the special geographical status of the British Channel islands, see Case C–171/96 *Pereira Roque v Governor of Jersey* [1998] ECR I–4607.

[37] Case C–496/01 *Commission v France* [2004] ECR I–2351.

[38] Dir 2004/38 replaced the previous Dir 73/148 in this respect.

prohibition shall also apply to restrictions on the setting up of agencies, branches, or subsidiaries by nationals of any Member State established in the territory of any Member State.

Freedom of establishment shall include the right to take up and pursue activities as self-employed persons and to set up and manage undertakings, in particular companies or firms within the meaning of the second paragraph of Article 54, under the conditions laid down for its own nationals by the law of the country where such establishment is effected, subject to the provisions of the chapter relating to capital.

Paragraph one requires the *abolition of restrictions* on freedom of primary and secondary establishment, whereas paragraph two provides for the right to pursue self-employed activities *on an equal footing* with the nationals of the Member State of establishment. The reference to capital acknowledges that there is a separate chapter on the free movement of capital, which has been subject to a different and more gradual regime of liberalization.[39]

Article 49 on its face appears to give rights only to persons in a Member State other than the Member State of their nationality. Secondly, it appears to prohibit discrimination, and to imply that its requirements are satisfied if the person exercising the right of establishment is treated in the same way as a national. However, we shall see that Article 49 has been given a broader reading on these two points. First, nationals may in appropriate circumstances rely on Article 49 against their own state, and secondly Article 49 prohibits not merely unequal treatment but also any unjustified obstacles to freedom of establishment.

Article 50 TFEU originally required the Council to draw up a General Programme for the abolition of restrictions on establishment (which it did in 1961[40]) and to issue directives to achieve freedom for particular activities. Article 53 now requires the European Parliament and the Council to issue directives, acting in accordance with the ordinary legislative procedure, for the mutual recognition of diplomas and other qualifications, and Article 54 places companies in the same position as natural persons for the purpose of the application of this chapter of the Treaty.

(A) THE EFFECT OF ARTICLE 49

In 1974 in *Reyners*, the ECJ ruled that Article 49 TFEU was directly effective, despite the fact that the conditions for direct effect set out in *Van Gend en Loos* were arguably not met,[41] and despite the Council's failure to adopt the necessary implementing legislation envisaged by the Treaty provisions. Such legislation had not yet been adopted at the time of *Reyners*, partly on account of the slow progress of legislation in the Council in the aftermath of the Luxembourg Accords, and partly on account of the opposition within Member States to the process of opening the professions, and in particular the legal profession, to non-nationals.[42]

Reyners, a Dutch national who had obtained his legal education in Belgium, was refused admission to the Belgian Bar solely because he lacked Belgian nationality. The ECJ ruled that, despite the Treaty requirement that directives should be adopted, Article 49 laid down a precise result which was to be achieved by the end of the transitional period, namely the requirement of non-discrimination on grounds of nationality. The fulfilment of this result had to be made easier by, but was not made dependent on, the implementation of a programme of progressive measures.[43] Thus he could invoke Article 49 directly. The ECJ acknowledged, however, that the directives had 'not lost all interest since

[39] Ch 20.

[43] Ibid [26].

they preserve an important scope in the field of measures intended to make easier the effective exercise of the right of freedom of establishment'.[44]

However, even before the relevant secondary legislation had begun to be adopted, it was argued to the ECJ that where a national restriction was based not on nationality but on the adequacy of qualifications, Article 49 could be relied on by an EU national seeking to practise a profession in another Member State. In *Thieffry*, a Belgian national who obtained a doctorate in law in Belgium and practised as an advocate in Brussels subsequently obtained French university recognition of his qualifications as equivalent to a degree in French law, and a certificate of aptitude for the profession of *avocat*.[45] He was refused admission to the training stage as an advocate at the Paris Bar on the ground that he lacked a degree in French law. According to the ECJ, since he had already obtained what was recognized in France, for both professional and academic purposes, to be an equivalent qualification, and had satisfied the necessary practical training requirements, the state authorities were not justified in refusing to admit Thieffry to the Bar solely on the ground that he did not possess a French qualification, despite the absence of EU directives in the field.[46]

In subsequent cases the ECJ went further still and ruled that Article 49 precluded the competent national authorities from simply refusing, without further explanation, to allow nationals of another Member State to practise their trade or profession on the ground that their qualification was not equivalent to the corresponding national qualification. Instead, the Treaty provisions imposed specific, positive obligations on national authorities and professional bodies to take steps to secure the free movement of workers and freedom of establishment, even in the absence of EU or national legislation providing for equivalence or for the recognition of qualifications. In *Heylens* the ECJ ruled, in the case of a Belgian football trainer working in France whose application for recognition of the equivalence of his Belgian diploma was refused by the French Ministry of Sport, that Member States were entitled, in the absence of harmonizing directives, to regulate the knowledge and qualifications necessary to pursue a particular occupation. However:

> [T]he procedure for the recognition of equivalence must enable the national authorities to assure themselves, on an objective basis, that the foreign diploma certifies that its holder has knowledge and qualifications which are, if not identical, at least equivalent to those certified by the national diploma. That assessment of the equivalence of the foreign diploma must be effected exclusively in the light of the level of knowledge and qualifications which its holder can be assumed to possess in the light of that diploma, having regard to the nature and duration of the studies and practical training which the diploma certifies that he has carried out.[47]

Further, where employment was dependent on possession of a diploma, it had to be possible for a national of a Member State to obtain judicial review of a decision of the authorities of another Member State, and to ascertain the reasons for refusing to recognize the equivalence of a diploma.

In *Vlassopoulou*, a Greek national who had obtained a Greek law degree and had practised German law for several years in Germany applied for admission to the Bar there. Her authorization to practise was rejected on the ground that she lacked the necessary qualifications because she had not passed the relevant German examinations. The ECJ began by ruling that even the non-discriminatory application of national qualification requirements could hinder the exercise of freedom of establishment:

[44] Ibid [31].
[45] Case 71/76 *Thieffry v Conseil de l'Ordre des Avocats à la Cour de Paris* [1977] ECR 765.
[46] Ibid [17]; Case 11/77 *Patrick v Ministre des Affairs Culturelles* [1977] ECR 1199.
[47] Case 222/86 *UNECTEF v Heylens* [1987] ECR 4097, [13].

> Consequently, a Member State which receives a request to admit a person to a profession to which access, under national law, depends upon the possession of a diploma or a professional qualification must take into consideration the diplomas, certificates and other evidence of qualifications which the person concerned has acquired in order to exercise the same profession in another Member State by making a comparison between the specialized knowledge and abilities certified by those diplomas and the knowledge and qualifications required by the national rules.[48]

Thus the national authorities must consider any education and training received by the holder of the diploma or certificate, and must compare the knowledge and skills acquired with those required by the domestic qualification.[49] If they are found to be equivalent, the state must recognize the qualification, and if they are not so found, the state must assess whether any knowledge or practical training the person may have acquired in the host Member State is sufficient to make up for what was lacking in the qualification.

Vlassopoulou highlights the extent to which the effectiveness of Article 49 was bolstered by the ECJ in the years following *Reyners*, where the ECJ held that in the absence of legislation only the core non-discrimination requirement of the Article was directly effective. By the time of *Vlassopoulou* it had been held that, despite the diversity of national educational and training systems and despite the lack of EU coordinating legislation, Article 49 TFEU imposed a precise obligation on national authorities to examine thoroughly the basis for the qualification held by an EU national, to inform the person concerned of the reasons if the qualification was deemed not to be equivalent, and to respect their rights in the process. The effect was that a Member State could no longer simply refuse someone entry to a profession or to practise a trade solely on the ground that he or she lacked the domestic qualification, even where there was as yet no domestic recognition of the equivalence of the foreign qualification.[50]

The approach adopted by the ECJ in *Vlassopoulou* closely reflected the provisions of Council Directive 89/48 on the mutual recognition of higher education diplomas which had been adopted around that time,[51] although not in time to be applicable in the case of *Vlassopoulou*. Directive 89/48 has since been replaced by consolidating Directive 2005/36, which embodies the same approach and the same principles.[52] Further, as we shall see, the principles articulated in the *Vlassopoulou* and *Heylens* cases continue to apply to situations which are not covered by the secondary legislation.

(B) THE SCOPE OF ARTICLE 49

(i) *Non-Discriminatory Restrictions*

It was noted above that the wording of Article 49 emphasizes the requirement of equal treatment of nationals and non-nationals. In some of its earlier case law, such as *Commission v Belgium*[53] and *Fearon*,[54] the ECJ appeared to suggest that, in the absence of discrimination, rules which restricted

the right of establishment would not violate Article 49. However, in keeping with the pattern of its case law on the free movement of goods, services, and workers, the ECJ has since moved away from the emphasis on unequal treatment.

In *Klopp*, a German lawyer who was refused admission to the Paris Bar on the sole ground that he already maintained an office as a lawyer in another Member State successfully challenged the rule under Article 49, even though the rule applied equally to nationals and non-nationals alike.[55] The ECJ ruled that Article 49 specifically guarantees the freedom to set up more than one place of work in the EU and there were less restrictive ways, given modern transport and telecommunications, of ensuring that lawyers maintain sufficient contact with their clients and the judicial authorities, and obeyed the rules of the profession.

Klopp was not of itself authority for a general proposition that even non-discriminatory rules may breach Article 49, given that Article 49 expressly guarantees the right to secondary establishment which was being denied in that case,[56] but it demonstrated that freedom of establishment requires more than equal treatment in certain circumstances. In *Wolf*,[57] *Stanton*,[58] and *Kemmler*,[59] the ECJ ruled that certain indistinctly applicable national rules on social-security exemptions for the self-employed were impermissible, because they constituted an unjustified impediment to the pursuit of occupational activities in more than one Member State, even though the rules contained no direct or indirect discrimination on grounds of nationality.[60] Similarly in cases concerning non-discriminatory registration requirements, the ECJ found a violation of Article 49 in the absence of objective justification.[61]

The *Gebhard* ruling gave the clearest indication of the Court's broad interpretation of Article 49 TFEU.[62] In this case the ECJ declared that the same principles underpin all of the Treaty provisions on freedom of movement, and stated that the provisions on goods,[63] services,[64] workers,[65] and establishment should be similarly construed. *Gebhard* concerned a German national against whom disciplinary proceedings were brought by the Milan Bar Council for pursuing a professional activity as a lawyer in Italy on a permanent basis. He had set up his chambers using the title *avvocato*, although he had not been admitted as a member of the Milan Bar and although his training, qualifications and experience had not formally been recognized in Italy. Having established that in the absence of EU rules, Member States may justifiably subject the pursuit of self-employed activities to *bona fide* rules relating to organization, ethics, qualifications, titles, etc, the ECJ continued:[66]

[65] Case C–415/93 *Bosman* (n 21), [82]–[84].

[66] Ibid [37].

> It follows, however, from the Court's case law that national measures liable to hinder or make less attractive the exercise of fundamental freedoms guaranteed by the Treaty must fulfil four conditions: they must be applied in a non-discriminatory manner; they must be justified by imperative requirements in the general interest; they must be suitable for securing the attainment of the objective which they pursue; and they must not go beyond what is necessary in order to attain it.

There is no mention in this paragraph of any requirement of discrimination, whether direct or indirect. Instead, any national rule which is liable to hinder or make less attractive the exercise of the 'fundamental' freedom of establishment (or any of the other fundamental freedoms) may violate the Treaty unless it is justified by an imperative requirement and applied in a proportionate and non-discriminatory manner.[67] Moreover while rules which create 'equally applicable' obstacles to freedom of establishment often impose a heavier burden in practice on non-nationals than on nationals,[68] and hence could be classified as indirectly discriminatory, this is not true of all such rules and some are genuinely equally applicable in law and in fact. The essence of *Gebhard*, adopting an obstacle approach rather than a discrimination approach, has been affirmed by the Court on many occasions since.[69]

A recent example is to be found in the *Commission v Spain* case concerning a Catalonian retail law involving stringent regulation of larger retail establishments (*hipermercados*), in which the ECJ ruled that:[70]

> the concept of 'restriction' for the purposes of Article 43 EC [now Art 49 TFEU] covers measures taken by a Member State which, although applicable without distinction, affect access to the market for undertakings from other Member States and thereby hinder intra-Community trade.[71]

The Commission had argued that the legislation in practice favoured typically smaller Spanish establishments and harmed operators from other Member States, who preferred larger establishments. The Court, however, following the Opinion of Advocate General Sharpston, found that the Commission had not demonstrated that the legislation had an indirectly discriminatory effect. Nonetheless, since Article 49 TFEU prohibits even non-discriminatory measures that hinder the exercise of the freedom of establishment, for example by affecting access to the market, the legislation still had to satisfy the requirements of proportionality, which it failed to do in several respects. The strict scrutiny applied by the ECJ to what was agreed to be non-discriminatory Spanish legislation here clearly illustrates the powerfully liberalizing approach adopted by the Court to the economic freedoms of the Treaty.

It should be noted, however, that the discriminatory nature of a restriction is not irrelevant, for several reasons. First, if a restriction on freedom of establishment discriminates directly on grounds of nationality, it will, without further question, fall within the scope of the Treaty prohibition. By comparison, not every non-discriminatory restriction will constitute a sufficient hindrance, by analogy

[67] See also Case C–108/96 *MacQuen* [2001] ECR I–837, [26]–[27].

[70] Case C–400/08 *Commission v Spain* (n 20).

[71] Ibid [64]. The ECJ has begun to make increasing use of this concerning phrase 'access to the market', which is to be found in the *Alpine Investments* case regarding services at (n 4). See, eg, Case C–518/06 *Commission v Italy* [2009] ECR I–3491; Case C–89/09 *Commission v France*, 16 Dec 2010; Case C–169/07 *Hartlauer Handelsgesellschaft mbH v Wiener Landesregierung and Oberösterreichische Landesregierung* [2009] ECR I–1721.

with the case law on goods[72] and on workers, as in *Graf*.[73] Secondly, it seems that, at least in certain contexts, if a restriction is directly or deliberately discriminatory, the Member State may rely for justification only on the express derogations on grounds of public policy, security, and health in Article 52 TFEU.[74] The Court's ruling in *Laval* seems to confirm this position, since it established that a Swedish law which discriminated against collective agreements concluded under the law of another state, as compared with collective agreements concluded under Swedish law, could not be justified on public interest grounds such as the creation of a climate of fair competition, but only on the limited grounds set out in Article 52 TFEU, none of which was applicable in the case.[75] By comparison, when the obstacle stems from an equally applicable rule which does not constitute deliberate discrimination, a wider and open-ended range of public-interest grounds, which are referred to *inter alia* as mandatory requirements, imperative requirements, and objective justifications, may be relied upon to justify the restrictive measure. It should be noted, however, that the internal-market case law on what constitutes discrimination, whether direct or indirect, and on what kinds of justification are available is highly confused.[76] This problem has been discussed in more detail in Chapter 19 in the context of the free movement of goods.[77]

(ii) *Reverse Discrimination and Wholly Internal Situations: When Can Nationals Rely on Article 49 in Their Own Member State?*

We noted above that the wording of the first sentence of Article 49 refers to the situation of nationals of a Member State wishing to establish themselves 'in the territory of another Member State'. A first reading of this sentence suggests that nationals setting up in a self-employed capacity in their own Member State cannot complain under Article 49 about the domestic regulation of those activities. The situation is somewhat more complex, however.

In the first place, a Member State is clearly obliged under both Article 49 and Directive 2004/38 not to restrict its own nationals who wish to *leave* the territory in order to set up an establishment in another Member State.

Secondly, it is obvious that nationals who wish to establish themselves within their own Member State may be disadvantaged if the qualifications they have obtained in another Member State are not recognized by their own state. In *Knoors,* where a Dutch national sought to practise as a plumber in the Netherlands, having obtained training and experience in Belgium, the Dutch government argued that a national could not rely in his own Member State on Article 49 to gain recognition for qualifications obtained, since he might be seeking to evade the application of legitimate national provisions. The ECJ firmly rejected this argument:[78]

[72] Cases 267 and 268/91 *Keck* (n 63) and the discussion in Ch 19.

Compare however the restrictive approach of the ECJ in the first *Auer* case, Case 136/78 *Ministère Public v Auer* [1979] ECR 437, [20]–[21], and see the later Case 271/82 *Auer* (n 61).

> 20. In fact these liberties, which are fundamental in the Community system, could not be fully realized if the Member States were in a position to refuse to grant the benefit of the provisions of Community law to those of their nationals who have taken advantage of the facilities existing in the matter of freedom of movement and establishment and who have acquired, by virtue of such facilities, the trade qualifications referred to by the Directive in a Member State other than that whose nationality they possess.
>
> . . .
>
> 24. Although it is true that the provisions of the Treaty relating to establishment and the provision of services cannot be applied to situations which are purely internal to a Member State, the position nevertheless remains that the reference in Article 52 [now Art 49 TFEU] to 'nationals of a Member State' who wish to establish themselves 'in the territory of another Member State' cannot be interpreted in such a way as to exclude from the benefit of Community law a given Member State's own nationals when the latter, owing to the fact that they have lawfully resided on the territory of another Member State and have there acquired a trade qualification which is recognized by the provisions of Community law, are, with regard to their State of origin, in a situation which may be assimilated to that of any other persons enjoying the rights and liberties guaranteed by the Treaty.

We have seen above how, in *Heylens* and *Vlassopoulou*, despite the absence of EU legislation, Member States were obliged to consider the equivalence of qualifications obtained in other Member States.[79] Where, however, unlike in *Heylens* and *Vlassopoulou*, the applicant is a national of the host Member State, concerns such as those expressed by the government in *Knoors* about a possible evasion or abuse have occasionally been raised.[80]

Now, however, a national who has obtained a qualification in another Member State and has returned to practise in his or her Member State of origin will probably be covered by the terms of Directive 2005/36 (which replaced Directive 89/48) on the recognition of professional qualifications. Further, even where Directive 2005/36 does not cover the facts of the situation, it now seems that the principles in *Heylens* and *Vlassopoulou* will be applied even when the applicant is a national of the host state.[81] Whenever a national of a Member State has obtained a qualification in another Member State and has returned to practise in the home state, it is no longer a wholly internal situation and the right of establishment in Article 49 applies.[82]

This was made evident in the case of *Koller*, in which an Austrian national, after obtaining a law degree in Austria, went to Spain and, after taking additional courses and examinations, had his degree declared equivalent to the Spanish 'Licenciado en Derecho' authorizing him to use the title '*abogado*'.[83] When he later applied for admission to the aptitude test for the profession of lawyer in Austria, his request was refused on the ground that in Spain, unlike in Austria, practical experience was not required in order to pursue the profession of a lawyer. The Austrian Admissions Board concluded that his application was designed to circumvent the requirement for five years' practical experience required by the Austrian rules. The ECJ however held that Koller fell within the scope of Directive 89/48 and that he could not be refused the option of taking an aptitude test solely on the ground that he had not completed the period of practical experience required by the 'host' state. On the contrary, the ECJ took the view that the very purpose of the aptitude test was 'to ensure that

[83] Case C–118/09 *Robert Koller*, 22 Dec 2010.

the applicant is capable of exercising the regulated profession in that Member State'.[84] Thus, so long as some 'EU element' is present and the situation is not wholly internal, individuals can rely on Article 49 in their own state.[85]

Conversely, nationals who have never exercised the freedom to move within the EU will have no EU law claim against their state. This gives rise to the curious phenomenon of 'reverse discrimination' whereby nationals of a Member State find themselves disadvantaged by comparison with other EU nationals within the same Member State. In the *Belgian Social Security* case, the Flemish Government, a federated entity of the Belgian state, had enacted a scheme of care insurance that was available only to those working and residing in either the Dutch-speaking region or the bilingual region of Brussels-Capital.[86] The ECJ ruled that this constituted a restriction under Articles 45 and 59 TFEU, since 'migrant workers, pursuing or contemplating the pursuit of employment or self-employment in one of those two regions, might be dissuaded from making use of their freedom of movement and from leaving their Member State of origin to stay in Belgium, by reason of the fact that moving to certain parts of Belgium would cause them to lose the opportunity of eligibility for the benefits which they might otherwise have claimed'.[87] The ECJ insisted that any EU national working in either of these two regions must be eligible for the scheme, regardless of where in Belgium they resided, with the exception of Belgian nationals living in the French- or German-speaking region who had never exercised their freedom to move. The Court ruled that EU law 'clearly cannot be applied to such purely internal situations'.[88] The consequence is that a Spanish national establishing herself in the French-speaking region and working in the Dutch-speaking region will be able to join the insurance scheme, while her Belgian colleague and neighbour, who has worked and lived all his life in Belgium, will not.

In *Werner*, the ECJ indicated that even if a national was resident in a Member State other than that of his nationality, so long as he maintained his place of establishment and professional practice in his own Member State, he could not rely on Article 49 to challenge tax provisions of his own state which favoured residents over non-residents.[89] By way of contrast, in *Asscher*, a Dutch national residing in Belgium who was a director of companies *both* in Belgium and in the Netherlands, and who, on account of his non-resident status and the level of his earnings outside the Netherlands, was subject within the Netherlands to a considerably higher rate of tax than residents of that state, was entitled to invoke Article 49 against his own Member State.[90] The ECJ ruled this was not an 'internal' situation because his exercise of his Treaty rights of establishment and his dual economic activities in Belgium and the Netherlands had resulted in this unfavourable tax situation. Although differential treatment of resident and non-resident taxpayers which constitutes *prima facie* discrimination under Article 49 could be justified by the state, given the possible objective differences between them, there can be no justification where such differences do not actually exist.[91]

[91] See also Case C–80/94 *Wielockx* [1995] ECR I–2493; Case C–279/93 *Finanzamt Köln-Altstadt v Schumacker* [1995] ECR I–225; Case C–324/00 *Lankhorst-Hohorst GmbH v Finanzamt Steinfurt* [2002] ECR I–11779; Case C–383/05 *Talotta v Belgium* [2007] ECR I–2555; Case C–470/04 *N v Inspecteur van de Belastingdienst Oost/kantoor Almelo* [2006]

Cases such as *Kraus* and *Asscher* indicate clearly that EU law on freedom of establishment is not only about the elimination of unequal treatment of non-nationals or the elimination of protectionism, but also entails a robust attempt to liberalize the 'single market' such that, whatever their nationality, self-employed individuals and companies can set up business in various locations within that market without encountering unnecessary obstacles.

(iii) *Are Restrictions on Social Benefits Contrary to Article 49?*

We have seen that many different national rules and provisions constitute potential obstacles to freedom of establishment under the Treaty. However, there was initially no equivalent, within the law on freedom of establishment, to Regulation 1612/68 governing the rights of workers and their families, which expressly guaranteed EU migrant workers the same social and tax advantages as were available to nationals, as well as housing and educational rights for their children. Now however, apart from the general non-discrimination clause in Article 18 TFEU and the specific non-discrimination requirement in Article 49,[92] Article 24 of Directive 2004/38 on the rights of movement and residence of EU citizens contains an umbrella equal treatment clause.

We shall see below that the denial of tax advantages to companies whose primary establishment or registered office is not within the state may also infringe Article 49.[93] Such measures, although they may not directly regulate or curb the right of establishment, nevertheless are deemed to be disadvantages for those exercising such Treaty rights.

(c) ESTABLISHMENT OF COMPANIES

Article 54 TFEU provides:

> Companies or firms formed in accordance with the law of a Member State and having their registered office, central administration or principal place of business within the Union shall, for the purposes of this Chapter, be treated in the same way as natural persons who are nationals of Member States.
>
> 'Companies or firms' means companies or firms constituted under civil or commercial law, including cooperative societies, and other legal persons governed by public or private law, save for those which are non-profit making.

Although this Article requires companies to be treated in the same way as nationals for the purposes of the Treaty provisions on freedom of establishment, this is not strictly possible, given the differences between natural and legal persons. Further, despite the many company law directives which

ECR I–7409. In the context of services see Case C–484/93 *Svensson and Gustavsson* (n 74); Case C–294/97 *Eurowings Luftverkehrs AG v Finanzamt Dortmund-Unna* [1999] ECR I–7447, and see the series of cases on corporate taxation at (n 116).

[92] For some cases in which the ECJ insisted on equality of treatment for persons exercising the right of establishment see, eg, Case 63/86 *Commission v Italy* [1988] ECR 29; Case C–337/97 *Meeusen v Hofddirectie van de Informatie Beheer Groep* [1999] ECR I–3289; Case 197/84 *Steinhauser v City of Biarritz* [1985] ECR 1819; Case 143/87 *Stanton* (n 58); Case 79/85 *Segers* [1986] ECR 2375; Case C–334/94 *Commission v France* [1996] ECR I–1307, [21]; Case C–151/96 *Commission v Ireland* [1997] ECR I–3327.

[93] Case 270/83 *Commission v France* [1986] ECR 273. On indirect disadvantages to non-established credit institutions, due to the conditions imposed on subsidies for borrowers, see Case C–484/93 *Svensson and Gustavsson* (n 74); Case C–410/96 *André Ambry* [1998] ECR I–7875 concerning restrictions imposed on travel agencies arranging security with a financial institution in another Member State to ensure that a guarantee agreement is concluded with a credit institution situated in the host Member State.

have been adopted, considerable differences in the way the various Member States regulate companies and their activities remain.

The definition of a company in Article 54 is wide, referring to 'legal persons governed by private or public law'. However, it excludes non-profit-making companies even though non-profit-making economic activities may be covered by Article 49.[94] The exclusion of non-profit-making companies can be compared with the exclusion from the scope of the Treaty of workers who are not remunerated and services which are not provided for remuneration.[95]

(i) *When is a Company 'Established' in a Member State?*

It is clear that, so long as a company is formed in accordance with the law of a Member State and has its registered office there and its principal place of business *somewhere* in the EU, it will be established in the first Member State within the meaning of the Treaty. The ECJ made it clear in *Segers* that this would hold true even if the company conducted no business of any kind in that Member State, but instead conducted its business through one of the various forms of secondary establishment, such as a subsidiary, branch, or agency, in another Member State.[96]

This was affirmed in *Centros*, where the ECJ ruled that a company was lawfully established in the UK even though it had never traded there.[97] Further, in the *Insurance Services* case, the Court held that even an office managed for a company by an independent person on a permanent basis would amount to establishment in that Member State.[98] This form of establishment would amount to a secondary establishment, since the registered office or seat of the company and its principal place of business would presumably be elsewhere in the EU. A company has a right of secondary establishment only if it already has its principal place of business or central or registered office within the EU.

(ii) *Court-Led Liberalization in the Absence of EU Harmonization*

While companies are not covered by Directive 2004/38 on citizens, (nor were they by its predecessor Directive 73/148) governing the right of natural persons to leave their Member State, the ECJ ruled in the *Daily Mail* case that companies enjoy similar rights under the Treaty.[99] However, the *Daily Mail* judgment also declared that the Treaty provisions on freedom of establishment did not give companies an unfettered right to move their registered offices or their central management and control to another Member State, whilst retaining an establishment in the first Member State. On the contrary, the Court ruled that the Member State from which the company wishes to move its registered office or central place of administration is entitled to subject the company to certain conditions. In this particular case, the UK could legitimately require a company which wished to transfer its central management and control to the Netherlands to first settle its taxes and even to wind up the company in the UK. The reason given by the Court for this was that the laws of the Member States on what constitutes the place of incorporation or the 'real seat' of the company are not harmonized, and that different

[94] Case C–70/95 *Sodemare* (n 15).

[95] The fact that a company is non-profit-making does not however mean that it is not engaged in economic activity. For an illustration of this point in a different context see Case C–382/92 *Commission v UK* [1994] ECR I–2435, [45], and see the cases on cross-border access to health care in the context of services (n 183).

[96] Case 79/85 *Segers* (n 92) [16].

[98] Case 205/84 (n 13) [21]. Compare Case C–386/04 *Centro di Musicologia Walter Stauffer v Finanzamt München für Körperschaften* [2006] ECR I–8203, [18]–[20].

[99] Case 81/87 *R v HM Treasury and Commissioners of Inland Revenue, ex p Daily Mail and General Trust PLC* [1988] ECR 5483.

Member States may legitimately have different views and different ways of regulating how a transfer of head office may be effected.[100]

The general question underlying *Daily Mail*, ie, to what extent a company can rely on Article 49 TFEU when it seeks to set up various forms of establishment in more than one Member State which have different systems of corporate regulation, given the continued absence of EU harmonization, was revisited just over ten years later in *Centros*. This time the restriction was imposed not by the state in which the company had its primary establishment (which was again the UK), but by the state in which the company sought to conduct business through a secondary establishment, which in this case was Denmark.

Case C–212/97 **Centros Ltd v Erhvervs- og Selskabsstyrelsen**
[1999] ECR I–1459

[Note Lisbon Treaty renumbering: Arts 52, 54, and 58 EEC are now Arts 49, 50, and 54 TFEU]

The facts concerned a company which was registered (and therefore had its primary establishment) in the UK, but which had never traded there. It had chosen the UK in which to register because UK law imposed no requirements on limited liability companies as to the provision for, or the paying-up of, a minimum share capital. The main purpose of establishing in the UK was to conduct business in Denmark, the minimum capital requirement laws of which were considerably stricter, through a branch. The Danish Board of Trade and Companies refused to register the branch on the ground that Centros was not in fact seeking to establish a branch in Denmark, but rather a principal establishment, while circumventing legitimate national rules including those on the paying-up of minimum capital. The Danish government argued that Centros was seeking to abuse EU rights of establishment; and secondly, following the reasoning in *Daily Mail*, the absence of harmonization of national corporate laws seemed to militate against permitting Centros to rely on Article 49 TFEU.

THE ECJ

21. Where it is the practice of a Member State, in certain circumstances, to refuse to register a branch of a company having its registered office in another Member State, the result is that companies formed in accordance with the law of that other Member State are prevented from exercising the freedom of establishment conferred on them by Articles 52 and 58 of the [EEC] Treaty.

22. Consequently, that practice constitutes an obstacle to the exercise of the freedoms guaranteed by those provisions.

. . .

24. It is true that according to the case-law of the Court a Member State is entitled to take measures designed to prevent certain of its nationals from attempting, under cover of the rights created by the Treaty, improperly to circumvent their national legislation or to prevent individuals from improperly or fraudulently taking advantage of provisions of Community law. . . .

25. However, although, in such circumstances, the national courts may, case by case, take account—on the basis of objective evidence—of abuse or fraudulent conduct on the part of the persons concerned in order, where appropriate, to deny them the benefit of the provisions of Community law on which they seek to rely, they must nevertheless assess such conduct in the light of the objectives pursued by those provisions. . . .

[100] Art 293 EC (ex Art 220 EEC) had originally recognized the need for the adoption of agreements for the mutual recognition of companies and the retention of legal personality in the event of transfer of their seat from one country to another, but the Convention on the Mutual Recognition of Companies, which was adopted pursuant to this Art in 1968, did not come into force: J Wouters, 'European Company Law: Quo Vadis?' (2000) 37 CMLRev 257.

26. In the present case, the provisions of national law, application of which the parties concerned have sought to avoid, are rules governing the formation of companies and not rules concerning the carrying on of certain trades, professions or businesses. The provisions of the Treaty on freedom of establishment are intended specifically to enable companies formed in accordance with the law of a Member State and having their registered office, central administration or principal place of business within the Community to pursue activities in other Member States through an agency, branch or subsidiary.

27. That being so, the fact that a national of a Member State who wishes to set up a company chooses to form it in the Member State whose rules of company law seem to him the least restrictive and to set up branches in other Member States cannot, in itself, constitute an abuse of the right of establishment. The right to form a company in accordance with the law of a Member State and to set up branches in other Member States is inherent in the exercise, in a single market, of the freedom of establishment guaranteed by the Treaty.

28. In this connection, the fact that company law is not completely harmonised in the Community is of little consequence. Moreover, it is always open to the Council, on the basis of the powers conferred upon it by Article 54(3)(g) of the EC Treaty, to achieve complete harmonisation.

29. In addition, it is clear from paragraph 16 of *Segers* that the fact that a company does not conduct any business in the Member State in which it has its registered office and pursues its activities only in the Member State where its branch is established is not sufficient to prove the existence of abuse or fraudulent conduct which would entitle the latter Member State to deny that company the benefit of the provisions of Community law relating to the right of establishment.

While the principles of law expressed in *Centros* were familiar principles long articulated by the ECJ in the context of freedom of establishment, their application to this factual situation and with this outcome caused considerable surprise, in particular amongst company lawyers, and generated extensive commentary. The fact that the particular manoeuvre engaged in by the company to choose its preferred regulatory environment within the EU internal market (the UK), while conducting all of its business in a different geographic part of the market (Denmark), was not caught by the 'avoidance' or 'abuse' exception was unexpected.

The ECJ ruled that, far from constituting an *abuse* of Article 49, the deliberate choice of a Member State with lenient legislative requirements concerning incorporation in order to enjoy the right of secondary establishment more freely in a Member State with stricter incorporation requirements was simply an exercise of the rights inherent in the notion of freedom of establishment.[101] Further, the absence of legislative harmonization, which the ECJ in *Daily Mail* had given as a reason for the inapplicability of Article 49 to the case, was deemed to be irrelevant in *Centros*, and even gave the Court occasion to point out the availability to Member States of the option of adopting EU harmonizing legislation in this area of company law.[102] The Court took the view that there were other options, including under existing EU corporate account and disclosure legislation, available to Member States seeking to protect creditors, to counter fraud, or to prevent unjustified corporate evasion of *legitimate* regulatory requirements, which would be less restrictive than imposing the full range of its company law requirements on a branch the primary establishment of which was lawfully in another Member State.

The case has been described as reflecting a judicial 'willingness to break down the remaining constraints to the free movement of companies in the [EU] and as 'opening the door to competition

[101] For discussion of the ECJ's similar approach to allegations of abuse in the context of the rights of citizenship, and the rights of free movement of workers, see Ch 21 and Ch 23,

[102] For a similar dismissal of the relevance, for the freedom of establishment of companies, of the fact that EU law in the field of cross-border mergers had not been harmonized see Case C–411/03 *Sevic Systems* [2005] ECR I–10805, [26]; P Behrens, Note (2006) 43 CMLRev 1669.

among national rules as an alternative approach to ensure the completion of the internal market'.[103] Others however noted that it left the ruling in *Daily Mail* for the moment untouched.[104]

Centros was followed by the *Überseering*[105] and *Inspire Art*[106] rulings which confirmed and extended the *Centros* approach. Überseering was a company incorporated in the Netherlands under Dutch law, where it had its registered office. It then sought to transfer its centre of administration to Germany, and its entire share capital was bought by German shareholders. Unlike the position of the UK in the *Daily Mail* case, the Netherlands did not seek to prevent the company from transferring its administration, or to deny the validity of its continued incorporation under Dutch law. German law, however, would not recognize the legal capacity of a company incorporated in the Netherlands, thus prohibiting it from appearing before the German courts. German law followed the 'company seat principle' rather than the 'incorporation principle' as the relevant factor of connection for a company, and since Überseering had moved its real seat from the Netherlands to Germany, German law would not recognize the company's legal capacity unless it re-incorporated again under German law.

Although the ECJ distinguished the *Daily Mail* case (where the restriction was imposed by the Member State of incorporation, the UK) on its facts, the reasoning in *Überseering* clearly moves away from the underlying broad rationale in *Daily Mail*. *Überseering* establishes that, despite the lack of harmonization of the laws governing the connecting factor for incorporation, a company which is legitimately incorporated in one Member State and which moves its centre of administration to another state cannot in those circumstances be denied recognition of its legal personality by the latter. Although objectives such as enhancing legal certainty, protecting creditors and minority investors, and legitimate fiscal requirements could in principle justify rules restricting the freedom of establishment, the German rule in *Überseering* amounted to an outright denial of freedom of establishment and was held to be disproportionate.

The case of *Inspire Art* addressed the question whether a restriction on a company's secondary establishment which is less drastic than an outright denial of the right of establishment might be compatible with Article 49.[107] Dutch legislation sought to impose regulatory requirements concerning minimum share capital and directors' liability on a company which was incorporated in the UK. Once again, while the ECJ accepted that restrictive regulations could in principle be justified in the interests of protecting creditors and investors, or ensuring an effective tax inspection system, the rules at issue were found disproportionate and unnecessary.

While these rulings did not explicitly overturn *Daily Mail*, they seemed to limit its impact and scope quite significantly. Consequently, the 2008 ruling in *Cartesio* came as something of a surprise.[108] Cartesio, a company formed under Hungarian law, wished to transfer its seat to Italy. However, Hungarian law did not allow a company incorporated in Hungary to transfer its seat abroad while continuing to be subject to Hungarian law. The national court considered that while *Daily Mail* seemed to indicate that Articles 49 and 54 TFEU do not include the right for a company to transfer its central administration to another Member State while retaining its legal personality and nationality

of origin, later case law rendered the situation unclear. Advocate General Maduro argued that Member States did not enjoy 'an absolute freedom to determine the "life and death" of companies constituted under their domestic law, irrespective of the consequences for the freedom of establishment', and took the view that the Hungarian legislation amounted to an outright negation of the freedom of establishment, which could not be justified on public interest grounds. The ECJ, however, did not follow his opinion, declaring instead that companies were creatures of national law which existed only by virtue of the national legislation which determined their incorporation and functioning:

Case C–210/06 **Cartesio Oktató és Szolgáltató bt**
[2008] ECR I–9641

[Note Lisbon Treaty renumbering: Arts 43 and 48 EC are now Arts 49 and 54 TFEU]

109. Consequently, in accordance with Article 48 EC, in the absence of a uniform Community law definition of the companies which may enjoy the right of establishment on the basis of a single connecting factor determining the national law applicable to a company, the question whether Article 43 EC applies to a company which seeks to rely on the fundamental freedom enshrined in that article—like the question whether a natural person is a national of a Member State, hence entitled to enjoy that freedom—is a preliminary matter which, as Community law now stands, can only be resolved by the applicable national law. In consequence, the question whether the company is faced with a restriction on the freedom of establishment, within the meaning of Article 43 EC, can arise only if it has been established, in the light of the conditions laid down in Article 48 EC, that the company actually has a right to that freedom.

110. Thus a Member State has the power to define both the connecting factor required of a company if it is to be regarded as incorporated under the law of that Member State and, as such, capable of enjoying the right of establishment, and that required if the company is to be able subsequently to maintain that status. That power includes the possibility for that Member State not to permit a company governed by its law to retain that status if the company intends to reorganise itself in another Member State by moving its seat to the territory of the latter, thereby breaking the connecting factor required under the national law of the Member State of incorporation.

Cartesio's confirmation of the *Daily Mail* ruling and its underlying premise was unexpected after the series of robust rulings, from *Centros* to *Inspire Art*, which had introduced a mutual recognition principle into the law on freedom of establishment. While those cases insist that a Member State must recognize the legitimacy of a company's incorporation (and primary establishment) under the law of another Member State and should not impose unnecessary restrictions on the right of secondary establishment, the ECJ in *Cartesio* on the other hand has affirmed that the basic rules as to what is necessary for incorporation in the first place remain, in the absence of EU harmonization, for the Member State of incorporation to decide.

(iii) *Restrictions on the Freedom of Establishment of Companies: Direct Taxation Rules*

Many of the cases before the ECJ have concerned restrictions or disadvantages imposed by Member States on companies, or on the employees of companies,[109] the registered offices of which were in another Member State. Other cases however have involved restrictions, particularly tax restrictions,

[109] Case 79/85 *Segers* (n 92).

imposed by states on companies the registered offices of which are within that state, but which have subsidiaries or branches in other Member States. The compatibility with EU law of tax rules which distinguish between resident and non-resident companies and subsidiaries has generated a large case law.

In *Commission v France*, the Court drew an analogy between the location of the registered office of a company and the place of residence of a natural person.[110] According to the Court 'it is their corporate seat . . . that serves as the connecting factor with the legal system of a Member State, like nationality in the case of natural persons'.[111] It ruled that discrimination in tax laws against branches or agencies in a Member State by taxing them on the same basis as companies the registered offices of which are in that state yet not giving them the same tax advantages as such companies was an infringement of Article 49. Neither the lack of harmonization of the tax laws of the different Member States nor the risk of tax avoidance by companies could justify the restriction.[112]

Nevertheless, the ECJ has accepted that a distinction based on the location of the registered office of a company or the place of residence of a natural person may, under certain conditions, be justified in an area such as tax law.[113] In *Futura*, it was permissible for a Member State to impose conditions as regards the keeping of accounts and the location where losses were incurred on a non-resident company, which had a branch but not a main establishment in the state, for the purposes of assessing liability to tax and allowable losses.[114] However, the specific restrictions imposed by Luxembourg in *Futura* were closely scrutinized for proportionality, and the accounting requirement, even in the absence of harmonized EU rules in this area, was found to be excessively restrictive. In *X Holding BV* the ECJ held that legislation preventing a parent company from forming a single tax entity with its subsidiaries in other Member States, while it could do so with resident subsidiaries, was justified by the need to safeguard the allocation of power to impose taxes between Member States.[115]

In recent years there has been a significant amount of important litigation, including the high-profile *Marks & Spencer*[116] and *Cadbury Schweppes*[117] cases and a series of other test cases,[118] to clarify

the scope and applicability of Article 49 to a range of corporate taxation laws directed at cross-border situations—governing matters such as tax credits, deductibility of losses (group relief), and taxation of dividends—as applied to companies which are established in more than one Member State. The Court has ruled that while states may in appropriate circumstances treat resident companies differently from non-resident companies, and resident companies with non-resident subsidiaries differently from resident companies with resident subsidiaries, and foreign-sourced dividends differently from domestic-sourced dividends, as far as direct taxation rules are concerned, this is always subject to the requirement of demonstrating reasonable and proportionate justification. While the Court has accepted that goals such as preventing tax avoidance or preventing companies from benefiting twice from rules governing tax relief may be legitimate objectives, it has continued to apply strict scrutiny to the national laws which claim to be necessitated by such objectives.

(iv) *Restrictions on the Freedom of Establishment of Companies: Vessel Registration Requirements*

A second issue area which has generated a sizeable body of case law on freedom of establishment is that dealing with vessel registration.[119] In *Commission v Ireland*, it was held contrary to Article 49 to require nationals of other Member States who owned a vessel registered in Ireland to establish a company in Ireland.[120] In *Factortame*, the ECJ condemned several residency and nationality requirements for the registration of fishing vessels, but permitted a Member State to stipulate as a requirement for registration that a vessel must be managed and its operations directed and controlled from within that Member State.[121]

The most important and controversial ruling to date on this issue however is the *Viking* case, which was discussed above in the context of the 'horizontal' applicability of Article 49 to trade unions.[122]

Case C–438/05 **International Transport Workers Federation and Finnish Seamen's Union v Viking Line ABP and OÜ Viking Line Eesti**
[2007] ECR I–10779

[Note Lisbon Treaty renumbering: Arts 43 and 137 EC are now Arts 49 and 153 TFEU]

Viking was a company incorporated under Finnish law, which operated the *Rosella* vessel on the route between Tallinn (Estonia) and Helsinki (Finland). The *Rosella* was running at a loss due to competition from Estonian vessels operating on the same route with lower wage costs. Under the Finnish flag, Viking was obliged—under Finnish law and the terms of a collective bargaining agreement—to pay the crew wages at the same level as those applicable in Finland. Consequently, Viking planned to reflag the *Rosella* by registering it in Estonia. FSU, the Finnish union of seamen, together with the international federation of transport workers' unions (ITF), decided to take collective action against the adoption of such a 'flag of convenience' and requested affiliated unions to refrain from entering into negotiations with Viking. Viking argued that the action by FSU and ITF was contrary to its freedom of establishment.

[119] Case C–246/89 *Commission v UK* [1991] ECR I–4585; Case C–334/94 *Commission v France* (n 92); Case C–151/96 *Commission v Ireland* (n 92); Case C–299/02 *Commission v Netherlands* [2004] ECR I–9761.

[120] Case 93/89 *Commission v Ireland* [1991] ECR I–4569.

[121] Case C–221/89 *Factortame* (n 3).

[122] Case C–438/05 *Viking Line* (n 25); P Chaumette, 'Reflagging a Vessel in the European Market and Dealing with Transnational Collective Disputes: ITF & Finnish Seamen's Union v Viking Line' (2010) 15 Ocean & Coastal LJ 1.

FSU and ITF, supported by the Danish and Swedish governments, argued that the situation did not fall within the scope of the Treaty rules.

THE ECJ

36. [C]ollective action such as that at issue in the main proceedings, which may be the trade unions' last resort to ensure the success of their claim to regulate the work of Viking's employees collectively, must be considered to be inextricably linked to the collective agreement the conclusion of which FSU is seeking.

37. It follows that collective action . . . falls, in principle, within the scope of Article 43 EC.

. . .

40. In that respect it is sufficient to point out that, even if, in the areas which fall outside the scope of the Community's competence, the Member States are still free, in principle, to lay down the conditions governing the existence and exercise of the rights in question, the fact remains that, when exercising that competence, the Member States must nevertheless comply with Community law . . .

41. Consequently, the fact that Article 137 EC does not apply to the right to strike or to the right to impose lock-outs is not such as to exclude collective action such as that at issue in the main proceedings from the application of Article 43 EC.

. . .

44. Although the right to take collective action, including the right to strike, must therefore be recognised as a fundamental right which forms an integral part of the general principles of Community law the observance of which the Court ensures, the exercise of that right may none the less be subject to certain restrictions. As is reaffirmed by Article 28 of the Charter of Fundamental Rights of the European Union, those rights are to be protected in accordance with Community law and national law and practices. In addition, as is apparent from paragraph 5 of this judgment, under Finnish law the right to strike may not be relied on, in particular, where the strike is *contra bonos mores* or is prohibited under national law or Community law.

45. In that regard, the Court has already held that the protection of fundamental rights is a legitimate interest which, in principle, justifies a restriction of the obligations imposed by Community law, even under a fundamental freedom guaranteed by the Treaty, such as the free movement of goods (see Case C–112/00 *Schmidberger* [2003] ECR I–5659, paragraph 74) or freedom to provide services (see Case C–36/02 *Omega* [2004] ECR I–9609, paragraph 35).

46. However, in *Schmidberger* and *Omega*, the Court held that the exercise of the fundamental rights at issue, that is, freedom of expression and freedom of assembly and respect for human dignity, respectively, does not fall outside the scope of the provisions of the Treaty and considered that such exercise must be reconciled with the requirements relating to rights protected under the Treaty and in accordance with the principle of proportionality (see, to that effect, *Schmidberger*, paragraph 77, and *Omega*, paragraph 36).

47. It follows from the foregoing that the fundamental nature of the right to take collective action is not such as to render Article 43 EC inapplicable to the collective action at issue in the main proceedings.

The ECJ ruled ultimately that the collective action constituted a restriction on Viking's exercise of its right to freedom of establishment in Estonia by making it less attractive or pointless to re-flag there, and that it was for the national court to determine whether the collective action might be justified as a proportionate and necessary means of protecting the rights of workers. The case has been subject to extensive critical analysis.[123]

[123] The EU's Eur-lex website shows that 79 case notes or commentaries have been published at the time of writing. For some examples see B Bercusson, 'The Trade Union Movement and the European Union: Judgment Day' (2007) 13 ELJ 279; T Novitz, 'The Right to Strike and Re-flagging in the European Union: Free Movement Provisions and Human

(D) SUMMARY

i. Article 49 may be invoked by a national in his or her Member State of establishment so long as there is an EU element present. This element often consists of the fact that the individual has obtained a qualification or professional training in another Member State, so long as the situation involves no attempted 'abuse' of EU rights. The notion of abuse or evasion of legitimate control remains, after cases such as *Koller* concerning individuals, and *Centros* and *Cadbury Schweppes* concerning companies, hypothetical and underspecified.

ii. The case of *Viking* (and *Laval* for services) controversially extended the horizontal application of the Treaty provisions on establishment to the activities of trade unions, even though they are not public regulatory actors and do not possess quasi-legislative powers, and even where they are acting pursuant to their fundamental right to strike, to impose lock-outs, or other forms of collective action.

iii. Despite the importance of non-discrimination in the field of establishment, the ECJ adopts broadly the same approach to freedom of establishment as it does in other areas of free movement. In other words, any obstacle to the right of establishment in a Member State and any restriction on 'access to the market' for persons seeking to establish themselves, whether or not it has a differential impact on nationals and non-nationals, is caught by the prohibition in Article 49 unless it can be justified.

iv. The law governing establishment of companies is more complex than that governing natural persons, mainly due to the differences between national company laws. Rather than await legislative harmonization at EU level, the ECJ has required host states to permit companies validly incorporated in another state, even under a very different corporate law regime, to exercise rights of secondary establishment in a host state without imposing undue regulatory restrictions. However, the cases of *Daily Mail* and *Cartesio* indicate that the Member State of incorporation of a company (home state) retains the right to set the conditions for acquisition and maintenance of the status as an incorporated entity.

v. Tax restrictions on companies established in more than one Member State, which seek to combine the advantages and minimize the disadvantages of different tax regimes within the different states in which they are established, have been regularly and successfully challenged in recent years.

4 FREE MOVEMENT OF SERVICES

We have seen that the right of establishment entails the pursuit of an economic activity from a fixed base in a Member State for an indefinite period. Freedom to provide services under Article 56 TFEU, on the other hand, entails the carrying out of an economic activity for a temporary period in a Member State in which either the provider or the recipient of the service is not established.

According to the *Insurance Services* case, if a person or an undertaking maintains a *permanent* economic base in a Member State, even if only through an office, it cannot avail itself of the right to provide services in that state but will be governed by the law on freedom of establishment.[124] In *Gebhard*, however, we saw that the ECJ acknowledged that the provision of services did not necessarily cease to be *temporary* simply because the provider might need to equip herself with the necessary

Rights' [2006] LMCLQ 242; A Davies, 'One Step Forward, Two Steps Back? The Viking and Laval Cases in the ECJ' (2008) 37 ILJ 126; C Barnard, 'Social Dumping or Dumping Socialism?' (2008) 37 CLJ 262.

[124] Case 205/84 (n 13) [21]. The earlier decision in Case 39/75 *Coenen v Sociaal-Economische Raad* [1975] ECR 1547 was somewhat contradictory on this point.

infrastructure, for example an office or chambers, to perform those services.[125] The relevant criterion is not the mere existence of an office in a Member State, but rather the temporary or permanent nature of the economic activities carried on there.

This may prove difficult to establish, especially when certain services, such as the construction of large buildings, take a long time. The Court has held that the fact that services are provided over an extended period, even over several years, does not mean that Article 56 is inapplicable.[126] In *Commission v Portugal* the Court held that the imposition of authorization rules concerning construction activity in Portugal were incompatible with Article 56, since those rules imposed the same requirements on the provision of temporary services as were imposed on the establishment of providers of building services.[127] According to the ECJ, the fact that the provision of construction services generally takes some time and that it may prove difficult to distinguish from the situation in which the provider is actually established in the host Member State does not have the effect of precluding those services from the scope of Article 56 TFEU.

The ECJ has also ruled that people who direct most or all of their services at the territory of a particular Member State, but maintain their place of establishment outside that state in order to evade its professional rules (the abuse/evasion theory), may in certain circumstances be treated as being established within the Member State, and thus covered not by Article 56 on services but by Article 49 on establishment instead.[128] In such a case the professional rules which were being evaded by the maintenance of an establishment in a different Member State could be applied as though the person were established in the regulating state. Cases in which such an evasion or abuse has been found seem relatively rare, and the onus is firmly on a Member State to show that a person was seeking to evade legitimate requirements rather than simply exercising their Treaty freedoms.[129]

Article 56 TFEU

Within the framework of the provisions set out below, restrictions on freedom to provide services within the Union shall be prohibited in respect of nationals of Member States who are established in a Member State other than that of the person for whom the services are intended.

The European Parliament and the Council, acting in accordance with the ordinary legislative procedure, may extend the provisions of the Chapter to nationals of a third country who provide services and who are established within the Union.

Article 56 indicates that in order to benefit from the right to provide services, the person in question, natural or legal, must already have a place of establishment within the EU and, if a natural person, must possess the nationality of a Member State.[130] The General Programme on freedom to provide services specified in more detail that the right to provide services was available only to nationals established in the EU, or to companies formed under the laws of a Member State and having their seat, centre of administration, or main establishment within the EU.[131] If only the seat of a company

[131] The 1961 General Programme (n 40).

is situated within the EU, then its activity must have a 'real and continuous link' with the economy of a Member State, other than a link of nationality.

Without that economic foothold within the EU, there is no right under EU law for a company or a EU national established *outside* the EU to provide temporary services *within* the EU.[132] A permanent economic base must first be established within a Member State, and from that base the person may provide temporary services in other Member States.

Article 57 TFEU

Services shall be considered to be 'services' within the meaning of the Treaties where they are normally provided for remuneration, in so far as they are not governed by the provisions relating to freedom of movement for goods, capital and persons.

'Services' shall in particular include

(a) activities of an industrial character;

(b) activities of a commercial character;

(c) activities of craftsmen;

(d) activities of the professions.

Without prejudice to the provisions of the Chapter relating to the right of establishment, the person providing a service may, in order to do so, temporarily pursue his activity in the Member State where the service is provided, under the same conditions as are imposed by that State on its own nationals.

Article 57 specifies that the provisions on free movement of services will apply only in so far as a particular restriction is not covered by the provisions on free movement of goods, persons, or capital. Article 58 also excludes transport services from the chapter on services since transport is dealt with elsewhere in the Treaty,[133] and provides that banking and insurance services connected with capital movements are to be dealt with in line with the Treaty provisions on movement of capital.[134]

As in the chapter on establishment, Article 59 provided for a General Programme to be drawn up, and for directives to be issued by the Council so as to liberalize specific services. The General Programme which was drawn up was similar in many respects to that adopted on establishment, with an emphasis on the abolition of discrimination.

(A) THE EFFECT OF ARTICLE 56 TFEU

The chapter on the free movement of services is very similar to that on establishment, except that the activity in question is pursued on a temporary rather than a permanent basis in a Member State. Shortly after the *Reyners* ruling first established that Article 49 was directly effective, the *Van Binsbergen* case on the direct effect of Article 56 came before the Court.[135] The UK and Irish Governments intervened to argue that, despite the ECJ's ruling in *Reyners*, the area of provision of services was subject to even greater problems of control and discipline than that of establishment, that Articles 56 and 57 should not be found to have direct effect, and that the only satisfactory solution was the adoption of directives as provided for by the Treaty.

[135] Case 33/74 (n 9).

Case 33/74 **Van Binsbergen v Bestuur van de Bedrijfsvereniging voor de Metaalnijverheid**
[1974] ECR 1299

[Note Lisbon Treaty renumbering: Arts 59, 60, 63, and 66 EC are now Arts 56, 57, 59, and 62 TFEU]

A Dutch national acting as legal adviser to Van Binsbergen in respect of proceedings before a Dutch social security court transferred his place of residence from the Netherlands to Belgium during the course of the proceedings. He was told that he could no longer represent his client since, under Dutch law, only those established in the Netherlands could act as legal advisers. A reference was made to the ECJ to determine whether Article 56 TFEU had direct effect, and whether the Dutch rule was compatible with it.

THE ECJ

20. With a view to the progressive abolition during the transitional period of the restrictions referred to in Article 59, Article 63 has provided for the drawing up of a 'general programme'—laid down by Council Decision of 18 December 1961—to be implemented by a series of directives.

21. Within the scheme of the chapter relating to the provision of services, these directives are intended to accomplish different functions, the first being to abolish, during the transitional period, restrictions on freedom to provide services, the second being to introduce into the law of Member States a set of provisions intended to facilitate the effective exercise of this freedom, in particular by the mutual recognition of qualifications and the coordination of laws with regard to the pursuit of activities as self-employed persons.

22. These directives also have the task of resolving the specific problems resulting from the fact that where the person providing the service is not established, on a habitual basis, in the State where the service is performed he may not be fully subject to the professional rules of conduct in force in that State.

...

24. The provisions of Article 59, the application of which was to be prepared by directives issued during the transitional period, therefore became unconditional on the expiry of that period.

25. The provisions of that article abolish all discrimination against the person providing the service by reason of his nationality or the fact that he is established in a Member State other than that in which the service is to be provided.

26. Therefore, at least as regards the specific requirement of nationality or of residence, Articles 59 and 60 impose a well-defined obligation, the fulfilment of which by the Member States cannot be delayed or jeopardized by the absence of provisions which were to be adopted in pursuance of powers conferred under Articles 63 and 66.

The Court here identified two reasons for the Treaty provisions on the adoption of directives: first, to abolish restrictions and, secondly, to facilitate the freedom to provide services. With regard to the first, where the restriction was a straightforward restriction on the ground of nationality or place of establishment, the ECJ considered that no directive was necessary and the provisions of Article 56 could be relied on directly. A residence requirement was a particularly straightforward infringement, given that the aim of Article 56 was to abolish state restrictions on the freedom to provide services which were imposed on non-resident providers. More generally, restrictions imposed on the basis of residence are seen as being liable to operate mainly to the detriment of nationals of other Member States, since non-residents are in the majority of cases foreigners.[136]

[136] Case C–350/96 *Clean Car Autoservice v Landeshauptmann von Wien* [1998] ECR I–2521; Case C–224/97 *Ciola v Land Vorarlberg* [1999] ECR I–2517.

Notably, the lawyer in *Van Binsbergen* was a national relying on Article 56 in his own Member State. This did not pose any problem because the relevant factor for the application of Article 56 is simply that the provider must be established in a Member State other than that of the person for whom the service is to be provided. The provider may rely on Article 56 as against the state in which he or she is established, so long as the services are provided for persons established in another Member State.[137]

(B) THE SCOPE OF ARTICLE 56

(i) *The Need for an Inter-State Element*

As with the other freedoms, the Treaty chapter on services does not apply to 'wholly internal situations' where the relevant elements of an activity are confined within a single Member State.[138]

In *Koestler*, which concerned a bank in France carrying out certain stock-exchange orders and account transactions for a customer established in France, the ECJ ruled that although both the provider and the recipient of services were established in the same Member State, there was a provision of services within the meaning of Article 57 because the customer moved, before the contractual relationship with the bank was terminated, to establish himself in Germany.[139] Similarly in *Deliège*, in which a Belgian sportswoman had challenged the selection rules of the Belgian Judo Federation, the ECJ rejected the argument that this was a wholly internal situation, relying on the fact that 'a degree of extraneity may derive in particular from the fact that an athlete participates in a competition in a Member State other than that in which he is established'.[140] Further, in certain sectors such as public procurement, where harmonizing legislation has been adopted, the legislation is made applicable even to wholly internal situations.[141] Finally, the Court's focus has been as much on the mobility of the service as that of the persons involved.[142]

(ii) *The Freedom to Receive Services*

Article 56 expressly refers to the freedom to *provide* services, and Article 57 to the rights of the *provider* of services, and does not mention the recipient of the services. In *Luisi and Carbone*, however, the ECJ confirmed that the Treaty covers the situation of recipients as well as providers of services, and ruled that the freedom for the recipient to move was the necessary corollary of the freedom for the provider:

> It follows that the freedom to provide services includes the freedom, for the recipients of services, to go to another Member State in order to receive a service there, without being obstructed by restrictions,

[137] Case C–18/93 *Corsica Ferries* [1994] ECR I–1783, [30]; Case C–379/92 *Peralta* [1994] ECR I–3453, [40]. For a 'wholly internal situation' in the services context see Case C–108/98 *RI.SAN v Comune di Ischia* [1999] ECR I–5219.

[138] For an example of such a 'purely internal situation' see Case 52/79 *Debauve* (n 18) on broadcasting services. Compare two other broadcasting cases, Case 62/79 *Coditel v SA Ciné Vog Films* [1980] ECR 881, [10], [15] and Case 352/85 *Bond van Adverteerders* (n 74) [14]–[15], where there was a certain inter-state element, in that the substance of the services, the cable television broadcasts, originated in a different Member State. See the subsequent 'TV without frontiers' Broadcasting Directive 89/552 [1989] OJ L298/23.

[139] Case 15/78 *Société Générale Alsacienne de Banque SA v Koestler* [1978] ECR 1971.

[140] Cases C–51/96 and C–191/97 *Deliège v Ligue Francophone de Judi et Disciplines Associées ASBL* [2000] ECR I–2549, [59]; S van den Bogaert, Note (2000) 25 ELRev 554.

[141] V Hatzopoulos and T Do, 'The Case Law of the ECJ Concerning the Free Provision of Services: 2000–2005', (2006) 43 CMLRev 923.

[142] See the discussion on the cases concerning cross-border access to health care, below. For more general discussion see V Hatzopoulos, 'Recent Developments of the Case Law of the ECJ in the Field of Services' (2000) 37 CMLRev 43, and Snell (n 19).

> even in relation to payments, and that tourists, persons receiving medical treatment and persons travelling for the purposes of education or business are to be regarded as recipients of services.[143]

This holding was confirmed in subsequent judgments,[144] notably in *Cowan*, in which the ECJ found that the refusal, under a French criminal compensation scheme, to compensate a British tourist who had been attacked while in Paris constituted a restriction within the meaning of Article 56, without specifying exactly what service he had received.[145]

(iii) *The Commercial Nature of the Services*

Whether a provision of services falls within Articles 56 to 57 depends not just on the inter-state element, but also on the services being commercial in nature, in that they must be provided *for remuneration*. The ECJ has ruled that remunerated services do not lose their economic nature either because the provider is a non-profit-making enterprise,[146] or because of an 'element of chance' inherent in the return, or because of the recreational or sporting nature of the services.[147]

In *Deliège* the ECJ ruled further that 'the mere fact that a sports association or federation unilaterally classifies its members as amateur athletes does not in itself mean that those members do not engage in economic activities'[148] and in *Bond van Adverteerders* the Court specified that the remuneration does not have to come from the recipient of the services, so long as there is remuneration from some party.[149] This was elaborated upon in *Deliège* where the ECJ drew on its case law in the field of free movement of workers concerning economic activity which was not 'marginal or ancillary' and ruled:

> 56. In that connection, it must be stated that sporting activities and, in particular, a high-ranking athlete's participation in an international competition are capable of involving the provision of a number of separate, but closely related, services which may fall within the scope of Article 59 [*now Article 56 TFEU*] of the Treaty even if some of those services are not paid for by those for whom they are performed…
>
> 57. For example, an organiser of such a competition may offer athletes an opportunity of engaging in their sporting activity in competition with others and, at the same time, the athletes, by participating in the competition, enable the organiser to put on a sports event which the public may attend, which television broadcasters may retransmit and which may be of interest to advertisers and sponsors. Moreover, the athletes provide their sponsors with publicity the basis for which is the sporting activity itself.[150]

[146] Case C–70/95 *Sodemare* (n 15).

[147] Case C–275/92 *Schindler* (n 19) [33]–[34]. For similar rulings on the concept of an economic activity under Art 45 see Case 36/74 *Walrave* (n 22); Case C–415/93 *Bosman* (n 21); Cases C–51/96 and 191/97 *Deliège* (n 140); Case C–176/96 *Lehtonen v FRBSB* [2000] ECR I–2681.

[148] Cases C–51/96 and 191/97 (n 140).

[149] Case 352/85 (n 74); Case C–159/90 *SPUC v Grogan* [1991] ECR I–4685 where student distributors of information in Ireland about abortion services in the UK received no remuneration from the providers of the actual service in the second Member State. In the absence of such an economic link between the information ban and the freedom to provide the service, the connection between them was deemed 'too tenuous' to attract the application of Art 56 TFEU.

[150] (N 140).

What is the legal position where the remuneration for the service is provided by the state? This issue came to prominence in a series of cases concerning cross-border access to medical and health care services, which threatened to disrupt the operation of national welfare systems.[151] The question had arisen previously in the context of a course taught under the national educational system in *Humbel*, where the ECJ ruled that it did not fall within the scope of the Treaty rules on services:

Case 263/86 **Belgium v Humbel**
[1988] ECR 5365

17. The essential characteristic of remuneration thus lies in the fact that it constitutes consideration for the service in question, and is normally agreed upon between the provider and the recipient of the service.

18. That characteristic is, however, absent in the case of courses provided under the national education system. First of all, the State, in establishing and maintaining such a system, is not seeking to engage in gainful activity but is fulfilling its duties towards its own population in the social, cultural and educational fields. Secondly, the system in question is, as a general rule, funded from the public purse and not by pupils or their parents.

19. The nature of the activity is not affected by the fact that pupils or their parents must sometimes pay teaching or enrolment fees in order to make a certain contribution to the operating expenses of the system.

Conversely, the ECJ in *Wirth* declared that, although most institutions of higher education were financed from public funds, those which sought to make a profit and were financed mainly from private funds, for example by students or their parents, could constitute providers of services within Articles 56 and 57.[152] This was confirmed by the ruling in *Schwarz*, where the German government's refusal to grant tax relief to the parents of school-going children on the ground that the private school they attended was established in another Member State amounted to a restriction under Article 56 TFEU.[153]

The distinction between publicly and privately remunerated services on which these cases are based is however a difficult one, and the applicability of the reasoning in *Humbel* has been narrowed, as the cases concerning access to cross-border health care demonstrate. In *Kohll*, the ECJ ruled that treatment provided by an orthodontist established in a different Member State from the applicant amounted to a service provided for remuneration, and that the requirement of prior authorization from the home state's social security institution before the cost would be reimbursed constituted an unjustified restriction on the freedom to receive cross-border services.[154] Together

[151] Case C–120/95 *Decker* [1998] ECR I–1831 (albeit dealing with goods rather than services); Case C–158/96 *Kohll* (n 144); Case C–368/98 *Vanbraekel v ANMC* [2001] ECR I–5363; Case C–157/99 *Geraets-Smits and Peerbooms* [2001] ECR I–5473, Case C–385/99 *Müller-Fauré* [2003] ECR I–4509; Case C–372/04 *Watts v Bedford Primary Care Trust* [2006] ECR I–4325; Case C–444/05 *Stamatelaki v OAEE* [2007] ECR I–3185.

[152] Case C–109/92 *Wirth v Landeshauptstadt Hannover* [1993] ECR I–6447; Case C–159/90 *Grogan* (n 149); S O'Leary, Note (1992) 17 ELRev 138; Case C–70/95 *Sodemare* (n 15), in which the ECJ considered the applicability of Art 56 to Italian conditions on the involvement of economic operators in the provision of the state's social welfare services, such as the running of old people's homes.

[153] Case C–76/05 *Schwarz and Gootjes-Schwarz v Finanzamt Bergisch Gladbach* [2007] ECR I–6849; Case C–318/05 *Commission v Germany* [2007] ECR I–6957; Case C–281/06 *Hans-Dieter and Hedwig Jundt v Finanzamt Offenburg* [2007] ECR I–12231.

[154] Case C–158/96 *Kohll* (n 144). This was decided on the same day as the parallel Case C–120/95 *Decker* (n 151) which concerned a prior authorization requirement from the competent social security institution before reimbursement of spectacles purchased in another Member State could be made. For comment see P Cabral, Note (1999) 24 ELRev 387.

with the subsequent cases of *Geraets-Smits/Peerbooms,*[155] *Inizan,*[156] and *Vanbraekel*,[157] this ruling demonstrates vividly the potentially disruptive effects on national welfare systems of the decision to bring essential and publicly organized services within the scope of the Treaty's free movement provisions.

In *Geraets-Smits/Peerbooms*, the two applicants were insured for their medical costs under a Dutch social insurance scheme for people whose income is below a certain level. Some of the funding in the scheme was derived from individual premiums, some from the state, and some from subsidization by other private insurance funds. Both applicants received medical treatment abroad without prior authorization from the fund, apparently because of the restrictive conditions for authorization which entailed that (i) the treatment must be regarded as 'normal in the professional circles concerned' and (ii) the treatment must be 'necessary', in the sense that adequate care could not be provided without undue delay by a care provider in the home state.

In addressing whether this kind of prior authorization requirement was prohibited by Articles 56 and 57, the ECJ began by reaffirming that Member States retain the power to organize their social security systems, subject to compliance with the rules of EU law.[158] The Court went on to consider the argument made by several governments, citing *Humbel*, that hospital services did not constitute an economic activity when provided free of charge under a sickness insurance scheme.

Case C–157/99 **Geraets-Smits v Stichting Ziekenfonds, Peerbooms v Stichting CZ Groep Zorgverzekeringen**
[2001] ECR I–5473

[Note Lisbon Treaty renumbering: Art 60 EC is now Art 57 TFEU]

55. With regard more particularly to the argument that hospital services provided in the context of a sickness insurance scheme providing benefits in kind, such as that governed by the ZFW, should not be classified as services within the meaning of Article 60 of the Treaty, it should be noted that, far from falling under such a scheme, the medical treatment at issue in the main proceedings, which was provided in Member States other than those in which the persons concerned were insured, did lead to the establishments providing the treatment being paid directly by the patients. It must be accepted that a medical service provided in one Member State and paid for by the patient should not cease to fall within the scope of the freedom to provide services guaranteed by the Treaty merely because reimbursement of the costs of the treatment involved is applied for under another Member State's sickness insurance legislation which is essentially of the type which provides for benefits in kind.

The fact that the hospital treatment was financed directly by the sickness insurance funds on the basis of agreements and pre-set fee scales did not remove such treatment from the ambit of Article 57. The ECJ reiterated that Article 57 did not require the service to be paid for by those for whom it was performed and declared that the payments made by the sickness insurance funds under the contractual

For a case concerning non-discriminatory access to medical care under what is now Art 18 TFEU see Case C–411/98 *Ferlini* (n 24).

[155] (N 151); E Steyger, Note (2002) 29 LIEI 97; G Davies, Note (2002) 29 LIEI 27.

[156] Case C–56/01 *Inizan v Caisse primaire d'assurance maladie des Hauts-de-Seine* [2003] ECR I–12403.

[157] Case C–368/98 *Vanbraekel* (n 151).

[158] Several of the health care cases involve an interpretation of Reg 1408/71 on the cross-border coordination of social security, and particularly of Art 22 thereof, but for the purposes of this chapter the focus will be only on the ECJ's conclusions about the applicability of Art 56 TFEU on the free movement of services.

arrangements constituted consideration for the hospital services, and represented remuneration for the hospital which was engaged in an activity of an economic character.

Geraets-Smits was followed by the cases of *Müller Fauré*[159] and *Watts*,[160] which confirmed and extended its reasoning. Both cases dealt with a national requirement for prior authorization before travelling to receive medical care in another state. *Watts*, however, concerned the UK's tax-funded National Health Service (NHS) and not the kind of insurance-based health care systems at issue in the previous cases. The referring court asked the ECJ whether Article 56 was applicable to the situation in which the applicant had travelled to another state for medical care and was now seeking reimbursement, despite the fact that the NHS had no fund out of which to pay for health care received in another state, and despite the fact that it had no obligation to pay for private health care obtained *within* the UK.

The ECJ's answer was that Article 56 applied where a patient received medical services in a hospital environment for consideration in a Member State other than the state of residence 'regardless of the way in which the national system with which that person is registered and from which reimbursement of the cost of those services is subsequently sought operates'. However, the Court refused to be drawn on the question whether the provision of health care services by the NHS within the UK amounted to the provision of a commercial service, and stated that there was 'no need in the present case to determine whether the provision of hospital treatment in the context of a national health service such as the NHS is in itself a service within the meaning of those provisions'.

While the outcomes on the facts of these cases may not in themselves be alarming, since the Court in each case acknowledged the importance of the stable financing of national social insurance systems and the justifiability of measures which seek to maintain a balanced and manageable national health care system, they have undoubtedly opened up to the rigours of the Treaty rules and to cross-border economic activity, some of the core aspects of national welfare systems.[161]

The ECJ delivered a somewhat more cautious ruling recently in *Commission v Spain*, which did not concern people who travel abroad in order to receive medical treatment, but rather those who travel for other reasons such as travel or education, and the need for medical care arises unexpectedly during their stay.[162] The Court held that the Spanish legislation limiting the level of cover, in such circumstances, to that applicable in the state where the treatment was administered did not amount to a restriction of the freedom to provide services. Distinguishing the case from *Vanbraekel*, where it had ruled that a similar limit on the level of cover would constitute a restriction on the free movement of services where a person had gone abroad specifically to receive scheduled medical treatment, the ECJ ruled that the potential interference with free movement in a case involving unscheduled medical care was too 'uncertain and indirect' to constitute a restriction on the Treaty freedom.[163]

Despite this more careful ruling on the issue of unscheduled medical treatment abroad, the upshot of the Court's rulings remains that Articles 56–57 TFEU apply to any service, however important a public service it may be, which is 'provided for remuneration'.[164] The line between publicly and privately remunerated services remains uncertain. Health care services, however funded, fall within the scope of the Treaty where a patient who has travelled to another state and paid for health care there seeks reimbursement from their national system. There is no exception from the Treaty rules for state-provided welfare services. One of the consequences of these rulings has been a move by

the EU legislature—after three years of contestation and debate—to adopt a Directive codifying and clarifying the law on cross-border access to health care.[165]

(iv) *Can Illegal Activities Constitute Services within Articles 56–57?*

Several cases, including a recent stream of rulings on the subject of lotteries and gambling, have raised the question of illegal or 'immoral' services in relation to activities which are lawful in certain states but not in others. Clearly if a person established in a Member State in which a particular activity is lawful wishes to provide services in another Member State in which it is not lawful, the second state may have good reasons for restricting the provision of that service. An initial question is whether such activities, on the legality of which the Member States do not agree, can constitute 'services' at all within EU law.

In *Koestler*, the ECJ ruled that Germany's refusal to allow a French bank which had provided services for a German national, including a stock-exchange transaction which was treated as an illegal wagering contract in Germany but not in France, to recover from that client was not contrary to Article 56 if the same refusal would apply to banks established in Germany.[166] Despite the fact that the services were considered illegal in Germany, the ECJ ruled that the conclusion of the wagering contract could constitute a service, although Germany was justified in restricting that service by refusing to allow the bank to sue for recovery.

In *Grogan*, the Court considered whether the provision of abortion was a service within the meaning of the Treaty, in order to determine whether the restriction in one Member State on information about the provision of abortion in another state was contrary to Article 56.[167] In response to the argument that abortion could not be categorized as a service on the ground that it was immoral, the ECJ ruled that it was not for the Court 'to substitute its assessment for that of the legislature in those Member States where the activities are practised legally'.[168] As *Koestler* indicates however, the fact that abortion constitutes a service within Article 56 does not mean that a Member State in which abortion services are illegal may not prohibit or restrict their provision in its territory by health care providers who are established in another Member State. Less clear, even after *Grogan*, is whether a Member State can restrict the access of its citizens to services in another Member State, where those services are prohibited or restricted within the regulating state.[169]

In *Schindler*, the defendants were acting as agents on behalf of a German public lottery, seeking to promote that lottery within the UK, and they were charged with an offence under the UK lotteries legislation. When the case was referred to the ECJ, several Member States argued that lotteries were not an 'economic activity' within the meaning of the Treaty, since they were traditionally prohibited or operated by public authorities in the public interest. The Court rejected the argument, ruling that lotteries were services provided for remuneration, the price of the lottery ticket, and that, although they were closely regulated in some Member States, they were not totally prohibited in any.[170] Although the morality of lotteries was 'questionable', they could not be regarded as 'activities whose harmful nature

[166] Case 15/78 (n 139).
[167] Case C–159/90 (n 149).
[168] Ibid [20].
[169] The AG in *Grogan* (n 149) took the view that the restriction on information in the case in question was proportionate. For an indirect restriction by the UK on access to artificial insemination services in another Member State which was not referred to the ECJ see *R v Human Fertilisation and Embryology Authority, ex p Diane Blood* [1997] 2 CMLR 591. For a revival of the 'Irish problem' concerning whether a woman seeking access to abortion in another Member State may be restricted by the state from travelling for that purpose see *D v Health Service Executive*, Irish High Court, 9 May 2007.
[170] Case C–275/92 *Schindler* (n 19).

causes them to be prohibited in all the Member States and whose position under Community law may be likened to that of activities involving illegal products'.[171]

Similarly, in a series of cases concerning gambling, despite the fact that these constituted services within the meaning of the Treaty, the Court ruled that 'the morally and financially harmful consequences for the individual and for society associated with betting and gaming, may serve to justify a margin of discretion for the national authorities'.[172] As with all instances of 'objective justification' of Treaty freedoms, the regulation of such services must be carried out in a genuine, non-discriminatory, proportionate, and consistent manner.[173]

In *Jany*, the ECJ ruled that the relevant provisions of the EU's Association Agreement with Poland on freedom of establishment and services were to have the same meaning and scope as those under the EU Treaties so that 'the activity of prostitution pursued in a self-employed capacity can be regarded as a service provided for remuneration'.[174] In response to arguments based on the immoral nature of the services, the Court cited its rulings in *Grogan* and *Schindler*, and declared that, 'far from being prohibited in all Member States, prostitution is tolerated, even regulated, by most of those States'.[175]

Somewhat surprisingly in view of the consistent previous case law, the ECJ in *Josemans* came to a different conclusion as regards the provision of services relating to the marketing of cannabis by so-called marijuana cafés in the Netherlands.[176] The marketing of cannabis in the Netherlands was prohibited but tolerated by law, yet the Court ruled that Article 56 TFEU could not be relied on to challenge municipal legislation which limited access to such cafés to residents only. With regard to the provision of catering services for food and drink in such coffee shops, the Court ruled that although the legislation restricted the free movement of services, this was justified by the need to combat drug tourism. To distinguish the circumstances in *Josemans* (despite the official tolerance of marijuana cafés) from those of previous judgments, the ECJ emphasized that there was a prohibition in *all* Member States, under both international law and EU law, on the marketing of narcotic drugs, which differentiated it even from the case of prostitution.[177]

The result of these rulings appears to be that provided it is lawful in some Member States, and perhaps even in just one state, a remunerated activity constitutes a service within the meaning of Articles 56–57 TFEU. Nevertheless, Member States remain free to regulate and restrict such services,[178] so long as they do so proportionately and without arbitrary discrimination on grounds of nationality or place of establishment.[179]

[171] Ibid [32].

[172] Case C–67/98 *Zenatti* [1999] ECR I–7289; Case C–42/02 *Lindman* [2003] ECR I–13519; Case C–6/01 *Anomar* [2003] ECR I–8621; Case C–243/01 *Gambelli* [2003] ECR I–13031; Cases C–338, 359, and 360/04 *Placanica,Palazzese and Sorricchio* [2007] ECR I–1891; Cases C–447–448/08 *Otto Sjöberg and Anders Gerdin,* 8 July 2010; Case C–46/08 *Carmen Media Group v Land Schleswig-Holstein*, 8 Sept 2010; Case C–64/08 *Ernst Engelmann,* 9 Sept 2010.

[173] An example of the wide margin of appreciation allowed by the Court is evident in Cases C–316, 358–360 and 409–410/07 *Markus Stoß*, 8 Sept 2010, which establishes that Member States may impose an authorization requirement for the provision of games of chance, even though the operator, established in another Member State, holds an authorization from its own Member State.

[178] See, eg, Case C–36/02 *Omega* (n 4).

[179] The ECJ's conclusion in *Schindler* that the UK legislation was justified on public policy grounds was criticized for ignoring the discrimination practised in favour of national small-scale lotteries, and for applying the proportionality test too loosely: G Straetmans, Note (2000) 37 CMLRev 991 on the subsequent gaming cases, Case C–124/97 *Läärä* [1999] ECR I–6067; Case C–67/98 *Zenatti* (n 172).

(v) *Are Restrictions on Social Benefits Contrary to Article 56?*

We saw in the context of establishment that, despite the absence of secondary legislation such as Regulation 1612/68 for workers, restrictions on certain social advantages and benefits which are linked to the exercise of the self-employed activity may fall within the Treaty prohibition. The same is true of the free movement of services. In the *Italian Housing* case, discussed also in the establishment context above, the ECJ ruled that a nationality requirement for access to reduced-rate mortgage loans and to social housing was contrary to Article 49 TFEU on freedom of establishment, but the Italian Government argued that access to publicly built housing could not possibly be relevant to the exercise of the right to provide services, which was precisely the right to provide services without having to have a place of residence in that state.

Case 63/86 Commission v Italy
[1988] ECR 29

> 18. It is true, as the Italian Government has contended, that in practice not all instances of establishment give rise to the same need to find permanent housing and that as a rule that need is not felt in the case of the provision of services. It is also true that in most cases the provider of services will not satisfy the conditions, of a non-discriminatory nature, bound up with the objectives of the legislation on social housing.
>
> 19. However, it cannot be held to be *a priori* out of the question that a person, whilst retaining his principal place of establishment in one Member State, may be led to pursue his occupational activities in another Member State for such an extended period that he needs to have permanent housing there and that he may satisfy the conditions of a non-discriminatory nature for access to social housing. It follows that no distinction can be drawn between different forms of establishment and that providers of services cannot be excluded from the benefit of the fundamental principle of national treatment.

In *Cowan*, a British tourist in France was refused state compensation for victims of violent crime which was available to nationals and to residents.[180] The ECJ cited the general prohibition on discrimination 'within the scope of application of this Treaty' in Article 18 TFEU,[181] and referred to its ruling in *Luisi and Carbone* to the effect that tourists were covered by Article 56 as recipients of services:

> When Community law guarantees a natural person the freedom to go to another Member State, the protection of that person from harm in the Member State in question, on the same basis as that of nationals and persons residing there, is a corollary of that freedom of movement. It follows that the prohibition of discrimination is applicable to recipients of services within the meaning of the Treaty as regards protection against the risk of assault and the right to obtain financial compensation provided for by national law when that risk materialises. The fact that the compensation at issue is financed by the Public Treasury cannot alter the rules regarding the protection of the rights guaranteed by the Treaty.[182]

[180] Case 186/87 *Cowan* (n 145). See also Case C–164/07 *Wood* [2008] ECR I–4143, which however concerned a resident and not a temporary service-recipient or provider.

[181] For cases in which the ECJ ruled that Art 18 TFEU could be the basis for a claim of discrimination in treatment, without being linked to another specific Treaty provision, see Cases C–92 and 326/92 *Phil Collins v Imtrat Handelsgesellschaft* [1993] ECR I–5145; Case C–274/96 *Bickel and Franz* [1998] ECR I–7637; Case C–411/98 *Ferlini* (n 24). The ECJ sometimes does not rely on Art 18 where a more specific Treaty provision such as Art 49 applies: Case C–1/93 *Halliburton* (n 112).

[182] [1989] ECR 195, [17]; Case C–45/93 *Commission v Spain* [1994] ECR I–911, concerning free admission to national museums.

Thus, although the state compensation is publicly funded, it is not (following *Humbel*[183]) the compensation which constitutes the commercial service being provided. Instead the relevant services in these cases, although not specifically identified by the ECJ, must be other services such as hotels, restaurants, etc for which the recipients, as tourists, provide remuneration. If, whilst in the course of a temporary stay in a Member State in order to avail themselves of remunerated services of this nature, such tourists are denied equal treatment in matters such as compensation for assault and entry fees to museums they may be able to invoke Article 56.[184]

Article 24 of Directive 2004/38 now articulates a general rule of equal treatment for EU citizens who are resident in a host Member State. In the case of a person who is temporarily resident in order to provide or receive services, however, it seems likely that there will have to be some general link between the nature and purpose of the temporary residence and the nature of the social benefit sought.

(c) JUSTIFYING RESTRICTIONS ON THE FREE MOVEMENT OF SERVICES

(i) *General Requirements*

Alongside the express exceptions for public policy, security, and health contained in Article 52 TFEU, which are made applicable to the field of services by Article 62,[185] the ECJ has developed a justificatory test for workers, services, and establishment alike which is similar to the *Cassis de Dijon* 'rule of reason' in the free movement of goods context.[186] Although in the area of goods these open-ended exceptions have generally been referred to as 'mandatory requirements', in the field of services the term 'imperative requirements' or the generic term 'objective justification' is more often used.

The origins of this approach in the services context can be found in the case of *Van Binsbergen*.[187] We saw in that case how various Member States argued that there were greater dangers in the area of services than in the area of establishment, since evasion of national regulation and control would be easier where service providers were not—or were only temporarily—resident in the state where the service was provided.[188] The ECJ addressed the issue by indicating that, although the imposition of a residence requirement would probably be excessive in that particular case as a way of ensuring 'observance of professional rules of conduct connected with the administration of justice and with respect for professional ethics', it might not always be so.[189] The test for justification laid down by the Court in *Van Binsbergen* contains several conditions which must be satisfied if a restriction on the freedom to provide services is to be compatible with Article 56.

[183] Case 263/86 *Belgium v Humbel* [1988] ECR 5365.

[184] For other cases on the provision or receipt of inter-state services see Case C–43/95 *Data Delecta and Forsberg v MSL Dynamics* [1996] ECR I–4661; Case C–323/95 *Hayes v Kronenberger* [1997] ECR I–1171; Case C–122/96 *Saldanha and MTS Securities Corporation v Hiross Holdings* [1997] ECR I–5325 on national procedures requiring non-residents to provide security for costs in litigation, which were held to be capable of having an indirect effect on trade in goods and services between Member States. Compare Case C–177/94 *Perfili* [1996] ECR I–161.

[185] See Section 2(d) above.

[186] Ch 19.

[187] Case 33/74 *Van Binsbergen* (n 9); Cases 110–111/78 *Ministère Public v Van Wesemael* [1979] ECR 5; Case 279/80 *Webb* [1981] ECR 3305.

[188] AG Mayras in *Van Binsbergen* (n 9) 1317. These concerns about temporary service provision are to some extent reflected in the distinction between establishment and services in the 2005 Dir on recognition of professional qualifications: Dir 2005/36, Arts 7–9 in particular, and rec 6.

[189] Case 33/74 *Van Binsbergen* (n 9) [12]–[14]; Case 39/75 *Coenen* (n 124) [9]; Case C–131/01 *Commission v Italy* [2003] ECR I–1659. For a case in which the protection of creditors and the 'sound administration of justice' was found to be an important objective justifying the imposition of restrictions on the practice of debt collection see Case C–3/95 *Reisebüro Broede v Sandker* [1996] ECR I–6511. On restrictions preventing legal advocates from practising in partnership with accountants see Case C–309/99 *Wouters* (n 24) [97]–[99].

First, the restriction must be adopted in pursuit of a legitimate public interest compatible with EU aims. In keeping with the scope of permissible exceptions to other Treaty freedoms, the ECJ has ruled that an economic aim is not a legitimate aim. Thus the aim of protecting a particular economic sector within a Member State is not legitimate,[190] whereas the maintenance of the financial balance of the social security system with a view to protecting public health is legitimate.[191] In *Finalarte* the ECJ ruled that that the aim of a measure is something to be determined 'objectively' by the national court,[192] although the ECJ retains the ultimate role of pronouncing on the legitimacy of the aim.

Secondly, the restriction must be equally applicable to persons established within the state, and must be applied without discrimination.[193] For example, in a series of cases concerning broadcasting restrictions, the Court held that, although the promotion of cultural policy through ensuring a balance of programmes and restricting the content and frequency of advertisements was a legitimate aim, it must not be pursued in a discriminatory or protectionist manner.[194]

Thirdly, the restriction imposed on the provider of services must be *proportionate* to the need to observe the legitimate rules in question.[195] The proportionality test entails examining whether the rule is 'suitable' or 'appropriate' in achieving its aim, and although the ECJ has not consistently applied this part of the proportionality test in all cases, whether that aim could be satisfied by other, less restrictive means.[196] In *Van Binsbergen* itself, the Court ruled that the public interest in the proper administration of justice could be ensured by requiring an address for service to be maintained within the state, rather than a residence there. A crucial factor in appraising the proportionality and necessity of any restriction is whether the provider is subject to similar regulation in the Member State in which that person is established.[197] If the requirement duplicates a condition already satisfied, it imposes a 'dual burden' and therefore cannot be justified.[198] Although the proportionality test in principle is for the national court to apply, the ECJ frequently indicates which requirements or restrictions may

[190] Case C–398/95 *SETTG v Ypourgos Ergasias* [1997] ECR I–3091, [22]–[23]; Case C–49/98 *Finalarte* (n 12) [39]; Case C–338/09 *Yellow Cab Verkehrsbetriebs GmbH v Landeshauptmann von Wien*, 22 Dec 2010, in which the objective of ensuring the profitability of a bus service, as a purely economic objective, could not constitute an overriding reason in the public interest.

[191] See the health care cases at (n 151). In these cases, the states could not rely on aims of a purely economic nature, and in order to plead the 'risk to the financial balance of the social security system' as a justification, they had to frame the argument as a risk to public health rather than to the economic interests of the state.

[192] Case C–49/98 (n 12) [40]–[41].

[193] For an example of a discriminatory and inappropriate way of protecting the confidentiality of data by imposing a requirement of state-ownership of shares see Case 3/88 *Commission v Italy* [1989] ECR 4035; Case C–272/91 *Commission v Italy* (n 30); Case C–101/94 *Commission v Italy* [1996] ECR I–2691.

[194] Case 352/85 (n 74); Case C–288/89 *Stichting Collectiëve Antennevoorsiening Gouda v Commissariaat voor de Media* [1991] ECR I–4007; Case C–353/89 *Commission v Netherlands* [1991] ECR I–4069. The subsequent adoption of the Broadcasting Dir 89/552 [1989] OJ L298/23, which was enacted with the aim of ensuring freedom to provide services and freedom of establishment in the sphere of television, generated a further spate of litigation: Case C–222/94 *Commission v UK* [1996] ECR I–4025; Case C–11/95 *Commission v Belgium* [1996] ECR I–4115; Case C–14/96 *Denuit* [1997] ECR I–2785; Case C–125/06 *Commission v Infront WM AG* [2008] ECR I–1451; Case C–250/06 *United Pan-Europe Communications Belgium SA and Others v Belgian State* [2007] ECR I–11135; Case C–195/06 *KommAustria v ORF* [2007] ECR I–8817. In a high-profile series of cases concerning the broadcasting of international football matches, the General Court upheld the decisions of the Commission authorizing the exemption of exclusive broadcasting of all World Cup and EURO matches, thus reserving these matches for free-for-air television. The restrictions on the freedom of establishment and to provide services were justified by the protection of the right to information and to ensure wide public access to television broadcasts of events of major importance for society: Case T–68/08 *FIFA v Commission*, Case T–55/08 *UEFA v Commission,* and Case T–385/07 *FIFA v Commission*, 17 Feb 2011.

[195] See, eg, the tourist guide cases: Case C–180/89 *Commission v Italy* [1991] ECR I–709; Case C–154/89 *Commission v France* [1991] ECR I–659; Case C–198/89 *Commission v Greece* [1991] ECR I–727; Case C–375/92 *Commission v Spain* [1994] ECR I–923.

[196] For an interesting case concerning alcohol advertising in France, in which the ECJ did not apply a strict proportionality test, see Case C–262/02 *Commission v France* [2004] ECR I–6569.

[197] Case C–272/95 *Guiot and Climatec* [1996] ECR I–1905; Cases C–369 and 376/96 *Arblade* (n 64).

[198] Ch 19, in relation to the free movement of goods.

be disproportionate in the context of the preliminary reference procedure,[199] or more directly in the context of infringement proceedings under Article 258 TFEU (ex Article 226 EC),[200] such as the series of insurance services cases.[201]

A *fourth* condition of the test for justification, which was not mentioned in *Van Binsbergen* and has less frequently been highlighted by the ECJ, but which was clearly stated in the *Carpenter* case,[202] is the requirement that the restrictive measure should also respect fundamental rights.[203]

The question whether specific restrictions on free movement can be justified is one of the most regularly litigated before the Court. Three lines of case law will be discussed below to exemplify the way in which the Court has dealt with claims that a restriction on the free movement of services was justified. These groups of cases concern the subject of (ii) posted workers, (iii) cross-border access to health care, and (iv) direct taxation rules.

(ii) *Posted Workers*

There has been an important series of ECJ rulings on the subject of 'posted workers', which concerns the provision of manpower on a temporary basis by a service provider from another Member State, and which is governed in part by the Posted Workers Directive.[204] Much of the litigation concerned matters which were not covered by the Directive, so that the Treaty provisions on services were directly applied instead. The case law establishes that preserving the interests of the workforce and ensuring good relations on the labour market are legitimate aims for host Member States to pursue. A host Member State can, in principle, apply its own labour legislation to employees, including non-EU national employees, of a company providing temporary services. The principle of proportionality applies however, so that the imposition of conditions such as a licence requirement is acceptable only if they do not duplicate requirements imposed by the state of establishment (home state), and take account of the relevant evidence and guarantees furnished by the service provider in the home state.[205] In all cases, a claim by the host state that legislative restrictions are intended for the protection of the posted workers must be carefully scrutinized.[206]

The most famous and contested ruling on posted workers to date is that in *Laval,* which came shortly after the *Viking* ruling discussed above.[207] The ECJ in *Laval* ruled that industrial action in the form of a blockade by Swedish labour unions against a Latvian company which, due to its considerably

[207] (Nn 25–26) above, and text.

lower labour costs, won a construction contract to carry out temporary work in Sweden, where the industrial action was aimed at forcing the company to sign a collective agreement in Sweden containing wage conditions and other terms of employment, was unjustified under Article 56 TFEU.[208] The ECJ based its ruling also on the Posted Workers Directive, under which Sweden could have chosen to impose a legislative minimum wage requirement on the Latvian company, or to declare relevant collective agreements to be universally applicable. However, Sweden's labour relations system was designed to be decentralized, entrusting management and labour with the task of setting wage rates through collective negotiations. Further, in the construction sector it required negotiation to take place on a case-by-case basis at the place of work, taking account of the specific qualifications and tasks of the employees concerned.

Case C–341/05 **Laval un Partneri Ltd v Svenska Byggnadsarbetareförbundet ea**
[2007] ECR I–11767

[Note Lisbon Treaty renumbering: Arts 2 and 136 EC are now Arts 3 and 151 TFEU; Art 3 EC has been repealed and replaced by Arts 7 TFEU and 13(1) and 21(3) TEU]

102. The Swedish Government and the defendant trade unions in the main proceedings submit that the restrictions in question are justified, since they are necessary to ensure the protection of a fundamental right recognised by Community law and have as their objective the protection of workers, which constitutes an overriding reason of public interest.

103. In that regard, it must be pointed out that the right to take collective action for the protection of the workers of the host State against possible social dumping may constitute an overriding reason of public interest within the meaning of the case-law of the Court which, in principle, justifies a restriction of one of the fundamental freedoms guaranteed by the Treaty . . .

104. It should be added that, according to Article 3(1)(c) and (j) EC, the activities of the Community are to include not only an 'internal market characterised by the abolition, as between Member States, of obstacles to the free movement of goods, persons, services and capital', but also 'a policy in the social sphere'. Article 2 EC states that the Community is to have as its task, inter alia, the promotion of 'a harmonious, balanced and sustainable development of economic activities' and 'a high level of employment and of social protection'.

105. Since the Community has thus not only an economic but also a social purpose, the rights under the provisions of the EC Treaty on the free movement of goods, persons, services and capital must be balanced against the objectives pursued by social policy, which include, as is clear from the first paragraph of Article 136 EC, inter alia, improved living and working conditions, so as to make possible their harmonisation while improvement is being maintained, proper social protection and dialogue between management and labour.

. . .

107. In that regard, it must be observed that, in principle, blockading action by a trade union of the host Member State which is aimed at ensuring that workers posted in the framework of a transnational provision of services have their terms and conditions of employment fixed at a certain level, falls within the objective of protecting workers.

108. However, as regards the specific obligations, linked to signature of the collective agreement for the building sector, which the trade unions seek to impose on undertakings established in other Member States by way of collective action such as that at issue in the case in the main proceedings, the obstacle which that collective action forms cannot be justified with regard to such an objective.

[208] Case C–341/05 *Laval un Partneri Ltd v Svenska Byggnadsarbetareförbundet ea* (n 25).

> In addition to [*the possibility under the Posted Workers Directive for Sweden to impose, in relation to posted workers, certain specified minimum protections and conditions of employment on a non-discriminatory basis*], their employer is required, as a result of the coordination achieved by Directive 96/71, to observe a nucleus of mandatory rules for minimum protection in the host Member State.
>
> 109. Finally, as regards the negotiations on pay which the trade unions seek to impose, by way of collective action such as that at issue in the main proceedings, on undertakings, established in another Member State which post workers temporarily to their territory, it must be emphasised that Community law certainly does not prohibit Member States from requiring such undertakings to comply with their rules on minimum pay by appropriate means (see *Seco and Desquenne & Giral*, paragraph 14; *Rush Portuguesa*, paragraph 18, and *Arblade and Others*, paragraph 41).
>
> 110. However, collective action such as that at issue in the main proceedings cannot be justified in the light of the public interest objective referred to in paragraph 102 of the present judgment, where the negotiations on pay, which that action seeks to require an undertaking established in another Member State to enter into, form part of a national context characterised by a lack of provisions, of any kind, which are sufficiently precise and accessible that they do not render it impossible or excessively difficult in practice for such an undertaking to determine the obligations with which it is required to comply as regards minimum pay (see, to that effect, *Arblade and Others*, paragraph 43).

The case has generated significant controversy in Sweden and across Europe. Not only did it involve the disruption of the much-admired Swedish social model, pitting this against the economic freedoms of the Treaty, but it did so in the context of the 'new socio-economic diversity in the Union subsequent to its Eastern Enlargement', bringing to prominence the significant economic disparities between different parts of the European Union.[209] While the judgment has been much criticized, mostly for prioritizing economic free movement over collective labour rights and for the lack of judicial deference in a sensitive domestic field of social and labour policy,[210] it has also divided critics on questions such as whether it can be viewed as enhancing the rights of Latvian workers rather than undermining the rights of Swedish workers. Unlike its 'sister ruling' in *Viking*, above,[211] which was equally criticized for framing collective action as a restriction on freedom of establishment, the Court in *Laval* did not leave it to the national court to apply the proportionality test, but ruled the collective action to be unjustified.

(iii) *Cross-Border Health Care*

A further example of the Court's treatment of attempts to justify restrictions on the free movement of services is in the line of cases governing access to cross-border health care, discussed above.[212] In *Decker* and *Kohll*, the Court rejected the argument that the financial balance of the social security scheme would be upset, given that the expenses incurred were to be reimbursed at exactly the same

rate as that applicable in the home state.[213] In *Leichtle*, the conditions imposed for reimbursement of accommodation and other expenses associated with obtaining a spa health cure in another Member State were deemed to be excessive and thus unjustified.[214]

In *Geraets-Smits*,[215] the Court concluded that the requirement of prior authorization, subject to the conditions of the necessity and 'normality' of the treatment obtained, might be justified in the interests of maintaining a balanced medical and hospital service open to all, or of preventing the risk of the social security system's financial balance being seriously undermined, or for essential public health reasons under Article 52 TFEU.[216] However, the two conditions had to be applied fairly in a non-discriminatory manner, so that the condition that the treatment sought should be 'normal' must, for example, take into account the findings of international medical science, and the condition concerning the 'necessity' meant that authorization should be given unless the same or equally effective treatment can be obtained without undue delay from an establishment with which the insured person's sickness insurance fund has contractual arrangements.[217] A similar ruling was given in *Müller-Fauré*, where the ECJ distinguished between hospital and non-hospital services, holding that the restrictive measures were more readily justified in the case of the former than the latter.[218] Finally in *Watts*, the aim of 'ensuring sufficient and permanent access to a balanced range of high-quality hospital treatment in the State' was a legitimate aim, if applied in a proportionate way.[219]

(iv) *National Taxation Rules*

Just as in the context of freedom of establishment, there has been an increase in recent years in challenges to national taxation rules on the ground that they constitute unjustifiable restrictions on the freedom to provide services. In cases such as *Danner*,[220] *Gerritse*,[221] *FKP*,[222] *Centro Equestre da Lezíria*,[223]and *Commission v Belgium*,[224] the ECJ ruled that restrictive tax rules may be justified on grounds such as prevention of fraud or tax avoidance, effective fiscal supervision, and the effective collection of taxes, or on social grounds, but it has regularly rejected the argument on the facts of the case. Further, the Court has indicated clearly that objectives such as the prevention of the erosion of the tax revenue base, or compensation for the low level of tax paid in the company's state of establishment do not constitute legitimate aims.[225]

The ECJ has also rejected attempts to justify national restrictions where the goals allegedly pursued by such measures were already satisfied by the existence of EU legislation.[226] Conversely, the Court has also indicated that in the absence of coordination of Member States' regulations on a given issue,

[226] See, eg, Case C–158/96 *Kohll* (n 144) [45]–[49].

a national rule will not be deemed to be disproportionate simply because it is stricter than rules applicable in other Member States.[227] Further, EU secondary legislation which implements the provisions on free movement of services in particular sectors or for particular activities must also be interpreted in the light of the fundamental principles laid down in the Treaty and in the case law, including the principles relating to the scope of permissible exceptions and imperative requirements.[228] Finally, the likely interaction of the derogation provisions contained in Article 16(1)(b) and (3) of the Services Directive, discussed below,[229] with the more general public interest justifications developed by the Court raises interesting questions.[230]

(D) ARE NON-DISCRIMINATORY RESTRICTIONS COVERED BY ARTICLE 56?

It has been increasingly clear in recent years that, in the field of free movement of services, even genuinely non-discriminatory obstacles, as opposed to indirectly discriminatory restrictions, are likely to fall within the scope of Article 56 and to be subjected to the 'objective justification' test. While many of the early cases appeared to involve measures which imposed a heavier burden or a dual burden and thus could have been described as indirectly discriminatory,[231] there were also cases involving rules which did not burden established providers of services any less than non-established providers, and yet which were found to be incompatible with Article 56. In more recent years, the Court has explicitly declared that it is not necessary for any kind of discrimination to be established, but simply an impediment to free movement or a restriction on access to the market of another Member State. At the same time, the ECJ has emphasized the commonality of the principles underpinning all of the internal market freedoms in this respect.[232]

The judgment in *Säger* was the first to address the issue of non-discrimination directly.[233] The case concerned German legislation which reserved activities relating to the maintenance of industrial property rights to patent agents.[234] The UK government, citing earlier case law,[235] argued that in the absence of any discrimination, a restriction on the provision of services would not breach Article 56. Advocate General Jacobs responded:

> It does not seem unreasonable that a person establishing himself in a Member State should as a general rule be required to comply with the law of that State in all respects. In contrast, it is less easy to see

[227] Case C–108/96 *MacQuen* (n 67); Case C–67/98 *Zenatti* (n 172).

[228] See, eg, Case C–205/99 *Analir v Administración General de l'Estado* [2001] ECR I–1271.

[229] De Witte (n 271).

[230] In Case C–458/08 *Commission v Portugal*, 18 Dec 2010, [88] the ECJ ruled that the obligation on Member States in Art 16(1) of the Services Dir to ensure access to a service activity within its territory by subjecting it only to non-discriminatory and objectively justified requirements 'stems directly from Article 49 EC' (now Art 56 TFEU).

[231] Marenco (n 68); Case C–379/92 *Peralta* (n 137) [51], where, in the absence of any direct or indirect discrimination or any advantage for domestic interests, Art 56 TFEU was held not to apply to a prohibition on discharging harmful chemicals at sea.

[232] Case C–55/94 *Gebhard* (n 14) [37]; Case C–390/99 *Canal Satélite* (n 6) in which the case law on goods and services was treated as being the same. On the convergence of the freedoms see C Barnard, 'Fitting the Remaining Pieces into the Goods and Persons Jigsaw' (2001) 26 ELRev 35; T Connor, 'Goods, Persons, Services and Capital in the European Union: Jurisprudential Routes to Free Movement' (2010) 11 German LJ 159.

[233] The first signs were already visible in the *Lawyers' Services* case, concerning the implementation by Germany of Dir 77/249 on the exercise by lawyers of freedom to provide services. See Case 427/85 *Commission v Germany* [1988] ECR 1123; Case 292/86 *Gullung* (n 61); Case C–294/89 *Commission v France* [1991] ECR I–3591; Case C–289/02 *AMOK* (n 69).

[234] Case C–76/90 (n 13).

[235] Case 15/78 *Koestler* (n 139); AG Gulman in Case C–275/92 *Schindler* (n 19).

why a person who is established in one Member State and who provides services in other Member States should be required to comply with all the detailed regulations in force in each of those States. To accept such a proposition would be to render the notion of a single market unattainable in the field of services.

For this reason, it may be thought that services should rather be treated by analogy with goods, and that non-discriminatory restrictions on the free movement of services should be approached in the same way as non-discriminatory restrictions on the free movement of goods under the '*Cassis de Dijon*' line of case-law. That analogy seems particularly appropriate where, as in the present case, the nature of the service is such as not to involve the provider of the service in moving physically between Member States but where instead it is transmitted by post or telecommunications. . . .

[I] do not think that it can be right to state as a general rule that a measure lies wholly outside the scope of [*Article 56 TFEU*] simply because it does not in any way discriminate between domestic undertakings and those established in other Member States. Nor is such a view supported by the terms of [*Article 56 TFEU*]: its expressed scope is much broader. If such a view were accepted, it would mean that restrictions on the freedom to provide services would have to be tolerated, even if they lacked any objective justification, on condition that they did not lead to discrimination against foreign undertakings. There might be a variety of restrictions in different Member States, none of them intrinsically justified, which collectively might wholly frustrate the aims of [*Article 56 TFEU*] and render impossible the attainment of a single market in services. The principle should, I think, be that if an undertaking complies with the legislation of the Member State in which it is established it may provide services in another Member State, even though the provision of such services would not normally be lawful under the laws of the second Member State. Restrictions imposed by those laws can only be applied against the foreign undertaking if they are justified by some requirement that is compatible with the aims of the Community.[236]

The Advocate General's approach is a strongly liberalizing one, since almost any national law which regulates the domestic market even in pursuance of important national policies is potentially subject to rigorous scrutiny by the ECJ for justification. Yet this approach has been confirmed by the ECJ in several judgments, beginning with *Alpine Investments*.[237] The case concerned a Dutch prohibition on cold-calling, ie on the making of unsolicited telephone calls without the prior written consent of the individuals concerned in order to offer financial services, and the prohibition applied both to calls made within the Netherlands and to calls made to other Member States. According to the ECJ the prohibition deprived the operators of a rapid and direct technique for marketing and for contacting potential clients in other Member States, thus restricting the free movement of services:

35. Although a prohibition such as the one at issue in the main proceedings is general and non-discriminatory and neither its object nor its effect is to put the national market at an advantage over providers of services from other Member States, it can, none the less, as has been held (paragraph 28) constitute a restriction on the freedom to provide services.

36. Such a prohibition is not analogous to the legislation concerning selling arrangements held in *Keck and Mithouard* to fall outside the scope of Article 30 of the Treaty.

[236] Case C–76/90 *Säger* (n 13) 4234–4235.

[237] Case C–384/93 *Alpine Investments* (n 4). For criticism see L Daniele, 'Non-discriminatory Restrictions on the Free Movement of Persons' (1997) 22 ELRev 191; C Hilson, 'Discrimination in Community Free Movement Law' (1999) 24 ELRev 445.

> 37. According to that judgment, the application to products from other Member States of national provisions restricting or prohibiting, within the Member State of importation, certain selling arrangements is not such as to hinder trade between Member States so long as, first, those provisions apply to all relevant traders operating within the national territory and, secondly, they affect in the same manner, in law and in fact, the marketing of domestic products and of those from other Member States. The reason is that the application of such provisions is not such as to prevent access by the latter to the market of the Member State of importation or to impede such access more than it impedes access by domestic products.
>
> 38. A prohibition such as that at issue is imposed by the Member State in which the provider of services is established and affects not only offers made by him to addressees who are established in that State or move there in order to receive services but also offers made to potential recipients in another Member State. It therefore directly affects access to the market in services in the other Member States and is thus capable of hindering intra-Community trade in services.

Although the reasoning is not altogether clear, the effect of paragraphs 37 and 38 is that a restrictive regulation will not fall outside the scope of Article 56 or 34 TFEU simply because it is non-discriminatory in law and in fact, unless it is *also* a restriction which does not in any way affect the access of the person in question to the market in goods or services of another Member State. If an effect on an individual's access to the market of another Member State can be shown, then, regardless of the equally restrictive effect on situations wholly internal to a Member State, the measure in question will fall within the scope of EU law and require objective justification.[238]

Further, the ruling in *Gebhard* on freedom of establishment, which suggested that the same rules were applicable to all four freedoms and that discrimination is not necessary for a restrictive measure to constitute an impediment to freedom of movement under the Treaty, has since been repeated in several cases concerning services. In a paragraph in *Arblade*, which has been repeated in a number of other rulings,[239] the ECJ declared:

> It is settled case-law that Article 59 [*now Art 56 TFEU*] of the Treaty requires not only the elimination of all discrimination on grounds of nationality against providers of services who are established in another Member State but also the abolition of any restriction, even if it applies without distinction to national providers of services and to those of other Member States, which is liable to prohibit, impede or render less advantageous the activities of a provider of services established in another Member State where he lawfully provides similar services.[240]

It seems therefore that the rules relating to freedom of movement and the internal market have moved away from the earlier emphasis on discrimination and protectionism and focus more on the creation of a single EU market. In that sense any national rules, whether discriminatory or not, which may impede inter-state trade and mobility by affecting the access of goods, persons, or services from one national market to another is in principle caught by EU law and must be justified by the regulating state.

[238] Not every restrictive measure has been held by the Court to fall within the scope of Art 56. Just as in the case of goods, workers, and establishment, some restrictions are said to be insufficiently direct or significant to be considered liable to have an effect on access to the market: see, eg, Cases C–51/96 and 191/97 *Deliège* (n 140), in which the Judo Federation selection rules for competitions were held not to determine access to the labour market; Case C–190/98 *Graf* (n 73).

[240] Cases C–369 and 376/96 *Arblade* (n 64) [33].

5 GENERAL LEGISLATION TO FACILITATE ESTABLISHMENT AND SERVICES: RECOGNITION OF PROFESSIONAL QUALIFICATIONS

The recognition of qualifications is an important matter for the free movement of services, workers, and establishment alike, and there has been a great deal of litigation before the ECJ on this issue. However, in tandem with the developing case law of the ECJ, there has also been an active legislative programme on recognition of qualifications for many years. The EU has moved gradually towards a comprehensive mutual-recognition approach, culminating in the adoption of an umbrella Directive 2005/36 consolidating the prior legislation on the recognition of professional qualifications.[241]

(A) THE INITIAL SECTORAL HARMONIZATION/ COORDINATION APPROACH

Initially, the EU legislature pursued a harmonization or coordination approach, which focused on specific sectors of economic or professional life, with a view to reaching agreement between all Member States on the minimum standard[242] of training and education needed for a qualification in that field.[243] These directives mainly covered activities in the medical and health-related sphere—general practitioners, nurses, pharmacists, veterinary surgeons—and also architects, and there were some transitional and other directives on industries such as small craft, food and beverage, wholesale, intermediary, retail, and the coal trade.[244] A directive on lawyers' services was also adopted in 1977,[245] and a directive on the right of establishment for lawyers in 1998.[246]

(B) INTRODUCTION OF THE MUTUAL RECOGNITION APPROACH

It was not easy, however, to gain agreement on the content of such 'harmonizing' sectoral directives, and to get them adopted them through the cumbersome EU legislative process. In 1974, the Council expressed the wish that future work on mutual recognition be based on 'flexible and qualitative criteria', and that directives 'should resort as little as possible to the prescription of detailed training requirements'.[247]

The 1984 summit of the European Council at Fontainebleu marked the beginning of a new approach, and the first mutual recognition Directive 89/48 was adopted five years later, providing for 'a general

[242] For a case in which Austria was found to violate the sectoral Dirs on dentists' qualifications by recognizing persons as qualified to practise who had not met the minimum training criteria laid down see Case C–437/03 *Commission v Austria* [2005] ECR I–9373.

[243] This has been referred to as 'passive' recognition, since the active recognition work is done by the sectoral legislation and Member States need only passively recognize qualifications which comply with the standards set in that legislation: K Armstrong, 'Mutual Recognition' in C Barnard and J Scott (eds), *The Legal Foundations of the Single Market: Unpacking the Premises* (Hart, 2002) ch 9.

[244] For a case concerning one of the transitional dirs see Case C–58/98 *Corsten* [2000] ECR I–7919; and on pharmacists, Case C-221/05 *McCauley v Pharmaceutical Society of Ireland* [2006] ECR I-6869.

system for the recognition of higher-education diplomas awarded on completion of professional education and training of at least three years' duration'.[248] The Directive differed from previous sectoral directives in several ways.[249]

First, it was intended to apply to all regulated professions for which university-level training of at least three years was required and which was not covered by a specific directive. Secondly, recognition was to be based on the principle of mutual trust, without prior coordination of the preparatory educational and training courses for the various professions in question. The basic principle was that a host Member State may not refuse entry to a regulated profession to a national of a Member State who holds the qualifications necessary for exercise of that profession in another Member State.[250] Thirdly, recognition was granted to the 'end product', ie to fully qualified professionals, including any professional training required in addition to their university diplomas. Fourthly, where there were major differences in education and training, or in the structure of a profession, in different states, the Directive provided for compensation mechanisms in the form either of an adaptation period or an aptitude test.

While the mutual recognition approach has advantages over the time-consuming sectoral harmonization approach, there are also some obvious disadvantages. It does not provide an automatic guarantee to people holding specified qualifications that they will be accepted to practise in any Member State, but merely provides them with a starting point. States remain free, where either the content of the education or training received is inadequate or the structure of the profession it represents is different, to impose the additional requirement of an aptitude test or an adaptation period.[251] By allowing Member States to control and to supervise the process of recognition at each step, this approach is heavily reliant on mutual trust and on the adoption of a non-protectionist attitude by national competent authorities.[252] Nevertheless, it has become the dominant approach, and even the sectors in which harmonization-type directives were adopted have been affected by this approach, most recently under the terms of Directive 2005/36.

The basic thrust of Directive 89/48 was that, if an EU national wished to pursue a regulated profession in any Member State, the competent authorities in the Member State could not refuse permission on the ground of inadequate qualifications if the person satisfied certain conditions. The conditions were that the person had pursued the equivalent of a three-year higher education course in the EU and had completed the necessary professional training in order to be qualified to take up the 'regulated profession' in question.[253]

Satisfaction of these conditions did not mean that the person had to be given permission to pursue that profession, but it meant that the competent national authorities could not refuse permission solely on the ground of inadequate qualifications. If the qualifications were considered adequate, then

For the definition of a 'regulated profession' in Dir 89/48 [1989] OJ L19/16 and Dir 92/51 [1992] OJ L208/25, which includes being governed by the terms of a collective agreement, see Case C–234/97 *De Bobadilla* (n 81) [14]–[21]; Case C–586/08 *Angelo Rubino v Ministero dell'Università e della Ricerca*, 17 Dec 2009.

permission to practise should be given. If the duration of the person's training and education was however at least one year less than that required in the host state, the Directive permitted Member States to require certain evidence of professional experience. If, on the other hand, the matters covered by the person's education and training differed substantially from those covered by the host-state qualification, or if the host-state profession comprised specific regulated activities which were not within the profession regulated in the Member State where the qualification was obtained, the Member State was permitted to require the completion of an adaptation period or that an aptitude test be taken.[254]

Directive 89/48 was followed by Directive 92/51, which supplemented and adopted the same approach.[255] The 1992 Directive covered education and training other than the three-year higher education requirement of Directive 89/48, such as one-year post-secondary courses, qualifying the holder to take up a regulated profession. The third general directive was Directive 99/42, which replaced the series of earlier transitional and other sectoral directives using a mutual-recognition approach based on periods of consecutive experience and possession of skills, rather than the possession of formal qualifications or diplomas.[256]

Directives 89/48 and 92/51 were amended in 2001 along with most of the sectoral directives by a general (so-called SLIM) Directive 2001/19/EC.[257] The SLIM Directive simplified the coordination procedure under the general directives and introduced a range of other changes, including extension to the general system of the concept of 'regulated education and training', requiring host states to examine professional experience gained, incorporating some of the ECJ's case law on third-country diplomas, and specifying procedural rights.

(c) DIRECTIVE 2005/36 ON THE RECOGNITION OF PROFESSIONAL QUALIFICATIONS

In 2005, virtually all of the previous legislation, most importantly the three mutual recognition Directives of 1989, 1992, and 1999 and twelve of the sectoral directives (not including the two Lawyers' Directives[258]), was consolidated and replaced by a single Directive 2005/36 on the recognition of professional qualifications. The new Directive maintains the same approach and principles as the earlier mutual recognition legislation.[259]

Apart from consolidation, the aim of the 2005 Directive was to maintain the guarantees afforded by each of the prior recognition systems, and at the same time 'to create a single, consistent legal framework based on further liberalization of the provision of services, more automatic recognition of qualifications, and greater flexibility in the procedures for updating the Directive'. As with the Services Directive, which is discussed below, the original proposal for the Directive on Recognition of Professional Qualifications was amended and diluted in various ways in response to the concerns of Member States, in particular in relation to controls over the temporary provision of services.

The Directive contains some significant innovations. Three in particular should be mentioned. First, Title II establishes a more liberalized regime containing detailed procedures and stricter

[254] On the circumstances in which a Member State must permit the partial taking-up of a profession see Case C–330/03 *Colegio de Ingenieros de Caminos* (n 251).

[256] [1999] OJ L201/77.

[257] [2001] OJ L206/1.

[258] These two Lawyers' Dirs govern the recognition of the authorization of lawyers to practise, rather than recognition of their qualifications. Dir 2005/36 thus applies to the recognition of lawyers' qualifications. Dir 2005/35 however leaves unaffected other 'specific legal provisions regarding the recognition of professional qualifications, such as those existing in the field of transport, insurance intermediaries and statutory auditors'.

[259] Dir 2005/36 (n 1).

deadlines for decision-making, for the temporary provision of services under the provider's original professional title. Secondly, the part of Title III on establishment dealing with the former general mutual recognition regime introduces the notion of 'common platforms', defined in Article 15 as a set of criteria which make it possible to compensate for the widest range of substantial differences which have been identified between the training requirements in at least two-thirds of the Member States including all the Member States which regulate that profession. Thirdly, Title V provides for close collaboration between the competent administrative authorities of home and host states, involving confidential exchanges of information including in relation to disciplinary action taken or criminal sanctions imposed.[260]

Apart from Directive 2005/36 two other relevant developments in the field of recognition of qualifications are Decision 2241/2004, which introduced a set of European instruments to be used by individuals to describe their qualifications and competences,[261] and the European Qualifications Framework (EQF) which is intended to act as 'a translation device and neutral reference point for comparing qualifications across different education and training systems and to strengthen co-operation and mutual trust between the relevant stakeholder'.[262]

(D) SITUATIONS NOT COVERED BY THE LEGISLATION

Despite the comprehensive scope of Directive 2005/36 and the other remaining legislation dealing with mutual recognition of qualifications, there are still likely to be cases and circumstances in which the legislation does not provide a decisive answer. Examples may include the situation of a person seeking to pursue a profession which is unregulated in the host state[263] and other cases which are not covered by the secondary legislation.[264] In such situations, the basic principles outlined by the ECJ in *Vlassopoulou*[265] and *Heylens*[266] apply: Article 49 TFEU imposes a requirement on Member State authorities to examine the knowledge and qualifications already recognized or acquired by the person concerned in another Member State, and to give adequate reasons for the non-recognition of any qualification held, as well as access to a judicial remedy.[267] Qualifications obtained by EU nationals outside the EU are covered by Directive 2005/36 to the extent that the holder has at least three years' certified professional experience in the territory of a Member State which has chosen to give due recognition to the third-country qualification.[268] However, apart from EEA and Swiss nationals, nationals of non-member countries who are established in the EU have no general rights of mutual recognition or permission to practise in a self-employed capacity under EU law, even when they have undergone precisely the same education and training as EU nationals within a Member State. Thus

[260] The EU's official website provides a helpful summary of the key provisions of Dir 2005/36: http://europa.eu/legislation_summaries/internal_market/single_market_services/c11065_en.htm.

[267] Case C–586/08 *Angelo Rubino* (n 253).

[268] Art 3(3) of Dir 2006/35. This reflects the general approach which had been taken by the ECJ in relation to earlier dirs in Case C–238/98 *Hocsman v Ministre de l'Emploi* [2000] ECR I–6623; Case C–110/01 *Tennah-Durez v Conseil national de l'ordre des médecins* [2003] ECR I–6239 to the effect that national competent authorities must consider all diplomas or evidence of formal qualifications, and all relevant training and experience, of an EU national seeking to exercise the right of establishment, whether or not they were obtained within the EU. See also the earlier case of Case C–319/92 *Haim v Kassenzahnärtzliche Vereinigung Nordrhein* [1994] ECR I–425 on recognition of periods of professional experience in other Member States.

non-EU nationals are protected neither by the Treaty nor by the legislation. In a weak gesture towards recognizing this gap, recital 10 of Directive 2005/36 states that it does not impose any 'obstacle' to the right of Member States to recognize professional qualifications acquired outside the territory of the EU by third-country nationals, but stipulates that all recognition should respect the minimum training conditions for certain professions.

Finally, it should be noted that 'wholly internal situations' are not covered by the Directive, in the sense that the applicant must be seeking to practise in a host state other than the state in which that person's qualification was obtained.[269]

6 GENERAL LEGISLATION TO FACILITATE ESTABLISHMENT AND SERVICES: THE SERVICES DIRECTIVE

Late in 2006, following a long and heated political process, Directive 2006/123 on services in the internal market was adopted.[270] Although called the 'services directive', in fact the legislation, just like Directive 2005/36 on recognition of qualifications, covers both temporary service provision as well as freedom of establishment. Initially known as the Bolkenstein Directive after the Commissioner who first introduced the proposal, this has been a controversial legislative initiative which was seen by some of its opponents, who dubbed it the Frankenstein Directive, as a threat to the social systems and public service ethic of many Member States. Some believe that opposition to the Directive played a part in the debate in France which led to a negative outcome in the referendum on the Constitutional Treaty in 2005.

Three particular questions concerning the Directive will be addressed here. In the first place, why was a *general* directive on the liberalization of service-provision in the EU considered to be necessary, so long after the General Programme of the 1960s and more than a decade after the Single Market programme of the 1990s? Secondly, why was the 'country-of-origin' principle which was central to the original proposal for the Directive so controversial? And, thirdly, what are the main significant features of the Services Directive following the removal of the country-of-origin principle by the European Parliament's amendments? These questions are addressed in the extract below.

B De Witte, Setting the Scene—How did Services get to Bolkestein and Why?[271]

There was . . . in the early 1990s, a clear double-track approach to the establishment and functioning of the internal market for services: on the one hand, the most 'obstructed' and economically important sectors had been the subject of sector-specific internal market legislation as part of the 1992 programme, and on the other hand, the European Court of Justice had put in place a 'catch-all' legal regime, which allowed the Commission (in its other capacity of guardian of the Treaty) and interested firms or individuals to tackle national impediments to the services market that had been left in place by the EC legislative programme.

[269] Art 2(1) of Dir 2005/36; Cases C–225–227/95 *Kapasakalis v Greece* [1998] ECR I–4329 for a 'purely internal situation' under Dir 89/48.

[270] Dir 2006/123/EC (n 2). The deadline for implementation of the Dir was 28 Dec 2009.

[271] B de Witte, 'Setting the Scene: How did Services get to Bolkestein and Why?', EUI Working Papers, 20/2007; C Barnard, 'Unravelling the Services Directive' (2008) 45 CMLRev 323.

In addition, both elements of this legal strategy were elastic and therefore able to cope, in principle, with future challenges. The *judicial* approach was inherently open-ended, and therefore fit to identify new forms of trade in services as well as newly emerging impediments to such trade; it also covered gaps left even where internal market legislation had been adopted. The *legislative* approach was not exhausted by the deadline set for the 1992 programme, but could be used also later to deal with newly emerging problem sectors…

…

Why and when did the Commission start considering that this double-track approach was not sufficient for the establishment of a 'true' single market of services? One explanation could be the inherent weakness of the judicial limb of the double-track approach. There was a strong suspicion that the European Court of Justice, in its case-law, only dealt with the proverbial tip of the iceberg and that most impediments to trade in services remained hidden under the surface because the Commission failed to identify them in its infringement investigations, because the individual persons or firms suffering from those restrictions failed to take legal action, and because national courts, when confronted with such cases, failed to enforce the Treaty and/or to refer preliminary questions to the European Court of Justice. This suspicion—that many humanly and economically obnoxious impediments to the cross-border provision of services continue to exist in the post-1992 European Community—would seem to be confirmed by the marked increase of services cases before the ECJ in recent years.…Whatever the reasons, the growing amount of ECJ cases—assuming that they still only constitute the tip of the iceberg, though perhaps a slightly bigger tip than before—seems to indicate that there are serious problems with the effective application of the internal market rules on services.

[*The author goes on to discuss the most controversial parts of the legislation as it was initially proposed, ie the parts dealing with temporary service-provision and specifically with the country-of-origin principle, rather than the more acceptable part on freedom of establishment which deals mainly with administrative simplification*.]

As far as provision of services without establishment was concerned, the main emphasis was not on getting rid of administrative formalities but on the much more radical idea that these service providers should in principle be *regulated by the state of origin* and not by the host state…

This element was less obviously necessary, its implications were less clearly spelled out, and it created the virulent opposition which led to a painful retreat in the revised version of 2006.

This 'regulatory competition' part of the Bolkestein draft was more problematic because, unlike the administrative simplification part, it represented a substantive shift compared to the ECJ's case law, and compared to the Commission's own approach in drafting internal market legislation. The case law of the European Court of Justice does not challenge, as a matter of principle, the application of the host country's laws and regulations. The principle of mutual recognition, as adopted by the Court, simply meant that the host state must take into account the laws and regulations to which the service provider is subject in its home state, so as not to create unjustified double burdens. This is not the same thing as imposing, as a matter of principle, the application of the laws of the country of origin.

[*De Witte further points out that the previous, carefully-targeted sector-specific approach of the Commission to the liberalization of services contrasts sharply with the general approach of the Services Directive, and was part of the reason for diluting the original draft. He argues that the final version of the Services Directive adopts instead the 'targeted cross-sector harmonization' approach seen above in the 2005 Directive on recognition of professional qualifications*.]

This time, with the Bolkestein draft, the Commission proposed a regulatory programme applying to the whole range of services (rather than a single one), without an attempt at listing those services…Moreover, the regulatory balance was decidedly tilted away towards deregulation with only a little amount of re-regulation. The basic principle was that the laws of the host country would not apply

to the service provision, but instead the laws of the home country in which the service provider was established.

. . .

The idea of adopting the country of origin approach to regulation without identifying the sectors to which it would apply was the core innovation of the Bolkestein draft, compared to the Commission's earlier internal market policy, but it was also the cause of its troubles. This idea was abandoned in the final version of the Directive. The main innovative content left after the revision of the draft is its programme for 'smooth administration' (chapters II and III of the Directive), which fits better in the tradition of targeted cross-sector harmonisation that had been initiated by the diploma and public procurement directives.

. . .

As far as the regulation of services is concerned, the country-of-origin clause has been removed, but the price for the removal was the enactment of a highly complex and very confusing Article 16, which, taken as a whole, is reminiscent of the existing case-law of the ECJ on restrictions of services, but with some major differences which are not well explained in the rambling preamble of the Directive. Although the second sentence of Article 16(1) states that the 'Member State in which the service is provided shall ensure free access to and free exercise of a service activity within its territory', this promise of sweeping liberalisation is immediately tempered by the next sentence which makes clear that the host states may continue to apply their laws and regulations, as long as these are non-discriminatory, necessary and proportional—as the Court of Justice has consistently held in its case law on services. So far, Article 16 is only a restatement of existing court-made law. Paragraph 2 of Article 16 adds a number of prohibited requirements which, again, probably correspond to the Court's views of what is permissible, but the specification adds to legal clarity.

However, paragraph 3 of Article 16 attempts (whether deliberately or not) to modify existing services law by specifying which are the acceptable justifications for host country requirements, namely: reasons of public policy, public security, public health, the protection of the environment, and rules on employment conditions. This list is much shorter than the list of mandatory requirements that the Court of Justice has come to recognize in the course of the years. Neither the text of the Directive nor its preamble explain why the Directive attempts to modify the Court's case law on this point . . .

So, although the 'revolution' proposed in the Bolkestein draft was turned back by the Council and Parliament, the laborious compromise reached during the codecision procedure seems nevertheless to have produced (whether intentionally or not) a deregulatory shift compared to existing EC services law. This is only one of the many uncertainties raised by the text of the Directive.

In its final form, therefore, the Services Directive accomplished a certain amount of useful administrative simplification and cooperation with a view to reducing obstacles to the free movement of services and establishment. In this sense, it follows the pattern set by Directive 2005/36, which dealt with one particular obstacle, viz the non-recognition of qualifications, and is in the tradition of previous sectoral legislation.

Articles 5–8 of the Services Directive deal with procedural simplification, the setting-up of 'points of single contact', the right to information, and electronic procedures. Articles 9–15 deal with freedom of establishment, covering authorization procedures, and indicating which requirements are prohibited and which are subject to evaluation. Many of these are based directly on ECJ case law, in some cases with more specific detail.

When it comes to temporary service provision, however, we have seen that the retreat from the country-of-origin principle in the Services Directive has resulted in a complicated but arguably weakly deregulatory set of provisions in Articles 16–18. It remains to be seen whether the ECJ will continue to permit Member States to invoke a longer list of grounds for objective justification than the

five specific grounds set out in Article 16(3) of the Directive, in keeping with its longstanding interpretation of the Treaty provisions on the free movement of services in this respect.[272] Articles 19–21 then govern the rights of recipients of services.

Lastly, Articles 22–27 cover a range of detailed provisions on the 'quality of services' (covering issues such as availability of information, commercial communications, liability insurance and dispute-settlement),[273] Articles 28–36 deal with administrative cooperation (covering issues such as supervision, safety alerts, reputational information, and mutual assistance), and Articles 37–43 contain a range of provisions (including a code of conduct, mutual evaluation and review mechanisms, and a Comitology procedure) intended to further the aims of the Directive.

Finally, while the Directive is a general one applicable in principle to all kinds of services, its scope is not comprehensive. Rather it is negatively defined by a series of exclusions of particular kinds of services from its coverage, many of which were again a consequence of parliamentary amendments to the initial draft legislation. Apart from the exclusion of sectors already covered by legislation such as financial services, e-communication, and transport, Articles 1–3 contain: a range of exclusions: for example non-economic services of general interest, social services, health care, private security services; explanations of the areas which the Directive 'does not affect' or 'does not concern'; and indications of how it should interact with overlapping legislation such as that on mutual recognition of qualifications. These are in addition to the series of derogations provided for in Articles 17–18. Many of these provisions, which were politically crucial to the adoption process and which were often animated by concerns about the impact of the Directive on the different social protection systems of Member States,[274] are rather convoluted and unpredictable in their legal effect. To give one example, the declaration in Article 1 that the Directive 'does not affect labour law . . . which Member States apply in accordance with national law which respects Community law' is circular and confusing.

In all, even if not exactly Frankenstein's monster, the Directive is at best a patchy, complicated, and legally rather unsatisfactory outcome to a fraught and lengthy legislative process.

7 CONCLUSIONS

i. The ECJ has increasingly adopted a similar approach to the various Treaty freedoms, including the free movement of services and establishment, such that any national rule which constitutes an inter-state impediment to market access falls within the scope of the free movement rules and requires justification.

ii. Relevant differences remain between temporary service provision, on the one hand, and establishment, on the other. These differences are reflected partly in the more extensive case law on objective justification in the field of services, and partly in the distinction drawn between services and establishment in the two recent Directives on recognition of professional qualifications and

[272] One of several arguments in favour of adherence by the ECJ to its wider, non-exhaustive list of potential justifications is that otherwise the field of services will differ in an apparently arbitrary way from those of goods and workers, where restrictions on free movement can, so long as they are proportionate, be justified on an open-ended public interest grounds. Rec 40 to the Dir arguably also supports the broader reading. In Case C–458/08 *Commission v Portugal* (n 127) the Court held that the obligation in Art 16(1) of Dir 2006/123 stems directly from Art 56 TFEU.

[273] In Case C–111/09 *Société fiduciaire nationale d'expertise comptable v Ministre du Budget*, 5 Apr 2010, the ECJ ruled that Art 24(1) of the Services Dir precludes national legislation which totally prohibits the members of a regulated profession, such as that of qualified accountant, from canvassing.

[274] For similar concerns arising in recent litigation before the ECJ see Case C–341/05 *Laval* and Case C– 438/05 *Viking* (n 25).

services in the internal market, with an emphasis on greater liberalization in the case of temporary service provision.

iii. It remains unclear even after the controversial *Laval* and *Viking* cases, which applied the Treaty provisions on establishment and services to collective action by trade unions, whether those provisions are fully horizontally applicable to all private action.

iv. After years of pursuing a slow sectoral strategy of legislative harmonization of professional qualifications, there was a change of approach in the late 1980s to one of general mutual recognition. In 2005, a single consolidating directive on the recognition of professional qualifications was adopted. This directive retains the main elements of previous legislation, but seeks to simplify and liberalize further the recognition of entitlement to practise in the case of temporary service providers, and to strengthen the system of recognition for those exercising rights of establishment.

v. Together with Directive 2004/38 on the free movement and residence of EU citizens discussed in Chapters 21 and 23, these Directives signify a general move towards legislative consolidation in the field of free movement.

vi. Although EU law on establishment and services applies only to economic activity, the case law—in particular on cross-border access to health care—indicates that important or 'special' public services such as health, welfare, and education will not escape the Treaty rules if they are organized and provided through a system which lends itself to market behaviour, and where some kind of remuneration is provided.

CITIZENSHIP OF THE EUROPEAN UNION

1 CENTRAL ISSUES

i. The Maastricht Treaty first introduced the legal concept of EU citizenship as part of the move from a mainly economic community to a political union. In addition to providing a stronger Treaty basis for the rights of movement, residence, and equal treatment of EU nationals, and gathering existing entitlements together under the umbrella of citizenship, Articles 20–25 TFEU created a number of new political and electoral rights. While the Lisbon Treaty did not make major changes to the provisions on EU citizenship, it linked these rights more closely to the prohibition on discrimination on grounds of nationality. Secondly, the Lisbon Treaty situated EU citizenship in the context of a new emphasis on representative and participatory democracy, including by introducing a new 'agenda-setting' citizens' initiative.

ii. Directive 2004/38 consolidated, updated, and replaced most of the legislation governing the rights of movement and residence of all previous categories of people enjoying such rights under EU law, including workers, the self-employed, job-seekers, students, families, etc, under the title of 'citizens'. However, the ECJ has emphasized that Directive 2004/38 does not eliminate the different EU law categories of persons and rights, and in particular that it continues to distinguish between economically active and non-economically active EU nationals. Member States have been slow to implement Directive 2004/38 properly.[1]

iii. The ECJ's rulings on EU citizenship have been important in several ways. First, the Court established that the Treaty provisions on citizenship create certain autonomous rights, independent of other Treaty provisions governing movement and residence. Secondly, the ECJ has linked the provisions on citizenship with the prohibition on discrimination on grounds of nationality in a way which has strengthened the rights and entitlement of EU nationals and their families—both in host Member States and in their own—on matters such as social benefits, taxation, criminal procedures, and dual-nationality situations. However, the Court has recently been cautious in its rulings on access to education and educational benefits for students in other EU Member States.

iv. Although in 2009 there were at least 11.7 million EU citizens residing in a Member State of which they were not nationals, EU citizens are still not availing themselves extensively of their political and electoral rights in other Member States.

2 INTRODUCTION

The Treaty on European Union first introduced the legal concept of citizenship into European Union law.[2] Although this represented the first formal 'constitutionalization' of European Union citizenship, the idea of Community citizenship and the rhetoric of a 'People's Europe' had been in circulation for a long time.[3] The introduction of EU citizenship was greeted at the time with a measure of academic scepticism.[4] Critics focused *inter alia* on the absence of reciprocal duties (other than as a consequence of the ECJ's rulings on horizontal direct effect of certain Treaty provisions[5]), which might give rise to a more active or participatory citizenship,[6] the continued discrimination against resident third-country nationals,[7] and the subjection of citizens' right of residence to the limiting conditions laid down in earlier directives. We shall see below that while the first two of these criticisms retain their force and, indeed, the position of third-country nationals may have worsened,[8] the third has been partly modified by case law.

While the ECJ has continued to repeat the delphic phrase, first uttered in the *Grzelczyk* case, that: 'Union citizenship is destined to be the fundamental status of nationals of the Member States',[9] this does not answer one of the recurrent questions which arises for those studying EU citizenship. That question, which was alluded to in the introduction to Chapter 21, is the following: has the status of EU citizenship become the primary legal status granted under EU law to Member States' nationals, subsuming and rendering residual the other legal categories into which EU law traditionally divided the nationals of EU Member States (worker, student, privileged family member, etc)? Or, on the contrary, is it the case that, apart from its symbolic import, the practical legal impact of EU citizenship remains largely supplemental and residual to these other legal status categories?

In other words, apart from the new and potentially very important electoral and political rights introduced, does the legal relevance of EU citizenship lie mainly in its capacity (i) to supplement and strengthen the existing Treaty-based rights of workers, job-seekers, students, etc, and (ii) to provide a Treaty basis for, and to strengthen, the rights of a residual category of 'non-economically active Member State nationals'? Or is EU citizenship now the primary legal status for Member States' nationals, and the status from which they derive their most significant legal rights, transcending the

question whether they are working, studying, supplying services, or otherwise? We will return to this question later in the chapter.

Article 20 TFEU now summarizes the main elements of EU citizenship as follows:

> 1. Citizenship of the Union is hereby established. Every person holding the nationality of a Member State shall be a citizen of the Union. Citizenship of the Union shall be additional to and not replace national citizenship.
>
> 2. Citizens of the Union shall enjoy the rights and be subject to the duties provided for in the Treaties. They shall have, inter alia:
>
> (a) the right to move and reside freely within the territory of the Member States;
>
> (b) the right to vote and to stand as candidates in elections to the European Parliament and in municipal elections in their Member State of residence, under the same conditions as nationals of that State
>
> (c) the right to enjoy, in the territory of a third country in which the Member State of which they are nationals is not represented, the protection of the diplomatic and consular authorities of any Member State on the same conditions as the nationals of that State;
>
> (d) the right to petition the European Parliament, to apply to the European Ombudsman, and to address the institutions and advisory bodies of the Union in any of the Treaty languages and to obtain a reply in the same language.
>
> These rights shall be exercised in accordance with the conditions and limits defined by the Treaties and by the measures adopted thereunder.

A number of preliminary points may briefly be noted here. The first is that EU citizenship is expressly made 'additional to' to national citizenship.[10] Indeed, while the notion of EU citizenship has begun to pose a challenge to certain dimensions of nationality law, including aspects of dual nationality,[11] and restrictions on the use of surnames,[12] it does not yet displace the centrality of national citizenship in Europe.[13] EU citizenship is contingent upon possession of the nationality of a Member State. EU law does not directly regulate the conditions under which Member States confer nationality,[14] although it indirectly regulates aspects of this process by requiring them to recognize and not to impede enjoyment of the nationality duly granted by another Member State.[15] The *Rottmann* case raised the question whether *loss* or revocation of Member State nationality acquired by deception is a matter falling

[10] The original Maastricht Treaty did not contain this provision. It was added by the Amsterdam Treaty which stated that EU citizenship was 'complementary to' national citizenship. The Lisbon Treaty has changed the term 'complementary' to 'additional', at the insistence of Member States, but it seems unlikely that this change could have significant legal consequences: J Shaw, 'The Treaty of Lisbon and Citizenship', available at www.fedtrust.co.uk/admin/uploads/PolicyBrief_Citizenship.pdf.

[11] For an argument against the requirement to denounce an existing nationality upon naturalization in a Member State see D Kochenov, 'Double Nationality in the EU: An Argument for Tolerance' (2011) 17 ELJ 00.

[12] Case C–148/02 *Garcia Avello v Belgium* [2003] ECR I–11613; Case C–353/06 *Grunkin and Paul v Standesamt Stadt Niebüll* [2008] ECR I–7639; Case C–208/09 *Sayn-Wittgenstein v Landeshauptmann von Wien*, 22 Dec 2010.

[13] See, however, Kochenov, 'Rounding up the Circle' (n 8); G Davies, 'Any Place I Hang My Hat? or: Residence is the New Nationality' (2005) 11 ELJ 43.

[14] Declaration No 2 on Nationality of a Member State appended to the Maastricht Treaty confirms that the question whether an individual possesses the nationality of a Member State is determined by reference to the national law of the Member State concerned. This includes the conditions for naturalization, although see Immigration, Integration and Employment, COM(2003)33.

within the scope of EU law and thus governed by requirements of EU law, or whether it remains purely a matter of national law.

Case C–135/08 **Rottmann v Freistadt Bayern**
2 March 2010

[Note Lisbon Treaty renumbering: Art 17 EC is now Art 20 TFEU]

Rottmann was an Austrian national by birth, who gained German citizenship by naturalization. The naturalization process had the result, under Austrian law, of the loss of his Austrian nationality. When the German authorities discovered he had concealed the fact that serious criminal proceedings were pending against him in Austria, they moved to revoke his newly acquired German nationality. Since revocation would also mean the loss of his EU citizenship and would leave him stateless, Rottmann challenged the decision revoking German nationality. While the Advocate General took the view that the decision to revoke nationality in these circumstances was not governed by EU law, the ECJ disagreed.

THE ECJ

42 It is clear that the situation of a citizen of the Union who, like the applicant in the main proceedings, is faced with a decision withdrawing his naturalisation, adopted by the authorities of one Member State, and placing him, after he has lost the nationality of another Member State that he originally possessed, in a position capable of causing him to lose the status conferred by Article 17 EC and the rights attaching thereto falls, by reason of its nature and its consequences, within the ambit of European Union law…

45 Thus, the Member States must, when exercising their powers in the sphere of nationality, have due regard to European Union law…

48 The proviso that due regard must be had to European Union law does not compromise the principle of international law previously recognised by the Court, and mentioned in paragraph 39 above, that the Member States have the power to lay down the conditions for the acquisition and loss of nationality, but rather enshrines the principle that, in respect of citizens of the Union, the exercise of that power, in so far as it affects the rights conferred and protected by the legal order of the Union, as is in particular the case of a decision withdrawing naturalisation such as that at issue in the main proceedings, is amenable to judicial review carried out in the light of European Union law.

50 Nevertheless, as several of the governments having submitted observations to the Court have argued, if a decision withdrawing naturalisation such as that at issue in the main proceedings is based on the deception practised by the person concerned in connection with the procedure for acquisition of the nationality in question, such a decision could be compatible with European Union law.

51 A decision withdrawing naturalisation because of deception corresponds to a reason relating to the public interest. In this regard, it is legitimate for a Member State to wish to protect the special relationship of solidarity and good faith between it and its nationals and also the reciprocity of rights and duties, which form the bedrock of the bond of nationality.

[*The ECJ goes on to consider the compatibility of this conclusion with the Convention on the Reduction of Statelessness, the European Convention on Nationality, and the Universal Declaration on Human Rights.*]

54 Those considerations on the legitimacy, in principle, of a decision withdrawing naturalisation on account of deception remain, in theory, valid when the consequence of that withdrawal is that the person in question loses, in addition to the nationality of the Member State of naturalisation, citizenship of the Union.

55 In such a case, it is, however, for the national court to ascertain whether the withdrawal decision at issue in the main proceedings observes the principle of proportionality so far as concerns the consequences it entails for the situation of the person concerned in the light of European Union law, in addition, where appropriate, to examination of the proportionality of the decision in the light of national law.

The *Rottmann* case generated considerable attention, with some criticizing the ruling for not going far enough or even retreating from earlier rulings on the relationship between Member State nationality and EU citizenship such as *Micheletti*,[16] while others hailed it as a seminal case and a far-reaching judgment.[17]

3 THE RIGHTS OF FREE MOVEMENT AND RESIDENCE OF EU CITIZENS

The provisions of Articles 21–25 TFEU elaborate on the rights summarized in Article 20(2)(a)–(d), beginning with the core rights of free movement and residence.

Article 21

1. Every citizen of the Union shall have the right to move and reside freely within the territory of the Member States, subject to the limitations and conditions laid down in the Treaties and by the measures adopted to give them effect.
2. If action by the Union should prove necessary to attain this objective and the Treaties have not provided the necessary powers, the European Parliament and the Council, acting in accordance with the ordinary legislative procedure, may adopt provisions with a view to facilitating the exercise of the rights referred to in paragraph 1.
3. For the same purposes as those referred to in paragraph 1 and if the Treaties have not provided the necessary powers, the Council, acting in accordance with a special legislative procedure, may adopt measures concerning social security or social protection. The Council shall act unanimously after consulting the European Parliament.[18]

The introduction of these provisions into the EU Treaties gave rise to several questions about their likely impact. Some of these questions are identified below.

[16] Case C–369/90 (n 15).

[17] For a variety of such commentaries on the significance of the case see http://eudo-citizenship.eu/citizenship-forum/254-has-the-european-court-of-justice-challenged-member-state-sovereignty-in-nationality-law?start=3. Following the case, the Commission in its report on progress towards Citizenship of the Union, stated that it will 'encourage initiatives and projects aimed at acquiring and sharing knowledge and exchanging experience on conditions and procedures for forfeiting Member States' nationality and, consequently, EU Citizenship, to disseminate good practices and, where necessary, facilitating coordination, without encroaching on national competences': COM(2010)602.

[18] The Lisbon Treaty amended this provision slightly with the effect that provisions concerning passports, identity cards, and residence permits, which were previously excluded from the scope of EU legislative competence under Art 18 EC due to the Treaty provisions in the Area of Freedom, Security and Justice, can be adopted by ordinary legislative procedure rather than requiring the special legislative procedure. Measures on social security or social protection can also now be adopted under this Art, albeit using the special legislative procedure.

i. Did the Treaty provisions on citizenship create an autonomous and directly effective right to move and reside in a Member State, regardless of whether the person falls within any previously existing EU law status category?

ii. Did Articles 20 and 21 TFEU change the law as concerns 'wholly internal situations'?[19] Would they allow individuals to challenge restrictions on the rights they enjoy *within* their own Member State, where they have not otherwise exercised EU rights of free movement?

iii. May EU citizens who are neither economically active nor economically self-sufficient, ie who do not fall within any previously recognized EU status category, rely on Articles 20 and 21 (either alone or in conjunction with Article 18 TFEU) to claim entitlement to substantive equality of treatment as compared with nationals of a host Member State in access to social and material benefits?

iv. Did Articles 20 and 21 otherwise expand the rights of EU nationals to challenge restrictions on the terms of their movement, residence, and enjoyment of other benefits within the EU?

(A) DID ARTICLE 20 CREATE AN AUTONOMOUS AND DIRECTLY EFFECTIVE RIGHT?

The question whether Article 20 introduced an autonomous and directly effective right to move and reside in a Member State, regardless of whether the person falls within any other status category of EU law, requires a brief preliminary discussion of those other status categories.

Chapter 21 discussed the categories of worker, former worker, job-seeker, and protected family member, and Chapter 22 discussed the categories of self-employed person and service-recipient. Three other relevant categories are those persons who were formerly covered by the 1990 Residence Directives, which have since been repealed and replaced by the relevant provisions of Directive 2004/38.[20] These three categories were students exercising the right to vocational training under EU law,[21] persons who had ceased to work or had retired,[22] and a catch-all covering all those persons who did not already enjoy a right of residence under EU law.[23] The 1990 Directives had required Member States to grant rights of residence to those three categories of persons and certain of their family members, subject to the proviso that they had adequate resources not to become a burden on the social assistance schemes of the Member States and were covered by sickness insurance.

The new Treaty rights of movement and residence of EU citizens in Article 21 TFEU are expressly made *subject to the limitations and conditions laid down in the Treaties and by the measures adopted to give them effect*. This clause seems intended to include limitations such as those listed in the Treaty enabling Member States to adopt restrictive measures on grounds of public policy, security, and health. But it also seems plausible that Article 21 intended to refer to the financial and health insurance conditions imposed by the three prior Residence Directives, replaced now by Article 7(1)(b)–(d) of Directive 2004/38, on students and other non-economically active persons. This therefore raised the question what, if anything, Article 21 added to the existing law, or whether it simply renamed and gave a Treaty basis to the existing rights (and their limits) as the rights of EU citizenship. The ECJ responded to this question in the *Baumbast* case.

[19] See the discussion in Chs 21 and 22.

[20] Directive 2004/38/EC of the European Parliament and of the Council of 29 April 2004 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States [2004] OJ L158/77.

[21] Dir 90/366 (replaced later by Dir 93/96) [1993] OJ L317/59.

[22] Dir 90/365, [1990] OJ L180/28. This covered people who had not necessarily ever worked in a Member State other than that of their nationality, but who moved after retirement or ceasing to work.

[23] Dir 90/364, [1990] OJ L180/26.

Case C–413/99 **Baumbast and R v Secretary of State for the Home Department** [2002] ECR I–7091

[Note Lisbon Treaty renumbering: Arts 17, 18, 48, 52, and 59 EC are now Arts 20, 21, 45, 49, and 56 TFEU]

The ECJ was asked whether what is now Article 21 TFEU conferred a directly effective right of residence on an EU national who had been found by the relevant national tribunal to be neither a worker nor a person covered by one of the Residence Directives. Baumbast was a German national married to a Colombian national with two children. He worked and lived in the UK with his family over a three-year period before leaving to work in Asia and Africa. Although he no longer lived with them, he continued to provide for his family, who remained living in the UK and enjoyed comprehensive health insurance in Germany to which they travelled for health care. The UK refused to renew his and his family's residence permits, and in the course of the domestic litigation which followed, a reference was made to the ECJ to determine whether he enjoyed an independent right of residence as an EU citizen under Article 21 TFEU.

THE ECJ

81. Although, before the Treaty on European Union entered into force, the Court had held that that right of residence, conferred directly by the EC Treaty, was subject to the condition that the person concerned was carrying on an economic activity within the meaning of Articles 48, 52 or 59 of the EC Treaty … it is none the less the case that, since then, Union citizenship has been introduced into the EC Treaty and Article 18(1) EC has conferred a right, for every citizen, to move and reside freely within the territory of the Member States.

82. Under Article 17(1) EC every person holding the nationality of a Member State is to be a citizen of the Union. Union citizenship is destined to be the fundamental status of nationals of the Member States…

83. Moreover, the Treaty on European Union does not require that citizens of the Union pursue a professional or trade activity, whether as an employed or self-employed person, in order to enjoy the rights provided…on citizenship of the Union. Furthermore, there is nothing in the text of that Treaty to permit the conclusion that citizens of the Union who have established themselves in another Member State in order to carry on an activity as an employed person there are deprived, where that activity comes to an end, of the rights which are conferred on them by the…Treaty by virtue of that citizenship.

84. As regards, in particular, the right to reside within the territory of the Member States under Article 18(1) EC, that right is conferred directly on every citizen of the Union by a clear and precise provision of the EC Treaty. Purely as a national of a Member State, and consequently a citizen of the Union, Mr Baumbast therefore has the right to rely on Article 18(1) EC.

85. Admittedly, that right for citizens of the Union to reside within the territory of another Member State is conferred subject to the limitations and conditions laid down by the EC Treaty and by the measures adopted to give it effect.

86. However, the application of the limitations and conditions acknowledged in Article 18(1) EC in respect of the exercise of that right of residence is subject to judicial review. Consequently, any limitations and conditions imposed on that right do not prevent the provisions of Article 18(1) EC from conferring on individuals rights which are enforceable by them and which the national courts must protect…

87. As regards the limitations and conditions resulting from the provisions of secondary legislation, Article 1(1) of Directive 90/364 provides that Member States can require of the nationals of a Member State who wish to enjoy the right to reside within their territory that they themselves and the members

of their families be covered by sickness insurance in respect of all risks in the host Member State and have sufficient resources to avoid becoming a burden on the social assistance system of the host Member State during their period of residence.

[*The ECJ then found that while Mr Baumbast satisfied the condition requiring adequate resources in the Directive, the adjudicator in the UK had taken the view that he did not satisfy the requirement of having fully adequate sickness insurance.*]

90. In any event, the limitations and conditions which are referred to in Article 18 EC and laid down by Directive 90/364 are based on the idea that the exercise of the right of residence of citizens of the Union can be subordinated to the legitimate interests of the Member States. In that regard, according to the fourth recital in the preamble to Directive 90/364 beneficiaries of the right of residence must not become an unreasonable burden on the public finances of the host Member State.

91. However, those limitations and conditions must be applied in compliance with the limits imposed by Community law and in accordance with the general principles of that law, in particular the principle of proportionality. That means that national measures adopted on that subject must be necessary and appropriate to attain the objective . . .

92. In respect of the application of the principle of proportionality to the facts of the Baumbast case, it must be recalled, first, that it has not been denied that Mr Baumbast has sufficient resources within the meaning of Directive 90/364; second, that he worked and therefore lawfully resided in the host Member State for several years, initially as an employed person and subsequently as a self-employed person; third, that during that period his family also resided in the host Member State and remained there even after his activities as an employed and self-employed person in that State came to an end; fourth, that neither Mr Baumbast nor the members of his family have become burdens on the public finances of the host Member State and, fifth, that both Mr Baumbast and his family have comprehensive sickness insurance in another Member State of the Union.

93. Under those circumstances, to refuse to allow Mr Baumbast to exercise the right of residence which is conferred on him by Article 18(1) EC by virtue of the application of the provisions of Directive 90/364 on the ground that his sickness insurance does not cover the emergency treatment given in the host Member State would amount to a disproportionate interference with the exercise of that right.

94. The answer to the first part of the third question must therefore be that a citizen of the European Union who no longer enjoys a right of residence as a migrant worker in the host Member State can, as a citizen of the Union, enjoy there a right of residence by direct application of Article 18(1) EC. The exercise of that right is subject to the limitations and conditions referred to in that provision, but the competent authorities and, where necessary, the national courts must ensure that those limitations and conditions are applied in compliance with the general principles of Community law and, in particular, the principle of proportionality.

The case thus clearly established that Article 20(1) TFEU confers a directly effective right on EU citizens to reside in a host Member State, regardless of whether they are employed or self-employed. And while the main overall impact of Article 20(1) was to move the rights of residence of such citizens from a legislative footing (initially under the 1990 Directives) to a Treaty footing, this move had some significant legal consequences, since the ECJ ruled that the 'limitations and conditions' accepted by the Treaty on the rights of movement and residence must be interpreted and applied in a proportionate way. On the facts of the case, this meant that to read the requirement of 'sickness insurance' in the Directive restrictively would undermine the right of residence conferred directly by the Treaty.

Thus, one significant consequence of having placed the fundamental rights of movement and residence of EU citizens who do not otherwise fall into another Treaty status category on a Treaty basis is that any conditions or limitations on these rights must be interpreted so as to avoid disproportionate interference with the rights. This reasoning is to be found in much of the ECJ's citizenship case law,

including in those cases concerning access to social and material benefits for EU citizens, as we shall see below.[24]

In *Chen*, the ECJ confirmed that Article 20(1) TFEU confers a directly effective right of residence on EU citizens who do not fall within any other existing EU status category, since the citizen in question in this case was a newborn baby. The key questions raised by the case were (i) whether the child enjoyed a directly effective right to movement and residence based solely on EU citizenship derived from her Irish nationality; (ii) whether the circumstances amounted to an abuse of rights; and (iii) whether the resources of the mother could be taken into account in determining whether the child had sufficient resources not to become a burden on the social assistance scheme of the state.

Case C–200/02 **Zhu and Chen v Secretary of State for the Home Department** [2004] ECR I–9925

Mrs Chen was a Chinese national who came to the UK and moved temporarily to Northern Ireland in order to give birth to her child, Catherine, there, with a view to the child obtaining Irish birthright citizenship. Catherine's parents were both employed by a company established in China, and her mother now lived with Catherine in Wales, UK. The Home Secretary rejected their applications for long-term residence permits on the basis that, although the child was fully dependent on her mother, and together they had health insurance as well as sufficient resources to avoid becoming a burden on the state's resources, Catherine was not exercising any EU law rights, and her mother was not covered by EU law. The ECJ began by ruling that this was not a wholly internal situation since, although the child had been born in the UK and had never left the territory, she held the nationality of another state (Ireland). The Court also rejected the argument that a very young child cannot take advantage of the rights of movement and residence. It then moved on to consider whether she enjoyed rights under Article 20(1) TFEU (ex Article 18 EC).

THE ECJ

26. As regards the right to reside in the territory of the Member States provided for in Article 18(1) EC, it must be observed that that right is granted directly to every citizen of the Union by a clear and precise provision of the Treaty. Purely as a national of a Member State, and therefore as a citizen of the Union, Catherine is entitled to rely on Article 18(1) EC. That right of citizens of the Union to reside in another Member State is recognised subject to the limitations and conditions imposed by the Treaty and by the measures adopted to give it effect…

28. It is clear from the order for reference that Catherine has both sickness insurance and sufficient resources, provided by her mother, for her not to become a burden on the social assistance system of the host Member State.

29. The objection raised by the Irish and United Kingdom Governments that the condition concerning the availability of sufficient resources means that the person concerned must, in contrast to Catherine's case, possess those resources personally and may not use for that purpose those of an accompanying family member, such as Mrs Chen, is unfounded.

30. According to the very terms of Article 1(1) of Directive 90/364 it is sufficient for the nationals of Member States to 'have' the necessary resources, and that provision lays down no requirement whatsoever as to their origin.

[24] See further, Cases C–396–450/05 *Habelt v Deutsche Rentenversicherung Bund* [2007] ECR I–11895, [78], concerning a residence requirement imposed on the exportability of benefits accrued during wartime years for the purposes of Reg 1408/71, the ECJ noted that the requirements in question constituted a restriction not just on the mobility of workers, but also on EU citizens more generally under Art 21 TFEU.

31. The correctness of that interpretation is reinforced by the fact that provisions laying down a fundamental principle such as that of the free movement of persons must be interpreted broadly.

[*The ECJ then reiterated paragraphs 91–92 of its ruling in* Baumbast *to the effect that limitations on the exercise of the Treaty rights must be compatible with the principle of proportionality*]

33. An interpretation of the condition concerning the sufficiency of resources within the meaning of Directive 90/364, in the terms suggested by the Irish and United Kingdom Governments would add to that condition, as formulated in that directive, a requirement as to the origin of the resources which, not being necessary for the attainment of the objective pursued, namely the protection of the public finances of the Member States, would constitute a disproportionate interference with the exercise of the fundamental right of freedom of movement and of residence upheld by Article 18 EC.

...

[The ECJ then addressed the argument that Mrs Chen could not rely on EU law because she had abused EU rights by moving to Northern Ireland with the aim of having her child acquire the nationality of another Member State.]

35. That argument must also be rejected.

36. It is true that Mrs Chen admits that the purpose of her stay in the United Kingdom was to create a situation in which the child she was expecting would be able to acquire the nationality of another Member State in order thereafter to secure for her child and for herself a long-term right to reside in the United Kingdom.

37. Nevertheless, under international law, it is for each Member State, having due regard to Community law, to lay down the conditions for the acquisition and loss of nationality.

38. None of the parties that submitted observations to the Court has questioned either the legality, or the fact, of Catherine's acquisition of Irish nationality.

39. Moreover, it is not permissible for a Member State to restrict the effects of the grant of the nationality of another Member State by imposing an additional condition for recognition of that nationality with a view to the exercise of the fundamental freedoms provided for in the Treaty.

40. However, that would be precisely what would happen if the United Kingdom were entitled to refuse nationals of other Member States, such as Catherine, the benefit of a fundamental freedom upheld by Community law merely because their nationality of a Member State was in fact acquired solely in order to secure a right of residence under Community law for a national of a non-member country.

Finally, the ECJ ruled that Catherine's mother could not be considered a 'dependent relative'[25] for the purposes of deriving a right of residence through her child's EU citizenship, since the reality was that the child was dependent on the mother rather than *vice versa*. However, the Court ruled that a refusal to grant a right of residence to the parent, whether an EU national or not, who is the carer of a child possessing EU citizenship, and enjoying sufficient resources and health insurance, 'would deprive the child's right of residence of any useful effect'.[26]

Chen thus confirms the *Baumbast* ruling in two ways. First, the rights of movement and residence deriving from EU citizenship under Article 20(1) are directly effective, autonomous, and do not depend on possession of any previously existing EU status category. Secondly, the conditions and limitations which a state may impose on these rights must be interpreted and applied in a proportionate manner which does not unduly restrict their exercise. It further confirms the robust approach

[25] This was regulated by Dir 90/364 at the time, and now by Arts 2(2)(d) and 7(2) of Dir 2004/38.

[26] Case C–200/02 [45]. See Ch 21 for a similar ruling in Case C–413/99 *Baumbast,R* [2002] ECR I–7091 concerning the carer-parent of children enjoying educational rights in a Member State after the worker-parent has left the state or has divorced the other.

adopted by the ECJ in *Akrich*,[27] *Centros*,[28] *Cadbury-Schweppes*,[29] *Ninni-Orasche,*[30] and *Commission v Austria*,[31] below, to allegations that EU rights have been 'abusively' acquired.

The answer to the question posed at (i) above therefore is that Article 21 does create a new and directly effective right, and that while the most obviously novel element is the conferral of Treaty status on the right of non-economically active persons to move and reside, this is not a purely symbolic change. The case law indicates that the limits which states may legitimately impose on the rights of movement and residence of non-economically active persons must be interpreted in the light of their status as citizens, and that they must be proportionate.

(B) DID ARTICLES 20 AND 21 CHANGE THE LAW CONCERNING 'WHOLLY INTERNAL SITUATIONS'?

We saw in Chapter 21 that the ECJ has repeatedly held that EU law rights of movement and residence cannot be invoked in a 'wholly internal situation'. The issue has previously arisen where a national sought unsuccessfully to challenge an internal restriction on his or her freedom of movement within a Member State, as in *Saunders*,[32] or where a Member State national who had not previously exercised rights of movement outside that state sought unsuccessfully to rely on EU law to bring a non-EU national family member to reside with him or her, as in *Morson and Jhanjan*.[33]

After the provisions on EU citizenship were introduced, attempts were made to challenge the 'wholly internal situation' approach in reliance on the new EU Treaty rights of residence and movement, but the ECJ ruled in the cases of *Kremzow*[34] and *Uecker,*[35] the factual contexts of which were broadly similar to those in the cases of *Saunders* and *Morson* respectively, that the provisions on citizenship did not extend the scope of the Treaty to cover these internal situations 'which otherwise had no link' with EU law. However, two developments since the introduction of EU citizenship can be noted.

The first is that cases brought before the ECJ have identified an increasingly broad range of circumstances with a cross-border dimension, even where the litigant is a national claiming against his or her own Member State. The second is that there is evidently significant pressure on the ECJ from scholars, practitioners, and others to rethink its stance on 'purely internal situations' in the light of EU citizenship, a fact which has been addressed by a number of the Advocates General.[36]

In *Schempp*, the ECJ ruled that the legal situation of a national in a Member State who had not himself made use of the right to freedom of movement could not be treated as a wholly internal situation, because his former spouse, to whom he continued to pay maintenance, had exercised her right as an EU citizen to move to another Member State, and this affected his tax position within Germany.[37]

Further, in *Garcia Avello*[38] and *Chen*,[39] the ECJ also found that the Treaty provisions on citizenship conferred rights on the applicants in a situation where they had never left the territory of the Member State in which they were born, and were not presently intending to move. However, in each case the person claiming rights as an EU citizen also happened to possess the nationality of a Member State other than that of the host state. Chen was an Irish national resident in the UK and Garcia Avello was a dual Belgian–Spanish national resident in Belgium.

Garcia Avello concerned a challenge to a Belgian rule prohibiting any change in a registered surname, where Belgian law required the father's surname to be registered but the children wished, given their Spanish nationality, to add the surname of their mother.[40] The children relied on Article 18 TFEU, together with Article 20 TFEU, to claim that they were being discriminated against by comparison with other Belgian nationals. The ECJ ruled in their favour on both the 'internal situation' point and on the claim of discrimination. The ECJ ruled that the refusal to allow a change in surname was in violation of Articles 18 and 20 TFEU.

Case C–148/02 **Garcia Avello v Belgium**
[2003] ECR I–11613

[Note Lisbon Treaty renumbering: Arts 12 and 17 EC are now Arts 18 and 20 TFEU]

THE ECJ

26. Citizenship of the Union, established by Article 17 EC is not, however, intended to extend the scope *ratione materiae* of the Treaty also to internal situations which have no link with Community law (Joined Cases C–64/96 and C–65/96 *Uecker and Jacquet* [1997] ECR I–3171, paragraph 23).

27. Such a link with Community law does, however, exist in regard to persons in a situation such as that of the children of Mr Garcia Avello, who are nationals of one Member State lawfully resident in the territory of another Member State.

28. That conclusion cannot be invalidated by the fact that the children involved in the main proceedings also have the nationality of the Member State in which they have been resident since their birth and which, according to the authorities of that State, is by virtue of that fact the only nationality recognised by the latter. It is not permissible for a Member State to restrict the effects of the grant of the nationality of another Member State by imposing an additional condition for recognition of that nationality with a view to the exercise of the fundamental freedoms provided for in the Treaty (see in particular, to that effect, Case C–369/90 *Micheletti and Others* [1992] ECR I–4239, paragraph 10). Furthermore, Article 3 of the Hague Convention, on which the Kingdom of Belgium relies in recognising only the nationality of the forum where there are several nationalities, one of which is Belgian, does not impose an obligation but simply provides an option for the contracting parties to give priority to that nationality over any other.

29. That being so, the children of the applicant in the main proceedings may rely on the right set out in Article 12 EC not to suffer discrimination on grounds of nationality in regard to the rules governing their surname.

. . .

broad wording of Article 18, the Ombudsman takes the view that this provision also protects the right of EU nationals to go to other Member States with a view to spending a holiday there'.

[38] Case C–148/02 *Garcia Avello* (n 12).

[39] Case C–200/02 (n 15) [19].

[40] For two other cases concerning restrictions on the use of surnames, but where there was no question of a 'wholly internal situation', see Case C–353/06 *Grunkin and Paul v Standesamt Stadt Niebüll* [2008] ECR I–7639; Case C–208/09 *Sayn-Wittgenstein v Landeshauptmann von Wien*, 22 Dec 2010.

35. In contrast to persons having only Belgian nationality, Belgian nationals who also hold Spanish nationality have different surnames under the two legal systems concerned. More specifically, in a situation such as that in issue in the main proceedings, the children concerned are refused the right to bear the surname which results from application of the legislation of the Member State which determined the surname of their father.

36. As the Advocate General has pointed out in paragraph 56 of his Opinion, it is common ground that such a discrepancy in surnames is liable to cause serious inconvenience for those concerned at both professional and private levels resulting from, *inter alia*, difficulties in benefiting, in one Member State of which they are nationals, from the legal effects of diplomas or documents drawn up in the surname recognised in another Member State of which they are also nationals. As has been established in paragraph 33 of the present judgment, the solution proposed by the administrative authorities of allowing children to take only the first surname of their father does not resolve the situation of divergent surnames which those here involved are seeking to avoid.

37. In those circumstances, Belgian nationals who have divergent surnames by reason of the different laws to which they are attached by nationality may plead difficulties specific to their situation which distinguish them from persons holding only Belgian nationality, who are identified by one surname alone.

By comparison, the ECJ ruled in the *Walloon Government* case that where one of the autonomous communities within Belgium (the Flemish community) excluded Belgian nationals who did not reside either within the jurisdiction of the Flemish community or within another bilingual part of the state from the scope of eligibility for a care insurance scheme, this would remain a 'purely internal situation' unless the Belgian nationals who were excluded had previously *exercised* their rights of movement under EU law to another Member State.[41]

Subsequently in *Ruiz Zambrano*, the ECJ was faced with a situation involving the non-EU parents of two EU-citizen children born and resident in Belgium, who had never left that Member State.[42] The case takes the ruling in *Chen* one step further. Eight Member States intervened in the case and argued that the situation in question should be characterized as 'wholly internal', such that EU law on citizenship was not applicable, but Advocate General Sharpston and the ECJ disagreed. While the Advocate General argued at length that EU citizenship is not wholly bound up with movement between Member States, and that the right of residence and the right to move are *independent* rather than combined rights, the ECJ gave a remarkably brief and minimally reasoned ruling in the face of concerted Member State opposition. The essence of the judgment, which focuses on the refusal of residence and a work permit to the parent as an obstacle to the enjoyment of an EU citizen's rights, is contained in the following four paragraphs:

Case C–34/09 **Ruiz Zambrano v ONEM**
8 March 2011

THE ECJ

42 In those circumstances, Article 20 TFEU precludes national measures which have the effect of depriving citizens of the Union of the genuine enjoyment of the substance of the rights conferred by virtue of their status as citizens of the Union (see, to that effect, *Rottmann*, paragraph 42).

[41] Case C–212/06 *Government of the French Community and Walloon Government* (n 36) [37]–[39].
[42] Case C–34/09 *Ruiz Zambrano* (n 36).

43 A refusal to grant a right of residence to a third country national with dependent minor children in the Member State where those children are nationals and reside, and also a refusal to grant such a person a work permit, has such an effect.

44 It must be assumed that such a refusal would lead to a situation where those children, citizens of the Union, would have to leave the territory of the Union in order to accompany their parents. Similarly, if a work permit were not granted to such a person, he would risk not having sufficient resources to provide for himself and his family, which would also result in the children, citizens of the Union, having to leave the territory of the Union. In those circumstances, those citizens of the Union would, as a result, be unable to exercise the substance of the rights conferred on them by virtue of their status as citizens of the Union.

45 Accordingly, the answer to the questions referred is that Article 20 TFEU is to be interpreted as meaning that it precludes a Member State from refusing a third country national upon whom his minor children, who are European Union citizens, are dependent, a right of residence in the Member State of residence and nationality of those children, and from refusing to grant a work permit to that third country national, in so far as such decisions deprive those children of the genuine enjoyment of the substance of the rights attaching to the status of European Union citizen.

The case is bound to be a controversial one, in the vein of *Chen* and *Metock*, since—even if it can ultimately be limited on its factual circumstances—it challenges core aspects of Member States' migration policies.[43]

Just two months following *Zambrano*, however, the ECJ in the *McCarthy* ruling rejected the claim of an EU citizen who possessed both Irish and British nationality but had only ever lived in the UK of a right of residence deriving from EU law.[44] The reason she sought to claim the right of residence as an EU citizen under the Treaty or under Directive 2004/38 was so that her husband, who was a Jamaican national, would enjoy derived residence rights. The ECJ rejected her claim both under Directive 2004/38 and under the Article 21 of the Treaty. The Court ruled that Article 3(1) of Directive 2004/38 (which specifies the personal scope of the legislation) was not applicable to an EU citizen who had never exercised her right to freedom of movement and who had always resided in a Member State of which she was a national, and who was also a national of another Member State. This conclusion was based on a 'literal, teleological, and contextual interpretation' of the Directive. According to the Court, Directive 2004/38 deals with 'the conditions governing the exercise' of the right to move and reside freely in a Member State's territory, and a Member State may not, under international law, refuse its *own* nationals the right to enter and reside in its territory nor expel them or subject their right of residence to conditions.[45] Interestingly, however, the ECJ ruled that the fact that *McCarthy* had never exercised her right to freedom of movement was insufficient in itself to conclude that she was in a wholly internal situation as far as the applicability of Article 21 TFEU was concerned. This was because, according to its earlier ruling in *Ruiz Zambrano*, Article 20 TFEU precludes national measures 'which have the effect of depriving Union citizens of the genuine enjoyment of the substance of the rights conferred by virtue of that status' even where they are nationals of the Member State in question and have never exercised rights of free movement.[46] However, the ECJ distinguished the factual context in McCarthy from that in both *Ruiz Zambrano* and *Garcia Avello*, concluding that UK law in McCarthy's case did not (by comparison with *Zambrano*) have the effect of obliging her to leave the territory of the EU, nor (by comparison with *Garcia Avello*) did it give rise to serious professional

[43] See, eg, the formal statement issued on 21 Mar 2011 by the Irish Minister for Justice, Equality, and Defence on the implications for Ireland of the ruling of the ECJ in *Zambrano*: www.justice.ie/en/JELR/Pages/PR11000019.

[44] Case C–434/09 *McCarthy* (n 36).

[45] Ibid [28]–[34].

[46] Ibid [47].

inconvenience creating likely obstacles to her exercise of freedom of movement in the future. The ultimate ruling was that Article 21 TFEU does not apply to an EU citizen who has never exercised her right to freedom of movement, who has always resided in a Member State of which she is a national, and who is also a national of another Member State, provided that she is not deprived of the genuine enjoyment of the substance of the rights of EU citizenship, and her right of free movement and residence within the territory of the Member States is not impeded.

It is notable that the crucial factor determining whether the circumstances in *McCarthy* and those in *Ruiz Zambrano* were to be characterized as a wholly internal situation seems to hinge on a relatively slight factual distinction: namely the perceived difference in the degree of dependence and vulnerability of the EU-citizen family member. While this was not explicitly discussed by the ECJ in *McCarthy,* the fact that the family member for whom the EU citizen was seeking a derivative residence permit in that case was an adult spouse, as compared with the parent of dependent minor children in *Ruiz Zambrano*, seems to have influenced the Court in reaching a different conclusion in the two cases. Although it is evident that in both cases the right to family life of the EU citizen would be significantly affected by the risk of deportation of the non-EU national family member, the ECJ was willing in *Ruiz Zambrano* but not in *McCarthy* to treat this as a deprivation of the substance of the rights of the EU citizen.

The answer to the question posed at (ii) therefore is that the introduction of EU citizenship and the rights of movement and residence in Articles 20 and 21 TFEU have placed continued pressure on the notion of a purely internal situation, and have reduced, though certainly not eliminated, the scope of the 'wholly internal situation' scenario from which EU law is excluded. Certain factual situations such as those in *Schempp*, *Garcia Avello, Chen,* and *Ruiz Zambrano*, which might otherwise have been considered as purely internal situations, are now considered to have a sufficient connection with EU law due to the impact on certain rights enjoyed by virtue of the status of EU citizenship. In particular, where a national measure restricts the 'substance of the rights conferred by EU citizenship', even in circumstances involving a Member State national who has never exercised rights of movement outside that Member State, that situation will no longer be characterized as a 'wholly internal situation'.

(c) DID ARTICLES 20 AND 21 CREATE RIGHTS FOR EU NATIONALS WHO ARE NEITHER ECONOMICALLY ACTIVE NOR ECONOMICALLY SELF-SUFFICIENT TO CLAIM SUBSTANTIVE EQUALITY OF TREATMENT WITH NATIONALS OF A HOST MEMBER STATE?

We have seen that the rights of movement and residence of EU citizens arising from Articles 20 and 21 are subject to the limits and conditions laid down in the Treaties and in secondary legislation. We also saw that the 1990 Residence Directives, now replaced by Directive 2004/38, imposed two conditions on the freedom of movement and residence of EU nationals who were not workers or self-employed, that is not economically active: first, that such persons have sufficient resources to avoid becoming a burden on the social assistance scheme of the state, and, secondly, that they have comprehensive sickness insurance.

Below we will examine four (potentially overlapping) groups of cases: (i) the first concerning access to social assistance for *non-economically active persons*, (ii) the second concerning access to social or educational assistance for *students*, and (iii) the third concerning access to various kinds of jobseeker's allowance for *persons seeking work*. In all three, the ECJ has ruled that the provisions on citizenship have expanded the circumstances in which an EU national may be entitled to specific social benefits in a host Member State. The fourth group of cases concerns (iv) EU nationals who have acquired a right of *permanent residence* in an EU Member State other than that of their nationality. This is a newly enhanced status introduced by Directive 2004/38 which is enjoyed by all EU citizens

who have satisfied certain conditions, and which continues to be enjoyed regardless of whether the person requires social and economic support from the state or not.

(i) *Non-Economically Active Persons*

The early case of *Martínez Sala* concerned a Spanish national who was resident in Germany and had not been working for some time, who was in receipt of social assistance.[47] The case concerned her eligibility for a child-raising allowance under national law. It seemed unlikely that she would be considered economically active or economically self-sufficient, although the ECJ left open the possibility that she could, depending on the facts before the national court, be a worker. The ECJ ruled that so long as an EU national is lawfully resident within another Member State, he or she is entitled, on a combined reading of Articles 18 and 20(2) TFEU, to equal treatment with Member State nationals in relation to benefits within the scope of the Treaty. The ECJ thus applied the general principle of non-discrimination on grounds of nationality to Martínez Sala on the basis of her EU citizenship and her lawful residence in Germany.[48] It has been said that the ECJ in this case was willing to 'explode the linkages'[49] which had previously been required in order for the principle of non-discrimination to apply. It was not necessary for there to be involvement in any economic activity as a worker or service provider, nor was it necessary to show preparation for a future economic activity as a student, etc. However, the fact that the ECJ did not base her right to residence on Articles 20–21 TFEU, because it had found that Germany had authorized her residence under the terms of a Council of Europe Convention on social and medical assistance, meant that the Court did not have to confront the limiting conditions within Articles 20–21 TFEU, and especially the requirement that she should have sufficient resources to avoid becoming a burden on the social assistance scheme of the state.

In *Trojani*, however, the ECJ directly confronted the limiting conditions of Articles 20–21, since the question whether Trojani had a right of residence under the Treaty citizenship provisions was specifically raised by the national court. Trojani was a French national taking part in a reintegration programme with the Salvation Army in Belgium,[50] who applied for social assistance in the form of a minimum subsistence allowance ('minimex') there.

Case C–456/02 Trojani v CPAS
[2004] ECR I–7573

[Note Lisbon Treaty renumbering: Arts 12 and 18 EC are now Arts 18 and 21 TFEU]

THE ECJ

31. It must be recalled that the right to reside in the territory of the Member States is conferred directly on every citizen of the Union by Article 18(1) EC (see Case C–413/99 *Baumbast and R*, paragraph 84). Mr Trojani therefore has the right to rely on that provision of the Treaty simply as a citizen of the Union.

32. That right is not unconditional, however. It is conferred subject to the limitations and conditions laid down by the Treaty and by the measures adopted to give it effect.

[47] Case C–85/96 *Maria Martínez Sala v Freistaat Bayern* [1998] ECR I–2691.

[48] *Martínez Sala* thus strengthens the basis for earlier rulings such as Case C–411/98 *Ferlini v Centre hospitalier de Luxembourg* [2000] ECR I–8081, which did not involve EU citizenship, but applied Art 18 TFEU and the principle of non-discrimination on grounds of nationality to a lawfully resident EU national.

[50] A discussion of his possible status as a worker is contained in Ch 21.

33. Among those limitations and conditions, it follows from Article 1 of Directive 90/364 that Member States can require of the nationals of a Member State who wish to enjoy the right to reside within their territory that they themselves and the members of their families be covered by sickness insurance in respect of all risks in the host Member State and have sufficient resources to avoid becoming a burden on the social assistance system of that State during their period of residence.

34. As the Court has previously held, those limitations and conditions must be applied in compliance with the limits imposed by Community law and in accordance with the general principles of that law, in particular the principle of proportionality (*Baumbast and R*, paragraph 91).

35. It follows from the judgment making the reference that a lack of resources was precisely the reason why Mr Trojani sought to receive a benefit such as the minimex.

36. In those circumstances, a citizen of the Union in a situation such as that of the claimant in the main proceedings does not derive from Article 18 EC the right to reside in the territory of a Member State of which he is not a national, for want of sufficient resources within the meaning of [the Directive]. Contrary to the circumstances of the case of *Baumbast and R* (paragraph 92), there is no indication that, in a situation such as that at issue in the main proceedings, the failure to recognise that right would go beyond what is necessary to achieve the objective pursued by that directive.

[*It would appear therefore that the ECJ ruled against Trojani on the basis that, given his lack of adequate resources, he could not rely on a right of residence under Article 21. The implications would therefore seem to be that he could be refused a minimex and, if necessary, deported from Belgium. However, the Court went on to qualify the first part of the ruling, following the line of its reasoning in Martínez Sala.*]

37. However, it must be observed that, according to information put before the Court, Mr Trojani is lawfully resident in Belgium, as is attested by the residence permit which has in the meantime been issued to him by the municipal authorities of Brussels.

. . .

39. In the context of the present case, it should be examined more particularly whether, despite the conclusion in paragraph 36 above, a citizen of the Union in a situation such as that of the claimant in the main proceedings may rely on Article 12 EC [*now Article 18 TFEU*], under which, within the scope of application of the Treaty and without prejudice to any special provisions contained therein, all discrimination on grounds of nationality is prohibited.

40. In the present case, it must be stated that, while the Member States may make residence of a citizen of the Union who is not economically active conditional on his having sufficient resources, that does not mean that such a person cannot, during his lawful residence in the host Member State, benefit from the fundamental principle of equal treatment as laid down in Article 12 EC.

41. In that connection three points should be made.

42. First, as the Court has held, a social assistance benefit such as the minimex falls within the scope of the Treaty (see Case C–184/99 *Grzelczyk*, paragraph 46).

43. Second, with regard to such benefits, a citizen of the Union who is not economically active may rely on Article 12 EC where he has been lawfully resident in the host Member State for a certain time or possesses a residence permit.

44. Third, national legislation such as that at issue in the main proceedings, in so far as it does not grant the social assistance benefit to citizens of the European Union, non-nationals of the Member State, who reside there lawfully even though they satisfy the conditions required of nationals of that Member State, constitutes discrimination on grounds of nationality prohibited by Article 12 EC.

45. It should be added that it remains open to the host Member State to take the view that a national of another Member State who has recourse to social assistance no longer fulfils the conditions of his right of residence. In such a case the host Member State may, within the limits imposed by Community law, take a measure to remove him. However, recourse to the social assistance system by a citizen of the Union may not automatically entail such a measure . . .

Ultimately, therefore, the ECJ ruled that although EU citizens cannot derive a right of residence from Article 21 where they lack sufficient resources within the meaning of the Directive, they are

nonetheless entitled, so long as they are lawfully resident on some other basis within a Member State, to have access to social assistance on the same conditions as nationals under Articles 18 and 21 TFEU. If Member States wish to deny an EU citizen access to social benefits under such circumstances, they must move to revoke that person's residence on the ground of lack of sufficient resources.[51] The final protection offered by the ECJ to the EU citizen in such a situation is that recourse to the social assistance system cannot *automatically* lead to revocation of residence permission or deportation. In other words, Member States are not entitled to equate 'recourse to social assistance' with 'lack of sufficient resources'. They must, as recital 16 to Directive 2004/38 suggests, apply the limiting condition in a proportionate manner, and make a proper inquiry into the sufficiency of an EU citizen's resources before moving to revoke his or her residence.

The cases of *Ibrahim* and *Teixeira* recently raised the question of the possible residence rights of the non-working parents of EU-citizen children who were pursuing primary education in a host Member State, where the family lacked adequate means of support or health insurance.[52] The ECJ however decided the cases on the basis of Article 12 of Regulation 1612/68 concerning the educational rights of children of former migrant workers, and the derived rights of their carer-parents, rather than discussing whether any rights could flow from the children's status as EU citizens, and it refused to read into Regulation 1612/68 the 'adequate resources' and sickness insurance conditions from the Citizens Directive 2004/38.

Sala and *Trojani*, on the other hand, both concerned the circumstances of persons whose status in the host state was uncertain, and whose rights as EU citizens seemed precarious since they did not appear to satisfy the sufficient-resources and sickness insurance conditions of what is now Directive 2004/38. Yet in both cases the ECJ ruled that, by virtue of the fact that they were EU citizens lawfully resident within a host Member State, they were in principle entitled to equal access to those social benefits which were available to nationals purely on the basis of their nationality or residence.

(ii) *Students*

The introduction of EU citizenship has also been used by the ECJ to strengthen the rights of students under EU law, by extending the circumstances under which EU nationals pursuing educational courses in states other than that of their nationality are entitled to claim certain social advantages, including educational advantages, from either the host state or their home state. This requires a brief discussion of the law relating to students prior to the introduction of EU citizenship.

In *Gravier*, a French national who was studying for a course in strip-cartoon art in Belgium had challenged the requirement of an enrolment fee for non-Belgians.[53] The ECJ ruled that, since the Treaty at the time specified that the EU should lay down principles for developing a common vocational training policy, Belgium was prohibited from discriminating against her under Article 12 EC on grounds of her nationality in access to vocational training. The Court held that, since access to vocational training was likely to promote the free movement of persons, the 'conditions of access to vocational training' fell within the scope of the Treaty, and the enrolment fee for non-nationals was contrary to the requirement of non-discrimination on grounds of nationality.[54]

[51] In Case C–408/03 *Commission v Belgium* [2006] ECR I–2647 the ECJ underscored the fundamental Treaty status of the rights of movement and residence of EU citizens under Art 20, in condemning Belgium's excessively restrictive interpretation of how the 'sufficient resources' condition of the residence Dir could be satisfied.

[52] Case C–310/08 *London Borough of Harrow v Ibrahim,* and Case C–480/08 *Teixeira v London Borough of Lambeth*, 23 Feb 2010.

[53] Case 293/83 *Gravier v City of Liège* [1985] ECR 593.

[54] For subsequent litigation over discrimination in the Belgian higher education system see Case 42/87 *Commission v Belgium* [1988] ECR 5445; Case C–47/93 *Commission v Belgium* [1994] ECR I–1593.

Given the financial consequences for Member States if they were required to treat all students of EU nationality on an equal footing with national students in conditions of access to vocational training, the *Gravier* ruling clearly had far-reaching potential. However, the ECJ interpreted 'vocational training' expansively in this context,[55] ruling that any form of education, including university education,[56] which prepared for a profession, trade, or employment was included, even if it included 'an element of general education'.[57] The Court decided to limit the financial consequences of *Gravier* for Member States in a different way, by instead restricting the interpretation of what non-discrimination in the 'conditions of access' to vocational training meant. In *Lair* and *Brown* the Court ruled that only grants intended to cover charges relating specifically to *access* to vocational training, such as registration and tuition fees, were covered by the prohibition on discrimination, whereas a maintenance and training grant provided by the state to pursue university study would not be covered.[58]

Subsequently the 1990 Students' Residence Directive, which had been anticipated by the ECJ's ruling in *Raulin*,[59] provided that while students enjoying the EU right of access to vocational education in a host Member State must also enjoy a right of residence for the duration of their studies, states could subject this to the requirement that they possess sufficient resources to avoid becoming a burden on the state social assistance scheme and that they possess comprehensive sickness insurance.

Against this background, the argument of *Grzelczyk*, who was a French national studying in Belgium, that he was entitled under the Treaty's prohibition of discrimination on grounds of nationality to apply for state social assistance seemed unlikely to succeed. However, the influence of EU citizenship on the outcome of the case was once against crucial.

Case C–184/99 **Rudy Grzelczyk v CPAS**
[2001] ECR I–6193

[Note Lisbon Treaty renumbering: Arts 6 and 8a are now Arts 18 and 21 TFEU]

Grzelczyk was a French national studying in Belgium. In his fourth year of study he applied to the CPAS for payment of the minimex, a non-contributory minimum subsistence allowance. The CPAS initially granted this, but withdrew it after the Belgian minister decided that Grzelczyk was not entitled to it since he was not a Belgian national.

THE ECJ

29. It is clear . . . that a student of Belgian nationality, though not a worker . . . , who found himself in exactly the same circumstances as Mr Grzelczyk would satisfy the conditions for obtaining the minimex. The fact that Mr Grzelczyk is not of Belgian nationality is the only bar to its being granted to him. It is not therefore in dispute that the case is one of discrimination solely on the ground of nationality.

[55] In particular, the interpretation was much broader than the Court's interpretation of the term 'vocational schools' for workers in Art 7(3) of Reg 1612/68: Case 39/86 *Lair* [1988] ECR 3161.

[56] Case 24/86 *Blaizot v University of Liège* [1988] ECR 379, [20]. The ECJ drew for support on Art 10 of the Council of Europe's European Social Charter, which treats university education as a form of vocational training. However, the ECJ limited the retroactivity of its ruling in *Blaizot*, because of Belgium's fear that it would throw the financing of university education into chaos.

[57] Case 293/83 *Gravier* (n 53) [30]; Case 263/86 *Belgium v Humbel* [1988] ECR 5365; Case 242/87 *Commission v Council* [1989] ECR 1425.

[58] Case 39/86 *Lair* (n 55) 15; Case 197/86 *Brown* [1988] ECR 3205.

[59] Case C–357/89 *Raulin v Minister van Onderwijs en Wetenschappen* [1992] ECR I–1027.

30. Within the sphere of application of the Treaty, such discrimination is, in principle, prohibited by Article 6. In the present case, Article 6 must be read in conjunction with the provisions of the Treaty concerning citizenship of the Union in order to determine its sphere of application.

31. Union citizenship is destined to be the fundamental status of nationals of the Member States, enabling those who find themselves in the same situation to enjoy the same treatment in law irrespective of their nationality, subject to such exceptions as are expressly provided for . . .

34. It is true that, in paragraph 18 of its judgment in Case 197/86 *Brown* [1988] ECR 3205, the Court held that, at that stage in the development of Community law, assistance given to students for maintenance and training fell in principle outside the scope of the EEC Treaty.

35. However, since *Brown*, the Treaty on European Union has introduced citizenship of the European Union into the EC Treaty and added to Title VIII of Part Three a new chapter 3 devoted to education and vocational training. There is nothing in the amended text of the Treaty to suggest that students who are citizens of the Union, when they move to another Member State to study there, lose the rights which the Treaty confers on citizens of the Union. Furthermore, since *Brown*, the Council has also adopted Directive 93/96 [*see now Directive 2004/38*], which provides that the Member States must grant right of residence to student nationals of a Member State who satisfy certain requirements.

36. The fact that a Union citizen pursues university studies in a Member State other than the State of which he is a national cannot, of itself, deprive him of the possibility of relying on the prohibition of all discrimination on grounds of nationality laid down in . . . the Treaty.

37. As pointed out in paragraph 30 above, in the present case that prohibition must be read in conjunction with Article 8a(1) of the Treaty, which proclaims the right to move and reside freely within the territory of the Member States, subject to the limitations and conditions laid down in this Treaty and by the measures adopted to give it effect.

38. As regards those limitations and conditions, it is clear from Article 1 of Directive 93/96 that Member States may require of students who are nationals of a different Member State and who wish to exercise the right of residence on their territory, first, that they satisfy the relevant national authority that they have sufficient resources to avoid becoming a burden on the social assistance system of the host Member State during their period of residence, next, that they be enrolled in a recognised educational establishment for the principal purpose of following a vocational training course there and, lastly, that they be covered by sickness insurance in respect of all risks in the host Member State.

39. Article 3 of Directive 93/96 makes clear that the directive does not establish any right to payment of maintenance grants by the host Member State for students who benefit from the right of residence. On the other hand, there are no provisions in the directive that preclude those to whom it applies from receiving social security benefits.

The Court's reasoning thus far is somewhat similar to that in *Martínez Sala* and *Trojani*: as a lawfully resident EU citizen, Grzelczyk was entitled to equal treatment on grounds of nationality under Article 18 TFEU, in relation to benefits which fall within the scope of application of the Treaty.

Here the ECJ made its novel move, declaring in paragraphs 34–36 that although it had previously ruled that assistance for students fell outside the scope of the Treaty, the combination of a new Treaty title on education and the new provisions on EU citizenship had introduced relevant changes. Despite the fact that the rights in Article 21 TFEU are subject to limitations and conditions, and that the Students' Residence Directive had excluded any right to payment of maintenance grants and imposed relevant conditions of sufficient resources and sickness insurance, which are now contained in Directive 2004/38, there was no provision expressly precluding students from entitlement to social security benefits.

The Court went on to rule that the requirement for students to possess 'sufficient resources' under the Directive did not specify any particular amount, but merely required the student to make a declaration to that effect, and that the truthfulness of that declaration could only be assessed at the time

it was made.[60] Finally, the ECJ ruled, just as in paragraph 45 of *Trojani* above, that while Member States were free to conclude that a student who had recourse to social assistance no longer fulfilled the conditions for a right of residence, and to withdraw the residence permit, this conclusion could not be the automatic consequence of an application for social assistance. Interestingly too, the Court read the preambles to the various residence directives, which provided (as does the preamble to Directive 2004/38) that the person must not become an 'unreasonable burden' on the public finances of the host state, as an indication that host states could nevertheless be expected to carry a reasonable burden. More specifically, the Court ruled that the legislation 'thus accepts a certain degree of financial solidarity between nationals of a host Member State and nationals of other Member States, particularly if the difficulties which a beneficiary of the right of residence encounters are temporary'.[61]

Grzelczyk dealt with the issue of access to social security for EU nationals pursuing studies in another Member State, and the ECJ in paragraph 39 of that judgment drew attention to the fact that the Students' Residence Directive did not establish any right to payment of a maintenance grant. In *Bidar*, however, the ECJ was confronted with precisely this situation: a student of French nationality applying in the UK for a student maintenance loan or grant to finance the cost of his studies there.[62] The question was whether such maintenance assistance, despite the explicit limiting conditions in the Directive and the earlier case law in *Brown* and *Lair*,[63] fell within the scope of the Treaty for the purposes of discrimination under Article 12 EC. The Court, following a similar line of reasoning to that in *Grzelczyk*, relied on the introduction of EU citizenship and the changes in educational and vocational training competence under the Treaty to depart from its earlier conclusions in *Brown* and *Lair*, and to rule that maintenance grants for students did indeed now fall within the scope of the prohibition of discrimination on grounds of nationality.[64]

The ECJ emphasized that its ruling was supported by the recently adopted Directive 2004/38, which provides for equal treatment within the scope of the Treaty for all EU citizens residing in the territory of another Member State, and which provides in Article 24(2) that Member States may, if they wish, restrict eligibility for maintenance grants for students to those who have acquired permanent residence. Thus, while students could not rely on the earlier Students' Residence Directive (nor on the later 2004 Directive) to obtain a right to a maintenance grant, they could rely on Article 21 TFEU together with Article 18 TFEU to claim a right of equal access to maintenance grants with national students, on the basis that a maintenance grant is henceforth to be considered a benefit falling within the scope of the Treaty.

This was a dramatic ruling, effectively sidelining the restrictive provision which Member States had inserted into Article 24(2) of Directive 2004/38, which the Court sweetened only slightly by ruling that the host state was entitled to grant access to student maintenance grants only to students who had demonstrated a certain degree of *integration* into the society of that state. The ECJ concluded in *Bidar* that a requirement to show a link with the state's employment market would not be acceptable, and that the particular conditions of the UK's requirement that the student be 'settled' in the UK was also excessively restrictive and disproportionate.[65] In subsequent case law however, the ECJ retreated significantly from the boldness of its ruling in *Bidar*. In *Förster*, the Court was asked whether the 'integration' requirement which Member States may legitimately impose on the right of non-discriminatory access of a student pursuing vocational training to a maintenance grant in a host

[60] Art 8(3) of Dir 2004/38 now stipulates that Member States may not require this declaration to refer to any specific amount of resources.

[61] Case C–184/99 *Grzelczyk* (n 9) [46].

[65] Ibid [52]–[63].

Member State could include a (retroactively applicable) requirement of five years' prior residence, and the ECJ ruled that such a requirement would be legitimate and not disproportionate.[66]

In *Morgan and Bucher*, however, the ECJ ruled that Articles 20 and 21 TFEU prohibited German rules which limited the availability of study finance abroad in another Member State to students who had already completed at least one year of the same field of study in Germany.[67] Given their status as EU citizens, the applicants could challenge restrictions imposed by the Member State of their nationality on their freedom to move and study abroad by limiting without adequate justification the availability of study finance to courses which continued studies already begun in Germany. While the ECJ acknowledged, as in *Bidar* and *Forster*, that it might be legitimate for a Member State to demand a certain degree of integration into its society in order to ensure that the award of financial grants does not become an unreasonable burden, the degree of integration necessary should have been satisfied in the case in question by the fact that the applicants had been raised in Germany and completed their schooling there.[68]

In the strongly contested *Commission v Austria* litigation, the ECJ drew again on the status of EU citizenship to bolster the rights of access of students to educational courses in a host Member State, although the restriction challenged in this case did not concern the availability of study finance or maintenance grants, but rather the imposition by Austria of additional conditions of access to university education on students whose secondary education diplomas were obtained in another Member State.[69] The Court, following earlier cases such as *Commission v Belgium*[70] and *Gravier,*[71] ruled that this constituted indirect discrimination which could not be justified on any of the various grounds put forward by the Austrian Government. The case caused a political storm within Austria, which as a small country bordering a large neighbour sharing a common language, argued that it was facing an influx of students from Germany, especially in courses like medicine, which threatened to overwhelm the financial and structural equilibrium of its educational system. The case gave rise to outspoken criticism of the ECJ by Austrian Chancellor Wolfgang Schüssel at the time.[72] When Austria did not comply with the judgment but introduced even more restrictive rules, the Commission initiated fresh infringement proceedings against the state, but these were subsequently suspended under an agreement reached between Austria and the Commission due to political pressure over the pending Lisbon Treaty at the time.[73] A parallel legal dispute was brewing with Belgium, however, which had introduced restrictive measures for non-resident students due to its concern about an influx of French students seeking access to educational courses in Belgium. Although the Commission also suspended infringement proceedings which it had commenced against Belgium, the issue eventually came before the ECJ in the *Bressol* case via a preliminary reference from a Belgian court.

In *Bressol*, the applicant challenged Belgium's quota system which was designed to restrict the access of non-resident EU citizens into certain medical degree programmes, ostensibly in order to ensure that at least a certain number of Belgian residents would graduate each year with the ultimate objective of protecting public health.[74] The ECJ, mirroring the Commission's retreat from its initial infringement proceedings against Belgium, took a significantly softer stance than it had in the earlier *Commission v Austria* litigation.[75] The ECJ ruled that although Articles 18 and 21 TFEU *prima facie* prohibit such a quota system for EU citizens based indirectly on nationality, there may be an exception where the

national authority can show that it is restricting access of non-resident EU citizens in order to ensure a sufficient supply of national graduates to staff the French Community public health service. Whether there was an actual risk to the health service was to be determined by the national courts, but the ECJ emphasized the need for data and specific evidence to the effect that equal access for non-permanently resident EU nationals is detrimental to the public health service and the quota system (which included the drawing of lots for those over quota) would actually ameliorate that problem.[76]

Consequently, although the status of citizenship has been invoked by the ECJ to enhance the rights of access of students in certain circumstances to maintenance grants, social security, and educational courses in host Member States, the Court has shown itself responsive to adverse Member State reactions in this field, and it has softened some of its strongest rulings, as the shift in its stance from *Bidar* to *Förster*, and from *Commission v Austria* to *Bressol*, suggests.

(iii) *Job-Seekers*

The cases of *D'Hoop*, *Collins, Ioannidis,* and *Vatsouras* involved the situation of job-seekers covered by Article 45 TFEU, who wished to apply for a job-seeker's allowance.

In *D'Hoop*, the ECJ ruled that a Belgian national who was refused a 'tideover' allowance when seeking her first job on the Belgian job market, purely on the grounds that she had completed her secondary school education in France, had suffered discrimination on the basis of her EU citizenship, and in particular on account of her exercise of the EU right to move and avail herself of educational opportunities in France.[77] The Court ruled that while it might in theory be possible to justify a refusal to grant a tideover allowance to an EU citizen on the basis that there must be a sufficient link between the job-seeker and the host state, the condition which Belgium actually imposed was based on the place where the diploma of completion of secondary education was obtained. This was a disproportionate condition since it did not represent the real and effective degree of connection between the applicant and the Belgian job market. The *D'Hoop* ruling was further developed in *Collins*.

Case C–138/02 **Collins v Secretary of State for Work and Pensions**
[2004] ECR I–2703

[Note Lisbon Treaty renumbering: Arts 6, 8, and 39 EC are now Arts 18, 20, and 45 TFEU]

An Irish national was seeking employment in the UK and had applied for a job-seeker's allowance. Unlike D'Hoop in Belgium, Collins was neither a national nor a resident of the UK, but had moved there in order to seek work. UK legislation however made entitlement to a job-seeker's allowance conditional on a residence requirement, and Collins sought to challenge this condition as a violation of EU law. The ECJ began by reflecting on its past case law holding that job-seekers did not enjoy rights of equal access to social benefits under Article 39 governing the free movement of workers, or under the secondary legislation governing workers.

THE ECJ

56. Among the rights which Article 48 of the Treaty confers on nationals of the Member States is the right to move freely within the territory of the other Member States and to stay there for the purposes of seeking employment (*Antonissen*, cited above, paragraph 13).

[76] Case C–73/08 *Bressol* (n 74) [64]–[81].
[77] Case C–224/98 *D'Hoop v Office Nationale de l'Emploi* [2002] ECR I–6191.

57. Nationals of a Member State seeking employment in another Member State thus fall within the scope of Article 48 of the Treaty and, therefore, enjoy the right laid down in Article 48(2) to equal treatment.

58. As regards the question whether the right to equal treatment enjoyed by nationals of a Member State seeking employment in another Member State also encompasses benefits of a financial nature such as the benefit at issue in the main proceedings, the Court has held that Member State nationals who move in search of employment qualify for equal treatment only as regards access to employment in accordance with Article 48 of the Treaty . . . but not with regard to social and tax advantages within the meaning of Article 7(2) of Regulation 1612/68 (*Lebon*, paragraph 26, and Case C–278/94 *Commission* v *Belgium*, cited above, paragraphs 39 and 40) . . .

60. . . . However, in order to determine the scope of the right to equal treatment for persons seeking employment, this principle should be interpreted in the light of other provisions of Community law, in particular Article 6 of the Treaty.

61. As the Court has held on a number of occasions, citizens of the Union lawfully resident in the territory of a host Member State can rely on Article 6 of the Treaty in all situations which fall within the scope *ratione materiae* of Community law. Citizenship of the Union is destined to be the fundamental status of nationals of the Member States, enabling those who find themselves in the same situation to enjoy the same treatment in law irrespective of their nationality, subject to such exceptions as are expressly provided . . .

62. It is to be noted that the Court has held, in relation to a student who is a citizen of the Union, that entitlement to a non-contributory social benefit, such as the Belgian minimum subsistence allowance ('minimex'), falls within the scope of the prohibition of discrimination on grounds of nationality and that, therefore, Articles 6 and 8 of the Treaty preclude eligibility for that benefit from being subject to conditions which are liable to constitute discrimination on grounds of nationality (*Grzelczyk*, paragraph 46).

63. In view of the establishment of citizenship of the Union and the interpretation in the case-law of the right to equal treatment enjoyed by citizens of the Union, it is no longer possible to exclude from the scope of Article 48(2) of the Treaty—which expresses the fundamental principle of equal treatment, guaranteed by Article 6 of the Treaty—a benefit of a financial nature intended to facilitate access to employment in the labour market of a Member State.

64. The interpretation of the scope of the principle of equal treatment in relation to access to employment must reflect this development, as compared with the interpretation followed in *Lebon* and in Case C–278/94 *Commission* v *Belgium*.

Here we see the Court revisiting its prior case law, in which it had ruled that job-seekers, although covered by Article 45 TFEU as far as access to employment is concerned, were not entitled to social advantages under the Treaty or secondary legislation. It is precisely the introduction of EU citizenship in the Treaty which provided the Court with reason to depart from this earlier case law, and to rule that the rights of job-seekers under Article 45 should be interpreted in the light of the more general right to equal treatment of EU citizens. Given this new interpretative framework, the Court ruled, contrary to its prior ruling in *Lebon*, that a job-seeker was henceforth entitled under Article 45 to a 'benefit of a financial nature intended to facilitate access to employment in the labour market of a Member State'.

As far as the compatibility with EU law of the residence condition was concerned, the Court, following the reasoning in *D'Hoop*, ruled that although it was legitimate for a state to require that a job-seeker has a genuine link with the employment market of the state, for example by requiring that the person has for a reasonable period genuinely sought work in that state, a residence condition would have to be applied in a proportionate and non-discriminatory way. *Collins* was confirmed and applied in the subsequent case of *Ioannidis*.[78]

[78] Case C–258/04 [2005] ECR I–8275, in which it was held that a Greek national seeking his first employment in Belgium could not be refused entitlement a job-seeker's allowance under Belgian law purely on the ground that he completed his secondary education outside Belgium.

It remained to be seen, however, whether this case law would survive the introduction in Article 24(2) of Directive 2004/38 of the provision permitting Member States, by way of derogation from the equal treatment principle, to limit entitlement to social assistance for migrant EU nationals and their families during the first three months of residence or for the longer period provided for job-seekers in Article 14(4)(b). We have seen that the parallel provision in Article 24(2) allowing Member States to restrict the availability of maintenance grants to students was effectively sidelined by the ECJ in *Bidar*, where it ruled that students could instead rely directly on Articles 18 and 21 TFEU to gain entitlement to a maintenance grant.[79] The ECJ was confronted directly with this question in *Vatsouras*, where a number of Greek nationals whose economic status was unclear had applied for job-seeker's allowances in Germany. The Court was asked whether the derogation in Article 24(2) of the Directive concerning social assistance for job-seekers was compatible with the commitment to equal treatment for EU citizens under Articles 18 and 21 TFEU.

Cases C–22 and 23/08 **Vatsouras and Koupatantze v Arbeitsgemeinschaft (ARGE) Nürnberg 900**
[2009] ECR I–4585

[Note Lisbon Treaty renumbering: Arts 12 and 39 EC are now Arts 18 and 45 TFEU]

THE ECJ

33 By this question, the referring court asks whether Article 24(2) of Directive 2004/38 is compatible with Article 12 EC, read in conjunction with Article 39 EC.

34 Article 24(2) of Directive 2004/38 establishes a derogation from the principle of equal treatment enjoyed by Union citizens other than workers, self-employed persons, persons who retain such status and members of their families, who reside within the territory of the host Member State.

35 Under that provision, the host Member State is not obliged to confer entitlement to social assistance on, among others, job-seekers for the longer period during which they have the right to reside there.

36 Nationals of a Member State seeking employment in another Member State fall within the scope of Article 39 EC and therefore enjoy the right to equal treatment laid down in paragraph 2 of that provision (Case C–258/04 *Ioannidis* [2005] ECR I–8275, paragraph 21).

37 Furthermore, in view of the establishment of citizenship of the Union and the interpretation of the right to equal treatment enjoyed by citizens of the Union, it is no longer possible to exclude from the scope of Article 39(2) EC a benefit of a financial nature intended to facilitate access to employment in the labour market of a Member State (Case C–138/02 *Collins* [2004] ECR I–2703, paragraph 63, and *Ioannidis*, paragraph 22)...

40 It follows that nationals of the Member States seeking employment in another Member State who have established real links with the labour market of that State can rely on Article 39(2) EC in order to receive a benefit of a financial nature intended to facilitate access to the labour market.

41 It is for the competent national authorities and, where appropriate, the national courts not only to establish the existence of a real link with the labour market, but also to assess the constituent elements of that benefit, in particular its purposes and the conditions subject to which it is granted.

42 As the Advocate General has noted in point 57 of his Opinion, the objective of the benefit must be analysed according to its results and not according to its formal structure.

[79] Case C–209/03 *Bidar* (n 62). However, the ECJ did subsequently limit the impact of the *Bidar* ruling by allowing Member States instead to impose lengthy integration requirements on students seeking access to maintenance grants under the Treaty: Case C–158/07 *Förster* (n 66).

43 A condition such as that in Paragraph 7(1) of the SGB II, under which the person concerned must be capable of earning a living, could constitute an indication that the benefit is intended to facilitate access to employment.

44 In any event, the derogation provided for in Article 24(2) of Directive 2004/38 must be interpreted in accordance with Article 39(2) EC.

45 Benefits of a financial nature which, independently of their status under national law, are intended to facilitate access to the labour market cannot be regarded as constituting 'social assistance' within the meaning of Article 24(2) of Directive 2004/38.

46 In the light of the foregoing, the answer must be that, with respect to the rights of nationals of Member States seeking employment in another Member State, examination of the first question has not disclosed any factor capable of affecting the validity of Article 24(2) of Directive 2004/38.

What the ECJ did in *Vatsouras*, in other words, was to confirm its ruling in *Collins* that the introduction of EU citizenship had the effect of overruling earlier case law such as *Lebon*, by henceforth including within the scope of Article 45(2) TFEU non-discriminatory entitlement to benefits intended to facilitate access to employment. Job-seeker benefits of this kind, according to the ECJ, should not be considered to be 'social assistance' within Article 24(2) of Directive 2004/38. In other words, the impact of EU citizenship in widening the scope of Article 45(2) to include job-seeker's benefits correspondingly limits the scope of Article 24(2) so as to exclude such benefits from the derogation permitted to Member States under the Directive. Yet the *Vatsouras* judgment did not conclude that Article 24(2) was either incompatible with the Treaty or wholly redundant: Member States may arguably continue to rely on Article 24(2) to exclude job-seekers from access to other kinds of 'social assistance', although not from benefits which are objectively construed by the domestic court as 'intended to facilitate access to the labour market' and therefore falling within Article 45 TFEU.

(iv) *EU Citizens who have Acquired a Right of Permanent Residence under Directive 2004/38*

Article 16 of Directive 2004/38 introduced a right of 'permanent residence' in a host EU Member State for EU citizens who have resided legally there for a 'continuous period of five years', and which can only be lost, under Article 16(4), through absence from the host Member State for a period exceeding two consecutive years. This right of permanent residence is not subject to conditions provided earlier in the Directive, including the conditions of possession of adequate resources and sickness insurance in Article 7(1). Questions have arisen about the precise conditions for the acquisition and loss of this status of permanent residence.

In *Lassal*, the ECJ confirmed an earlier ruling to the effect that the provisions on EU citizenship are applicable as soon as they enter into force and must be applied to the present effects of 'situations arising previously'.[80] The Court ruled that continuous periods of five years' residence completed even *before* the date for transposition of Directive 2004/38 must be taken into account in determining acquisition of the status of permanent residence, although the right itself could not be acquired before the transposition date, and that temporary absences occurring prior to the date of transposition, but after completion of a continuous period of five years, would not affect such acquisition.[81] The bottom line is that EU citizens who have acquired the right of permanent residence in a Member State are

[80] Case C–162/09 *Secretary of State for Work and Pensions v Lassal*, 7 Oct 2010, [39].

[81] Ibid. See also Case C–325/09 *Dias*, and Cases C–424/10 *Ziolkowski* and C–425/10 *Szeja*, pending, on whether periods of residence completed prior to the transposition of Dir 2004/38, or even prior to the state's accession to the EU, count towards permanent residence under Art 16 when the applicant was not employed or did not otherwise fulfil the requirements of Art 7 of Dir 2004/38.

entitled to virtually full material equality and equal access for themselves and their families to social benefits as nationals of the host state, regardless of their lack of resources or health insurance.

(D) DID ARTICLES 20 AND 21 OTHERWISE ENHANCE THE RIGHTS OF EU CITIZENS TO CHALLENGE RESTRICTIVE MEMBER STATE MEASURES?

A range of additional cases exemplify some of the other circumstances in which the rights of EU Member State nationals and their families have either been introduced or enhanced by the creation of EU citizenship.

In an early case *Bickel & Franz*[82] the ECJ emphasized that German and Austrian nationals who were subject to criminal proceedings in Italy and who requested the use of German in the proceedings were exercising their right to free movement as European citizens based on Article 21 TFEU and were entitled not to be discriminated against on grounds of nationality. More recently in *Huber* the Court ruled that a Member State's crime prevention system which involved processing personal data specific to EU citizens who were not nationals of that state would violate Articles 18 and 21 TFEU.[83]

Secondly, in a range of cases in which Member States sought to adopt restrictive public policy measures against non-nationals, the ECJ has invoked the legal provisions on EU citizenship to bolster the rights of the individuals concerned. In *Commission v Belgium* the ECJ criticized the disproportionate penalty of automatic deportation imposed by Belgian law for failure to produce the relevant documents needed to obtain a residence permit within the prescribed time limit.[84] In *Tsakouridis*, the ECJ considered the ultra-enhanced protection against expulsion only on 'imperative grounds of public security', which was introduced by Article 28(3)(a) of Directive 2004/38 for EU citizens who had resided in the host Member State for the previous ten years, as well as the enhanced protection whereby expulsion was only on 'serious grounds of public policy or public security' introduced by Article 28(2) for EU citizens who had resided there for the previous five years and acquired permanent residence.[85] The ECJ was asked whether certain absences from the Member State during the period of ten years would deprive an applicant of ultra-enhanced protection, and whether criminal offences connected with organized drug dealing were sufficient to constitute 'imperative grounds of public security' under Article 28(3), or 'serious grounds of public policy or public security' under Article 28(2). The ECJ replied that the answers to the question of the length of the period of residence were ultimately for the national court to determine, taking the reason, nature, and duration of absences into account, and that while offences relating to organized narcotic trafficking could amount to imperative grounds of public security under the Directive, the decision must be proportionate and must respect fundamental rights, and that a balance had to be struck between the exceptional nature of the threat to public security and the risk of compromising the social rehabilitation of the EU citizen in the state in which he had become genuinely integrated. Finally, in *Wolzenburg* the ECJ ruled that when implementing the EU Framework Decision establishing a European Arrest Warrant, Member States were entitled to restrict the ground for optional non-execution of an arrest warrant to their own nationals, and to non-national EU citizens who had demonstrated a sufficient degree of integration by residing continually for five years in the host state and acquiring the right of permanent residence,

[82] Case C–274/96 [1998] ECR I–7637, [15].

[83] Case C–524/06 *Huber v Bundesrepublik Deutschland* [2008] ECR I–9705.

[84] Case C–408/03 *Commission v Belgium* [2006] ECR I–2647. See also Case C–50/06 *Commission v Netherlands* [2007] ECR I–4383 in which the ECJ ruled that the Netherlands had violated EU law by applying to EU citizens general legislation relating to foreign nationals which established a systematic and automatic connection between a criminal conviction and a measure ordering expulsion

[85] Case C–145/09 *Land Baden-Württemberg v Tsakouridis*, 23 Nov 2010.

but they could not impose an additional administrative requirement such as possession of a residence requirement of indefinite duration.[86]

Thirdly, in cases such as *Turpeinen*,[87] *Pusa*,[88] *N*,[89] *Schwarz and Gootjes-Schwarz*,[90] and *Zanotti*,[91] the ECJ has condemned a number of restrictive or discriminatory measures imposed by Member States as regards access to social or tax benefits as a violation of Article 20 TFEU, regardless of whether the applicants were workers or not.[92] Similarly in *De Cuyper,*[93] *Commission v Sweden*,[94] *Tas-Hagen,*[95] *Nerkowska,*[96] and *Habelt*[97] concerning unemployment, wartime, and other social security benefits, the Court ruled that national residence restrictions were *prima facie* in breach of Article 20 TFEU. In *Gottwald*, however, the ECJ took the view that the imposition of a residence requirement for the issue of an annual toll disc free of charge to disabled persons did not constitute an unreasonable or disproportionate restriction on the rights of EU citizens, but was justified by the wish to ensure a connection between the society of the Member State concerned and the recipient of a benefit designed to promote the mobility and integration of disabled persons.[98]

(E) SUMMARY

i. Having discussed the changes brought about by EU citizenship under the four headings above: (a) autonomous rights, (b) purely internal situations, (c) rights for EU citizens who are not economically active or self-sufficient, and (d) enhancement of other existing rights, we can now return to reconsider the question posed at the outset of this chapter and Chapter 21. Has the status of EU citizenship subsumed the previous legal status categories to become the primary and 'fundamental status' of EU nationals, as the ECJ seems to proclaim, or does it remain residual to the other status categories (worker, service provider/recipient, etc) existing under EU law, gaining legal salience mainly where the applicant is not economically active or economically self-sufficient?

ii. It is certainly true that where a Member State's rule is being challenged for allegedly discriminating on the basis of nationality or residence and the economic status of the claimant is not in question, the ECJ regularly chooses to decide the case either on the basis of the claimant's status as an EU citizen or without deciding into which specific status category he or she falls.[99] In various cases, as we have seen, the lens of citizenship is treated by the ECJ as enhancing the existing legal guarantees of EU law, such as the protections against arbitrary discrimination,

[98] Case C–103/08 *Gottwald v Bezirkshauptmannschaft Bregenz* [2009] ECR I–9117.

[99] See, eg, Case C–499/06 *Nerkowska* [2008] ECR I–3993 concerning a residence requirement for payment of a benefit for civilian victims of war or repression; Case C–103/08 *Gottwald* (n 98); Cases C–396–450/05 *Habelt* (n 24) [78]; Case C–164/07 *Wood* [2008] ECR I–4143. In *Wood* the ECJ referred to the applicant's status as a worker, but also cited its citizenship-based ruling in *Garcia-Avello* on the prohibition of discrimination on the grounds of nationality.

criminal prosecution, or expulsion, without addressing the economic or other status of the applicant.[100] Yet in several other groups of cases the ECJ has chosen to deal with the matter on the basis of the applicant's economic status as an employed or self-employed person, and has expressly ruled that it is therefore unnecessary to consider the citizenship-based claim.[101] These cases seem to suggest that the status of citizenship remains secondary and residual to existing legal status categories, and that it has little role to play in circumstances where the individual has recognized legal status as an EU worker or self-employed person.[102] Perhaps more importantly however, the existence of a recognized economic status under EU law clearly becomes relevant in circumstances in which the individual seeks access to material benefits in a host state. In such cases, as is evident from *Teixeira*[103] and *Ibrahim*,[104] reliance on the status of citizenship alone renders the right of access to social and material benefits more precarious than if the individual can lay claim to the status of worker, former worker, or protected family member of either of these.

iii. The answer to each of the four questions posed above, concerning the impact of EU citizenship on previously existing EU law, is that the introduction of EU citizenship has changed the law in gradual but significant ways. The legal status of EU citizenship has expanded and strengthened existing rights of movement, residence, and non-discrimination including by: (a) introducing a new and autonomous right to move and reside within the territory of a Member State which does not depend on previously existing free movement rights (*Baumbast*, *Chen*); (b) shrinking somewhat the scope of the 'purely internal situation' (*Garcia-Avella*, *Schempp, Ruiz Zambrano*); (c) granting social rights to non-economically active citizens in certain circumstances where it does not constitute an unreasonable burden for the state (*Trojani*, *Gryzlczyk*), and strengthening the existing social rights of other categories such as students and job-seekers who are sufficiently 'integrated' in the host state (*Bidar*, *Förster*, *Collins*, *Vatsouras*); (d) introducing the status of permanent residence which entitles the EU citizen to substantial social and material equality alongside nationals (Article 16 of Directive 2004/38, *Lassal*); and (e) granting enhanced protection against repressive (*Tsakouridis*), restrictive, or discriminatory (*Zanotti*) state measures, including progressively greater protection against expulsion for permanent residents.

iv. While EU citizenship has thus clearly made a difference to the rights of nationals of EU Member States, it has not superseded or overshadowed the existing status categories under EU law. It is regularly treated by the ECJ as being residual or secondary to the economic status of individuals as workers or self-employed persons (*Hendrix*, *ITC*), and reliance purely on the status of EU citizenship is less beneficial than reliance on another economic status in cases where the applicant seeks access to social or material benefits (*Teixeira*, *Ibrahim*). The rights introduced by EU citizenship are in many cases supplements to, rather than substitutes for, the rights existing under previous EU law status categories, which means amongst other things that we cannot yet do away with textbook chapters on the free movement of workers, services, and establishment!

[104] Case C–310/08 *Ibrahim* (n 52).

4 POLITICAL RIGHTS OF CITIZENSHIP

Thus far we have examined the impact of Articles 20–21 TFEU in some detail. Articles 22–25 also confer a number of rights which, although limited in their range, are of both practical and symbolic importance.

The most important of these are the rights of alien suffrage, the passive and active electoral rights created for EU citizens in host Member States.[105] Article 22 provides that citizens of the Union[106] shall have the right in a Member State other than that of their nationality to vote and to stand as candidates both in municipal and in European Parliament elections, under the same conditions as nationals.[107] This Article was controversial because of its incompatibility with constitutional provisions in some Member States,[108] and Article 22 allows for the possibility of derogations.[109] In *Eman and Sevinger* the ECJ ruled that although Member States could subject the right to vote and to stand in European Parliament elections to a requirement of residence in the territory in which the elections were held, the principle of equal treatment required that there should not be unjustified differences of treatment of nationals who were in comparable situations.[110] Consequently the provision that a Netherlands national resident in a non-Member State had the right to vote and stand in European Parliament elections, but a Netherlands national residing in the Netherlands Antilles or Aruba did not, was unjustified under EU law. According to one commentator, it is implicit in this and another ECJ ruling on voting rights in Gibraltar[111] that European citizens have a democratic right to vote for 'their' parliament, and that—even though this is not stated in the Treaty, which provides only for a right of equal treatment for EU citizens in relation to the electoral rights of nationals of a host state—the right to vote in European Parliament elections is in fact a normal incident of EU citizenship.[112]

Thus far, the take-up and impact of the electoral rights of EU citizens has not been very substantial. In previous reports on the right to vote and stand in municipal elections and European Parliament elections, the Commission noted very low rates of voter registration and low numbers exercising the right to vote in a host state. However, in 2010 the Commission reported that increasing numbers of EU citizens of voting age live in Member States other than that of their nationality, and that there has been a rise in enrolment from 2004 to 2009 on the electoral lists in the Member State of residence, albeit not one that is proportionate to the rise in number of third-country nationals residing in the EU.[113] The Commission has suggested that rates of participation in elections in the Member State of

[105] For a comprehensive analysis see J Shaw, *The Transformation of Citizenship in the European Union* (Cambridge University Press, 2007).

[106] In Case C–145/04 *Spain v UK* [2006] ECR I–7917, [78]–[80], the ECJ ruled that the Treaty provisions on citizenship did not prevent Member States from granting rights to vote and stand in European Parliament elections to persons other than EU citizens, in this case residents of Gibraltar. The action by the UK had been necessitated by the judgment of the ECHR in App No 24833/94, *Matthews v UK*, 18 Feb 1999.

[107] Council Directive 93/109/EC of 6 December 1993 laying down detailed arrangements for the exercise of the right to vote and stand as a candidate in elections to the European Parliament for citizens of the Union residing in a Member State of which they are not nationals [1993] OJ L329/34. On the right to vote and stand in municipal elections see Dir 94/80 [1994] OJ L368, modified by Dir 2006/106. See also Council Dec 2002/772 amending the Act concerning the election of the representatives of the European Parliament by direct universal suffrage, [2002] OJ L283/1. For the most recent Commission report on European Parliament elections, including the participation of EU citizens, see COM(2010)605.

[108] The Greek Council of State in Feb 2011 ruled that a citizenship law passed in the Greek Parliament on 11 Mar 2010, which allowed foreigners who legally reside in Greece to vote and stand in local elections, was unconstitutional since the constitution in force provided that only Greek citizens were entitled to participate in elections.

[109] See the Commission's Reports on granting such derogations under the Treaty and Dir 93/109, COM(2003)31, COM(2005)382, and COM(2007)846.

[110] Case C–300/04 *Eman and Sevinger* [2006] ECR I–8055; J Shaw, Comment (2008) 4 EuConst 162.

[111] Case C–145/04 (n 106).

[112] Shaw (n 10).

[113] COM(2010)605, 5.

residence may be influenced by the fact that, because double voting is prohibited,[114] EU citizens have to choose whether to vote in their Member State of origin or in the Member State to which they have moved. There were significant initial delays and problems with the transposition of Directive 93/109 on the rights of EU citizens to vote and stand in elections in other Member States, including the failure to provide adequate information to citizens, some of which led to infringement proceedings being brought by the Commission.[115] The Commission has also noted that despite the increase in participation in voting by EU citizens resident in other Member States, fewer are standing as candidates,[116] but an attempt by the Commission to introduce amendments to Directive 93/109 in order to make it less onerous for candidates to stand did not succeed and no action has since been taken in this regard.[117] Finally, the Commission has criticized provisions in several Member States which restrict or prohibit non-nationals from establishing or joining political parties as incompatible with the rights of EU citizenship.[118]

Article 23 TFEU provides that Union citizens have the right, in a third country where their own Member State is not represented, to the protection of the diplomatic authorities of any Member State.[119] The Commission, which acknowledged that there is as yet very little '*acquis*' in this field, adopted a Green Paper on diplomatic and consular protection of EU citizens in third countries in 2006, and an Action Plan for 2007–2009 to enhance protection in this area.[120] The Lisbon Treaty added a new paragraph to Article 23 providing a legal basis, using a special legislative procedure involving only consultation of the Parliament, for the Council to establish measures necessary to facilitate diplomatic and consular protection.[121]

Article 24 TFEU was amended by the Lisbon Treaty to provide for the implementation by the ordinary legislative procedure of the new citizens' initiative which was introduced in Article 11(4) TEU, instituting a process whereby one million Union citizens may invite the Commission to bring forward certain legislative initiatives.[122] The Commission will not be under a legal obligation to follow up on any such initiative, but it seems likely that the political pressure on the Commission to be responsive will be strong. Much was made of the democratic potential of this initiative during the debate on the Constitutional Treaty and the subsequent Lisbon Treaty, but it remains to be seen whether it becomes an effective means of democratic mobilization and engagement within the EU.[123] Article 24 TFEU also confirms two previously existing rights under EU law, namely the rights of EU citizens to petition the European Parliament and to apply to the Ombudsman.[124] Article 24 also provides that EU citizens who write to any of the EU institutions in one of the official languages have the right to an answer in that language.

[114] The Commission has also commented on the need to improve the efficiency of the mechanism for detecting double-voting and the need for common rules on electoral schedules and provision of data.

[115] (N 113) 7–8.

[116] Fifth Report on Citizenship of the Union, COM(2008)85, [4.1].

[117] Proposal for a Dir amending Dir 93/109, COM(2006)791.

[118] COM(2008)85, [4.4].

[119] Decision 95/553 regarding protection for citizens of the Union by diplomatic and consular representations of the Member States in non-member countries [1995] OJ L314/73, which eventually entered into force in May 2002.

[120] COM(2007)767.

[121] Art 35 TEU also imposes duties on the diplomatic and consular missions of the EU and the Member States in third countries to provide protection on the basis of EU citizenship, without mentioning Member State nationality.

[122] The Commission published its proposal for a regulation in 2010, COM(2010)119, and agreement on the legislation was reached by Council and Parliament in Feb 2011. The Reg provides that an initiative must include citizens of one-quarter of the EU's Member States, and a method is established for calculating the number of supporters necessary from within each Member State.

[123] J Pilcher and B Kaufmann (eds), *The European Citizens Initiative: Into New Democratic Territory* (Intersentia, 2010).

[124] Non-citizens resident in the EU can also do so: Arts 227 and 228 TFEU.

Article 25 requires the Commission to report every three years on the application of these provisions on citizenship.[125] In 2010, following a request by Commission President Barroso, the Commission adopted three linked reports on citizenship of the Union, as well as a report on dismantling the obstacles to EU citizens' rights.[126] Article 24 also allows the Council, with the consent of the Parliament, to 'adopt provisions to strengthen or to add to the rights' of citizenship listed in Article 20(2) TFEU. However, the Council must act unanimously, and Article 25 envisages that such action may require constitutional amendment at the national level.

5 DIRECTIVE 2004/38 ON THE RIGHTS OF FREE MOVEMENT AND RESIDENCE FOR EU CITIZENS AND THEIR FAMILIES

We saw in Chapter 21 that Directive 2004/38[127] consolidated virtually all of the existing legislation on the free movement of persons into a single instrument, repealing and replacing most of the pre-existing laws including the three Residence Directives. It created, according to the Commission, 'a single legal regime for free movement and residence within the context of citizenship of the Union while maintaining the acquired rights of workers'. While in substance Directive 2004/38 does not significantly change the conditions and terms which had been laid down in the previous Residence Directives, the Directive now implements a fundamental Treaty-based right of residence for citizens, rather than creating such a right by legislation, as was the case with the 1990 Residence Directives.

A full discussion of the main provisions of Directive 2004/38 is contained in Chapter 21 dealing with the free movement of workers. All the main provisions discussed in that context—the initial three-month period of residence, the general right of residence and the right of permanent residence, the reduction in formalities required for entry and residence, the category of family members included, the enhanced procedural and substantive protections in the event of restrictive measures being taken, a general right to equal treatment—apply to all EU citizens and not just to those who are employed or self-employed. The main provisions of the Directive which are specific to EU citizens who are not economically active, or who are students, are set out below.

Article 7(1)(b) and (c) sets out the conditions for the right of residence of EU citizens who are neither workers nor self-employed persons. Article 7(1)(b) essentially incorporates the conditions relating to sufficient resources and comprehensive sickness insurance conditions from the previous Residence Directives. Article 7(1)(b) governs students and provides in substance that an EU citizen shall enjoy a right of residence where he or she is enrolled at a recognized educational establishment for the purposes of study, has comprehensive sickness insurance, and can provide an assurance (whether by declaration or otherwise)[128] that he or she has sufficient resources to avoid becoming a burden on the social assistance scheme.[129]

We have seen from the case law discussed above that the ECJ has required these conditions to be interpreted and applied in a proportionate manner, recognizing that a degree of solidarity between citizens of different Member States had been created by the status of EU citizenship.

[125] COM(93)702, COM(97)230, COM(2001)506, COM(2004)695, and COM(2008)85.

[126] COM(2010)602, COM(2010)603, and COM(2010)605.

[127] (N 20).

[128] Art 8(3) of the Dir specifies that the Member States cannot require the declaration of sufficient resources to refer to any specific amount.

[129] Art 7(4) also limits slightly the category of protected family members of a student who can enjoy rights of residence: only the spouse, registered partner, and dependent children of a student are covered, and dependent direct relatives in the ascending line are not included. Instead, Member States are merely required to facilitate the admission of such other relatives under Art 3(2) of Dir 2004/38.

Article 8(4) of the Directive elaborates further on the requirement of sufficient resources, providing that no fixed amount may be laid down by Member States, that in any case the amount must not be higher than the eligibility threshold for social assistance or the minimum state social security pension, and that the personal situation of the person concerned must be taken into account.[130]

Article 12 concerns acquisition of the right of permanent residence by the family members of an EU citizen who is deceased or departs from the Member State. Article 12(2) provides that before acquiring the right of permanent residence, the persons in question (if they are not workers or self-employed) remain subject to the requirements of sufficient resources and adequate sickness insurance. The right of residence of such family members is said to be retained 'exclusively on a personal basis'. Article 13 similarly governs the right of family members to remain, and to gain permanent residence, in the event of divorce, annulment, or termination of a registered partnership, and it contains similar conditions to those in Article 12. Article 14 governs the general initial three-month right of residence for all EU citizens,[131] and subjects it to one condition only: ie that they do not become an unreasonable burden on the social assistance scheme of the host state.[132] Article 14(4) codifies the case law in *Grzelczyk* and *Trojani* to the effect that expulsion cannot be an automatic consequence of a person's recourse to the social assistance scheme of the host state.

Finally, and importantly, Article 24 governs the right to equal treatment of all EU citizens in a host Member State. Having set out the right to equal treatment in paragraph 1, paragraph 2 provides by way of derogation that host states are not obliged to confer entitlement to social assistance during the first three months of residence, nor (in the case of job-seekers) during the longer period to which a job-seeker is entitled to reside in search of work. We have seen, above, how in the cases of *Vatsouras* and *Bidar*, the ECJ ruled that, despite the terms of Article 24 paragraph 2, job-seekers and students may rely instead on Articles 18 and 45 TFEU to gain access to job-seeker's allowances and maintenance grants on the same terms as nationals.[133]

The transposition of Directive 2004/38 was far from straightforward. The Commission in 2008, two years after the deadline for implementation had passed, adopted a report on the application of the Directive, noting that infringement proceedings (which were later closed) had been initiated against nineteen Member States, and that a great many obstacles and problems with transposition remained.[134] Indeed by 2010, sixty-three sets of infringement proceedings were pending against Member States relating to the rights of free movement and residence of citizens. Particular controversy was caused by the ECJ ruling in *Metock*, which required several Member States to change their laws which had made the right of residence of third-country family members conditional on prior lawful residence in a Member State.[135] Partly in response to the many compliance problems with Directive 2004/38, the Commission in 2009 adopted a Communication to provide guidance for its better transposition and application,[136] and established a group of Member States' experts intended

[130] See also Case C–408/03 *Commission v Belgium*, [2006] ECR I–2647 concerning Belgium's excessively restrictive definition of the sufficient resources condition of the 1990 Residence Dir, which did not take into account the resources of a partner in particular circumstances. The Commission in its Communication on the application of Dir 2004/38, COM(2008)841, noted that twelve Member States had not correctly implemented the 'sufficient resources' requirement.

[131] Art 39 of the Dir provides that in its report on the application of the legislation after four years, the Commission may submit a proposal on the possibility for extending this initial period of (almost) unconditional residence for all EU citizens.

[132] Rec 16 to the Dir sets out three criteria for determining an unreasonable burden: duration, personal situation, and amount, and the Commission's 2009 Communication provides further guidance.

to assist in identifying problems with the Directive, clarifying questions of interpretation, gathering data, and disseminating best practices.

6 CONCLUSIONS

i. The status of EU citizenship created by EU law has been criticized on various grounds, including the thinness of the rights created and their economic focus, the conditions to which they are subject, the reinforcement of the distinction between third country nationals and EU nationals, the limited impact of the new electoral rights, and the reluctant pace of implementation. On the other hand the legal rights of citizenship have been relatively steadily expanded by the ECJ, even in the face of vocal Member State opposition in cases like *Metock* and *Ruiz Zambrano*. Yet a recent appraisal concluded that the 'legal, political and social threads of EU citizenship are not sufficiently joined up'.[137]

ii. A broader dimension of the critique of citizenship is that any meaningful idea of European citizenship would require not merely concrete legal and practical measures on the matters examined in this chapter (ie rights of residence, travel, voting), but also deeper political, institutional, and democratic change within the EU.

iii. The non-discrimination clause in Article 18 TFEU now clearly strengthens an important dimension of EU citizenship, as do various other aspects of EU law such as the right of access to documents and the right to good administration in the 'citizens' rights' chapter of the Charter of Fundamental Rights, and the provisions on democratic principles introduced by the Lisbon Treaty into Articles 9–12 TEU.

iv. European citizenship can also be viewed positively in terms of its potential. In this sense, not only the narrowly defined Treaty provisions on citizenship, but other aspects of transnational civic engagement within the EU are part of the picture, providing a broader perspective on how EU citizens are constituted as members having a stake in the EU as a political entity.[138]

EQUAL TREATMENT AND NON-DISCRIMINATION

1 CENTRAL ISSUES

i. EU anti-discrimination law was originally confined to the issue of sex equality in the employment context, but has expanded significantly over the past decade and a half to cover a range of grounds and an increasing range of contexts.

ii. There is now an impressive constitutional framework for EU anti-discrimination law. In addition to requiring equal treatment for women and men, the Treaty provides legislative competence to combat discrimination on a range of grounds. The Charter of Fundamental Rights, which has a chapter devoted to equality, has been incorporated into the EU Treaties. Article 21 of the Charter prohibits discrimination on *any* ground. Articles 8 and 10 TFEU contain horizontal clauses requiring the EU to promote equality between men and women, and to combat discrimination based on certain grounds, namely sex, racial or ethnic origin, religion or belief, disability, age, or sexual orientation in all of its policies and activities. Gender mainstreaming is well-advanced as an EU policy, and it has more recently begun to extend to other grounds of discrimination. A range of new institutions to promote equality and combat discrimination, including the EU Fundamental Rights Agency and an array of national equality bodies, has been established.

iii. The origins of EU equality law lie in the requirement of equal pay for women and men in Article 157 TFEU, which was first introduced by the EEC Treaty in 1957. Article 157 was later amended to permit the adoption of EU legislation ensuring equal treatment of men and women at work going beyond the field of pay, and to permit forms of 'positive action'. Article 153 TFEU makes equal treatment of men and women in the labour market a sphere of supportive and 'complementary' EU action, allowing for the adoption of 'minimum requirement' directives. There are six major gender equality directives currently in force, and a broad range of other legal and policy measures in this field.

iv. Article 19 TFEU, which was introduced by the Amsterdam Treaty in 1999, provides that the EU may take action to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age, or sexual orientation. Two major legislative instruments have so far been enacted under Article 19: the Race Directive 2000/43 and the Framework Employment Directive 2000/78. In the sphere of criminal law, EU Framework Decision 2008/913/JHA combating racist and xenophobic expression was adopted in 2008.

v. There is a significant body of ECJ case law on equality and discrimination. The vast bulk of this is in the field of sex equality, with a particularly detailed body of jurisprudence on equal pay and social security. However, the expansion of EU anti-discrimination law to cover other grounds since 2000 has begun to mobilize litigation in these other fields, particularly on the issue of age discrimination.

vi. The Court of Justice has also articulated a general principle of equal treatment and non-discrimination, and has treated secondary EU legislation as an expression of this general principle. Unlike other issues of human rights within EU law where the direction of influence from the ECHR to the EU system has been mainly one-way, it seems that EU and ECHR anti-discrimination law have mutually influenced one another.

vii. The principle of non-discrimination on grounds of nationality is not covered in this chapter, but is treated in several of the other chapters dealing with EU citizenship, free movement of workers, services, establishment, goods, and capital. It will be evident from these chapters that the principle of non-discrimination on grounds of nationality is curiously truncated due to its highly instrumental role in the EU context. It does not, in the absence of specific legislation, extend to discrimination against non-EU nationals, but cover mainly discrimination against EU nationals and certain other privileged categories of family members or long-term residents.

2 EU ANTI-DISCRIMINATION LAW: ORIGINS AND CONTEXT

Originating in the provision on equal pay between men and women in Article 119 of the 1957 EEC Treaty, EU anti-discrimination law for several decades focused almost exclusively on sex equality in the employment context. EU sex discrimination law was then divided principally into three parts: equal pay, equal treatment in access to and conditions of employment, and social security. The basic principle of non-discrimination on grounds of sex was common to all three, but they were governed by different bodies of secondary legislation, based on different Treaty Articles. Now, with the exception of state social security and sex equality for self-employed persons, these three are dealt with in one consolidating measure: Directive 2006/54. This consolidating Directive replaces the prior directives on equal pay, equal treatment, occupational social security, and the burden of proof. Apart from the consolidating Directive, there is specific gender equality legislation on state social security (Directive 79/7), on access to and supply of goods and services (Directive 2004/113), on equal treatment as between self-employed men and women (Directive 2010/41), and on pregnancy and parental leave (Directives 92/85 and 2010/18 respectively).

For four decades, EU action in the field of anti-discrimination was largely limited to sex discrimination in the workplace. With the entry into force of the Amsterdam Treaty in 1999, the EU obtained a clear legal basis, now Article 19 TFEU, to take action to combat discrimination on a number of grounds other than sex. Two important pieces of legislation were adopted under Article 19 TFEU in 2000. Directive 2000/43, known as the Race Directive, prohibits discrimination on grounds of racial and ethnic origin in a range of contexts.[1] Directive 2000/78, known as the Framework Employment Directive, prohibits discrimination in the field of employment on the grounds of religion, belief, disability, age, and sexual orientation. These cover the remaining grounds listed in Article 19 other than racial or ethnic origin, or sex.

While the list of grounds of non-discrimination in Article 21 of the Charter of Fundamental Rights is lengthy and non-exhaustive, the EU has express legislative competence only in relation to the grounds set out in Articles 19 and 157 TFEU. However, in addition to the positive law provisions in the Treaties and in legislation, the ECJ has recognized a general principle of equal treatment in EU law which will be discussed further below.

Over the years, the Treaty framework on equality and the array of legislative measures have been supplemented by a range of softer and supportive policy measures, including the Commission's

[1] Council Dir 2000/43, [2000] OJ L180/22.

'framework strategy' on gender equality (2000–2005), its 'Roadmap' for equality (2006–2010),[2] its action programmes to promote equality in the workplace (the last for the period 2010–2015),[3] and its strategy for equality between women and men (2010–2015) adopted on 21 September 2010.[4] Within the framework of the 2008 'renewed social agenda',[5] the Commission presented a comprehensive approach to taking action against discrimination and to promote equal opportunities,[6] created an expert group of governmental experts on discrimination,[7] and adopted a number of measures on the integration of the Roma people.[8] More recently a European Disability Strategy 2010–2020 was adopted.[9]

While gender equality may have been the dominant focus of EU anti-discrimination law for many years, the deeply entrenched economic, social, and political marginalization of the Roma people has in more recent years been recognized as one of the great challenges for EU equality law and policy.[10] The high-profile actions of Italy and France against the Roma communities within those states, including collective expulsion, evictions, and ethnic fingerprinting,[11] eventually led the Commission to investigate and, in the case of France, to threaten infringement proceedings before the ECJ.[12]

3 EQUAL TREATMENT AND NON-DISCRIMINATION: THE LEGAL FRAMEWORK

The Treaty framework for the EU's equal treatment and non-discrimination regime will be briefly described below. This will be followed by an overview of the original equal pay provision between men and women in Article 157 TFEU and its complex elaboration through case law over time. There will then be analysis of Article 19 TFEU, the two Directives adopted under Article 19, and the proposed new legislation to supplement these. This will be followed by consideration of the six gender equality Directives. There will then be analysis of the general principle of equal treatment elaborated by the ECJ.

The principles of equality and non-discrimination are expressed in Articles 2 and 3(3) TEU and Articles 8 and 10 TFEU. Article 2 TEU identifies equality as one of the values on which the EU is founded, and equality between women and men is given specific mention. Article 3(3) TEU includes the combating of 'social exclusion and discrimination' as well as the promotion of 'social justice and protection,

equality between men and women, solidarity between generations and protection of the rights of the child' amongst the objectives of the Union. Articles 8 and 10 TFEU contain horizontal clauses which effectively require the 'mainstreaming' of gender equality and of non-discrimination on the basis of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation' within all EU policies.

The Charter of Fundamental Rights, discussed at more length in Chapter 11, contains an entire Title on equality, designed to illustrate the status of equal treatment in the EU as a fundamental right. Article 20 declares that everyone is equal before the law. Article 21(1) contains an open-ended prohibition of discrimination:

> 1 Any discrimination based on any ground such as sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age or sexual orientation shall be prohibited.
>
> 2 Within the scope of application of the Treaties, and without prejudice to any of their specific provisions, any discrimination on grounds of nationality shall be prohibited.

Despite the breadth and unqualified nature of Article 21(1), however, its scope must be read together with the horizontal clauses at the end of the Charter. The most important limiting clauses are in Article 51(1) which specifies that the provisions of the Charter apply to the EU but to the Member States 'only when they are implementing Union law', and Article 51(2) which provides that the Charter 'does not extend the field of application of Union law' or 'modify powers and tasks as defined in the Treaties'.

Equality between men and women is also dealt with in Article 23 of the Charter, which specifies that it must be ensured in all areas, including employment, work, and pay. Finally it should be noted that the Charter, which gained legally binding force with the entry into force of the Lisbon Treaty, has increasingly been used as a source of rights by the ECJ in non-discrimination cases.

4 THE ORIGINS: ARTICLE 157 TFEU AND THE PRINCIPLE OF EQUAL PAY FOR WOMEN AND MEN

The EEC Treaty from the time of its adoption included the requirement of equal pay for equal work within the scope of EU competence and made it applicable to the Member States. The ECJ soon found this requirement, then contained in Article 119 EEC, to be directly effective. Later rulings of the ECJ, secondary legislation, and ultimately the Amsterdam Treaty amendments to Article 157 TFEU indicated that not only equal work, but also work of equal value was covered. The Amsterdam Treaty in 1999 also added paragraph 3, which provides legislative power for the EU to promote equal treatment for men and women in employment, and paragraph 4 which permits 'positive action' on the part of Member States. Article 157 TFEU now provides:

> 1. Each Member State shall ensure that the principle of equal pay for male and female workers for equal work or work of equal value is applied.
>
> 2. For the purpose of this Article, 'pay' means the ordinary basic or minimum wage or salary and any other consideration, whether in cash or in kind, which the worker receives directly or indirectly, in respect of his employment from his employer.
>
> Equal pay without discrimination based on sex means:
>
> (a) that pay for the same work at piece rates shall be calculated on the basis of the same unit of measurement;
>
> (b) that pay for work at time rates shall be the same for the same job.

3. The European Parliament and the Council, acting in accordance with the ordinary legislative procedure, and after consulting the Economic and Social Committee, shall adopt measures to ensure the application of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation, including the principle of equal pay for equal work or work of equal value.

4. With a view to ensuring full equality in practice between men and women in working life, the principle of equal treatment shall not prevent any Member State from maintaining or adopting measures providing for specific advantages in order to make it easier for the under-represented sex to pursue a vocational activity or to prevent or compensate for disadvantages in professional careers.

(A) THE SOCIAL AND ECONOMIC UNDERPINNINGS OF ARTICLE 157

The historical explanation for Article 157 TFEU, given the absence of any mention in the Treaty of equal treatment other than in the context of pay, appears to have been France's concern that it would be placed at a competitive disadvantage in observing the principle of equal pay for equal work more than it was observed in other Member States.[13] In other words, concern over unfair treatment of women in the labour market was not the primary motivation for the inclusion of this Article. Nevertheless, Article 157 and the other provisions of EU sex discrimination law are now viewed and interpreted not only as an instrument of economic policy, but also as an important part of EU social policy.[14]

While the equal pay rule was undoubtedly intended to 'level the playing field' by ensuring that employers in no one Member State would have this competitive advantage over those in another Member State, the ECJ declared, even in its early case law, that Article 157 had a social and not just an economic aim. In the first *Defrenne* case, Belgium argued that the aim of this provision was economic only, namely 'to avoid discrepancies in cost prices due to the employment of female labour less well paid for the same work than male labour'.[15] The Court rejected this view in *Defrenne II*.

Case 43/75 **Defrenne v Sabena** [1976] ECR 455

[Note Lisbon Treaty renumbering: Art 119 EEC is now Art 157 TFEU]

THE ECJ

8. Article 119 pursues a double aim.

9. First, in the light of the different stages of the development of social legislation in the various Member States, the aim of Article 119 is to avoid a situation in which undertakings established in States which have actually implemented the principle of equal pay suffer a competitive disadvantage in intra-Community competition as compared with undertakings established in States which have not yet eliminated discrimination against women workers as regards pay.

[13] C Barnard, 'The Economic Objectives of Article 119' in D O'Keeffe and T Hervey (eds), *Sex Equality Law in the European Union* (Wiley, 1996).

[14] Case C–50/96 *Deutsche Telekom v Schröder* [2000] ECR I–7.

[15] Case 80/70 *Defrenne v Belgium (Defrenne I)* [1971] ECR 445.

10. Secondly, this provision forms part of the social objectives of the Community, which is not merely an economic union, but is at the same time intended, by common action, to ensure social progress and seek the constant improvement of the living and working conditions of their peoples, as is emphasized by the Preamble to the Treaty.

...

12. This double aim, which is at once economic and social, shows that the principle of equal pay forms part of the foundations of the Community.

We saw in Chapter 7 that various Member States had avoided the implementation of the equal pay principle for years, eventually arguing unsuccessfully to the ECJ in *Defrenne* that the Treaty provision lacked direct effect. The Court ruled that Article 157 TFEU (ex Article 119 EEC) had been directly effective since the end of the first stage of the transitional period. Nevertheless, the ECJ was swayed by the arguments of the Member States on the serious financial consequences of such a ruling for them, and it declared that in view of the incorrect understanding of the Member States of the effects of this Treaty Article, due in part to the fact that the Commission had not brought earlier infringement proceedings against them, its ruling should have effect only prospectively. This meant that only those who had already brought legal proceedings or made a claim could rely on the Article in respect of pay claims for periods prior to the date of judgment. Prospective overruling of this kind by the Court has not been frequent, and the cases tend to be those in which there are considerable financial implications for the Member States or their industries.[16]

More recently, in *Schröder*, the ECJ was confronted with an apparent conflict between the social aim, ensuring fairness to individual women and men, and the economic aim, ensuring equal conditions for competing employers, of Article 157.[17] If the social aim were to take priority, German law could apply the equal pay principle retroactively so as to permit part-time workers access to an occupational pension scheme, whereas if the economic aim were to take priority, Germany, in order to ensure that its firms were not operating under less favourable conditions than those of Member State competitors, should not do so. The ECJ began by repeating the 'double aim' ruling in paragraphs 8–11 of *Defrenne II* (above) and continued:

Case C–50/96 **Deutsche Telekom v Schröder**
[2000] ECR I–743

THE ECJ

56. However, in later decisions the Court has repeatedly held that the right not to be discriminated against on grounds of sex is one of the fundamental human rights whose observance the Court has a duty to ensure (see, to that effect, Case 149/77 *Defrenne III* [1978] ECR 1365, paragraphs 26 and 27, Joined Cases 75/82 and 117/82 *Razzouk and Beydoun* v. *Commission* [1984] ECR 1509, paragraph 16, and Case C–13/94 *P.* v. *S. and Cornwall County Council* [1996] ECR I–2143, paragraph 19).

[16] See, eg, Case 262/88 *Barber v Guardian Royal Exchange Assurance Group* [1990] ECR 1889; N Hyland, 'Temporal Limitation of the Effects of the Judgments of the Court of Justice' (1995) 4 IJEL 208. See however Case C–128/93 *Geertruida Catharina Fisscher v Voorhuis Hengelo BV and Stichting Bedrijfspensioenfonds voor de Detailhandel* [1994] ECR I–04583 where it is affirmed that the limitation of the effects in time of the *Barber* judgment does not apply to the right to join an occupational pension scheme.

[17] Case C–50/96 (n 14); L Besselink, Note (2001) 38 CMLRev 437; E. Ellis, Note (2000) 25 ELRev 564.

> 57. In view of that case-law, it must be concluded that the economic aim pursued by Article 119 of the Treaty, namely the elimination of distortions of competition between undertakings established in different Member States, is secondary to the social aim pursued by the same provision, which constitutes the expression of a fundamental human right.

Thus the social aim of Article 157 TFEU, read in the light of the ECJ's case law on fundamental human rights, had come to take precedence over its economic rationale.[18] Moreover, while *Schröder* is an equal pay case, the Court's ruling seemed to refer to Article 157 TFEU and the equal treatment principle more generally.

The emphasis on human rights rather than on economic competitiveness as the primary rationale for EU equal treatment law is evident now in the preambles to recent legislation, including the consolidating Directive 2006/54[19] as well as in the Article 19 anti-discrimination Directives adopted in 2000.[20]

(B) THE BREADTH OF ARTICLE 157: THE DEFINITION OF PAY

This has proven to be a complex question, despite the guidance given in the Article itself on the meaning of the term 'pay'. The ECJ has given the term a very wide scope, which caused some confusion in relation to the borderline between pay and social security. While some of the Court's rulings appeared to undermine measures adopted by the EU legislative institutions—and thus the bargains struck by the Member States in the Council when adopting those measures—at other times its rulings appeared responsive to the political context by retreating from earlier expansive positions in the face of obvious dissatisfaction from the Member States or the other institutions.

(i) *Social Security Benefits are Not Pay*

In *Defrenne I*, a case concerning discrimination in retirement pensions which was brought against Belgium, the ECJ gave an early ruling on what subsequently became a very tangled relationship between pay and pensions.[21] The ECJ ruled that while 'consideration in the nature of social security benefits' was not in itself excluded from the concept of pay, the employer's contributions to a retirement pension in this case were excluded from the scope of Article 157 for three reasons: first, the pension scheme was directly governed by legislation; secondly, there was no agreement on the scheme within the particular company or occupational branch concerned; and, thirdly, the retirement scheme was *obligatorily* applicable to *general* categories of workers. The determining role of the state and the lack of involvement of the particular employer were crucial: in sum, the pension scheme was set up essentially as a matter of social policy and not as a part of the employment relationship in question. The Court's definition of the difference between pay and social security is important, since equal treatment in social security is not covered by Article 157 TFEU but primarily by Directive 79/7, whereas occupational social security is covered in part by this Article and in part by Directive 2006/54.

[20] (N 121).

[21] Case 80/70 *Defrenne v Belgium* [1971] ECR 445.

(ii) *Widening the Definition of Pay*

The wide interpretation of pay under Article 157 was already evident in cases such as *Garland*,[22] where the ECJ ruled that the fact that female employees following retirement could no longer enjoy *travel facilities* for their spouses and dependent children, whilst male employees continued to do so, constituted discrimination contrary to the Treaty.[23] Since these were benefits conferred in respect of employment, even if after retirement and irrespective of any specific contractual obligation, they were held to constitute pay.[24] Similarly in *Kowalska*, a severance grant was covered by Article 157 since it was compensation to which a worker was entitled by reason of her employment, even though it was paid on termination rather than during the employment relationship.[25] In *Seymour-Smith*, *compensation for unfair dismissal* was held to constitute pay, since it was designed to replace pay to which the employee would have been entitled had she not been unfairly dismissed.[26] And in the famous case of *Barber* the ECJ ruled that *severance benefits*, including statutory redundancy payments, would constitute pay under Article 157, even though it was required by statute, since the worker was entitled to the payment upon termination of the employment 'by reason of the existence of the employment relationship'.[27] In *Nimz*, the Court confirmed that the *rules governing the system of salary-classification into grades* fell within the concept of pay in Article 157 since they directly governed changes in employees' salaries.[28] The ECJ has also included *statutory sick pay*,[29] *maternity benefit*,[30] and *statutorily required compensation*[31] within the concept of pay. It is generally in the employee's interests that benefits are classified as pay rather than social security, given that Article 157, unlike Directive 79/7, is directly effective both against the state and against private employers.

In contrast, rules governing the calculation of the length of service of public servants for the purposes of determining eligibility for promotion, even while indirectly determining the possibility of access to a higher level of remuneration, were a matter of equal treatment rather than equal pay.[32] In *Defrenne II* the ECJ had ruled that the fact that the fixing of certain working conditions could have pecuniary consequences was not sufficient to bring such conditions within the scope of the equal pay principles in Article 157, and this point was confirmed again in *JämO*[33] and *Seymour-Smith*,[34] *Steinicke*,[35] and *Lommers*.[36] Such conditions fell instead to be dealt with under Directive 76/207 (now Directive 2006/54) on Equal Treatment.

(iii) Bilka *and* Barber*: Occupational Pensions may Constitute Pay*

Some of the most significant developments in relation to the uncertain zone between pay and social security were the rulings on *occupational pensions* in both *Bilka-Kaufhaus* and *Barber*,[37] along with the flood of litigation which followed *Barber*. The ECJ first addressed the issue of occupational pension schemes directly in *Bilka-Kaufhaus*. At the time judgment was given, the Council was considering adopting legislation on occupational social security, which subsequently became Directive 86/378,[38] to supplement Directive 79/7 on statutory social security.

The terms of the 1986 Directive clearly showed that the institutions considered occupational pensions to be a matter of social security rather than pay, so that they were dealt with in a more gradual manner similar to matters covered by Directive 79/7, rather than under the strictures of Article 157. However, the ECJ in *Bilka* took a different view, in the context of a supplementary occupational pension scheme *entirely financed by the employer*, and ruled that although the scheme was adopted in accordance with conditions laid down by German law, it was based on an agreement between the employer and the employee staff committee, bringing it within the scope of pay under the Treaty.[39]

By contrast with the statutory pension scheme in *Defrenne I*, the ECJ in this case highlighted three factors: (i) the contractual nature of the pension scheme, (ii) the fact that it was not directly governed by statute but by an agreement between employer and employee, and (iii) it was not financed in part by the public authorities but entirely by the employer. The fact that the employer chose to arrange the scheme in a way which corresponded to the statutory social security scheme was irrelevant, and the benefits paid to employees under the occupational scheme thus constituted 'pay' under Article 157. The fact that employee affiliation to an occupational pension scheme is made compulsory by legislation was also to be irrelevant.[40] Although the ruling in *Bilka* should have warned the EU institutions that occupational pensions were viewed by the ECJ as pay rather than social security, Directive 86/378 was nonetheless adopted shortly after the case.

The famous *Barber* judgment which followed, however, rendered much of Directive 86/378 redundant, by ruling that even if an occupational pension scheme was contracted out, ie where it was set up by an employer in direct substitution for and in fulfilment of the obligations of the statutory scheme, payments of benefits to employees would constitute pay rather than social security.[41] The distinction between social security and pay at issue in the case was particularly important in relation to pensions, because of the exceptions to the equal treatment principle which are allowed under Social Security Directive 79/7 in relation to pensionable age and related benefits.[42] No such exception exists under Article 157 and companies which had operated contracted-out occupational pension schemes had, prior to *Barber*, proceeded on the assumption that they could maintain discriminatory pensionable ages as between men and women.

The question was, in essence, whether contracted-out occupational pension schemes were governed by the principle set out in *Defrenne I*,[43] in which case they were social security, or that in *Bilka*,[44] in which case they were pay. Mirroring its reasoning in *Bilka*, the ECJ focused on three features of the contracted-out scheme: first, it was agreed and entirely financed by the employer, not imposed

directly by statute;[45] secondly, unlike most social security benefits the scheme was not compulsorily applicable to general categories of employees and, although in conformity with national legislation, was governed by its own rules; and, finally, although it was in substitution for the statutory scheme, its provisions could also go further and provide additional benefits, thereby making it indistinguishable from supplementary schemes such as those in *Bilka*. The fact that the fund was administered by trustees did not prevent the benefits paid from constituting pay, and this point was underlined later in *Coloroll*[46] and again in *Menauer*,[47] where the Court held that Article 157 could be relied upon directly as against the trustees, who were bound in their duties by the equal treatment principle.

Having established that private 'contracted-out' occupational pension schemes were covered by the equal pay principle, the ECJ in *Barber* went on to rule that different pension entitlements on redundancy for men and women were in breach of that principle, and that equal pay had to be ensured with respect to each element of pay.[48] The *Barber* case had serious repercussions throughout the EU, and fundamentally changed the way pension schemes would henceforth have to be organized.

D Curtin, Scalping the Community Legislator: Occupational Pensions and *Barber*[49]

One of the major points to emerge from the Court's decision in *Barber* is that the limitation originally imposed by the Court as to the scope of the direct effect of Article 119 [*now Article 157 TFEU*] is, to all intents and purposes, redundant. It has been consistently argued over the years that highly complex problems such as the different life expectancies of men and women, different retirement ages, putative pensionable service during maternity leave etc. all militated against direct effect being ascribed to Article 119 in the pensions sphere in the absence of implementing legislation. The view was that since pension benefits were not tangible and calculable in money terms, detailed criteria determining how equality had to be achieved would have to be established through appropriate measures at either Community level or national level. However the Court's judgment in *Barber* adopts the approach that once the question of deciding that occupational benefits fall within the scope of 'pay' in Article 119 has been answered, the national court will *ipso facto* be in a position to decide whether the litigant receives less pay than a member of the opposite sex engaged in the same work. What is radical about this approach is that it confirms that equal treatment in the pension context does not require that the total amount of a particular benefit be mathematically equal since neither the costs nor the value of total pension benefits received will ever be known in advance. What seems to be required is rather that the rate at which the benefit is enjoyed be equal.

The radical nature of *Barber*, unsurprisingly, met with criticism from Member States, which had argued strongly against the Court's conclusion in their submissions during the case, and from employers alike. It was felt that the judgment did not take sufficient account of the social policy requirements underlying many occupational pension schemes, that it ignored the close link between statutory and occupational pension schemes, and that it involved deliberate judicial bypassing of a legitimate piece of EU legislation: the Occupational Pension Directive of 1986.[50] The ECJ however made one major

[45] The ECJ made it clear subsequently in Case C–200/91 *Coloroll Pension Trustees Ltd v Russell and others* [1994] ECR I–4389, [88], that all benefits payable to an employee under an occupational pension scheme, whether the scheme was contributory or non-contributory, constituted pay within Art 157 TFEU.

[50] (N 38).

concession to the concerns of the Member States,[51] and to those of employers who would henceforth have to organize occupational pensions differently, by limiting the retroactivity of its ruling. While the ECJ has regularly insisted that financial consequences alone do not justify limiting the temporal effect of a ruling,[52] it took the view in *Barber* that the Member States and others had reasonably been entitled, in light of the authorization in the two Social Security Directives to defer implementation of the equal treatment principle in relation to pensionable ages, to consider that Article 157 did not apply to pensions paid under contracted-out schemes.[53] However, the relevant paragraphs of the judgment in which it purported to limit the effects of its ruling were somewhat ambiguous, and before the ECJ itself had the opportunity to clarify its meaning in later case law, the concern aroused by *Barber* in the Member States had prompted the annexation of a Protocol to the then EC Treaty by the Maastricht Treaty, purporting to limit the retroactive effect of the judgment by adopting the more limited of two possible interpretations. The ECJ itself, when later called upon to clarify the meaning of the relevant paragraphs in *Barber*, pragmatically agreed with the version chosen by the states in the Protocol.[54]

(iv) *Post*-Barber *Case Law*

Despite this clear attempt by Member States to rein in the interpretative autonomy of the ECJ, the Court in subsequent case law reasserted its independence by limiting the potential scope of the Protocol, ruling in *Fisscher* and *Vroege* that it had to be read 'in conjunction with the *Barber* judgment and cannot have a scope wider than the limitation of its effects in time'.[55] This meant that the Protocol related only to *benefits* and not to the *right to join or belong* to an occupational pension scheme. Thus discriminatory conditions governing *membership* of an occupational scheme, such as a full-time requirement or the exclusion of married women, were governed by the ECJ's earlier ruling in *Bilka* on this issue,[56] rather than by the Protocol, and the same was later held to be true for other restrictive conditions on participation in occupational pension schemes.[57]

Thus, subject to the application of national time limits for bringing an action,[58] Article 157 could be relied on to challenge a discriminatory exclusion from a pension scheme as from the date of the *Defrenne II* judgment, in which Article 157 had been held to be directly effective. However, the right retroactively to join a pension scheme did not mean that workers could avoid paying the value of the past contributions.[59]

[51] The UK in particular argued that, unless the retroactive effect of the judgment was limited, the increase in costs would run to between £33 and £45 billion, with disastrous effects for the UK economy as a whole.

[52] See, eg, Case C–184/99 *Grzelczyk v CPAS* [2001] ECR I–6193, [50]–[54]; Case C–366/99 *Griesmar v Ministre de l'Economie* [2001] ECR I–9383, [73]–[78].

[56] Case 170/84 *Bilka-Kaufhaus* (n 37).

[57] See also Case C–435/93 *Dietz v Stichting Thuiszorg Rotterdam* [1996] ECR I–5223, [23]–[25]; Case C–246/96 *Magorrian and Cunningham v Eastern Health and Social Services Board* [1997] ECR I–7153; Case C–50/96 *Schröder* (n 14); Cases C–270 and 271/97 *Deutsche Post v Sievers and Schrage* [2000] ECR I–929. The *Moroni* ruling also confirmed that *Barber* applied in the same way to supplementary pension schemes as to contracted-out schemes, thus extending the reasoning in *Bilka* (re the exclusion of part-time workers from a supplementary pension scheme) to the existence of discriminatory pensionable ages *within* such a scheme. Case C–110/91 *Moroni v Collo GmbH* [1993] ECR I–6591.

[58] As in the Court's general case law on remedies, the rules relating to national time limits must be no less favourable than for similar actions of a domestic nature and must not render impossible the exercise of the right. See, however, Case C–147/95 *DEI v Efthimios Evrenopoulos* [1997] ECR I–2057.

[59] Case C–128/93 *Fiscchер* (n 55) 37. The Court has applied this case law by analogy to membership of a statutory scheme: Cases C–231–233/06 *Jonkman and Others* [2007] ECR I–5149.

The ECJ in *Ten Oever* also ruled that Article 157 covered pension benefits payable not just to an employee, but also to the employee's survivor, in this case a widow's pension, since the crucial factor was that the pension was paid by reason of the employment relationship between the employee and employer.[60] Following from this, the ECJ ruled in *Coloroll*[61] and *Menauer*[62] that Article 157 could be invoked against the employer or the trustees of the pension scheme also by the employee's dependants.[63]

(v) *Other Kinds of Pension Scheme*

In *Beune*,[64] concerning civil service pensions, the ECJ reviewed the criteria it had developed in cases from *Defrenne I* to *Ten Oever* for determining whether a pension scheme constituted pay under Article 157 or social security under Directive 79/7. Ultimately, having considered the criteria of (i) agreement between employer and employee rather than statutory origin, (ii) the absence of public funding of a scheme, and (iii) the provision of benefits supplementary to state social security benefits, the ECJ concluded that the 'decisive' though not the 'exclusive' criterion was (iv) that set out in Article 157 TFEU itself: that the pension is paid to the worker by reason of the employment relationship between the worker and the former employer.[65] Consequently, even if the civil service pension scheme was affected by 'considerations of social policy, of State organisation, or of ethics or even budgetary preoccupations', factors which would normally point to its classification as a state social security scheme rather than pay, these could not prevail if three other factors were also present: if the pension paid by a public employer (i) concerned only a particular category of workers rather than general categories, (ii) was directly related to the period of service, and (iii) was calculated, in its amount, by reference to the civil servant's last salary, then it was comparable to a pension paid by a private employer and would constitute pay.[66]

These principles were applied by the ECJ in *Griesmar*[67] and *Mouflin,*[68] where French retirement pensions for civil servants were held to be pay rather than social security, and similarly to German and Finnish pension schemes in *Schönheit*[69] and *Niemi*[70] respectively. In these cases the ECJ ruled that, whenever the legal criteria of pay and equal work could be identified, an employee could rely directly on Article 157, effectively overriding the relevant provision of the Occupational Pension Directive 86/378 which had purported to allow the postponement until 1993 of the establishment of equal pensionable ages in occupational schemes. However, the limitation on the retroactive effect of *Barber* was held to be applicable to discriminatory age conditions.[71]

(vi) *A Limited Retreat from* Barber*: Employer Contributions to Defined-Benefit Pension Schemes*

Among the various other issues raised in post-*Barber* case law was the question whether payments by an employer to a contracted-out occupational pension scheme (rather than payments to an *employee*,

[60] See also Case C–147/95 *DEI* (n 58); Case C–50/99 *Podesta v CRICA* [2000] ECR I–4039.
[61] Case C–200/91 *Coloroll* (n 45) [17]–[19].
[62] Case C–379/99 *Menauer* (n 47).
[63] This was sharply criticized by the German Government in the case, which argued that a survivor's pension benefit should be not regarded as pay, since it did not represent consideration for work performed, but reflected social policy concerns connected to the traditional allocation of men's and women's roles: Case C–109/91 *Ten Oever* (n 54).
[64] Case C–7/93 *Beune* (n 55); Case C–50/99 *Podesta* (n 60).

[71] Case C–200/91 *Coloroll* (n 45) [71].

as in *Barber*) were covered by Article 157.[72] This question arose because actuarial calculations of the different life expectancies of men and women were used in determining the sums payable by an employer into the scheme.

In both *Coloroll* and *Neath*, a 'defined-benefit' pension scheme was in issue, under which employees would receive a pension for which the criteria were fixed in advance, for example by reference to a fraction of their final year's salary for each year of service.[73] It was held that contributions of *employees* to the scheme must consist of an identical amount for men and women, since, according to the *Worringham* case,[74] employees' contributions were pay within Article 157. However, in such defined-benefit schemes, *employers*' contributions varied over time and were adjusted to take account of the pensions which would have to be paid. As a consequence of using the sex-based actuarial factors in calculating such employers' contributions, the amount which a male employee would receive on redundancy, in the form of a capital sum, transfer benefits, or a deferred pension, would be less than that which a woman would receive. Contrary to the arguments of the Commission and the Advocate General, the ECJ ruled that although the pension which was promised according to fixed criteria constituted pay, neither were the employer's contributions paid in order to ensure the adequacy of the funds to cover the cost of that promised pension, nor would the value of those contributions as represented by a lump sum or transfer benefits fall within Article 157.[75]

Thus, having gradually broadened the concept of pay, eroding the distinction between pay and occupational social security, and creating a distinction between occupational social security and state social security, the ECJ drew back somewhat in *Neath* and *Coloroll*.[76] The outcome of these and other cases decided after *Barber* was subsequently enacted into legislation, which is now contained in the consolidating Directive 2006/54.[77] However, it has been suggested that the rulings in *Neath* and *Coloroll* on the permissibility of using sex-based actuarial calculations in occupational pensions schemes may have been called into question by the recent *Test-Achats* ruling of the ECJ prohibiting the use of sex-based actuarial calculations in the field of insurance.[78] This case will be discussed further below.

Directive 2006/54 also contains an 'exception' to the scope of the equal treatment principle in occupational pensions which was first established in *Coloroll*, ie that certain pension benefits purchased by *voluntary employees' contributions* to an occupational scheme do not fall within Article 157 and thus do not constitute pay.[79] A range of other specific exceptions are also provided for by the Directive.[80] The legislation also incorporates the outcome of the somewhat surprising judgment in *Birds Eye Walls*,[81] which permits Member States to introduce differential treatment between men and women in a bridging pension scheme in order to counterbalance the effects of the state system, which maintains different retirement ages for men and women.[82]

[72] Case C–200/91 *Coloroll* (n 45); Case C–152/91 *Neath v Hugh Steeper Ltd* [1993] ECR I–6935.

[82] Dir 2006/54 (n 116) Art 8(2).

(vii) *Remedying Discrimination in Occupational Pensions*

A major question following *Barber* was how the discrimination identified was to be remedied. In *Coloroll*, the ECJ ruled that, between the date of the *Barber* ruling and the date of entry into force of measures designed to eliminate discrimination, 'correct implementation of the principle of equal pay requires that the disadvantaged employees should be granted the same advantages as those previous enjoyed by other employees'.[83] In other words, until amending measures were adopted, pension schemes could only 'level up', by giving men the same advantages as women enjoyed. This principle had been first enunciated in *Defrenne II*,[84] in which the ECJ ruled that compliance with the equal pay principle could not be achieved other than by raising the lowest salaries, since Article 157 appeared in the context of the harmonization of working conditions while maintaining an improvement in those conditions.

However, the Court in *Coloroll* took a more limited approach than that in *Defrenne II*, and applied the 'levelling-up' or improvement in conditions of pay only to the transitional stage between the date of the *Barber* ruling and the date on which measures were adopted to comply with it.[85] However, once equalizing measures were adopted, Article 157 'did not then preclude measures to achieve equal treatment by reducing the advantages of the persons previously favoured'.[86] However, EU law had nothing to say about age discrimination between men and women in occupational pension schemes prior to the date of *Barber,* and thus did not provide Member States with a rationale for retroactively reducing the advantages enjoyed by women during that period. The Court also ruled in *Smith* that once an employer took steps for the future to comply with Article 157 TFEU, the achievement of equality could not be made partial or progressive.[87]

Notably, the Court uses the language of 'advantage' in the occupational pensions case law to describe the position of women, since the retirement age for women was generally, being linked to that of state pension schemes, lower than that for men. However, it has been pointed out that the language of 'advantage' or 'favoured group' is hardly appropriate to apply to women in this context, since 'unquestionably, the less favoured group is in reality composed of women, who have worked and contributed to the scheme but receive very low pensions because of the level of pay which they earned during their working life, itself frequently shorter than the men's'.[88]

Finally, it should be said that Directive 2006/54 now incorporates the outcome of the stream of case law from *Barber* onwards, with all of its details and anomalies, virtually without amendment.[89]

5 ARTICLE 19 TFEU AND THE ARTICLE 19 DIRECTIVES

Just over forty years after the EEC Treaty with its equal pay principle entered into force, Article 19 TFEU (ex Article 13 EC) was introduced by the Amsterdam Treaty. This followed a long campaign by NGOs, European Parliamentarians, and others to empower the EU to address issues of race discrimination

[89] For criticism of the 'purely declaratory' approach of the initial Dir 96/97, and its failure to address certain deficiencies in this field, see N Burrows and M Robison, 'An Assessment of the Recast of Community Equality Laws' (2006) 13 ELJ 186; E Cassell, 'The Revised Directive on Equal Treatment for Men and Women in Occupational Social Security Schemes—The Dog that Didn't Bark' (1997) 26 ILJ 269.

and the rise of xenophobia in Europe.[90] A Treaty amendment had been resisted by certain Member States for some time, but the election of the Labour Party into government in the UK after almost two decades of Conservative government in 1997 helped secure the inclusion of Article 19 TFEU by the Amsterdam Treaty. Article 19 does not contain a direct prohibition of discrimination on grounds which it lists, and, unlike the equal pay provision between men and women in Article 157 TFEU, it is not directly effective. Rather it enables the EU to adopt measures to combat discrimination on the grounds listed within the scope of the policies and powers otherwise granted in the Treaties:

> 1. Without prejudice to the other provisions of the Treaties and within the limits of the powers conferred by them upon the Union, the Council, acting unanimously in accordance with a special legislative procedure and after obtaining the consent of the European Parliament, may take appropriate action to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation.

While measures under Article 19(1) require unanimity in the Council, Article 19(2) allows for the adoption by a qualified majority of supportive, non-harmonizing incentive measures to combat discrimination on the grounds set out in paragraph 1.

(a) THE RACE DIRECTIVE 2000/43

Directive 2000/43/EC,[91] which establishes a prohibition of discrimination on grounds of racial or ethnic origin, was the first piece of legislation to be adopted under Article 19. It was adopted in an exceptionally speedy manner in 2000, less than a year after the Treaty of Amsterdam entered into force.[92] The background to this unexpectedly rapid action included mounting concern at the resurgence of the far right in parts of Europe, and the famous 'Haider affair' arguably played a significant part in explaining the pace and ease with which the legislation was enacted. There was also an intention, reflected in the enactment by the Amsterdam Treaty of the 'sanctions clause' in Article 7 TEU,[93] to send out a signal about the importance of combating racial discrimination to the Central and Eastern European countries which were seeking accession to the EU at the time.[94]

While the jurisdictional limitation in Article 19 TFEU specifies that the EU can act only within the limits of the Union's powers, Article 3 of the Race Directive gives it a wide material scope, including a prohibition on discrimination in relation to social protection, health care, housing, and education. The personal scope of the Directive is also reasonably wide, covering all persons within the EU, including public and private actors alike. The importance of protecting 'all natural persons' against discrimination on grounds of racial or ethnic origin is emphasized in recital 16 of the preamble. The otherwise broad scope of the Race Directive is, however, limited in respect of third-country nation-

[90] For the background to this Treaty provision see M Bell, 'The New Article 13 EC Treaty: A Sound Basis for European Antidiscrimination Law?' (1999) 6 MJ 5; M Bell, *Anti-Discrimination Law and the European Union* (Oxford University Press, 2002).

[94] E Ellis, *EU Anti-discrimination Law* (Oxford University Press, 2005) 29. The adoption of the Race Dir was preceded by the enactment of a number of non-binding soft-law measures in the field of racism and xenophobia.

als, pointing to the troubling issue of the relationship between discrimination, race, and migration in Europe. While non-EU nationals are formally protected from discrimination on grounds of race and ethnic origin whilst on EU territory, Article 3(2) of the Directive and recital 13 make clear that it does not cover nationality-based discrimination and is 'without prejudice to provisions and conditions relating to the entry into and residence of third-country nationals' and to 'any treatment which arises from the legal status of the third-country national concerned'.

It is all too evident that the distinction between discrimination based on nationality, discrimination based on religion, and discrimination based on racial or ethnic origin is far from clear. Further, the Directive itself acknowledges the fact that the very category of 'race' is highly contested and scientifically unfounded, and the legislation avoids attempting to define the notion of discrimination on grounds of racial or ethnic origin.[95] The conundrum however is that the lack of a definition of the prohibited behaviour may add to the familiar difficulties of victims of discrimination in establishing a claim under the Race Directive.[96]

Perhaps surprisingly, very few references have so far been made to the ECJ under the Race Directive, although a trickle is finally beginning to appear which may provide an opportunity to address some of these difficult questions. The ECJ in the *Firma Feryn* case side-stepped the problem of the relationship between race discrimination and migration and the Directive's exclusion of nationality discrimination by appearing to treat a public statement by an employer who was seeking to recruit fitters that it 'could not employ immigrants because its customers were reluctant to give them access to their private residences' as equivalent to a statement that it would not employ people of a certain racial or ethnic origin.[97]

A further opportunity to define the concept of ethnic origin and to clarify the distinction between discrimination based on nationality and discrimination based on ethnic origin may soon arise in the pending case of *Runevič-Vardyn and Wardyn*.[98] This reference from a Lithuanian court asks whether national legislation providing that personal names and surnames in documents indicating civil status may be written only using the letters of the national language constitutes indirect discrimination on grounds of ethnic origin under Article 2(2)(b) of the Race Directive, or whether such legislation is forbidden by the prohibition of discrimination on grounds of nationality covered by Article 18 TFEU. A pending reference in the *Servet* case raises the question whether national law which distinguishes between resident EU citizens on the one hand and third-country national long-term residents or stateless persons on the other for the purpose of access to housing benefit is compatible with the Race Directive, with Directive 2003/109 on long-term resident third-country nationals, with Article 21 of the Charter of Fundamental Rights prohibiting discrimination on grounds of nationality or Article 34 of the Charter recognizing the right to housing assistance.[99]

Article 2 of the Race Directive identifies four types of prohibited discrimination, namely direct discrimination, indirect discrimination, harassment, and instruction to discriminate. These concepts are explained further below. Whereas a *prima facie* charge of indirect discrimination can be rebutted by invoking a general 'objective justification' in accordance with Article 2(2)(b), direct discrimination can be justified only on the basis of a limited number of exceptions enumerated in the Directive. These comprise the provision in Article 4 which permits differential treatment based on a 'genuine and determining occupational requirement' which is legitimately and proportionately applied; and

[95] Rec 6 of the Dir.

[97] Case C–54/07 *Firma Feryn* [2008] ECR I–5187, [16], [25], [34]. The ECJ did not directly address the specific question—which was posed to it by the referring Brussels Labour Court in question 4(d) of its reference, at [18] of the judgment—whether a statement of refusal to hire *immigrants*, combined with the failure to hire any employees of a non-indigenous ethnic background, gave rise to a presumption of indirect discrimination on racial or ethnic grounds.

[98] Case C–391/09 *Runevič-Vardyn and Wardyn*, referred to the ECJ, 2 Oct 2009. See also pending Case C–310/10 *Agafiței*, referred to the ECJ, 29 June 2010 from Romania, asking whether discrimination in the availability of compensation for prior discrimination against a 'certain socio-professional class' is covered by the Race Dir 2000/43.

[99] Case C–571/10 *Servet*, pending.

the 'positive action' provision in Article 5 which permits the adoption of measures 'to compensate for disadvantages linked to racial or ethnic origin' and in order to ensure 'full equality in practice'.

The Directive also introduces a number of interesting institutional provisions. Article 13 provides for the establishment or designation of a national equality body or agency the tasks of which include the promotion of equal treatment of all persons without discrimination on the grounds of racial or ethnic origin. In addition to their policy work in publishing reports, conducting surveys, and making recommendations, these bodies are to provide independent assistance to victims of discrimination in pursuing their complaints. Although the Directive does not introduce anything like a group or class action mechanism, Article 7 supplements the individual complaints mechanism by providing that associations and organizations with a legitimate interest, as well as the Article 13 equality bodies, may assist and support victims in any judicial or administrative proceedings to enforce obligations under the Directive. Article 8 introduces a burden-shifting requirement to the effect that once the claimant has introduced facts from which it may be inferred that direct or indirect discrimination has occurred, the burden of proof must shift to the respondent to prove that there has been no breach of the equal treatment rule.[100] Article 6 indicates that the provisions of the Directive are minimum rather than maximum requirements, and introduces a 'non-regression clause' which prevents Member States from relying on the Directive to justify reducing existing protection against discrimination. Finally, effective, proportionate, and dissuasive remedies must be made available to victims of discrimination, and Article 9 requires the establishment of effective measures to prevent retaliation or the victimization of complainants.[101]

(B) THE FRAMEWORK EMPLOYMENT DIRECTIVE 2000/78

The Employment Equality Directive, which followed shortly after the adoption of the Race Directive, is both broader and narrower than the latter. It is broader in that it covers five grounds of discrimination, but it is narrower in that it is confined, like the earlier sex equality directives, to labour-market discrimination. Directive 2000/78, which is labelled as a 'framework' directive, prohibits discrimination on the basis of sexual orientation, religious belief, age, and disability in the area of employment.[102]

Article 3(1) defines the scope of the Directive and, like the Race Directive, it applies generally to persons within the EU and to the public and private sectors alike, but with the same limitation as regards nationality-based discrimination.[103] The material scope of the legislation is limited to employment-related matters. It covers (i) conditions for access to employment including selection criteria, recruitment, and promotion; (ii) access to vocational guidance, training, and retraining; (iii) employment and working conditions, including dismissals and pay; and (iv) membership of, and involvement in, workers' or employers' organizations.

There are a number of specific exclusions from the Directive's coverage: Member States may exclude the application of the provisions on age and disability discrimination to employment in the armed

[101] For a pending challenge to Poland for inadequate implementation of Art 9 the Dir see Case C–341/10 *Commission v Poland* [2010] OJ C260/6.

[102] Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation [2000] OJ L303/16.

[103] Art 3(2) provides that the Dir does not cover differences of treatment based on nationality and is without prejudice to provisions and conditions relating to the entry into and residence of third-country nationals and stateless persons in the territory of Member States, and to any treatment which arises from the legal status of the third-country nationals and stateless persons concerned.

forces;[104] and the Directive does not apply to state schemes such as state social security or social protection schemes.[105] Recital 14 of the preamble also specifies that 'this Directive shall be without prejudice to national provisions laying down retirement ages'. The Court ruled in *Palacios de la Villa* that this recital would not preclude the application of the Directive to national measures affecting the conditions governing termination of employment (in this case a compulsory retirement age), and that it merely confirmed the competence of Member States to establish an applicable retirement age in the first place.[106] Recital 22 also states that 'this Directive shall be without prejudice to national laws on marital status and the benefits dependent thereon'. This provision was the subject of litigation in the *Maruko* case, where the ECJ ruled that once a Member State had recognized registered life partnerships and marriages to be comparable as far as survivors benefits were concerned, the exclusion of life partners from a scheme of survivor's benefits under an occupational pension scheme amounted to impermissible discrimination on the basis of sexual orientation under the Directive.[107]

As with the Race Directive, Article 2 of the Framework Employment Directive prohibits direct and indirect discrimination, harassment, and instruction to discriminate, and Article 11 requires the introduction of measures to protect against the victimization of complainants. Indirect discrimination, as under the Race Directive, can be 'objectively justified' under Article 2(2)(b). Direct discrimination can be justified only on the basis of one of the exceptions contained in the Directive, but there are a greater number of possible exceptions or justifications for indirect discrimination, some of which vary according to the specific ground of discrimination, in the Framework Employment Directive than in the Race Directive. Article 2(5) provides a generally applicable justification for differential treatment that is necessary for reasons related to public security, public order, prevention of crime, public health, or protection of the rights of others, provided that the measures serve a legitimate objective and are proportionate. Article 4 provides for a 'genuine and determining occupational requirement' exception similar to that contained in the Race Directive. Article 7 contains a positive action provision permitting the adoption by Member States of preferential measures that 'prevent or compensate for disadvantages' linked to the grounds covered by the Directive, and which seek to ensure full equality in practice.

In addition to these general exceptions or justifications, there are a number of more specific exceptions to the prohibition of *direct* discrimination on the grounds of disability, age, and religion. Article 6 permits Member States to adopt differential treatment on the basis of age, where this is objectively and reasonably justified by a legitimate national aim, including legitimate employment policy, labour market, and vocational training objectives, and is proportionate. Article 6 sets out some examples of legitimate national measures of this kind. Article 4(2), in the context of the general occupational requirement exception, contains a more specific version of this exception permitting 'churches and other public or private organizations' the ethos of which is based on religion or belief to stipulate (subject to the general principles of EU law and of domestic constitutional law) that a person's religion or belief constitutes an occupational requirement, and to insist that those working for them must act 'with loyalty to the organization's ethos'. There are also specific provisions relating to the remedying of religious discrimination in Northern Ireland.

Article 5 of the Directive contains an important provision on the obligation to provide 'reasonable accommodation' for people with disabilities.[108] The existence of this obligation is recognized

[104] Art 3(4).

[105] Art 3(3). The ECJ in Case C–267/06 *Maruko* [2008] ECR I–1757 ruled that this exclusion does not extend to private occupational pension schemes which, by analogy with the *Barber* case law discussed above (nn 37–50 and text), constitute pay rather than state social security.

[106] Case C–411/05 *Palacios de la Villa* [2007] ECR I–8531, [44]–[45].

[107] Case C–267/06 *Maruko* (n 105); Case C–147/08 *Römer v Freie und Hansestadt Hamburg*, 10 May 2011 .

[108] L Waddington, 'When is it Reasonable for Europeans to be Confused? Understanding when a Disability Accommodation is "Reasonable" from a Comparative Perspective' (2008) 29 Comparative Labor Law and Policy Journal 317.

also in Article 2(b)(ii), which indicates that measures taken to comply with legislation implementing the obligation of reasonable accommodation will not be considered to be indirectly discriminatory. Article 5 obliges employers to take appropriate measures to enable a person with a disability to have access to, participate in, or advance in employment or training, unless such measures would impose a disproportionate burden on the employer. The question whether the burden is disproportionate is to be assessed in the context of the state's disability policy.

The remaining procedural and institutional provisions of the Framework Equality Directive are similar to those in the Race Directive. The Directive sets minimum rather than maximum standards, and there is a non-regression clause. There is a burden-shifting provision (which is not to apply in criminal procedures) where the claimant has produced facts from which discrimination may be presumed. Sanctions applicable to infringements must be effective, proportionate, and dissuasive. Member States must promote compliance in other ways too, including through information-dissemination and monitoring, and provision must be made for social dialogue and dialogue with NGOs. States shall ensure that associations or organizations with a legitimate interest, including these equality bodies, have the right to engage in judicial or administrative procedures on behalf or in support of the complainant. Notably however, there is no requirement, as there is under the Race Directive, on Member States to establish or designate an equality body or institution charged with promoting equal treatment in these fields.

The ECJ has interpreted the scope of the Framework Employment Directive so as to prohibit discrimination by association, at least in the field of disability. The case of *Coleman* concerned the alleged constructive dismissal of an employee who was not herself disabled, but who had apparently been subjected to adverse treatment by her former employer in connection with the disability of her child.[109] The Court ruled that the prohibition of direct discrimination in Directive 2000/78 is not limited to people who are themselves disabled, but applies also to an employee who is treated less favourably than another employee if the adverse treatment is related to the disability of her child, whose care is provided primarily by that employee. While the case concerned only discrimination on grounds of disability, the ruling of the Court could equally apply to discrimination by association with the other grounds covered by the Directive:

Case C–303/06 **Coleman v Attridge Law**
[2008] ECR I–5603

51 Where it is established that an employee in a situation such as that in the present case suffers direct discrimination on grounds of disability, an interpretation of Directive 2000/78 limiting its application only to people who are themselves disabled is liable to deprive that directive of an important element of its effectiveness and to reduce the protection which it is intended to guarantee.

More generally, the Framework Employment Directive, unlike the Race Directive, has already produced a substantial body of ECJ case law, most notably concerning the possibility of direct age-based discrimination on grounds of legitimate employment policy or labour market objectives provided for by national law. This case law is discussed below. Significantly fewer cases have come before the ECJ on the other grounds of discrimination such as disability,[110] religion,[111] and sexual orientation.[112]

[109] Case C–303/06 *Coleman* [2008] ECR I–5603.

[110] See however Case C–13/05 *Chacón Navas* [2006] ECR I–6467, distinguishing disability from sickness; Case C–303/06 *Coleman* (n 109).

[111] To date no cases have been decided by the ECJ under the Equality Dirs on the subject of discrimination on the basis of religion or belief.

[112] See, eg, Case C–267/06 *Maruko* (n 105); Case F–86/09 *W v Commission*, 14 Oct 2010, decided since the adoption of the Framework Employment Dir.

(c) THE PROPOSED NEW ARTICLE 19 DIRECTIVE ON EQUAL TREATMENT

We have seen that the two anti-discrimination directives adopted in 2000 differ in their material scope. While Directive 2000/78 covers a larger number of grounds (disability, age, religion or belief, and sexual orientation) the Race Directive is not confined to employment but prohibits discrimination across a wider range of areas, including education, social protection, housing, and the provision of goods and services. This 'hierarchy of equality' as between the various EU discrimination directives, and indeed as between the grounds within the Framework Equality Directive, with race and gender equality enjoying (to different degrees) a stronger level of protection than other grounds, has long been criticized.[113]

In 2008 the Commission responded to this criticism by proposing legislation under Article 19(1) aiming to 'equalize' standards of protection against discrimination across all of the prohibited grounds in Article 19, namely age, disability, sexual orientation, and religion or belief. except for race and sex, given the strong existing legislation in these two areas.[114] Given the objective of achieving greater consistency between the different legal instruments, the proposal adopts most of the same terms, definitions, principles, substantive provisions, and exceptions as in the existing Race Directive 2000/78 and the consolidating Gender Equality Directive 2006/54, including positive action, reasonable accommodation, and remedial provisions. Its material scope is similar (though not quite identical) to that of the Race Directive, covering social protection, health, education, and access to and supply of goods and services provided in the context of a commercial activity. The proposed Directive declares itself to be 'without prejudice' to national laws on marital or family status and reproductive rights, to 'the national content of teaching and the organization of their education system' as well as to the secular nature of the state and its institutions, education, or the status and activities of organizations based on religion or belief.

The Commission based the proposal on Article 19 TFEU, which, as we have seen above, requires the assent of the European Parliament and unanimity in the Council. For now, although the Commission's draft has been approved by the Parliament,[115] there seems little prospect of reaching unanimity on it in the Council of Ministers, and the German Government in particular has raised persistent objections about the cost to business of the proposed new law.

6 THE GENDER DIRECTIVES

As we have seen EU anti-discrimination law began with a provision on equal pay for men and women for work of equal value. The specific role played by gender discrimination in the EU legislative framework on equal treatment appears not only from the Treaties, but also from the vast body of secondary legislation covering discrimination on grounds of sex. From 1976 on the EU adopted numerous directives tackling specific aspects of gender discrimination. A first Directive (75/117) on equal pay was adopted in 1975, followed by secondary legislation on equal treatment relating to access to employment, vocational training, promotion, and working conditions (76/207), the implementation of the

principle of equal treatment in matters of social security (79/7), and in relation to occupational security schemes (86/378/EEC), as well as the application of equal treatment between men and women in a self-employed capacity (86/613). In the decades which followed, a series of further directives was enacted on the protection of pregnancy and maternity (92/85), parental leave (96/34), the burden of proof (97/80), and equality in access to and supply of goods and services (2004/113). Ultimately, not least as a result of ECJ case law, many of these earlier directives were significantly amended, repealed, and consolidated.

(A) THE 'RECAST' EQUAL TREATMENT DIRECTIVE 2006/54

(i) *General*

As part of the EU's general programme of legislative consolidation, and with a view to tidying up and recasting the existing legislation on equal pay, equal treatment, occupational social security, and the burden of proof, Directive 2006/54 was adopted.[116] Apart from systematizing and tidying up the existing legislation, and incorporating relevant rulings of the ECJ, the Directive does not introduce any substantially new amendments. Matters of equal treatment in state social security are dealt with separately by Directive 79/7, and matters of equal treatment in access to and supply of goods and services by Directive 2004/113. Directive 2006/54 left unamended the Pregnancy Directive 92/85, but the Parental Leave Directive has now been replaced by Directive 2010/18, and Directive 86/613 on equal treatment for self-employed persons has been replaced by Directive 2010/41.

While the partial and relatively unambitious nature of the 2006 consolidation was criticized, it appears that the reason for the selective approach was so that the recast Directive could be adopted on the basis of Article 157, without the need to use a legal basis such as Article 153, which is more onerous in both procedural and substantive terms.[117]

Directive 2006/54 therefore now governs equal treatment in access to employment and promotion, vocational training, working conditions including pay, and occupational social security. Title I sets out the purpose and scope of the Directive, defines its key terms, and makes reference to the positive action provision in Article 157(4). Title II contains the main substantive sections. Chapter 1 of Title II deals with pay, Chapter 2 with occupational social security, and Chapter 3 with access to employment and promotion, vocational training, and working conditions. Title III contains the 'horizontal provisions', with a chapter on remedies and enforcement, including adequate compensation, recourse to judicial and conciliation procedures, and the burden of proof; a chapter on the promotion of equal treatment through dialogue, including provision for the establishment of national equality bodies, the promotion of dialogue and adoption of agreements by the social partners, the imposition of positive obligations on the Member States, and dialogue with NGOs; and a final chapter dealing broadly with Member States' compliance, including the requirement of adoption of appropriate penalties, prevention of discrimination, protection against victimization, gender mainstreaming, and dissemination of information. Article 27 of the Directive indicates that it sets minimum conditions only, so that states may adopt more extensive protection, and it contains a qualified non-regression clause.

The core provision of the Directive which applies across the three fields of pay, occupational social security, and employment conditions more generally is the prohibition on direct or indirect discrimination on grounds of sex in the public and private sectors.[118] Discrimination, according to the Directive,

[116] Directive 2006/54/EC of the European Parliament and of the Council of 5 July 2006 on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation (recast) [2006] OJ L204/23.

[117] Burrows and Robison (n 89).

[118] Art 14.

includes harassment and sexual harassment,[119] instruction to discriminate, and any less favourable treatment of a woman related to pregnancy or maternity leave. All of the relevant terms, including direct and indirect discrimination and harassment, are defined in Article 2. The reference to discrimination on the basis of 'marital and family status' has however been omitted from the Directive.[120]

In terms of tidying up, some of the contributions made by the consolidating Directive were adoption of a definition of indirect discrimination which is consistent with other EU equality legislation, and the application of the horizontal general provisions on remedies, equality bodies, compliance, information, dialogue, etc to all three fields. These changes bring the EU's sex equality legislation into line with the other two main EU anti-discrimination Directives, the Race Directive and the Framework Employment Equality Directive, discussed above.[121]

(ii) *Equal Pay*

Equal pay was originally governed by Directive 75/117, which was replaced virtually without amendment, other than updating it in the light of relevant case law, by Directive 2006/54.[122] The basic thrust is to require the elimination of sex discrimination in pay in cases involving the same work or work to which equal value is attributed, and to require job-classification schemes to be similarly free from discrimination.[123] Member States are required to abolish any such discrimination in legislative or administrative provisions and to ensure that any breaches of the equal pay principle in collective agreements or contracts are rendered void or amended. There is, as we have seen, a chapter in the consolidating legislation on 'promotion of equal treatment', *inter alia* through dialogue with social partners and NGOs and through the establishment of equality bodies, which replaces the previous and more cursory positive obligation to take appropriate measures to ensure that the equal pay principle is observed.[124] The consolidating Directive also contains more extensive provisions than the earlier Directive on remedies, enforcement, and compliance.[125] These provisions incorporate various aspects of the ECJ's case law, such as the rules that there can be no prior ceiling on damages,[126] that the burden of proof shifts to the defendant where the plaintiff can establish facts which raise a presumption of direct or indirect discrimination,[127] and that penalties must be 'effective, proportionate and dissuasive'.

Although the original Equal Pay Directive fleshed out the provisions of Article 157, the right to equal pay has always been said by the Court to stem directly from the Treaty, so that the terms of the legislation are to be given the same meaning as those in the Treaty.[128] Further, the Treaty could be directly invoked in 'horizontal' cases against an employer, thus avoiding problems concerning the

[119] These also include 'any less favourable treatment based on a person's rejection of or submission to such conduct'.

horizontal effect of the Directive. The Equal Pay Directive was intended to address the problem of how to apply the equal pay principle when the work performed by two employees is quite different, but is alleged to be of equal value, and its aim was to place the onus of putting the principle into practice on the states.

For example, in a case brought against the UK for failure to ensure an adequate job-classification system, the ECJ ruled that where there was disagreement on the application of the equal pay principle, a worker had to have at least a right of access to an appropriate authority for a binding ruling on whether or not his or her work has the same value as other work.[129]

In *Brunnhofer*, the Court indicated that the personal qualities of the employee and the manner in which the work was performed could not simply be conflated and used retrospectively by an employer to argue that the employee was not carrying out similar work or work of equal value to that of other employees, for the purposes of explaining a pay differential which existed from the outset.[130] Individual work capacity could however be taken into account in other ways, for example, in relation to an employee's career development as compared with that of a more effective colleague, and therefore in *subsequent* postings and pay. The ECJ has been criticized, however, for stating that professional training could be a valid criterion for ascertaining whether or not employees were engaged in the 'same work'.[131] While a person's higher qualifications or training may provide grounds for *justifying* a higher level of pay for work done, it does not render such work qualitatively different from the same task carried out by other employees with lower qualifications.[132]

(iii) *Employment Conditions*

Equal treatment between men and women in the field of employment, including access to employment and promotion, vocational training, and working conditions, was originally covered by Directive 76/207,[133] which was repealed and replaced in 2002 and again by the recast Directive 2006/54.[134]

The general rule, as we have seen, is the prohibition of direct and indirect discrimination on grounds of sex. The original Equal Treatment Directive contained three 'exceptions' to this prohibition: an occupational qualification provision, a 'pregnancy and maternity' provision, and a positive action provision. Under the recast Directive, only the occupational qualification provision in Article 14(2) could still be said to be phrased as an exception, while the other two provisions are affirmatively expressed.

The positive action provision appears in Article 3, covering all matters which fall within the scope of the Directive, and declares that 'Member States may maintain or adopt measures within the meaning of Article 157(4) of the Treaty with a view to ensuring full equality in practice between men and women in working life'. The earlier provision on the protection of women in the event of pregnancy or maternity was replaced by Article 15 of Directive 2006/54, which provides that a woman on maternity leave is to be entitled to return to equivalent employment on no less favourable terms and to benefit from any improvement in working conditions to which she would have been entitled during her absence. Article 16 provides that the Directive is 'without prejudice to the right of Member States to recognise distinct rights to paternity and/or adoption leave'. We shall see below that the 1992 Pregnancy Directive supplies further detail by imposing a requirement to provide a minimum

of employment protection for women who are pregnant, breastfeeding, or who have recently given birth.[135]

In *Hofmann*, it was argued that where maternity leave provisions went beyond what was necessary to protect women before and after childbirth, eg by giving a longer period of leave in order to care for a child, they would breach the Directive unless the leave period was made available to men and women alike.[136] The case concerned a man who wished to take leave to care for his newborn child, but who was not eligible for the longer six-month period of paid maternity leave which German law provided for mothers. The ECJ rejected the argument, however, ruling that the provision of a period of extended maternity leave was intended to protect women in connection with the effects of pregnancy and motherhood, and that such leave could legitimately be reserved to the mother 'in view of the fact that it is only the mother who may find herself subject to undesirable pressures to return to work prematurely'.[137] The Court also said that the Equal Treatment Directive was not intended 'to alter the division of responsibility between parents', and that Member States had a measure of discretion as to the social measures they adopt to protect women in the event of pregnancy and maternity.

The dilemma of such cases is that the Court's ruling could be said to support the continuation by the Member States of the traditional division of responsibility which entrenches the role of the mother as primary carer, and which, by protecting 'the special relationship between a woman and her child', deprives the father of the opportunity to develop such a relationship in the period after birth, by refusing to give the parents a choice of who shall take leave. On the other hand, had the Court ruled that the Equal Treatment Directive prohibited states from providing special protection for women other than when this was strictly necessary to protect their biological condition during and after pregnancy and childbirth, the states would have been free to 'level down' as well as to 'level up', by abolishing the more extended maternity leave for women rather than providing it for men.

Reinforcement of the view that only the mother should develop a special relationship with a child after birth was also to be found in *Commission v Italy*, concerning national laws giving compulsory maternity leave to the mother of an adopted child under 6 years of age, but not to the father.[138] The ECJ accepted Italy's 'legitimate concern to assimilate as far as possible the conditions of entry of the child into the adoptive family to those of the arrival of a newborn child in the family during the very delicate initial period',[139] without considering whether it might be equally delicate for an adoptive father as for an adoptive mother, especially when the child is not newborn.

More recently in *Roca Álvarez*, the Court appeared to narrow its rulings in the *Hofmann* and *Italy* cases, declaring that the Equal Treatment Directive precludes a national measure which provides that female employees are entitled to take leave during the first nine months following the child's birth, while fathers are not entitled to the same leave unless the child's mother is also an employed person.[140] The Court attempted to distinguish *Roca Álvarez* from *Hofmann* by focusing on the purpose of the national legislation in question. Noting that the Spanish law in *Roca Álvarez* had detached the period of leave from the biological fact of breastfeeding, since the leave could be taken by the mother or the father without distinction, and was accorded to workers in their capacity as parents, rather than to ensure the protection of the biological condition of women following pregnancy, the ECJ took the view that the imposition of an additional requirement on fathers in order to qualify for the nine-month period of leave would not be permissible under the Directive.

This distinction between the earlier cases and *Roca Álvarez* is unconvincing, since it could equally be said that the period of additional maternity leave after the expiry of the protective period in

Hofmann, and the maternity leave for an adopted child in *Commission v Italy*, had been detached from the biological fact of childbirth and breastfeeding. The ruling in *Roca Álvarez* thus seems to represent a certain change on the part of the Court as regards the role of law in perpetuating traditional gender roles within the family:

Case C–104/09 **Roca Álvarez**
30 September 2010

36 However, to hold, as the Spanish Government submits, that only a mother whose status is that of an employed person is the holder of the right to qualify for the leave at issue in the main proceedings, whereas a father with the same status can only enjoy this right but not be the holder of it, is liable to perpetuate a traditional distribution of the roles of men and women by keeping men in a role subsidiary to that of women in relation to the exercise of their parental duties (see, to that effect, *Lommers*, paragraph 41).

While it was clear that the original Equal Treatment Directive permitted Member States to maintain protective provisions favouring women in relation to pregnancy and maternity, it was not clear for some years whether it also *prohibited* measures which discriminated against women on grounds of pregnancy. In a steady line of case law which followed, including *Dekker*[141] and *Hertz*,[142] the ECJ ruled that discrimination on grounds of pregnancy constitutes sex discrimination under Directive 76/207, and this case law remains equally applicable to the recast Equal Treatment Directive 2006.

Subsequent cases addressed related questions concerning refusal of employment due to an illness arising from pregnancy, or because of a legislative prohibition on women performing certain work during pregnancy, or because of unavailability for essential work while absent during pregnancy. In *Hertz*, where a woman was dismissed on account of absence owing to sickness originating in pregnancy, the ECJ rejected the argument that the protection provided by the Directive against dismissal owing to illness caused by pregnancy was unlimited in time.[143] An illness manifesting itself after the maternity leave and not attributable to pregnancy or confinement is covered by the general rules applicable in the event of illness.[144]

The case of *Webb* concerned the dismissal of a woman who discovered, shortly after being employed on a contract of indefinite duration to replace another employee on maternity leave, that she herself was pregnant.[145] In addressing the question whether this would breach the Equal Treatment Directive, the ECJ made extensive reference to the protections introduced by the Pregnancy Directive 92/85[146] (which at the time was not yet in effect). The case of women employed on fixed-term contracts who are dismissed owing to pregnancy arose in *Tele Danmark*. The Court ruled that both the Equal Treatment Directive and the Pregnancy Directive 92/85 prohibited the dismissal of a woman on grounds of pregnancy also in the case of a fixed-term contract.[147]

Moreover in *Busch*, the ECJ ruled, relying on both the Equal Treatment and the Pregnancy Directives, that there was no obligation on an employee who chose to return to work before the end of her parental leave to inform her employer that she was pregnant, even though her aim in terminating her parental leave and coming back to work was to make herself eligible for maternity benefit which was at a higher level than the parental leave benefit she received.[148] The ECJ in *Paquay* ruled that a decision to dismiss on the grounds of pregnancy or the birth of a child violates the Equal Treatment Directive irrespective of the moment when the decision to dismiss was notified and even if this took place after the expiry of the period of protection provided for in the Pregnancy Directive.[149]

The protection of the Equal Treatment Directive extends to other situations that are not covered by the Pregnancy Directive such as that in *Mayr*.[150] Here the ECJ ruled that the Equal Treatment Directive precludes dismissal of a female worker on sickness leave who is at an advanced stage of *in vitro* fertilization treatment, if the dismissal is essentially based on the fact that the women has undergone such treatment, and even if transfer of the fertilized ova into the women's uterus has not yet taken place, thus precluding the application of the Pregnancy Directive. Finally, in *Danosa*,[151] the Court held that the removal of a member of a company's Board of Directors on account of pregnancy constitutes direct discrimination on grounds of sex, even if the board member is not a 'pregnant worker' within the meaning of Directive 92/85.

We can see that in most of the cases, the ECJ has given an interpretation of the Equal Treatment Directive which corresponds with, and in some cases strengthens or supplements, the relevant provisions of the Pregnancy Directive, by providing essentially that dismissal for any pregnancy-related reason during the period of maternity leave is impermissible, and that the imposition of other disadvantages (such as refusal of consent to return from parental leave) on grounds of pregnancy is equally prohibited.

(iv) *Occupational Social Security*

Occupational social security is governed by Title II, Chapter 2, of the recast Equal Treatment Directive 2006/54. Occupational social security schemes are defined broadly as schemes (other than those covered by Directive 79/7), whether membership is optional or compulsory, the purpose of which is to provide workers or self-employed persons in an economic sector or undertaking with benefits intended to supplement or replace those provided by statutory social security schemes. Certain schemes are excluded by Article 8, such as individual contracts for self-employed workers, insurance contracts to which the employer is not a party, and individual options for additional benefits.

Article 6 sets out the personal scope of the Directive, covering the working population (including the self-employed) in terms very similar to those of Article 2 of Directive 79/7, except that, in addition to covering those whose work is interrupted by illness, accident, or involuntary unemployment, and to retired and disabled workers or those seeking employment, it also covers interruption by maternity, and those claiming under them. Article 7 sets out the material scope of the Directive, and again the risks covered are almost exactly the same: sickness, invalidity, old-age including early retirement, industrial accidents and occupational diseases, and unemployment. Article 7(1)(b) also provides that any other social benefits provided for in an occupational scheme, such as family or survivor's benefits, will fall within the scope of the Directive insofar as they constitute consideration for the worker by reason of the worker's employment. Article 5 sets out the principle of equal treatment in terms virtually identical to those of Article 4 of Directive 79/7, and Article 9 sets out a range of examples of

[151] Case C–232/09 *Danosa*, 11 Nov 2010.

provisions which contravene the principle of equal treatment by discriminating on the basis of sex, or marital or family status.

Article 10 provides for the implementation of the obligations of equal treatment in relation to occupational pension schemes as regards self-employed workers, and the three derogations provided for in Article 11 (concerning pensionable age, survivors' pensions, and actuarial calculations in defined-contribution schemes), which specify matters in relation to which Member States may defer the application of the principle of equal treatment, now apply only in relation to self-employed workers, since as far as employed workers are concerned it is clear since the *Barber* judgment that the equal pay principle applies.

One of the results of repealing the 1986 and 1996 Occupational Social Security Directives and incorporating their provisions into Directive 2006/54 is that this area is now governed by the general ('horizontal') provisions of the Directive, including the positive action provision in Article 3 and the extensive provisions on remedies, promotion of equal treatment, compliance, and dialogue in Title III.

(v) *The Distinction Between Conditions of Work, Pay, and Social Security*

As we have seen, Directive 2006/54[152] seeks to unify the legal principles governing equal pay, occupational social security, and equal treatment in other employment conditions. These three concepts are to be distinguished from state social security, which is governed by Directive 79/7. The Social Security Directive 79/7,[153] as we shall see below, allows Member States to maintain certain exceptions to the principle of equal treatment, and permits a more gradual and progressive move towards equality than the legislation on pay and conditions of employment.

The complex relationship between equal treatment in working conditions, pay, and state social security is evident in a series of cases beginning with *Burton*.[154] The ECJ ruled that the maintenance of different age conditions in access to voluntary redundancy was compatible with the Equal Treatment Directive, because the terms of the redundancy scheme had been tied by the employer to the national statutory retirement scheme. The national scheme, which maintained different pensionable ages for men and women, was covered by the exception in Social Security Directive 79/7, and the employer was permitted to arrange a redundancy scheme to correspond with this without breaching the Equal Treatment Directive.

Subsequently in *Roberts*, however, the complainant belonged to an occupational pension scheme providing for compulsory retirement with a pension at age 65 for men and 60 for women.[155] This time, the Court decided the case on the basis of the Equal Treatment Directive, thus apparently narrowing the scope of the exception in the Social Security Directive. The imposition of an age limit for compulsory redundancy was not about the terms on which an early pension was *granted* (ie not about social security), even if it involved the grant of a pension, but about the terms of *dismissal* (ie about equal treatment). Since the redundancy was classified by the ECJ as dismissal, rather than *voluntary* redundancy as in *Burton*, the receipt of a pension on redundancy was a condition of dismissal within the scope of the Equal Treatment Directive.[156]

[152] (N 116).

[153] Council Directive 79/7/EEC of 19 December 1978 on the progressive implementation of the principle of equal treatment for men and women in matters of social security, [1979] OJ L6/24.

[154] Case 19/81 *Burton v British Railways Board* [1982] ECR 555.

[155] Case 151/84 *Roberts v Tate & Lyle Industries* [1986] ECR 703; Case 262/84 *Beets-Proper v Van Lanschot Bankiers* [1986] ECR 773.

[156] See also Case C–207/04 *Vergani v Agenzia delle Entrate* [2005] ECR I–7453, concerning tax benefits on the taking of voluntary redundancy, which was held to violate the Equal Treatment Dir and was not saved by Dir 79/7.

The narrowing of the social security exception continued in *Marshall I*.[157] In this case, the Court was dealing, not with voluntary or compulsory *redundancy*, but with a compulsory *retirement* provision which mirrored the different statutory pensionable ages for men and women. The ECJ followed *Roberts* and treated the compulsory retirement as dismissal within the terms of the Equal Treatment Directive, rather than as a consequence of the different statutory pensionable ages falling within the exception in Directive 79/7. In *Hlozek*, the ECJ implicitly overruled *Burton* insofar as it stood as authority for the proposition that benefits paid after termination of the employment relationship, such as voluntary redundancy, do not constitute pay.[158]

The distinction between conditions of work under the Equal Treatment Directive and social security under Directive 79/7 arose also in *Jackson and Cresswell*, where the ECJ held that a scheme of benefits would not be excluded from the scope of the Equal Treatment Directive solely because it was formally part of a national social-security system.[159] However, the subject matter of any scheme falling within the Equal Treatment Directive must concern access to employment,[160] access to promotions, vocational training, or conditions of work. Thus an income-support scheme, the purpose of which was to supplement the income of those with inadequate means of subsistence, would not be brought within the scope of the Directive solely by virtue of the fact that the method for calculating eligibility could affect a single mother's ability to take up vocational training or employment.[161]

In *Meyers*, however, the ECJ ruled that family credit, which was an income-related benefit awarded under UK social security legislation, would fall within the scope of the Equal Treatment Directive.[162] This was because one of the conditions for its award was that the claimant should be engaged in remunerative work, and because its function was to encourage unemployed workers to accept low-paid work and to keep poorly paid workers in employment, thus concerning access to employment. Since the benefit was 'necessarily linked to a contract of employment' it did not matter that it was not a condition set out in the contract of employment, nor that entitlement to the benefit would not be affected by loss of employment or a salary increase for a certain period.[163]

In sum, the disparities between the EU legal regimes governing pay and conditions of work, on the one hand (now Directive 2006/54), and social security, on the other (Directive 79/7), and the fact that matters of social assistance are left to be regulated by the Member States, mean that the categorizations within EU sex-discrimination law are important, and have regularly given rise to complex litigation.

(B) THE SOCIAL SECURITY DIRECTIVE 79/7

Directive 79/7 was adopted on the basis of the residual powers clause of Article 352 TFEU (ex Article 308 EC) and its purpose was said to be the progressive implementation of the principle of equal treatment for men and women in the field of social security.[164] The term 'progressive implementation' is significant since, unlike with equal pay and now also equal treatment more generally, Directive 79/7 provided for significant exceptions to the equal-treatment principle, and allowed Member States a

considerably longer period of time to adapt their laws to its requirements than under the other equality legislation.

Article 2 establishes the personal scope of the Directive, setting out two broad categories of people to which it applies. First, it covers the 'working population', which is subdivided into three categories: (i) those who are employed or self-employed; (ii) those under (i) whose work is interrupted by illness, accident, or involuntary unemployment; and (iii) those who are seeking employment. Secondly, it covers employees and the self-employed who are retired or invalided out. Thus, in keeping with the Equal Pay and Equal Treatment Directives, Directive 79/7 covers only *employment-related* social security.

Directive 79/7 is strictly employment-related, in that it does not cover someone who has never worked. In *Achterberg-te Riele*, the Court also ruled that people who give up work for a reason other than one of the five listed in the Directive, for example to look after children, fall outside its scope. The benefits which are referred to in Article 3, such as old-age pensions and invalidity allowances, fall within the scope of the Directive only when they are claimed by someone who is within one of the categories of person in Article 2.[165]

These conditions were tightened further in *Johnson I,* where the Court ruled that in order for someone to be covered by the Directive not only must one of the risks listed in the Directive have materialized, but the person in question must have either given up employment or been obliged to give up seeking employment *at the time of materialization of the risk*.[166] This firmly underlines the employment-related focus of the Directive, by excluding someone who cannot *seek* employment on account of a disability or illness he or she has suffered.

Once the conditions of the Directive are satisfied by the person seeking a benefit, however, the right to rely on the Directive is not confined to individuals falling within its personal scope, since 'other persons may have a direct interest in ensuring that the principle of non-discrimination is respected as regards persons who are protected'.[167] Thus where the claimant's husband had suffered the effects of the discriminatory national legislation concerning his spouse, in that his pension would also be reduced, he could invoke the provisions of the Directive so long as his spouse came within its personal scope.[168]

Article 3, which sets out the material scope of the Directive, indicates that it does not cover all forms of employment-related social security. Rather, it covers those statutory schemes which provide protection against five specified risks, as well as social assistance which is intended to supplement or replace those statutory schemes. The five categories of risk are sickness, invalidity, old age, accidents at work and occupational diseases, and finally unemployment. Article 3(2) specifies that the Directive will not apply to provisions concerning survivor's benefits or family benefits, except family benefits due in respect of one of the five listed risks. Article 3(3) indicates that occupational social security is not covered.

Although the ECJ initially read Article 3 quite broadly, its scope was later narrowed. In *Drake* the Court found an invalid care allowance to be a benefit falling within the scope of the Directive because it was indirectly of benefit to the disabled person who would receive the care.[169] Later cases however require the link between one of the risks listed and the benefit paid to be quite strong if the benefit is to fall within the scope of the Directive. In *Smithson* the Court considered that a housing benefit was outside the scope of the Directive even though the criteria for calculating the benefit included two of the listed risks, namely age and invalidity. This was because the link between these criteria and the purpose of the benefit, which was to provide for those whose income was inadequate to cover housing

costs, was insufficiently strong to conclude that the housing benefit was intended to protect against the risks of old age or invalidity. The case underlines a distinction between social assistance, including such housing, and social security, and adopts a strict approach to the definition of the latter for the purposes of Directive 79/7.

In *Jackson and Cresswell,* too, the ECJ ruled that the benefits deriving from a supplementary allowance or income support were not 'directly and effectively' linked to protection against the risk of unemployment.[170] The Court pointed out that the national income-support scheme exempted the applicants from the obligation to be available for work, and the amount of the benefit was set without any consideration of the risks listed in Article 3(1) of the Directive.[171] The Court emphasized the need which the scheme was 'designed' to meet, rather than its 'effect' in meeting one of the risks listed in the Directive. Such an intention-oriented approach, however, risks encouraging Member States to structure their social security and assistance schemes so as to avoid the application of the equal-treatment principle to many benefits which provide protection against one or more of the risks set out in the Directive.[172]

In *Hoever and Zachow*, a child-raising allowance intended to secure the maintenance of the family while children were being raised was held to fall outside the material scope of the Directive.[173] Although one effect of the benefit was to help keep people in employment, the ECJ focused on the intended aim, and ruled that it did not provide direct and effective protection against one of the risks listed in the Directive, and noted that Article 3(2) largely excludes family benefits from its scope. However, although certain benefits, such as survivor's benefits, may be excluded from the Directive's scope, if a benefit such as invalidity benefit which *did* fall within its scope were to be withdrawn on one becoming entitled to a survivor's benefit, this situation would be governed by the Directive.[174]

In *Richardson*, the ECJ ruled that UK national health regulations, which exempted those who qualify for an old-age pension from prescription charges, came within the scope of Directive 79/7, since they were part of a statutory scheme affording direct and effective protection against the risk of sickness, even though they did not strictly form part of national social security rules.[175] Similarly in *Taylor*, a winter-fuel payment was held to be directly linked to protection against the risk of old age.[176] These cases contrast with the ruling in *Atkins*, where the ECJ found that a system of concessionary fares on public transport for those who had reached pensionable age fell outside the material scope of the Directive.[177] This was because the purpose or aim of the benefit was to facilitate access to public transport for certain classes of person needing such transport who were less well off financially and, as in *Smithson*, old age and invalidity were merely two of the criteria which could be applied to define the classes of beneficiaries for the concessionary scheme. The ECJ rejected the Commission's argument that Directive 79/7 could extend to measures of 'social protection' of this kind, going beyond the scope of social security proper, so long as they were granted to persons affected by one of the risks listed in the Directive.

The basic principle of equal treatment set out in Article 4(1) provides that there is to be no direct or indirect discrimination on ground of sex, by reference in particular to marital or family status.

[176] Case C–382/98 *R v Secretary of State for Social Security, ex p Taylor* [1999] ECR I–8955.

[177] Case C–228/94 *Atkins v Wrekin District Council and Department of Transport* [1996] ECR I–3633.

Provisions concerning the protection of women on grounds of maternity are specifically exempted.[178] The Member States are required, as in the other equality directives, to take the necessary measures to ensure that any provisions in breach of the equal treatment principle are abolished, and provide an adequate remedy for those aggrieved.[179]

The permissible exceptions to the scope of the Directive are set out in Article 7(1). Five specific matters are listed which the Member States may choose to exclude from the application of the Directive. The first, which was mentioned above in relation to the cases of *Marshall* and *Roberts* on the Equal Treatment Directive, relates to the 'determination of pensionable age for the purposes of granting old-age and retirement pensions and the possible consequences thereof for other benefits'.[180] This has been the subject of much litigation. The second exception concerns advantages in respect of old-age pension schemes for persons who have brought up children and the acquisition of benefit entitlements following periods of interruption of employment due to the bringing up of children. The third concerns the granting of old-age or invalidity benefit entitlements 'by virtue of the derived entitlements of a wife', the fourth the granting of increases in long-term invalidity, old-age, accidents-at-work, and occupational-disease benefits for a dependent wife, and the fifth the consequences of the exercise of a right of option not to acquire rights or incur obligations under a statutory scheme.[181]

However, the justification for maintaining any such exceptions must be regularly reviewed. Article 7(2) requires Member States to examine periodically any areas they have excluded, to see whether the justification for exclusion has altered in the light of social developments. Member States must communicate to the Commission the provisions adopted pursuant to Article 7(2) and inform it of their reasons for maintaining existing provisions under Article 7(1), as well as the possibilities for future review of such derogations.

The direct effect of the equal treatment principle in Article 4(1) was confirmed in *FNV*.[182] The prohibition in Article 4(1) was held to be sufficiently precise to be relied upon in a national court, and the exceptions in Article 7 did not affect the unconditionality of this prohibition, but merely excluded certainly clearly defined areas from the scope of the equal treatment principle.[183] And in *Borrie Clark*, the ECJ ruled that it was contrary to Article 4(1) for a Member State, by means of legislation passed after the coming into effect of the Directive, to extend the discriminatory effects of an old benefit to the criteria for eligibility for a new benefit.[184]

(c) THE PREGNANCY DIRECTIVE 92/85

In a move away from the treatment of pregnancy as an issue of sex equality, Directive 92/85 was expressly based at the time on Article 138 EC (now Article 153 TFEU) concerning health and safety at work, under which legislation could be adopted by qualified majority.[185] The Directive was adopted after considerable negotiation and compromise, which included, at the insistence of the UK, the setting of the minimum level of pay for workers on maternity leave at the level of sick pay, despite the arguments against drawing parallels between sickness and pregnancy.

[185] Council Directive 92/85/EEC of 19 October 1992 on the introduction of measures to encourage improvements in the safety and health at work of pregnant workers and workers who have recently given birth or are breastfeeding [1992] OJ L348/1. For a critical analysis of the Dir see V Cromack, 'The EC Pregnancy Directive: Principle or Pragmatism?' [1993] JSWFL 261.

The Directive introduced a requirement of minimum protection by the Member States for three categories of female workers: pregnant workers, workers who have recently given birth, and workers who are breastfeeding. The Directive is not a 'maximum harmonization' measure, but sets a common floor for Member States, including a non-regression clause which states that the Directive cannot be used to justify any reduction in higher levels of protection already provided in Member States.

The Directive provides that the Commission will draw up guidelines on substances and processes which are considered hazardous or stressful to those three categories of workers. It requires employers to assess the extent to which such women are exposed to specified risks and, under Article 5, to take appropriate action such as adjusting their working hours or conditions, moving them to another job, or granting leave. Article 7 provides that such women cannot be obliged to perform night-work for a period to be set by national law, and the option of day-work or extended maternity leave must be possible. Article 6 provides that pregnant or breastfeeding workers cannot be required to carry out duties involving the risk of exposure to specified substances, and Article 9 stipulates that pregnant workers must be entitled, where necessary, to time off work without loss of pay to attend ante-natal examinations.

The core provision on maternity leave is contained in Article 8, which specifies that the three categories of workers shall be given a minimum of fourteen continuous weeks' maternity leave before and/or after confinement, including at least two weeks of compulsory maternity leave. This is bolstered by Article 10, which requires Member States to prohibit the dismissal of such workers during the period of maternity leave, other than in exceptional cases unconnected with pregnancy.[186] The Pregnancy Directive however does not cover the *Dekker* situation, the refusal to employ a woman on grounds of pregnancy, and in such a situation the prohibition of discrimination under the Equal Treatment Directive is crucial.[187] In *Boyle*, the ECJ ruled that it was not contrary to Article 8 of the Pregnancy Directive for an employer to specify when the obligatory fourteen-week period of maternity leave should commence, even if the employee was on sick leave at the time of giving birth.[188] In 2010 the Council rejected a legislative proposal by the Commission to extend the period of paid maternity leave from fourteen to eighteen weeks as being excessively costly and raising subsidiarity concerns.[189]

Article 12 covers the requirement of access to a judicial remedy. Under Article 11, the right to maintenance of payment and other employment rights must be protected in the case of those workers who are on leave in the circumstances specified in Articles 5, 6, and 7. Significantly, the same is not required in the case of workers who are on maternity leave as provided in Article 8.[190] Instead, Article 11 specifies that they must be entitled to an 'adequate allowance' of not less than the amount of statutory sick pay.[191] It should be noted that the 'special concept of pay' under the Pregnancy Directive

[186] For an interpretation of the requirement of Member State consent in exceptional cases under Art 10(1) see Case C–438/99 *Melgar* (n 147).

[187] For a critique see Cromack (n 185).

[188] Case C–411/96 *Boyle* (n 30). The employer could not, however, make the right to take sick leave during the period of maternity leave conditional on the employee first agreeing to return to work and terminate maternity leave, except in the case where the period of maternity leave in question was an additional period granted by the employer in excess of that required by statute.

[189] COM(2008)637. The European Parliament had proposed a further extension from 18 to 20 weeks.

[190] In Case C–342/93 *Gillespie* (n 30), on facts which arose before the Dir was applicable, the ECJ ruled that the Treaty did not require a woman on maternity leave to continue to receive full pay, although the amount payable could not be so low as to undermine the purpose of maternity leave in protecting women before and after birth. See also Case C–66/96 *Handels- og Kontorfunktionærernes Forbund i Danmark, acting on behalf of Berit Høj Pedersen v Fællesforeningen for Danmarks Brugsforeninge* [1998] ECR I–7327.

[191] See, however, Case C–194/08 *Gassmayr*, 1 July 2010, in which the Court held that even though pregnant workers during maternity leave are entitled to pay which is equivalent to average earnings received during a reference period prior to the beginning of the leave, the employer was not required to include an on-call duty allowance in the calculation of average pay. See also Case C–471/08 *Parviainen*, 1 July 2010, where the ECJ ruled that a pregnant worker who

is not the same as the concept of pay for the purposes of Article 157 TFEU,[192] which has given rise to some complexity. The fact that the opportunity was not taken, when the recast Directive 2006/54 was adopted, to align the principles governing pay under Article 157 and under the Pregnancy Directive has been criticized.[193]

Eligibility for the allowance under the Pregnancy Directive can be subjected by national legislation to conditions, other than a condition which requires previous employment of more than twelve months prior to confinement. In *Boyle*, the ECJ ruled that a contractual term under which a higher level of pay than the statutory maternity payment was made conditional on the worker undertaking to return to work after the birth for at least one month was compatible with this provision and also with Article 157 TFEU.[194]

In other words, the Pregnancy Directive guarantees only a minimum level of maternity pay, and does not provide a legal guarantee of any higher amount that the employer may choose to pay. Similarly in the case of the period of maternity leave granted: the employer is only required under Article 8 to grant fourteen weeks' leave, and if supplementary leave is also granted, there is nothing in the Pregnancy Directive or the Equal Treatment Directive to prevent the employer from limiting the entitlement to accrual of annual leave to the period of fourteen weeks. However, accrual of annual leave and accrual of occupation pension rights are firmly protected during the fourteen-week period, as basic rights of the employment contract,[195] by Article 11(2)(a).[196]

In a further series of cases we see how the 2006 Equal Treatment Directive and other EU equality legislation has been interpreted so as to supplement or complement the Pregnancy Directive in protecting women against suffering adverse consequences as a result of pregnancy and maternity leave. In *Woolwich*, the ECJ referred to its ruling in *Gillespie*[197] that a woman on maternity leave could not usefully rely on Article 157 TFEU to argue for the right to full pay since she was in a different and specially protected legal position, but stated that where a woman is still linked to her employer by a contract of employment or by an employment relationship during maternity leave she is, like any other worker, entitled under Article 157 to benefit from any pay rise awarded between the beginning of the period covered by reference pay and the end of maternity leave.[198] This was in part because, even though maternity pay is not the same as pay for the purposes of Article 157, it is nevertheless equivalent to a weekly payment calculated on the basis of the average pay received by the worker at the time when she was actually working. The thrust of much of this case law is also now reflected in Article 14 of the recast Directive 2006/54, which protects the rights of women returning from maternity leave.

The case of *McKenna* raised the additional complication of a woman who was absent on pregnancy-related sick leave after the period of her maternity, and who sought to challenge the lower level of sick-pay (which was equivalent to that provided for non-pregnancy related illness) she received during this

has been temporarily transferred to another job on account of pregnancy is not entitled to a supplementary allowance based on specific functions she no longer performs after the transfer.

[192] In Case C–333/97 *Lewen* (n 24) it was held that while a voluntary Christmas bonus given to employees constituted pay within Art 157 TFEU it did not fall within the special concept of pay under Art 11(2)(b) of the Pregnancy Dir in relation to maternity leave.

[198] Case C–147/02 *Woolwich* (n 30).

additional period of sick leave.[199] Here the ECJ ruled that this was not prohibited by Article 157 or the equal pay legislation.

In *Meroni Gómez*, the Court ruled that the Working Time Directive, read together with the Pregnancy Directive and the Equal Treatment Directive, required that a worker be allowed to take her annual leave during a period other than the period of her maternity leave, even if the period of annual leave of the entire workforce happened to coincide with when she was on maternity leave.[200] And in *Sarkatzis Herrero*, the ECJ ruled that, although the case was not covered by the Pregnancy Directive since it did not involve adverse treatment for a woman returning to an existing job from maternity leave, the Equal Treatment Directive was breached where a woman's maternity leave was not taken into account in calculating her seniority, where she had deferred taking up a new post in order to take maternity leave.[201] Finally, in *Mayer*, the ECJ ruled that the Occupational Social Security Directives (now replaced by Directive 2006/54) prohibited a woman who was on maternity leave from being denied a particular insurance benefit which was part of a supplementary occupational social security scheme, on the ground that she was not in receipt of taxable pay during her maternity leave.[202]

(D) DIRECTIVE 2004/113 ON ACCESS TO AND SUPPLY OF GOODS AND SERVICES

Apart from the broader move towards gender mainstreaming across all areas of EU law and policy, one of the first targeted pieces of 'hard law' on gender equality going beyond the labour market context was Directive 2004/113,[203] which aimed to combat sex discrimination in the access to and supply of goods and services.

The Directive was particularly intended to apply to the field of insurance, and it specifically excludes education and the content of media and advertising from its scope. These exclusions reflect a lively debate which took place when the measure was first proposed, including whether it should apply to ban sex-stereotyping in advertising. The Directive also does not apply to the fields of employment and self-employment.

As in the Article 19 anti-discrimination directives adopted in 2000,[204] the prohibition of discrimination as between women and men in Directive 2004/113 applies to both the public and private sectors. However, unlike the Race Directive in particular, Directive 2004/113 does not have any broader application beyond the fields of access to and supply of goods and services. Contrasting with the Race Directive but in keeping with the provisions of the TFEU on the free movement of services, the term 'services' in Directive 2004/113 refers to commercial services provided for payment. The Directive applies to goods and services available to the public, irrespective of the individual situation of the consumer, 'which are offered outside the area of private and family life'.[205] Article 3(2) provides that 'this Directive does not prejudice the individual's freedom to choose a contractual partner as long as an individual's choice of contractual partner is not based on that person's sex'.

The Goods and Services Directive has much in common with the consolidated Equal Treatment Directive 2006/54[206] and with the Article 19 directives adopted in 2000.[207] Thus it prohibits direct and

[207] (Nn 91, 102).

indirect sex discrimination, including harassment and sexual harassment, as well as adverse treatment on grounds of pregnancy or maternity,[208] and the various directives contain the same definitions of these terms. There is a positive action provision like that contained in the Article 19 directives,[209] and there are also similar provisions on remedies, the burden of proof, compliance, the role of equality bodies, dialogue, non-regression, minimum harmonization, and the dissemination of information.[210] Interestingly, Article 4(5) of the Directive introduces the familiar concept of objective justification, but unlike most of the other legislation with the exception of age discrimination under Directive 2000/78, does not limit it to cases of indirect discrimination. Article 4(5) of Directive 2004/113 provides:

> This Directive shall not preclude differences in treatment, if the provision of the goods and services exclusively or primarily to members of one sex is justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

The examples given in the preamble to the Directive include single-sex shelters, which can be justified on grounds of protection of victims of violence, and single-sex private clubs, on the grounds of freedom of association.

The Directive was intended in particular to apply to the insurance sector, and Article 5 prohibits the use of sex as a factor in the calculation of premiums and benefits for the purposes of insurance and related financial services in all new contracts concluded after 21 December 2007, insofar as that results in difference in individuals' premiums and benefits. Prior to 21 December 2007, however, Member States were to be allowed, on the basis of Article 5(2) and subject to review after five years, to permit 'proportionate differences in individual's premiums and benefits where sex is a determining factor in the assessment of the risk, based on relevant and accurate actuarial and statistical data'. The validity of Article 5(2) was successfully challenged in the case of *Test-Achats*[211] on the ground that it conflicted with the sex equality provisions in Articles 21 and 23 of the Charter of Fundamental Rights. The ECJ ruled that, while Member States may use appropriate transitional periods in their application of the principle of equal treatment to the insurance sector, EU law did not allow for the application of unequal treatment without temporal limit.

Case C–236/09 **Association belge des Consommateurs Test-Achats v Conseil des ministres,** 3 March 2011

> 30 It is not disputed that the purpose of Directive 2004/113 in the insurance services sector is, as is reflected in Article 5(1) of that directive, the application of unisex rules on premiums and benefits. Recital 18 to Directive 2004/113 expressly states that, in order to guarantee equal treatment between men and women, the use of sex as an actuarial factor must not result in differences in premiums and benefits for insured individuals. Recital 19 to that directive describes the option granted to Member States not to apply the rule of unisex premiums and benefits as an option to permit 'exemptions'. Accordingly, Directive 2004/113 is based on the premise that, for the purposes of applying the principle of equal treatment for men and women, enshrined in Articles 21 and 23 of the Charter, the respective situations of men and women with regard to insurance premiums and benefits contracted by them are comparable.

[208] (N 203) Art 4.
[209] Ibid Art 6.
[210] Ibid Arts 8–15.
[211] Case C–236/09 *Test-Achats* (n 78).

31 Accordingly, there is a risk that EU law may permit the derogation from the equal treatment of men and women, provided for in Article 5(2) of Directive 2004/113, to persist indefinitely.

32 Such a provision, which enables the Member States in question to maintain without temporal limitation an exemption from the rule of unisex premiums and benefits, works against the achievement of the objective of equal treatment between men and women, which is the purpose of Directive 2004/113, and is incompatible with Articles 21 and 23 of the Charter.

33 That provision must therefore be considered to be invalid upon the expiry of an appropriate transitional period.

34 In the light of the above, the answer to the first question is that Article 5(2) of Directive 2004/113 is invalid with effect from 21 December 2012.

Initial reactions to the judgment have differed as to whether the striking down of Article 5(2) will actually benefit women, or will simply result in the imposition of higher insurance premiums in the name of equality.

(E) PARENTAL LEAVE

Following a number of unsuccessful attempts by the Commission to introduce legislation on parental leave, in 1996 a Framework Agreement on parental leave was concluded by the social partners, the main organizations representing confederations of European employers' and employees' representatives, and was implemented by Council Directive 96/34.[212] In June 2009 the European social partners concluded a new Framework Agreement on parental leave, and this was subsequently annexed to Council Directive 2010/18 on parental leave, implementing the revised Framework Agreement and repealing Directive 96/34.[213]

The new Framework Agreement grants male and female workers a minimum-level individual right to at least four months' parental leave on the grounds of the birth or adoption of a child in order to care for the child, until a given age up to 8 years to be specified by the Member State or the social partners. The right to parental leave is in principle to be granted on a non-transferable basis, but the specific conditions of access and the rules governing the leave are left to the Member States to define by law or by collective agreement.

The Framework Agreement sets out a number of permissible conditions on which Member States may decide, such as whether leave is to be granted on a full-time or part-time basis, whether it is to be subject to a period of work qualification, what notice periods may be required, in what circumstances employers may postpone the grant of leave, and the making of special arrangements for small undertakings.

Workers are to be protected against dismissal on grounds of applying for or taking the permitted parental leave,[214] and they shall have the right to return to the same or an equivalent or similar job at the end of the leave period, without any other of their acquired rights being affected by the leave.[215] Upon return, they shall also have the right to submit a request to change their working hours for a set period of time, which must be considered by the employer, taking into account his own needs and

[212] Council Directive 96/34/EC of 3 June 1996 on the framework agreement on parental leave concluded by UNICE, CEEP and the ETUC [1996] OJ L145/4. This was extended to the UK by Dir 97/75, [1998] OJ L10/24.

[213] Council Directive 2010/18/EU implementing the revised Framework Agreement on parental leave concluded by BUSINESSEUROPE, UEAPME, CEEP and ETUC and repealing Directive 96/34/EC [2010] OJ L68/13.

[214] Case C–116/08 *Meerts* [2009] ECR I–10063 on the dismissal of a worker before the end of parental leave without observing the statutory period of notice.

[215] Case C–468/08 *Zentralbetriebsrat der Landeskrankenhäuser Tirols v Land Tirol*, 22 Apr 2010, [50]–[56] on Dir 96/34.

those of the employee. Member States and/or social partners are required to take the necessary measures to protect workers against less favourable treatment or dismissal on the grounds of applying for or taking parental leave. Moreover, the legislation requires the specific needs of parents of adopted children and children with a disability or long-term illness, or, according to the ECJ in *Chatzi*, the parents of twins,[216] to be taken into account. No provision is made in the Agreement regarding pay or any other allowance, and clause 2(5) specifies that all matters relating to social security are to be determined by the Member States in accordance with national law.[217] The Agreement also provides, in a less detailed clause, that Member States or the social partners shall take 'the necessary measures' to entitle workers to time off work 'on grounds of *force majeure* for urgent family reasons in cases of sickness or accident'.

The Framework Agreement introduces minimum-level rather than maximum-level rights, and contains the usual non-regression clause. The interpretation of provisions of the Agreement is assigned in the first instance to the signatory parties, without prejudice to the role of the Commission, national courts, and the ECJ.

In *Österreichischer Gewerkschaftsbund*, the ECJ ruled that the equal pay provisions of Article 157 TFEU were not violated where Austrian law took account of periods of civilian or military service, which were largely taken by men, but not periods of (nationally-granted) parental leave, which were overwhelmingly taken by women.[218] The Court distinguished maternity leave from parental leave, ruling that the latter was voluntary, and also distinguished it from military and civilian service, ruling that while parental leave served the individual interests of workers and their families, military and civilian service served the national interest.

Finally, we have seen that Article 16 of Directive 2006/54 also now makes reference to the rights of those who have taken paternity (rather than parental) or adoption leave granted by national law to return to jobs and conditions which are equivalent and no less favourable than those they enjoyed before, and to benefit from any improvement in working conditions to which they would have been entitled during their absence.

(F) DIRECTIVE 2010/41 ON THE SELF-EMPLOYED

The application of the principle of equal treatment between self-employed men and women was originally covered by Directive 86/613/EEC,[219] supplementing the provisions on equal treatment of employed persons in the original Equal Treatment Directive. In 2010 the Council adopted a new directive on self-employed persons, Directive 2010/41/EU,[220] which is set to replace Directive 86/613 by 5 August 2012.

Directive 2010/41 was adopted under Article 157(3). It supplements the provisions on self-employment activities in a number of existing legal instruments, in particular Directive 79/7 and Directive 2006/54, and does not apply to aspects already covered by those Directives. Article 2 sets out the personal scope of the Directive, providing that it applies to the self-employed as well as their spouses who are not employees or partners, but who participate in the same activities. Life partners recognized by national law who are in the same situation equally fall within the personal scope of the Directive.

[216] Case C–149/10 *Chatzi*, 16 Sept 2010.

[217] See, however, Case C–333/97 *Lewen* (n 24); Case C–537/07 *Gómez-Limón* [2009] ECR I–6525.

[218] Case C–220/02 *Österreichischer Gewerkschaftsbund, Gewerkschaft der Privatangestellten v Wirtschaftskammer Österreich* [2004] ECR I–5907.

[219] Council Dir 86/613/EEC, [1986] OJ L359/56 and COM(94)163.

[220] Council Directive 2010/41/EU of 7 July 2010 on the application of the principle of equal treatment between men and women engaged in an activity in a self-employed capacity and repealing Council Directive 86/613/EEC [2010] OJ L180/1.

Article 3 sets out the principle of equal treatment in a similar way to that in the other Equality and Social Security Directives.[221]

Articles 4–8 set out the 'material scope' of the scheme, which requires Member States to take action to eliminate sex discrimination in a range of matters, such as establishing a business or activity or forming a company. In comparison with Directive 86/613, Directive 2010/41 notably improves the social and maternity protection of female self-employed workers and assisting spouses or life-partners. On the basis of Article 7, Member States must ensure that spouses and life-partners of self-employed workers can benefit from a system of social protection on a mandatory or voluntary basis, provided that a system for social protection for self-employed workers exists under national law. Member States are also required to take the necessary measures to ensure that female self-employed workers and their spouses and life partners may be granted, on a mandatory or voluntary basis, a 'sufficient' maternity allowance during pregnancy or motherhood for at least fourteen weeks. Article 8(3) stipulates that an allowance is considered to be 'sufficient' for the purpose of the Directive if it guarantees an income at least equivalent to the allowance which the person would receive in the case of illness, the average loss of income or profit in relation to a comparable preceding period, and/or any other family-related allowance established by national law.

7 THE GENERAL PRINCIPLE OF EQUAL TREATMENT AND NON-DISCRIMINATION

Apart from the various sub-regimes of equality law outlined above, the ECJ has increasingly relied on equal treatment as a *general principle* of EU law. We have also seen above that the principle of equal treatment between men and women is now laid down as a fundamental right in Articles 21(1) and 23(1) of the Charter of Fundamental Rights.

Reflecting the origins of EU equality law, the Court first articulated a general principle of equal treatment and non-discrimination between men and women as part of EU law.[222] The Court ruled, originally in *Defrenne III*,[223] and later in the cases of *P v S*[224]and *Schröder*,[225] that the elimination of sex discrimination was one of the fundamental personal human rights which had to be protected within EU law. However, at the time of *Defrenne III* in 1978, this principle was held not to be directly applicable against Member States, since the EU had not yet assumed competence in the area of equal treatment at work.[226] Indeed it remains the case, despite the frequent judicial rulings on the fundamental status of the principle of equal treatment on grounds of sex, that the principle is not directly effective *per se* and requires further legislative implementation to be fully effective in challenging national law or employers' practice.[227]

[221] For a case discussing the concept of indirect discrimination under Dir 86/613 and Dir 76/207 see Case C–226/98 *Jørgensen v Foreningen af Speciallæger* [2000] ECR I–2447.

[222] In Case 20/71 *Sabbatini* [1972] ECR 345; Case 21/74 *Airola* [1972] ECR 221; Cases 75 and 117/82 *Razzouk and Beydoun v Commission* [1984] ECR 1509, the Court held that the *EU* institutions were bound by the principle of non-discrimination on grounds of sex in the treatment of their staff. For more recent cases invoking the principle of equal treatment see Case C–37/89 *Weiser* [1990] ECR I–2395, [13]–[14]; Case C–227/04 P *Lindorfer v Council* [2007] ECR I–6767, [51].

On equal treatment in the protection of workers in the event of the insolvency of their employer see Case C–81/05 *Anacleto Cordero Alonso v Fondo de Garantía Salarial (Fogasa)* [2006] ECR I–07569. On equal treatment in

In *Rinke*, the ECJ ruled that the principle of equal treatment of men and women was a condition for the lawfulness of EU action, so that any EU legislative measure which violated the principle would be illegal.[228] Although it ruled ultimately that they were justified on objective grounds, the Court found that the terms of two EU directives on the recognition of qualifications for general medical practice did indeed place women at a disadvantage as compared with men.[229]

Following the expansion of EU non-discrimination law beyond gender equality and beyond the employment context in the Treaty of Amsterdam and the successive adoption of Directives 2000/43 and 2000/78, the Court began to invoke the general principle of equal treatment outside the area of sex equality. In *P v S* the ECJ declared that the principle underlying Directive 76/207 on sex equality extended to the situation of an employee who was dismissed for undergoing gender reassignment surgery, and later cases reinforced the protection of EU law against transgender discrimination.[230] However, the Court was unwilling in cases such as *Grant* to extend the principle of equal treatment to the circumstances of sexual orientation discrimination prior to the enactment of Directive 2000/78.[231]

Somewhat controversially, in the cases of *Mangold*[232] and *Kücükdeveci*[233] the ECJ declared and applied a general principle of non-discrimination on grounds of age as a general principle of EU law. Although the period for transposing the Framework Employment Directive into national law had not yet expired in the circumstances of *Mangold*, the ECJ ruled that the general principle of equal treatment in EU law precluded national law from permitting arbitrary discrimination on the basis of age.[234] Effectively, the ECJ invoked and enforced the principle of non-discrimination on the ground of age in a dispute between private parties at a point in time when the implementation period for Directive 2000/78 had not yet expired. Thus not only did the Court confirm the application of the general principle of non-discrimination outside the field of sex and transgender equality, but it also seemed to strengthen its autonomous nature.[235]

In *Defrenne III*, despite articulating the principle of equal treatment between men and women as a general principle of EU law, the Court had emphasized that in the absence of express legislation at the time, EU law did not guarantee the observance of this principle in working conditions other than pay.[236] In contrast, the ECJ in *Mangold*, although ruling within the context of the Framework Employment Directive 2000/78, emphasized the importance of ensuring the observance of the principle of equal treatment even in circumstances where the Directive was not yet required to be implemented into national law.[237]

The *Mangold* ruling was controversial and triggered debate over the scope of the general principle of non-discrimination, and the extent to which national legislators are bound by such a principle

when drafting employment legislation.[238] As we have seen in Chapter 9, the ruling gave rise to the *Honeywell* case before the German Constitutional Court, questioning whether the ECJ had exceeded EU competence in *Mangold*.[239] Most of the criticism aimed focused on the ECJ's articulation of a general principle of age discrimination in *Mangold*, which seemed to undermine the carefully negotiated provisions of Directive 2000/78/EC.[240] It was argued that by relying on little more than a vague reference to international instruments and Member States' common constitutional traditions, the ECJ interfered with the political choices and compromises represented in Member States' social policy,[241] and effectively created a new EU social right.[242]

The *Mangold* case triggered a series of preliminary references to the ECJ raising questions about the scope and application of this newly articulated general principle of non-discrimination on grounds of age.[243] The Opinions of the Advocates General in cases such as *Lindorfer, Palacios de la Villa, Maruko,* and *Bartsch* discussed the scope and reach of the general principle of non-discrimination on grounds of age, but the ECJ remained mostly silent on the issue.

In *Palacios de la Villa*, which concerned the automatic termination of a worker's employment contact on reaching the retirement age set under Spanish law, the Court considered the problem exclusively on the basis of Directive 2000/78 and did not refer to a general principle of non-discrimination on grounds of age.[244] The case of *Bartsch*, like *Mangold*, concerned an allegation of age discrimination at a time before the period for implementation of Directive 2000/78 had expired.[245] However, the Court distinguished the situation by ruling that in *Bartsch,* which concerned company pension guidelines, unlike in *Mangold* which concerned an EU framework agreement on fixed-term work, the disputed national measures were not intended to implement EU law, and that the EU prohibition of discrimination on grounds of age would not apply to a national rule of this kind which contained no link with EU law.[246]

The cases of *Age Concern England*[247] and *Hütter*[248] concerned the possible derogations from the requirement of non-discrimination on grounds of age. The applicants in *Age Concern England* invoked the general principle recognized in *Mangold* to argue that any proposed justification for

[243] Case C–227/04 *Lindorfer* [2007] ECR I–6767; Case C–411/05 *Palacios de la Villa* [2007] ECR I–8531; Case C–267/06 *Maruko* (n 105); Case C–427/06 *Bartsch* [2008] ECR I–7245; Case C–388/07 *Age Concern England* [2009] ECR I–1569; Case C–88/08 *Hütter* [2009] ECR I–5325; Case C–555/07 *Kücükdeveci* (n 233); Case C–499/08 *Andersen*, 12 Oct 2010; Case C–45/09 *Rosenbladt*, 12 Oct 2010; Cases C–250 and 268/09 *Georgiev*, 18 Nov 2010. The case also became a matter of concern for national constitutional courts: see the *Honeywell* ruling of the German Federal Constitutional Court regarding the question whether in *Mangold* the ECJ had exceeded the competences conferred upon it by the Member States and whether the judgment was therefore inapplicable in Germany: 2 BvR 2661/06, 6 July 2010.

[244] AG Mazák in Case C–411/05 *Palacios de la Villa* (n 243) criticized the ECJ in *Mangold* for having deduced a specific principle prohibiting age discrimination from the general principle of equal treatment enshrined in international instruments. AG Sharpston in Case C–427/06 *Bartsch* (n 243) argued that although discrimination on grounds of age was prohibited by the general principle of equality, such a principle could constitute a basis for review of national legislation only if it fell within the scope of EU law.

[245] Case C–427/06 *Bartsch* (n 243).

[247] Case C–388/07 *Age Concern England* (n 243).

[248] Case C–88/08 *Hütter* (n 243).

direct discrimination on grounds of age must be subjected to a very high standard of scrutiny.[249] The ECJ in both cases invoked its ruling in *Mangold* to emphasize that Member States enjoy broad discretion in the choice of measures to attain their social and employment policy objectives under Article 6(1) of Directive 2000/78, but it also cautioned that the exercise of 'that discretion should not frustrate the implementation of the fundamental principle of non-discrimination on grounds of age'.[250]

It was in *Kücükdeveci,* however, that the Court clearly affirmed the core of its ruling in *Mangold* and clarified several aspects of the judgment.[251] The case concerned a dispute regarding the appropriate period of notice under German law for the dismissal of an employee who had begun working at a company before the age of 25. Kücükdeveci was employed by Swedex for a period of more than ten years, beginning when she was 18. She was dismissed with one month's notice, instead of the four months that was generally obligatory for the dismissal of employees following ten years of service. According to the relevant German law, periods of employment completed before the age of 25 were not to be taken into account when calculating the notice period in cases of dismissal. While the time limit for implementation of the Directive in this case had, unlike in *Mangold*, expired by the time of her dismissal, this was a dispute between private parties and a non-implemented Directive would not normally be given 'horizontal' direct effect under EU law.[252] The ECJ was asked whether the German law was in conformity with EU law and whether the case should be assessed by reference to primary EU law or by reference to Directive 2000/78. Referring to *Mangold* and to the provision on non-discrimination in Article 21(1) of the Charter, the ECJ in *Kücükdeveci* ruled:

> 27 It follows that it is the general principle of European Union law prohibiting all discrimination on grounds of age, as given expression in Directive 2000/78, which must be the basis of the examination of whether European Union law precludes national legislation such as that at issue in the main proceedings.

A national provision such as that concerning the notice period of dismissal was precluded by the principle of non-discrimination on grounds of age, 'as given expression by Directive 2000/78'.

The cases of *Mangold* and *Kücükdeveci* thus confirm the 'direct effect' of the general principle of equal treatment in disputes between private parties, at least in the context of EU legislation (albeit a non-implemented or wrongly implemented Directive) which gives effect to the principle. The idea of a directly effective general principle is somewhat controversial, given the lack of clarity and precision of such principles, particularly in disputes between private parties, given the declared limits on the horizontal direct effect of directives. Thus far, however, the ECJ has not applied the general principle of equal treatment in a very autonomous way, but has mainly linked it to the application of the Framework Employment Directive 2000/78.

The ECJ has regularly ruled that the general principle of equal treatment requires that 'comparable situations must not be treated differently and that different situations must not be treated in the same way unless such treatment is objectively justified'.[253] In *Gualtieri*, the Court ruled that a difference in the rate of the daily allowance paid to a Commission expert, where the rate was based on the proximity of her spouse's residence to the place to which she was seconded, did not amount to impermissible pay discrimination on the basis of marital status.[254] According to the ECJ, use of the criterion of marital status was not arbitrary or disproportionate to the objective of reducing the allowances paid to Commission experts when they were in a situation in which it could be assumed they bore fewer costs

and disadvantages on account of that matrimonial status.[255] In *Maruko*, on the other hand, the ECJ left it to the national court to determine whether a surviving spouse and a surviving registered life-partner were in a 'comparable situation' for the purposes of an entitlement to survivor's benefits under national law.[256] Once the national court concluded that they were comparably situated, the exclusion of life-partners from eligibility for survivor's benefits was deemed to constitute unlawful discrimination on the basis of sexual orientation under the Framework Employment Directive 2000/78.

The role of the Charter of Fundamental Rights in bolstering the principle of equal treatment in the EU is also evident in recent anti-discrimination cases. We saw in *Test-Achats* above that Article 5(2) of Directive 2004/113/EC was ruled invalid on the basis of its conflict with Articles 21 and 23 of the Charter of Fundamental Rights.[257] And in *Chatzi*[258] the ECJ ruled that, despite the failure to provide for such in the Parental Leave Directive, the national legislature was required in light of the principle of equal treatment to establish a parental leave regime which would ensure that the particular needs of parents of twins are duly taken into account.

Case C–149/10 **Chatzi v Ipourgos Ikonomikon**
16 September 2010

63 Observance of the principle of equal treatment, which is one of the general principles of European Union law and whose fundamental nature is affirmed in Article 20 of the Charter of Fundamental Rights, is all the more important in implementing the right to parental leave because this social right is itself recognised as fundamental by Article 33(2) of the Charter of Fundamental Rights.

EU equal treatment law has also drawn occasionally on the case law of the ECtHR, although in the field of anti-discrimination law it seems that EU law has influenced the development of ECHR law as much as vice versa. Cases such as *KB v NHS* and *P v S* show the ECJ following the lead of Strasbourg,[259] while cases such as *Stec*, *Goodwin, DH*, and *Schalk and Kopf* show the ECtHR drawing on EU law and jurisprudence.[260] Nevertheless, despite the growing tendency to look to one another for inspiration, the two bodies of European anti-discrimination law have developed along quite separate paths and remain rather different in many detailed respects.

8 COMMON PROVISIONS AND CONCEPTS OF EU ANTI-DISCRIMINATION LAW

(A) DIRECT AND INDIRECT DISCRIMINATION

(i) *Direct Discrimination*

We have seen that the recent anti-discrimination directives prohibit four types of discrimination: direct discrimination, indirect discrimination, harassment, and instruction to discriminate. The

consolidated Gender Equality Directive 2006/54 also includes any less favourable treatment of a woman related to pregnancy and maternity within the definition of discrimination. The proposed new Equal Treatment Directive would also, following the provisions of the UN Convention on the Rights of Persons with Disabilities, include denial of reasonable accommodation for persons with disabilities within the definition of discrimination.[261]

Direct discrimination is the most overt form of discrimination and is defined in the same way by the Article 19 directives and by the Recast Gender Equality Directive 2006/54:

> [D]irect discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation, on any of the [prohibited] grounds.[262]

A finding of direct discrimination is based upon an assessment of the victim's treatment with a (potential) comparator. It is premised on the notion that the complainant was treated in a different way from a similarly situated hypothetical comparator, and that the basis for the differential treatment was the prohibited ground of discrimination.

The ECJ has found direct age discrimination in several of the recent cases concerning compulsory termination on reaching retirement age such as *Rosenbladt,*[263] *Georgiev,*[264] *Palacios de la Villa,*[265] and *Age Concern England,*[266] as well as provisions setting a maximum age for recruitment or permission to practise in certain sectors.[267] The Court also found direct sex discrimination in *Kleist*, where national rules linked protection from dismissal to the age at which employees could draw their retirement pensions, where the age was different for men and women.[268]

We have seen above that, with the possible exception of age discrimination, the available grounds of legal justification for direct discrimination are different from and rather narrower than for indirect discrimination.

(ii) *Indirect Discrimination*

Indirect discrimination is a concept which has been discussed in Chapters 19, 21, and 22 in the context of discriminatory restrictions on freedom of movement. Within anti-discrimination law, indirect discrimination is a familiar concept in many jurisdictions as a means of confronting and redressing systemic discrimination.

Where a rule or a practice, although apparently neutral, has the effect of disadvantaging a considerably higher percentage of persons sharing the protected characteristics (sex, racial or ethnic origin, sexual orientation, religion, disability, age), that rule or practice is deemed indirectly discriminatory. The concept was initially defined in the early ECJ case law and legislation on the burden of proof,[269] and later in the Article 19 anti-discrimination directives,[270] and the amended Sex Equality Directive in 2002,[271] but these definitions were not uniform. Now, the consolidating Gender Equality Directive

[261] (N114).
[262] Art 2(2)(a) Dir 2000/78. Art 2 of Dir 2000/43, Dir 2006/54, and the proposed new Equal Treatment Dir contain virtually identical provisions.

[267] Case C–299/08 *Wolf* and Case C–341/08 *Petersen*, 12 Jan 2010.
[268] Case C–356/09 *Kleist*, 18 Nov 2010.
[269] Dir 97/80, now repealed.
[270] (Nn 91, 102). See also the proposed Equal Treatment Dir, COM(2008)426.
[271] Dir 2002/73, now repealed.

2006/54 has adopted the definition from the anti-discrimination directives and made it generally applicable, abandoning the more complicated definition incorporating reference to statistics which had been used in the burden of proof directive.[272]

The early case law on indirect discrimination concerned the equal pay provision of the Treaty. After a hesitant start when the ECJ seemed to imply that indirect discrimination was not covered by Article 157 TFEU in the absence of further legislation,[273] the Court ruled clearly that indirect discrimination was covered by the Treaty. In *Jenkins*, the ECJ ruled that although the fact that part-time work was paid at a lower hourly rate than full-time work did not *per se* amount to discrimination, a presumption of discrimination in breach of the Treaty would arise 'if it is established that a considerably smaller percentage of women than of men perform the minimum number of weekly working hours required in order to be able to claim the full-time hourly rate of pay', and no other objective justification existed for the pay differential.[274]

The Court also suggested that an employer's policy of encouraging a greater number of full-time workers could be an example of legitimate justification.[275] Ultimately, the ECJ ruled that the issue of objective justification was for the national court to weigh, with the onus being on the employer to demonstrate that it was based on something legitimate other than the sex of the worker. Gradually therefore, both the scope of the prohibition on discrimination in EU law to include indirect as well as direct discrimination and the scope of the justifications which could be offered to legitimate such discrimination were widened.

Building on this early case law on equal pay, the two Article 19 directives, the 2006 Gender Equality Directive, and the proposed new Equal Treatment Directive all contain a virtually identical definition of indirect discrimination.

Article 2(1)(b) of Directive 2000/78 provides:

> [I]ndirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons having a particular religion or belief, a particular disability, a particular age, or a particular sexual orientation at a particular disadvantage compared with other persons, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

The same definition, although adapted to the specific ground of discrimination covered by the Directives, can be found in Article 2 of both Directive 2000/43 and Directive 2006/54. The remaining Gender Equality Directives also prohibit indirect discrimination, and the ECJ has interpreted them in a similar way.[276]

[272] (N 269).

[273] See, eg, Case 149/77 *Defrenne* (n 223) [18]; Case 129/79 *Macarthys Ltd v Smith* [1980] ECR 1275, [14]–[15]; Case C–400/93 *Royal Copenhagen* (n 123) [29]–[38]; Case C–200/91 *Coloroll* (n 45) [103]–[104] on the difficulties of comparisons between employees who are and who are not within the same establishment, for the purposes of showing discrimination; and Case 157/86 *Murphy v Bord Telecom Eireann* [1988] ECR 673 on discrimination where a man was paid the same as a woman for doing work of lower value.

[274] Case 96/80 *Jenkins v Kingsgate (Clothing Productions) Ltd* [1981] ECR 911. AG Warner in the case noted that women constituted 90 per cent of part-time workers in the EU.

[275] Ibid [12].

[276] See for instance in the context of Art 4(1) of the Social Security Dir 79/7 Case 30/85 *Teuling v Bedrijfsvereniging voor de Chemische Industrie* [1987] ECR 2497.

(iii) *Harassment and Instruction to Discriminate*

Unlike the early equal pay and equal treatment legislation in the field of sex equality, the recent anti-discrimination directives explicitly prohibit both harassment and any instruction to discriminate.

Harassment is defined in Article 2(3) of Directive 2000/43, Directive 2000/78, and in almost identical terms in Article 2(1)(c) of Directive 2006/54,[277] as:

> Unwanted conduct related to any of the grounds referred to in Article 1 [that] takes place with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment. In this context, the concept of harassment may be defined in accordance with the national laws and practice of the Member States.

The Court in *Coleman* ruled that the prohibition of harassment is not limited to persons who are themselves disabled, but also covers harassment related to the disability of the child of a person who is not herself disabled.[278]

The prohibition of 'an instruction to discriminate' against any persons on any of the prohibited grounds of discrimination is not further defined in the Directives and has not yet been the subject of litigation.[279] It should also be noted that all of the Directives now also require states to introduce effective measures to prevent retaliation or the victimization of complainants.

(B) EXCEPTIONS AND JUSTIFICATIONS

(i) *Justification for Direct Discrimination: General*

Direct discrimination is more strictly regulated than indirect discrimination, and can be justified only on the basis of one of the limited grounds or exceptions contained in the treaties or secondary legislation, rather than being capable of a more open-ended 'objective justification'.

One area of exception to this is the field of age discrimination, where Article 6(1) of Directive 2000/78 appears to permit a kind of open-ended objective justification for direct age discrimination.[280] The ECJ in *Age Concern England* addressed the question whether there was a difference between the test for objective justification of *indirect discrimination on all grounds* in Article 2(2)(b) and the test for objective justification of *direct age discrimination only* in Article 6(1).[281] Despite the argument of the UK for a single test in the interests of legal certainty, the ECJ, although without giving any detail as to the differences between them, indicated that the scope and function of Article 2(2)(b) and Article 6(1) are not identical:

[277] Art 2(1)(d) of Dir 2006/54 also contains a more specific definition of *sexual* harassment as 'any form of unwanted verbal, non-verbal or physical conduct of a sexual nature occurs, with the purpose or effect of violating the dignity of a person, in particular when creating an intimidating, hostile, degrading, humiliating or offensive environment'; K Zippel, 'Gender Equality Politics in the Changing European Union: The European Union Anti-Discrimination Directive and Sexual Harassment', Harvard Center for European Studies Working Paper 134/2006, available at www.ces.fas.harvard.edu/publications/docs/pdfs/Zippel134.pdf.

[278] (N 109).

[279] For a pending case see (n 101).

[280] Art 6(1) provides that 'Member States may provide that differences of treatment on grounds of age shall not constitute discrimination, if, within the context of national law, they are objectively and reasonably justified by a legitimate aim, including legitimate employment policy, labour market and vocational training objectives, and if the means of achieving that aim are appropriate and necessary'. Art 6(1)(a) goes on to specify some examples of discriminatory measures which could be justified.

[281] Case C–388/07 *Age Concern England* (n 243).

Case C–388/07 **R (Age Concern England) v Secretary of State for Business, Enterprise and Regulatory Reform** [2009] ECR I–1569

THE ECJ

65 [I]t is important to note that [Article 6] is addressed to the Member States and imposes on them, notwithstanding their broad discretion in matters of social policy, the burden of establishing to a high standard of proof the legitimacy of the aim pursued.

66 Although there is no need in this case to give a ruling on whether that standard of proof is higher than that applicable in the context of Article 2(2)(b) of Directive 2000/78, it must be stated that, if a provision, a criterion or a practice does not constitute discrimination within the meaning of the directive, by reason of an objective justification within the meaning of Article 2(2)(b) thereof, it is as a consequence not necessary to have recourse to Article 6(1) of the directive, which, as is clear from paragraph 62 of this judgment, is intended in particular to permit the justification of certain differences in treatment which, but for that provision, would constitute such discrimination.

The thrust of the ECJ's ruling is that the standard for justifying direct age discrimination under Article 6(1), and consequently the burden of proof, is high, since direct discrimination, unlike indirect discrimination under Article 2(2), is presumptively incompatible with EU law.

Apart from this provision in Article 6 of Directive 2000/78 on age discrimination, the ECJ in some of its early equality case law had also seemed to contemplate the possibility of justifying direct sex discrimination in the field of pay. While the Court never unambiguously declared that direct rather than indirect pay discrimination could be 'objectively justified', it nonetheless considered in a number of cases whether men and women who appeared *prima facie* to be paid differently for performing work of equal value might actually have been 'differently situated', such that the unequal pay did not in fact amount to discrimination.

In *Birds Eye Walls*, the ECJ ruled that the payment of different bridging pensions to men and women did not constitute discrimination since they were not similarly situated in relevant respects.[282] This was more recently confirmed in the case of *Hlozek*.[283] In *Abdoulaye*, the ECJ ruled that the situation of a male worker was not comparable to that of a female worker where the advantage granted specifically to the female was designed to offset the occupational disadvantages, inherent in maternity leave, which arise for female workers as a result of being away from work.[284] In *Griesmar*, the ECJ considered the argument that differential service credits for the calculation of retirement pensions for female and not male workers who had children did not constitute discrimination, since the positions of male and female workers were not comparable in this respect.[285] The ECJ however rejected the argument on the basis that their situations could indeed be comparable if the male worker had assumed the task of bringing up his children. The *Griesmar* ruling also drew attention to another possible basis for justifying apparently discriminatory pay practices, namely the 'positive action' provision which is discussed in further detail below.

[282] Case C–132/92 *Birds Eye* (n 81). The case also sat uneasily with the earlier ruling of the ECJ in Case 69/80 *Worringham* (n 74). For criticism see B Fitzpatrick, 'Equality in Occupational Pension Schemes' (1994) 23 ILJ 155.

[283] Case C–19/02 *Hlozek* (n 158).

[284] Case C–218/98 *Abdoulaye v Régie nationale des usines Renault SA* [1999] ECR I–5723, [18]–[20]; C McGlynn, Note (1999) 24 ELRev 202.

[285] Case C–366/99 *Griesmar* (n 52).

(ii) *Justification for Direct Discrimination: Public Security, Public Order, and Public Health*

In *Johnston* the ECJ rejected the argument that Member States could invoke a general 'public safety' proviso which was applicable across the whole of the Treaty, similar to the specific derogations expressly provided in the context of free movement of persons, services, goods, and in serious military situations.[286]

However, Article 2(5) of the Framework Employment Directive 2000/78 introduced a form of derogation from the prohibition of discrimination for reasons related to the protection of public safety. Notably, however, and reflecting again the uneven nature and scope of EU legal protection against different forms of discrimination, neither the Race Directive 2000/43 nor the consolidated Gender Equality Directive contains any such derogation.

Article 2(5) of Directive 2000/78 provides:

> This Directive shall be without prejudice to measures laid down by national law which, in a democratic society, are necessary for public security, for the maintenance of public order and the prevention of criminal offences, for the protection of health and for the protection of the rights and freedoms of others.

The Court dealt with the derogation on grounds of public health in *Petersen*.[287] A dentist challenged a provision of German law, according to which admission to practise as a panel dentist in the statutory health insurance scheme expired when the dentist reached the age of 68. The dentists concerned were still permitted to practise outside the panel system, although 90 per cent of patients were covered by that scheme. The German government argued that the difference in treatment was justified on the basis of (i) the protection of the health of patients covered by the statutory health insurance scheme, given the perceived decline in performance of dentists after a certain age, (ii) the maintenance of the financial balance of the German health care system, and (iii) the distribution of employment opportunities amongst the generations.

The Court assessed the first two objectives within the context of the public health exception of Article 2(5), and ruled that the measure could be compatible with Article 2(5) if it was intended to prevent a risk of serious harm to the financial balance of the social security system in order to achieve a high level of protection of health. If, on the other hand, the objective was the protection of the health of patients from the point of view of the competence of the dentists, the measure was not justified by this exception, since the means chosen were not necessary to obtain the objective pursued.[288] The Court also underlined the inconsistency of the measure, since the age limit applied only to dentists practising under the panel system, allowing dentists to practise outside that system at any age.

(iii) *Justification for Direct Discrimination: The Occupational Requirement Exception*

All of the main anti-discrimination directives provide for an occupational requirement exception. Article 4 of Directives 2000/43 and 2000/78 and Article 14(2) of Directive 2006/54 maintain

[286] Case 222/84 *Johnston v Chief Constable of the RUC* [1986] ECR 1651. The specific derogations mentioned by the Court were those in Arts 30, 39, 46, 296, and 297 EC. See also Case C–273/97 *Sirdar* (n 295); Case C–285/98 *Kreil* (n 295).

[287] Case C–341/08 *Petersen* (n 267).

[288] Ibid [52].

the essence of the occupational qualification exception which was originally contained in the Sex Equality Directive 76/207. Article 4 of Directive 2000/78 provides:

> Member States may provide that a difference of treatment which is based on a characteristic related to any of the grounds [covered] shall not constitute discrimination where, by reason of the nature of the particular occupational activities concerned or of the context in which they are carried out, such a characteristic constitutes a genuine and determining occupational requirement, provided that its objective is legitimate and the requirement is proportionate.

The scope of this occupational requirement provision in the context of gender equality was considered in the *Male Midwives* case.[289] The Court found that British legislation which limited access for men to the profession of midwife was in conformity with the occupational requirement exception in Directive 76/207, in view of the fact that 'personal sensitivities' could play an important role in the relationship between midwife and patient. The arguments of the Commission and the Advocate General that this could be adequately catered for by giving the patient the choice of a male or female midwife were not addressed by the Court—nor indeed the fact that other presumably equally 'sensitive' relationships such as between gynaecologist and patient did not seem to necessitate such limited access—which ruled that the UK had not violated the Directive.[290]

The provision was also considered in *Johnston,* in which the Royal Ulster Constabulary (RUC) sought to justify its decision not to employ women as full-time members of the RUC Reserve.[291] The UK Government argued that if women were permitted to carry and use firearms they would be at greater risk of becoming targets for assassination. The Court accepted the UK's argument without requiring any evidence to support the implication that women could not be trained to use firearms just as safely and effectively as men.[292] Hence the Court accepted that the sex of police officers could constitute a 'determining factor' for carrying out certain policing activities.[293] The assessment of the proportionality of the decision was left to the national court, to consider amongst other things 'whether the refusal to renew Mrs Johnston's contract could not have been avoided by allocating to women duties which, without jeopardizing the aims pursued, can be performed without firearms'.[294]

Similar questions came before the Court in the cases of *Sirdar* and *Kreil*.[295] In *Sirdar*, a woman who was refused employment as a chef with the UK Royal Marines challenged their policy of excluding women from service on the ground that the presence of women was incompatible with the requirement of 'interoperability', ie, 'the need for every Marine, irrespective of his specialisation, to be capable of fighting in a commando unit'. The ECJ ruled that this could be justified as an occupational requirement on the basis that the Marine corps was an exceptional and small force intended to be in the first line of attack.

In *Kreil*, on the other hand, the applicant was challenging a more general prohibition under German law which barred women from military posts involving the use of arms, and allowed them access only to the medical and military-music services. Here the ECJ ruled that, since the occupational requirement derogation in Article 2(2) of Directive 76/207 was intended to apply only to specific activities, the scope and breadth of this prohibition exceeded even the discretion given to Member States when

adopting measures they consider necessary to guarantee public security. Its disproportionate nature was also evident from the fact that basic training in the use of arms was already provided to women in the services of the Bundeswehr which remained accessible to them.

The *Kreil* judgment was a high-profile one, not least because of the fact that the German Federal Constitution at the time barred women from service involving the use of arms.[296] The relevant constitutional provision was subsequently amended, to provide that women could not be forced to render armed service.

This in turn gave rise to the case of *Dory*, in which a German man challenged the fact that compulsory military service was applicable only to men and not to women. According to Dory, this constituted discrimination as between men and women as regards access to employment, since the need to complete compulsory military service delayed his entry onto the labour market and imposed a disadvantage on him as compared with a similarly situated woman. Interestingly, rather than treating this case within the context of the occupational requirement exception, the ECJ in this case accepted an argument made by the German Government which it had rejected in *Kreil* and earlier cases, that the rule in question fell outside the scope of application of EU law.

Case C–186/01 **Dory v Bundesrepublik Deutschland**
[2003] ECR I–2479

39. The decision of the Federal Republic of Germany to ensure its defence in part by compulsory military service is the expression of such a choice of military organisation to which Community law is consequently not applicable.

40. It is true that limitation of compulsory military service to men will generally entail a delay in the progress of the careers of those concerned, even if military service allows some of them to acquire further vocational training or subsequently to take up a military career.

41. Nevertheless, the delay in the careers of persons called up for military service is an inevitable consequence of the choice made by the Member State regarding military organisation and does not mean that that choice comes within the scope of Community law. The existence of adverse consequences for access to employment cannot, without encroaching on the competences of the Member States, have the effect of compelling the Member State in question either to extend the obligation of military service to women, thus imposing on them the same disadvantages with regard to access to employment, or to abolish compulsory military service.

While clearly the reasoning in *Dory* could also have been applied to the 'choice of military organization' adopted by Germany in *Kreil*, the ECJ was presumably motivated in *Dory* by pragmatic concerns. If it had followed the logic of its previous judgments and held that compulsory military service for men only constituted sex discrimination, it would have left Germany with the choice of abolishing compulsory military service altogethe, or extending compulsory service also to women. The first would clearly have been seen as a major encroachment by EU law into national military matters, whereas the second would involve taking a controversial option in social terms.[297]

More recently in *Wolf* the ECJ addressed the nature of the occupational requirement provision within the context of the Framework Employment Directive 2000/78.[298] The applicant challenged a German provision setting a maximum age of 30 for the recruitment of officials to intermediate career posts in the professional fire service. Although the question referred by the domestic court presented

the issue as one of the justifiability of direct age discrimination under Article 6(1) of the Directive, the ECJ instead addressed the issue on the basis of the occupational requirement provision in Article 4(1).[299] The Court emphasized that it is the characteristic related to a ground of discrimination, in this case physical fitness, rather than the ground itself, age, which must constitute a genuine and determining occupational requirement.[300]

The ECJ outlined the four familiar conditions which must be satisfied in order to justify a national measure which restricts or derogates from an EU right or freedom,[301] or which offers objective justification for indirect discrimination,[302] and applied them to the occupational requirement in Article 4(1). First, the objective pursued must be *legitimate*; secondly, the characteristic required must constitute a *genuine and determining* occupational requirement for carrying out the activities in question; thirdly, the characteristic must be *related* to age (or one of the other specified grounds of discrimination); and, fourthly, the national measure must be *necessary and proportionate*.[303] In this case, the ECJ accepted the statistical data provided by the German government to show that the physical capacity required to perform fire-fighting activities is related to the age of a person, and it took the view that the four conditions would be satisfied by legislation of this kind.

(iv) *Justification for Direct Discrimination: Objective Justification of Direct Age Discrimination*

As we have seen above, Directive 2000/78 contains a specific exception to the prohibition of discrimination on grounds of age in the field of employment. Article 6(1) provides:

> Notwithstanding Article 2(2), Member States may provide that differences of treatment on grounds of age shall not constitute discrimination, if, within the context of national law, they are objectively and reasonably justified by a legitimate aim, including legitimate employment policy, labour market and vocational training objectives, and if the means of achieving that aim are appropriate and necessary.
>
> Such differences of treatment may include, among others:
>
> (a) the setting of special conditions on access to employment and vocational training, employment and occupation, including dismissal and remuneration conditions, for young people, older workers and persons with caring responsibilities in order to promote their vocational integration or ensure their protection;
>
> (b) the fixing of minimum conditions of age, professional experience or seniority in service for access to employment or to certain advantages linked to employment;
>
> (c) the fixing of a maximum age for recruitment which is based on the training requirements of the post in question or the need for a reasonable period of employment before retirement.

This provision has been the subject of considerable litigation. In the *Mangold* case discussed above, the Court considered a provision of German law which authorized the conclusion, without objective reasons, of fixed-term employment contract with workers aged 52 and above.[304] The Court took the view that the aim of the law, which was to promote the vocational integration of unemployed

[304] (N 227).

older workers who might face difficulties in finding work, was a legitimate one within the meaning of Article 6(1). However, despite the broad discretion enjoyed by Member States in the choice of measures to attain their social and employment policy objectives, the ECJ ruled that in this case the national measure went beyond what was necessary to attain the legitimate objective.

Many of the cases arising under Article 6(1) of Directive 2000/78 have concerned the justifiability of compulsory retirement at a certain age on a number of grounds. In *Palacios de la Villa*,[305] an employee challenged the automatic termination of his employment contract upon his reaching the compulsory retirement age as provided for in a collective agreement. Having established that the measure fell within the scope of Directive 2000/78 and constituted direct discrimination on grounds of age, the ECJ considered whether it could be justified under Article 6(1). The Court ruled that although the provision of national law did not expressly refer to an objective related to a legitimate national policy, labour market, or vocational training objective, nevertheless it had to be understood within the broader context of national labour market policies aimed at tackling unemployment by facilitating access to the labour market:

Case C–411/05 **Félix Palacios de la Villa v Cortefiel Servicios SA**
[2007] ECR I–8531

THE ECJ

56 It cannot be inferred from Article 6(1) of Directive 2000/78 that the lack of precision in the national legislation at issue as regards the aim pursued automatically excludes the possibility that it may be justified under that provision.

...

62 Thus, placed in its context, the single transitional provision was aimed at regulating the national labour market, in particular, for the purposes of checking unemployment.

...

64 The legitimacy of such an aim of public interest cannot reasonably be called into question, since employment policy and labour market trends are among the objectives expressly laid down in the first subparagraph of Article 6(1) of Directive 2000/78 and, in accordance with the first indent of the first paragraph of Article 2 EU and Article 2 EC, the promotion of a high level of employment is one of the ends pursued both by the European Union and the European Community.

65 Furthermore, the Court has already held that encouragement of recruitment undoubtedly constitutes a legitimate aim of social policy (see, in particular, Case C–208/05 [2007] ECR I–181, paragraph 39) and that assessment must evidently apply to instruments of national employment policy designed to improve opportunities for entering the labour market for certain categories of workers.

66 Therefore, an objective such as that referred to by the legislation at issue must, in principle, be regarded as 'objectively and reasonably' justifying 'within the context of national law', as provided for by the first subparagraph of Article 6(1) of Directive 2000/78, a difference in treatment on grounds of age laid down by the Member States.

[*The promotion of a high level of employment and the encouragement of recruitment were thus accepted by the Court as legitimate policy objectives. With regard to the proportionality of the measure, the ECJ again emphasized the broad discretion enjoyed by the national authorities in this field and took the view that the measure was probably proportionate.*]

69 As is already clear from the wording, 'specific provisions which may vary in accordance with the situation in Member States', in recital 25 in the preamble to Directive 2000/78, such is the case as

[305] Case C–411/05 *Palacios de la Villa* (n 243).

> regards the choice which the national authorities concerned may be led to make on the basis of political, economic, social, demographic and/or budgetary considerations and having regard to the actual situation in the labour market in a particular Member State, to prolong people's working life or, conversely, to provide for early retirement.
>
> ...
>
> 72 It does not appear unreasonable for the authorities of a Member State to take the view that a measure such as that at issue in the main proceedings may be appropriate and necessary in order to achieve a legitimate aim in the context of national employment policy, consisting in the promotion of full employment by facilitating access to the labour market.

The broad discretion accorded to Member States in *Mangold* and *Palacios de la Villa* was qualified somewhat in the later case of *Age Concern England*, in which a British charitable organization challenged a provision of UK law permitting an employer to dismiss workers under the age of 65 when they reached the retirement age fixed by the employer, if such a measure constituted a proportionate means of achieving a legitimate aim.[306] The ECJ clarified that the legitimate policy objectives listed in Article 6(1) were purely illustrative rather than exhaustive, and ruled that the legitimate aim of a national measure could be inferred from its context, even if the legislation lacked specificity or precision in this respect.[307] However, the ECJ distinguished legitimate employment or social policy aims of a public nature from 'purely individual reasons particular to the employer's situation such as cost reduction or improving competitiveness', even while acknowledging that there could at times be a close relationship between these.[308] 'Mere generalizations' would however risk undermining the effectiveness of the Directive's prohibition against discrimination on grounds of age, and where direct age discrimination was concerned the standard of proof required of the Member States would be high.[309]

A series of similar rulings followed. In *Hütter*, while the objectives of promoting the integration into the labour market of young people who had pursued vocational education and not treating secondary education less favourably than vocational training were legitimate, national legislation which excluded periods of employment completed before the age of 18 from being taken into account for the purpose of determining the steps at which public servants would be graded was disproportionate to these aims.[310] In *Kücükdeveci*, discussed above,[311] while the stated policy objectives of the national legislation which precluded periods of employment completed before the age of 25 from being taken into account in calculating the notice period for dismissal were legitimate, the means used were neither appropriate nor necessary.[312] In *Petersen*, the German legislation which provided that admission to practise as a panel dentist in the statutory health insurance scheme expired on reaching the age of 68 was a proportionate means of achieving the legitimate aim of improving opportunities for young people entering this particular labour market category.[313] In *Georgiev*, a national law providing for compulsory retirement of university professors who had reached the age of 68 and for fixed-term contracts only beyond the age of 65 was a proportionate means of pursuing the legitimate aim of encouraging recruitment to higher education by offering professorships to younger people.[314] And in

[308] Ibid [46].
[309] Ibid [51] and [65]. See also (n 281) and text.
[310] Case C–88/08 *Hütter* (n 243).
[311] Case C–555/07 *Kücükdeveci* (n 233).
[312] Ibid. See also Case C–306/07 *Andersen* [2008] ECR I–10279, where the ECJ found that a legitimate Danish social policy objective was being pursued by disproportionate means.
[313] Case C–341/08 *Petersen* (n 267).
[314] Cases C–250 and 268/09 *Georgiev* (n 243).

Rosenbladt, a scheme permitting automatic termination of employment contracts on reaching retirement age, which served the legitimate policy aim of promoting a better distribution of work between the generations, was found to be proportionate where the scheme was flexible enough to allow for individual or collective agreements to be made between employers and employees permitting work beyond the retirement age.[315]

To summarize, it seems that the high standard of strict scrutiny announced by the ECJ in *Age Concern England* for the justification of measures which directly discriminate on grounds of age under Article 6(1) of Directive 2000/78 has thus far been applied to the determination of proportionality rather than to the identification of legitimate domestic policy aims.

(v) *Justification for Indirect Discrimination: Objective Justification*

The broadening of the formal criterion of direct discrimination to include less obvious but sometimes even more pervasive forms of indirect discrimination was an important development. However, the parallel development of an equally broad concept of objective justification reduced the impact of this expansion. As we have seen above,[316] the definition of indirect discrimination in the Article 19 directives as well as in Directive 2006/54, Article 2(1)(b), now integrates the notion of the absence of 'objective justification' into the definition itself.

Exactly what can constitute objective justification remains unclear. The ECJ often leaves the matter for the national court to decide, raising the likelihood of differences amongst the various Member States' tribunals as to whether an indirectly discriminatory policy is justified. The Court however has given some guidance, by declaring certain grounds of justification to be too general and indicating that others may be sufficient. The bulk of these cases arose in the field of sex equality, beginning with equal pay, but the reasoning is equally applicable now to all of the grounds and forms of discrimination covered by the newer anti-discrimination directives. Problems of inconsistency and uncertainty nonetheless remain, contributing to the volume of expensive and possibly duplicated litigation in different Member States.

In *Bilka*, concerning eligibility of part-time workers for an occupational pension scheme, the ECJ formulated a test for objective justification very similar to the proportionality test developed when it examined state justifications for restrictions on the free movement of goods and services.[317]

Case 170/84 **Bilka-Kaufhaus GmbH v Karin Weber von Hartz**
[1986] ECR 1607

[Note Lisbon Treaty renumbering: Art 119 EEC is now Art 157 TFEU]

THE ECJ

33. In its observations Bilka argues that the exclusion of part-time workers from the occupational pension scheme is intended solely to discourage part-time work, since in general part-time workers refuse to work in the late afternoon and on Saturdays. In order to ensure the presence of an adequate workforce during those periods it was therefore necessary to make full-time work more attractive than part-time work, by making the occupational pension scheme open only to full-time workers..

. . .

[315] Case C–45/09 *Rosenbladt* (n 243).
[316] 896–897.
[317] See in particular Chs 19, 21, and 22.

> 36. It is for the national court, which has sole jurisdiction to make findings of fact, to determine whether and to what extent the grounds put forward by an employer to explain the adoption of a pay practice which applies independently of a worker's sex but in fact affects far more women than men may be regarded as objectively justified economic grounds. If the national court finds that the measures chosen by the employer correspond to a real need on the part of the undertaking, are appropriate with a view to achieving the objectives pursued and are necessary to that end, the fact that the measures affect a far greater number of women than men is not sufficient to show that they constitute an infringement of Article 119.

In other words, an indirectly discriminatory measure of this kind may be justified if, first, the measure answers a 'real need' of the employer; secondly, the measure is 'appropriate' to achieve the objectives it pursues; and, finally, the measure is 'necessary' to achieve those objectives. However, the ECJ in *Bilka*, while it appeared to accept that the encouragement of full-time workers was an acceptable policy, did not rule on whether this policy justified the pay disadvantage to women, and ultimately left the proportionality test for the national court to apply.

In *Rinner-Kühn*, the Court ruled that although a legislative exclusion of part-time workers from sick pay provision was *prima facie* contrary to the aim of Article 157 TFEU, such an exclusion could be objectively justified.[318] However, the particular justification offered by the government in this case was inadequate:

> 13. In the course of the procedure, the German Government stated, in response to a question put by the Court, that workers whose period of work amounted to less than 10 hours a week or 45 hours a month were not as integrated in, or as dependent on, the undertaking employing them as other workers.
>
> 14. It should, however, be stated that those considerations, in so far as they are only generalizations about certain categories of workers, do not enable criteria which are both objective and unrelated to any discrimination on grounds of sex to be identified. However, if the Member State can show that the means chosen meet a necessary aim of social policy and that they are suitable and requisite for attaining that aim, the mere fact that the provision affects a much greater number of female workers than male workers cannot be regarded as constituting an infringement of Article 119.

In *Elsner-Lakeberg* the ECJ accepted that although requiring part-time and full-time workers to exceed their monthly working time by three hours in order to be eligible for excess pay appeared on the surface to be equal treatment, it was in fact indirectly discriminatory against part-time workers in that it imposed a greater burden on them by requiring them to work a higher percentage of their normal monthly hours.[319] It was then for the national court to determine whether this discrimination could be objectively justified.

Although phrased in slightly different terms in *Bilka* and *Rinner-Kühn*, the thrust of the 'objective justification' test in each is to require the responsible authority to demonstrate that any discrimination which does occur is effective in achieving a legitimate purpose and goes no further than is necessary to achieve that purpose. And although the ECJ declared that generalized considerations about the tendency of full-time as opposed to part-time workers to integrate more in the workplace could not constitute good grounds for indirect discrimination, it suggested that 'social policy' aims might do so.[320]

[318] Case 171/88 *Rinner-Kühn* (n 29).

[319] Case C–285/02 *Elsner-Lakeberg v Land Nordrhein-Westfalen* [2004] ECR I–5861.

[320] Contrast the UK House of Lords in *EOC v Secretary of State for Employment* [1994] 1 WLR 409 on the impermissibility of discriminating against part-time workers in pay and in the requirements for qualifying periods for statutory protection, with the ruling of the ECJ in Case C–189/91 *Kirsammer-Hack v Nurhan Sidal* [1993] ECR I–6185.

In *Bötel*,[321] *Lewark*,[322] and *Freers*,[323] the ECJ acknowledged that while the payment of compensation for attending training courses to full-time workers on a more favourable basis than that paid to part-time workers[324] was likely to discriminate indirectly against women, it was none the less possible that such discrimination was justified by reference to social policy aims unrelated to sex.[325] In *Danfoss*, the ECJ considered what kinds of justification for indirect discrimination in the criteria for supplementary pay, criteria such as mobility, training, and length of service, might be acceptable.[326] The ECJ ruled that while the criteria could in principle be neutral, they could also be applied in such a way as to disadvantage women. Further, if mobility meant initiative and enthusiasm, it could in the ECJ's view be a neutral criterion, whereas if it meant adaptability to hours and places of work, it could disadvantage women because of family and household duties for which they so often bear responsibility.

The ECJ in *Kowalska* and *Nimz* ruled that indirect discrimination stemming from a provision in a collective-bargaining agreement would breach the Treaty unless objectively justified.[327] The attempt in *Nimz* to offer an *en bloc* justification for rules which discriminate against part-time workers, by asserting that full-time workers were more experience and acquire abilities and skills more rapidly than part-time workers, was dismissed by the ECJ as reliance on generalizations. The legitimacy of such a justification could only be assessed in the specific circumstances of a given employment, and this was a matter for the national court in a particular case to assess.[328] More generally, these cases show the ECJ struggling to distinguish 'mere generalizations' such as those discussed in *Rinner-Kuhn* and *Nimz*, which cannot in themselves constitute adequate justification for indirect discrimination, and broad characteristics such as length of service or seniority which have been accepted by the Court as offering presumptive justification in cases such as *Cadman*.[329]

In *Schnorbus*, the ECJ considered that indirect discrimination against women in access to practical legal training could be objectively justified in order to compensate for the delay occasioned to the careers of men who had undergone compulsory military or civilian service, and the preferential treatment was not disproportionate since it was limited to twelve months maximum.[330] In *JämO*, differences in working hours could constitute objective justification, although the employer would have to demonstrate that this was in fact the case.[331]

In *Hill and Stapleton*, however, the Court gave a clear indication that discrimination against job-sharers, who were overwhelmingly women, in the method of determining pay progression could not be justified on a range of dubious grounds, including avoidance of increased costs, offered by the Revenue Commissioners.[332] The ECJ drew attention in its ruling to the specific type of indirect

discrimination involved, discrimination against job-sharers, by noting that job-sharing was overwhelmingly chosen by women seeking to combine work and family responsibilities, and that the protection of women within family life and at work 'in the same way as for men' was a principle recognized by EU law as a 'natural corollary' of the equal treatment principle. The implication seems to be that a stronger onus to justify such indirect discrimination would therefore lie on the defendant whose practices undermined such a principle.

The shortcomings of the indirect discrimination/objective justification tests in the field of sex equality have often been noted,[333] given the male norm on which the concept of discrimination used is generally based, and given the relative ease with which the commercial objectives of the undertaking or employer can defeat a claim of indirect discrimination.[334] On the other hand, rulings such as those in *Hill and Stapleton*, *Seymour-Smith*, and *Kutz-Bauer*[335] show the ECJ adopting a more robust approach to scrutinizing the 'objective justifications' offered by states for indirectly discriminatory legislative measures. Such rulings reiterate the rejection of 'mere generalizations' and—like the cases concerning the justification of age discrimination— insist upon close scrutiny of the proportionality and necessity of discriminatory measures, even when they are adopted in pursuit legitimate national policies.

(c) POSITIVE ACTION

Provisions permitting (but not mandating) 'positive action', sometimes referred to as 'affirmative action', are now contained both in the EU Treaties and in secondary legislation. As far as primary law is concerned, Article 157(4) TFEU provides:

> With a view to ensuring full equality in practice between men and women in working life, the principle of equal treatment shall not prevent any Member State from maintaining or adopting measures providing for specific advantages in order to make it easier for the underrepresented sex to pursue a vocational activity or to prevent or compensate for disadvantages in professional careers.

Article 23 of the Charter of Fundamental Rights also allows for the 'maintenance or adoption of measures providing for specific advantages in favour of the under-represented sex'.

The first positive action provision in secondary EU law was to be found in Article 2(4) of the prior Equal Treatment Directive, 76/207. Article 2(4) permitted measures designed to redress inequality between men and women and to 'promote equal opportunity for men and women, in particular by removing existing inequalities which affect women's opportunities'. Article 3 of the recast Gender Equality Directive 2006/54 replaced this provision and aligned it with the terms of Article 157(4) TFEU. Article 3 of Directive 2006/54 now reads:

> Member States may maintain or adopt measures within the meaning of Article 157(4) of the Treaty with a view to ensuring full equality in practice between men and women in working life.

decided this case under the Equal Treatment Dir 76/207 rather than as an equal pay case; C McGlynn and C Farrelly, 'Equal Pay and the "Protection of Women within Family Life"' (1999) 24 ELRev 202.

[334] See, eg, Case C–189/91 *Kirsammer-Hack* (n 320); Case C–297/93 *Grau-Hupka v Stadtgemeinde Bremen* [1994] ECR I–5535; T Hervey, 'Small Business Exclusion in German Dismissal Law' [1994] ILJ 267.

[335] Case C–243/95 *Hill* (n 332); Case C–167/97 *Seymour-Smith* (n 26) [71]–[73]; Case C–187/00 *Kutz-Bauer* (n 332) [54]–[60].

A similar positive action provision is contained in the two Article 19 anti-discrimination directives. Article 5 of Directive 2000/43 and Article 7 of Directive 2000/78 provide:

> With a view to ensuring full equality in practice, the principle of equal treatment shall not prevent any Member State from maintaining or adopting specific measures to prevent or compensate for disadvantages linked to [the protected grounds].

Article 7(2) of Directive 2000/78 contains an additional paragraph in respect of disabled persons, permitting Member States to 'maintain or adopt provisions on the protection of health and safety at work or … measures aimed at creating or maintaining provisions or facilities for safeguarding or promoting their integration into the working environment'.

Although the wording of the modern positive action provisions is slightly different from and simpler than the wording of the original provision in Article 2(4) of Directive 76/207, it seems likely, given their overall similarity, that the ECJ will continue to interpret them in much the same way as it interpreted the original provision in Article 2(4).

Article 2(4) was initially given a narrow reading by the Court, so that a provision of French law which permitted collective agreements to provide special rights for women, including shorter working hours for older women, the obtaining of leave when a child was ill, and the granting of extra days of leave in respect of children, was held to be unjustified.[336] France had not adequately shown that 'the generalized preservation of special rights for women' would reduce actual instances of inequality in social life.[337] The Court's assumption seemed to be that there was no actual inequality faced by women which required these advantages. The Commission's argument for condemning the French law, on the other hand, seemed to acknowledge a danger that EU law might crystallize the existing distribution of domestic labour within the family. The Commission argued that the French law authorized the maintenance of discriminatory conditions for an indeterminate period and left their removal to the discretion of the two sides of industry.[338]

In *Lommers*, for example, the ECJ upheld the compatibility with Article 2(4) of a scheme set up within a national ministry to tackle the extensive under-representation of women in a situation 'characterised by a proven insufficiency of proper, affordable child-care facilities'.[339] Under the scheme, the ministry made available a limited number of subsidized nursery places to its staff, and reserved those for female staff alone, while permitting male officials access only in individual cases of emergency. The ECJ ruled that this scheme would be acceptable on condition that the emergency exception was construed as allowing any male officials who took care of their children by themselves to have access to the nursery places on the same conditions as female officials. Clearly the situation in *Lommers* was quite different from that in the *France* case, in that it did not involve the generalized preservation of rights for women, but concerned a specific advantage granted in an attempt to tackle the acknowledged under-representation of women in a particular employment context. Nonetheless the ECJ was willing to accept positive action measures even where they were premised on the accurate but role-reinforcing assumption that women would be the primary child-carers in two-parent families.

On the other hand, the ECJ in *Roca Alvarez* in 2010 ruled that neither Article 157(4) TFEU nor Article 2(4) of the Directive would permit a law which provided that female employees who were mothers could take leave during the first nine months following the child's birth, while male employees

[338] Ibid [17]. See the similar argument of AG Jacobs at [14] of his Opinion in Case 373/89 *Integrity v Rouvroy* [1990] ECR 4243 concerning 'positive discrimination' in national social security benefits in favour of women, where the Court found a breach of the equal treatment principle in Dir 79/7.

[339] Case C–476/99 *Lommers* (n 36).

who were fathers were not entitled to the same leave unless the child's mother was also an employed person.[340] The Court concluded that a measure of this kind was liable to perpetuate a traditional distribution of the roles of men and women by keeping men in a role subsidiary to that of women in relation to the exercise of their parental duties.[341]

Some commentators have argued that even if positive action measures of this kind may risk perpetuating stereotypes, the law should not ignore an actually existing disadvantage which is broadly shared by members of a group.[342] What we see in the differing approaches adopted in *Commission v France*, *Lommers,* and *Roca Álvarez*, however, is that the ECJ continues to grapple with this tension, without taking a consistent stance either for or against positive action measures which could be argued to reinforce traditional roles and responsibilities in particular in relation to childcare. However, we can infer that when the measures in question are broad-ranging and general, and when they are legislative rather than specific to one employer, they are less likely to be saved by the positive action provision.

While the cases discussed above mostly concern schemes providing additional leave or childcare benefits for working women, the most controversial positive action measures have been those which concern access for women to employment or promotion. Positive action schemes of the latter kind were dealt a blow in the mid-1990s by the ECJ ruling in *Kalanke*.[343] In this case the Court ruled that Article 2(4) constituted a derogation from the right to equal treatment which must be strictly interpreted. Consequently, a German regional law which provided, where candidates of different sexes who had been shortlisted for promotion were equally qualified, that priority must to be given to women in sectors where they were under-represented (ie made up less than half of the staff) would breach the Directive. The fact that the Bremen system involved a 'soft' rather than a 'rigid' quota, and was intended to overcome the disadvantages faced by women and the perpetuation of past inequalities, as a result of which few women held senior posts, was insufficient to bring it within Article 2(4):

> 22. National rules which guarantee women absolute and unconditional priority for appointment or promotion go beyond promoting equal opportunities and overstep the limits of the exception in Article 2(4) of the Directive.
>
> 23. Furthermore, in so far as it seeks to achieve equal representation of men and women in all grades and levels within a department, such a system substitutes for equality of opportunity as envisaged in Article 2(4) the result which is only to be arrived at by providing such equality of opportunity.

The *Kalanke* ruling prompted a flood of criticism and comment, not only from women's interest groups and from academic and practising lawyers,[344] but also from the European Commission itself, which issued a communication on the interpretation of the judgment.[345] The Commission took the view that not all quotas would be unlawful, and listed a range of positive-action measures which would, in its view, be acceptable despite the ruling. It proposed also an amendment/clarification of the terms of Article 2(4) to provide that a soft quota such as that in issue in *Kalanke* would not be contrary to the Directive, so long as it did not automatically give preference to the under-represented sex, but permitted the assessment of an individual's specific circumstances in a given case.[346]

[345] COM(96)88.
[346] [1996] OJ C179/8.

In the subsequent and very similar case of *Marschall*, AG Jacobs suggested that even if individual candidates' circumstances had to be taken into account, a national measure which gave priority to women over men in under-represented sectors where the candidates were equally qualified would still breach the Equal Treatment Directive.[347] He criticized the Commission's proposed clarificatory amendment to Article 2(4) and deemed criticisms of *Kalanke* to be misconceived.[348] However, the ECJ did not follow the Advocate General's Opinion and it narrowed the scope of the *Kalanke* ruling along the lines of the Commission's proposal, by confirming that while a rule guaranteeing 'absolute and unconditional priority' for women was impermissible, a softer quota which allowed for individual consideration of circumstances would fall within the existing terms of Article 2(4).

The *Marschall* case concerned a German regional law which provided that where there were fewer women than men in a higher grade post in a career bracket, women were to be given priority for promotion in the event of equal suitability, competence, and professional performance unless reasons specific to an individual male candidate tilted the balance in his favour. In contrast with the *Kalanke* litigation, in which the only intervening Member State was the UK in support of the applicant's challenge against the German law, five governments intervened in *Marschall* to support the compatibility of the positive action legislation with EU law. Only the UK and France opposed it. The ECJ distinguished the rule in *Kalanke* from the *Marschall* rule by reference to its 'saving clause',[349] and adopted a more nuanced view of the 'equal' chances of men and women on the labour market.

Case C–409/95 **Hellmut Marschall v Land Nordrhein Westfalen**
[1997] ECR I–6363

THE ECJ

29. As the Land and several governments have pointed out, it appears that even where male and female candidates are equally qualified, male candidates tend to be promoted in preference to female candidates particularly because of prejudices and stereotypes concerning the role and capacities of women in working life and the fear, for example, that women will interrupt their careers more frequently, that owing to household and family duties they will be less flexible in their working hours, or that they will be absent from work more frequently because of pregnancy, childbirth and breastfeeding.

30. For these reasons, the mere fact that a male candidate and a female candidate are equally qualified does not mean that they have the same chances.

31. It follows that a national rule in terms of which, subject to the application of the saving clause, female candidates for promotion who are equally as qualified as the male candidates are to be treated preferentially in sectors where they are underrepresented may fall within the scope of Article 2(4) if such a rule may counteract the prejudicial effects on female candidates of the attitudes and behaviour described above and thus reduce actual instances of inequality which may exist in the real world.

32. However, since Article 2(4) constitutes a derogation from an individual right laid down by the Directive, such a national measure specifically favouring female candidates cannot guarantee absolute and unconditional priority for women in the event of a promotion without going beyond the limits of the exception laid down in that provision. (*Kalanke* paras 21 and 22)

33. Unlike the rules at issue in *Kalanke*, a national rule which, as in the case in point in the main proceedings, contains a saving clause does not exceed those limits, if, in each individual case, it provides

[347] Case C–409/95 *Hellmut Marschall v Land Nordrhein Westfalen* [1997] ECR I–6363.

[348] Ibid [47] of his Opinion.

[349] See also the significant role of the 'exceptional clause' in Case C–476/99 *Lommers* (n 36); Case C–380/01 *Schneider v Bundesminister für Justiz* [2004] ECR I–1389, in which the national court had applied the *Kalanke* and *Marschall* rulings to deem an Austrian law which did not contain a savings clause to be incompatible with EC law.

> for male candidates who are equally as qualified as the female candidates a guarantee that the candidatures will be the subject of an objective assessment which will take account of all criteria specific to the individual candidates and will override the priority accorded to female candidates where one or more of those criteria tilts the balance in favour of the male candidate. In this respect, however, it should be remembered that those criteria must not be such as to discriminate against female candidates.

Shortly after *Marschall*, Article 157(4) TFEU (then Article 141 EC) was amended to include the provision permitting Member States to adopt positive action 'with a view to ensuring full equality in practice between men and women in working life'. As we have seen above, Article 157(4) refers in formally neutral terms to the permissibility of providing specific advantages for the 'under-represented sex' to pursue vocational training or to compensate for career disadvantages,[350] rather than referring, as previously, to women only.[351] Although the terms of Article 157(4) TFEU, on which the positive action provisions of the more recent anti-discrimination directives are based, are not exactly the same as those of the earlier provision in Article 2(4) of Directive 76/207, the ECJ in both *Abrahamsson*[352] and *Roca Álvarez*[353] reached the same conclusion in the cases under both the Directive and Article 157(4).

In *Badeck*,[354] the ECJ followed its more permissive post-*Kalanke* approach in finding that a whole series of German public service rules designed to give priority to women in promotion, access to training, and recruitment were compatible with Article 2(4), since they contained sufficient flexibility and non-rigidity to comply with the criteria it had articulated in *Marschall*. Some of the provisions in question in *Badeck* seemed quite strong and even rather strict forms of positive action, for example the quota for training places and the rule on calling women to interview, but the ECJ did not hesitate in exempting them under Article 2(4), finding none to be 'automatic or unconditional' priority rules.

In *Briheche*, however, a French rule which exempted widows who had not remarried and were obliged to work from a rule setting an age limit for entry to competitive civil service examinations was found to constitute discrimination against widowers who had not remarried and were in the same situation.[355] According to the ECJ, such a rule automatically and unconditionally gave priority to women over men, and was not saved by Article 2(4).

In the Swedish case of *Abrahamsson*, the ECJ was asked to consider a practice which, unlike the various German provisions in *Kalanke*, *Marschall*, and *Badeck*, enabled preference to be given to a candidate of the under-represented sex who, although sufficiently qualified, did not possess qualifications equal to those of other candidates of the opposite sex.[356] The question framed by the ECJ was whether the positive action provision would permit legislation 'under which a candidate for a public post who belongs to the under-represented sex and possesses sufficient qualifications for that post must be chosen in preference to a candidate of the opposite sex who would otherwise have been appointed, where this is necessary to secure the appointment of a candidate of the under-represented

[350] In Case C–366/99 *Griesmar* (n 285), the ECJ ruled that the predecessor to Art 157(4) EC (which was Art 6(3) of the Maastricht Social Policy Agreement) could not be used to justify pay discrimination which consisted of service credits for the calculation of retirement pensions only for female workers who had had children, since this discrimination would not itself offset the disadvantages to which the careers of female civil servants were exposed.

[351] A declaration appended to the Amsterdam Treaty, however, stated that in adopting measures referred to in para 4, the Member States should 'aim at improving the situation of women in working life'.

sex and the difference between the respective merits of the candidates is not so great as to give rise to a breach of the requirement of objectivity in making appointments'.

Case C–407/98 **Abrahamsson v Fogelqvist**
[2000] ECR I–5539

THE ECJ

46. As a rule, a procedure for the selection of candidates for a post involves assessment of their qualifications by reference to the requirements of the vacant post or of the duties to be performed.

47. In paragraphs 31 and 32 of *Badeck*, cited above, the Court held that it is legitimate for the purposes of that assessment for certain positive and negative criteria to be taken into account which, although formulated in terms which are neutral as regards sex and thus capable of benefiting men too, in general favour women. Thus, it may be decided that seniority, age and the date of last promotion are to be taken into account only in so far as they are of importance for the suitability, qualifications and professional capability of candidates. Similarly, it may be prescribed that the family status or income of the partner is immaterial and that part-time work, leave and delays in completing training as a result of looking after children or dependants in need of care must not have a negative effect.

48. The clear aim of such criteria is to achieve substantive, rather than formal, equality by reducing *de facto* inequalities which may arise in society and, thus, in accordance with Article 141(4) EC, to prevent or compensate for disadvantages in the professional career of persons belonging to the under-represented sex.

49. It is important to emphasise in that connection that the application of criteria such as those mentioned in paragraph 47 above must be transparent and amenable to review in order to obviate any arbitrary assessment of the qualifications of candidates.

50. As regards the selection procedure at issue in the main proceedings, it does not appear from the relevant Swedish legislation that assessment of the qualifications of candidates by reference to the requirements of the vacant post is based on clear and unambiguous criteria such as to prevent or compensate for disadvantages in the professional career of members of the under-represented sex.

51. On the contrary, under that legislation, a candidate for a public post belonging to the under-represented sex and possessing sufficient qualifications for that post must be chosen in preference to a candidate of the opposite sex who would otherwise have been appointed, where that measure is necessary for a candidate belonging to the under-represented sex to be appointed.

52. It follows that the legislation at issue in the main proceedings automatically grants preference to candidates belonging to the under-represented sex, provided that they are sufficiently qualified, subject only to the proviso that the difference between the merits of the candidates of each sex is not so great as to result in a breach of the requirement of objectivity in making appointments.

53. The scope and effect of that condition cannot be precisely determined, with the result that the selection of a candidate from among those who are sufficiently qualified is ultimately based on the mere fact of belonging to the under-represented sex, and that this is so even if the merits of the candidate so selected are inferior to those of a candidate of the opposite sex. Moreover, candidatures are not subjected to an objective assessment taking account of the specific personal situations of all the candidates. It follows that such a method of selection is not such as to be permitted by Article 2(4) of the Directive.

54. In those circumstances, it is necessary to determine whether legislation such as that at issue in the main proceedings is justified by Article 141(4) EC.

55. In that connection, it is enough to point out that, even though Article 141(4) EC allows the Member States to maintain or adopt measures providing for special advantages intended to prevent or compensate for disadvantages in professional careers in order to ensure full equality between men and

> women in professional life, it cannot be inferred from this that it allows a selection method of the kind at issue in the main proceedings which appears, on any view, to be disproportionate to the aim pursued.

Accordingly, if measures such as job qualification criteria which indirectly favour the underrepresented sex are to be compatible with the positive action provisions of EU law, they must: (i) genuinely be designed to reduce *de facto* inequalities and compensate for career disadvantages, and (ii) be based on transparent and objective criteria which can be reviewed.

The case law does not supply a great deal of guidance on the scope of Article 157(4) for the future, and there is as yet no case law on the positive action provisions in the three more recent pieces of legislation, the Race Directive, the Framework Employment Directive, and the consolidated Gender Equality Directive. However, it seems unlikely that the *Marschall* and *Briheche* cases would be any differently decided under any of the new positive action provisions, and it seems that the existence of a savings clause of some kind will remain important for the compatibility with EU law of national positive action measures in the field of access to employment or promotion.

(D) REMEDIES

The general subject of remedies has been discussed in Chapter 8, but it is notable how many of the cases on remedies have arisen in the specific context of discrimination.

(i) *Levelling Up or Down*

In *Defrenne II*, the ECJ had appeared to reject the possibility of 'levelling down' salaries in order to comply with the equal pay principle in Article 157 (ex Article 119 EEC):

> In particular, since Article 119 appears in the context of the harmonisation of working conditions while the improvement is being maintained, the objection that the terms of this article may be observed in other ways than by raising the lowest salaries may be set aside.[357]

Subsequently, in the context of social security, the Court in *FNV*, having ruled that Article 4(1) of Directive 79/7 was directly effective from the date on which it should have been implemented, went on to elaborate the proper 'point of reference' pending such proper implementation:

> It follows that until such time as the national government adopts the necessary implementing measures, women are entitled to be treated in the same manner, and to have the same rules applied to them, as men who are in the same situation, since, where the directive has not been implemented, those rules remain the only valid point of reference.[358]

This formula has since been repeated in many other cases concerning transitional measures where there has been previous discrimination, including cases where the discrimination was contained in legislative measures as well as in collective bargaining agreements.[359] However, once the legislature or the employer responsible for the discrimination takes measures to abolish the discrimina-

[357] Case 43/75 *Defrenne II* (n 84) [15].
[358] Case 71/85 *FNV* (n 182) [22].
[359] See, eg, Case C–377/89 *Cotter and McDermott v Minister for Social Welfare* [1991] ECR I–1155, [18]; Case 102/88 *Ruzius Wilbrink v Bestuur van de Bedrijfsvereniging voor Overheidsdiensten* [1989] ECR 4311,[20]; Case C–184/89 *Nimz* (n 28); Case C–33/89 *Kowalska* (n 25).

tory provisions, there is no 'levelling-up' requirement. Although this was not clear from the original *Defrenne II* ruling, the ECJ ruled in *Coloroll* that when action is taken to eliminate sex discrimination, the benefits may be abolished altogether rather than being provided for both sexes.[360]

(ii) *Limitations on Damages*

In *Emmott*,[361] *Cotter*,[362] *Marshall II*,[363] and *Pontin*[364] the ECJ stressed the importance of ensuring the effectiveness of EU equality law, by requiring the provision of adequate national remedies. In all four cases, the Court stated that particular national rules, both procedural and substantive, must be set aside where they have the effect of depriving an aggrieved person of an effective remedy. In *Cotter*, the rule in question was a principle of unjust enrichment which would have barred the plaintiff's remedy; in *Marshall II* it was a ceiling on damages in a statute and a prohibition on the award of interest by certain tribunals; in *Emmott*, it was a time limit within which proceedings had to be brought; and in *Pontin* it was a fifteen-day time limit for pregnant women dismissed from employment during pregnancy combined with a provision barring pregnant women from obtaining damages that were available to other employees. In *Bulicke*,[365] an age discrimination case decided under Directive 2000/78, the Court held that a period of two months for submitting a claim did not appear liable to render practically impossible or excessively difficult the exercise of rights conferred by EU law, given that the starting point for the time limit was the moment at which the worker has knowledge of the alleged discrimination.[366]

In *Coote*, the ECJ cited Article 6 of the ECHR while underscoring the fundamental right of access to court, and ruled that the principle of judicial control must extend also to retaliatory measures adopted by an employer in reaction to legal proceedings brought against it for sex discrimination, even after the employment relationship has ended.[367] Further, the requirement to do all that is necessary to give effect to EU equal treatment law applies not just to the national courts, following *Von Colson*,[368] but also to those authorities, such as trustees, who are responsible for the scheme in question, to use all the means available to them under domestic law.[369]

We have seen in Chapter 8 too, however, that the principle in *Emmott* was limited by subsequent rulings such as *Johnson II*, *Texaco A/S*, and *Steenhorst-Neerings*.[370] In these cases the ECJ ruled that national legislation which provided that benefits would not be payable retroactively for more than one year before the date on which they were claimed was compatible with EU law. Subsequently in *Magorrian*, however, the Court ruled that a national measure which provided that the right to be admitted to membership of an occupational pension scheme, from which the applicants had previously been excluded on indirectly discriminatory grounds, should only have effect from a date no earlier than two years before the institution of proceedings was incompatible with EU law, since it would deprive the applicants of an adequate remedy.[371]

[370] Case C–338/91 *Steenhorst-Neerings* (n 174); Case C–410/92 *Johnson v Chief Adjudication Officer (No 2)* [1994] ECR I–5483, [26]; Cases C–114–115/95 *Texaco A/S v Havn* [1997] ECR I–4263.

[371] Case C–246/96 *Magorrian* (n 57); Case C–78/98 *Preston v Wolverhampton Healthcare NHS Trust* [2000] ECR I–3201 on the justifiability of a six-month period following the termination of employment within which a claim for membership of an occupational pension scheme must be brought.

The Court distinguished the rules in the various cases on the basis that, whereas those in *Steenhorst-Neerings* and *Johnson II* had merely limited the period in respect of which backdated benefits could be obtained, the rule in *Magorrian* had the effect of preventing the entire record of service of the employees in question from being taken into account for the purpose of calculating the pension benefits which would be payable even after the date of the claim. Moreover in *Levez*, in a kind of compromise between the more generous reasoning in the *Emmott* ruling and the more conservative reasoning underpinning *Steenhorst-Neerings*, the ECJ ruled that a two-year limit on arrears of damages could not be applied to the applicant's case on account of the role played by her employer's deception in the delay occasioned.[372]

The scope of the principle of adequate compensation laid down in *Marshall II* was further circumscribed by the ruling in *Sutton*, where the ECJ distinguished claims for social security arrears, which had been denied on a discriminatory basis, from damages for discriminatory dismissal, and explained why a fixed limitation on the amount recoverable would be compatible with EU law in the former but not the latter situation.[373] On the ECJ's reasoning, an award of damages for discriminatory dismissal was concerned with compensation for harm and the restoration of equal treatment, and thus must be commensurate with the loss suffered, whereas the award of arrears of social security benefits did not constitute reparation or compensation for damage sustained, even where those benefits had been denied in a discriminatory way, so that the sum could more readily be limited or restricted by the state in the interest of matters such as financial balance. In *Draehmpaehl*, however, the Court made clear that the ruling in *Marshall II* did not mean that *any* ceiling on the maximum amount of a compensatory award for discrimination would be in breach of EU law.[374]

(iii) *Broadening the Individual Focus of Remedial Provisions*

Many of these consequences of the ECJ's remedial jurisprudence have been integrated into the anti-discrimination legislation, including in Directive 2006/54 and the Article 19 Directives. Indeed, all of the EU anti-discrimination legislation adopted since 2000 exhibits an enhanced emphasis on the active promotion of equal treatment and prevention of discrimination, as well as on questions of compliance, remedies, and enforcement. The traditional, individual-rights-based legal approach to remedies has been broadened to include strategies of equality bodies and other collective actors such as the social partners and NGOs in the endeavour to redress discrimination.

Under the Article 19 directives, judicial or administrative procedures must be made available to all persons who consider themselves to have been discriminated against.[375] Article 7(2) of Directive 2000/43 and Article 9(2) of Directive 2000/78 require Member States to ensure that associations or organizations with a legitimate interest may engage, either on behalf or in support of the complainant, in judicial or administrative procedures. Article 13 of the Race Directive 2000/43 also contains a provision which is not to be found in the Framework Employment Directive 2000/78, which requires Member States to designate or establish bodies for the promotion of equal treatment. The powers of such designated bodies must include the provision of assistance to victims of discrimination in proceedings brought, and they must conduct surveys and publish reports on the situation of racial and ethnic discrimination in their Member State. All of the Directives require protection against retaliation or victimization of complainants.

[372] Case C–326/96 *Levez v Jennings Ltd* [1998] ECR I–7835; T Connor, Note (1999) 24 ELRev 300.

[373] Case C–66/95 *R v Secretary of State for Social Security, ex p Eunice Sutton* [1997] ECR I–2163.

[374] Case C–180/95 *Draehmpaehl v Urania Immobilienservice* [1997] ECR I–2195. Here a maximum compensatory award of three months' salary could be adequate where the candidate, who had been ruled ineligible for a job on grounds of sex, was less well qualified than the successful candidate and so would not have obtained the job. The ruling is effectively enshrined now in Art 18 of Dir 2006/54.

[375] Art 7 of Dir 2000/43 and Art 9 of Dir 2000/78.

Reflecting the broadening of the anti-discrimination regime to include certain forms of collective as well as individual redress, the ECJ ruled in *Feryn*[376] that the general rule requiring effective, proportionate, and dissuasive sanctions in Article 15 of the Race Directive applies also in cases brought by one of the equality bodies established under Article 13, where there is no identifiable victim. Sanctions in such cases may include a finding of discrimination by the domestic court in conjunction with an adequate level of publicity, a prohibitory injunction, an order to an employer to cease the discriminatory practice, a fine or an award of damages to the body brining the proceedings.[377]

The anti-discrimination Directives thus broadly reflect the principle of national procedural autonomy discussed in Chapter 8. Member States are to lay down rules on sanctions and to take all measures necessary to ensure that they are applied. Sanctions may be applied under criminal or civil law and may comprise the payment of compensation to the victim. Any sanctions chosen, however, must be effective, proportionate, and dissuasive.

(iv) *The Burden of Proof*

One final remedial issue which plays an important role in the anti-discrimination field is the burden of proof. We have seen that in the area of sex equality the EU built on the ECJ's case law by introducing a burden of proof directive, the provisions of which have now been integrated into the consolidated Gender Equality Directive 2006/54. Article 19(1) of Directive 2006/54 imposes a requirement on Member States to ensure that, where an employee establishes 'facts from which it may be presumed that there has been direct or indirect discrimination', it is for the respondent to prove that there has been no breach of the principle of equal treatment. The Article 19 directives also contain a virtually identical provision regarding the burden of proof. Article 10 of Directive 2000/78[378] provides:

> When persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

These provisions reflect the fact that there are often significant obstacles facing a complainant who wishes to challenge discriminatory practices in legal or administrative proceedings, in particular in establishing proof that discrimination has in fact occurred.

The principle of burden-shifting set out in these legislative provisions was initially laid down by the ECJ in its sex equality case law. In *Danfoss,* discussed above, the employer implemented a system of individual pay supplements in a way that made it impossible for female employees to identify the reasons for a difference between their pay and that of their male colleagues doing the same work.[379] The Court held that where an employer applied a system of pay which was totally lacking in transparency, and where statistical evidence indicated that the average pay for women was less than for men, it was for the employer to provide evidence that the pay difference was not discriminatory.[380] In *Rinner-Kühn*,[381] despite the Advocate General's argument that no presumption of indirect discrimination should arise in the case of national *legislative* provisions, on the ground that they could be presumed

[376] Case C–54/07 *Feryn* [2008] ECR I–5187, [35]–[40].

[377] Ibid [59]. See also pending Case C–571 *Servet*, in which an Italian court has asked whether this provision requires a national court to order the cessation of all infringements affecting the persons discriminated against, even if they do not form part of the dispute.

[378] The relevant provision of Dir 2000/43 is Art 8.

[379] Case 109/88 *Danfoss* (n 127).

[380] Ibid [16].

[381] Case 171/88 *Rinner-Kühn v FWW Spezial-Gebäudereinigung GmbH* [1989] ECR 2743.

to take into account many social, economic, and political circumstances other than the adverse effects on women as compared with agreements made by employers, the ECJ disagreed. While the initial onus was on the employee, save in a case like *Danfoss* where the employer's system was insufficiently transparent, to show that those receiving lower payments were predominantly or disproportionately women, the onus then shifted to the employer to justify such indirect discrimination without the employee having to impute a discriminatory intent or to demonstrate that the pay policy was in some way based on sex.[382]

It is particularly difficult for complainants to prove discrimination in situations where certain professions are predominantly female while others, who are more highly paid, are predominantly male. The Court dealt with this problem in the *Enderby* case.

Case C–127/92 **Enderby v Frenchay Health Authority and the Secretary of State for Health**
[1993] ECR I–5535

Enderby, who was employed as a speech therapist by the defendant authority, complained of sex discrimination. She argued that members of her profession, which was overwhelmingly a female profession, were paid appreciably less well than members of comparable professions whose jobs were of equal value to hers. She cited the higher pay received by clinical psychologists and pharmacists, since these were professions in which, at an equivalent professional level, there were more men than women. The Court of Appeal referred a number of questions to the ECJ, and having cited its rulings on the burden of proof in *Bilka* and *Danfoss* (discussed above), the ECJ continued:

THE ECJ

15. In this case, as both the FHA and the United Kingdom observe, the circumstances are not exactly the same as in the cases just mentioned. First, it is not a question of *de facto* discrimination arising from a particular sort of arrangement such as may apply, for example, in the case of part-time workers. Secondly, there can be no complaint that the employer has applied a system of pay wholly lacking in transparency since the rates of pay of NHS speech therapists and pharmacists are decided by regular collective bargaining processes in which there is no evidence of discrimination as regards either of those two professions.

16. However, if the pay of speech therapists is significantly lower than that of pharmacists and if the former are almost exclusively women while the latter are predominantly men, there is a *prima facie* case of sex discrimination, at least where the two jobs in question are of equal value and the statistics describing that situation are valid.

17. It is for the national court to assess whether it may take into account those statistics, that is to say, whether they cover enough individuals, whether they illustrate purely fortuitous or short-term phenomena, and whether, in general, they appear to be significant.

18. Where there is a *prima facie* case of discrimination, it is for the employer to show that there are objective reasons for the difference in pay. Workers would be unable to enforce the principle of equal pay before national courts if evidence of a *prima facie* case of discrimination did not shift to the employer the onus of showing that the pay differential is not in fact discriminatory.

Although the reference had been made from the national court on the assumption that the two jobs were of equal value, *Enderby* illustrates the problem of establishing indirect discrimination in

[382] J Shaw, 'Sick Pay for Cleaners' (1989) 14 ELRev 428, for criticism of the AG's argument and the difficulties it would pose for employees.

the sense of showing that work which is performed predominantly by women is undervalued in comparison to work which is performed predominantly by men.[383] In the case of part-time and full-time workers, it is clear that the actual tasks being done are the same, whereas in the case of two distinct types of work and in the absence of a job-classification scheme, it is considerably more difficult to establish this. The same problem is likely to arise in cases of discrimination on the basis of racial or ethnic origin, in situations where there is *de facto* racial segregation rather than sex-segregation in the workforce.

The situation is more complex still in a situation where the average pay of several groups is compared, and where, although the highest paid group consists principally of one category of persons (in this example, women), so also does the lowest paid group. This arose in the *Royal Copenhagen* case, in which it was argued that the system of piece-work pay schemes, in which pay depends largely on the individual output of each worker, led to indirect discrimination against women.[384] The ECJ ruled that the mere finding that the average pay, within such a pay scheme, of a group of workers consisting predominantly of women was appreciably lower than the average pay of a group of predominantly male workers carrying out work of equal value would not be sufficient to establish indirect pay discrimination. This was because, so long as the same unit of measurement was used for the two groups, a matter which was for the national court to assess, the difference in pay received could be due to their different individual output. However, the Court went on to cite its reasoning in *Enderby* and *Danfoss* concerning the situations in which the burden of proof would shift to the employer to establish that there was no discrimination or that it was justified. On the facts of the *Royal Copenhagen* case, the burden of proof might indeed shift if the pay consisted in part of a variable element, depending on each worker's output, and it was not possible to identify the factors determining the unit of measurement used to calculate this variable element.[385]

(E) MAINSTREAMING

The idea of mainstreaming is the integration of a certain set of norms or concerns into all policies. The EU has moved gradually towards mainstreaming equality and non-discrimination concerns throughout other EU laws and policies. As with many other issues we have seen in this chapter, the move began in the area of sex and gender equality, and the mainstreaming approach is most developed in the gender equality context.[386] This commitment to gender mainstreaming is now enshrined in Article 8 TFEU which declares that in all of the activities listed 'the Union shall aim to eliminate inequalities, and to promote equality, between men and women'.

Recent years have seen, albeit to varying degrees, the beginnings of a mainstreaming approach to the other grounds of discrimination such as racial or ethnic origin,[387] disability,[388] and sexual orientation.[389] A commitment to mainstreaming these other grounds has been added by the Lisbon Treaty into Article 10 TFEU, which declares that 'in defining and implementing its policies and activities, the Union shall aim to combat discrimination based on sex, racial or ethnic origin, religion or

belief, disability, age or sexual orientation'. As yet, however, it is fair to say that only in the field of gender has there been a reasonably thorough and comprehensive attempt to develop a policy of mainstreaming, and that the approach remains as yet underdeveloped in relation to the other grounds of discrimination.

9 CONCLUSIONS

i. EU anti-discrimination and equality law has undergone significant transformation over the last decade and a half, growing from a narrowly tailored body of law concerned with employment equality between men and women to a broader regime addressing a variety of forms of discrimination on a range of other specified grounds. While most of the legislation, case law, and policy programmes still concern gender equality, the two Article 19 directives covering race, religion, sexual orientation, age, and disability have begun to generate litigation and to stimulate policy mobilization across the EU.

ii. The body of EU sex equality law is complex and differentiated, and despite significant expansion and the move towards mainstreaming, it remains strongly focused on labour market equality. The main, consolidating Gender Equality Directive 2006/54 is supplemented by issue-specific legislation on social security, pregnancy, parental leave, part-time work, and access to commercial services. There is a particularly detailed body of case law governing equal pay, which draws subtle and complicated distinctions between pay, social security, and conditions of work, and there is a large body of case law on many other aspects of gender equality law.

iii. Despite the similarity of many of the provisions and concepts within the Gender Equality Directives and the two Article 19 anti-discrimination directives, the scope and nature of EU equality law are far from uniform. While a general principle of equal treatment has been recognized by the ECJ, and while the Charter of Fundamental Rights contains a broader prohibition of discrimination on any ground, there is specific EU legislative protection only against discrimination on the grounds of sex, race, religious belief, disability, age, and sexual orientation. Further, there remains a kind of hierarchy of protection amongst these grounds, with gender and race (in different ways) at the top of the hierarchy, age near the bottom, and sexual orientation, religion/belief, and disability somewhere in between. The Commission's attempt to address the uneven scope of protection by proposing a new Equal Treatment Directive under Article 19 seems unlikely to succeed, given Member State opposition in the Council. However, the Council did, after many years of discussion, eventually adopt Framework Decision 2008/913/JHA requiring Member States to criminalize racist and xenophobic speech and expression.

iv. The important common provisions of the EU various anti-discrimination laws include (a) the imposition of positive as well as negative obligations on public as well as private actors; (b) a broad prohibition against direct and indirect discrimination, including harassment; (c) permission for 'positive action' measures to be adopted; (d) reversal of the burden of proof on a *prima facie* showing of discrimination, (e) robust remedial requirements, including a more concerted emphasis on dialogue and compliance to supplement other legal remedies, including through the involvement of equality bodies, social partners, and NGOs with an emphasis on collective as well as individual mechanisms. (f) The requirement of reasonable accommodation has so far been introduced only in the field of disability discrimination. (g) Most forms of discrimination, even direct discrimination, can be justified on a range of grounds, subject to the requirement of proportionality. The grounds for justifying indirect discrimination, and for justifying all forms of age discrimination, are particularly expansive.

v. More generally, the beneficial impact of EU anti-discrimination law is inevitably confined, not only by the inherent limits of the formal concept of equality which has often informed EU lawmaking in this field, and by the strong emphasis on employment and market-related discrimination, but also by the limits of law's capacity to bring about change in the face of entrenched socio-economic hierarchies, inequalities, prejudices, and gender roles. The continued entrenchment of discrimination against non-EU nationals and the close relationship between race discrimination and migration policy have also drawn criticism.

vi. Assessments of the contribution of EU equal treatment law, including that of the ECJ, have been mixed. Some perceive EU law as having been progressive and important in assisting social change in this field, while others have noted its ambivalence as regards positive action measures, the unwillingness to extend protection in certain fields and for certain grounds, the market-based focus, the expansion of grounds of justification, and (in the field of gender equality) the inconsistent positions taken by the Court on issues relating to the reconciliation of work and family life.

AFSJ: EU CRIMINAL LAW

1 CENTRAL ISSUES

i. The Area of Freedom, Security, and Justice (AFSJ) is now to be found in Title V of Part Three of the TFEU. Prior to the Lisbon Treaty the AFSJ was divided between Title VI EU, which was the Third Pillar, and Title IV EC.[1] The AFSJ was therefore integral to the very idea of the three-pillar structure that characterized the Treaty architecture prior to the Lisbon Treaty.

ii. The subject matter dealt with by these provisions is important and politically sensitive, as it includes police and judicial cooperation in criminal matters, visas, asylum, immigration, and judicial cooperation in civil matters. These are issues of considerable complexity, and it is not therefore possible within the confines of this chapter to cover the detailed regulatory regime that pertains in these areas.[2] The approach adopted is therefore as follows.

iii. Section 2 considers the development of the three-pillar structure introduced by the Maastricht Treaty, since it is impossible to understand the current law without an appreciation of the forces that shaped it.

iv. This leads naturally to Section 3, where the focus is on the rationale for the inclusion of the subject matter that comprises the AFSJ. The AFSJ is now part of the normal Treaty structure, but this still invites inquiry as to the rationale for EU involvement, and more precisely what it is that links together the different issues that come within the AFSJ. The 'official view' is that the policies that make up the AFSJ were 'compensatory measures' made necessary by EU provisions on the free movement of persons, although commentators differ as to how far this provides a full explanation for EU involvement.

v. Section 4 considers the general principles in the Lisbon Treaty that apply to all areas that comprise the AFSJ, including: Treaty objectives, competence, role of the principal EU institutions, judicial role, and an outline of the opt-outs that apply to the UK.

vi. The remainder of the chapter looks in more detail at criminal law and procedure. It would be impossible even within these confines to give detailed treatment to all criminal law measures,

[1] In this chapter references to Treaty Arts from the pre-Lisbon TEU will be signified as, for example, Art 35 EU, in order to differentiate them from the TEU provisions of the Lisbon Treaty, which will be represented as, for example, Art 6 TEU.

since that would require a book in itself. The objective is rather to reveal at a more general level the rationale for the EU's involvement in the criminal sphere, the regulatory techniques used to that end, and the challenges posed by such intervention.

vii. Thus Section 5 considers the EU's competence over criminal law and procedure prior to the Lisbon Treaty, including the important contributions made by the ECJ. This is followed in Section 6 by a close look at the Lisbon Treaty provisions on criminal law and procedure and on police and judicial cooperation. Section 7 revisits the objectives of the AFSJ in the post-Lisbon world, with specific focus on criminal law and procedure.

viii. Section 8 then considers some of the very real challenges posed by EU involvement in this area, including those of a political, constitutional, and legal nature. These challenges are exemplified by the European Arrest Warrant, the European Evidence Warrant, the draft European Investigation Order, and the EU rules on organized crime.

2 MAASTRICHT TO LISBON

(A) MAASTRICHT: THREE PILLARS

Intergovernmental cooperation to combat matters such as terrorism, cross-border crime, and breach of external frontiers did not begin with the Maastricht Treaty. Numerous mechanisms for cooperation pre-dated the Treaty on European Union. Thus, for example, the Trevi Group was created in 1975 by the Rome European Council to coordinate the fight against terrorism, and its mandate was extended in 1985 to encompass serious international crimes such as drug trafficking, bank robbery, and arms trafficking. A further prominent example was the Schengen Agreement 1985, designed to remove border controls among the participating states, which was supplemented by the Schengen Implementing Convention 1990.

It was however the Treaty on European Union (TEU) which formalized the pillar structure. It was signed by the Member States in Maastricht in February 1992.[3] It was initially rejected by Denmark in a referendum, but after several 'concessions' to the Danish Government a second referendum yielded a narrow majority in favour of ratification. A challenge to the constitutionality of ratification failed before the German Federal Supreme Court,[4] and the Treaty entered into force in November 1993.

The TEU established the 'three-pillar' structure for what was henceforth to be the European Union, with the Communities as the first of these pillars and the EEC Treaty being officially renamed the European Community (EC) Treaty.[5] There were originally seven titles in the TEU: Title I included the 'common provisions', which set out the basic objectives of the TEU. Titles II, III, and IV covered the 'First Pillar' amendments to the EEC, ECSC, and Euratom Treaties respectively. Title V created the Second Pillar of the Common Foreign and Security Policy (CFSP), Title VI the Third Pillar of Justice and Home Affairs (JHA), and Title VII contained the final provisions.

The original formulation of the Justice and Home Affairs Pillar under Articles K.1 to K.9 TEU governed policies on matters such as such as asylum, immigration, and 'third country' nationals, which were later integrated into the EC Treaty by the Treaty of Amsterdam. However, it also included cooperation on a range of international crime issues and various forms of judicial, customs, and police cooperation, including the establishment of a European Police Office (Europol) for exchanging information.[6]

[5] Ch 1.
[6] Art K.1 EU.

Decision-making under the Third Pillar was more intergovernmental and less supranational. The Council of Ministers was given the role of adopting joint positions and drawing up agreements on the basis of Member State or Commission initiatives, acting unanimously except on matters of procedure or when implementing joint actions or agreed conventions.[7] The Commission was to be 'fully associated' and the Parliament was to be informed, its views to be 'duly taken into consideration', and it could question or recommend matters to the Council.[8] A Coordinating Committee, which became the notorious and secretive K-4 committee, was set up to help the Council, and had a role similar to that of Coreper under the EC Treaty.

(B) AMSTERDAM: THREE PILLARS MODIFIED

A major criticism of the Maastricht Treaty was that many of the policies under the JHA Pillar called for institutional provisions and legal controls that were not well-suited to the subject matter. Unlike the foreign and security policy matters under the Second Pillar, the Third Pillar involved subjects such as immigration, asylum, border controls, and constraints on movement, which touched on fundamental human rights and raised issues similar to those under the free movement provisions of the EC Treaty.

It was therefore argued that the need for openness and accountability in this policy field was much greater, requiring a full role for the European Parliament and review jurisdiction for the ECJ. Arguments for reform ranged from improving the institutional provisions under the existing JHA to absorbing the Third Pillar entirely into the Community Pillar. What emerged in the Amsterdam Treaty lay between the two, with parts of JHA being incorporated into EC Title IV, and the remaining Third Pillar provisions being subjected to a range of institutional controls closer to those under the Community Pillar.

Thus the major structural substantive change was the incorporation into the Community Pillar of a large part of the former Third Pillar on the free movement of persons, covering visas, asylum, immigration, and judicial cooperation in civil matters, which was shifted to what became Title IV, Articles 61–69 EC. The aim of this title and that of the amended Third Pillar, which covered Police and Judicial Cooperation in Criminal matters (PJCC), were similarly described, both being intended to establish 'an area of freedom, security and justice'. Further, the *acquis* of the 1985 Schengen Treaty on the gradual abolition of common border checks was integrated by a Protocol to the Amsterdam Treaty into the EU framework.[9]

While the new Title IV on the free movement of persons was part of Community law, the close legal and institutional connection between these Community policies and those of the Third Pillar was still evident, thereby highlighting the increasing complexity of the EU constitutional order, and the move away from the relative clarity of the previous Community legal order. The Area of Freedom, Security, and Justice prior to the Lisbon Treaty was thus comprised of the remodelled Third Pillar and Title IV EC.

3 RATIONALE

The three-pillar structure defined the EU's architecture from Maastricht to Lisbon. It is therefore important to reflect on the rationale for its creation. There are two related aspects to this inquiry.

[7] Art K.3 EU.

[8] Arts K.4(2) and K.6 EU.

[9] P Kuijper, 'Some Legal Problems Associated with the Communitarization of Policy on Visas, Asylum and Immigration under the Amsterdam Treaty and Incorporation of the Schengen Acquis' (2000) 37 CMLRev 345; S Peers, 'Caveat Emptor: Integrating the Schengen Acquis into the European Union Legal Order' (1999) 2 CYELS 87.

(A) RATIONALE FOR THE THREE-PILLAR STRUCTURE

Weiler argued that consociationalism was the key to understanding the three-pillar structure.[10] In pluralistic societies functional stability was normally secured by cross-cutting cleavages. This could not, however, explain such stability in societies characterized by cleavages which reinforced each other, leading to divisive conceptions of the public good. Some countries had such reinforcing social cleavage, and yet were stable nonetheless. Consociational theory sought to explain this through the behaviour of a cartel of elites, which rendered the system both functional and stable. The 'elites would share a commitment to the maintenance of the system and to the improvement of its cohesion, functionality and stability'.[11] They would also deliver the agreement or acquiescence of their constituents. These elites would commonly operate outside normal political forums, and proceed by consensual politics rather than the dictates of majority rule.

Weiler used consociational theory to explain the three-pillar structure.[12] Thus on this view the crucial factor explaining the emergence of the Second and Third Pillars was the sharply segmented nature of the politics which prevailed in these areas. For Weiler it was the very lack of substantive commonality that 'pushed the Member States to insist on this form of governance in this area'.[13]

There is however an alternative explanation, which was also acknowledged by Weiler. The Member States wished for some degree of international cooperation in these areas, but were not ready for the application of the full supranational machinery which operated in the Community Pillar. Thus the Second and Third Pillars gave the Member States an institutionalized forum in which to discuss these matters, without subjecting themselves to supranational controls. The Member States believed that such cooperation would be beneficial for reasons articulated by international relations theorists.[14] The Member States wished for some established mechanism through which they could cooperate in the areas of Common Foreign and Security Policy and Justice and Home Affairs. Setting up *ad hoc* meetings to discuss such matters is cumbersome, time-consuming, and involves heavy 'transaction costs', more especially as the number of players expands. The sensitive nature of the subject matter, touching closely as it did at the heart of traditional conceptions of sovereignty, meant however that Member States preferred the 'default position' of intergovernmentalism, thereby retaining maximum control in their own hands. The cost-benefit analysis of having supranationalism, with its attendant delegation of power to the Commission and ECJ, was therefore negative, in the sense that the benefits attendant on supranationalism in these areas were felt by the Member States to be outweighed by the costs.

(B) RATIONALE FOR SUBJECT MATTER COMPRISING AFSJ

We must also inquire into the rationale for the subject matter included under the heading of the AFSJ, and what sense of freedom, security, and justice links this material. We can begin by considering the official rationale. The following extract from the Council's website on Justice and Home Affairs

[10] J Weiler, U Haltern, and F Mayer, 'European Democracy and its Critique' in J Hayward (ed), *The Crisis of Representation in Europe* (Frank Cass, 1995).

links the need for the AFSJ to free movement of persons *and* to the inherently trans-border impact of matters such as immigration and organized crime.

Justice and Home Affairs Council[15]

When the Member States negotiated the Treaty on European Union, they drew up a list of areas of common interest. This ambitious list includes matters relating to asylum, immigration, controls at the Union's external frontiers, drugs, international fraud, civil and criminal justice, customs cooperation and police cooperation, particularly against international crime and terrorism . . . Why did they decide on such cooperation? What needs did it meet?

The creation of an area of free movement of persons must be accompanied by flanking measures to strengthen external frontiers and asylum and immigration policies

One of the prime objectives of the construction of Europe was to create a large European economic market . . . In that area without internal frontiers, goods, capital and services were to move about and be exchanged freely and without obstacles. However the fourth freedom, the free movement of persons, gave rise to problems different from those caused by the free movement of goods: problems of the internal security of each State.

Lifting the frontiers between Member States to permit people to pass freely cannot take place to the detriment of the security of the population, of public order and of civil liberties. To obviate this, flanking compensatory measures were adopted.

Strengthening the External Frontiers

By doing away with the frontiers between Member States, the latter were deprived of an important national instrument for controlling and filtering the entry and identity of persons and ensuring internal security within their territory. A person present in one State can cross the frontiers of another state without hindrance . . . To ensure the same level of security without that tool, controls at the external frontiers, ie between a Member State of the Union and a third state, need to be strengthened . . . .

. . .

The strengthening of the Union's external frontiers, a measure to compensate for the disappearance of internal frontiers, therefore requires increased cooperation between the interior and justice ministries and, more particularly, the police forces, customs and immigration services.

Immigration and the nationals of third states

Freedom of movement of persons is designed for the citizens of the European Union, ie those holding the nationality of one of the Member States. In an area without frontiers, what happens in the case of nationals of third States legally present in the territory of one of the Member States? . . . These are just some of the new questions to which cooperation in the field of justice and home affairs must provide answers.

Looked at from another angle, the disappearance of internal frontiers also raises the questions of illegal immigration or of illegal residence or employment which the Member States have to resolve together . . .

Asylum

The Member States have to agree on the very concept of political refugee in order to avoid a confusing situation in which one Member State grants asylum where another refuses it. They have to avoid a

[15] Available at www.consilium.europa.eu.

situation in which applications are made to several States at the same time. They have to cooperate in discussing the minimum guarantees to be granted to asylum applicants in the event of their expulsion and their rights during examination of an asylum application or an appeal…

The issues of the strengthening of external frontiers, immigration and asylum, which are all linked to the disappearance of internal frontiers, are very sensitive political questions for each State. They are perceived as directly affecting the sovereignty, security and people of those States. Their political culture, their legal systems and their administrative traditions and practices are often very different. That is why concerted action, comprehension and dialogue in the context of the JHA are proving to be fundamental.

Schengen and the free movement of persons

[T]he Amsterdam Treaty… integrates the Schengen acquis into the European Union framework…

The Member States of the European Union can no longer tackle certain problems in dispersed order, but must combine their efforts

Drugs, organised crime, international fraud, trafficking in human beings and the sexual exploitation of children are all problems of great concern to all the Member States of the European Union. These disorders know no frontiers. The aim of the European Union is to become an area of freedom, security and justice, and not an area for all manner of trafficking.

Drugs

[T]he consumption and trafficking of drugs are linked to other problems, such as large-scale crime or money laundering….

Organized crime

Cases of crime, terrorism and fraud can no longer be dealt with solely in a national framework, especially since the creation of a large European market…

The link between the need for the AFSJ, free movement of persons, and the inherently trans-border impact of matters such as immigration, asylum, and organized crime has been echoed by commentators.

S Lavenex and W Wallace, Justice and Home Affairs, Towards a 'European Public Order'?[16]

There were several overlapping rationales for developing common policies within the EU, emerging both from functionalist spill-over from other EU policies, and from new challenges faced by the member states… The requirements of the single market included 'free movement of persons'. Cross-border movements intensified among geographically compact, densely populated countries, as prosperity rose and communication links improved. The success of the 1992 internal market programme in removing controls on goods crossing internal frontiers focused on the remaining controls on people at the EU's internal frontiers. The further surge in border-crossing which the internal market programme encouraged also alerted law enforcement agencies to the need to agree on 'compensatory measures' to maintain public order across the EU for the movement of both the lawful and the unlawful, legal and illegal.

[16] H Wallace, W Wallace, and M Pollack (eds), *Policy Making in the European Union* (Oxford University Press, 5th edn, 2005) 460–461.

Apart from these functionalist dynamics, new domestic priorities shaped the agenda of evolving cooperation. These included concern about cross-border crime and the international mobility of criminals as well as changing patters of migration. Tightened controls on immigration from the mid-1970s onwards coincide with increasing flows from outside Europe and a global rise in the number of refugees, leading to a surge of asylum seekers arriving in western Europe…

German concerns and anxieties were a driving force in the development of common policies.

The official explanation for the emergence of the AFSJ has nonetheless been contested. It has been argued that the 'compensatory measures rationale' cannot readily explain the *restrictiveness* of the policies adopted in areas such as migration, asylum, and the like, and that the driving force behind AFSJ has in reality been security.

C Costello, Administrative Governance and the Europeanisation of Asylum and Immigration Policy[17]

[T]he compensatory measures rationale cannot provide an explanation for the restrictiveness of the policies and practices adopted. Bigo…goes so far as to describe '[t]he debate on compensatory measures and the security deficit created by the opening of the internal borders [as] one of the strongest myths of EU self-presentation'. Any internal market rationale is agnostic as to the restrictiveness or otherwise of external barriers, but simply requires the application of common rules. For example, for internal free trade in goods, there must be a common external tariff and commercial policy, but not of any particular restrictiveness. In contrast in relation to the free movement of persons…there are no common immigration rules, but rather a restrictive entry control system. The lie that this system is required by the internal free market movement is revealed in relation to the UK and Ireland's participation in a range of external border control measures without any commitment to the abolition of internal border controls.

It is moreover clear that while the official rationale played a role in the emergence of the AFSJ, this development also provided a 'new' banner through which the legitimacy of the EU could be enhanced. The 1990s was a decade in which the legitimacy of the EU came to be increasingly questioned. The Intergovernmental Conference discussions leading to the Amsterdam Treaty were shot through with soul searching concerning input and output legitimacy. The institutional regime through which the AFSJ was delivered did little to enhance input legitimacy. It nonetheless served as an appropriate vehicle through which it could be argued that the EU fostered output legitimacy. The initial establishment of the EEC had been justified in large part in terms of outcomes, increased peace, and prosperity. It was therefore neither fortuitous, nor surprising, that the AFSJ should be justified in similar terms, more especially because fears relating to crime and the like regularly featured high in Eurobarometer polls for EU citizens. Consider in this respect the following extract from the Tampere European Council in 1999.

Tampere European Council[18]

Towards a Union of Freedom, Security and Justice: The Tampere Milestones

1. From its very beginning European integration has been firmly rooted in a shared commitment to freedom based on human rights, democratic institutions and the rule of law. These common

[17] H Hofmann and A Türk (eds), *EU Administrative Governance* (Edward Elgar, 2006) 289.
[18] 15–16 Oct 1999, 2–3.

values have proved necessary for securing peace and developing prosperity in the European Union. They will also serve as a cornerstone for the enlarging Union.

2. The European Union has already put in place for its citizens the major ingredients of a shared idea of prosperity and peace: a single market, economic and monetary union, and the capacity to take on global political and economic challenges. The challenge of the Amsterdam Treaty is now to ensure that freedom, which includes the right to move freely throughout the Union, can be enjoyed in conditions of security and justice accessible to all. It is a project which responds to the frequently expressed concerns of citizens and has a direct bearing on their daily lives.
3. This freedom should not, however, be regarded as the exclusive preserve of the Union's own citizens. Its very existence acts as a draw to many others world-wide who cannot enjoy the freedom Union citizens take for granted. It would be in contradiction with Europe's traditions to deny such freedom to those whose circumstances lead them justifiably to seek access to our territory. This in turn requires the Union to develop common policies on asylum and immigration, while taking account the need for a consistent control of external borders to stop illegal immigration and to combat those who organise it and commit related international crimes....
4. The aim is an open and secure European Union, fully committed to the obligations of the Geneva Refugee Convention and other relevant human rights instruments....
5. The enjoyment of freedom requires a genuine area of justice, where people can approach courts and authorities in any Member State as easily as their own....
6. People have the right to expect the Union to address the threat to their freedom and legal rights posed by serious crime...The joint mobilisation of police and judicial resources is needed to guarantee that there is no hiding place for criminals or the proceeds of crime within the Union.
7. The area of freedom, security and justice should be based on the principles of transparency and democratic control...
8. The European Council considers it essential that in these areas the Union should also develop a capacity to act and be regarded as a significant partner on the international scene...

The discussion thus far has highlighted the rationales for the development of the AFSJ. The extent to which the issues dealt with therein relating to immigration, border controls, the fight against organized crime, asylum, and the like can be considered to be a *coherent* package has however been contested by Walker.

N Walker, In Search of the Area of Freedom, Security and Justice: A Constitutional Odyssey[19]

To begin with, we might speak of a basic *thematic* coherence in the area of FSJ—a fundamental unity of subject matter. Yet unlike many of the major domains of European law such as the internal market...the subject matter assembled under the AFSJ does not form a 'natural' unity in terms of a clearly defined overall project. Although analogies have often been drawn between the '1992' Single Market project and the ASFJ, the two are not comparable in terms of precision and internal consistency. The '1992' project concerned a well-defined set of objectives directed towards a particular *finalité*...In

[19] Walker (n 2) 5–7, italics in the original.

contrast, the AFSJ, even if part of its initial Maastricht inspiration was the attempt to supply a menu of compensatory measures concerning the control of movements across the EU's external borders and the development of new capacities for the internal monitoring of populations in the light of the supposed 'security deficit' attendant upon the completion of an internal market . . . has no *finalité* other than continuing adherence to a highly abstract triumvirate of values . . .

But if there is no clearly defined overall project implicit in the very idea of AFSJ, perhaps there is a kind of *historical* coherence in terms of a tried-and-tested pattern of common treatment . . . Here, too, only a weak argument can be made. The Treaties tell us that AFSJ is concerned, on the one hand, under Title IV EC, with 'Visas, Asylum, Immigration and Other Policies Relating to Free Movement of Persons', . . . , and on the other hand under Title VI TEU with 'Provisions on Police and Judicial Cooperation in Criminal Matters'. Yet we need only look at the variety of government departments under which these policies are traditionally organized in various European states to conclude that history lends no obvious coherence to this enterprise . . .

Another type of coherence, then, might be *institutional* coherence. Is the AFSJ characterized by a distinctive institutional methodology? Evidently, the answer must again be no . . . Under Amsterdam . . . there is a clear divide between the communitarized Title IV EC and the more state-centred rump Third Pillar under Title VI EU, even if Title IV EC remains only partly and incrementally communitarized and Title VI EU allows a greater role for EC institutions and instruments than its Maastricht predecessor . . .

Strikingly, however, institutional diversification has developed hand-in-hand with a new impetus towards *policy* coherence . . . [T]he post-Amsterdam era is clearly marked by an attempt to *construct* a new kind of policy whole out of diverse parts. To begin with, the very coining of the concept of an Area of Freedom, Security and Justice in the Treaty of Amsterdam is a statement of intent to consider the matters under Title IV EC and Title VI EU as a new policy domain, their new institutional separation notwithstanding . . . [T]he special Tampere European Council late in 1999 drew upon the new rhetoric and institutional capability in order to launch an explicit and ambitious programme of action to develop a common policy field within and across four general headings—A Common EU Asylum and Migration Policy; A Genuine European Area of Justice; A Unionwide Fight against Crime and Stronger External Action—complete with timetables and milestones.

There is force in this argument. The AFSJ is marked by institutional diversity rather than a distinctive institutional methodology, and the framers of the Amsterdam Treaty did consciously construct a new policy from diverse parts. There is nonetheless also room for disagreement with this thesis, relating to the extent to which the AFSJ is marked by thematic coherence. It is questionable whether the *finalité* of the 1992 internal market project is that much more well-defined than that of the AFSJ. We should remember in this respect that the former is ongoing, notwithstanding the temporal 'end-point' of 1992, and that there is increased contestation as to the balance between the social and the economic in internal market initiatives.[20]

4 LISBON TREATY: GENERAL PRINCIPLES

The Lisbon Treaty has had a marked impact on the Area of Freedom, Security, and Justice. The previous three-pillar system has gone, although distinct rules continue to apply to Foreign and Security Policy.[21] However the provisions concerning the AFSJ have been integrated into the main body of the Treaties. This section examines the general changes made by the Lisbon Treaty.

[20] Ch 17.
[21] Ch 10.

(A) OBJECTIVES

Article 2 TEU sets out the EU's values, and follows the corresponding provision of the Constitutional Treaty.[22]

> The Union is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities. These values are common to the Member States in a society in which pluralism, non-discrimination, tolerance, justice, solidarity and equality between women and men prevail.

The EU's objectives are contained in Article 3 TEU, which is close to, although not identical with, the analogous provision of the Constitutional Treaty.[23] The objectives listed in Article 3 TEU bear comparison with those in Article 2 EU of the previous Treaty. There are however differences as to the more precise wording and placing of the objectives. Thus, for example, it is not fortuitous that mention of the area of freedom, security, and justice has 'moved up' the list to become Article 3(2) TEU, thereby signifying its centrality to EU policy. Article 3(2) TEU is framed as follows:

> The Union shall offer its citizens an area of freedom, security and justice without internal frontiers, in which the free movement of persons is ensured in conjunction with appropriate measures with respect to external border controls, asylum, immigration and the prevention and combating of crime.

(B) TREATY ARCHITECTURE

The Lisbon Treaty completed the transition that began with the Amsterdam Treaty. The pillar system introduced by the Maastricht Treaty has been dismantled, although distinct rules still apply to the Common Foreign and Security Policy. The provisions concerning the AFSJ are no longer divided as they were prior to the Lisbon Treaty. They are grouped together in Title V of Part Three of the TFEU, which deals with 'Union Policies and Internal Actions'. Title V is located after those dealing with the internal market, free movement of goods, agriculture and fisheries, and free movement of persons, services, and capital.

The approach to the AFSJ in the Lisbon Treaty follows very closely that in the Constitutional Treaty.[24] Thus it was Working Group X on 'Freedom, Security and Justice'[25] from the Convention on the Future of Europe that strongly advocated de-pillarization, the incorporation of the Third Pillar into the main body of the Treaty, and the abolition of the distinctive categories of legal act that had previously applied to that area.

(C) COMPETENCE

The Lisbon Treaty established categories of competence for different subject matter areas.[26] The AFSJ falls within shared competence.[27] Two points should be noted about this placing, which were

[22] Art I-2 CT.
[23] Art I-3 CT.
[24] Arts III-257–277 CT.
[25] CONV 426/02, Final Report of Working Group X, 'Freedom, Security and Justice', Brussels, 2 Dec 2002.
[26] Ch 3.
[27] Art 4(2)(j) TFEU.

elaborated in the earlier discussion.First, the nature of the power sharing between the EU and the Member States can only be divined by looking at the detailed provisions of the particular area. The divide is not the same in all areas of the AFSJ. It is the particular Treaty provisions and the judicial interpretation thereof that determine the division between Member State and EU competence. This is in reality what we have always had to do to determine the boundaries between state and EU power.

Secondly, Article 2(2) TFEU stipulates that in the context of shared competence the Member State can exercise competence only to the extent that the Union has not exercised, or has decided to cease to exercise, its competence within any such area. This looks like automatic pre-emption of Member State action where the Union has exercised its competence, with the consequence that the amount of shared power held by the Member States will diminish over time. There is truth in this, subject to the following qualifications.

Member States will lose their competence within the regime of shared power only to the extent that the Union has exercised 'its' competence. Precisely what the EU's competence is within these areas can, as noted above, be divined only by considering the detailed provisions in a particular area. The pre-emption of Member State action will moreover occur only 'to the extent' that the EU has exercised its competence in the relevant area. There are different ways in which the EU can intervene in a particular area.[28] The EU may choose to make uniform regulations, it may harmonize national laws, it may engage in minimum harmonization, or it may impose requirements of mutual recognition. The scope for any Member State action will depend on which regulatory technique is used by the EU.[29]

(D) ARTICLE 67 TFEU

Article 67 TFEU is the lead provision for this Title of the Lisbon Treaty and it represents both continuity with, and modification of, the previous Treaty Articles.

> 1. The Union shall constitute an area of freedom, security and justice with respect for fundamental rights and the different legal systems and traditions of the Member States.
> 2. It shall ensure the absence of internal border controls for persons and shall frame a common policy on asylum, immigration and external border control, based on solidarity between Member States, which is fair towards third-country nationals. For the purpose of this Title, stateless persons shall be treated as third-country nationals.
> 3. The Union shall endeavour to ensure a high level of security through measures to prevent and combat crime, racism and xenophobia, and through measures for coordination and cooperation between police and judicial authorities and other competent authorities, as well as through the mutual recognition of judgments in criminal matters and, if necessary, through the approximation of criminal laws.
> 4. The Union shall facilitate access to justice, in particular through the principle of mutual recognition of judicial and extrajudicial decisions in civil matters.

Article 67 TFEU is based on Article 29 EU and Article 67 EC. There are however differences, most notably in Article 67(1) TFEU, which now provides that the AFSJ is to be secured with respect for fundamental rights and the different national legal systems and traditions. Article 67(4) is new in terms of its express recognition within the general provision that guides this area.

[28] S Weatherill, 'Beyond Preemption? Shared Competence and Constitutional Change in the European Community' in D O'Keefe and P Twomey (eds), *Legal Issues of the Maastricht Treaty* (Chancery Law Publishing, 1994) ch 2; M Dougan, 'Minimum Harmonization and the Internal Market' (2000) 37 CMLRev 853; M Dougan, 'Vive la Difference? Exploring the Legal Framework for Reflexive Harmonisation within the Single Market' (2002) 1 Annual of German and European Law 13; CONV 375/1/02, Final Report of Working Group V on Complementary Competencies, Brussels, 4 Nov 2002, 12–13.

[29] See also Protocol (No 25) On Shared Competence.

(E) INSTITUTIONS

The Lisbon Treaty specifies roles for the principal institutional players and for the Member States.

(i) *European Council*

Article 68 TFEU is novel and provides that the European Council shall define the strategic guidelines for legislative and operational planning within the area of freedom, security, and justice. This is however the Treaty catching up with reality, since the European Council has been performing this function for a decade, through the five-year programmes, Tampere,[30] Hague,[31] and most recently Stockholm.[32] The Commission and the Justice and Home Affairs Council provide detailed input that fashions the guidelines agreed by the European Council.

(ii) *Council*

The Council is central to all that happens within the AFSJ. It has been the source of many legislative initiatives in this area, and this will continue in the future. It helps to structure the objectives of AFSJ policy, which are then fed into the European Council. The 'General Provisions' of the Lisbon Treaty on the AFSJ address the role of the Council in the following respect. Article 74 TFEU empowers the Council to adopt measures to ensure administrative cooperation between the relevant departments of the Member States in the areas covered by this Title, as well as between those departments and the Commission.

Article 70 TFEU is novel and reflects concern over Member States' implementation of AFSJ policies and the efficacy of mutual recognition. It provides that, without prejudice to the Treaty provisions on enforcement actions,[33] the Council may, on a proposal from the Commission, adopt measures laying down arrangements whereby Member States, in collaboration with the Commission, evaluate the implementation of AFSJ policies, in particular in order to facilitate full application of mutual recognition.

(iii) *Council Committees*

Article 71 TFEU deals with support structures within the Council. The volume and nature of AFSJ initiatives has always necessitated specialist committee support for the Council.[34] There were essentially three layers of such support beneath the Justice and Home Affairs Council. Coreper provided the highest level of support, with the lowest level coming from working groups of specialists,[35] which operated in all major areas of AFSJ policy. There were however also groups which operated between Coreper and the working parties. In relation to the Third Pillar there was the Article 36 Committee, also known as CATS (*Comite de l'Article Trente Six*). In relation to Title IV EC there was SCIFA, the Strategic Committee on Immigration Frontiers and Asylum, SCIFA + which included national heads of border control, a Committee on Civil Law Matters, and a High Level Working Group on Asylum and Migration.[36]

[30] Tampere European Council, 15–16 Oct 1999.
[31] Brussels European Council, 4–5 Nov 2004.
[32] Council 16484/1/09, Brussels, 25 Nov 2009.
[33] Arts 258, 259, and 260 TFEU.
[34] F Hayes-Renshaw and H Wallace, *The Council of Ministers* (Palgrave, 2nd edn, 2006) 86–87.
[35] H Aden, 'Administrative Governance in the Fields of EU Police and Judicial Co-operation' in Hofmann and Türk (n 17) 351.
[36] Lavenex and Wallace (n 16) 468.

Article 71 TFEU continues this tradition of committee support. It provides for a standing committee to be set up within the Council in order to ensure that operational cooperation on internal security is promoted and strengthened within the Union. It is, without prejudice to Coreper, to facilitate coordination of the action of Member States' competent authorities. Representatives of the Union bodies, offices, and agencies concerned may be involved in the committee proceedings, and the European Parliament and national parliaments are to be kept informed of the proceedings.

The abbreviation chosen for this new committee is COSI, which has already prompted comment as to whether the title will match reality.[37] COSI is to facilitate, promote, and strengthen coordination of operational actions between EU Member States in the field of internal security.[38] This coordination role will concern, *inter alia*, police and customs cooperation, external border protection, and judicial cooperation in criminal matters relevant to operational cooperation in the field of internal security. COSI is also to be responsible for evaluating the general direction and efficiency of operational cooperation, so as to identify possible shortcomings and propose recommendations to address them. It can invite representatives from Eurojust, Europol, Frontex, and other relevant bodies to its meetings. COSI is not however to be involved in preparing legislative acts, nor in the conduct of operations. Coreper remains responsible for preparing legislative acts with the help of the different Council working groups.

(iv) *European Parliament*

The ordinary legislative procedure is the norm for areas that fall within the AFSJ. This is to be welcomed, subject to the concerns expressed earlier as to modification of this procedure through the use of trilogues.[39] These concerns are especially prevalent in relation to the AFSJ, since the great majority of legislative measures are now subject to these trilogue arrangements, with a consequential loss of transparency and opportunity for democratic input.[40] Article 76 TFEU provides that legal acts passed in relation to crime and police cooperation, and measures enacted pursuant to Article 74 TFEU, can be made on a proposal from the Commission or on the initiative of a quarter of the Member States.

(v) *National Parliaments*

Article 69 TFEU stipulates that national parliaments ensure that the proposals and legislative initiatives submitted concerning crime and police cooperation comply with the principle of subsidiarity, in accordance with the arrangements laid down by the Protocol. This provision is new, and reflects the sensitivity of EU involvement in these areas. National parliaments would, however, even in the absence of Article 69, have been able to review such measures for compliance with subsidiarity, pursuant to Article 12 TEU.

(vi) *Member States*

Articles 72–73 TFEU address the role of the Member States. Article 72 TFEU reiterates the injunction in the previous Treaty that the AFSJ Title shall not affect the exercise of Member State responsibilities

with regard to maintenance of law and order and the safeguarding of internal security. This proposition has political resonance and is not without substance, but does not reflect reality. The AFSJ Title is an area of shared competence. This necessarily means that Member State responsibilities for law and order will be circumscribed by EU measures. The nature and degree of this circumscription will perforce depend on the particular measure adopted by the EU.

Article 73 TFEU provides that it shall be open to Member States to organize between themselves and under their responsibility such forms of cooperation and coordination as they deem appropriate between the competent departments of their administrations responsible for safeguarding national security.

(f) UNION COURTS

(i) *Scope of Jurisdiction*

The Lisbon Treaty has brought all provisions concerning the AFSJ within the normal Treaty structure, with the consequence that the jurisdiction of the Union Courts extends to all EU law unless the Treaties stipulate to the contrary. The injunction that the Court of Justice of the European Union shall ensure that in the interpretation and application of the Treaties the law is observed[41] is therefore of general application, save where it is limited by specific Treaty provisions.

The Community Courts' jurisdiction over the Third Pillar had been limited,[42] notwithstanding teleological interpretation which stretched the limits to afford the maximum possible judicial oversight. Thus jurisdiction to give preliminary rulings was dependent on a Member State making a declaration accepting such jurisdiction, and it could also specify which national courts should be able to make such a preliminary reference. There were limits on legality review. Enforcement actions by the Commission were not available, and there was no provision for damages. The Community Courts' jurisdiction in relation to the other aspect of the AFSJ, dealing with visas, asylum, immigration, and other policies related to free movement of persons,[43] had also been constrained, since only national courts of last resort could send preliminary rulings to the ECJ.[44]

The Lisbon Treaty signals a major change in this respect. The normal rules on direct and indirect actions are applicable to the AFSJ, subject to transitional provisions considered below. Thus preliminary rulings, legality review, and the other heads of jurisdiction are applicable to the AFSJ in the same manner as to other subject matter that falls within the Treaty.

(ii) *Direct Effect and Supremacy*

The doctrine of direct effect was created and developed by the ECJ. The Lisbon Treaty does not signal any change in the doctrine itself, but has implications for its scope of application.

Article 34 EU had provided for a distinct set of legal norms that were used in the context of the Third Pillar, dealing with Police and Judicial Cooperation in Criminal Matters. Framework Decisions and Decisions were the most important legal norms used in this area, and Article 34(2) EU stated that they did not have direct effect. The ECJ interpreted this limit narrowly, and held that it did not preclude indirect effect.[45]

Article 34 EU has been repealed and the general regime of legal acts specified in the Lisbon Treaty applies to measures adopted in the Area of Freedom, Security, and Justice. It will henceforth be

[41] Art 19(1) TEU.
[42] Art 35 EU.
[43] Title IV EC.
[44] Art 68(1) EC.
[45] Case C–105/03 *Criminal Proceedings against Maria Pupino* [2005] ECR I–5283.

possible to argue that a Treaty Article or a legislative, delegated, or implementing act dealing with the AFSJ gives rise to direct effect, provided that it satisfies the criteria for this doctrine to apply.

The supremacy principle was considered in an earlier chapter.[46] There was debate under the pre-existing regime as to whether the supremacy of Community law over national law applied in relation to the Third Pillar,[47] although the matter was never ultimately tested in the courts. The de-pillarization resulting from the Lisbon Treaty means that the primacy of EU law will now cover matters that were hitherto part of the Third Pillar and are now shifted to the TFEU. The potential for clashes between Union acts and national constitutional precepts is especially prevalent in this area. This could in turn lead to cases that test the boundaries of the primacy doctrine when the conflict with EU law involves national constitutional provisions.

(iii) *Transitional Provisions*

The Lisbon Treaty contains transitional provisions that are relevant to Union Courts and enforcement.[48]

Article 10(1) of the Protocol on Transitional Provisions specifies two limits to the powers of the institutions with respect to acts of the Union in the field of police and judicial cooperation in criminal matters that were adopted before the entry into force of the Lisbon Treaty: the Commission's enforcement powers under Article 258 TFEU are not applicable; the powers of the Court of Justice under what was the Third Pillar remain the same, including where Member States accepted the preliminary ruling jurisdiction under what was Article 35(2) EU. These limits cease to have effect five years after entry into force of the Lisbon Treaty.[49] The limits are also inapplicable if a Third Pillar act is amended[50] after the Lisbon Treaty enters into force.[51]

Article 10(4) of the Protocol is relevant to the UK. It states that at the latest six months before the expiry of the five-year transitional period, the United Kingdom may notify to the Council that it does not accept, with respect to the Third Pillar acts passed before the Lisbon Treaty, the powers of the institutions referred to in Article 10(1) as set out in the Treaties. If the UK makes such a notification then Third Pillar acts adopted prior to the Lisbon Treaty cease to apply to it from the expiry of the transitional period. This is subject to the caveat that a Third Pillar act amended after the Lisbon Treaty enters into force that is applicable to the UK remains so. Article 10(5) of the Protocol however leaves the door open to the UK to notify the Council of its wish to participate in acts which have ceased to apply to it pursuant to Article 10(4).

(G) UK AND THE AFSJ

The UK and Ireland negotiated three related opt-outs in the Treaty of Amsterdam that pertained to aspects of the AFSJ. These have been preserved and modified in the Lisbon Treaty.[52]

(i) *Schengen* 'Acquis'

The Treaty of Amsterdam brought the Schengen treaties, and implementing measures, the Schengen *acquis*, into the EU legal order, through a Protocol. The Schengen regime abolished internal border controls between the participating states, and established harmonized rules for visas, as well as rules on external border control, illegal migration, and criminal and police cooperation. The UK and Ireland were not bound by the Schengen *acquis*, but the Protocol allowed them to participate in part or all of it, provided that the participating states agreed unanimously that this should be so. Both states have participated in certain aspects of the Schengen regime.

The Lisbon Treaty preserved the Protocol relating to the Schengen regime, together with the option for the UK and Ireland to participate in some or all parts of the regime, subject to unanimous agreement from the participating states.[53] The Protocol has however been amended to give the UK and Ireland a right to opt out of measures building upon parts of the Schengen *acquis*.

(ii) *Border Controls*

The Treaty of Amsterdam also contained a Protocol that preserved the UK's control over its borders. It was framed in broad terms, in order to preclude Treaty rules or international agreements concluded by the EU from impinging on the UK's control over its borders. This Protocol has been retained in the Lisbon Treaty.[54]

(iii) *AFSJ*

The Treaty of Amsterdam contained a further Protocol. It provided in essence that the UK and Ireland were not bound by Title IV EC, but that they could choose whether or not to opt in to proposed measures in this area. When a legislative proposal was made, the UK and Ireland had three months to decide whether to opt in to a measure. If they did not do so, they were deemed to have opted out. The UK and Ireland could however opt in to legislation after it was made, subject to permission from the Commission.

The Lisbon Treaty has preserved and extended this Protocol, such that it now applies to the entirety of the AFSJ.[55] The default position is therefore that the UK and Ireland are not bound by measures adopted under the AFSJ Title. This constitutes an extension of the previous Protocol, since the Lisbon Protocol No 21 applies to all AFSJ measures, including those on crime and police cooperation. It is, as before, open to the UK and Ireland to signify that they wish to take part in the adoption of a proposed measure under this Title, and they can, as previously, choose to opt in after an AFSJ measure has been adopted.

The Lisbon Protocol No 21 extends the UK and Irish opt-out by providing in effect that it applies to amendments to measures in relation to which those states have previously opted in. There are consequential provisions dealing with the situation where the decision to opt out of an amendment to a measure by which they were previously bound would lead to that measure being inoperable as between the other Member States.[56]

[53] Protocol (No 19) On the Schengen *Acquis* Integrated into the Framework of the European Union.

[54] Protocol (No 20) On the Application of Certain Aspects of Article 26 of the Treaty on the Functioning of the European Union to the United Kingdom and to Ireland.

[55] Protocol (No 21) On the Position of the United Kingdom and Ireland in respect of the Area of Freedom, Security and Justice, makes special provision for the UK and Ireland.

[56] Protocol (No 21) contains a further extension to the opt-out by providing that the United Kingdom and Ireland are not bound by the rules laid down on the basis of Art 16 TFEU, which relate to the processing of personal data by the Member States when carrying out activities which fall within the scope of Ch 4 or Ch 5 of Title V, where the United

5 CRIMINAL LAW AND PROCEDURE: PRE-LISBON

The remainder of this chapter will, as stated at the outset, focus on criminal law and procedure as an example of the operation of the AFSJ within a particular substantive area. It is impossible to understand the significance of the Lisbon Treaty on criminal law and procedure without some understanding of the prior legal position.

The EU's express competence over criminal matters was hitherto regulated by the EU Treaty. Article 31(1) EU provided that common action on criminal matters should 'include': facilitating and accelerating cooperation between competent ministries and judicial authorities of the Member States, including, where appropriate, cooperation through Eurojust, in relation to proceedings and the enforcement of decisions; facilitating extradition between Member States; ensuring compatibility in rules applicable in the Member States, as may be necessary to improve such cooperation; preventing conflicts of jurisdiction between Member States; and progressively adopting measures establishing minimum rules relating to the constituent elements of criminal acts and to penalties in the fields of organized crime, terrorism, and illicit drug trafficking. Article 31(2) EU stated that the Council should encourage cooperation through Eurojust in a number of specified ways. Unanimity in the Council was required for decision-making in this area.[57] The Third Pillar thus provided some legislative competence over criminal matters, subject to the unanimity requirement.

It was nonetheless contested whether there was competence to enact measures relating to criminal procedure, since it was not explicitly mentioned in Article 31 EU. The need for EU initiatives in relation to criminal procedure was driven in large part by mutual recognition, which entailed the acceptance by Member States' courts of the judgments by national criminal courts.[58] The creation of the European Arrest Warrant led in turn to calls for procedural protection and defence rights for the person who had been transferred to the Member State issuing the warrant. There were nonetheless serious concerns as to the competence of the EU to enact such measures, and the content thereof.[59]

There was also controversy as to criminal law competence within the Community Pillar, since there was no express Treaty foundation for the exercise of such power. A legislative technique used to circumvent this problem was to enact two measures, one adopted under the Community Pillar dealing with the principal regulatory issues, the other made pursuant to the Third Pillar, which contained criminal law measures where these were felt to be necessary to support the regulatory scheme.

This approach was however thrown into question by ECJ decisions, which held that there was some criminal law competence within the Community Pillar.[60] The ECJ had, in its early jurisprudence, placed limits on national criminal law, insofar as it might impede the rules on free movement.[61] It had also positively encouraged the use of national criminal law as a sanction for breach of Community law, where this form of sanction would be used at national level in analogous situations.[62] These decisions were significant, but fell short of ascribing any direct criminal law competence to the EC within the Community Pillar. The Commission nonetheless felt that such competence could be justified in certain circumstances. This was accepted by the ECJ in the *Environmental Crimes* case.[63]

Kingdom and Ireland are not bound by the rules governing the forms of judicial cooperation in criminal matters or police cooperation which require compliance with the provisions laid down on the basis of Art 16.

Case C–176/03 **Commission v Council** [2005] ECR I–7879

The Council enacted a Framework Decision under the Third Pillar, Title VI TEU, that required Member States to prescribe criminal penalties for certain environmental offences. The Commission argued that the measure should have been enacted under Article 175 EC, since it was concerned with the environment. The ECJ found that the principal aim of the Framework Decision was to protect the environment, and that it should have been made under Article 175. It accepted that, as a general rule, neither criminal law, nor criminal procedure fell within Community competence, but then reasoned as follows.

THE ECJ

48. However, [this] does not prevent the Community legislature, when the application of effective, proportionate and dissuasive criminal penalties by the competent national authorities is an essential measure for combating serious environmental offences, from taking measures which relate to the criminal law of the Member States which it considers necessary in order to ensure that the rules which it lays down on environmental protection are fully effective.

The decision was greeted enthusiastically by the Commission, which regarded it as applicable to any sphere of Community action.[64] The Council and Member States were, unsurprisingly, less enamoured by the decision, and were unwilling to accept that it had such a broad reach.[65] The reaction in academic circles was critical, with commentators highlighting the expansion of Community competence on the basis of a generalized notion of effectiveness that was difficult to confine.[66]

The ECJ nonetheless reaffirmed the Community's competence over criminal matters in the *Ship-Source Pollution* case, *Commission v Council*.[67] The Commission argued for a broad reading of the earlier judgment, such that it should be applicable to the sphere of transport, the subject matter in the instant case. The Council, supported by twenty Member States, sought to distinguish and confine the ruling in the *Environmental Crimes* case. The ECJ gave a nuanced judgment.[68] It stated that the contested measure should have been adopted under the Community Pillar, and reiterated the ruling from the earlier decision concerning effectiveness and criminal law. The ECJ nonetheless refrained from holding that this principle was applicable to all spheres of Community policy and also held that the precise sanction should be determined through a Third Pillar measure.

6 CRIMINAL LAW AND PROCEDURE: POST-LISBON

The Lisbon Treaty resolved some of the issues concerning the scope of EU competence over criminal law, although there are still difficult interpretive problems. The detailed Articles of the Lisbon Treaty follow those in the Constitutional Treaty.[69] The 'thinking' on this issue had however been done in the Convention on the Future of Europe and in Working Group X on 'Freedom, Security and Justice'. The

[69] Arts III-270–275 CT.

detailed provisions in the Lisbon Treaty merely copied those in the Constitutional Treaty. Article 82 TFEU is now the lead provision in this area.[70]

Article 82(1) provides that judicial cooperation in criminal matters in the Union shall be based on the principle of mutual recognition of judgments and judicial decisions and shall include the approximation of the laws and regulations of the Member States in the areas referred to in Article 82(2) and in Article 83. The European Parliament and the Council, acting by the ordinary legislative procedure, shall adopt measures to: lay down rules and procedures for ensuring recognition throughout the Union of all forms of judgments and judicial decisions; prevent and settle conflicts of jurisdiction between Member States; support the training of the judiciary and judicial staff; and facilitate cooperation between judicial or equivalent authorities of the Member States in relation to proceedings in criminal matters and the enforcement of decisions. The legal acts in this area can be made at the initiative of the Commission or a quarter of the Member States.[71]

(A) CRIMINAL LAW

The EU's competence to enact measures concerning the criminal law is now specified in Article 83 TFEU.

> 1. The European Parliament and the Council may, by means of directives adopted in accordance with the ordinary legislative procedure, establish minimum rules concerning the definition of criminal offences and sanctions in the areas of particularly serious crime with a cross-border dimension resulting from the nature or impact of such offences or from a special need to combat them on a common basis.
>
> These areas of crime are the following: terrorism, trafficking in human beings and sexual exploitation of women and children, illicit drug trafficking, illicit arms trafficking, money laundering, corruption, counterfeiting of means of payment, computer crime and organised crime.
>
> On the basis of developments in crime, the Council may adopt a decision identifying other areas of crime that meet the criteria specified in this paragraph. It shall act unanimously after obtaining the consent of the European Parliament.
>
> 2. If the approximation of criminal laws and regulations of the Member States proves essential to ensure the effective implementation of a Union policy in an area which has been subject to harmonisation measures, directives may establish minimum rules with regard to the definition of criminal offences and sanctions in the area concerned. Such directives shall be adopted by the same ordinary or special legislative procedure as was followed for the adoption of the harmonisation measures in question, without prejudice to Article 76.

The scope of Article 83(1) and (2) should be considered in turn. Article 83(1) TFEU provides that the ordinary legislative procedure should apply to the making of such directives, by way of contrast to unanimity in the Council, which was the decisional rule hitherto. It tightens the pre-existing wording in Article 31 EU, by expressly requiring that EU intervention relates to areas of particularly serious crime that have a cross-border dimension, although this might be regarded as inherent in the earlier formulation. The list of offences in Article 83(1) TFEU has however been broadened by way of comparison to Article 31 EU, and now embraces matters previously listed in Article 29 EU,[72] plus some

[70] C Ladenburger, 'Police and Criminal Law in the Treaty of Lisbon. A New Dimension for the Community Model' (2008) 4 EuConst 20.

[71] Art 76 TFEU.

[72] Art 29 EU did not contain any express power to make minimum rules relating to the constituent elements of offences listed therein, which were not also mentioned in Art 31 EU, although Art 31 did not expressly preclude this.

other matters. Additions to this list can be made only if there is Council unanimity and consent by the European Parliament.

Article 83(2) TFEU is new and affirms the ECJ's approach in the jurisprudence considered above. The Treaty provision moreover enshrines a broad interpretation of the previous jurisprudence. The EU is empowered to approximate criminal laws and regulations to ensure the effective implementation of a Union policy in an area that has been subject to harmonization measures. This power thus applies to any Union policy that has been harmonized, there being no condition that the relevant Union policy be regarded as referring to 'essential objectives' of the Union. It will be interesting to see the interpretation of the requirement that there has been harmonization of the relevant Union policy. This could well be interpreted liberally, such that relatively minimal substantive harmonization is regarded as sufficient foundation for the approximation of criminal laws and regulations. The Commission will make the initial determination as to whether such approximation is 'essential' to ensure effective implementation of EU policy, subject to acceptance by the Council and European Parliament in the ordinary or special legislative procedure.

Member States' concerns as to possible use of Article 83(1)–(2) furnish the explanation for Article 83(3) TFEU, which enshrines an 'emergency brake'. Thus where a member of the Council considers that a draft directive proposed under Article 83(1)–(2) would affect fundamental aspects of its criminal justice system, it can request that the draft directive should be referred to the European Council. This leads to suspension of the ordinary legislative procedure. If consensus is reached in the European Council within four months, the draft directive is then referred back to the Council, and the ordinary legislative procedure continues. If disagreement persists after four months then the draft directive fails, subject to the caveat that a minimum of nine Member States can notify the Council, European Parliament, and Commission of their wish to establish enhanced cooperation on the basis of the draft directive. If this occurs, the authorization[73] to proceed with enhanced cooperation is deemed to be granted and the provisions on enhanced cooperation apply.

(B) CRIMINAL PROCEDURE

There were, as seen above, doubts as to EU competence over criminal procedure prior to the Lisbon Treaty. This issue has been addressed through Article 82(2) TFEU.

> To the extent necessary to facilitate mutual recognition of judgments and judicial decisions and police and judicial cooperation in criminal matters having a cross-border dimension, the European Parliament and the Council may, by means of directives adopted in accordance with the ordinary legislative procedure, establish minimum rules. Such rules shall take into account the differences between the legal traditions and systems of the Member States.
>
> They shall concern:
>
> (a) mutual admissibility of evidence between Member States;
>
> (b) the rights of individuals in criminal procedure;
>
> (c) the rights of victims of crime;
>
> (d) any other specific aspects of criminal procedure which the Council has identified in advance by a decision; for the adoption of such a decision, the Council shall act unanimously after obtaining the consent of the European Parliament.
>
> Adoption of the minimum rules referred to in this paragraph shall not prevent Member States from maintaining or introducing a higher level of protection for individuals.

[73] Art 20(2) TEU, Art 329(1) TFEU.

The EU now has explicit competence over criminal procedure, and the Lisbon Treaty has in that sense settled the controversy that plagued the passage of such measures hitherto. The terms of this competence are nonetheless carefully delineated.

The condition precedent for competence over criminal procedure is that it is necessary to facilitate mutual recognition of judgments and judicial decisions and police and judicial cooperation in criminal matters having a cross-border dimension. The linkage with mutual recognition thereby reaffirms the primary rationale for earlier EU involvement with criminal procedure. The corollary is that 'criminal procedure measures—and the human rights implications which they may have—are thus subordinated to the efficiency logic of mutual recognition'.[74]

There are other limits built into Article 82(2). Thus the EU is only empowered to enact directives which lay down minimum rules, and there is a specific injunction to take account of differences between the legal systems and traditions of the Member States. The addition of any other aspect of criminal procedure requires Council unanimity and the consent of the European Parliament.

Article 82(3) TFEU contains a further limit. The 'emergency brake' mechanism that was considered above in relation to the passage of criminal law measures is also applicable in this context. It is therefore open to a Member State to refer a draft directive to the European Council where it believes that it would affect fundamental aspects of its criminal justice system. The procedure thereafter is the same as that described above.

(c) CRIME PREVENTION

The Lisbon Treaty added a new provision that deals directly with crime prevention. Article 84 TFEU provides that the European Parliament and the Council, acting via the ordinary legislative procedure, can establish measures to promote and support the action of Member States in the field of crime prevention, excluding any harmonization of the laws and regulations of the Member States. Article 84 exemplifies the incomplete categorization of competences. It confines the EU to supporting Member State action and excludes harmonization. This would naturally place it within the category of competence dealing with supporting, coordinating, or supplementing Member State action, but it is not included in the relevant list.[75]

(d) CRIMINAL INVESTIGATION AND PROSECUTION

The previous EU Treaty made provision for Eurojust. Article 31(2) EU was framed in terms of the Council 'encouraging cooperation' via Eurojust in a variety of ways, including, for example, the facilitation of coordination between Member States' prosecuting authorities. This sufficed however to enable the EU to adopt the Eurojust Decision.[76]

Article 85 TFEU is framed in a similar vein, although there are differences of detail. Thus Article 85(1) states that Eurojust's mission is to support and strengthen coordination and cooperation between national investigating and prosecuting authorities in relation to serious crime affecting two or more Member States, or requiring a prosecution on common bases, on the basis of operations conducted and information supplied by the Member States' authorities and by Europol.

The EU is now empowered to enact regulations via the ordinary legislative procedure to determine Eurojust's 'structure, operation, field of action and tasks', including arrangements for involving the

[74] Mitsilegas (n 2) 109.

[75] Art 6 TFEU.

[76] Council Decision 2002/187/JHA of 28 February 2002, setting up Eurojust with a view to reinforcing the fight against serious crime [2002] OJ L63/1.

European Parliament and national parliaments in the evaluation of Eurojust's activities.[77] Article 85(1) provides that Eurojust's tasks may include the following.

> (a) the initiation of criminal investigations, as well as proposing the initiation of prosecutions conducted by competent national authorities, particularly those relating to offences against the financial interests of the Union;
>
> (b) the coordination of investigations and prosecutions referred to in point (a);
>
> (c) the strengthening of judicial cooperation, including by resolution of conflicts of jurisdiction and by close cooperation with the European Judicial Network.

Eurojust's power can be increased pursuant to Article 85 TFEU. Legislative regulations can be made relating to its tasks, which now include the 'initiation of criminal investigations', which is expressly distinguished from proposing the initiation of prosecutions by national authorities. Eurojust's tasks also cover the resolution of jurisdictional conflicts, as part of the strengthening of judicial cooperation. It remains to be seen whether these provisions serve as the basis for EU regulations that reshape, to some degree, the criminal investigatory process.

(E) CRIMINAL PROSECUTION AND THE EUROPEAN PUBLIC PROSECUTOR

There had, prior to the Lisbon Treaty, been debate and contestation as to whether there should be a European Public Prosecutor, with autonomous power to conduct prosecutions in relation to certain offences that had a marked impact on the EU's financial interests.[78] This provoked considerable opposition from Member States, which regarded the creation of such an office as a further incursion on national sovereignty in a sensitive field. The Lisbon Treaty nonetheless included provision for a European Public Prosecutor in Article 86 TFEU.

> 1. In order to combat crimes affecting the financial interests of the Union, the Council, by means of regulations adopted in accordance with a special legislative procedure, may establish a European Public Prosecutor's Office from Eurojust. The Council shall act unanimously after obtaining the consent of the European Parliament.
>
> . . .
>
> 2. The European Public Prosecutor's Office shall be responsible for investigating, prosecuting and bringing to judgment, where appropriate in liaison with Europol, the perpetrators of, and accomplices in, offences against the Union's financial interests, as determined by the regulation provided for in paragraph 1. It shall exercise the functions of prosecutor in the competent courts of the Member States in relation to such offences.

Article 86 contains what is in effect an interesting 'emergency accelerator'. It provides that in the absence of Council unanimity, a group of at least nine Member States can request that the draft regulation be referred to the European Council. If this happens, the procedure in the Council is suspended. If consensus is forthcoming in the European Council within four months, the draft regulation is referred back to the Council for adoption. If disagreement persists beyond four months, it is still open to at least nine Member States to notify their wish to the European Parliament, Council, and

[77] Art 85(2) TFEU makes clear that formal acts of judicial procedure shall be carried out by the competent national officials in relation to prosecutions, without prejudice to Art 86 TFEU.

[78] Mitsilegas (n 2) 229–232.

Commission to establish enhanced cooperation. Authorization to proceed with enhanced cooperation shall be deemed to be granted and the provisions on enhanced cooperation apply.

Article 86(4) TFEU moreover enables the European Council, acting unanimously after obtaining the consent of the European Parliament and consulting the Commission, to adopt a decision amending Article 86(1) in order to extend the powers of the European Public Prosecutor's Office to include serious crime having a cross-border dimension, with relevant amendments to Article 86(2).

(F) CRIME AND POLICE COOPERATION

Article 30 EU dealt with police cooperation, and made provision for cooperation through Europol. The complex rules applicable to Europol and the EU have been expertly examined elsewhere.[79] The Lisbon Treaty builds on and modifies the pre-existing provisions.

Article 87 TFEU embodies the basic principle of police cooperation between Member States' authorities in relation to the prevention, detection, and investigation of crime. Measures can now be enacted pursuant to the ordinary legislative procedure concerning: the collection, storage, processing, analysis, and exchange of relevant information; support for staff training; and common investigative techniques in relation to the detection of serious forms of organized crime. It is moreover open to the Council, acting unanimously after consulting the European Parliament, to establish measures concerning operational cooperation between national authorities. This is subject to an 'emergency accelerator' procedure of the kind described above, subject to the caveat that it does not apply to acts that constitute a development of the Schengen *acquis*.

Article 88 TFEU deals with Europol. Its mission is to support and strengthen action by the Member States' police authorities and other law enforcement services and their mutual cooperation in 'preventing and combating serious crime affecting two or more Member States, terrorism and forms of crime which affect a common interest covered by a Union policy'. The reference to forms of crime that affect a common interest covered by a Union policy extends Europol's mandate. Legislative regulations adopted by the ordinary legislative procedure determine Europol's structure, operation, field of action, and tasks, including procedures for scrutiny of Europol's activities by the European Parliament and national parliaments.

Europol's tasks include: collection, storage, processing, analysis, and exchange of information; and coordination, organization, and implementation of investigative and operational action carried out jointly with the Member States' competent authorities or in liaison with Eurojust. This wording lays the foundation for Europol to be granted operational capability, and this is reinforced by the requirement that any such operational action must be carried out in liaison and in agreement with the relevant national authorities, which have exclusive responsibility for application of coercive measures.[80]

7 CRIMINAL LAW AND PROCEDURE: OBJECTIVES

The discussion in the preceding section focused on the Articles in the Lisbon Treaty concerning criminal law and procedure. We need however to press further in order to understand the objectives posed by EU intervention in this area. The earlier discussion considered in general terms the rationale for the AFSJ. We need now to sharpen the focus to reveal the purpose served by EU intervention in relation to criminal law and procedure. This evolved over time, but now has two discernible strands, as is

[79] Ibid 161–187.
[80] Art 88(3) TFEU.

apparent from Working Group X on 'Freedom, Security and Justice', whose report shaped thinking on the EU's involvement with crime in the Treaty reform process.

The rationale for EU intervention in some instances was the need to combat the cross-border impact of serious crime, which could not be achieved effectively by individual Member States, more especially post-9/11.[81] The need for the approximation of substantive criminal law was pressing because 'certain crimes have a transnational dimension and cannot be addressed effectively by the Member States acting alone'.[82] The cross-border impact of serious crime created therefore externalities in Member States, which demanded collective action. The EU provided an institutional forum for collective action that could be used to fashion appropriate rules, more especially because many such crimes would also have negative effects on the EU economy.

There is also a second rationale for EU intervention in criminal law, which is more closely associated with the efficacy of the internal market and other EU policies. The Working Group touched on this idea when it posited a further reason for EU intervention 'where the crime is directed against a shared European interest which is already itself the subject of a common policy of the Union . . . approximation of substantive criminal law should be part of the toolbox of measures for the pursuit of that policy whenever non-criminal rules do not suffice'.[83] The developed version of this idea is now enshrined in Article 83(2) TFEU: approximation of criminal laws is warranted where this is essential to ensure effective implementation of Union policy in an area that has been harmonized.

8 CRIMINAL LAW AND PROCEDURE: CHALLENGES

It is important to appreciate that EU involvement in criminal law has generated significant challenges and tensions.

(A) MEMBER STATE ACCEPTANCE

The first such challenge concerns Member State acceptance of criminal law initiatives. The history of EU intervention in relation to criminal law matters reveals an interesting duality in the willingness of Member States to realize the Treaty objectives.

The Member States have been at the forefront of the augmentation of EU competence over crime. It was the Member States that agreed to the initial three-pillar structure in the Maastricht Treaty, which gave the EU competence over criminal issues, and to the revisions embodied in the Treaty of Amsterdam. It was the Member States that expressed willingness to bring crime within the main fabric of the Constitutional Treaty and Lisbon Treaty, and to extend the EU's powers in this sphere. It was the Member States once again that fashioned overall policy via the European Council in the Tampere[84] and Hague Programmes.[85]

The Member States' willingness to embrace EU intervention over crime at the 'macro' level must however be balanced by difficulties of realization at the 'micro' level, as attested to by contestation over the content and passage of particular criminal measures. There is no logical inconsistency in this respect. This tension is reflective of the proposition that it is often easier to agree on general principles than on concrete measures to secure their realization. There was thus little difficulty in securing consensus on the desirability of tackling serious cross-border crime, as exemplified by drug trafficking and the like. Decisions as to the particular measures that should be taken to attain this objective were

[81] Working Group X (n 25) 1, 9.

[85] Brussels European Council, 25–26 Mar 2004.

nonetheless often controversial, since they entailed assumptions concerning criminality and incursions into Member State autonomy on which Member States disagreed.

(B) MUTUAL RECOGNITION

The second challenge concerns the regulatory technique used to attain the EU's objectives outlined above. The EU has various regulatory tools at its disposal, but two are of particular significance: approximation of laws and mutual recognition.

Prior to the Lisbon Treaty the formal rules gave prominence to the approximation of laws. Article 34 EU provided that the objectives of the Third Pillar could be attained by framework decisions to approximate Member States' laws and regulations. These measures were analogous to directives, save for the fact that they were said not to have direct effect.

The late 1990s saw a shift to the principle of mutual recognition. The catalyst was concern about the slow pace of integration post-Maastricht, coupled with Member States' wariness of EU harmonization.[86] This led to suggestions, voiced by the UK Presidency in 1998, that mutual recognition might be the way forward, with analogies drawn with the use of this concept to attain the objectives of the internal market. This suggestion was endorsed by the European Council in the Tampere programme,[87] and by the Commission.[88]

The centrality of mutual recognition is now firmly embedded in the Lisbon Treaty. Article 82 TFEU, the lead provision in this area, provides that judicial cooperation in criminal matters is to be based on mutual recognition, with approximation of laws denominated for the specific topics delineated in Articles 82(2) and 83 TFEU. This is reinforced by the fact that the new EU competence over criminal procedure in Article 82(2) TFEU is predicated on the need for minimum harmonization in order to facilitate mutual recognition of judgments. The centrality of mutual recognition is apparent in the following extract from the Commission.

Mutual Recognition of Judicial Decision is the Cornerstone of Judicial Cooperation between EU Member States[89]

Traditional judicial cooperation can be defined as an inter-state relation where one sovereign State makes a request to another sovereign State, which then decides whether or not to comply with it. Those relations are organised by a variety of legal instruments agreed either on a bilateral basis or within the framework of International Organisations such as the UN or the Council of Europe. This system is both slow and complex. It does not correspond anymore with the reality of today's European area where people circulates easily, with no or little controls. To a free circulation of people shall correspond a free circulation of judicial decisions. That is where the principle of Mutual recognition leads to a real change in the whole philosophy of judicial cooperation. Basically, it means that each national judicial authority should ipso facto recognise requests made by the judicial authority of another Member State with a minimum of formalities.

Enhanced mutual recognition will improve the efficiency of cooperation between authorities. It is based on mutual confidence that Member State have in each other systems and which is founded on the common respect of Human rights and fundamental freedoms as asserted in the Treaty of the European Union.

The application of mutual recognition to the criminal sphere has not however been unproblematic. Commentators have questioned the analogy with the use of this concept in the internal market. They

[89] http://ec.europa.eu/justice/policies/criminal/recognition/policies_criminal_recognition_en.htm.

have rightly pointed to the very real difference between mutual recognition of Member States' regulatory provisions concerning the content of goods for the purpose of enhancing free movement[90] and mutual recognition of judicial decisions for the purpose of increasing the applicability of such rulings in other Member States.[91]

S Lavenex, Mutual Recognition and the Monopoly of Force: Limits of the Single Market Analogy[92]

Who benefits from mutual recognition and for what purpose?

…In the single market, mutual recognition facilitates the cross-border flows of economic goods and services. It is an instrument to facilitate economic transactions between societal actors in spite of partly differing state regulations. In the AFSJ, mutual recognition promotes the free movement of judgments and judicial decisions; that is, state acts … In criminal law, the member states accept final judicial decisions, e.g. an arrest warrant or other decisions laying down sanctions issued under the law of that state. Those benefiting from mutual recognition are hence not societal actors but state representatives.

There is thus a fundamental difference in the nature of the flows addressed: in the first case, single market integration, mutual recognition eases the cross-border movement of societal interaction, thus contributing to processes of liberalization and socialization. The private sphere and the rights of individuals engaged in trade and consumption are enhanced while the regulatory scope of the member states is reduced. In the case of judicial co-operation in JHA, in contrast, the introduction of mutual recognition does not expand the rights of individuals vis-a`-vis the state. On the contrary, it facilitates the cross-border movement of sovereign acts exercised by states' executives and judicial organs…

What is being mutually recognized?

The second important difference concerns the 'object' that governments agree to mutually recognize and its scope in terms of sovereignty implications for the participating states. In the economic sphere, the object of recognition is another country's rules on products and production methods…. In JHA, by contrast, the object of recognition reaches much further as it applies to sovereign acts of the judiciary in their interpretation and application of a whole set of material and procedural laws. By applying mutual recognition, another member state not only recognizes a law as being equivalent but recognizes the judicial act in its interpretation of all relevant provisions in a given case. In other words, mutual recognition not only implies that member states recognize other norms as equivalent to their own but that they accept the need to co-operate in the enforcement of other states' systems of law.

(c) MUTUAL RECOGNITION AND THE EUROPEAN ARREST WARRANT

(i) *Framework Decision and Judicial Interpretation*

The difficulties concerning mutual recognition can be exemplified by experience with the European Arrest Warrant (EAW),[93] which was the first major mutual recognition initiative in this

area.[94] The 9/11 terrorist attacks were the immediate catalyst for the EAW, but its reach extends far beyond such offences.

The EAW is a judicial decision issued by a Member State with a view to the arrest and surrender by another Member State of a requested person, for the purposes of conducting a criminal prosecution, or executing a custodial sentence or detention order. Member States are required to execute any EAW on the basis of the principle of mutual recognition. The initial EAW regime distinguished between two types of offence.

Certain more serious offences listed in Article 2(2) of the Framework Decision that were punishable by at least three years' detention in the issuing state could be the subject of an EAW, irrespective of whether those offences existed in the state that had to execute the warrant. There was no need for verification of double criminality in such instances, meaning that there was no requirement to check that such offences existed in the state that had to execute the warrant. In relation to less serious offences, Article 2(1) and (4) provided that an EAW could be issued, subject to the caveat that it was an offence under the law of the executing state, although this condition could be satisfied whatever the constituent elements of the offence or how it was described. Article 3 listed certain mandatory grounds on which the state required to execute the EAW should not do so; Articles 4 and 4a set out certain optional grounds on which it might refuse to do so; and Article 5 specified guarantees that had to be provided by the state issuing the EAW. The legality of the EAW was challenged in the following case, but the ECJ upheld its legality.[95]

Case C–303/05 **Advocaten voor de Wereld VZW v Leden van de Ministerraad** [2007] ECR I–3633

The claimant alleged that Article 2(2) of the Framework Decision, by dispensing with the need to verify the double criminality of the offences listed, was contrary, *inter alia*, to the principle of legality in criminal matters. This was because the listed offences were not legally defined, but constituted vague categories of undesirable conduct. He argued that this thereby violated the requirement that criminal offences should satisfy conditions of precision, clarity, and predictability. The ECJ acknowledged that the principle of the legality of criminal offences was part of EU law and continued as follows.

THE ECJ

50. This principle implies that legislation must define clearly offences and the penalties which they attract. That condition is met in the case where the individual concerned is in a position, on the basis

thereby enhancing the procedural rights of persons and fostering the application of the principle of mutual recognition to decisions rendered in the absence of the person concerned at the trial [2009] OJ L81/24; http://ec.europa.eu/justice/policies/criminal/extradition/policies_criminal_extradition_en.htm.

[94] S Alegre and M Leaf, 'Mutual Recognition in European Judicial Cooperation: A Step too Far too Soon? Case Study—The European Arrest Warrant' (2004) 10 ELJ 200; J Wouters and F Naert, 'Of Arrest Warrants, Terrorist Offences and Extradition Deals: An Appraisal of the EU's Main Criminal Law Measures against Terrorism after "11 September"' (2004) 41 CMLRev 911; Mitsilegas (n 59); A Hinarejos, 'Recent Human Rights Developments in the EU Courts: The Charter of Fundamental Rights, the European Arrest Warrant and Terror Lists' (2007) 7 HRLRev 793; J Komárek, 'European Constitutionalism and the European Arrest Warrant: In Search of the Limits of Contrapunctual Principles' (2007) 44 CMLRev 9; O Pollicino, 'European Arrest Warrant and Constitutional Principles of the Member States: A Case Law-Based Outline in the Attempt to Strike the Right Balance between Interacting Legal Systems' (2008) 9 German Law Journal 1313; A Górski and P Hofmański, *The European Arrest Warrant and its Implementation in the Member States of the European Union* (Wydawnictwo CH Beck, 2008); D Sarmiento, 'European Union: The European Arrest Warrant and the Quest for Constitutional Coherence' (2008) 6 I-CON 171.

[95] D Leczykiewicz, 'Constitutional Conflicts and the Third Pillar' (2008) 33 ELRev 230.

of the wording of the relevant provision and with the help of the interpretative assistance given by the courts, to know which acts or omissions will make him criminally liable . . .

. . .

52. . . . even if the Member States reproduce word-for-word the list of the categories of offences set out in Article 2(2) of the Framework Decision for the purposes of its implementation, the actual definition of those offences and the penalties applicable are those which follow from the law of 'the issuing Member State'. The Framework Decision does not seek to harmonise the criminal offences in question in respect of their constituent elements or of the penalties which they attract.

53. Accordingly, while Article 2(2) of the Framework Decision dispenses with verification of double criminality for the categories of offences mentioned therein, the definition of those offences and of the penalties applicable continue to be matters determined by the law of the issuing Member State, which, as is, moreover, stated in Article 1(3) of the Framework Decision, must respect fundamental rights and fundamental legal principles as enshrined in Article 6 EU, and, consequently, the principle of the legality of criminal offences and penalties.

54. It follows that, in so far as it dispenses with verification of the requirement of double criminality in respect of the offences listed in that provision, Article 2(2) of the Framework Decision is not invalid on the ground that it infringes the principle of the legality of criminal offences and penalties.

The ECJ's reasoning did not fully address the applicant's argument. It is of course true that the Framework Decision did not seek to harmonize the criminal offences listed in Article 2(2) in respect of their constituent elements, and that the definition of those offences remained a matter for the state issuing the EAW. This did not however meet the substance of the applicant's concern. The Member States have to implement the Framework Decision into their national law. An accused in the executing state will therefore have to determine the constituent elements of the legal definition of the offences listed in Article 2(2) in relation to the state that issues the EAW. This may not be easy to divine, in part because of language issues, and in part because the very definition of those elements may not always be clear.

The ECJ has in its subsequent case law emphasized that Member States are in principle obliged to act on an EAW from the issuing state,[96] an interpretation that is reinforced by the language of Article 1(1), which is framed in terms of 'surrender' of the individual to the issuing state. The ECJ has ruled that key terms in the Framework Decision will be given an autonomous EU legal meaning.[97] It has signalled that the circumstances in which the executing state can, pursuant to Article 4, legitimately refuse to hand over a person to a state that has issued the EAW will be closely controlled by the Union Courts.[98] The ECJ will however, when interpreting Article 4, give weight to the possibility of increasing the person's chances of reintegrating into society by serving a sentence in the country where he resides.[99]

(ii) *Constitutional and Rights-Based Concerns*

The implementation and application of the EAW have given rise to constitutional concerns. The new requirement to surrender nationals pursuant to the EAW led to litigation before several constitutional courts and subsequent constitutional amendment, since some Member States' constitutions prohibited the extradition of nationals *per se*. The compatibility of national implementing legislation with

the national constitution was challenged in, for example, Germany, Cyprus, Poland, and the Czech Republic.[100]

There have also been related concerns raised as to the EAW regime and human rights. Article 1(3) of the Framework Decision states that it should not have the effect of modifying the obligation to respect human rights contained in Article 6 TEU. The Framework Decision did not, however, make adequate protection of human rights a specific ground *per se* on which a state could refuse to execute a warrant, although recital 12 is more far-reaching in this respect.[101] The inclusion of Article 1(3) did not moreover dispel human rights concerns, as exemplified by the *Advocaten voor de Wereld* case extracted above. Moreover, even if all EU Member States are bound by the ECHR and the Charter of Fundamental Rights, this does not mean that all twenty-seven legal systems have the same standards of human rights safeguards in the field of criminal law, or that they consider the same things essential for a just criminal law regime.[102] Consider the following extract which deals with constitutional and human rights concerns relating to the EAW.

V Mitsilegas, The Constitutional Implications of Mutual Recognition in Criminal Matters in the European Union[103]

The application of the mutual recognition principle in criminal matters … has raised a number of constitutional concerns. A major objection has centred on the abolition of the dual criminality requirement, which is seen to constitute breach of the legality principle … As has been noted, constitutionally it is not acceptable to execute an enforcement decision related to an act that is not an offence under the law of the executing state …

A related, but broader concern involves the link between legality and legitimacy of criminal law at the national, and EU, level … Criminal law is fundamental in a society governed by the rule of law, as it contains rules delineating the relationship between the individual and the State, and thus provides guarantees and safeguards for the individual regarding the extent and limits of acceptable behaviour and reach of State power and force. Criminal law and the limits that it sets must be openly negotiated and agreed via a democratic process, and citizens must be aware of exactly what the rules are. However, mutual recognition challenges this framework. Contrary to harmonization, which would involve … a set of concrete EU-wide standards which would be negotiated and agreed by the EU institutions, mutual recognition does not involve a commonly negotiated standard …

…

A related concern … is that the recognition of Warrants with the minimum of formality along with the abolition of the dual criminality requirement will lead to breach of the suspects' rights. Concerns have been focusing in particular on whether the suspect will enjoy ECHR rights in the issuing state, in particular the right to a fair trial and the protection from torture … The mutual recognition measures themselves assume that a high level of confidence between Member States exists, and this has been reiterated by the ECJ. However, debates in national parliaments and the press have shown that this is not necessarily the case. The legal profession, in particular defence lawyers, have shown a particular scepticism as to the capacity of the criminal justice systems across the enlarged EU to protect human rights in the light of the intensification of prosecutorial co-operation with the European Arrest Warrant.

[100] Mitsilegas (n 59) 1294–1299.

[101] Ibid 1291–1292. A number of Member States when implementing the Framework Decision added human rights as grounds for refusal to execute an EAW: ibid 1293. See, eg, Extradition Act 2003, ss 21, 25.

[102] Concerns about the human rights implications of the EAW regime can also be seen in the recent decision of a German court, which held, albeit *obiter*, that the German legislation implementing the EAW was subject to an implied overall limit of proportionality flowing from German constitutional law and/or from Art 49(3) of the Charter: J Vogel and J Spencer, 'Proportionality and the European Arrest Warrant' [2010] Crim Law Rev 474.

[103] (2006) 43 CMLRev 1277, 1286–1289.

(iii) *Addressing the Concerns through Harmonization*

Attempts have been made to meet the concerns voiced about the EAW regime through harmonization. This may seem paradoxical, given that, as we have seen, mutual recognition was introduced as the primary regulatory technique in order to circumvent the difficulties of securing agreement through harmonization. The Commission was nonetheless of the view that some criticisms of the EAW regime could be met through harmonized standards that addressed the rights of the defendants when they were sent to the state that issued the EAW.[104] Work began on such initiatives in 2002, with proposals being advanced by the Commission in 2004 on matters such as the right to legal advice, the right to translation, the right to communication, and the duty to inform the suspect of his rights.[105]

Progress on such initiatives was however slow, in part because Member States fought hard about the content of the proposed measures, and in part because there were doubts whether, prior to the Lisbon Treaty, the EU had competence over criminal procedure. The concerns over EU competence concerning criminal procedure have been met by Article 82(2) TFEU. Securing Member States' acceptance of such measures is still proving difficult.

In November 2009, the Justice Council did, however, adopt a 'Roadmap' for strengthening the procedural rights of suspected or accused persons in criminal proceedings.[106] It called for the adoption of five measures covering the most basic procedural rights, based on a 'step-by-step' approach. The Commission was invited to present the necessary proposals to this end. The Council recognized that not enough had been done at EU level to safeguard the fundamental rights of individuals in criminal proceedings, and that the full benefit of EU legislation in this area would be felt only when such measures had been transposed into legislation.

A further impetus came from the Stockholm Programme, adopted by the European Council on 10–11 December 2009, which reaffirmed the importance of the rights of the individual in criminal proceedings as a fundamental value of the Union and an essential component of mutual trust between Member States. The Stockholm Programme referred to the 'Roadmap' as an integral part of the multiannual programme and called on the Commission to present the relevant proposals.

The Commission is now pursuing initiatives in this regard.[107] Directives dealing with discrete issues, rather than a single directive covering all defence rights, are now at various stages in the EU legislative process.[108] The Commission hopes to secure the enactment of five measures, which is in accordance with the Council's Roadmap. The passage of such measures will certainly alleviate some of the concerns about the EAW regime.

(D) MUTUAL RECOGNITION AND THE EUROPEAN EVIDENCE WARRANT

The EAW regime is the best known example of mutual recognition, but is not the only one. Mutual recognition has been used in relation to financial aspects of criminal law enforcement, as exemplified by the measures dealing with execution of orders freezing property and financial penalties.[109]

[104] Mitsilegas (n 59) 1304–1307; T Spronken, G Vermeulen, D de Vocht, and L van Puyenbroeck, *EU Procedural Rights in Criminal Proceedings* (Directorate General, Justice and Home Affairs, 2008).

[108] On the right to interpretation and translation in criminal proceedings see COM(2010)82 final; on the right to information criminal proceedings see COM(2010)392 final.

[109] Council Framework Decision 2003/577/JHA of 22 July 2003 on the execution in the European Union of orders freezing property or evidence [2003] OJ L196/45; Council Framework Decision 2005/214/JHA of 24 February 2005 on the application of the principle of mutual recognition to financial penalties [2005] OJ L76/16.

Mutual recognition has also been used in relation to evidence, leading to a Framework Decision on the European Evidence Warrant (EEW).[110] The sensitivity of the issues in this area is shown by the fact that the Commission's original proposal dated from 2003, but was only finally enacted in 2008. The initial impetus for the EEW came from the Tampere and Hague Programmes. The measure was seen as an essential component of the EU's criminal law strategy, and one that would complement the EAW and the regimes dealing with execution of orders concerning criminal financial penalties.

National sensitivity in this area is evident in the content of the Framework Decision. The EEW enables the issuing state to obtain objects, documents, and data from another Member State, the executing state, for use in a range of criminal proceedings. This is, however, qualified by Article 4(2), which states that the EEW cannot require the executing authority to: conduct interviews, take statements, etc; carry out bodily examinations or obtain bodily material such as DNA or fingerprints; obtain information through, for example, interception of communications; conduct analysis of existing objects, documents, or data; or obtain communications data.

The EEW regime also has various safeguards built into the system. Thus Article 7(a) provides that an EEW should be issued only where obtaining the data sought is 'necessary and proportionate' for the purpose of the criminal proceedings. Article 7(b) further stipulates that the EEW should be issued only where the documents, etc, sought could be obtained under the law of the issuing state in a 'comparable case'. Article 13 contains safeguards from the perspective of the state required to execute the EEW. It lists a number of grounds on which the executing state may refuse to recognize the EEW, including: double jeopardy; immunity or privilege; double criminality in the circumstances set out in Article 14(3); and territoriality, viz that the executing state regards the data sought as relating to an offence that took place on its territory.

The national sensitivities are reflected moreover in compromises embodied in the EEW regime, as exemplified by Article 14 which deals with double criminality. Article 14(1) provides that execution of the EEW is not subject to verification of double criminality unless it is necessary to carry out a search or seizure. Thus, subject to this caveat, there is no requirement that the documents sought relate to an offence recognized as criminal in the state asked to execute the EEW. Article 14(2) further stipulates that even if it is necessary to carry out a search or seizure for execution of the EEW, verification of double criminality is not required under any circumstances for a range of more serious offences such as trafficking in drugs, people, and weapons, murder, kidnapping, and fraud, provided that the offences are punishable in the issuing state by a sentence of at least three years. Article 14(3) then provides that the executing state may refuse to execute the EEW if it does not relate to the offences listed in Article 14(2) on grounds of double criminality, subject to certain qualifications concerning offences relating to tax and customs.

Concerns about human rights are reflected in Article 1(3), which states that the Framework Decision shall not modify the obligation to respect fundamental rights in Article 6 TEU. This is reinforced by recital 8 and by recital 27. The latter states that nothing in the Framework Decision may be interpreted as prohibiting refusal to execute an EEW when there are objective reasons to believe that the EEW has been issued for the purpose of prosecuting or punishing a person on account of his or her sex, racial or ethnic origin, religion, sexual orientation, nationality, language, or political opinions, or that the person's position may be prejudiced for any of these reasons.

The EEW regime was to be implemented by the Member States in January 2011.[111] The fate of this regime is however uncertain. A group of Member States has proposed a directive that will replace the EEW Framework Decision and that relating to orders freezing property.[112] They are to be replaced by

[110] Framework Decision 2008/978/JHA on the European evidence warrant for the purpose of obtaining objects, documents and data for use in proceedings in criminal matters [2008] OJ L350/72.

[111] R Belfiore, 'Movement of Evidence in the EU: The Present Scenario and Possible Future Developments' (2009) 17 European Journal of Crime, Criminal Law and Criminal Justice 1.

[112] [2010] OJ C165/22.

the European Investigation Order (EIO), the rationale being that the existing measures from 2003 and 2008 are too fragmentary in relation to the gathering of evidence. The EIO would go further than the EEW, since the latter is limited to evidence that already exists, whereas the EIO, as the name indicates, would enable the issuing state to require the executing state to undertake 'investigative measures' in order to gather evidence for criminal proceedings in the issuing state.

The fate of this proposal remains to be seen. We have already seen the balances and compromises contained in the EAW and EEW regimes, relating to matters such as the grounds on which a state can refuse to execute such a warrant. The devil is always in the detail in such matters. This is also true of the proposed EIO measure. Consider the following estimation of the EIO proposal in this regard.

S Peers, EU Justice and Home Affairs Law[113]

> The proposal would amount to a 'bonfire' of the key traditional grounds for refusals of mutual assistance requests or the EEW, most notably as regards double jeopardy, dual criminality, and territoriality. This would be the first EU measure to abolish fully the possibility of refusal on any of these grounds, never mind all three together. The abolition of the double jeopardy exception takes no account of other EU rules on this issue and status of this principle in the EU Charter of Fundamental Rights, while the combined abolition of the dual criminality and territoriality exceptions means that a person could be subject to home, business, and body searches for committing an act that was not criminal under the national law of the place where it was committed. This is fundamentally objectionable from the point of view of human rights principles or national sovereignty.
>
> Furthermore, the EIO Directive would also remove a number of sundry other restrictions or safeguards which currently apply to the EEW or mutual assistance measures . . .

(E) SUBSTANTIVE CRIMINAL LAW

(i) *The Broad Reach of EU Criminal Law*

The discussion thus far has focused on EU involvement in criminal law via mutual recognition as it affects aspects of criminal procedure, such as the EAW, the EEW, and the proposed EIO. The analysis has revealed the tensions and concerns resulting from such initiatives.

The EU has, however, also enacted a plethora of detailed measures concerning substantive criminal law. There are now EU measures relating to matters listed in Article 83(1) TFEU: terrorism, trafficking in persons, child pornography and prostitution, drug trafficking, money laundering, corruption, counterfeiting, attacks on information systems, and organized crime. There are also criminal law measures that would now be legitimated under Article 83(2) TFEU or other Treaty provisions, concerning matters such as racism and xenophobia, illegal entry and residence, environmental crime, and the protection of the EU's financial interests.

Space precludes examination of all such measures.[114] The concern within this chapter is in any event, as stated at the outset, to reveal at a more general level the rationale for the EU's involvement in the criminal sphere, the regulatory techniques used to that end, and the challenges posed by such intervention. The nature of EU involvement can nonetheless be exemplified by considering its approach to organized crime.

[113] (N 2) 715–716.

(ii) *EU Criminal Law Initiatives against Organized Crime*

It is readily apparent that the cross-border impact of serious crime can create externalities in other Member States which can be better met by collective action. The EU provides an institutional forum for such collective action to fashion appropriate rules, more especially because many such crimes will also have negative effects on the EU economy. This does not mean that development of EU initiatives in this area has been unproblematic.

EU intervention in relation to organized crime with the objective of harmonizing certain aspects of substantive law dates from a Joint Action in 1998, which made it a criminal offence to participate in a criminal organization in the European Union.[115] The Joint Action was broadly framed and was noteworthy for its twin-track approach: it criminalized active participation in such an organization or conspiracy to commit any offence listed in the Joint Action. The use of these divergent approaches to criminalization perforce created a tension, given that the objective was to harmonize the relevant law, but the explanation resides, as Mitsilegas notes,[116] in the need to secure unanimity in the Council in the face of different national legal approaches to organized crime, the conspiracy alternative satisfying the English legal tradition.

The current law dates from a Commission proposal made in 2005.[117] It was designed to take account, *inter alia*, of developments at the international level, such as the 2000 United Nations Convention on Transnational Organized Crime, the Palermo Convention, and the EU initiatives on terrorism. The Commission proposal concentrated on harmonization of the crime of participation in a criminal organization and removed the alternative conspiracy variant. It also did much to align EU law with the Palermo Convention by, for example, making it criminal to direct a criminal organization and through the definition of an organized crime group. The Commission proposal led to a Third Pillar Framework Decision in 2008 'on the fight against organised crime',[118] which repealed the 1998 Joint Action.

A 'criminal organisation' is defined in Article 1 as a structured association, established over a period of time, of more than two persons acting in concert with a view to committing offences which are punishable by deprivation of liberty or a detention order of a maximum of at least four years or a more serious penalty, to obtain, directly or indirectly, a financial or other material benefit. A 'structured association' is specified as an association that is not randomly formed for the immediate commission of an offence, but it does not require there to be formal roles or tasks for the members thereof. There is inevitably a tension in devising any such definition: if it is drawn too narrowly or formalistically then it is of little use in practical terms, whereas if it is drawn too widely it can lead to problems of legal certainty.[119] The Framework Decision makes provision for penalties for taking part in a criminal organization, specifying a minimum of two years and a maximum of five years. If a criminal organization commits an offence this is an aggravating circumstance in this regard.

The domain of EU criminal law reveals moreover the enduring truth that the Commission does not always get all that it had hoped for, as determined by its initial proposal. Thus the Framework Decision, by contrast to the Commission's draft, retained the previous duality whereby Member States could choose to criminalize either participation in an organized criminal group or conspiracy. The Framework Decision also refrained from rendering criminal the direction of an organized criminal group, as proposed by the Commission.

[115] Joint Action 98/733/JHA on making it a criminal offence to participate in a criminal organisation in the Member States of the European Union [1998] OJ L351/1.

[116] Mitsilegas (n 114) 528.

[117] Proposal for a Framework Decision on the fight against organised crime, COM(2005)6.

[118] Framework Decision 2008/841/JHA on the fight against organised crime [2008] OJ L300/42.

[119] F Calderoni, 'A Definition that Could not Work: the EU Framework Decision on the Fight against Organised Crime' (2008) 16 European Journal of Crime, Criminal Law and Criminal Justice 265.

It remains to be seen what difference the existence of the 2008 Framework Decision makes in the fight against organized crime. The sceptical view is 'not very much'. The very breadth of the definition of organized crime, combined with the retention of the dual options of participation/conspiracy, may well render the attainment of 'harmonization' more illusory than real.

It begs once again in more general terms the rationale for EU involvement in crime, as evidenced by the following extract.

V Mitsilegas, The Third Wave of Third Pillar Law: Which Direction for EU Criminal Justice?[120]

The third wave of EU substantive criminal law demonstrates an effort by the European Union to develop and improve the existing legal framework. The main goal in this context has been to keep abreast of international developments aimed at responding to perceived global security threats such as terrorism and organised crime, while at the same time attempting to send a clear message with regard to European values by taking a strong enforcement stance against racism and xenophobia. In the field of both terrorism and organised crime, the relationship between the Union and international fora is noteworthy: EU legislation largely takes on board and integrates into the Union legal framework internationally agreed standards, which in their turn have been modelled upon or strongly influenced by Union action. This strategy has led, however, to the introduction in the Union legal order of an approach focusing on extensive criminalisation, based on subjective elements, and aiming primarily at prevention. All newly adopted third pillar instruments aiming at harmonisation of substantive criminal law present challenges to the principle of legal certainty.

A persistent feature in attempts to harmonise substantive criminal law at Union . . . level has been the ongoing tension between . . . the quest for meaningful harmonisation, on the one hand, and the respect for state sovereignty and national diversity, on the other . . .

The question which remains, and appears even stronger following recent developments, is *why* European substantive criminal law. Attempts to harmonise seem to aim at a variety of quite disparate objectives . . .

9 CONCLUSIONS

i. The nature of the topics comprised in the AFSJ and the volume of measures, both hard law and soft law, that has been enacted, bear testimony to its overall importance within the EU polity.

ii. The distinctive nature of the AFSJ stemmed originally from the Member States' unwillingness for the normal EU method to be applied. The Lisbon Treaty has now completed the 'journey' begun in the Maastricht Treaty and continued via the Amsterdam Treaty, with the consequence that the AFSJ has been fully integrated into the main body of the Treaty.

iii. It is little surprise, given the nature of the subject matter, that many of the measures enacted have proven controversial. There have been problems concerning effectiveness, complexity, compliance with fundamental rights, and accountability.

[120] (N 114) 536–537, italics in the original.

iv. The EU bears responsibility in this respect, but so too do the Member States. The measures enacted are dependent in the last resort on what the Member States will accept, and 'all Member States have a contradictory stance regarding closer integration: recognizing the logic that rising cross-border movement and crime require responses that override the boundaries between national jurisdictions, while resisting the adjustments in national practices and the public concessions of sovereignty that this entails'.[121]

COMPETITION LAW: ARTICLE 101

1 CENTRAL ISSUES

i. Competition law has always been of central importance for the EU. It covers anti-competitive agreements between firms, abuse of a dominant position, and mergers.

ii. Article 101 TFEU is the principal vehicle for the control of anti-competitive agreements. Such agreements can be horizontal, being made between firms at the same level of the production cycle, such as agreements between cement manufacturers. Vertical agreements are those between firms at different levels of the distribution cycle, such as an agreement between a producer of stereo equipment and a retailer.

iii. The key features of Article 101 are examined in this chapter. These include: the meaning given to the terms agreement and concerted practice; the relationship between Article 101(1) and (3); the extent to which economic analysis does and should take place within Article 101(1); and the interpretation accorded to Article 101(3), including whether non-economic factors can be taken into account.

iv. The discussion then shifts to more detailed examination of vertical agreements. There is controversy about the extent to which these agreements are economically harmful, and about the 'correct' approach for competition policy.

v. The enforcement regime for Articles 101 and 102 has been reformed, and the chapter will conclude with an outline of these reforms.

2 COMPETITION LAW: OBJECTIVES

Competition law has always played an important part in EU law, but its precise role is contestable. A number of differing objectives can be pursued by competition policy.

The primary objective is to *enhance efficiency*, in the sense of maximizing consumer welfare and achieving the optimal allocation of resources. Traditional economic theory indicates that goods and services will be produced most efficiently where there is perfect competition or, more realistically, workable competition.[1] It is generally agreed that certain types of agreement can have a deleterious impact on market efficiency. Thus, for example, a horizontal agreement between the major cement

[1] F Scherer and D Ross, *Industrial Market Structure and Economic Performance* (Houghton Mifflin, 3rd edn, 1990); S Bishop and M Walker, *The Economics of EC Competition Law: Concepts, Application and Measurement* (Sweet & Maxwell, 3rd edn, 2010).

producers to fix selling prices leads to higher prices for cement, and the production of less cement, than would be produced via ordinary competition. There is more disagreement between economists concerning the effects of vertical agreements, and hence less certainty concerning how the competition rules should apply.

A second objective of competition policy may be *to protect consumers and smaller firms* from large aggregations of economic power, whether in the form of monopolies, or through agreements whereby rival firms coordinate their activity so as to act as one unit.

A third objective is to facilitate the *creation of a single European market*, and to prevent this from being frustrated by private undertakings. EU law prohibits tariffs, quotas, and the like that impede attainment of this goal. The effectiveness of such norms would be undermined if private undertakings could partition the EU market along national lines.

The objectives and priorities of EU competition policy have not remained static across time.[2] Wesseling identifies three phases in the development of EU competition policy.

R Wesseling, The Modernisation of EC Antitrust Law[3]

Initially, the antitrust law provisions were inserted into the Treaty in view of their role in the process of market integration. The antitrust rules were no more than the private counterpart to the rules, enshrined in Articles 28–30 EC. . . . The framers of the Treaty wanted to preclude private undertakings replacing the prohibited public obstacles to inter-state trade. The first period . . . saw the Commission enforcing the rules with constant reference to ensuring the free flow of goods, thus promoting market integration.

Subsequently, in the second period, antitrust policy was employed to establish a broader Community industrial policy. Exemptions from the antitrust rules were granted to forms of (trans-national) co-operation between undertakings which the Commission considered desirable, to promote either integration (Eurocheque) or broader Community policy aims (for example employment in crisis sectors). . . .

The momentum created by the Commission's '1992 programme' provided the occasion for expanding the scope of Community antitrust policy even further . . . the control of corporate mergers and the gradual liberalisation of public economic sectors, both highly political exercises, which commenced by the end of the 1980s, symbolise the altered character of Community antitrust law enforcement.

Although the system was originally devised for promoting market integration, antitrust policy is now also—and mainly—directed at promoting the various other objectives of the Community enshrined in Article 2. Absent a clear hierarchy between those objectives, priorities are selected on a case by case basis. . . .

3 ARTICLE 101: THE TREATY TEXT

Article 101 TFEU (ex Article 81 EC) is the principal weapon to control anti-competitive behaviour by cartels:

1. The following shall be prohibited as incompatible with the internal market: all agreements between undertakings, decisions by associations of undertakings and concerted practices which may affect

[2] I Maher, 'Competition Law and Intellectual Property Rights: Evolving Formalism' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 1999) ch 16; I Maher, 'Competition Law Modernization: An Evolutionary Tale?' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 2nd edn, 2011) ch 23.

[3] (Hart, 2000) 48–49.

trade between Member States and which have as their object or effect the prevention, restriction or distortion of competition within the internal market, and in particular those which:

(a) directly or indirectly fix purchase or selling prices or any other trading conditions;

(b) limit or control production, markets, technical development, or investment;

(c) share markets or sources of supply;

(d) apply dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage;

(e) make the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

2. Any agreements or decisions prohibited pursuant to this Article shall be automatically void.

3. The provisions of paragraph 1 may, however, be declared inapplicable in the case of:

— any agreement or category of agreements between undertakings,

— any decision or category of decisions by associations of undertakings,

— any concerted practice or category of concerted practices,

which contributes to improving the production or distribution of goods or to promoting technical or economic progress, while allowing consumers a fair share of the resulting benefit, and which does not:

(a) impose on the undertakings concerned restrictions which are not indispensable to the attainment of these objectives;

(b) afford such undertakings the possibility of eliminating competition in respect of a substantial part of the products in question.

4 ARTICLE 101(1): UNDERTAKINGS

Article 101(1) catches agreements, etc, which are made by undertakings, but the Treaty does not define this term. The Union Courts and competition authorities have taken a broad view. In *Höfner*, the ECJ held that the term undertaking covers any entity engaged in an economic activity regardless of its legal status and the way in which it is financed.[4] This has been held to include: corporations, partnerships, individuals, trade associations, the liberal professions, state-owned corporations, and cooperatives.[5]

The concept of undertaking does not, however, cover bodies that pursue an exclusively social objective and do not engage in economic activity, such as bodies entrusted with the management of statutory health insurance and old-age insurance schemes. Whether an undertaking operating in such a field engages in any 'economic' activity so as to bring it within Article 101 may require close inquiry into the way in which the undertaking operates.[6]

State-owned corporations can be undertakings when they operate in a commercial context, but not when they exercise their public law powers.[7] Similarly, a private body vested with public power will only be excluded from Article 101 with respect to its public activities, not those of an economic nature.[8] Organizations representing management and labour that conclude a collective agreement are not regarded as undertakings for the purposes of Article 101.[9] This is because the social objectives of such agreements would be undermined if such agreements were subject to Article 101, but collective agreements may still be subject to the rules on freedom of establishment.[10] Employees are, for the duration of their employment relationship, part of the undertakings that employ them, and therefore do not themselves constitute undertakings for the purposes of Article 101.[11]

Firms that are legally distinct may be treated as a single unit because of their close economic link. This may be the case with agreements made between parent and subsidiary, where it is decided that they are, in reality, to be regarded as one economic unit. The agreement will be regarded as an internal allocation of function within that economic unit.[12] The issue is whether the subsidiary has real autonomy, or whether it merely carries out the instructions of its parent.[13] If Article 101 is inapplicable, it may still be possible to use Article 102.

5 ARTICLE 101(1): AGREEMENTS, DECISIONS, AND CONCERTED PRACTICES

(A) AGREEMENTS

Article 101 requires the existence of an agreement, decision, or concerted practice. If the competition rules operated only when an explicit, formal agreement was made they would be of little practical use, since undertakings would achieve their anti-competitive goals in less formal ways. It is therefore necessary to have provisions to catch less formal species of agreements. The *Quinine Cartel* case provides a good example of this aspect of competition law.

Cases 41, 44 and 45/69 **ACF Chemiefarma NV v Commission**
[1970] ECR 661

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

A number of firms agreed to fix prices and divide the market in quinine. They made an agreement to this effect, which affected trade with non-Member States (the export agreement). They also made a gentlemen's agreement, which extended this to sales within the common market.

[7] Whish (n 5) 85–88.

THE ECJ

110. The gentlemen's agreement, which the applicant admits existed until the end of October 1962, had as its object the restriction of competition within the Common Market.

111. The parties to the export agreement mutually declared themselves willing to abide by the gentlemen's agreement and concede that they did so until the end of October 1962.

112. This document thus amounted to the faithful expression of the joint intention of the parties to the agreement with regard to their conduct in the Common Market.

113. Furthermore it contained a provision to the effect that infringement of the gentlemen's agreement would ipso facto constitute an infringement of the export agreement.

114. In those circumstances account must be taken of this connection in assessing the effects of the gentlemen's agreement with regard to the categories of acts prohibited by Article 85(1).

115. The defendant bases its view that the gentlemen's agreement was continued until February 1965 on documents and declarations emanating from the parties to the agreement the tenor of which is indistinct and indeed contradictory so that it is impossible to conclude whether those undertakings intended to terminate the gentlemen's agreement at their meeting on 29 October 1962.

116. The conduct of the undertakings in the Common Market after 29 October 1962 must therefore be considered in relation to the following four points: sharing out of domestic markets, fixing of common prices, determination of sales quotas and prohibition against manufacturing synthetic qunidine.

117. The gentlemen's agreement guaranteed protection of each domestic market for the producers in the various Member States.

118. After October 1962 when significant supplies were delivered on one of those markets by producers who were not nationals, as for example in the case of sales of quinine and quinidine in France, there was a substantial alignment of prices conforming to French domestic prices which were higher than the export prices to third countries.

119. It does not appear that there were alterations in the insignificant volume of trade between the other Member States referred to by the clause relating to domestic protection in spite of considerable differences in the prices prevailing in each of those States.

120. The divergences between the domestic legislation of those States cannot by itself explain those differences in price or the substantial absence of trade.

121. Obstacles which might arise in the trade in quinine and quinidine from differences between national legislation governing pharmaceutical products under trade-mark cannot relevantly be invoked to explain those facts.

122. The correspondence exchanged in October and November 1963 between the parties to the export agreement with regard to the protection of domestic markets merely confirmed the intention of those undertakings to allow this state of affairs to remain unchanged.

123. This intention was subsequently confirmed by Nedchem during the meeting of the undertakings concerned in Brussels on 14 March 1964.

124. From those circumstances it is clear that with regard to the restriction on competition arising from the protection of the producers' domestic markets the producers continued after the meeting on 29 October 1962 to abide by the gentlemen's agreement of 1960 and confirmed their common intention to do so.

The *Quinine Cartel* case serves as a good example of the ECJ's approach. Informal agreements can be caught under Article 101 and the mere fact that the parties claim to have terminated them will not be conclusive. The Court will examine the facts with care to determine whether it was economically plausible that the pricing behaviour of the parties could have been achieved in the absence of collusion.

The Commission, the CFI (now the General Court), and ECJ have continued to take an expansive view of 'agreement'. Thus, in *Polypropylene*,[14] the Commission held that there was a single agreement between firms in the petrochemical industry, which had continued over many years, even though the agreement was oral, even though there were no sanctions for breach, and even though it was not legally binding. The finding of a single overall agreement facilitated a finding of guilt against the fifteen firms involved, notwithstanding the fact that not all the firms had taken part in all aspects of the cartel. An agreement existed if the parties reached a consensus on a plan which limited, or was likely to limit, their commercial freedom by determining the lines of their mutual action or abstention from action in the market. The CFI upheld the Commission in this respect,[15] holding that the firms' pattern of conduct was in pursuit of a single economic aim, the distortion of the market in question. It would therefore be artificial to split this continuous conduct into a number of separate infringements.

The Union Courts have, moreover, held that for there to be an agreement within Article 101 it was sufficient that the undertakings in question should have expressed their joint intention to conduct themselves on the market in a specific way. Such was the case where there were common intentions between undertakings to achieve price and sales-volume targets.[16] It sufficed for the Commission to show that an undertaking participated in meetings at which an anti-competitive agreement was concluded without opposing it.[17] If an undertaking participated with others in the making of an agreement it could not argue that, because of its limited size, it could not have had a restrictive effect on competition,[18] nor does the undertaking have to be active on the relevant market.[19]

An agreement does, however, require the concurrence of will between at least two parties, as distinct from unilateral measures, although the precise form of this concurrence is not important, provided that it constitutes the faithful expression of the parties' intentions.[20] Unilateral measures do not therefore suffice, but an agreement can be deduced from conduct. However for an agreement to be based on tacit acceptance it is necessary that the manifestation of the wish of one contracting party to achieve an anti-competitive goal constitutes an invitation to the other party, whether express or implied, to fulfill that goal jointly.[21] It has, however, been argued that the concept of agreement should be treated less like the contract law idea of an 'agreement', and more in keeping with the economic objectives of competition policy.[22]

The Commission and Union Courts have also tackled the problems flowing from complex cartels that extend over many years, with multiple participants, by framing the claim in terms of 'agreement and/or concerted practice'. This strategy was upheld in *Limburgse Vinyl*.[23] The CFI stated that where there were complex infringements over many years, involving many parties, the Commission could not be expected to classify the infringement precisely for each undertaking at any given moment. The dual classification designated a complex whole, where some factual elements were relevant to an agreement, others to a concerted practice. This classification did not mean that the Commission had to prove that there was an agreement and a concerted practice throughout the whole period of the cartel. The ECJ confirmed this approach in *ANIC*,[24] since any other interpretation would have allowed the parties to escape liability through the creation of impossible evidential barriers.[25]

(B) CONCERTED PRACTICE

Even if there is no agreement, undertakings will be caught by Article 101 if there is a concerted practice. Firms can be devious. They may well have colluded, but they may have destroyed all paper evidence, or never have committed anything to paper at all. The collusion may be real none the less, and the term concerted practice must be able to capture this 'fact' of business life.

If, however, the term is interpreted too broadly it may catch parallel pricing that is a rational, natural response of firms in that market. In normal competitive markets, it is unlikely that firms will price at the same level without some collusion, because of differences in cost structures and the like. This may be different in oligopolistic markets, which have the following characteristics: relatively few sellers, high barriers to entry, little product differentiation, and price transparency, such that price changes are easily detectable by competitors. It has been argued that firms in such markets will naturally price at the same level, not because of any collusion, but because each firm independently recognizes its mutual interdependence. If any firm attempted to increase its market share by cutting prices, this would lead to a similar response from others. There would be a downward spiral of prices, but no increase in market share for any firm. No firm could unilaterally increase price, because its customers would switch trade to a competitor.[26]

If price uniformity really is the result of rational action in an oligopoly, and there is no actual collusion, then it is not sensible or fair to penalize such parties through fines for colluding. The problem is no longer behavioural, since the parties are not engaging in behaviour different from what is normal in that type of market. The problem is structural, in the sense that this type of market will naturally generate this type of response. This theory has, however, been criticized.

R Whish, Competition Law[27]

The theory of oligopolistic interdependence has attracted criticism. Four particular problems have been pointed out.

[23] Case T–305/94 *NV Limburgse Vinyl* (n 15) [695]–[698]; *Interbrew and Alken-Maes* [2003] OJ L200/1, [222]–[227].

[24] Case C–49/92 P *Commission v ANIC Partecipazioni SpA* [1999] ECR I–4125; Cases T–202, 204 and 207/98 *Tate & Lyle plc, British Sugar plc and Napier Brown & Co Ltd v Commission* [2001] ECR II–2035; Case T–19/05 *Boliden AB, Outokumpu Copper Fabrication AB and Outokumpu Copper BCZ SA v Commission*, 19 May 2010, [60]–[61]; D Bailey, 'Single Overall Agreement in EU Competition Law' (2010) 47 CMLRev 473.

[25] Cases T–25 etc/95 *Cimenteries CBR SA and others v Commission* [2000] ECR II–491.

[26] G Stigler, 'The Kinked Oligopoly Demand Curve' (1947) 55 J Pol Econ 431.

[27] (N 5) 548–550.

The first is that the theory overstates the interdependence of oligopolists. Even in a symmetrical three-firm oligopoly one firm might be able to steal a march on its rivals by cutting its price if, for example, there would be a delay before the others discovered what it had done: in the meantime the price-cutter may make sufficient profit to offset the cost of any subsequent price-war. . . .

A second problem is that the theory of oligopoly presents too simplistic a picture of industrial market structures. In a symmetrical oligopoly where producers produce identical goods at the same costs interdependence may be strong, but in reality market conditions are usually more complex. The oligopolists themselves will almost inevitably have different cost levels; they may be producing differentiated goods and will usually command at least some consumer loyalty; and their market shares will not be equal. . . . Many other factors affect the competitive environment in which oligopolists operate. The concentration of the market on the buying side is also important: the more concentrated it is, the less the oligopolists might compete with one another since it will be relatively easy to detect attempts to attract the custom of particular customers. The transparency of price information is significant: the easier it is to conceal the price of goods from competitors, the less will be the interdependence or mutual awareness of the oligopolists. . . .

A third problem with the theory of interdependence is that it fails to explain why in some oligopolistic markets competition is intense. Firms quite clearly do compete with one another in some oligopolies. Such competition may take various forms. Open price competition may be limited, although price wars do break out periodically in some oligopolistic markets. . . . Where open price competition is restricted, this does not mean that secret price cutting does not occur. Non-price competition may be particularly strong in oligopolistic markets. This may manifest itself in various ways: offering better quality products and after sales service; striving for a lead in technical innovation and research and development . . . ; and by making large investments in advertising to improve brand image. . . .

A fourth objection to the theory of oligopolistic interdependence is that it does not explain satisfactorily its central proposition, which is that oligopolists can earn supra-competitive profits without actually colluding. The interdependence theory says that they cannot increase price unilaterally because they will lose custom to their rivals, and yet to earn supra-competitive profits, prices must have been increased from time to time: how could this have been achieved without collusion? A possible answer to this is that a pattern of price leadership develops whereby one firm raises its price and this acts as a signal for the others to follow suit. Prices therefore remain parallel without conspiracy amongst the oligopolists, although this is not particularly convincing. . . .

Having analysed the economic problems with the term concerted practice we can now consider the leading ECJ decision.

Case 48/69 **ICI v Commission**
[1972] ECR 619

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The Court considered allegations that there had been concerted practices in the dyestuffs industry. The firms argued that any identity of price was the result of the oligopolistic nature of the market. The extract begins with the Court providing a definition of concerted practice.

THE ECJ

64. Article 85 draws a distinction between the concept of 'concerted practices' and that of 'agreements between undertakings' or of 'decisions by associations of undertakings'; the object is to bring

within the prohibition of that Article a form of coordination between undertakings which, without having reached the stage where an agreement properly so-called has been concluded, knowingly substitutes practical cooperation between them for the risks of competition.

65. By its very nature, then, a concerted practice does not have all the elements of a contract but may inter alia arise out of coordination which becomes apparent from the behaviour of the participants.

66. Although parallel behaviour may not by itself be identified with a concerted practice, it may however amount to strong evidence of such practice if it leads to conditions of competition which do not correspond to the normal conditions of the market, having regard to the nature of the products, the size and number of the undertakings and the volume of the said market.

67. This is especially the case if the parallel conduct is such as to enable those concerned to attempt to stabilize prices at a level different from that to which competition would have led, and to consolidate established positions to the detriment of effective freedom of movement of the products in the Common Market and of the freedom of consumers to choose their suppliers.

68. Therefore the question whether there was concerted action in this case can only be correctly determined if the evidence upon which the contested decision is based is considered, not in isolation, but as a whole, account being taken of the specific features of the market in the products in question.

[*The Court found that 80 per cent of the dyestuffs market was supplied by ten producers; that these firms possessed differing cost structures; that there were a large number of dyes produced by each firm; that while standard dyes could be replaced by other products relatively easily, this was not the case with specialist dyes; that the market for specialist dyes tended to be oligopolistic; that the Community market in dyestuffs consisted of five separate national markets which had different price levels; and that this division along national lines was in part due to the need to supply local assistance to users of the product, and also to ensure immediate delivery of quantities which were often small. The Court then considered price increases which occurred in 1964, 1965, and 1967. It found that the increases were factually connected, and then continued as follows:*]

88. In 1964 all the undertakings in question announced their increases and immediately put them into effect, the initiative coming from Ciba-Italy which, on 7 January 1964, following instructions from Ciba-Switzerland, announced and immediately introduced an increase of 15 per cent. This initiative was followed by the other producers on the Italian market within two or three days.

89. On 9 January ICI Holland took the initiative in introducing the same increase in the Netherlands, whilst on the same day Bayer took the same initiative on the Belgo-Luxembourg market.

...

91. As regards the increase of 1965 certain undertakings announced in advance price increases amounting, for the German market, to an increase of 15 per cent for products whose prices had already been similarly increased on the other markets, and to 10 per cent for products whose prices had not yet been increased. These announcements were spread over the period between 14 October and 28 December 1964.

92. The first announcement was made by BASF, on 14 October 1964, followed by an announcement by Bayer on 30 October and by Casella on 5 November.

93. These increases were simultaneously applied on 1 January 1965 on all the markets except for the French market because of the price freeze in that State, and the Italian market where, as a result of the refusal by the principal Italian producer, ACNA, to increase its prices on the said market, the other producers also decided not to increase theirs.

...

95. Otherwise the increase was general, was simultaneously introduced by all the producers mentioned in the contested decision, and was applied without any differences concerning the range of products.

[*The Court then considered a similar pattern in relation to the 1967 price increases. It continued as follows:*]

99. Viewed as a whole, the three consecutive increases reveal progressive cooperation between the undertakings concerned.

100. In fact, after the experience of 1964, when the announcement of the increases and their application coincided, although with minor differences as regards the range of products affected, the increases of 1965 and 1967 indicate a different mode of operation. Here, the undertakings taking the initiative, BASF and Geigy respectively, announced their intentions of making an increase some time in advance, which allowed the undertakings to observe each other's reactions on the different markets, and to adapt themselves accordingly.

101. By means of these advance announcements the various undertakings eliminated all uncertainty between them as to their future conduct and, in doing so, also eliminated a large part of the risk usually inherent in any independent change of conduct on one or several markets.

102. This was all the more the case since these announcements, which led to the fixing of general and equal increases in prices for the markets in dyestuffs, rendered the market transparent as regards the percentage rates of increase.

...

104. The fact that this conduct was not spontaneous is corroborated by an examination of other aspects of the market.

105. In fact, from the number of producers concerned it is not possible to say that the European market in dyestuffs is, in the strict sense, an oligopoly in which price competition could no longer play a substantial role.

106. These producers are sufficiently powerful and numerous to create a considerable risk that in times of rising prices some of them might not follow the general movement but might instead try to increase their share of the market by behaving in an individual way.

107. Furthermore, the dividing-up of the Common Market into five national markets with different price levels and structures makes it improbable that a spontaneous and equal price increase would occur on all the national markets.

...

109. Therefore, although parallel conduct in respect of prices may well have been an attractive and risk-free objective for the undertakings concerned, it is hardly conceivable that the same action could be taken spontaneously at the same time, on the same national markets and for the same range of products.

...

111. As regards the increases of 1965 and 1967 concertation took place openly, since all the announcements of the intention to increase prices with effect from a certain date and for a certain range of products made it possible for producers to decide on their conduct regarding the special cases of France and Italy.

112. In proceeding in this way, the undertakings mutually eliminated in advance any uncertainties concerning their reciprocal behaviour on the different markets and thereby also eliminated a large part of the risk inherent in any independent change of conduct on those markets.

113. The general and uniform increase on those different markets can only be explained by a common intention on the part of those undertakings, first, to adjust the level of prices and the situation resulting from competition in the form of discounts, and secondly, to avoid the risk, which is inherent in any price increase, of changing the conditions of competition.

The ECJ's approach emerges clearly in the above extract.[28] It is clear from the *Sugar Cartel* case that there can be a concerted practice even though there is no actual 'plan' between the parties. The key idea was that each undertaking should operate independently on the market.[29] Four points should be made about the concept of concerted practice.

[28] See also Case 172/80 *Gerhard Züchner v Bayerische Vereinsbank AG* [1981] ECR 2021.

[29] Cases 40–48, 50, 54–56, 111, 113 and 114/73 *Cooperatiëve Vereniging 'Suiker Unie' UA v Commission* [1975] ECR 1663, 1942; Cases T–202, 204 and 207/98 *Tate & Lyle plc* (n 24).

First, the burden of proving an infringement of Article 101 rests with the Commission, and the mere existence of parallel conduct will not, in itself, prove a concerted practice. Thus, if the parties can show that, although there is parallel behaviour, there are explanations for what has occurred other than concertation then they may be exonerated.[30] The Court will investigate whether there really is 'room' for the competition rules to operate in a particular context.[31]

Secondly, the Court will not readily accept that uniformity of price is the result of oligopolistic market structure. If the facts do not indicate that the market structure will naturally lead to price uniformity, and if other factors indicate collusion, then the onus may shift to the firms to suggest how the identity of price came about without some concertation.

Thirdly, there can, however, be differences of opinion on which side of the line a case falls. In *Wood Pulp*[32] the Commission considered allegations of concerted practices by a large number of wood pulp producers. In reaching the conclusion that there was a concerted practice, the Commission refused to accept that the market was oligopolistic, because of the large number of firms. The fact that they charged similar prices, and altered them uniformly and simultaneously, was itself *prima facie* evidence that they were acting in concert. The ECJ disagreed.[33] It held that parallel conduct cannot be regarded as proof of concertation unless this constituted the only plausible explanation for the conduct. Article 101 did not deprive firms of the ability to adapt their behaviour intelligently to that of their competitors.[34] It held, moreover, that the parallelism of the prices and the price trends could satisfactorily be explained by the oligopolistic tendencies of the market and the specific circumstances prevailing during the relevant period.[35] The ECJ insisted that rigorous economic analysis is required to determine whether there is another plausible explanation for the parties' conduct. In the absence of overt communication between the parties, the Commission will have to defend its assumptions against experts who can suggest an innocent explanation for the challenged behaviour.[36]

The *Polypropylene* cases provide a good contrast to *Wood Pulp*. In a series of decisions the CFI cited the requirement from the *Sugar Cartel* case that undertakings must behave independently. It held that participation in meetings concerning the fixing of price and sales-volume targets during which information was exchanged between competitors about the prices they intended to charge, their profitability thresholds, the sales volumes they judged to be necessary, or their sales figures constituted a concerted practice. This was because the participant undertakings could not fail to take account of the information thus disclosed in determining their conduct on the market.[37]

Fourthly, there is the issue of whether a concerted practice must have been put into effect. This issue was addressed in *Hüls* and the approach was affirmed in *T-Mobile*.[38]

Case C–199/92 P **Hüls AG v Commission**
[1999] ECR I–4287

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

This was one of the appeals from the CFI to the ECJ resulting from the *Polypropylene* decision of the Commission. The Commission had found that there was a concerted practice of fixing prices on this market. Hüls argued that there was a lack of proof of conduct on the market corresponding to a concerted practice. The ECJ set out the definition of concerted practice, and then continued as follows.

THE ECJ

161. It follows, first, that the concept of a concerted practice . . . implies, besides undertakings' concerting with each other, subsequent conduct on the market, and a relationship of cause and effect between the two.

162. However, subject to proof to the contrary, which the economic operators concerned must adduce, the presumption must be that the undertakings taking part in the concerted action and remaining active on the market take account of the information exchanged with their competitors for the purposes of determining their conduct on that market. This is all the more true where the undertakings concert together on a regular basis over a long period, as was the case here. . . .

163. Secondly, contrary to Huls's argument, a concerted practice . . . is caught by Article 81(1) EC, even in the absence of anti-competitive effects on the market.

164. . . . it follows from the actual text of that provision that . . . concerted practices are prohibited regardless of their effect, when they have an anti-competitive object.

165. . . . although the very concept of a concerted practice presupposes conduct by the participating undertakings on the market, it does not necessarily mean that that conduct should produce the specific effect of restricting, preventing or distorting competition.

. . .

166. Consequently, contrary to Huls's argument, the Court of First Instance was not in breach of the rules applying to the burden of proof when it considered that, since the Commission had established to the requisite legal standard that Huls had taken part in polypropylene producers' concerting together for the purpose of restricting competition, it did not have to adduce evidence that their concerting together had manifested itself in conduct on the market or that it had effects restrictive of competition; on the contrary, it was for Huls to prove that that did not have any influence whatsoever on its own conduct on the market.

6 ARTICLE 101(1): OBJECT OR EFFECT OF PREVENTING, RESTRICTING, OR DISTORTING COMPETITION

Article 101(1) requires that the agreement, decision, or concerted practice has the object or effect of preventing, restricting, or distorting competition in the internal market. The interpretation of this phrase has generated a significant body of literature.

(A) NATURE OF THE PROBLEM

Article 101(1) captures all agreements, concerted practices, etc., which have as their object or effect the prevention, etc, of competition. However all contracts concerning trade impose some restraints, 'to

bind, to restrain is of their very essence',[39] yet it would be absurd if every contract was caught by competition law. Moreover an agreement may have features that both enhance and restrict competition. Imagine that a supplier wishes to break into a new market, and decides to use Brown as its distributor for a particular area. Brown may only be willing to risk marketing the new product if given certain incentives and protection, such that the supplier will not supply other firms in the same area. This is a restriction of competition, but the agreement may enhance competition, since there is a new product on the market. The appropriate response to these issues is contentious. It has been debated whether the EU should follow the approach in the United States, and distinguish between a rule of reason and *per se* rules. A brief glance at US experience is, therefore, necessary in order to understand the diversity of opinion in the EU.

(B) EXPERIENCE IN THE UNITED STATES

The dilemmas identified above are evident in section 1 of the Sherman Act, which states that every contract, combination, or conspiracy in restraint of trade is illegal. The courts responded by developing the rule of reason. In *Standard Oil v US* White CJ stated that a standard of reason had to be applied to determine whether a restraint was within the Sherman Act, and that only undue or unreasonable restraints should be condemned.[40] The precise meaning of this idea was contested, and still is today.[41] The concept appears to demand a broad inquiry into whether the restrictions increase or decrease competition in the market. The pro- and anti-competitive effects of the agreement are weighed to determine whether it suppresses or promotes competition.[42]

There is, however, continuing disagreement on the effects of particular types of agreement, and therefore whether they should be prohibited. There has also been disagreement on the range of considerations that should be taken into account within this analysis. For some this should be restricted to economic factors, while others advocate a more wide-ranging inquiry, or are willing to ascribe economic value to social factors.[43]

Per se rules developed from a rule-of-reason analysis. The inquiry demanded by the rule of reason may be time-consuming and costly. With the passage of time the courts came to identify certain types of agreement that were conclusively presumed to be 'without redeeming virtue' and which had a 'pernicious effect on competition'. The courts condemned these without the need for elaborate inquiry into whether they had an impact on the market. The cases held to fall within this category were those which were most obviously anti-competitive, such as horizontal price-fixing[44] and market division.[45] In these instances proof of the agreement was sufficient to condemn it, obviating the need for more detailed market investigation.[46]

[44] *US v Trenton Potteries Co*, 273 US 392 (1927).

[45] *US v Topco Associates*, 405 US 596 (1972).

[46] Because classification as a price-fixing agreement can have these serious consequences the courts will, on occasion, strive to avoid characterizing a case in this way, if they believe that it has redeeming features, notwithstanding an element of price control: *National Collegiate Athletic Assn v Board of Regents of the University of Oklahoma*, 468 US 85 (1984); *Broadcast Music Inc v Columbia Broadcasting Systems Inc*, 441 US 1 (1979).

(c) THE ACADEMIC DEBATE IN THE EU

There has been debate about whether we should adopt a rule of reason in EU law. This debate was affected by Article 101(3), whereby agreements that are held to restrict competition can be exempted following an economic analysis. No such provision exists in the United States, thereby rendering the need for some rule-of-reason analysis more necessary. The debate was also affected by the fact that until recently national courts could apply Article 101(1), but not Article 101(3).

Korah was an early advocate of adopting a rule of reason analysis in EU law.[47] References to Article 85 EEC should now be read as to Article 101 TFEU.

V Korah, The Rise and Fall of Provisional Validity—The Need for a Rule of Reason in EEC Antitrust[48]

The Community Court and Commission have not developed the same theory of per se offences so brilliantly developed in the early cases under the Sherman Act. Naked restraints on pricing, market sharing, and some kinds of collective boycott . . . are likely to be condemned with fairly short reasoning if they are found capable of restricting trade between Member States, but more market analysis is required in the case of ancillary restraints. In Consten & Grundig, the Court seems to have developed a per se rule against absolute territorial protection conferred by export bans . . . , and this has been consistently applied by the Commission, despite mounting criticism. For all other restraints, however, the Court seems to be applying a rule of reason, requiring an analysis of the actual or intended effects in the light of market conditions.

The Commission, however, habitually analyzes agreements under Article 85(1) in the formalistic way developed by the German case law . . . and condemns any restriction on the conduct of the parties, or third parties, provided the restriction has, or may be expected to have, appreciable effects on the market. Only under Article 85(3) does the Commission usually try to balance any pro-and anti-competitive effects.

If national courts adopt the Commission's practice, it is feared that many desirable contracts which restrict only competition that could not take place without such an agreement, or which restrict competition less than they increase it, may not be made. The Commission grants few exemptions. . . . Important agreements are unlikely to be exempted unless certain clauses are altered. These alterations may help one party more than the other, and the whole contract may have to be renegotiated after the parties have been implementing it, when their relative bargaining power may have been altered as a result of the collaboration. This is a considerable disincentive to notification.

. . .

There is fear that European firms that may have to compete in world markets may fall behind technologically or have to merge completely, so as to reduce the risk of collaboration. Market analyses are difficult, especially for lawyers and bureaucrats. But if such analyses are not made, agreements that may have overall desirable consequences should not be controlled. This means that national courts will have to be strong in resisting claims that agreements are anti-competitive just because some competitor is harmed.

[47] See also R Joliet, *The Rule of Reason in Antitrust Law: American, German and Common Market Laws in Comparative Perspective* (Faculté de Droit, Liège, 1967); M Schecter, 'The Rule of Reason in European Competition Law' [1982] 2 LIEI 1; I Forrester and C Norall, 'The Laicization of Community Law: Self-Help and the Rule of Reason: How Competition Law is and Could be Applied' (1984) 21 CMLRev 11; V Korah, 'EEC Competition Policy—Legal Form or Economic Efficiency' (1986) 39 CLP 85.

[48] (1981) 3 NW J Int L and Bus 320, 354–355.

Whish and Sufrin presented the contrasting view. They argued that the ECJ's case law did not signify acceptance of a rule of reason in EU law, or that differing labels captured what the ECJ was doing better than the adoption of labels from the United States. This will be considered below.[49] They also contended that there were very real differences between the antitrust laws of the United States and the EU, which rendered any transfer of terminology of limited utility.[50]

R Whish and B Sufrin, Article 85 and the Rule of Reason[51]

The call for the adoption of a US-style rule of reason should be resisted and, indeed, there is much to be said for dropping this term (and the terms 'ancillary restraint' and 'per se illegality') from EEC antitrust law altogether, on the basis that they do more to confuse than to clarify. EEC competition law requires its own vocabulary, carefully honed to express its own particular tensions.

One ground for jettisoning the term 'rule of reason' from the vocabulary of EEC competition law is that it is now used in other areas of the law, for example, in the provisions on free movement of goods. . . .

A different reason for abandoning this terminology in EEC competition law is that it invites misleading comparison with antitrust law analysis in the United States. We have suggested above that the context of US antitrust law is so dissimilar from that of the EEC that comparative analysis should be undertaken with great caution.

Quite apart from the issue of terminology, the writers have other doubts about the wisdom of analysing Article 85(1) in a way that relies on an approach similar to that of the Sherman Act. It would not help the cause of certainty.

. . .

The matter of certainty is, of course, important. It is in no one's interest to retard beneficial collaboration between firms striving to compete in a competitive international market. However, the best answer to this problem is for the Commission to continue to improve its procedures, to publish block exemptions where this is possible, and to develop such notions as objective necessity and potential competition. We also expect its sophistication in dealing with economics to continue to improve, but do not consider that this goes hand in hand with rule-of-reason analysis. This would stifle the proper application of Article 85 which, precisely because of its more ample wording, does not bear the same intellectual burden that the words 'restraint of trade' do in the Sherman Act. We doubt, too, that it would be helpful to draw the national courts further into the application of Article 85 by asking them to undertake extensive economic analysis under Article 85(1). We are happy for them to enforce the competition rules against blatant cartels and abuses of a dominant position. We do not consider them to be appropriate fora for deciding upon complex economic issues.

(D) THE CASE LAW

The academic debate provides a framework within which to evaluate the case law. In reading these materials we should consider whether the Court is balancing the pro- and anti-competitive effects of an agreement to determine whether it is caught within Article 101(1), and how far the terminology of the rule of reason is an apt description of this approach.

[49] See 973–983 below.
[50] (1987) 7 YBEL 12–20.
[51] Ibid 36–37.

Case 56/65 **Société La Technique Minière v Maschinenbau Ulm GmbH**
[1966] ECR 235

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The case concerned an exclusive supply contract, whereby STM had the exclusive right to sell in France certain grading equipment produced by Maschinenbau Ulm (MBU), a German undertaking. The contract did not, however, insulate the French territory: STM could sell the goods outside France, and parallel imports could be obtained from other countries. A contract dispute between STM and MBU led the former to argue that this contract was invalid under Article 85.

THE ECJ

Finally, for the agreement at issue to be caught by the prohibition contained in Article 85(1) it must have as its 'object or effect the prevention, restriction or distortion of competition within the Common Market'.

The fact that these are not cumulative but alternative requirements, indicated by the conjunction 'or', leads first to the need to consider the precise purpose of the agreement, in the economic context in which it is to be applied. This interference with competition referred to in Article 85(1) must result from all or some of the clauses of the agreement itself. Where, however, an analysis of the said clauses does not reveal the effect on competition to be sufficiently deleterious, the consequences of the agreement should then be considered and for it to be caught by the prohibition it is then necessary to find that those factors are present which show that competition has in fact been prevented or restricted or distorted to an appreciable extent.

The competition in question must be understood within the actual context in which it would occur in the absence of the agreement in dispute. In particular it may be doubted whether there is an interference with competition if the said agreement seems really necessary for the penetration of a new area by an undertaking. Therefore, in order to decide whether an agreement containing a clause 'granting an exclusive right of sale' is to be considered as prohibited by reason of its object or its effect, it is appropriate to take into account in particular the nature and quantity, limited or otherwise, of the products covered by the agreement, the position and importance of the grantor and the concessionaire on the market for the products concerned, the isolated nature of the disputed agreement or, alternatively, its position in a series of agreements, the severity of the clauses intended to protect the exclusive dealership or, alternatively, the opportunities allowed for other commercial competitors in the same products by way of parallel re-exportation and importation.

Cases 56 and 58/64 **Etablissements Consten SARL and Grundig-Verkaufs-GmbH v Commission**
[1966] ECR 299

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

Grundig granted to Consten a sole distributorship for its electronic products in France. Consten had an obligation to take a minimum amount of the product; it had to provide publicity and after-sales service; and undertook not to sell the products of competing manufacturers. Moreover, the French territory was in effect insulated: there was absolute territorial protection. Consten undertook not to sell the goods outside the contract territory. A similar prohibition existed on other Grundig distributors in other

countries. Grundig assigned to Consten its trade-mark, GINT, which Consten could use against any unauthorized sales in France. In 1961 a company called UNEF bought Grundig goods from sellers in Germany and sold them in France more cheaply than Consten. The latter brought an action for infringement of its trade-mark, and UNEF contended that the agreement between Grundig and Consten violated Article 85.

THE ECJ

The applicants and the German Government maintain that since the Commission restricted its examination solely to Grundig products the decision was based upon a false concept of competition . . . contained in Article 85(1), since this concept applies particularly to competition between similar products of different makes; the Commission, before declaring Article 85(1) to be applicable, should, by basing itself upon the 'rule of reason', have considered the economic effects of the disputed contract upon competition between the different makes. There is a presumption that vertical sole distributorship agreements are not harmful to competition and in the present case there is nothing to invalidate that presumption. On the contrary, the contract in question has increased the competition between similar products of different makes.

The principle of freedom of competition concerns the various stages and manifestations of competition. Although competition between producers is generally more noticeable than that between distributors of products of the same make, it does not thereby follow that an agreement tending to restrict the latter kind of competition should escape the prohibition of Article 85(1) merely because it might increase the former.

Besides, for the purpose of applying Article 85(1), there is no need to take account of the concrete effects of an agreement once it appears that it has as its object the prevention, restriction or distortion of competition.

Therefore, the absence in the contested decision of any analysis of the effects of the agreement on competition between similar products of different makes does not, of itself, constitute a defect in the decision.

[*The Court considered the system of absolute territorial protection established by the agreement between Consten and Grundig. It continued as follows:*]

The situation as ascertained above results in the isolation of the French market and makes it possible to charge for the products in question prices which are sheltered from all effective competition. . . . Since the agreement thus aims at isolating the French market for Grundig products and maintaining artificially, for products of a very-well known brand, separate national markets within the Community, it is therefore such as to distort competition in the Common Market.

It was therefore proper for the contested decision to hold that the agreement constitutes an infringement of Article 85(1). No further considerations, whether of economic data . . . or of the correctness of the criteria upon which the Commission relied in its comparisons between the situations of the French and German markets, and no possible favourable effects of the agreement in other respects, can in any way lead, in the face of the above-mentioned restrictions, to a different solution under Article 85(1).

(i) *Object*

It is clear from the *STM* case that the Court accepted that the words of Article 101 were to be read disjunctively: if the object of the agreement was anti-competitive then it could be condemned without pressing further,[52] since 'certain forms of collusion between undertakings can be regarded, by their

[52] O Odudu, 'Interpreting Article 81(1): Object as Subjective Intention' (2001) 26 ELRev 60.

very nature, as being injurious to the proper functioning of normal competition'.[53] If one were using the language of the United States' courts, such agreements would be *per se* illegal. The anti-competitive nature of an agreement will be determined by its content, the objectives it seeks to attain, and the economic and legal context of which it forms a part.[54] The parties' intention is not a necessary factor, but may be taken into account.[55]

Agreements that are particularly heinous, such as horizontal price-fixing, market-division, and collective boycotts, are condemned without further analysis of market circumstances.[56] The Union Courts have also regarded agreements that limit parallel trade as having a restrictive object,[57] this being reflective of the Court's concern to prevent partition of markets along national lines.[58] This reading of Article 101 is confirmed by *Ferriere Nord*,[59] and *GlaxoSmithKline*.[60] It is unnecessary to demonstrate any actual effects on the market for such agreements. Proof of the existence of such agreements will suffice.[61] Nor is it necessary to show that consumers are disadvantaged for an agreement to be caught because of its object, since Article 101 has been construed to protect competition as well as the interests of consumers.[62] An agreement may have a restrictive object even if restriction of competition is not its sole aim.[63]

Cases C–501, 513, 515 and 519/06 **GlaxoSmithKline Services Unlimited and others v Commission**
[2009] ECR I–9291

The case concerned differential pricing whereby GSK made an agreement with Spanish wholesalers which distinguished between prices charged to wholesalers in the case of domestic resale of reimbursable drugs to pharmacies or hospitals and higher prices charged in the case of exports of medicines to any other Member State. The ECJ reaffirmed the approach in the STM case that Article 101 embodied a distinction between agreements that had the object of restricting competition and those where it was necessary to consider effect. It continued as follows.

THE ECJ

58. According to settled case-law, in order to assess the anti-competitive nature of an agreement, regard must be had inter alia to the content of its provisions, the objectives it seeks to attain and the

economic and legal context of which it forms a part . . . In addition, although the parties' intention is not a necessary factor in determining whether an agreement is restrictive, there is nothing prohibiting the Commission or the Community judicature from taking that aspect into account (see, to that effect, IAZ International Belgium and Others v Commission , cited above, paragraphs 23 to 25).

59. With respect to parallel trade, the Court has already held that, in principle, agreements aimed at prohibiting or limiting parallel trade have as their object the prevention of competition . . .

. . .

61. The Court has, moreover, held in that regard, in relation to the application of Article 81 EC and in a case involving the pharmaceuticals sector, that an agreement between producer and distributor which might tend to restore the national divisions in trade between Member States might be such as to frustrate the Treaty's objective of achieving the integration of national markets through the establishment of a single market. Thus on a number of occasions the Court has held agreements aimed at partitioning national markets according to national borders or making the interpenetration of national markets more difficult, in particular those aimed at preventing or restricting parallel exports, to be agreements whose object is to restrict competition within the meaning of that article of the Treaty . . .

62. With respect to the Court of First Instance's statement that, while it is accepted that an agreement intended to limit parallel trade must in principle be considered to have as its object the restriction of competition, that applies in so far as it may be presumed to deprive final consumers of the advantages of effective competition in terms of supply or price, the Court notes that neither the wording of Article 81(1) EC nor the case-law lend support to such a position.

63. First of all, there is nothing in that provision to indicate that only those agreements which deprive consumers of certain advantages may have an anti-competitive object. Secondly, it must be borne in mind that the Court has held that, like other competition rules laid down in the Treaty, Article 81 EC aims to protect not only the interests of competitors or of consumers, but also the structure of the market and, in so doing, competition as such. Consequently, for a finding that an agreement has an anti-competitive object, it is not necessary that final consumers be deprived of the advantages of effective competition in terms of supply or price (see, by analogy, T-Mobile Netherlands and Others , cited above, paragraphs 38 and 39).

(ii) *Effect*

Where the anti-competitive quality of an agreement is not evident from its object then it is necessary to consider its effects,[64] as emphasized in the *Delimitis* case.[65] The contrast between *STM* and *Consten and Grundig* is instructive. It is clear that the *STM* case countenanced some economic analysis within Article 101(1): the ECJ took into account the fact that the exclusive-supply contract may have been necessary to enable MBU to penetrate the French market, and that this was to be encouraged.

The ECJ's response in *Consten and Grundig* to the argument concerning the rule of reason must be seen in the light of the facts. The parties sought to use that doctrine to legitimate a scheme that gave absolute territorial protection to the French distributor. If one were engaging in a pure economic analysis, which involved trade-offs between the pro- and anti-competitive effects of an agreement, then even absolute territorial protection might be warranted.[66] However, the EU competition

[64] Case 23/67 *Brasserie de Haecht SA v Wilkin* [1967] ECR 407; Case 5/69 *Völk v Vervaecke* [1969] ECR 295; Case T–7/93 *Langnese-Iglo GmbH v Commission* [1995] ECR II–1533; O Odudu, 'Interpreting Article 81(1): Demonstrating Restrictive Effect' (2001) 26 ELRev 261.

[66] The protection might be necessary to enable the manufacturer to penetrate a new market, and any reduction in intra-brand competition (competition between distributors of the same product) would be offset by increase in

rules have been influenced by the desire to create a single market.[67] Agreements that have the effect of partitioning the market along national lines will, therefore, be treated harshly. The *Consten and Grundig* case should not be perceived as rejecting economic analysis within Article 101(1), but rather as indicating that such analysis could not validate absolute territorial protection. Economic analysis is apparent in a number of other decisions.[68]

Case 258/78 **LC Nungesser KG and Kurt Eisele v Commission**
[1982] ECR 2015

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The case concerned a contract between INRA, a French research institute specializing in the development of plant seeds, and Eisele, a German supplier of seeds. The contract gave Eisele, and through him Nungesser, absolute territorial protection: INRA would not sell the seed to any other undertaking in Germany, and would prevent third parties from doing so; Eisele could use the plant breeder's rights assigned to him by INRA to prevent third parties selling into Germany. The Commission found that the agreement violated Article 85(1). The applicant argued that the exclusive licence was necessary to enable INRA to enter a new market, and compete with comparable products therein, since no trader would risk launching a new product unless he were given protection from competition from the licensor and from other licensees. The Court distinguished between an open exclusive licence, whereby the owner merely undertook not to compete himself, nor to grant licences to others in the same territory; and an exclusive licence with absolute territorial protection, under which all competition from third parties was eliminated.

THE ECJ

54. That point having been clarified, it is necessary to examine whether, in the present case, the exclusive nature of the licence, in so far as it is an open licence, has the effect of preventing or distorting competition within the meaning of Article 85(1) of the Treaty.

...

56. The exclusive licence which forms the subject-matter of the contested decision concerns the cultivation and marketing of hybrid maize seeds which were developed by INRA after years of research and experimentation and were unknown to German farmers at the time when the cooperation between INRA and the applicants was taking shape. For that reason the concern shown by the interveners as regards the protection of new technology is justified.

57. In fact, in the case of a licence of breeders' rights over hybrid maize seeds newly developed in one Member State, an undertaking in another Member State which was not certain that it would not encounter competition from other licensees for the territory granted to it, or from the owner of the right himself, might be deterred from accepting the risk of cultivating and marketing that product; such a result would be damaging to the dissemination of a new technology and would prejudice competition in the Community between the new product and similar existing products.

58. Having regard to the specific nature of the products in question, the Court concludes that, in a case such as the present, the grant of an open exclusive licence, that is to say a licence which does not

inter-brand competition (competition between those who distribute goods of the same kind, eg, different brands of stereo equipment).

[67] Case C–501/06 P *GlaxoSmithKline* (n 54) [63]; Jones and Sufrin (n 56) 197–198; G Amato, *Antitrust and the Bounds of Power* (Hart, 1997) 48–49.

[68] Case 262/81 *Coditel SA v Ciné-Vog Films SA* [1982] ECR 3381; Case C–234/89 *Delimitis* (n 65); Cases T–374, 375, 384 and 388/94 *European Night Services* (n 56); Case C–238/05 *Asnef-Equifax v Ausbanc* [2006] ECR I–11125.

affect the position of third parties such as parallel importers and licensees for other territories, is not in itself incompatible with Article 85(1) of the Treaty.

[*In relation to those aspects of the agreement which conferred absolute territorial protection, the Court, however, continued to follow* Consten and Grundig*, and to hold that these were illegal.*]

Closely related to the preceding material is the case law on what are termed ancillary restraints. The jurisprudence indicates that restrictions on the conduct of the parties ancillary, or objectively necessary, to the operation of pro-competitive or non-restrictive agreements cannot be said to restrict competition.[69] Thus, in *Remia*[70] it was held that non-competition clauses included in the sale of an undertaking would not come within Article 101(1), since otherwise the vendor, with his specialist knowledge of the transferred undertaking, could simply win back the custom from the purchaser. Such clauses could, therefore, enhance competition by increasing the number of undertakings on the relevant market. This will, however, exclude only certain clauses from Article 101(1). Thus, in *Remia* the Court held that the non-competition clause must be limited in time and scope.[71] Similar reasoning is evident in *Pronuptia*, although the Court decided that certain of the clauses were not necessary for the integrity of the franchise agreement and hence were caught by Article 101(1).[72]

Case 161/84 **Pronuptia de Paris GmbH v Pronuptia de Paris Irmgard Schillgallis** [1986] ECR 353

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The case was concerned with franchising arrangements for wedding apparel. Under the franchise, the franchisor granted the franchisee the exclusive right to use the Pronuptia mark for a certain area; it agreed not to open another shop in that area, or aid any third party to do so; and it assisted the franchisee in setting up the store, providing know-how, etc. In return the franchisee, who remained the owner of the business, agreed to use the Pronuptia name; to pay the franchisor a royalty on turnover; to purchase 80 per cent of its requirements for wedding dresses from the franchisor; to take account of the recommended resale prices proposed by the franchisor; and not to compete with any Pronuptia business. The Court noted the diversity in types of franchise agreement: there were service, production, and distribution franchise agreements. The judgment is directed at distribution franchises.

THE ECJ

15. In a distribution system such as this, an enterprise which has established itself as a distributor in a market and which has thus been able to perfect a range of commercial methods gives independent businessmen the chance, at a price, of establishing themselves in other markets by using its mark and the commercial methods which created the franchisor's success. . . . At the same time this system

[69] Jones and Sufrin (n 56) 227–231; Commission Guidelines (n 61) [28]–[31].

[70] Case 42/84 *Remia BV and Verenigde Bedrijven Nutricia NV v Commission* [1985] ECR 2545; Case C–250/92 *Gottrup-Klim Grovvareforeninger v Dansk Landbrugs Grovvareselskab AmbA* [1994] ECR I–5641.

[71] Case 42/84 (n 70).

[72] Case 161/84 [1986] ECR 353, 382–325. This was particularly the case for those clauses which partitioned the market between franchisor and franchisee, or between franchisees themselves. Thus, the obligation on the franchisor not to allow other franchisees to open shops outside their allotted territory was held to fall foul of the *Consten and Grundig* principle. The fact that such a clause might be necessary for any franchisee to make the initial investment was recognized by the Court, but was considered to be of relevance only within Art 101(3).

gives businessmen who lack the necessary experience access to methods which they could otherwise only acquire after prolonged effort and research and allows them also to profit from the reputation of the mark. . . . Such a system, which permits the franchisor to take advantage of his success, is not by itself restrictive of competition. For it to function two conditions must be satisfied.

16. First, the franchisor must be able to communicate his know-how to the franchisees and provide them with the necessary assistance in putting his methods into effect, without running the risk that this know-how will aid his competitors, even indirectly. It thus follows that those clauses which are essential to prevent this risk do not constitute restrictions on competition in the sense of Article 85(1). These include the prohibition on the franchisee opening, for the duration of the franchise or for a reasonable period after its termination, a shop with an identical or similar purpose in an area where he could be in competition with one of the members of the network. The same applies to the obligation on the franchisee not to sell his shop without the prior approval of the franchisor: this clause serves to ensure that the benefit of the know-how and assistance provided does not go directly to a competitor.

17. Secondly, the franchisor must be able to take appropriate measures to preserve the identity and reputation of the network which is symbolised by the mark. It thus follows that those clauses which provide a basis for such control as is indispensable for this purpose also do not constitute restrictions on competition in the sense of Article 85(1).

18. This covers then the obligation on the franchisee to apply the commercial methods developed by the franchisor and to utilise the know-how provided.

19. This is also the case with the franchisee's obligation only to sell the merchandise covered by the agreement in premises set up and decorated according to the franchisor's specifications, which have as their purpose to guarantee a uniform image corresponding to specified requirements.

. . .

21. Thanks to the control exercised by the franchisor over the selection of goods offered by the franchisee, the public can find at each franchisee's shop merchandise of the same quality. . . . A clause prescribing that the franchisee can only sell products provided by the franchisor or by suppliers selected by him must, in these circumstances, be considered necessary for the protection of the reputation of the network. It must not, however, operate to prevent the franchisee from obtaining the products from other franchisees.

Notwithstanding the above the CFI in *Métropole Télévision* denied that there is a rule of reason as such within Article 101(1), and it has reiterated this stance in subsequent decisions.[73]

Case T–112/99 **Métropole Télévision (M6), Suez-Lyonnaise des Eaux, France Telecom, and Télévision Française 1 SA (TFI) v Commission**
[2001] ECR II–2459

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The applicant companies sought to annul a Commission decision relating to the creation of TPS, a company providing digital satellite television for payment. The agreement had an exclusivity clause, whereby the general-interest channels provided by the applicants would be broadcast exclusively by TPS. The applicants argued, based on cases such as *Nungesser*, that the Commission should have applied Article 85(1) in the light of the rule of reason to this clause. There were already strong companies on the pay TV market, into which TPS was seeking to gain entry.

[73] Case T–65/98 *Van den Bergh Foods Ltd v Commission* [2003] ECR II–4653, [107]; Case T–328/03 *O2 (Germany) GmbH & Co OHG v Commission* [2006] ECR II–1231, [65]–[73].

THE CFI

72. According to the applicants, as a consequence of the existence of the rule of reason in Community competition law, when Article 85(1)... is applied it is necessary to weigh the pro- and anti-competitive effects of an agreement in order to determine whether it is caught by the prohibition laid down in that article. It should, however, be observed, first of all, that contrary to the applicants' assertions the existence of such a rule has not, as such, been confirmed by the Community courts. Quite the contrary, in various judgments the Court of Justice and Court of First Instance have been at pains to indicate that the existence of a rule of reason in Community law is doubtful (see Case C–235/92, *Montecatini*... [1999] ECR I–4539, paragraph 133... Case T–148/89, *Tréfilunion* [1995] ECR II–1063, paragraph 109).

73. Next, it must be observed that an interpretation of Article 85(1)..., in the form suggested by the applicants, is difficult to reconcile with the rules prescribed by that provision.

74. Article 85... expressly provides, in its third paragraph, for the possibility of exempting agreements that restrict competition where they satisfy a number of conditions.... It is only in the precise framework of that provision that the pro- and anti-competitive effects of a restriction may be weighed (see... *Pronuptia* paragraph 24... and *European Night Services* paragraph 136). Article 85(3) would lose much of its effectiveness if such an examination had to be carried out already under Article 85(1)....

75. It is true that in a number of judgments the Court of Justice and the Court of First Instance have favoured a more flexible interpretation of the prohibition laid down in Article 85(1) (see... *STM*... *Nungesser*... *Coditel*... *Pronuptia*... *European Night Services*...).

76. Those judgments cannot, however, be interpreted as establishing the existence of a rule of reason in Community competition law. They are, rather, part of a broader trend in the case law according to which it is not necessary to hold, wholly abstractly and without drawing any distinction, that any agreement restricting the freedom of action of one or more of the parties is necessarily caught by... Article 85(1).... In assessing the applicability of Article 85(1) to an agreement, account should be taken of the actual conditions in which it functions, in particular the economic context in which the undertakings operate, the products or services covered by the agreement and the actual structure of the market concerned....

77.... It must, however, be emphasized that such an approach does not mean that it is necessary to weigh the pro- and anti-competitive effects of an agreement when determining whether... Article 85(1)... applies.

[*The CFI then considered whether the exclusivity clause could be considered as a valid ancillary restraint.*]

104. In Community competition law the concept of an ancillary restriction covers any restriction which is directly related and necessary to the implementation of a main operation...

...

106. The condition that a restriction be necessary implies a two-fold examination. It is necessary to establish, first, whether the restriction is objectively necessary for the implementation of the main operation and, second, whether it is proportionate to it....

107. As regards the objective necessity of a restriction, it must be observed that inasmuch as, as has been shown in paragraph 72 et seq above, the existence of a rule of reason in Community competition law cannot be upheld, it would be wrong, when classifying ancillary restrictions, to interpret the requirement for objective necessity as implying a need to weigh the pro- and anti-competitive effects of an agreement. Such an analysis can take place only in the specific framework of Article 81(3) of the Treaty.

...

109. Consequently... examination of the objective necessity of a restriction in relation to the main operation cannot but be relatively abstract. It is not a question of analyzing whether, in the light of the competitive situation on the relevant market, the restriction is indispensable to the commercial success of the main operation, but of determining whether, in the specific context of the main operation,

the restriction is necessary to implement that operation. If, without the restriction, the main operation is difficult or even impossible to implement, the restriction may be regarded as objectively necessary for its implementation.

[*The CFI held that the claimants did not satisfy this test.*]

(E) SUMMARY

i. It is clear that the ECJ condemns certain types of agreement because of their object or purpose without any extensive market analysis, and thus effectively proscribes these agreements as *per se* illegal. It is also clear that the ECJ has engaged in economic analysis within Article 101(1). While it has not employed the language of the rule of reason, there is evidence of a balancing of the pro- and anti-competitive effects of an agreement, subject to the caveats made above.

ii. The Union Courts may choose to undertake this analysis by considering all the clauses of the agreement as a whole, or they might distinguish between the main and ancillary clauses of the agreement. The fact that the Court chooses the latter mode should not disguise the fact that there is some weighing of the pro- and anti-competitive effects of the agreement, as exemplified by *Pronuptia*.

iii. The reasoning in *Métropole* is problematic for two reasons. First, there are problems with the CFI's rationalization of the prior case law. The Union Courts considered the entire economic context since it was only by doing so that it was possible to tell whether, for example, a clause restricting conduct should nonetheless be allowed, because it enabled a party to break into the market, the conclusion being that such restrictions on freedom of action were not restrictive of competition. The Union Courts have, in this sense, balanced the pro- and anti-competitive effects of the agreement.[74] The exclusivity clause in *Métropole* was designed to give subscribers something attractive so as to enable TPS to break into a market where there was strong competition. Secondly, the reasoning assumes that a rule of reason is incompatible with the existence of Article 101(3). It is, however, possible to balance the pro- and anti-competitive effects of an agreement within Article 101(1), and still to preserve a role for Article 101(3).[75]

iv. The Commission has not been enthusiastic about economic analysis in the past, and has been criticized for equating a restriction on conduct with a restriction on competition. This is clearly mistaken, since restriction of competition is an economic concept, which must be assessed in relation to a market. It is unclear how far its approach has changed. In the White Paper on Modernization[76] the Commission stated that it adopted the ECJ's approach in *Nungesser*[77] and *Pronuptia*[78] and balanced the pro- and anti-competitive effects of an agreement within Article 101(1) in relation to some restrictive practices. It however went on to say that any more systematic use of such rule-of-reason analysis under Article 101(1) would mean that Article 101(3) would be 'cast aside'. The Commission said that this would be paradoxical, given that Article 101(3) contains all the elements of a rule of reason.[79] This reasoning, although supported by *Métropole*, has been contested. It has been argued

[74] R Nazzini, 'Article 81 EC between Time Present and Time Past: A Normative Critique of "Restriction of Competition" in EU Law' (2006) 43 CMLRev 487.

that a more thoroughgoing balancing of pro- and anti-competitive effects within Article 101(1) would be beneficial, and would still leave room for a distinctive role for Article 101(3).[80]

7 ARTICLE 101(1): THE EFFECT ON TRADE BETWEEN MEMBER STATES

In order for Article 101(1) to apply, the agreement, etc, must have an effect on trade between Member States, otherwise the matter will remain within the jurisdiction of the relevant Member State. The hurdle has not, however, proven difficult for the Court to surmount. It has adopted a broad test. The ECJ held in *STM* that the test was whether it was possible to 'foresee with a sufficient degree of probability on the basis of a set of objective factors of law or of fact that the agreement in question may have an influence, direct or indirect, actual or potential, on the pattern of trade between Member States'.[81]

The focus on potential or indirect effects on trade means that it will be very rare for the EU to lack jurisdiction. Proof that the agreement had an actual impact on trade is not necessary, provided that it was capable of having that effect.[82] The fact that all the parties to the agreement are from one Member State will not preclude the application of Article 101(1), since it will increase compartmentalization of the EU along national lines, thereby rendering it more difficult for firms from other states to penetrate that national market.[83] Nor will the Court's jurisdiction be barred merely because the agreement relates to trade outside the EU if it might have an impact on trade within the EU.[84] The Commission has published guidelines indicating when it believes that an agreement is not capable of appreciably affecting trade.[85]

8 ARTICLE 101(1): THE *DE MINIMIS* DOCTRINE

An agreement will not be caught by Article 101(1) if it does not have an appreciable impact on competition or on inter-state trade.[86] This principle has been imbued with greater specificity by Commission notices. The Commission will not institute proceedings in cases covered by the Notice, nor will it impose fines where the parties assume, in good faith, that the Notice covers the agreement. The current Notice dates from 2001.[87]

The criterion is that agreements between undertakings do not appreciably restrict competition where the aggregate market share held by the parties to the agreement does not exceed 10 per cent on

[80] Wesseling (n 75).

[81] Case 56/65 [1966] ECR 235, 249. Moreover, provided that the agreement has this effect, it is not necessary for each of the restrictions to do so: Case 193/83 *Windsurfing International Inc v Commission* [1986] ECR 611.

[82] Case 19/77 *Miller International Schallplatten GmbH v Commission* [1978] ECR 131; Case C–219/95 P *Ferriere Nord* (n 31). This extends to the situation where the relevant restriction has not been implemented, since the very existence of the restriction can still have a psychological effect which contributes to the partitioning of the market: Case T–77/92 *Parker Pen* (n 56); Case T–66/92 *Herlitz* (n 56).

[83] Case 8/72 *Vereeniging van Cementhandelaren v Commission* [1972] ECR 977; Case 246/86 *Société Coopérative des Asphalteurs Belges (BELASCO) v Commission* [1989] ECR 2117; Case T–66/89 *Publishers Association v Commission (No 2)* [1992] ECR II–1995.

[84] *Franco-Japanese Ballbearings Agreement* [1974] OJ L343/19, [1975] 1 CMLR D8; *French and Taiwanese Mushroom Packers* [1975] OJ L29/26, [1975] 1 CMLR D83.

[85] Commission Guidelines on the effect on trade concept contained in Articles 81 and 82 of the Treaty [2004] OJ C101/81, [44]–[57].

[86] Case 5/69 *Völk* (n 64); Case T–77/92 *Parker Pen* (n 56); Case C–180/98 *Pavlov v Stichting Pensioenfonds Medische Specialisten* [2000] ECR I–6451.

[87] Commission Notice on agreements of minor importance which do not appreciably restrict competition under Article 81(1) (de minimis) [2001] OJ C368/13.

markets where the parties are actual or potential competitors. The relevant figure is 15 per cent for cases where the parties are not competitors on the relevant markets.[88] In cases where it is difficult to classify the agreement then the 10 per cent threshold applies. Paragraph 8 of the Notice deals with vertical cases, in which competition may be restricted by the cumulative effect of agreements. In such instances, the threshold is reduced to 5 per cent for agreements between both competitors and non-competitors. The Notice further provides that individual suppliers or distributors with a market share not exceeding 5 per cent will, in general, not be considered to contribute significantly to a cumulative foreclosure effect. Moreover, such an effect will be unlikely to exist if parallel networks of agreements having similar effects cover less than 30 per cent of the relevant market. The Notice provides a further buffer, in stipulating that agreements will not be restrictive of competition where the preceding thresholds are not exceeded by more than 2 per cent in two successive years.[89]

However, the benefits of the Notice are excluded if the agreement contains hardcore restrictions listed in paragraph 11. Agreements between competitors cannot contain restrictions as to sale price, limitation of output, or allocation of markets or customers.[90] Agreements between non-competitors cannot, for example, contain restrictions on minimum resale price, or the territory into which, or the customers to whom, the buyer may sell the contract goods.[91] There are, however, exceptions for types of vertical restriction that are not regarded as hardcore. The remainder of paragraph 11 contains other limitations on the types of restriction that cause the benefits of the Notice to be lost.

9 ARTICLE 101(3): EXEMPTIONS

If an agreement is within Article 101(1) it can gain exemption under Article 101(3), provided that four conditions are satisfied: it must improve the production or distribution of goods or promote technical or economic progress; consumers must receive a fair share of the resulting benefit; it must contain only restrictions which are indispensable to the attainment of the agreement's objectives; and it cannot lead to the elimination of competition in respect of a substantial part of the products in question. The four conditions are cumulative: they must all be fulfilled before an exemption can be granted.[92] There are individual and block exemptions.

(A) INDIVIDUAL EXEMPTION

Prior to 2003 the Commission had the sole power to grant exemptions under Article 101(3), subject to review by the Court. This has now changed with the new scheme for enforcement of competition law, whereby national courts and national competition authorities can apply the entirety of Article 101.[93] The Commission has published guidelines on the application of Article 101(3), which provide a useful frame of reference.[94]

[88] Ibid [7].
[89] Ibid [9].
[90] Ibid [11(1)].
[91] Ibid [11(2)(a),(b)].
[92] Case T–213/00 *CMA CGM* (n 56) [226].
[93] Council Regulation (EC) 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] OJ L1/1.
[94] L Kjolbye, 'The New Commission guidelines on the Application of Article 81(3): An Economic Approach to Article 81' [2004] ECLR 566.

The Commission makes clear that any balancing of the pro- and anti-competitive effect of an agreement should take place within Article 101(3), rather than Article 101(1).[95] All restrictive agreements that are caught by Article 101(1) can in principle be exempted under Article 101(3), but especially heinous agreements such as horizontal price fixing are unlikely to satisfy the conditions for exemption.[96]

The *first condition* is that there must be some efficiency gains flowing from the restrictive agreement. The efficiencies may take the form of lower costs, resulting from new production methods, synergies consequent upon integration of existing assets, economies of scale, or cost savings.[97] Efficiency gains may also be qualitative in nature, generating improved products or better research and development.[98] The Commission requires proof of such gains and of the causal link between them and restrictive agreement.

Commission Guidelines on the application of Article 81(3) of the Treaty[99]

50. The purpose of the first condition of Article 81(3) is to define the types of efficiency gains that can be taken into account . . . The aim of the analysis is to ascertain what are the objective benefits created by the agreement and what is the economic importance of such efficiencies . . .

51. All efficiency claims must therefore be substantiated so that the following can be verified:

(a) The nature of the claimed efficiencies;

(b) The link between the agreement and the efficiencies;

(c) The likelihood and magnitude of each claimed efficiency; and

(d) How and when each claimed efficiency would be achieved.

The *second condition* is that consumers receive a fair share of resulting benefits. The Commission's view of this requirement emerges from the following extract.

Commission Guidelines on the application of Article 81(3) of the Treaty[100]

85. The concept of 'fair share' implies that the pass-on of benefits must at least compensate consumers for any actual or likely negative impact caused to them by the restriction of competition found under Article 81(1) . . .

86. It is not required that consumers receive a share of each and every efficiency gain identified under the first condition. It suffices that sufficient benefits are passed on to compensate for the negative effects of the restrictive agreement . . .

87. The decisive factor is the overall impact on consumers of the products within the relevant market and not the impact on individual members of this group of consumers. In some cases a period of time may be required before the efficiencies materialize. Until such time the agreement may have only negative effects. The fact that pass-on to the consumer occurs with a certain time lag does not in itself exclude the application of Article 81(3). However the greater the time lag, the greater must be the efficiencies to compensate also for the loss to consumers during the period preceding the pass-on.

[95] Commission Guidelines (n 61) [11].
[96] Ibid [46].
[97] Ibid [64]–[68].
[98] Ibid [69]–[72].
[99] Ibid [50]–[51].
[100] Ibid [85]–[87].

The *third condition* concerns the indispensability of the restrictions. This implies a twofold test: the restrictive agreement must be reasonably necessary to achieve the efficiencies; and the individual restrictions of competition that flow from the agreement must also be reasonably necessary for the attainment of those efficiencies.[101] The ECJ will also consider closely whether the restriction is indispensable, as exemplified by *Nungesser*.

Case 258/78 **LC Nungesser KG and Kurt Eisele v Commission**
[1982] ECR 2015

The facts were set out above. It will be remembered that the Court held that the clauses in the agreement that gave absolute territorial protection were caught by Article 85(1). The Commission had also refused exemption under Article 85(3) for certain aspects of the agreement because of this territorial protection. The applicants argued that the Court should overturn this part of the Commission's decision.

THE ECJ

76. It must be remembered that under the terms of Article 85(3)...an exemption from the prohibition contained in Article 85(1) may be granted in the case of an agreement between undertakings which contributes to improving the production or distribution of goods or to promoting technical progress, and which does not impose on the undertakings concerned restrictions which are not indispensable to the attainment of those objectives.

77. As it is a question of seeds intended to be used by a large number of farmers for the production of maize, which is an important product for human and animal foodstuffs, absolute territorial protection manifestly goes beyond what is indispensable for the improvement of production or distribution or the promotion of technical progress, as is demonstrated...by the prohibition agreed to by both parties to the agreement, of any parallel imports of INRA maize seeds into Germany even if those seeds were bred by INRA itself and marketed in France.

78. It follows that the absolute territorial protection conferred on the licensee...constituted a sufficient reason for refusing to grant an exemption under Article 85(3)....It is therefore no longer necessary to examine the other grounds set out in the decision for refusing to grant such an exemption.

The *final condition* for exemption is that the agreement should not lead to elimination of competition in respect of a substantial part of the products in question. This reflects the fact that the 'protection of rivalry and the competitive process is given priority over potentially pro-competitive efficiency gains which could result from restrictive agreements'.[102] Whether competition is being eliminated will depend on the degree of competition prior to the agreement and the impact of the restrictive agreement on competition. Thus the 'more competition is already weakened in the market concerned, the slighter the further reduction required for competition to be eliminated within the meaning of Article 81(3)'.[103]

In considering the conditions in the Commission's Notice, one should not lose sight of its overall impact.

[101] Ibid [73].
[102] Ibid [105].
[103] Ibid [107].

P Lugard and L Hancher, Honey I Shrunk the Article! A Critical Assessment of the Commission's Notice on Article 81(3) of the EC Treaty[104]

In clarifying the analytical framework for the application of both Art. 81(1) and (3), the Notice provides useful guidance to national courts, authorities and firms. In addition to several questionable aspects of the analysis . . . the main concern is that,, by significantly raising the threshold in terms of quantification and verification of efficiencies under Art. 81(3), the role of Art. 81(3) in national court proceedings may—paradoxically—be limited. It is not unlikely that national proceedings will in the future increasingly centre around the applicability of Art. 81(1) . . . Indeed, once the applicability of Art. 81(1) is established, the Notice may not leave much scope to adduce convincingly the extensive evidence required under Art. 81(3). Such an outcome would be at odds with the very purpose underlying the Notice and indeed Regulation 1/2003.

(B) BLOCK EXEMPTION

Article 101(3) allows the Commission to declare the provisions of Article 101(1) inapplicable to a category of agreements. This is the foundation for block exemptions made by the Commission, acting under delegated authority from the Council. The object of such exemptions is to exclude a generic type of agreement from the ambit of Article 101(1), thereby obviating the need for separate and time-consuming individual exemptions. The technique of block exemption is conceptually similar to the evolution of *per se* rules, although the result is to exclude rather than condemn the agreement: experience with individual agreements leads to the conclusion that certain types of agreement, which contain particular terms, warrant exemption. A block exemption encapsulates this conclusion and gives more definite guidance to firms.

Block exemptions have certain common features. They state the reasons for their enactment, set out the substance of the exemption, contain provisions limiting the size of the firms that can take advantage of them, and list the types of clauses that are and are not allowed within the relevant agreement. Such exemptions have been made for a number of areas, including: specialization agreements;[105] research and development;[106] vertical restraints;[107] technology transfer;[108] and franchising.[109] The structure and operation of block exemptions will be examined more closely in the context of vertical restraints.[110]

10 ARTICLE 101: COMPETITION AND NON-COMPETITION CONSIDERATIONS

There has been debate whether the EU Courts should or should not take into account non-competition considerations, in the context of either Article 101(1) and/or Article 101(3).

[104] [2004] ECLR 410, 420.
[105] Reg 2658/2000 [2000] OJ L304/3.
[106] Reg 2659/00 [2000] OJ L304/7.
[107] Reg 2790/99 [1999] OJ L336/21; Reg 330/2010 [2010] OJ 102/1.
[108] Reg 772/2004 [2004] OJ L123/11.
[109] Reg 4087/88 [1988] OJ L359/46.
[110] See 1001–1005.

(A) ARTICLE 101(1)

The general academic consensus is that the EU Courts do and should restrict their analysis within Article 101(1) to considerations that relate to competition. This follows from the preceding analysis of the rule of reason debate in the following sense: if there is reluctance to consider the full pro- and anti-competitive effects of an agreement within Article 101(1), then there will be even greater opposition to the inclusion of non-competition considerations in that context.

There is relatively little evidence of such matters being taken into account by the Union Courts, although *Wouters*[111] appears to be an exception in this regard. The Netherlands Bar adopted rules that prevented its members from practising in full partnership with accountants. The ECJ found that this limited production within Article 101(1)(b).[112] It nonetheless concluded that the rules did not violate Article 101(1), because they were to ensure the independence of members of the Bar and hence the sound administration of justice. In that sense the Court appeared to weigh the anti-competitive effect of the rules against the non-economic benefits they were designed to achieve. It has, however, been argued either that the case can be regarded as an instance of 'regulatory ancillarity', in the sense that restraints on competition that are ancillary to a legitimate purpose can be accepted;[113] or that the decision can be seen, by way of analogy with case law on free movement, as one in which the ECJ weighed the impact of non-discriminatory national rules that limited competition against mandatory national public policy.[114]

The ECJ, however, returned to the '*Wouters* theme' in *Meca-Medina*.[115] It held that anti-doping rules adopted by the International Olympic Committee, even if they could be regarded as a decision of an association of undertakings limiting the applicants' freedom of action, did not come within Article 101, since they were justified by a legitimate objective, this being to ensure fair rivalry between athletes in sport, and were proportionate.

(B) ARTICLE 101(3)

Some authors argue that non-competition considerations can be taken into account within Article 101(3).[116] The predominant academic view is, however, that they should not be, more especially so now that national courts apply the entirety of Article 101: if a broad range of non-competition considerations could be taken into account then the criteria that national courts should apply would be uncertain.[117]

R Whish, Competition Law[118]

A narrow view of Article 81(3) is that it permits only agreements that would bring about improvements in economic efficiency: the very wording of Article 81(3), which speaks of improvement to production

[111] Case C–309/99 *Wouters v Algemene Raad van de Nederlandse Orde van Advocaten* [2002] ECR I–1577; A Jones, 'Regulating the Legal Profession: Article 81, the Public Interest and the ECJ's Judgment in *Wouters*' (2008) 19 European Business Law Review 1079.

[112] Ibid [90], [94].

[114] G Monti, 'Article 81 EC and Public Policy' (2002) 39 CMLRev 1057, 1087–1089.

[115] Case C–519/04 P *Meca-Medina and Majcen v Commission* [2006] ECR I–6991, [40]–[56].

[116] Monti (n 114); R Wesseling, 'The Draft Regulation Modernising the Competition Rules: The Commission is Married to One Idea' (2001) 26 ELRev 357.

[117] O Odudu, *The Boundaries of EC Competition Law, The Scope of Article 81* (Oxford University Press, 2006) ch 6.

[118] (N 5) 152–155.

and distribution and to technical and economic progress, is clearly suggestive of an efficiency standard. Article 81(3), therefore, simply allows a balancing of the restrictive effects of an agreement under Article 81(1) against the enhancement of efficiency under Article 81(3). . . . The Commission's White Paper on Modernisation . . . explained Article 81(1) and 81(3) in precisely this way.

. . .

However, an alternative, and broader view of Article 81(3) is possible: that it allows policies other than economic efficiency to be taken into account when deciding whether to allow agreements that are restrictive of competition. There are many important policies in the Community, for example on industry, the environment, employment, the regions and culture, which go beyond the simple enhancement of efficiency. According to a broad view of Article 81(3), a benefit in terms of any of these policies may be able to 'trump' a restriction of competition under Article 81(1).

[*Whish reviews a number of decisions where such factors seem to have had some impact on the Commission's reasoning. He continues as follows:*]

It is clear . . . that a number of factors have been influential in decisions under Article 81(3), not all of which can be considered to be 'narrow' improvements in efficiency. There are significant proponents of the view that Article 81(3) does admit broad, non-competition considerations . . .

. . .

This discussion shows that, over a number of years, there has been uncertainty—even confusion—as to the proper application of Article 81(3) . . . However the Modernization Regulation makes it necessary to decide on the true content of Article 81(3) because decisions since 1 May 2004 can be made by NCAs[119] and national courts as well as by the Commission itself. These institutions, and the undertakings that enter into agreements that might be challenged under Article 81, need to know the limits of what can be justified under Article 81(3); and the NCAs and national courts are not well-placed to balance a restriction of competition under Article 81(1) against a variety of Community policies ranging from industrial and environmental policy to social and cultural issues under Article 81(3). It seems reasonable to suppose that NCAs and national courts would have less difficulty in applying a 'narrow' interpretation of Article 81(3), limited to a consideration of economic efficiencies. These considerations suggest that, in the post-Modernization Regulation world, Article 81(3) should be interpreted in a narrow rather than a broad manner, according to standards and by reference to principles that are justiciable in courts of law.

It is absolutely clear from the Commission's *Article 81(3) Guidelines* that it intends Article 81(3) to be applied asccording to the narrow approach based on economic efficiency . . .

11 ARTICLE 101: VERTICAL RESTRAINTS

Space precludes detailed analysis of all types of competitive restraint. This section will, therefore, consider one important area of competition policy, that of vertical restraints. Vertical agreements are made between parties at differing levels of the production process, a typical example being a distribution agreement between a manufacturer of a product and a retailer. There is controversy about the extent to which these agreements are economically harmful, and the arguments will be considered below. There are differing types of vertical restraint. It must be determined whether they are caught by Article 101(1). The criterion used by the ECJ and the Commission has not always been the same, and the Commission has been criticized for taking too formalistic an approach to vertical agreements. In terms of Article 101(3), the EU has primarily used block exemptions to deal with vertical restraints.

[119] National Competition Authorities.

(A) THE ECONOMIC DEBATE

There is considerable diversity of opinion on whether vertical restraints are economically harmful or not.[120] Some believe that they are not harmful at all, or only where there is some real market power at the production level. Others believe that vertical restraints may produce a variety of anti-competitive effects, and that therefore they should be scrutinized by competition authorities.

(i) *The First View*

A manufacturer must decide how to market its product. It may decide to establish its own retail outlets; to establish a joint venture with a company that has expertise in the retailing area; to sell its products through any outlet that is willing to stock them; to sell through certain specialized shops, because the product requires sales expertise; or to sell through certain retail outlets, each of which will be given exclusive rights in a geographical area, either because retailers will only do so on these terms, or because this will maximize total sales. This list is by no means exhaustive. The argument of those who do not see vertical restraints as harmful has four parts.

First, the manufacturer will choose the most efficient marketing option. It will, for example, give outlets exclusivity only if this leads to greater sales. If the manufacturer is wrong then the market will 'punish' it, through reduced sales. The competition authorities should not try to devise a better marketing strategy for the manufacturer, since this is not their function, and they are in a less good position than the manufacturer to make this choice.

Secondly, a manufacturer which imposes such restraints will not restrict output to any greater degree than it would otherwise do, and will not take any greater monopoly profit, if such is available, through the presence of a vertical restraint than it would otherwise be able to extract from that market.

Thirdly, any restraints are either outweighed by the pro-competitive effects of the agreement, and/or are necessary to persuade the distributor to market the goods. A producer may wish to enter a new market, but does not have retailing expertise. If the product is to break into the new market it may require advertising, and also a commitment to providing pre- and post-sales service. A retailer may not be willing to undertake this expense unless it is accorded some exclusivity because of the 'free-rider' problem: the retailer will expend money on advertising, pre-sales service, and the like, only to witness the sales being taken by a rival retailer who has not incurred these costs. The grant of exclusivity will restrict intra-brand competition between retailers of the same product, but inter-brand competition will be enhanced by having a new product on the market, and this will control retail prices. A retailer of Sony stereos who has exclusivity in a certain area will not be able to raise prices significantly, since there will be competition from other stereo brands.

Fourthly, it is argued that vertical restraints should be lawful because they do not produce anti-competitive effects. The nature of these effects will be considered in more detail below.

A prominent exponent of the preceding view is Bork, and the following extract provides a summary of the argument.

[120] D Neven, P Papandropolous, and P Seabright, *Trawling for Minnows: European Competition Policy and Agreements between Firms* (Centre for Economic Policy Research, 1998); J Lever and S Neubauer, 'Vertical Restraints, Their Motivation and Justification' [2000] ECLR 7.

R Bork, The Antitrust Paradox, A Policy at War with Itself[121]

We have seen that vertical price fixing (resale price maintenance), vertical market division (closed dealer territories), and, indeed, all vertical restraints are beneficial to consumers and should for that reason be completely lawful. Basic economic theory tells us that the manufacturer who imposes such restraints cannot intend to restrict and must (except in the rare case of price discrimination, which the law should regard as neutral) intend to create efficiency. The most common efficiency is the inducement or purchase by the manufacturer of extra reseller sales, service or promotional effort.

The proposal to legalize all truly vertical restraints is so much at variance with conventional thought on the topic that it will doubtless strike many readers as troublesome, if not bizarre. But I have never seen any economic analysis that shows how manufacturer-imposed resale price maintenance, closed dealer territories, customer allocation clauses, or the like can have the net effect of restricting output. We have too quickly assumed something that appears untrue.

Perhaps the ambiguity of the word 'restraint' accounts for some of our confusion on this topic. When the Supreme Court speaks of a restraint it often, or even usually, refers to the manufacturer's control of certain activities of his resellers or to the elimination by the manufacturer of some forms of rivalry among his resellers. There is, of course, nothing sinister or unusual about using 'restraint' in that sense. It is merely a form of vertical integration by contract, a less complete integration than that which would obtain if the manufacturer owned his outlets and directed their activities. It is merely one instance of the coordination of economic activities which is ubiquitous in the economic world and upon which our wealth depends. The important point is that such vertical control never creates 'restraint' in that other common meaning, restriction of output. Perhaps, if we are more careful about the ambiguity of the word and make it clear in which sense we use it, our reasoning about antitrust problems, including the problem of vertical restraints, will improve.[122]

(ii) *The Second View*

There are, however, many commentators who perceive possible dangers to the competitive process from such agreements. The principal concerns are as follows.

The first is market foreclosure. If a producer has made exclusive contracts with certain outlets to sell only its brand of a product, then it may be difficult for other producers to secure outlets for their sales. This is especially so where the best outlets have already been taken, or the number of outlets is limited by the nature of the product or by factors such as planning laws.

A second concern is that consumers will be harmed by certain types of vertical restraint, resale-price maintenance being the most commonly cited example, although this has been vigorously contested.[123] Consumer harm is said to be apparent in other ways. Thus, it is argued that systems of selective or exclusive distribution force a 'package' on consumers, which includes the basic price of the product, plus advertising costs, after-sales service, and the like, even though some consumers would prefer to take the product itself and worry about maintenance, etc, themselves.

A third disadvantage said to attend vertical agreements is that they can serve as a mask for cartels between producers or distributors. A producer may grant an exclusive distribution right where the

[123] See (n 121).

distributor has agreed with other distributors of competing products to divide the market horizontally: the consequence will be that inter- as well as intra-brand competition is reduced. It has, however, been questioned whether this actually happens, and whether it is exacerbated by the existence of the vertical agreement. It has also been argued that if this occurred then the horizontal agreement should be the target of the competition authorities.[124]

A final cause for concern with vertical agreements is peculiar to EU competition law, which is not concerned solely with efficiency. The creation of a single European market is also of prime importance. Agreements which divide the market along national or regional lines will, therefore, be treated particularly severely, as exemplified by the Court's continuing opposition to agreements that provide absolute territorial protection.

Comanor expresses the concerns of this second, more cautious, school of thought. He reviews Bork's arguments, but does not believe that vertical agreements should always be regarded as legal.[125]

W Comanor, Vertical Price-Fixing, Vertical Market Restrictions, and the New Antitrust Policy[126]

When vertical restraints are used to promote the provision of distribution services, the critical issue for antitrust purposes remains whether consumers are better served by lower prices and fewer services or by higher prices and more services. In its *Spray-Rite* brief, the Department of Justice suggested that pure vertical restraints always lead to increased consumer welfare. This position is unfounded, and a more hostile treatment of vertical restraints is appropriate.

Because vertical restraints can either enhance or diminish consumer welfare, depending upon the situation, it is tempting to apply the rule of reason on a case-by-case basis.

…Yet it is no easy task to determine whether particular restraints increase or decrease efficiency: the answer depends in each case largely on the relative preferences of different groups of consumers. In the interests of judicial economy, therefore, it may be more expeditious to set general policy standards, even though they will sometimes lead to improper results.

Vertical restraints that concern established products are more likely to reduce consumer welfare. Large numbers of consumers are already familiar with such products and are therefore unlikely to place much value on acquiring further information about them. In this context, stringent antitrust standards should be applied to vertical price and non-price restraints alike. This approach could take the form either of a direct *per se* prohibition, or of a modified rule of reason analysis under which the defendant would be required to demonstrate that the restraints have benefited consumers generally. By contrast, in the case of new products or products of new entrants into the market, vertical restraints are less likely to lessen consumer welfare, because their novelty should create greater demand for information. In these circumstances, the restraints should be permissible, or at the least should be treated more leniently in any modified rule of reason analysis.

(B) THE COMMISSION AND VERTICAL RESTRAINTS

(i) *The Critique of the Commission*

The Commission's approach to vertical restraints has been criticized. References to Article 85 should now be read as to Article 101.

[124] Bork (n 43) ch 14.
[125] Monti (n 114).
[126] (1985) 98 Harv L Rev 983, 1001–1002.

B Hawk, System Failure: Vertical Restraints and EC Competition Law[127]

The most fundamental, and the most trenchant, criticism is that the Commission too broadly applies Article 85(1) to agreements having little or no anticompetitive effects. This criticism rests on three pillars...

Inadequate economic analysis under 85(1)

The majority of Commission decisions fail adequately to consider whether the restraint at issue harms competition in the welfare sense of economics, i.e., effect on price or output. Concomitantly, market power, which should be the threshold issue, frequently is hardly examined (let alone given a central role) or is simply found to exist in a conclusory fashion under the rubric of 'appreciability'.

...

The Commission's rationale under 85(1) is unpersuasive

The...explanation for the inadequate economic analysis under 85(1) lies in the Commission's stubborn (in the face of Court judgments) adherence to the definition of a restriction on competition as a restriction on the 'economic freedom' of operators in the marketplace. The principal weaknesses of the Freiburg School notion of restriction on economic freedom are (1) its failure to generate precise operable legal rules, (i.e. its failure to provide an analytical framework); (2) its distance from and tension with (micro) economics which does provide an analytical framework; (3) its tendency to favour traders/competitors over consumers and consumer welfare (efficiency); and (4) its capture under Article 85(1) of totally innocuous contract provisions having no anti-competitive effects in an economic sense.

...

Commission refusal to follow Community Courts

The Court of Justice and the Court of First Instance have taken a more nuanced approach toward vertical arrangements under Article 85(1). The Courts have increasingly required an analysis of economic effects, particularly the possibility of foreclosure. This approach has been largely ignored or distinguished by the Commission, which adheres to its non-economics based application of Article 85(1), i.e. restriction on economic freedom.

(ii) *The Commission's Green Paper*

In part as a result of this criticism, the Commission re-examined its approach in 1996 in a wide-ranging Green Paper on Vertical Restraints.[128] A number of important points emerged from this document.

First, the Commission accepted that the academic consensus on the economic effects of vertical restraints is that market structure is of prime importance. The fiercer is the inter-brand competition, the more likely will it be that the pro-competitive and efficiency aspects of the agreement outweigh any anti-competitive effects. This is even more so when market power at the production level is limited and barriers to entry are low.[129]

[127] (1995) 32 CMLRev 973, 974–975, 977–978, 982. See also C Bright, 'EU Competition Policy: Rules, Objectives and Deregulation' (1996) 16 OJLS 535.

[128] COM(96)721 final.

[129] Ibid [82]–[85].

Secondly, the report made it clear that the desire to create a single market means that vertical restraints that seek to insulate markets through the grant of absolute territorial protection will not be tolerated, under either Article 101(1) or (3).[130]

Thirdly, the Commission accepted[131] that it did not engage in meaningful economic analysis within Article 101(1), but rather reserved such matters for consideration under Article 101(3).

Fourthly, the Commission set out a number of options on which it invited comment. Option 1 was to preserve the then present system, which seemed to mean a broad, formalistic interpretation of Article 101(1), coupled with existing block exemptions.[132] Option 2 was to widen the block exemptions.[133] Option 3 was to develop more focused block exemptions, placing emphasis on market-integration objectives.[134] The final option was to have some economic analysis within Article 101(1), coupled with block exemptions.[135]

It is clear that the Commission faced a dilemma. It was aware that many vertical restraints do not have any net anti-competitive impact. It was probably also aware that logically they should not therefore be held to fall within Article 101(1). It was, however, mindful of the costs of extensive economic analysis within Article 101(1).[136]

The Commission presented more concrete proposals in the Follow-up to the Green Paper on Vertical Restraints.[137] It concluded that there should be a more economics-based approach to vertical restraints, and that there should be one block exemption for all vertical agreements. The new Regulation was adopted on 22 December 1999, and came fully into force on 1 June 2000.[138] The Regulation expired in May 2010, but the policy has been continued in a new block exemption, which will be analysed in detail below.[139] Before we do so, we should consider the differing kinds of vertical restraint and the extent to which they are caught by Article 101(1).

(c) EXCLUSIVE DISTRIBUTION

In an exclusive distribution agreement (EDA) the producer agrees to supply only to a particular distributor within a particular territory. This may be buttressed by attempts to prevent third parties from selling into the contract territory of the designated distributor, either through contract terms in agreements between the producer and other distributors, and/or by assigning to the designated distributor trade mark rights which will enable the latter to stop such infringements. This type of agreement may be necessary to persuade a distributor to market a new product or to market an existing product in a new area. An EDA may also be beneficial to the producer by facilitating the efficient distribution of its goods, since it will not have to incur transport costs, etc., to multiple sites. The central issue is whether an EDA will be caught by Article 101(1), and whether it will be exempted under Article 101(3), either individually or pursuant to a block exemption.

The applicability of Article 101(1) to an EDA was considered earlier: such an agreement must be considered in its factual, legal, and economic context to determine whether it is caught by Article 101(1).[140]

[130] Ibid [276].

[140] Case 56/65 *Société La Technique Minière v Maschinenbau Ulm GmbH* [1966] ECR 235; Case 23/67 *Brasserie de Haecht SA* (n 64); Case T–25/99 *Roberts v Commission* [2001] ECR II–1881; Case T–328/03 *O2 (Germany)* (n 73) [65]–[73].

The Commission nonetheless often adopted a more formalistic approach, eschewing the ECJ's contextual approach.

Notwithstanding this divergence between Court and Commission, it is apparent from their combined jurisprudence that certain types of restrictions within an EDA are especially likely to fall within Article 101(1). Thus, export bans which prohibit a distributor from exporting the product outside a designated area will be judged particularly severely, as will any other attempt to establish absolute territorial protection for a distributor.[141] Indirect attempts to attain the same end will also be condemned, as in the case of customer guarantees which are available only if the product is bought from the distributor in that state.[142]

If an EDA is caught by Article 101(1) the parties may seek individual exemption or seek to use the block exemption. The principles that govern individual exemption have been examined above.[143] There was until recently a separate block exemption for EDAs.[144] This has now been replaced by the general block exemption for vertical restraints, which will be examined below.

(D) SELECTIVE DISTRIBUTION

The approach of the Court and the Commission to selective distribution agreements (SDA) stands in marked contrast to that adopted towards EDAs. A selective distribution system is one in which the supplier chooses to distribute the goods only through certain outlets, normally those which fulfil certain criteria concerning expertise. There was until recently no block exemption for SDAs as such. They can now come within the new block exemption for vertical restraints, provided that the conditions therein are met. The present discussion will consider whether such agreements fall within Article 101(1).

Case 26/76 **Metro-SB-Großmärkte GmbH & Co KG v Commission and SABA** [1977] ECR 1875

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

Metro was a wholesaler of goods in Germany. It operated a system of self-service wholesaling and a cash-and-carry service, which enabled it to undercut the prices charged by other wholesalers. Metro applied to SABA to be allowed to stock the electronic equipment produced by the latter, but SABA refused to supply it, claiming that it did not fulfill the conditions that SABA required before supplying its goods. Metro complained to the Commission that SABA's policy was in breach of Article 85(1), but the Commission found in favour of SABA after the latter had amended its terms of trade in certain respects. Metro then sought to have the Commission decision annulled.

THE ECJ

20. . . . In the sector covering the production of high quality and technically advanced consumer durables, where a relatively small number of large and medium-scale producers offer a varied range of items

[141] Cases 56 and 58/64 *Consten and Grundig* [1966] ECR 299; Case 258/78 *Nungesser* (n 77); Case 19/77 *Miller International Schallplatten GmbH v Commission* [1978] ECR 131; Case C–279/87 *Tipp-Ex GmbH & Co KG v Commission* [1990] ECR I–261; Case T–77/92 *Parker Pen* (n 56); Case T–66/92 *Herlitz AG* (n 56).

[142] Case 31/85 *ETA Fabriques d'Ebauches v DK Investments SA* [1985] ECR 3933.

[143] See 984–987.

[144] Reg 1983/83, [1983] OJ L173/1.

> which, or so consumers may consider, are readily inter-changeable, the structure of the market does not preclude the existence of a variety of channels of distribution adapted to the peculiar characteristics of the various producers and to the requirements of the various categories of consumers. On this view the Commission was justified in recognising that selective distribution systems constituted, together with others, an aspect of competition which accords with Article 85(1), provided that the resellers are chosen on the basis of objective criteria of a qualitative nature relating to the technical qualifications of the reseller and his staff and the suitability of his trading premises and that such conditions are laid down uniformly for all potential resellers and are not applied in a discriminatory fashion.
>
> 21. It is true that in such systems of distribution price competition is not generally emphasised either as an exclusive or indeed as a principal factor. . . . However, although price competition is so important that it can never be eliminated, it does not constitute the only effective form of competition or that to which absolute priority must in all circumstances be accorded. . . . For specialist wholesalers and retailers the desire to maintain a certain price level, which corresponds to the desire to preserve, in the interests of consumers, the possibility of the continued existence of this channel of distribution in conjunction with new methods of distribution based on a different type of competition policy, forms one of the objectives which may be pursued without necessarily falling under the prohibition of Article 85(1), and if it does fall thereunder, either wholly or in part, coming within the framework of Article 85(3). . . .

The significance of *Metro* is that, when the conditions elaborated therein are fulfilled, the SDA is held not to be within Article 101(1).[145] There are, however, limits to the application of this principle.

(i) *First Condition: Nature of the Product*

The product has to be of the kind in relation to which the Court and the Commission believe that it is justifiable to limit price competition and to operate the regime of selective distribution with an element of non-price competition. Such products tend to be those that require specialist sales staff,[146] or goods where brand image is important.[147] Plumbing fittings are, by way of contrast, not deemed to be a technically advanced product which necessitates such a system.[148]

(ii) *Second Condition: Qualitative Criteria*

The *Metro* principle operates to legitimate outlets chosen on qualitative criteria. It can, however, be difficult to determine whether a particular requirement for a distributor to be acceptable to a supplier should be classified as qualitative or not. Subject to this uncertainty, the *Metro* principle does not allow a supplier to impose quantitative limits on those who can distribute the product, or to discriminate as between distributors.[149]

The logic of the distinction drawn between qualitative and quantitative criteria for restrictions on distribution is questionable. Producers will choose the distribution method that they believe best maximizes their sales. Whether they think that this is best achieved by qualitative or quantitative

criteria, or a mixture of both, will vary depending upon the nature of the product. The pro- and anti-competitive effects of such distribution strategies will not, however, differ radically depending on which of these criteria is chosen.

JS Chard, The Economics of the Application of Article 85 to Selective Distribution Systems[150]

It should be clear from this discussion of the economic effects of qualitative and quantitative selection criteria that the Commission's attempts to distinguish between the criteria is essentially arbitrary and confusing. To be meaningful, qualitative criteria must have a quantitative effect . . . while quantitative criteria may have qualitative implications. With regard to the latter aspect for example, in *Omega*, the Commission recognised that the number of concessionaires needed to be limited otherwise no concessionaire could attain a sufficient turnover to be able to undertake service and guarantee commitments. Thus, qualitative and quantitative criteria should be subject to the same analytical procedure.

[*The author suggests that a proper economic analysis along the following lines is required:*]

First, the Commission should examine whether there is direct evidence of collusion between manufacturers and/or distributors of different brands or whether the restriction embraces so large a fraction of the market . . . as to make cartelisation a plausible motivation for the restriction. If it finds the answer is no . . . there should be a presumption that the restriction has pro-competitive effects. The parties to the agreements in question can be expected to indicate the alleged pro-competitive effects and the Commission should not query these too closely. It should not be tempted to second-guess business judgments as to what arrangements would or would not provide adequate means for achieving the pro-competitive effects and attach conditions to the granting of negative clearance or exemption under Article 85(3), as its record in this respect does not inspire confidence.

Secondly, if there is some evidence of restrictions in competition between manufacturers and/or distributors, but the evidence is not conclusive, . . . the Commission should carefully examine whether pro-competitive effects are being achieved, . . . the burden of justification being shifted firmly onto the defendant. . . .

What evidence there is seems to cast doubt on the likely importance of anti-competitive effects while pro-competitive effects seem likely to be more common . . . If anti-competitive effects are usually absent, then the greater freedom of manufacturers to choose the distribution arrangements which suit them best will tend to result in the most efficient forms of arrangements being used.

It should, however, be noted that the greater leniency accorded to SDAs as opposed to EDAs may be partially explained by the importance of attaining a single European market. EDAs are more likely to divide the EU along national lines than are SDAs and the ECJ is particularly antagonistic towards such forms of market division.

(iii) *Third Condition: Non-Elimination of Competition through Multiple SDAs*

The compatibility of a particular SDA with Article 101(1) may be affected by the existence of other such SDAs, if the overall impact is to eliminate or unduly restrict competition.

[150] (1982) 7 ELRev 83, 97, 100–101. See also C Vajda, 'Selective Distribution in the European Community' (1979) 13 JWTL 409; I Lianos, 'Commercial Agency Agreements, Vertical Restraints, and the Limits of Article 81(1) EC: Between Hierarchies and Networks' (2007) 3 Journal of Competition Law and Economics 625.

Case 75/84 **Metro-SB-Großmärkte GmbH & Co KG v Commission (No 2)** [1986] ECR 3021

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The Commission had renewed an exemption for SABA's selective distribution system. Metro, the original objector, contested the renewal of the SDA. In the original decision the Court had intimated that its view (that SDAs were compatible with Article 85(1)), might be different if, in a particular area, the existence of a large number of SDAs similar to that operated by SABA eliminated firms such as Metro from the market. Metro argued that this had occurred, and that therefore the exemption for the SABA SDA should not be renewed.

THE ECJ

40. It must be borne in mind that, although the Court has held in previous decisions that 'simple' selective distribution systems are capable of constituting an aspect of competition compatible with Article 85(1), there may nevertheless be a restriction or elimination of competition where the existence of a certain number of such systems does not leave any room for other forms of distribution based on a different type of competition policy or results in a rigidity in price structure which is not counterbalanced by other aspects of competition between other products of the same brand and by the existence of effective competition between different brands.

41. Consequently, the existence of a large number of selective distribution systems for a particular product does not in itself permit the conclusion that competition is restricted or distorted. Nor is the existence of such systems decisive as regards the granting or refusal of exemption under Article 85(3), since the only factor to be taken into consideration in that regard is the effect which such systems actually have on the competitive situation. Therefore the coverage ratio of selective distribution systems for colour television sets, to which Metro refers, cannot in itself be regarded as a factor preventing an exemption from being granted.

42. It follows that an increase in the number of 'simple' selective distribution systems after an exemption has been granted must be taken into consideration, when application for renewal of that exemption is being considered, only in the special situation in which the relevant market was already so rigid and structured that the element of competition inherent in 'simple' systems is not sufficient to maintain workable competition. Metro has not been able to show that a special situation of that kind exists in the present case.

43. As regards the effect on the market of the existence of selective distribution systems other than 'simple' systems, the Commission in renewing the exemption based itself on the relatively small market share covered by the SABA system and on the fact that that system is distinguished from 'simple' systems only by the existence of obligations pertaining to the promotion of sales. By so doing, it did not misdirect itself in exercising its discretion to assess, within the framework of Article 85(3), the economic context in which the SABA system is situated.

The judgment in *Metro II* builds on the cautionary remarks in the earlier *Metro* case. The situations in which a market analysis is required render it more difficult to predict whether a particular SDA will be caught by Article 101(1). Moreover, it would be unfair if the creation of one further SDA brought it, but not those already existing, within Article 101(1). It would be equally odd if the creation of the most recent SDA had the effect of retrospectively bringing the previous SDAs within the ambit of Article 101(1).

(iv) *Fourth Condition: No Absolute Territorial Protection*

The ECJ will not tolerate an SDA if it operates so as to confer absolute territorial protection. This is apparent from the *BMW* case.[151]

Case C–70/93 Bayerische Motorenwerke AG v ALD Autoleasing D GmbH
[1995] ECR I–3439

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

BMW sold its vehicles through a selective distribution system. There was an agreement between BMW and its dealers that the latter were not to deliver vehicles to independent leasing companies that made vehicles available to customers residing or having their seat outside the contract territory of the dealer in question. This was challenged by an independent leasing company, ALD, which had supplied BMW cars in the manner which the agreement was designed to prohibit. Was the agreement caught by Article 85(1)?

THE ECJ

6. BMW claims that the appearance of independent leasing companies . . . has created an imbalance in its commercial organisation. Those independent companies concentrate on purchasing from certain BMW dealers and lease the vehicles to customers established outside the contract territory of those dealers. Those customers then turn for the customer services and maintenance to the BMW dealer in the contract territory in which they are established. Since those dealers are not involved in the original sales transaction, they do not obtain any profit margin. They therefore complained to BMW about the activities of independent leasing companies which were disturbing the network.

[*As a result of these complaints BMW instituted the agreement which was the subject matter of this action.*]

. . .

19. As regards the requirement that competition be restricted, it should be noted that, by virtue of the agreement in question BMW dealers are able to supply vehicles of the BMW mark to independent leasing companies only if the vehicles are to be made available to lessees having their seat in the contract territory of the dealer in question. Consequently, only the dealer in whose territory the lessee has its seat is authorised by the manufacturer to supply to ALD vehicles of the BMW mark, to the exclusion of all other BMW dealers. That amounts to absolute territorial protection for the BMW dealer on whose territory the customer of ALD is established. Furthermore, the agreement reduces each dealer's freedom of commercial action in so far as each individual dealer's choice of customer is confined exclusively to those leasing companies which have concluded contracts with lessees established within that dealer's contract territory.

(E) FRANCHISING

A franchise differs from other distribution methods considered thus far. The franchisor allows the franchisee to use intellectual property rights belonging to the former, such as trade names, logos, and the like. The premises on which the goods are sold are owned by the franchisee, who pays a royalty to the franchisor for the use of the trade name, etc. Franchises, therefore, benefit both parties: the

[151] See also Case T–67/01 (n 145) [85]; Case T–450/05 *Automobiles Peugeot SA and Peugeot Nederland NV v Commission* [2009] ECR II–2533.

franchisor receives a payment for the use of its intellectual property rights; the franchisee can start an independent business with the assurance that the product has been tried and tested elsewhere. It is of the essence of a franchise that the franchisor will require the franchisee to comply with certain standards and methods of sale. Failure to meet such standards by a franchisee can harm both the franchisor and other franchisees by damaging the reputation of the product and trade name. It is also central to the franchising system that the franchisor is able to impose terms to protect the intellectual property rights assigned to the franchisee.

In the seminal *Pronuptia* case the Court held that terms which related to both of the above issues were not caught by Article 101(1). However, other restrictions in the agreement, such as those which divided the market territorially, were examined under Article 101(3).[152] In *Yves Rocher* the Commission held that a franchise agreement under which the franchisor appointed only one franchisee for a particular area, agreed not to compete with the latter in that area, and forbade franchisees from opening more than one shop resulted in a degree of market-sharing which brought the agreement within Article 101(1).[153] The Commission made other decisions that built upon the judgment in *Pronuptia*.[154] A block exemption, Regulation 4087/88,[155] was passed to cover certain types of franchise agreements. This was replaced by the general block exemption for vertical restraints.

(F) EXCLUSIVE PURCHASING

Exclusive purchasing agreements (EPAs) are those in which one party agrees to buy all it needs of a product from a particular supplier. Common examples include petrol stations, which stock only one brand of petrol, and tied public houses, which carry only one general brand of beer. Whether EPAs are within the ambit of Article 101(1) requires a market analysis: if the agreement, considered in its legal, factual, and economic context, could have the effect of restricting, preventing, or distorting competition then it will be within Article 101(1).[156]

Case T–7/93 **Langnese-Iglo GmbH v Commission** [1995] ECR II–1533

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The CFI considered whether a network of exclusive purchasing agreements was caught by Article 85(1). The Commission had argued that there was no need for any real market analysis to determine whether the agreements restricted competition since the market share covered by the contested agreements was more than 15 per cent of the relevant market and the turnover of the undertakings concerned was well in excess of the ceilings laid down by the Notice on Agreements of Minor Importance.

The competition authorities will take account of clauses which, although not constituting an obligation as such on the reseller to purchase all its requirements of a product from a supplier, nonetheless constitute inducements to do so, such as offering discounts to the reseller.

THE CFI

98. It must be borne in mind that the Notice is intended only to define those agreements which, in the Commission's view, do not have an appreciable effect on competition or trade between Member States. The Court considers that it cannot however be inferred with certainty that a network of exclusive purchasing agreements is automatically liable to prevent, restrict or distort competition appreciably merely because the ceilings laid down in it are exceeded. Moreover, it is apparent from the actual wording of paragraph 3 of that Notice that it is entirely possible, in the facts of the present case, that agreements . . . which exceed the ceilings indicated affect . . . competition only to an insignificant extent and consequently are not caught by Article 85(1). . . .

99. As to whether the exclusive purchasing agreements fall within . . . Article 85(1) . . . , it is appropriate, according to the case-law, to consider whether, taken together, all the similar agreements entered into in the relevant market and the other features of the economic and legal context of the agreements at issue show that those agreements cumulatively have the effect of denying access to that market for new domestic and foreign competitors. If . . . that is found not to be the case, the individual agreements making up the bundle of agreements as a whole cannot undermine competition within the meaning of Article 85(1). . . . If, on the other hand, such examination reveals that it is difficult to gain access to the market, it is necessary to assess the extent to which the contested agreements contribute to the cumulative effect produced, on the basis that only agreements which make a significant contribution to any partitioning of the market are prohibited (*Delimitis*, paragraphs 23 and 24).

100. It must then be borne in mind, that as the Court of Justice held in . . . *Brasserie de Haecht*, consideration of the effects of an exclusive agreement implied that regard must be had to the economic and legal context of the agreement, in which it might combine with others to have a cumulative effect on competition.

[*The CFI found that the agreements were liable to affect competition appreciably and therefore came within Article 85(1).*]

The parties to an EPA can seek exemption, either on an individual basis or pursuant to the block exemption. There was a specific block exemption, Regulation 1984/83, covering exclusive purchasing.[157] This has now been replaced by the block exemption for vertical restraints.

(G) THE BLOCK EXEMPTION

(i) *The New-Style Block Exemption*

We have already seen the impetus for reform of vertical restraints. Regulation 2790/99[158] was properly regarded as a new-style block exemption.[159] It differed from the previous block exemptions in a number of ways. It was less formalistic than its predecessors, and was more economically oriented. It applied to all species of vertical restraints, with the exception of distribution agreements for motor vehicles. It was less prescriptive than the earlier Regulations. These had generally followed a format of having a specific list of white clauses that were allowed and black clauses that were forbidden. The new Regulation did not contain a white list: if conduct was not prohibited it was therefore permitted.

[157] [1983] OJ L173/5.

[158] Commission Regulation 2790/99 of 22 December 1999 on the application of Article 81(3) of the Treaty to categories of vertical agreements and concerted practices [1999] OJ L336/21.

[159] R Whish, 'Regulation 2790/99: The Commission's "New Style" Block Exemption for Vertical Agreements' (2000) 37 CMLRev 887; F Dethmers and P Posthuma de Boer, 'Ten Years on: Vertical Agreements under Article 81' [2009] ECLR 424.

Regulation 2790/99 expired in May 2010 and was replaced by Regulation 330/2010,[160] which must be read in tandem with Commission Guidelines.[161] The recitals to Regulation 330/2010 state that it is possible to define a category of vertical agreements that will normally satisfy the conditions of Article 101(3). These agreements are said to improve economic efficiency by facilitating coordination and reducing distribution costs.[162]

(ii) *Article 1: Definitions*

Article 1 of Regulation 330/2010 provides definitions, the following of which are of particular importance.

> 'vertical agreement' means an agreement or concerted practice entered into between two or more undertakings each of which operates, for the purposes of the agreement or the concerted practice, at a different level of the production or distribution chain, and relating to the conditions under which the parties may purchase, sell or resell certain goods or services.

Article 1(1)(a) is framed in terms of *two or more undertakings*, whereas the old block exemptions applied only to bilateral agreements. It is, however, necessary for *each* of the undertakings to operate, for the purposes of the agreement, at a different level of the production or distribution chain. The fact that Article 1(1)(a) includes the phrase *for the purposes of the agreement* means that it is possible, subject to the limits of Article 2(4), for two firms that are, for example, both cement manufacturers to come within the Regulation. This would be so where one supplies material to the other. Article 1(1)(d) defines non-compete obligation.

> 'non-compete obligation' means any direct or indirect obligation causing the buyer not to manufacture, purchase, sell or resell goods or services which compete with the contract goods or services, or any direct or indirect obligation on the buyer to purchase from the supplier or from another undertaking designated by the supplier more than 80 % of the buyer's total purchases of the contract goods or services and their substitutes on the relevant market, calculated on the basis of the value or, where such is standard industry practice, the volume of its purchases in the preceding calendar year.

(iii) *Article 2: The Core of the Block Exemption*

The core of the block exemption is to be found in Article 2. *Article 2(1)* provides that:[163]

> Pursuant to Article 101(3) of the Treaty and subject to the provisions of this Regulation, it is hereby declared that Article 101(1) of the Treaty shall not apply to vertical agreements.
>
> This exemption shall apply to the extent that such agreements contain vertical restraints.

An agreement that does not fall within Article 101(1) will not need to use the block exemption. Subject to this, the exempted agreement can be multilateral.

[160] Commission Regulation (EU) No 330/2010 of 20 April 2010 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to categories of vertical agreements and concerted practices [2010] OJ L102/1.

[161] Guidelines on Vertical Restraints [2010] OJ C130/1.

[162] Reg 330/2010 (n 160) rec 6.

[163] Guidelines (n 161) [5]–[7].

Article 2(2) applies the block exemption to vertical agreements between an association of undertakings and its members, or its suppliers. All members of the association must however be retailers, and no individual member must have an annual turnover in excess of 50 million Euros.

Article 2(3) makes the block exemption applicable where intellectual property rights are ancillary to the main purpose of the vertical agreement.[164]

Article 2(4) is designed to prevent the block exemption being used by competing undertakings to engage in market division. Competing undertakings are actual or potential suppliers in the same product market.[165] Article 2(4) provides that Article 2(1) shall not apply to vertical agreements between competing undertakings. Article 2(4) then provides that the exemption can apply where such undertakings enter into a non-reciprocal vertical agreement. This can occur where the supplier is a manufacturer and distributor of goods, while the buyer is a distributor not manufacturing goods that compete with the contract goods. It can also occur where the supplier is a provider of services at several levels of trade, while the buyer provides its goods or services at the retail level and is not a competing undertaking at the level of trade where it purchases the contract services.

Article 2(5) states that the block exemption shall not apply to vertical agreements the subject matter of which falls within the scope of any other block exemption.

(iv) *Article 3: The Market Share Cap*

The likelihood of efficiency gains from vertical agreements outweighing anti-competitive effects is said in the recitals to be dependent on the market power of the undertakings concerned, and the Regulation therefore has limits as to the market share of the participating firms.[166] Article 3(1) states that the exemption contained in Article 2 only applies on the condition that the market share held by the supplier does not exceed 30 per cent of the relevant market on which it sells the contract goods or services, and that the market share of the buyer must not exceed 30 per cent of the relevant market on which it purchases the contract goods or services.[167] The method of calculating market share is laid down in Article 7.

(v) *Article 4: The Black List*

The recitals make it clear that certain types of clauses that are regarded as especially anti-competitive will not benefit from the block exemption. These include clauses relating to vertical price fixing and territorial protection.[168] Article 4 excludes the Regulation for vertical agreements which, directly or indirectly, in isolation or combination with other factors under the control of the parties, have as their object any of the following restrictions.

Resale price maintenance is excluded.[169] Maximum selling prices and recommendations as to selling prices are allowed, subject to the caveat that they do not amount to a fixed or minimum sale price, as a result of pressure from, or incentives offered by, any of the parties. It is however open to the parties to seek an individual exemption for such an agreement.[170]

[170] Guidelines (n 161) [47].

Restrictions on the territory into which, or the customers to whom, the buyer can sell the goods or services are also precluded.[171] This is subject to a number of exceptions.[172] It is permissible to have a restriction on active sales into the exclusive territory or to an exclusive customer group reserved to the supplier, or allocated by the supplier to another buyer, where such a restriction does not limit sales by the customers to the buyer.[173] It is permissible to restrict sales to end users by a buyer operating at the wholesale level of trade, and to restrict sales to unauthorized distributors by the members of a selective distribution system. The final exception is that it is possible to restrict the buyer of components for use from selling them to a customer who would use them to make goods that would compete with those of the supplier.

The restriction of active or passive sales to end users by members of a selective distribution system operating at the retail level is not allowed. This is without prejudice to the possibility of prohibiting a member of the system from operating out of an unauthorized place of establishment.[174] It is important to note that, subject to this condition, selective and exclusive distribution can be combined within one agreement. Such an agreement could still come within the block exemption, provided that it complied with the other conditions laid down therein.[175]

It is not possible to have restrictions of cross-supplies between distributors within a selective distribution system, including between distributors operating at different levels of trade.[176] A selected distributor must therefore be able to buy from any approved distributor.

The final blacklisted provision relates to the supply of components. It is designed to allow end-users and independent service providers to obtain spare parts.[177]

(vi) *Article 5: Obligations that Do Not Benefit from the Exemption*

The restrictions in Article 4 prevent the entire vertical agreement from benefiting from the block exemption. Article 5 excludes the benefit of the block exemption from certain terms contained in such an agreement. The agreement may still gain the benefit of the block exemption if the objectionable clause can be severed. There are three types of obligation listed in Article 5.

Non-compete obligations cannot be indefinite or last longer than five years. Obligations not to compete after the term of the agreement are also excluded. This is subject to a qualification allowing such an obligation for one year on sales of competing goods or services from the place of sale that the buyer operated from during the contract, provided that this is necessary to protect the supplier's know-how. The benefit of the block exemption is also excluded from an obligation preventing members of a selective distribution system from selling brands of particular competing suppliers.

(vii) *Article 6: Withdrawing the Benefit of the Regulation*

Article 6 provides limits to the application of the block exemption. It allows the Commission by regulation to declare that, where parallel networks of similar vertical restraints cover more than 50 per cent of a relevant market, this Regulation shall not apply to vertical agreements containing specific restraints relating to that market.[178]

[177] Ibid Art 4(e).
[178] Reg 330/2010 (n 160) rec 13; Guidelines (n 161) [79]–[82].

The Commission may also[179] withdraw the benefit of Regulation 330/2010 pursuant to Article 29 of Regulation 1/2003.[180] Article 29(1) empowers the Commission to withdraw the benefit of the block exemption where it finds that vertical agreements have effects incompatible with Article 101(3), such as where access to the relevant market is significantly restricted by the cumulative effect of parallel networks of similar vertical restraints.[181] Article 29(2) allows the competition authority of a Member State, where the state has the characteristics of a distinct geographic market, to withdraw the benefit of the block exemption for that state under the same conditions as in Article 29(1).

(H) SUMMARY

i. There has been fierce debate as to whether vertical agreements are harmful, and if so when.

ii. There has been criticism of the Commission for not talking with the same voice as the ECJ, and for employing a test that equates a restriction of conduct with a restriction of competition.

iii. The degree of difference between the Union Courts and the Commission has diminished more recently. It would, however, be premature to say that the Commission has fully adopted the ECJ's approach to Article 101(1).[182] Moreover, the very approach of the EU Courts has been thrown into some doubt as a result of the CFI's decision in *Métropole*.[183]

iv. The importance of this difference has been lessened by the passage of the general block exemption. This Regulation is undoubtedly less formalistic than its predecessors. It should not however be forgotten that the Regulation has a market share cap of 30 per cent. Some commentators feel that this is warranted, since economic theory tells us that it is only when there is some degree of market power that vertical agreements are dangerous.[184] This may well be accepted, but other commentators regard the existing cap as too low, and have characterized the new Regulation as little more than an extended *de minimis* provision.[185]

12 COMPETITION LAW: ENFORCEMENT

(A) THE TRADITIONAL APPROACH AND THE MODERNIZATION WHITE PAPER

The discussion thus far has focused on the central elements of Article 101. The enforcement regime for Articles 101 and 102 was however reformed in 2003. Space precludes detailed treatment of the new regime, but it is nonetheless important to convey the core elements.

The traditional approach to the enforcement of competition law had two foundations. Agreements had, subject to certain exceptions, to be notified to the Commission, and the Commission had a monopoly over the application of Article 101(3). The system was, in this sense, centralized, although there were decentralized aspects. Articles 101 and 102 had direct effect and national courts could therefore apply Article 101(1), but could not grant an individual exemption under Article 101(3).

[179] These rules were hitherto found in Reg 2790/99 (n 158) Arts 6–7.

[180] Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] OJ L1/1.

[184] Whish (n 159).

[185] M Griffiths, 'A Glorification of De Minimis? The Regulation on Vertical Agreements' [2000] ECLR 241.

The traditional approach came under increasing strain. The Commission did not have the resources to deal with all agreements notified to it, nor did it have the resources to adjudicate on anything but a handful of individual exemptions. The Commission therefore encouraged national courts to apply Articles 101 and 102. However, the *White Paper on Modernization*[186] proposed a thorough overhaul of the enforcement regime, abolishing notification and the Commission's monopoly over Article 101(3). National courts and NCAs would be empowered to apply Article 101 in its entirety and Article 102. The White Paper generated a voluminous literature, which contained all shades of opinion.[187]

(B) THE NEW REGIME

Article 1 of Regulation 1/2003, which implemented the new regime,[188] provides that agreements, etc., caught by Article 101(1) which do not satisfy the conditions of Article 101(3) shall be prohibited, no prior decision to that effect being required. The same principle is applicable to abuse of a dominant position in Article 102. NCAs and national courts can apply the entirety of Articles 101 and 102.[189] The Regulation contains wide-ranging powers of investigation,[190] and far-reaching provisions concerning fines.[191]

There are provisions facilitating cooperation between an NCA and the Commission.[192] NCAs have an obligation to inform the Commission of proceedings begun in the Member States,[193] and the NCAs are also obliged to inform the Commission before they adopt a decision that an infringement of Article 101 or 102 should be brought to an end, and before they accept commitments or withdraw the benefit of a block exemption.[194] The NCAs are 'relieved of their competence' to apply Articles 101 and 102 if the Commission initiates proceedings for the adoption of a decision.[195] NCAs cannot make rulings in relation to Articles 101 and 102 that are counter to a decision already reached by the Commission on the same subject matter.[196]

There are also provisions facilitating cooperation between NCAs in different Member States,[197] and a European Competition Network has been established for cooperation between NCAs.[198] Where two

[198] http://ec.europa.eu/comm/competition/ecn/more_details.html.

or more NCAs have received a complaint, or are acting on their own initiative, against the same agreement, 'the fact that one authority is dealing with the case shall be sufficient grounds for the others to suspend proceedings before them or to reject the complaint'.[199] The Commission may also reject a complaint on the ground that an NCA is dealing with the matter. Where a case has already been dealt with by an NCA, or by the Commission, any other NCA may reject it.[200]

There are separate provisions dealing with cooperation with national courts.[201] National courts may, in proceedings for the application of Articles 101 and 102, ask the Commission for information in its possession, or for its opinion on questions concerning the application of EU competition rules.[202] Member States are obliged to send the Commission copies of judgments applying Article 101 or 102.[203] NCAs may submit written observations to national courts in relation to cases concerning Articles 101 and 102, and may submit oral argument with the permission of the national court. The Commission may do likewise where the coherent application of Articles 101 and 102 so requires.[204] National courts cannot make rulings in relation to Articles 101 and 102 that are counter to a decision already reached by the Commission on the same subject matter, and they must avoid giving decisions that would conflict with a decision contemplated by the Commission in proceedings which it has initiated.[205]

The Commission continues to have enforcement power under the new regime. It can act on a complaint or on its own initiative and find an infringement of Article 101 or Article 102.[206] It can impose behavioural or structural remedies, although the Regulation is framed in favour of the former.[207] The Commission has power, for reasons of the EU public interest, acting on its own initiative, to make a decision either that Article 101(1) is inapplicable to an agreement or that the conditions of Article 101(3) are fulfilled. The Commission has an analogous power in relation to Article 102.[208] The Commission must consult an Advisory Committee on Restrictive Practices and Dominant Positions prior to taking decisions under Article 7, 8, 9, 10, 23, 24(2), or 29(1).[209] The Committee is composed of representatives of the NCAs, and the Commission must take 'utmost account' of its opinion.[210]

The Commission's Report on the first five years of the new regime paints a largely positive picture, subject to the caveat that problems flow from divergent national procedures and sanctions.[211] Commentators have however expressed continuing concerns about aspects of the current system, including the increased criminalization of competition policy, due process, and compliance with human rights.[212]

(c) JUDICIAL REVIEW

Commission Decisions may be reviewed under Articles 263 and 267 TFEU and, since 1989, this has been undertaken initially by the General Court. The general principles concerning these actions have

[212] D Geradin *et al*, 'Towards an Optimal Enforcement of Competition Rules in Europe—Time for a Review of Regulation 1/2003', Global Competition Law Centre, Annual Conference, 11–12 June 2009.

been considered above.[213] There is appeal from the General Court to the ECJ, but the latter will only review the legal characterization of the facts found by the former and the conclusions drawn from them. The ECJ will not examine the facts or the evidence heard by the General Court in support of the facts.[214]

The applicant will have to show standing under Article 263. This hurdle is less problematic for competition matters than it is in relation to other issues. The party against whom a competition decision has been made can seek its annulment, and a complainant will normally be accorded standing.[215] There is nonetheless an important issue concerning the range of measures that may be annulled under Article 263. There is little difficulty with formal Commission decisions, such as findings of infringement. More difficulty has been encountered with less formal measures.[216] The grounds of review are listed in Article 263(2). Thus, for example, failure to authenticate the decision taken by the College of Commissioners in the proper manner constitutes breach of an essential procedural requirement.[217] The General Court has held that review of situations entailing complex economic assessments should be confined to verifying compliance with procedural rules, verifying the material accuracy of facts, and checking to ensure that there has been no manifest error of assessment or misuse of power.[218] Notwithstanding such statements, the intensity of review has increased since the task has been allocated to the General Court.[219]

An action may also be brought against the Commission for failure to act under Article 265 TFEU. However, the Commission is not obliged to proceed with a complaint, and it has discretion whether to use its scarce resources to proceed, taking account of the Union interest.[220]

The mode of challenging decisions of NCAs or national courts is to seek a preliminary ruling under Article 267 TFEU. Such cases will be heard by the ECJ and the normal rules relating to indirect challenge under Article 267 will apply.[221]

(D) DAMAGES ACTIONS

We must also consider the availability of damages for breach of Article 101 or 102.[222] The ECJ has confirmed that state liability in damages is in principle available where a state entity is the defendant in an Article 102 action.[223] It is now also clear that damages are available as a matter of EU law where the

defendant is a private party. In *Crehan*[224] the ECJ held that the full effectiveness of Article 101 would be jeopardized if an individual, even a party to the agreement, could not claim damages for loss caused by a contract, or by conduct liable to distort competition. There should not therefore be any absolute bar in national law to such actions, even by parties to the agreement. It was, however, open to national law to prevent a party from being unjustly enriched or profiting from his unlawful conduct. The national court should take into account the respective bargaining strengths of the contracting parties, and the extent to which a contracting party had responsibility for the breach of Article 101.[225]

The Commission is keen to develop damages actions as a mechanism for enforcing Articles 101 and 102 in national courts pursuant to Regulation 1/2003.[226] Its White Paper proposes full compensation for individual losses and mechanisms for collective redress. The latter could either be representative actions brought by qualified entities, such as consumer associations, trade associations, or state bodies, on behalf of victims of anti-competitive behaviour, or opt-in collective actions, in which victims decide to merge their individual claims into one single action. The White Paper also proposes minimum uniform conditions on disclosure of evidence, and that a final ruling by an NCA or national court should suffice for claiming damages in any other Member State.

The issue of how far benefits conferred under a contract which is illegal can be recovered is a complex topic, detailed treatment of which can be found elsewhere.[227] The relevant principles of EU law have been considered above,[228] and the ECJ has confirmed that these principles apply to recovery pursuant to an Article 101 or 102 action, at least where the defendant is a public undertaking.[229]

13 CONCLUSIONS

i. The EU Courts have given a broad reading to Article 101, with the objectives of enhancing efficiency and preventing the single market programme from being hindered by private actors. They have therefore read key concepts such as agreement and concerted practice expansively.

ii. The interpretation of Article 101 has also been markedly affected by the extent to which an economic analysis is mandated within Article 101(1). The ECJ has insisted that object and effect should be read disjunctively. Certain agreements will be condemned merely because of proof of their existence. They will be illegal *per se*. Horizontal market division, horizontal price fixing, and boycotts are the classic examples. As far as many other agreements are concerned, a market analysis will be required to determine whether they are within Article 101(1). The General Court and Commission have been more reluctant to embrace a full economic analysis of the pro- and anti-competitive effects of an agreement within Article 101(1).

[229] Case C–242/95 *GT-Link* (n 223).

iii. The jury is still out on whether Article 101(3) should be interpreted according to the narrow or broad view. This issue has been thrown into sharp relief by the devolution of competence over Article 101(3) to national courts and national competition authorities. It is likely that this will tilt the balance in favour of the narrow view.

iv. The reach of EU competition law has not been the work of the courts alone. The legislature has intervened through measures such as the Merger Regulation. The Commission itself has orchestrated developments in diverse ways, through the passage of block exemptions, the control of mergers, the increased attention paid to competition in the public sector, and the reform of the enforcement mechanisms.

COMPETITION LAW: ARTICLE 102

1 CENTRAL ISSUES

i. In the previous chapter we considered the applicability of Article 101. We now focus on the other principal provision concerned with competition policy: Article 102 TFEU (ex Article 82 EC).

ii. The essence of Article 102 is the control of market power, whether by a single firm or, subject to certain conditions, a number of firms. Monopoly power can lead to higher prices and lower output than would prevail under more normal competitive conditions, and this is the core rationale for legal regulation in this area.

iii. Article 102 does not, however, prohibit market power *per se*. It proscribes the *abuse* of market power. Firms are encouraged to compete, with the most efficient players being successful. It would therefore be odd if the winner were legally penalized, since it may be more efficient than the competitors.

iv. There are a number of stages in the Article 102 analysis. It is necessary to define the relevant market, since this is a pre-condition for deciding whether a firm is dominant; to decide whether the firm is dominant within that market; to determine whether it has abused its dominant position; and whether there are any available defences.

v. There are difficult issues at each stage of analysis. There can be differences of opinion as to, for example, the nature of the product market in a particular case; what factors other than market share make a firm dominant; whether certain behaviour by a dominant firm should always be regarded as abusive; and the very purpose to be served by Article 102, whether this is primarily to protect competitors or consumers.

vi. It is therefore unsurprising that judicial decisions in this area have frequently been criticized for the way in which market definition has been applied, the factors held to be indicative of dominance, or the meaning ascribed to abuse.

vii. The Commission has conducted a review of Article 102. This generated much comment as to the purpose served by this Article, and the extent to which it should be based on legal form or economic effect.

viii. The enforcement of Article 102 is now subject to the reformed regime discussed in a previous chapter, to which reference should be made.[1]

[1] See 1005–1010.

2 DOMINANT POSITION: DEFINING THE RELEVANT MARKET

Article 102 TFEU provides as follows:

> Any abuse by one or more undertakings of a dominant position within the internal market or in a substantial part of it shall be prohibited as incompatible with the internal market in so far as it may affect trade between Member States.
>
> Such abuse may, in particular, consist in:
>
> (a) directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;
>
> (b) limiting production, markets or technical development to the prejudice of consumers;
>
> (c) applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage;
>
> (d) making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

Article 102 requires that the undertaking[2] or undertakings be in a dominant position. Dominance must be assessed in relation to three variables: the product market, the geographical market, and the temporal factor.

(A) THE PRODUCT MARKET

A firm will only have market power in the supply of particular goods or services. The narrower the definition of the product market, the easier it is to conclude that an undertaking is dominant under Article 102. Undertakings will therefore often argue that the Commission adopted too narrow a definition of the product.[3] The general approach of the Commission and the Court has been to focus upon *interchangeability*: the extent to which the goods or services under scrutiny are interchangeable with other products.[4] This is addressed by looking at both the demand and supply sides of the market.

From the *demand side* interchangeability requires investigation of cross-elasticities of the product. The basic idea is simple. Cross-elasticity is high where an increase in the price of one product, for example beef, will lead buyers to switch in significant numbers to lamb or pork. The existence of high cross-elasticity indicates that the products are part of the same market. It may, however, be difficult to obtain reliable data on the relative cross-elasticities of different products. In these circumstances the Commission and the Court may well look to related factors to determine whether the products really are interchangeable, including the prices of the respective products and their physical characteristics. For example, wines may vary significantly in price and quality. An increase in the price of a top-quality wine may not lead buyers to switch to 'plonk', although it may lead them to buy another

[2] The definition of an undertaking is the same as in the context of Art 101: see 961–962. It covers any entity engaged in economic activity, regardless of its legal status and the way it is financed: Case T–128/98 *Aéroports de Paris v Commission* [2000] ECR II–3929, [107].

[3] Cases 6 and 7/73 *Istituto Chemioterapico Italiano SpA and Commercial Solvents v Commission* [1974] ECR 223; Case 6/72 *Europemballage Corporation and Continental Can Co Inc v Commission* [1973] ECR 215; Case 85/76 *Hoffmann-La Roche and Co AG v Commission* [1979] ECR 461; Case C–333/94 P *Tetra Pak International SA v Commission* [1996] ECR I–5951.

[4] Case 27/76 *United Brands Company and United Brands Continentaal BV v Commission* [1978] ECR 207.

high-grade wine. The relevance of the physical characteristics of the product is exemplified by *United Brands*, where the Court took into account the taste, seedlessness, and softness of bananas in order to determine whether they constituted a separate market from other fruits.[5] More recently in *France Télécom*[6] the CFI held that the markets for low and high-speed internet access were distinct, since there was insufficient substitutability between them.

The degree of product interchangeability may also be affected by factors on the *supply side*. Even if firms are producing differing products it may be relatively simple for one firm to adapt its machinery to make the goods produced by a rival. In these circumstances the two products may be thought to be part of the same market.[7]

The following cases[8] indicate how the Court defines the relevant product market, and the problems that this can entail:

Case 27/76 **United Brands Company and United Brands Continentaal BV v Commission**
[1978] ECR 207

[Note Lisbon Treaty renumbering: Art 86 is now Art 102 TFEU]

United Brands produced bananas, and was accused of a variety of abusive practices, which will be examined below. An initial issue concerned the definition of the relevant product market. UB argued that bananas were part of a larger market in fresh fruit, and produced studies designed to show that the cross-elasticity between bananas and other fruit was high. The Commission contended that cross-elasticity was low, and that bananas were a distinct market because they constituted an important part of the diet for certain consumers, and because they had specific qualities which made other fruits unacceptable as substitutes.

THE ECJ

22. For the banana to be regarded as forming a market which is sufficiently differentiated from other fruits it must be possible for it to be singled out by such special features distinguishing it from other fruits that it is only to a limited extent interchangeable with them and is only exposed to their competition in a way that is hardly perceptible.

23. The ripening of bananas takes place the whole year round without any season having to be taken into account.

...

27. Since the banana is a fruit which is always available in sufficient quantities the question whether it can be replaced by other fruits must be determined over the whole of the year for the purpose of ascertaining the degree of competition between it and other fresh fruit.

28. The studies of the banana market on the Court's file show that on the latter market there is no significant long term cross-elasticity any more than ... there is any seasonal substitutability in general between the banana and all the seasonal fruits, as this only exists between the banana and two

fruits (peaches and table grapes) in one of the countries (West Germany) of the relevant geographical market.

29. As far as concerns the two fruits available throughout the year (oranges and apples) the first are not interchangeable and in the case of the second there is only a relative degree of substitutability.

30. This small degree of substitutability is accounted for by the specific features of the banana and all the factors which influence consumer choice.

31. The banana has certain characteristics, appearance, taste, softness, seedlessness, easy handling, a constant level of production which enable it to satisfy the constant needs of an important section of the population consisting of the very young, the old and the sick.

32. As far as prices are concerned two FAO studies show that the banana is only affected by the prices—falling prices—of other fruits (and only of peaches and table grapes) during the summer months and mainly in July and then by an amount not exceeding 20 per cent.

...

34. It follows from all these considerations that a very large number of consumers having a constant need for bananas are not noticeably or even appreciably enticed away from the consumption of this product by the arrival of fresh fruit on the market and that even the seasonal peak periods only affect it for a limited period of time from the point of view of substitutability.

35. Consequently the banana market is a market which is sufficiently distinct from the other fresh fruit market.

Case 322/81 **Nederlandsche Banden-Industrie Michelin NV v Commission**
[1983] ECR 3461

[Note Lisbon Treaty renumbering: Art 86 is now Art 102 TFEU]

The Commission brought an action against Michelin based on the practice of awarding discounts on tyre sales, which were not related to objective differences in costs. The allegation was, therefore, that the discounts were granted so as to tie purchasers to Michelin. Michelin was held to have a dominant position in the market for new replacement tyres for lorries, buses and similar vehicles. Michelin argued that this definition of the product market was arbitrary and artificial, and that regard should also be had to tyres for cars and vans, and to retreads.

THE ECJ

37. As the Court has repeatedly emphasised . . . for the purposes of investigating the possibly dominant position of an undertaking on a given market, the possibilities of competition must be judged in the context of the market comprising the totality of the products which, with respect to their characteristics, are particularly suitable for satisfying constant needs and are only to a limited extent interchangeable with other products.

However, it must be noted that the determination of the relevant market is useful in assessing whether the undertaking concerned is in a position to prevent effective competition from being maintained and behave to an appreciable extent independently of its competitors and customers and consumers. For this purpose, therefore, an examination limited to the objective characteristics only of the relevant products cannot be sufficient: the competitive conditions and the structure of supply and demand must also be taken into consideration.

38. Moreover, it was for that reason that the Commission and Michelin NV agreed that new, original-equipment tyres should not be taken into consideration in the assessment of market shares.

Owing to the particular structure of demand for such tyres characterised by direct orders from car manufacturers, competition in this sphere is in fact governed by completely different factors and rules.

39. As far as replacement tyres are concerned, the first point which must be made is that at the user level there is no interchangeability between car and van tyres on the one hand and heavy-vehicle tyres on the other. Car and van tyres therefore have no influence at all on competition on the market in heavy-vehicle tyres.

40. Furthermore, the structure of demand for each of these groups of products is different. Most buyers of heavy-vehicle tyres are trade users . . . for whom . . . the purchase of replacement tyres represents an item of considerable expenditure. . . . On the other hand, for the average buyer of car or van tyres the purchase of tyres is an occasional event. . . .

41. The final point which must be made is that there is no elasticity of supply between tyres for heavy vehicles and car tyres owing to significant differences in production techniques and in the plant and tools needed for their manufacture. The fact that time and considerable investment are required in order to modify production plant for the manufacture of light-vehicle tyres instead of heavy-vehicle tyres or vice versa means that there is no discernible relationship between the two categories of tyre enabling production to be adapted to demand on the market.

. . .

45. In establishing that Michelin NV has a dominant position the Commission was therefore right to assess its market share with reference to replacement tyres for lorries, buses and similar vehicles and to exclude consideration of car and van tyres.

The nature of the product market may be particularly narrow. Thus in *Hugin*[9] the Commission held Hugin to be in breach of Article 102 by refusing to supply spare parts for its cash registers to Liptons, which competed with Hugin in servicing Hugin's machines. The Commission defined the relevant market as being spare parts for Hugin machines, which were needed by independent repairers. Hugin argued that the proper product market was cash registers in general, which was very competitive. The Court found that users of cash registers would require the services of a specialist to service the machines and upheld the product definition applied by the Commission.[10]

(B) THE GEOGRAPHIC MARKET

The geographic market is defined as the territory in which all traders operate in the same or sufficiently homogenous conditions of competition in relation to the relevant products or services, without it being necessary for those conditions to be perfectly homogenous.[11] In the absence of special factors, the relevant geographic market was held in *Hilti* to be the entire EU.[12] The *United Brands* case provides insights into this aspect of the Court's thinking:

[9] Case 22/78 *Hugin Kassaregister AB and Hugin Cash Registers Limited v Commission* [1979] ECR 1869; Case 26/75 *General Motors Continental NV v Commission* [1975] ECR 1367.

[10] E Fox, 'Monopolization and Dominance in the US and the EC: Efficiency, Opportunity and Fairness' (1986) 61 Notre Dame LRev 981, 1003–1004.

[11] Case T–83/91 *Tetra Pak v Commission* [1994] ECR II–755, [91], confirmed on appeal in Case C–333/94 P *Tetra Pak* (n 3); Case T–219/99 *British Airways plc v Commission* [2003] ECR II–5917, [108].

[12] Dec 88/138, [1988] OJ L65/19, upheld on appeal, Case C–53/92 P *Hilti AG v Commission* [1994] ECR I–667.

Case 27/76 **United Brands Company and United Brands Continentaal BV v Commission**
[1978] ECR 207

The facts were set out above. UB argued that the Commission misconstrued the geographic market. The Commission had excluded France, Italy, and the United Kingdom, because of particular trading conditions which existed there. The applicants accepted this, but contended that trading conditions were also different in each of the other countries that had been treated by the Commission as the relevant geographic market.

THE ECJ

44. The conditions for the application of Article 86 to an undertaking in a dominant position presuppose the clear delimitation of the substantial part of the Common Market in which it may be able to engage in abuses which hinder effective competition and this is an area where the objective conditions of competition applying to the product in question must be the same for all traders.

45. The Community has not established a common organisation of the agricultural market in bananas.

46. Consequently import arrangements vary considerably from one Member State to another and reflect a specific commercial policy to the States concerned.

[*The Court then examined the special arrangements for bananas in France, Italy, and the United Kingdom. These arrangements differed in detail, but in general entailed preferential treatment for bananas coming from overseas territories of the three countries, or from the Commonwealth. It continued as follows:*]

51. The effect of the national organisation of these three markets is that the applicant's bananas do not compete on equal terms with the other bananas sold in these States which benefit from a preferential system and the Commission was right to exclude these three national markets from the geographic market under consideration.

52. On the other hand the six other States are markets which are completely free, although the applicable tariff provisions and transport costs are of necessity different but not discriminatory, and in which the conditions of competition are the same for all.

53. From the standpoint of being able to engage in free competition these six States form an area which is sufficiently homogeneous to be considered in its entirety.

In some instances the scope of the geographical market will be relatively straightforward. Thus in *British Telecommunications*,[13] the issue was whether BT had abused its dominant position with regard to message-forwarding agencies in the United Kingdom, and hence the geographical market was the United Kingdom, within which BT had a monopoly in the provision of telecommunication services. In other instances the scope of the geographical market may be influenced by factors such as transport costs. This was so in *Napier Brown–British Sugar*.[14] The Commission held that in determining whether a United Kingdom company had a dominant position in the production and sale of sugar the relevant market was Great Britain, since imports were very limited and acted as a complement to British sugar, rather than an alternative.

[13] Dec 82/861, [1982] OJ L360/36. On appeal see Case 41/83 *Italy v Commission* [1985] ECR 873.
[14] Dec 88/518, [1988] OJ L284/41.

(c) THE TEMPORAL FACTOR

Markets may have a temporal quality or element to them. Thus, a firm may possess market power at a particular time of year, during which competition from other products is low because these other products are available only seasonally. It is equally important to note that the very definition of the product market will have a temporal dimension to it, in the sense that technological progress and changes in consumer habits will shift boundaries between markets.[15]

(d) THE COMMISSION NOTICE ON MARKET DEFINITION

The Commission published a Notice on the Definition of the Relevant Market for the Purposes of EU Competition Law.[16] It is important in three related ways.[17]

First, the Commission makes it clear that the definition of the relevant market will be viewed differently depending upon the nature of the competition inquiry: an investigation into a proposed concentration is essentially prospective, whereas other types of investigation may be concerned primarily with an analysis of past behaviour.[18]

Secondly, the Notice signalled a shift in Commission thinking on market definition.[19] The Notice begins in orthodox fashion, by stating that the Commission will inquire into demand substitutability, supply substitutability, and potential competition.[20] The novelty stems from the Commission's detailed indication as to how these principles will be applied. In essence, the Commission adopts what is known as the SSNIP test: 'small but significant and non-transitory increase in prices'. On this test, a relevant market is the narrowest range of products such that a hypothetical monopolist in the relevant product area would find it both possible and worthwhile to institute an SSNIP. If demand substitution would be enough to make the price increase unprofitable because of the resulting loss of sales, then additional product substitutes would be included in the relevant market.[21]

Thirdly, while it is axiomatic that the Commission cannot overrule ECJ decisions, the Commission is nonetheless moving away from some of the benchmarks used by the ECJ. Thus the similarity of product characteristics and intended use, which have featured in case law,[22] are regarded as insufficient to determine whether two products are demand substitutes.[23] The same is true of functional interchangeability,[24] because the responsiveness of customers to price changes may be determined by other considerations.[25] In positive terms, the Commission states that it will consider: evidence of substitution in the recent past or where there have been shocks in the market; the views of customers and competitors; quantitative econometric tests; evidence of consumer preferences where available; barriers and costs entailed in substitution; and whether there are distinct groups of customers for the product.[26]

3 DOMINANT POSITION: MARKET POWER

(A) SINGLE FIRM DOMINANCE

When the Court has defined the relevant market, it then has to decide whether the undertaking is dominant within that sphere. Some measurement of the firm's market power is, therefore, necessary.[27] The legal test used by the Court was laid down by the *United Brands* case:[28]

> The dominant position referred to in this Article relates to a position of economic strength enjoyed by an undertaking which enables it to prevent effective competition being maintained on the relevant market by giving it the power to behave to an appreciable extent independently of its competitors, customers and ultimately of its consumers.

This test was quoted with approval in *Hoffmann-La Roche*, and the Court then added the following rider:[29]

> Such a position does not preclude some competition, which it does where there is a monopoly or a quasi-monopoly, but enables the undertaking which profits by it, if not to determine, at least to have an appreciable influence on the conditions under which that competition will develop, and in any case to act largely in disregard of it so long as such conduct does not operate to its detriment. A dominant position must also be distinguished from parallel courses of conduct which are peculiar to oligopolies in that in an oligopoly the courses of conduct interact, while in the case of an undertaking occupying the dominant position the conduct of the undertaking which derives profits from that position is to a great extent determined unilaterally. The existence of a dominant position may derive from several factors which, taken separately, are not necessarily determinative but among these factors a highly important one is the existence of very large market shares.

Where there is no statutory monopoly, the Court will consider two types of evidence to determine whether the firm has market power: the market share possessed by the undertaking and whether other factors serve to reinforce its dominance. It should be noted that the test of dominance has been criticized.

J de Azevedo and M Walker, Market Dominance: Measurement Problems and Mistakes[30]

> The legal definition is based on the notion of a firm being able to act to a significant extent independently of its customers, consumers and competitors. Our criticism of the notion of acting independently of customers and consumers is largely conceptual: all firms, whether dominant or not, are constrained by the discipline of the demand curve and so do not act independently of customers or consumers. Our criticism of the notion of acting independently of competitors is largely empirical: it will only rarely be

possible to measure this independence, as in general a dominant firm will exercise its market power to the point at which it is constrained from exercising it any further. For instance, a dominant firm may face little pricing constraint at the competitive price level, but for precisely this reason it will raise prices above the competitive price level until prices are high enough that competitors do impose a price constraint.

(i) *Market Share*

An undertaking with a statutory monopoly may be dominant for the purposes of Article 102. The grant of the statutory monopoly confers no immunity from EU competition law, subject to Article 106(2) TFEU.[31] The market share possessed by the undertaking will be central to the determination of whether it has market power.[32] Few firms, other than those with a statutory monopoly, will have 100 per cent of the market. Nor is a market share of this size necessary in order for Article 102 to 'bite', but a *de facto* monopoly will lead to a finding of dominance.[33]

Thus, in *United Brands* UB's 40–45 per cent of the market was held to be sufficient, although the Court also considered other factors indicative of its dominance.[34] However, in *Hoffmann-La Roche* the Court overturned a Commission finding that the firm was dominant in the market for B3 vitamins, of which it had only 43 per cent. It was not satisfied that there were other factors sustaining the conclusion that the undertaking had dominance in this market.[35] The Court, however, made it clear that, save in exceptional circumstances, the existence of a very large market share which was held for some time would in itself be indicative of dominance. It would secure for the undertaking concerned the freedom of action that was the hallmark of a dominant position.[36] In the *Akzo* case[37] the ECJ held that a market share of 50 per cent could be said to be very large, and hence indicative of a dominant position, and this finding was repeated in *Irish Sugar*.[38]

It seems moreover that there is a concept of 'super-dominance' emerging, held to be applicable to undertakings with very large market shares. The Commission and Court regard such bodies as having a particular responsibility towards the competitive process.[39]

(ii) *Additional Factors Indicating Dominance: Barriers to Entry*

It can be problematic to determine the other factors that indicate dominance.[40] It is clear that the Court should pay attention to factors other than market share, since even a relatively large market share may be fragile because of the possibility of new market entrants. It must then be considered how far barriers to entry render it difficult for other firms to penetrate this market. There is, however, considerable controversy about the meaning of this concept.

For some, it is a broad idea, embracing almost anything that makes it particularly difficult for a new firm to enter the market. For others, the term has a much narrower construction, since there is concern that matters will be characterized as barriers to entry when they are merely indicative of the superior efficiency of the incumbent firm. The following extract exemplifies this aspect of the argument. There may well be reservations about aspects of Bork's analysis, but similar concerns about the broad meaning accorded to barriers to entry in EU law have been expressed by other writers.[41]

R Bork, The Antitrust Paradox, A Policy at War with Itself[42]

The concept of barriers to entry is crucial to antitrust debate. Those who advocate extensive and increasing legal intervention in market processes cite the existence of entry barriers as a reason to believe that unassisted market forces very often fail to produce adequate results.... The ubiquity and potency of the concept are undeniable.

Yet it is demonstrable that barriers of the sort these commentators and jurists believe they see do not exist. They are the ghosts that inhabit antitrust theory. Until the concept of barriers to entry is thoroughly revised, it will remain impossible to make antitrust law more rational or, indeed, to restrain the growth of its powerful irrational elements.

We may begin by asking what a 'barrier to entry' is. There appears to be no precise definition, and in current usage a 'barrier' often seems to be anything that makes the entry of new firms into an industry more difficult. It is at once apparent that an ambiguity lurks in the concept, and it is this ambiguity that causes the trouble. When existing firms are efficient and possess valuable plant, equipment, knowledge, skill, and reputation, potential entrants will find it correspondingly more difficult to enter the industry, since they must acquire those things.... But these difficulties are natural; they inhere in the nature of the tasks to be performed. There can be no objection to barriers of this sort. Their existence means only that when market power is achieved by means other than efficiency, entry will not dissipate the objectionable power instantaneously, and law may therefore have a role to play....

The question for antitrust is whether there exist artificial entry barriers. These must be barriers that are not forms of superior efficiency and which yet prevent the forces of the market—entry or the growth of smaller firms already within the industry—from operating to erode market positions not based on efficiency. Care must be taken to distinguish between forms of efficiency and artificial barriers. Otherwise the law will find itself—indeed, it has found itself—attacking efficiency in the name of market freedom. Joe Bain, whose work has done much to popularize the concept, lists among entry barriers such things as economies of scale, capital requirements, and product differentiation.[43] There may be disagreement about two of these barriers, but it is clear that at least one of them, economies of scale, is a form of efficiency. Uncritical adapters of Bain's work have not sufficiently inquired whether the others may not also be efficiencies.

Before examining some claimed entry barriers to determine whether they are efficiencies or artificial clogs upon competition, it should be noted that ... an artificial barrier is, of course, an exclusionary practice.... Every barrier will be either a form of efficiency deliberately created or an instance of deliberate predation. There is no 'intermediate case' of non-efficient and unintended exclusion. Failure to bear that in mind leads to serious policy mistakes.

[43] The reference is to J Bain, *Barriers to New Competition* (Harvard University Press, 1956) ch 1.

The Court's approach can be exemplified by *Hoffmann-La Roche*.[44] The case was concerned with alleged abusive behaviour in relation to vitamins, and the Court considered whether HLR was dominant. Its market share was taken into account, and the ECJ then evaluated other factors that might indicate market power. The Commission had listed a number of such factors. The ECJ rejected, for example, the fact that HLR had retained its market share, since this might have resulted from effective competitive behaviour.[45] It also rejected the fact that HLR produced a wider range of vitamins than other undertakings, since the Commission itself had found that each group of the vitamins constituted a separate market.[46] The following factors were, however, deemed to be of relevance:[47]

> On the other hand the relationship between the market shares of the undertaking concerned and of its competitors, especially those of the next largest, the technological lead of an undertaking over its competitors, the existence of a highly developed sales network and the absence of potential competition are relevant factors, the first because it enables the competitive strength of the undertaking in question to be assessed, the second and third because they represent in themselves technical and commercial advantages and the fourth because it is the consequence of the existence of obstacles preventing new competitors from having access to the market.

The ECJ has persisted in taking a wide view of barriers to entry, as has the Commission.[48] It is questionable whether a number of these factors ought to be regarded as barriers to entry.

Thus, *economies of scale* have been considered to be relevant in assessing the market power of a particular firm,[49] as has the capital strength of the undertaking and its access to capital markets.[50] However, as seen above, the former is almost certainly indicative of efficiency. As for the latter, many commentators contend that access to capital is not a barrier to entry, since capital markets accurately reflect the cost of capital to a particular firm, and any inefficiency in this regard is best dealt with through reform of capital markets themselves.

It is equally questionable whether the existence of *vertical integration* should be regarded as a factor indicating dominance.[51] The motivation for a firm to integrate vertically was considered earlier,[52] where it was seen that the rational firm would normally choose to do so only if that was the most efficient method of marketing its product.[53]

It is also doubtful whether *superior technology* should be perceived as a barrier to entry, even though the Court has consistently regarded it in this manner.[54] Any new firm wishing to enter the market should expect to have to expend money on developing technology and know-how. These costs will not necessarily be any greater than for the incumbent firm.

Legal provisions within Member States which render it more difficult for new firms to break into the market have also been regarded as indicative of dominance.[55]

[44] Case 85/76 (n 3).

[50] Ibid; Case T–301/04 *Clearstream* (n 8) [146].
[51] Case 27/76 *United Brands* (n 2); Case 85/76 *Hoffmann-La Roche* (n 3).
[52] See 989–992.
[53] It is, moreover, doubtful whether the existence of vertical integration enables the firm with some dominance to achieve any greater monopoly profit than it would do without the vertical integration.
[54] See, eg, Case 27/76 *United Brands* (n 4); Case 85/76 *Hoffmann-La Roche* (n 3); Case 322/81 *Nederlandsche Banden-Industrie Michelin NV v Commission* [1983] ECR 3461; Case T–301/04 *Clearstream* (n 8) [146].
[55] Case 22/78 *Hugin* (n 9); Case T–30/89 *Hilti* (n 36) [93]; Case T–321/05 *AstraZeneca AB and AstraZeneca plc v Commission*, 1 July 2010, [814].

It is clear that the Court will take into account, in determining dominance, the *conduct of the firm* which is alleged to be the abusive behaviour, notwithstanding the apparent circularity that this entails. Thus, in *Michelin* the Court took account of Michelin's price discrimination as indicative of dominance, even though it noted the circularity thereby involved.[56]

It is difficult to regard the decisions in this area as satisfactory. It may be argued, by way of response, that it is legitimate for the Court to take account of the preceding factors, since it is only seeking to determine whether the firm has some dominance, not whether it has abused that dominance. However, a finding of dominance renders the firm liable to investigation, with attendant costs. Moreover, while the existence of a dominant position is not itself illegal, a firm in such a position is regarded as having a 'special responsibility' not to allow its conduct to impair genuine undistorted competition on the relevant market.

(B) JOINT DOMINANCE

The discussion thus far has proceeded on the assumption that one firm occupies a dominant position. However, Article 102 speaks of an abuse of a dominant position by 'one or more undertakings'. It is clear that this covers the situation, exemplified by *Continental Can* and *Commercial Solvents*, where the dominant position is held by firms that are part of the same corporate group or economic unit.

What has been less clear is whether the phrase also covers oligopolistic markets, in which a number of independent firms operate in a parallel manner. The ECJ appeared to have rejected this in *Hoffmann-La Roche*,[57] when it held that unilateral behaviour by a single firm occupying a dominant position had to be distinguished from interactive behaviour by a number of independent firms, which made up an oligopoly. It however now appears to be the case that some species of oligopolistic behaviour can be caught by Article 102.

Cases T–68 and 77–78/89 **Re Italian Flat Glass: Società Italiana Vetro v Commission**
[1992] ECR I–1403

[Note Lisbon Treaty renumbering: Arts 85 and 86 are now Arts 101 and 102 TFEU]

A company, Cobelli, a wholesaler of glass, alleged that three producers of flat glass were in breach of the Treaty by maintaining agreed price lists and identical conditions of sale. It also alleged that two of these companies had engaged in practices designed to achieve full control, not only of the production of glass, but also of its distribution, by excluding from the market independent wholesaler-distributors. The Commission found a breach of Article 85 by the producers of the flat glass, and also a breach of Article 86. In relation to the latter, it held that the undertakings had a collective dominant position, that they were able to pursue a commercial policy independent of ordinary market conditions, and that they presented themselves on the market as a single entity, rather than as individual concerns. The CFI partially annulled the findings with respect to Article 85, holding that the Commission had failed to establish the requisite agreement or concerted practice between the three producers. It then considered Article 86.

THE CFI

358. The Court considers that there is no legal or economic reason to suppose that the term 'undertaking' in Article 86 has a different meaning from the one given to it in the context of Article 85. There

[56] Case 322/81 (n 54).
[57] Case 85/76 (n 3) [39].

is nothing, in principle, to prevent two or more independent economic entities from being, on a specific market, united by such economic links that, by virtue of that fact, together they hold a dominant position *vis-à-vis* the other operators on the same market. This could be the case, for example, where two or more undertakings jointly have, through agreements or licences, a technological lead affording them the power to behave to an appreciable extent independently of their competitors, their customers and ultimately of their consumers (*Hoffmann-La Roche*).

. . .

360. However, it should be pointed out that for the purposes of establishing an infringement of Article 86 EEC, it is not sufficient, as the Commission's agent claimed at the hearing, to 'recycle' the facts constituting an infringement of Article 85, deducing from the finding that the parties to an agreement or to an unlawful practice jointly hold a substantial share of the market, that by virtue of that fact alone they hold a collective dominant position, and that their unlawful behaviour constitutes an abuse of that collective dominant position. Amongst other considerations, a finding of a dominant position, which is in any case not in itself a matter of reproach, presupposes that the market in question has been defined (Case 6/72, *Continental Can*, Case 322/81, *Michelin*). The Court must therefore examine, first the analysis of the market made in the decision and, secondly, the circumstances relied on in support of the finding of a collective dominant position.

The CFI annulled the Commission's decision on Article 102, since there were errors in its reasoning with respect to market definition and because it had not adduced the necessary proof of a collective dominant position. Notwithstanding this, the CFI's decision was important for its affirmation of the existence of collective dominance.[58] The ECJ endorsed the idea of collective dominance[59] and gave further guidance on its meaning in the following case.[60]

Cases C–395–396/96 P **Compagnie Maritime Belge Transports SA, Compagnie Maritime Belge SA, and Dafra Lines A/S v Commission**
[2000] ECR I–1365

[Note Lisbon Treaty renumbering: Art 85 is now Art 101 TFEU]

The members of the liner conference argued that it was wrong of the Commission and the CFI to have concluded that they occupied a collectively dominant position. They contended that the Commission and CFI had, in making this finding, merely 'recycled' facts relating to the existence of a concerted practice.

[59] Case C–393/92 (n 74); Cases C–140–142/94 *DIP SpA v Commune di Bassano del Grappa* [1995] ECR I–3257, [25]–[26].

[60] Cases T–191 and 212–214/98 *Atlantic Container Line AB v Commission* [2003] ECR II–3275, [594]–[602], [610]; Case C–413/06 P *Bertelsmann AG and Sony Corporation of America v Independent Music Publishers and Labels Association (Impala)* [2008] ECR I–4951, [119].

THE ECJ

41. In order to establish the existence of a collective entity . . . it is necessary to examine the economic links or factors which give rise to a connection between the undertakings concerned. . . .

42. In particular, it must be ascertained whether economic links exist between the undertakings concerned which enable them to act independently of their competitors, their customers and consumers (see *Michelin*).

43. The mere fact that two or more undertakings are linked by an agreement, a decision . . . or a concerted practice within the meaning of Article 85(1) . . . does not, of itself, constitute a sufficient basis for such a finding.

44. On the other hand, an agreement, decision or concerted practice (whether or not covered by an exemption under Article 85(3) . . .) may undoubtedly, where it is implemented, result in the undertakings concerned being so linked as to their conduct on a particular market that they present themselves as a collective entity vis-à-vis their competitors, their trading partners and consumers.

45. The existence of a collective dominant position may therefore flow from the nature and terms of an agreement, from the way in which it is implemented and, consequently, from the links or factors which give rise to a connection between undertakings which result from it. Nevertheless, the existence of an agreement or of other links in law is not indispensable to a finding of a collective dominant position; such a finding may be based on other connecting factors and would depend on an economic assessment and, in particular, on an assessment of the structure of the market in question.

The same approach to collective dominance is apparent in the context of mergers. In *Gencor*[61] the CFI held that collective dominance within the Merger Regulation could catch oligopolistic collusion, and that the existence of structural links between the relevant firms was not a necessary condition for collective dominance to apply.

It is still necessary to find that there has been an abuse by the firms that occupy a collective dominant position. The meaning of abuse in this context is difficult.[62] A concerted practice by oligopolists will be caught by Article 101. For Article 102 to be of use collective dominance will have to embrace non-collusive behaviour. However, to condemn parallel pricing behaviour by oligopolists as an abuse under Article 102 would be tantamount to condemning oligopoly *per se*, since this is the rational behaviour of firms in such markets. There is nonetheless still room for the concept of abuse to apply. Thus, if those occupying a collective dominant position seek to drive a competitor from the market, as exemplified by *Compagnie Maritime Belge*, they should properly be caught by Article 102.

4 ABUSE: THREE PROBLEMS OF INTERPRETATION

An undertaking will be condemned only if it has abused its dominant position. The list of abusive practices in Article 102 is not exhaustive. The practices specified are merely examples of abuse.[63] There are three important interpretive issues when considering the meaning of 'abuse'.

[61] Case T–102/96 *Gencor Ltd v Commission* [1999] ECR II–753, [276]–[277].
[62] Whish (n 39) 556–567.
[63] Case 6/72 *Continental Can* (n 3) [26]; Case C–95/04 P *British Airways plc v Commission* [2007] ECR I–2331, [57].

(A) WHO IS ARTICLE 102 DESIGNED TO PROTECT?

The first issue is who Article 102 is intended to protect: consumers, competitors, or both?[64] There can be instances where the interests of consumers and competitors clash. Behaviour by a dominant undertaking that injures a competitor will not necessarily injure consumers.[65]

It is common to subdivide the situations to which Article 102 can apply into exploitation and anti-competitiveness.[66] The former signifies behaviour harmful to consumers. The latter, generally, connotes conduct deleterious to competitors, actual or potential. This division should not, however, be treated too rigidly, and in any event the same conduct by the dominant firm may be both exploitative and anti-competitive. It is now clear that Article 102 covers both exploitation and anti-competitive behaviour, but this was not so apparent at the inception of the Treaty. Some commentators argued strenuously that Article 102 should be restricted to exploitative behaviour harmful to consumers, and that there should be some real link between the harm and the market power of the dominant undertaking.[67] This construction was rendered untenable by *Continental Can*, which will be considered below. The Commission now views prevention of harm to consumers as the ultimate goal of Article 102, although it argues that this may require protection of the competitive process.[68]

(B) WHAT KINDS OF BEHAVIOUR ARE ABUSIVE?

The second issue relates to the kinds of behaviour held to be abusive. Such behaviour must be distinguished from normal competitive strategy. It would be odd if the ordinary pricing and output decisions of the dominant firm were abusive, since this would mean that we were proscribing dominant market power *per se*. Having said this, it is also clear that Article 102 explicitly prohibits unfair pricing and limits on productive capacity, and that some meaning must, therefore, be ascribed to these terms.

It might be thought that this problem could be overcome if the concept of abuse was confined to practices such as price discrimination, predation, and tying, which look 'bad', even for the firm with dominance. The problem is not so easily resolved since there is considerable disagreement among economists as to whether these activities are always harmful and how this is to be measured. The application of Article 102 can, therefore, be controversial.

The tension in the preceding paragraph is thrown into sharp relief by the Court's jurisprudence, which states that while a finding of dominance does not in itself imply any reproach, the undertaking nonetheless has a 'special responsibility', irrespective of the cause of that position, not to allow its conduct to impair genuine and undistorted competition on the common market.[69] The consequence is that an undertaking in a dominant position may be deprived of the right to adopt a course of conduct which is not itself abusive, and which would be unobjectionable if taken by a non-dominant undertaking.[70] Thus, while it is accepted that a dominant undertaking can take steps to protect its

own interests when they are attacked by competitors, it is not allowed to strengthen its dominant position, which will be held to be an abuse.[71] This divide is difficult to apply, more especially given that it has to be judged in the light of the specific circumstances of each case where competition has been weakened.[72]

(c) ABUSE OF WHICH MARKET?

It is clear that abuse of a dominant position in one market may be censured because of the effects that it produces on a different market, even where there is no dominance on the latter market. This is especially so where the dominant undertaking can control access to the other market. This is exemplified by *Aéroports de Paris*.[73] The airport authority controlled access to the supply of catering services and abused its dominant position by discriminatory pricing.

5 ABUSE: PARTICULAR EXAMPLES

(a) ABUSE AND MERGERS

The EU waited a long time for a specific regulation concerning mergers. The ECJ made it clear in the *Continental Can* case that some mergers would, however, be caught by Article 102. The case is also of more general importance for the interpretation of the meaning of abuse.

Case 6/72 **Europemballage Corporation and Continental Can Co Inc v Commission**
[1973] ECR 215

[Note Lisbon Treaty renumbering: Arts 3f, 85, and 86 are now Art 3(3) TEU, Arts 101 and 102 TFEU]

Continental Can (CC) was a United States manufacturer of metal packaging which had a presence in Europe through a German firm (SLW), which it acquired in 1969. In 1970 it sought to purchase, through its subsidiary Europemballage, a controlling interest in a Dutch company, TDV. The Commission found that CC had a dominant position in Europe for certain types of packaging through SLW, and that there had been an abuse of that position by the purchase of TDV. CC argued that there had been no abuse.

THE ECJ

20. …The question is whether the word 'abuse' in Article 86 refers only to practices of undertakings which may directly affect the market and are detrimental to production or sales, to purchasers or consumers, or whether this word refers also to changes in the structure of an undertaking, which lead to competition being seriously disturbed in a substantial part of the Common Market.

21. The distinction between measures which concern the structure of the undertaking and practices which affect the market cannot be decisive, for any structural measure may influence market conditions, if it increases the size and the economic power of the undertaking.

[71] Case 27/76 *United Brands* (n 4) [189]; Case T–228/97 *Irish Sugar plc* (n 38) [112]; Case T–219/99 *British Airways* (n 11) [241]–[243]; Case T–203/01 *Michelin* (n 69) [54]–[55]; Case T–66/01 *Imperial Chemical Industries Ltd v Commission*, 25 June 2010, [295]; Case T–155/06 *Tomra Systems ASA and Others v Commission*, 9 Sept 2010, [207].

[72] Case C–333/94 P *Tetra Pak* (n 3) [24]; Cases C–395–396/96 P *Compagnie Maritimes Belge* (n 39) [114].

[73] Case 128/98 (n 2) [164]–[165]; Case T–219/99 *British Airways* (n 11) [127]–[132].

22. In order to answer this question one has to go back to the spirit, general scheme and wording of Article 86, as well as to the system and objectives of the Treaty. . . .

23. Article 86 is part of the chapter devoted to the common rules on the Community's policy in the field of competition. This policy is based on Article 3(f) of the Treaty according to which the Community's activity shall include the institution of a system ensuring that competition in the Common Market is not distorted. . . .

24. But if Article 3(f) provides for the institution of a system ensuring that competition in the Common Market is not distorted, then it requires a fortiori that competition must not be eliminated. This requirement is so essential that without it numerous provisions of the Treaty would be pointless. Moreover, it corresponds to the precept of Article 2 of the Treaty according to which one of the tasks of the Community is 'to promote throughout the Community a harmonious development of economic activities'. Thus the restraints on competition, which the Treaty allows under certain conditions because of the need to harmonise the various objectives of the Treaty, are limited by the requirements of Articles 2 and 3. Going beyond this limit involves the risk that the weakening of competition would conflict with the aims of the Common Market.

25. . . . Articles 85 and 86 seek to achieve the same aim on different levels, viz. the maintenance of effective competition within the Common Market. The restraint on competition, which is prohibited if it is the result of behaviour falling under Article 85, cannot become permissible by the fact that such behaviour succeeds under the influence of a dominant undertaking and results in the merger of the undertakings concerned. In the absence of explicit provisions one cannot assume that the Treaty, which prohibits in Article 85 certain decisions of ordinary associations of undertakings restricting competition without eliminating it, permits in Article 86 that undertakings, after merging into an organic unity, should reach such a dominant position that any serious competition is practically rendered impossible. Such a diverse legal treatment would make a breach in the entire competition law which could jeopardise the proper functioning of the Common Market. If, in order to avoid the prohibitions in Article 85, it sufficed to establish such close connections between the undertakings that they escaped the prohibition of Article 85 without coming within the scope of Article 86, then, in contradiction to the basic principles of the Common Market, the partitioning of a substantial part of the Common Market would be allowed. . . .

26. It is in the light of these considerations that the condition imposed by Article 86 is to be interpreted whereby in order to come within the prohibition a dominant position must have been abused. The provision states a certain number of abusive practices which it prohibits. The list merely gives examples, not an exhaustive enumeration of the sort of abuses of a dominant position prohibited by the Treaty. As may further be seen from subparagraphs (c) and (d) of Article 86(2), the provision is not only aimed at practices which may cause damage to the consumer directly, but also at those which are detrimental to them through their impact on an effective competition structure, such as is mentioned in Article 3(f) of the Treaty. Abuse may therefore occur if an undertaking in a dominant position strengthens such position in such a way that the degree of dominance reached substantially fetters competition, i. e. that only undertakings remain in the market whose behaviour depends on the dominant one.

27. Such being the meaning and scope of Article 86 of the EEC Treaty, the question of the link of causality raised by the applicants which in their opinion has to exist between the dominant position and its abuse, is of no consequence, for the strengthening of the position of an undertaking may be an abuse and prohibited under Article 86 of the Treaty, regardless of the means and the procedure by which it is achieved, if it has the effects mentioned above.

The decision in *Continental Can* is of seminal importance for Article 102, in terms of both the reasoning and the result.

The ECJ's reasoning exemplifies its teleological approach. Reliance is placed on the general principles in the Treaty to guide construction of specific Articles. The competition provisions are read as a whole, and the interpretation of Article 102 is strongly influenced by the desire to avoid any 'gap' in Treaty coverage.

The result of the case signals the ECJ's intent that Article 102 should cover situations where the competitive market structure was placed in jeopardy. The Article included classic forms of 'behavioural' abuse, which operated directly to the detriment of consumers. It was now clear that it also embraced 'structural' abuse that weakened the competitive market structure. *Continental Can* thus made it apparent that Article 102 would cover anti-competitiveness where the primary injury was to competitors. This was reinforced by the Court's negation of the need for any real causal link between the dominance and the impugned action: it did not need to be proven that CC's 'economic muscle' had forced the merger on a reluctant undertaking.[74] It sufficed that the merger in fact resulted in damage to the competitive market structure.[75] *Continental Can* received a mixed reception when it first appeared, with certain commentators being critical of the reasoning and result. The Court has, however, persisted in its general approach, as the cases in the following sections will demonstrate.

(B) ABUSE AND REFUSAL TO SUPPLY

(i) *Refusal to Supply: The Basic Principles*

The obligation on a firm in a dominant position to supply to other firms is exemplified by *Commercial Solvents*:[76]

Cases 6 and 7/73 **Istituto Chemioterapico Italiano SpA and Commercial Solvents v Commission**
[1974] ECR 223

[Note Lisbon Treaty renumbering: Arts 3f, 85, and 86 are now Art 3(3) TEU, Arts 101 and 102 TFEU]

Commercial Solvents Corporation (CSC) made raw materials, nitropropane and aminobutanol, which were then used to make ethambutol, a drug for tuberculosis. CSC acquired 51 per cent of an Italian company, Istituto, which bought the raw material from CSC and sold it to another Italian company, Zoja, the latter then using it to manufacture ethambutol-based products. Istituto sought to acquire Zoja, but the negotiations were unsuccessful. Istituto then increased its price to Zoja, and Zoja found an alternative source of supply from other customers of CSC. This alternative source of supply then dried up, principally because CSC instructed those to whom it sold the raw material not to sell it on to firms such as Zoja. CSC then stated that it would no longer sell the raw material, but that it would instead integrate vertically down-market, and use the raw material for its own production of the finished product. When Zoja sought to re-order the raw material from CSC the latter refused to supply.

THE ECJ

25. However, an undertaking being in a dominant position as regards the production of raw material and therefore able to control the supply to manufacturers of derivatives, cannot, just because it decides

[75] P Vogelenzang, 'Abuse of a Dominant Position in Article 86: The Problem of Causality and Some Applications' (1976) 13 CMLRev 61. For a different view about causality see T Eilmansberger, 'How to Distinguish Good from Bad Competition under Article 82: In Search of Clearer and More Coherent Standards for Anti-Competitive Abuses' (2005) 42 CMLRev 49.

[76] R Subiotto and R O'Donoghue, 'Defining the Scope of the Duty of Dominant Firms to Deal with Existing Customers under Article 82' [2003] ECLR 683; Commission's enforcement priorities (n 21)[75]–[90]; DG Competition Discussion Paper (n 21) [207]–[224].

> to start manufacturing these derivatives (in competition with its former customers) act in such a way as to eliminate their competition which, in the case in question, would amount to eliminating one of the principal manufacturers of ethambutol in the Common Market. Since such conduct is contrary to the objectives expressed in Article 3(f) of the Treaty and set out in greater detail in Articles 85 and 86, it follows that an undertaking which has a dominant position in the market in raw materials and which, with the object of reserving such raw material for manufacturing its own derivatives, refuses to supply a customer, which is itself a manufacturer of these derivatives, and therefore risks eliminating all competition on the part of this customer, is abusing its dominant position within the meaning of Article 86. In this context it does not matter that the undertaking ceased to supply in the spring of 1970 because of the cancellation of the purchases by Zoja, because it appears from the applicants' own statement that, when the supplies provided for in the contract had been completed, the sale of aminobutanol would have stopped in any case.

This appears to be a classic case of abusive behaviour: CSC, the dominant firm, teaches Zoja a lesson by making it clear that if the latter seeks an alternative source of supply that later dries up, then Zoja cannot necessarily expect CSC to resume supplies. The case could well have been decided in this way. However, the Court's reasoning is broader. It specifically addresses the situation where the refusal to supply is based on a desire by the dominant firm to integrate vertically into the finished-product market. This is still deemed an abuse under Article 102.

This is more controversial for the reasons given above.[77] A rational firm will seek to enter a new phase of the market downstream only if it believes that it can produce the finished product more efficiently than the incumbent firms. If it is correct then the consumer will benefit by the product being cheaper. If it is wrong then it will suffer accordingly. The effect of such vertical integration may be that existing firms making the finished product cannot do so if the dominant firm does not have enough raw materials for its own needs and its rivals'.[78] This exemplifies the tension mentioned earlier as to whether Article 102 is intended to protect consumers or competitors/the competitive market structure. There may be situations where actions by a dominant firm may benefit consumers, but harm competitors. *Commercial Solvents* signals that if forced to choose the Court will protect the latter.[79]

Refusal by the dominant firm to supply existing customers will therefore be abusive unless there is some objective justification, as will reduction in supplies to firms in a comparable situation in a way which places them at a comparative disadvantage.[80] Thus in *United Brands* the ECJ held that the dominant firm cannot refuse to meet the orders of a longstanding customer who abides by regular commercial practice.[81] The Union Courts are likely to condemn refusal to supply where, as in *Microsoft*,[82] it precludes competitors of the dominant undertaking from bringing innovative goods or services to market.

It is unclear whether the rules on refusal to supply apply to new customers, as opposed to existing customers. The case law has come close to condemning such refusals, as has the Commission,[83] subject to certain conditions.[84] In *BPB*[85] the CFI held that, in deciding how to allocate supplies in times of

[77] See 989–992.

[78] The ECJ was not convinced that CSC could not meet its own needs and those of Zoja: [1974] ECR 223, [28].

[79] It may be possible to 'square this circle' by arguing that in the long term the consumer will be better off if there are more competitors at the finished-product-market level; and that if the dominant firm really is more efficient than a firm such as Zoja then the latter will not, in any event, survive.

shortage, a firm must use an objective criterion, and that favouring loyal customers, even marginally, over others did not meet this test.

A refusal to supply can be justified, but it has not been easy for dominant firms to satisfy the Court that such justification exists.[86]

Cases C–468–478/6 **Sot Lélos kai Sia EE and Others v GlaxoSmithKline AEVE Farmakeftikon Proïonton**

[2008] ECR I–7139[87]

The action was brought was by pharmaceutical wholesalers against GSK for its refusal to supply certain medicinal products. The wholesalers had bought the products for a number of years for re-sale in Greece and other Member States. The national court asked whether the refusal to supply could be justified because the wholesalers engaged in parallel trade to other Member States. The ECJ repeated orthodoxy that refusal by a dominant undertaking to meet the orders of an existing customer constituted abuse for the purposes of Article 82 EC where, without objective justification, that conduct was liable to eliminate a trading party as a competitor.

THE ECJ

35. With regard to a refusal by an undertaking to deliver its products in one Member State to wholesalers which export those products to other Member States, such an effect on competition may exist not only if the refusal impedes the activities of those wholesalers in that first Member State, but equally if it leads to the elimination of effective competition from them in the distribution of the products on the markets of the other Member States.

36. In this case it is common ground between the parties in the main proceedings that, by refusing to meet the Greek wholesalers' orders, GSK AEVE aims to limit parallel exports by those wholesalers to the markets of other Member States in which the selling prices of the medicinal products in dispute are higher.

37. In respect of sectors other than that of pharmaceutical products, the Court has held that a practice by which an undertaking in a dominant position aims to restrict parallel trade in the products that it puts on the market constitutes abuse of that dominant position, particularly when such a practice has the effect of curbing parallel imports by neutralising the more favourable level of prices which may apply in other sales areas in the Community . . . or when it aims to create barriers to re-importations which come into competition with the distribution network of that undertaking . . . Indeed, parallel imports enjoy a certain amount of protection in Community law because they encourage trade and help reinforce competition . . .

. . .

[*GSK argued that parallel trade brought only few financial benefits to the consumers.*]

53. In that connection, it should be noted that parallel exports of medicinal products from a Member State where the prices are low to other Member States in which the prices are higher open up in principle an alternative source of supply to buyers of the medicinal products in those latter States, which necessarily brings some benefits to the final consumer of those products.

54. It is true, as GSK AEVE has pointed out, that, for medicines subject to parallel exports, the existence of price differences between the exporting and the importing Member States does not

[86] Case T–65/89 *BPB Industries plc and British Gypsum Ltd v Commission* [1993] ECR II–389.

[87] S Kingston, Note (2009) 46 CMLRev 683.

necessarily imply that the final consumer in the importing Member State will benefit from a price corresponding to the one prevailing in the exporting Member State, inasmuch as the wholesalers carrying out the exports will themselves make a profit from that parallel trade.

55. Nevertheless, the attraction of the other source of supply which arises from parallel trade in the importing Member State lies precisely in the fact that that trade is capable of offering the same products on the market of that Member State at lower prices than those applied on the same market by the pharmaceuticals companies.

56. As a result, even in the Member States where the prices of medicines are subject to State regulation, parallel trade is liable to exert pressure on prices and, consequently, to create financial benefits not only for the social health insurance funds, but equally for the patients concerned, for whom the proportion of the price of medicines for which they are responsible will be lower....

(ii) *Refusal to Supply: The Essential Facilities Doctrine*

There has been considerable debate about Article 102 and the essential facilities doctrine. This is the idea that the owner of a facility which is not replicable by the ordinary process of innovation and investment, and without access to which competition on a market is impossible or seriously impeded, has to share it with a rival. There is some indication of this doctrine in the Court's jurisprudence and Commission decisions.

Thus the CFI held that Article 102 applies to a refusal to supply a product which is required by another party to produce a different product, even if the second product is in competition with the first and even if the producer of the first product enjoys an intellectual property right. This was established in *RTE*.[88] RTE was a statutory authority providing broadcasting services, and it reserved the exclusive right to publish a weekly schedule of TV programmes for its channels in Ireland. An Irish company, Magill, sought to publish a weekly guide which would have information on all the available channels. RTE claimed that this infringed its copyright in the weekly schedule for its channels. The CFI held that RTE, by reserving the exclusive right to publish its weekly television programme listings, was preventing the emergence of a new product, namely a general television magazine likely to compete with its own magazine, the RTE Guide, and that this constituted a breach of Article 102.

The 'essential facilities doctrine' is also apparent in Commission decisions, as evidenced by the *Sealink* case.[89] Sealink owned the port of Holyhead, and operated a ferry service to Ireland. A rival ferry company claimed that Sealink organized the sailing schedules from Holyhead in the most inconvenient way for the rival company. The Commission held that it was an abuse of Article 102 for the owner of an essential facility to use its power in one market to strengthen its position on another related market. This would occur if it granted its competitors access to the related market on terms which were less favourable than those for its own services without any objective justification.[90] There are, however, dangers in the essential facilities doctrine.

[88] Cases T–69, 70 and 76/89 *RTE, ITP, BBC v Commission* [1991] ECR II–485, upheld on appeal, Cases C–241 and 242/91 P *Radio Telefis Eireann (RTE) and Independent Television Publications Ltd (ITP) v Commission* [1995] ECR I–743. See also Case T–70/89 *British Broadcasting Corporation and British Broadcasting Corporation Enterprises Ltd v Commission* [1991] ECR II–535; Case 238/87 *Volvo AB v Erik Veng (UK) Ltd* [1988] ECR 6211.

[90] [1992] 5 CMLR 255, [41].

D Ridyard, Essential Facilities and the Obligation to Supply Competitors[91]

It will always be tempting for a liberal-minded competition authority to respond favourably to firms who complain about lack of access to new markets, and there are certain instances where the use of essential facilities can legitimately be used as an aid to market liberalisation. There are many other instances, however, in which an uncritical approach favouring market entry can threaten the incentives to dynamic efficiency that provide the engine for economic and technical progress in workably competitive markets.

. . . To achieve a better balance, some limiting principles need to be found. . . . The approach suggested in this article is to recognise that essential facilities, and the obligations on essential facilities owners that accompany them, should be identified only in circumstances where competition does not and cannot be expected to operate, and with assets that cannot reasonably be subject to effective competition. The fact that it may be inconvenient or costly for competitors to achieve market access by their own devices is not sufficient. Nor is the fact that the asset owner might be enjoying a high return from its policy of refusing to deal with competitors.

Later decisions have taken a more limited view of the essential facilities doctrine. In *Ladbroke* the CFI made it clear that an action for refusal to supply would be plausible only if the product or service being sought was essential for the exercise of the relevant activity. The supply of TV broadcasts concerning horse racing was not essential for the applicant's business of running betting shops.[92] In *ENS*[93] the CFI held that a product or service could not be considered necessary or essential unless there was no real or potential substitute for it. The same cautionary approach is apparent in *Bronner*.

Case C–7/97 **Oscar Bronner GmbH & Co KG v Mediaprint Zeitungs- und Zeitschriftenverlag GmbH & Co KG**
[1998] ECR I–7791

Bronner published a newspaper that had 3.6 per cent of the market; Mediaprint published newspapers that had 71 per cent of the market. Bronner claimed that Mediaprint had abused its dominant position by not including Bronner's paper in Mediaprint's home delivery service. Mediaprint argued that the establishment of the service was a considerable financial investment, and that, although it had a dominant position, it was not bound to subsidize competing companies. The ECJ held that the ruling in the *RTE* case turned on the fact that the information on the TV schedules was indispensable for the publication of the TV guide; that RTE's action prevented the appearance of a new product; and that there was no objective justification. The ECJ then held that access to Mediaprint's home delivery service was not indispensable to Bronner's primary business of newspaper production.

[93] Cases T–374, 375, 384 and 388/94 *European Night Services Ltd (ENS) v Commission* [1998] ECR II–3141, [208]–[209].

THE ECJ

43. In the first place, it is undisputed that other methods of distributing daily newspapers, such as by post and through sale in shops and at kiosks, even though they may be less advantageous for the distribution of certain newspapers, exist and are used by the publishers of those daily newspapers.

44. Moreover, it does not appear that there are technical, legal or even economic obstacles capable of making it impossible, or even unreasonably difficult, for any other publisher of daily newspapers to establish . . . its own nationwide home-delivery scheme. . . .

45. It should be emphasized in that respect that, in order to demonstrate that the creation of such a system is not a realistic potential alternative and that access to the existing system is therefore indispensable, it is not enough to argue that it is not economically viable by reason of the small circulation of the daily newspaper. . . .

46. For such access to be capable of being regarded as indispensable, it would be necessary at the very least to establish, as the Advocate General has pointed out . . . , that it is not economically viable to create a second home delivery scheme for the distribution of daily newspapers with a circulation comparable to that of the daily newspapers distributed by the existing scheme.

A similarly cautionary approach is apparent in the *IMS* case.[94] The ECJ held that there were three conditions to be met before a dominant undertaking could be required to grant a compulsory licence of data protected by an intellectual property right: the undertaking that requested the licence must intend to offer new services for which there was consumer demand that were not offered by the dominant firm; there must be no objective justification for the refusal to grant the licence; and the result of the refusal to supply the licence is to eliminate all competition on the relevant market. The CFI's reasoning in *Microsoft* was to similar effect.[95] It held that refusal by a dominant undertaking to license a third party to use a product covered by an intellectual property right did not in itself constitute an abuse for the purpose of Article 102. It would be abusive, subject to objective justification, only if the refusal related to a product or service indispensable to the exercise of an activity on a neighbouring market; the refusal excluded any effective competition on that neighbouring market; and it prevented the appearance of a new product for which there was potential consumer demand. The application of these criteria can however be contestable, as evidenced by the *Microsoft* case.

(c) ABUSE AND PRICE DISCRIMINATION

(i) *Price Discrimination: Economic Foundations*

Article 102(c) explicitly prohibits the application of dissimilar trading conditions to equivalent transactions. There is price discrimination where goods are sold or purchased at prices which are not related to differences in costs. Thus, price discrimination can cover the situation in which the same product is sold at different, non-cost-related prices. It can also cover the situation where the goods are sold at the same price, even though there are cost differences.

Discrimination can occur in a variety of ways. It may be *geographical*, whereby the undertaking prices at different levels for different local markets, and then seeks to insulate one from the other in order to prevent arbitrage (reselling) between them. It may assume the form of *discounts* or *rebates* that are not related to cost differences, with the objective of tying customers closer to that producer, thereby rendering it more difficult for competitors. It may also appear as *predatory pricing*: the dominant firm seeks to protect its dominance by dropping its prices to deter a would-be entrant to the

[94] Case C–418/01 *IMS Health GmbH & Co v NDC Health GmbH & Co KG* [2004] ECR I–5039.
[95] Case T–201/04 *Microsoft* (n 8) [331]–[333].

market, the idea being that it will raise prices again to reap monopoly profits when it has 'seen the other firm off'.

It is common also to distinguish price discrimination according to the nature of the injured party. *Primary-line injury* refers to harm suffered by a competitor at the same level of the market as the dominant firm, as exemplified by loyalty rebates that make it more difficult for a competitor to break into the market. *Secondary-line injury* is concerned with harm to the purchaser of the product. This is exemplified by uniform delivered pricing, whereby goods are sold at the same price irrespective of the fact that one customer is closer to the factory than the other, and therefore transport costs are different in the two instances.

The term 'price discrimination' suggests that differences in the price at which goods are sold are 'bad'. This is not self-evident in economic terms, or the cure may be worse than the disease. There are three reasons why this is so.

The first concerns *measurement* or *assessment*. Price discrimination is dependent on assessment of production costs, which may be difficult to determine. This is particularly problematic in relation to predatory pricing. If a new firm enters the market then the existing dominant firm will respond in some manner, since this is the essence of competition. It is difficult to decide when this response crosses the line between a 'proper' competitive strategy and 'improper' predation. This is because commentators disagree on the test for predation,[96] its application, and upon the empirical likelihood that it will occur.[97] This has led some to argue that legal intervention can be ineffective or worse than the disease.[98] The court may select the wrong criterion. It may choose the 'correct' criterion, but misapply it to the facts. The very existence of the legal rule may, moreover, have a dampening effect on competition.

The second reason price discrimination is not self-evidently bad relates to *allocative efficiency*. In economic theory monopoly is bad because the monopolist restricts output to a greater extent than under normal competitive conditions, with a consequential misallocation of resources within society. The key issue is whether this misallocation will be greater under a regime requiring the charging of a single price to all customers or under one which permits price discrimination. This depends upon whether the price discrimination would have the effect of further restricting output, or whether it might actually lead to an increase in output.

W Bishop, Price Discrimination under Article 86: Political Economy in the European Court[99]

If a monopolist were able to charge each customer exactly that customer's maximum price, then the monopolist would realise very large profits, but output would be identical to that under perfect competition with not a single sale being sacrificed because of higher price. This is called perfectly discriminating monopoly and is very rare, perhaps non-existent.

Much more important is imperfect price discrimination—different prices in a number of different markets or for different classes of customers. British Rail for example discriminates by offering special discounts to students for no reason other than that most of them would not travel by train otherwise, and a little more revenue is better than none at all when it costs virtually nothing to carry an extra passenger outside peak hours.

[96] (N 110).
[97] Bork (n 42) 144–159.
[98] Ibid.
[99] (1981) 44 MLR 282, 287–288. See also Bork (n 42) 394–398; P Muysert, 'Price Discrimination—An Unreliable Indicator of Market Power' [2004] ECLR 353; M Lorenz, M Lubbig, and A Russell, 'Price Discrimination, A Tender Story' [2005] ECLR 355.

In *United Brands* the court condemned imperfect price discrimination when practised on a regional basis so as to divide the common market into a number of sub-markets with different, discriminatory prices. However it is not at all clear that imperfect price discrimination generally reduces output below the level that would prevail under simple monopoly. Whether output under imperfectly discriminating monopoly is nearer the perfectly competitive or further from it will depend upon the facts of each case. Unfortunately in any real case the facts are extremely difficult to ferret out—in practice usually impossible to ascertain at all.

Moreover, as several economists have demonstrated, it is conceivable that price discrimination in practice may reduce economic efficiency, i.e. increase the misallocation of money and resources, even if it increases output as compared with output in the absence of discrimination. Probably the best we can do is to adopt one general rule on price discrimination. Many economists guess that price discrimination is probably on balance efficient, assuming that there will be monopoly anyway. Certainly there is no reason to believe that a rule prohibiting it will promote more efficient allocation of resources. Furthermore it is clear that enforcing the prohibition will lead both enforcers and defendants to incur costs that consume real social resources.

The third reason to be cautious about rules against price discrimination relates to *fairness*. This may seem intuitively odd, for many regard price discrimination as unfair. This is less self-evident than is normally thought. Bishop provides a succinct formulation of the counter-argument.

W Bishop, Price Discrimination under Article 86: Political Economy in the European Court[100]

The rule in *United Brands* requires any monopolist who hitherto has discriminated in price between national submarkets to discontinue this practice. Henceforth such a monopolist must charge the same price (with due allowance for cost differences). Generally speaking discriminating monopolists will find it profitable to charge higher prices in higher income countries . . . than in lower income countries. . . . Suppose these firms are now required to charge only one price. Almost certainly the profit maximising price will lie somewhere between the highest and lowest discriminatory prices that such a firm could charge . . . consider the effect on income distribution as between high and low income countries. German consumers of (say) bananas get them at a lower price than before. Also some German consumers who did not buy bananas before do buy them now. All these German consumers are better off. Some British consumers who bought before now drop out of the market because the price is too high. Remaining British consumers pay more. All these British consumers are worse off. So, though efficiency effects in this example are ambiguous, distributional effects are quite clear: income is redistributed away from Britain and toward Germany. The general effect of *United Brands* is clear—*it redistributes income away from consumers in the poorer regions of Europe and toward consumers in the richer regions.*

It may be argued that this ignores the importance of the creation of a *single market*, hence the Court's opposition to divisions along national lines. This is not a self-evident justification for all the ECJ's jurisprudence. We can lose sight of substance by concentrating upon form. The rationale for a single market in economic terms was to create greater efficiency:[101]

[100] Bishop (n 99) 288–289, italics in the original.
[101] Ibid 288–289, italics in the original.

To that end striking down arrangements in which arbitrary national barriers are preserved is a goal of the Community institutions. But that is very different from charging different prices in geographically separated markets, simply because the markets happen to be different countries. It is also very different when the effect of prohibiting the practice is possibly to induce greater misallocation of resources and certainly to redistribute wealth from the poor to the rich. The common European market was set up *as a means to the opposite ends*, so a general appeal to those means cannot justify the decision.

(ii) *Price Discrimination: The Case Law*

Case 27/76 **United Brands Company and United Brands Continentaal BV v Commission**
[1978] ECR 207

The facts were set out above. UB was accused of price discrimination. It shipped bananas from Central America to Europe. Some of these bore the brand name 'Chiquita', and these tended to fetch a higher price. UB sold the goods to ripeners, who sold them to wholesalers, who in turn sold to retailers. The bananas were landed at two ports, but there were no real differences in unloading costs. The Commission alleged that UB sold the bananas at different prices in different Member States, and that it did so without objective justification. The essence of UB's response was to contend that the price differentials reflected market forces, *viz.* the average anticipated market price in each state; that the Community had not established a single banana market; and that, therefore, it was not possible to avoid differences in the individual supply/demand situations in different countries.

THE ECJ

227. Although the responsibility for establishing the single banana market does not lie with the applicant, it can only endeavour to take 'what the market can bear' provided that it complies with the rules for the regulation and coordination of the market laid down by the Treaty.

228. Once it can be grasped that differences in transport costs, taxation, customs duties, the wages of the labour force, the conditions of marketing, the differences in the parity of the currencies, the density of competition may eventually culminate in different retail selling price levels according to the Member States, then it follows that those differences are factors which UBC only has to take into account to a limited extent since it sells a product which is always the same and at the same place to ripener/distributors who—alone—bear the risks of the consumers' market.

229. The interplay of supply and demand should, owing to its nature, only be applied to each stage where it is really manifest.

230. The mechanisms of the market are adversely affected if the price is calculated by leaving out one stage of the market and taking into account the law of supply and demand as between the vendor and the ultimate consumer and not as between the vendor (UBC) and the purchaser (the ripener/distributor).

231. Thus, by reason of its dominant position UBC . . . was in fact able to impose its selling price on the intermediate purchaser. . . .

232. These discriminatory prices, which varied according to the circumstances of the Member States, were just so many obstacles to the free movement of goods and were intensified by the clause forbidding the resale of bananas while still green and by reducing the deliveries of the quantities ordered.

233. A rigid partitioning of national markets was thus created at price levels which were artificially different, placing certain distributor/ripeners at a competitive disadvantage, since compared with what it should have been competition had thereby been distorted.

There is much confusion in this extract. The judgment omits any consideration of the general issue whether price discrimination can be beneficial, and the reasoning is punctuated by the mistaken use of concepts. It is, for example, central to the judgment that UB would have to take account of the many factors that differentiated the various retail markets only to a limited extent, and that the risks would instead be borne by the distributors/ripeners: paragraph 228. This is highly questionable. A manufacturer may well bear the risk of differing demand conditions at the retail level. UB almost certainly did bear these risks. If it tried to shift these risks to the distributors, then it would have to give financial inducements to the latter.[102] The Court's references to the markets in which supply and demand is really manifest are equally problematic.[103]

Case 85/76 **Hoffmann-La Roche & Co AG v Commission** [1979] ECR 461

The case turned on abusive practices by HLR in the vitamins markets, one aspect of this being HLR's practice of giving rebates.

THE ECJ

89. An undertaking which is in a dominant position on a market and ties purchasers—even if it does so at their request—by an obligation or promise on their part to obtain all or most of their requirements exclusively from the said undertaking abuses its dominant position within the meaning of Article 86 of the Treaty, whether the obligation in question is stipulated without further qualification or whether it is undertaken in consideration of the grant of the rebate. The same applies if the said undertaking, without tying the purchasers by a formal obligation, applies, either under the terms of agreements concluded with these purchasers or unilaterally, a system of fidelity rebates, that is to say discounts conditional on the customer's obtaining all or most of its requirements—whether the quantity of its purchases be large or small—from the undertaking in the dominant position.

90. Obligations of this kind . . . are incompatible with the objective of undistorted competition within the Common Market, because . . . they are not based on an economic transaction which justifies this burden or benefit but are designed to deprive the purchaser of or restrict his possible choices of sources of supply and to deny other producers access to the market. The fidelity rebate, unlike quantity rebates exclusively linked with the volume of purchases from the producer concerned, is designed through the grant of a financial advantage to prevent customers from obtaining their supplies from competing producers. Furthermore, the effect of fidelity rebates is to apply dissimilar conditions to equivalent transactions with other trading parties in that two purchasers pay a different price for the same quantity of the same product depending on whether they obtain their supplies exclusively from the undertaking in a dominant position or have several sources of supply. . . .

91. For the purpose of rejecting the finding that there has been an abuse of a dominant position the interpretation suggested by the applicant that an abuse implies that the use of the economic power bestowed by the dominant position is the means whereby the abuse has been brought about cannot

[102] Bishop (n 99) 285–286.
[103] Ibid 284–285.

be accepted. The concept of abuse is an objective concept relating to the behaviour of an undertaking in a dominant position which is such as to influence the structure of the market where, as a result of the very presence of the undertaking in question, the degree of competition is weakened and which, through recourse to methods different from those which condition normal competition in products or services on the basis of the transactions of commercial operators, has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition.

The ECJ thus reiterated the point made in *Continental Can*: there was no need to prove that the abuse had been brought about by the firm's market power. The concept of abuse was 'objective', and could apply to any behaviour which influenced the 'structure' of the market and weakened competition. The ECJ's antipathy to price discrimination in the form of loyalty rebates emerges clearly in the above extract.[104] This reasoning has been followed in later cases,[105] and it has been held that even a quantity rebate system may be contrary to Article 102 if it is not based on economically justified considerations, more especially if it tends, like fidelity rebates, to prevent a customer obtaining supplies from elsewhere.[106] Particular decisions have however been heavily criticized,[107] and there has been a more general call for a principled, economic approach to be applied to the pricing policies of dominant firms.[108]

(D) ABUSE AND PREDATORY PRICING

Predatory pricing has already been touched on above. It is now time to focus specifically on this abusive behaviour. *Akzo* is the leading case.

Case C–62/86 **Akzo Chemie BV v Commission**
[1991] ECR I–3359

[Note Lisbon Treaty renumbering: Art 86 is now Art 102 TFEU]

Akzo, based in Holland, and ECS, a smaller United Kingdom firm, both made organic peroxides. Benzoyl peroxide could be used in the flour and the plastics markets. ECS was initially engaged in the flour market, but then moved into the plastics market in 1979 and solicited some of Akzo's customers. Akzo had a meeting with ECS at which it threatened that it would take aggressive action on the flour market unless ECS withdrew from the plastics market. ECS ignored the threats, which Akzo then put into operation. Akzo targeted certain of ECS's customers in the flour market, and offered them prices which were below previous rates and below average total cost. Akzo subsidized these low prices by money drawn from the plastics sector. ECS's business fell significantly as a result. The Court quoted the test of abuse from *Hoffmann-La Roche* set out above,[109] and then reasoned as follows.

[109] See 1037–1038.

THE ECJ

70. It follows that Article 86 prohibits a dominant undertaking from eliminating a competitor and thereby strengthening its position by using methods other than those which come within the scope of competition on the basis of quality. From that point of view, however, not all competition by means of price can be regarded as legitimate.

71. Prices below average variable costs (that is to say, those which vary depending on the quantities produced) by means of which a dominant undertaking seeks to eliminate a competitor must be regarded as abusive. A dominant undertaking has no interest in applying such prices except that of eliminating competitors so as to enable it subsequently to raise its prices by taking advantage of its monopolistic position, since each sale generates a loss, namely the total amount of the fixed costs (that is to say, those which remain constant regardless of the quantities produced) and, at least, part of the variable costs relating to the unit produced.

72. Moreover, prices below average total costs, that is to say, fixed costs plus variable costs, but above average variable costs, must be regarded as abusive if they are determined as part of a plan for eliminating a competitor. Such prices can drive from the market undertakings which are perhaps as efficient as the dominant undertaking but which, because of their smaller financial resources, are incapable of withstanding the competition waged against them.

The ECJ found Akzo to be in breach of these principles. It had offered prices to ECS's customers that were lower than Akzo's average total or variable costs, and had done so to remove ECS from the plastics market. The behaviour of Akzo was particularly blatant. This should not lead us to underestimate the difficulties predatory pricing presents for competition policy.

First, there is continuing disagreement about the proper definition of predation in economic terms,[110] and the existence of this ground of challenge may do more harm than good. The line between vigorous price competition and illegal predation may be a fine one.[111] A dominant firm may feel that it should not pursue price competition too vigorously, lest this should leave it open to allegations of predatory abuse. This is all the more so given that, on the *Akzo* test, intention is of crucial importance where prices are below average total costs, but above average variable costs.

Secondly, there are those who doubt whether a rational firm would engage in predation. The potential gains from successful predation appear straightforward: the dominant firm lowers its prices, takes a loss in the short term, drives out the smaller firm, and then reaps high monopoly profits. The economic reality is much less certain. For predation to be a rational strategy the future flow of profits has to exceed the present losses incurred as a result of the drop in price. This is not theoretically impossible, but it is more difficult to achieve than might be thought. Predation is, in this sense, a war of attrition, with the outcome to be determined by the combatants' relative losses and reserves: the 'war will be a *Blitzkrieg* only if the predator has greatly disproportionate reserves or is able to inflict very disproportionate losses'.[112]

[110] P Areeda and D Turner, 'Predatory Pricing and Related Practices under Section 2 of the Sherman Act: A Comment' (1975) 88 Harv L Rev 697; FM Scherer, 'Predatory Pricing and the Sherman Act: A Comment' (1976) 89 Harv L Rev 869; O Williamson, 'Predatory Pricing: A Strategic and Welfare Analysis' (1977) 87 Yale LJ 284; J Brodley and G Hay, 'Predatory Pricing: Competing Economic Theories and the Evolution of Legal Standards' (1981) 66 Cornell L Rev 738; E Mastromanolis, 'Predatory Pricing Strategies in the European Union: A Case for Legal Reform' [1998] ECLR 211.

[111] As recognized by the Commission, DG Competition Discussion Paper (n 21) [94]–[97]; M Gravengaard, 'The Meeting Competition Defence Principle—A Defence for Price Discrimination and Predatory Pricing' [2006] ECLR 658.

[112] Bork (n 42) 147; J Glockner and L Bruttel, 'Predatory Pricing and Recoupment under EC Competition Law—per se Rules, Underlying Assumptions and the Reality: Results of an Experimental Study' [2010] ECLR 423.

Thirdly, there are real obstacles to a successful campaign. The losses during the battle will be higher for the predator than the victim. The predator will have to gauge the likelihood of another competitor entering the market, should it seek to reap excessive monopoly profits having disposed of the original combatant.[113] The threat of further predation may constitute a barrier to entry for prospective competitors, but the fact remains that the greater the monopoly profits now being reaped by the predator, the greater the incentive for new entrants.

Whether Akzo was behaving rationally depends on whether its present losses were outweighed by future gains.[114] The answer is unclear. The losses to the predator from the campaign will however be lower if it can price discriminate, by charging higher prices to its traditional customers while poaching ECS's customers with lower prices. It appears that Akzo did this, though how long this strategy could have been maintained is more debatable.

Notwithstanding these difficulties predatory pricing still constitutes abuse under Article 102. Thus in *Tetra Pak*[115] the ECJ held that Tetra Pak, a world leader in the manufacture of aseptic cartons for liquid and semi-liquid food, had abused its dominant position by its pricing policy on non-aseptic cartons. The company had a dominant position on the market for aseptic cartons, and it had used profits from this market to subsidize sales on the market for non-aseptic cartons, selling the latter at a loss below average variable cost in seven Member States. The ECJ reiterated the holding in paragraphs 72 and 73 of *Akzo*.

It was argued that the Commission and CFI should have taken into account the issue whether Tetra Pak had any realistic chance of recouping its losses. This argument was rejected by the ECJ, which held that it must be possible to penalize predation whenever there was a risk that competitors would be eliminated, and that this objective ruled out waiting until such a strategy resulted in the actual elimination of competitors.[116] This holding was reiterated more recently in *France Télécom*,[117] where the ECJ held that proof of recoupment of loss was not required to find predation under Article 102, although the possibility of such recoupment could be relevant in deciding whether the behaviour was abusive.

(E) ABUSE AND SELECTIVE PRICING

It is clear from cases such as *Irish Sugar*[118] that when judging the legality of a selective pricing policy the GC and ECJ will take account of the fact that the practice was aimed at eliminating a competitor from the market. This was reaffirmed in the following case.

Cases C–395–396/96 **P Compagnie Maritime Belge Transportes SA, Compagnie Maritime Belge SA, and Dafra Lines A/S v Commission** [2000] ECR I–1365

The applicants were members of a liner conference that had a dominant position on certain shipping routes in Africa. They were charged with the lowering of their freight rates in order to drive the only competitor from the market.

[113] Bork (n 42) 149–155.
[114] R Rapp, 'Predatory Pricing and Entry Deterring Strategies: The Economics of *AKZO*' [1986] ECLR 233.
[115] Case C–333/94 P (n 3).
[116] Ibid [44].
[117] Case C–202/07 P (n 6) [109]–[113].
[118] Case T–228/97 (n 38) [114]; Case T–271/03 *Deutsche Telekom AG v Commission* [2008] ECR II–477.

THE ECJ

117. . . . where a liner conference in a dominant position selectively cuts its prices in order deliberately to match those of a competitor, it derives a dual benefit. First, it eliminates the principal, and possibly the only, means of competition open to the competing undertaking. Second, it can continue to require its users to pay higher prices for the services which are not threatened by that competition.

118. It is not necessary, in the present case, to rule generally on the circumstances in which a liner conference may legitimately . . . adopt lower prices than those of its advertised tariff in order to compete with a competitor who quotes lower prices. . . .

119. It is sufficient to recall that the conduct at issue here is that of a conference having a share of over 90% of the market in question and only one competitor. The appellants have, moreover, never seriously disputed, and indeed admitted at the hearing, that the purpose of the conduct complained of was to eliminate G & C from the market.

6 DEFENCES: OBJECTIVE JUSTIFICATION, PROPORTIONALITY, AND EFFICIENCY

Article 102 has no equivalent to Article 101(3). The Court and Commission[119] have however applied the concepts of objective justification and proportionality to provide some flexibility in what would otherwise be too draconian an application of Article 102.[120] Thus if there is an objective justification for the dominant firm's conduct, and it is proportionate, then it will escape condemnation.[121] While objective justification and proportionality imbue Article 102 with added flexibility, their application is not self-executing. The decision, for example, whether a refusal to supply is objectively justified and proportionate will often reflect certain assumptions concerning the relative importance of protecting competitors and consumers, or the relative significance of single market integration and consumer welfare. The Commission has more recently indicated that an efficiency defence should be available under Article 102, provided that the efficiencies outweigh the negative effects of the relevant conduct.[122]

7 ARTICLE 102: REFORM

In 2005 the Commission undertook a review of Article 102.[123] This was felt to be timely, given the reviews of Article 101 and merger policy, and the disquiet about some decisions under Article 102. The discussion paper led to the Commission issuing Guidance on the Commission's enforcement priorities

under Article 102 in December 2008.[124] The Commission's philosophy is to protect consumers, rather than particular competitors, but this requires the safeguarding of the competitive process from foreclosure.[125] The Guidance focused on exclusionary conduct leading to anti-competitive foreclosure, defined as 'a situation where effective access of actual or potential competitors to supplies or markets is hampered or eliminated as a result of the conduct of the dominant undertaking whereby the dominant undertaking is likely to be in a position to profitably increase prices to the detriment of consumers'.[126]

The Commission's Guidance analyses conduct by a dominant undertaking that might lead to such anti-competitive foreclosure, although it is willing to consider arguments that efficiency gains outweigh anti-competitive effects in each type of case.[127] Exclusive dealing, in particular exclusive purchasing obligations, can lead to such foreclosure where it prevents entry or expansion of rival firms,[128] and conditional rebates can have the same impact.[129] Competitive foreclosure can also occur through tying and bundling, whereby customers that buy one product from the dominant undertaking are also required to purchase another product. The Commission signalled its intent to intervene where the tying and tied products are distinct and where the tying practice leads to anti-competitive foreclosure.[130] Predation is a further species of anti-competitive foreclosure that features in the Commission Guidance.[131] So too is refusal to supply, including new customers, where the refusal relates to a product that is objectively necessary to enable competition on a downstream market, the refusal is likely to eliminate competition on the downstream market, and consumers will be harmed.[132]

The review also raised broader issues concerning Article 102,[133] the extent to which it should be based on legal form or economic effects, and how far institutional realities limited what the Commission could do.[134] The Discussion Paper stated that 'in applying Article 82, the Commission will adopt an approach which is based on the likely effects on the market',[135] and this is exemplified to some degree by its treatment of particular instances of exclusionary abuse in the later Guidance.[136] Whether this goes far enough for those who advocate an economic-effects approach to Article 102 is less certain. Thus the EAGCP group argued for an economics-based approach, whereby assessment would not be undertaken on the form of the particular business practice, tying, exclusive dealing, etc, but on the anti-competitive effects that it generated, and the extent to which they were outweighed by efficiency gains.[137] Similar concerns were voiced by Vickers.

J Vickers, Abuse of Market Power[138]

The law on abuse of market power is far from settled. The law in Europe could now develop in either of two broad directions, with emphasis either on form or on economic effect. Form-based evolution of the law would further develop descriptions of conduct for dominant firms to avoid. Economics-based evolution would clarify underlying principles in terms of actual and potential economic effects, develop practically administrable rules and methods explicitly on the basis of those principles, and apply them to cases.

In the competition between economics- and form-based approaches the former has strong advantages. It can align the law with its economic purpose and in an internally consistent manner. It can prevent form from triumphing over substance at the cost of both allowing detrimental conduct and blocking benign conduct. And it can provide clarity at fundamental, rather than superficial level. These advantages will be realized if European competition law on abuse of dominance becomes more firmly anchored to economic principles, and where those principles are practically applicable by competition lawyers and the courts.

To say that the law on abuse of dominance should develop a stronger economic foundation is not to say that rules of law should be replaced by discretionary decision making based on whatever is thought to be desirable in economic terms case by case. There must be rules of law in this area of competition policy, not least for reasons of predictability and accountability. So the issue is not rules versus discretion, but how well the rules are grounded in economics. To that end there is great scope for economic analysis and research to contribute to the development of the law on abuse of dominance. To be effective, however, economics must contribute in a way that competition agencies, and ultimately the courts, find practicable in deciding the cases.

8 CONCLUSIONS

i. It is now generally accepted that Article 102 is to protect consumers rather than particular competitors, and that this requires protection of the competitive process from foreclosure.

ii. Adjudication under Article 102 nonetheless involves difficult problems relating to market definition, the determination of dominance, and the meaning of abuse.

iii. The boundaries of the special responsibility incumbent on dominant firms are not clear from the case law, thereby making it difficult for the dominant firm to know what it is allowed to do.

iv. There is continuing debate as to the detailed ramifications of a shift from legal form to economic effect under Article 102.

v. The enforcement of Article 102 is now subject to the reformed regime discussed in a previous chapter, to which reference should be made.[139]

COMPETITION LAW: MERGERS

1 CENTRAL ISSUES

i. Legal control of mergers is an important component of any regime to regulate competition. EU regulation of mergers was however a long time coming.[1] Articles 85 and 86 EEC (now Articles 101 and 102 TFEU) made no specific mention of mergers. The Commission attempted to fill this gap as early as 1973.[2] While the Member States recognized that merger control was necessary, they disagreed on the boundary between EU and national merger control, and on the precise form of EU control. The failure to resolve these issues meant that there were successive draft merger regulations[3] which did not become a legal reality.

ii. The ECJ partially filled the gap resulting from legislative inaction. Article 102 was invoked[4] in *Continental Can*[5] to catch mergers by a firm in a dominant position. The Court took longer to apply Article 101 to mergers. The traditional orthodoxy was that it did not apply to agreements to acquire ownership. This orthodoxy was shaken in the *BAT* case, where the ECJ indicated its willingness to consider the application of Article 101 to some instances of share acquisition.[6]

iii. Regulation 4064/89 was finally adopted in December 1989.[7] There have been subsequent amendments and the current regime is to be found in Regulation 139/2004 and accompanying provisions.[8] Most concentrations will now be dealt with under this Regulation, but it may still be possible to use Articles 101 and 102 in certain cases.

iv. It is important to understand the policy reasons underlying merger control, which are examined at the outset of this chapter. There are jurisdictional, procedural, and substantive aspects to EU merger policy.

v. Jurisdictional issues cover the types of concentration that are subject to the Merger Regulation and the inter-relationship between merger control at EU and national levels.

[8] Council Regulation (EC) 139/2004 of 20 January 2004 on the control of concentrations between undertakings (the EC Merger Regulation) [2004] OJ L24/1.

vi. Procedural issues cover matters such as the way in which notice of a proposed merger must be given and the investigative powers possessed by the Commission.

vii. Substantive issues of merger policy include matters such as the test for determining whether a merger or concentration should be allowed and the extent to which efficiencies produced by the concentration should be taken into account.

2 MERGER CONTROL: THE POLICY RATIONALE

Mergers can be of three kinds. Horizontal mergers are those between companies that make the same products and operate at the same level of the market. Vertical mergers are those between companies that operate at different distributive levels of the same product market. Conglomerate mergers are those between firms which have no connection in any product market. Horizontal mergers are potentially the most damaging to the competitive process.

(A) ARGUMENTS AGAINST MERGERS

A merger can have a *marked impact on competition*. A horizontal merger may enable the new entity to set price and output as a single-firm monopolist. In some countries indices are used to measure the reduction of competition brought about by the merger.[9] The impact of vertical mergers on competition is more controversial.[10] A vertical merger is one form of vertical integration: a company may relate to those down-market in different ways ranging from ordinary contract, through exclusive distribution arrangements, to vertical merger. Such vertical relationships can be potentially anti-competitive through, for example, foreclosing of outlets to other manufacturers,[11] but commentators also dispute how far these vertical relationships harm competition.[12] This disagreement carries over into vertical merger, since it may, for example, improve distribution of a branded product and hence promote inter-brand competition. There is also disagreement on the impact of conglomerate mergers on competition. Thus, while some see them as dangerous, allowing a wealthy firm to cross-subsidize between products to defeat new entrants, others are sceptical whether such mergers involve any detriment to competition.[13]

S Bishop, A Lofaro, and F Rosati, Turning the Tables: Why Vertical and Conglomerate Mergers are Different[14]

> [T]here should be an economic presumption that non-horizontal mergers are pro-competitive. This conclusion derives from a fundamental difference between horizontal and non-horizontal mergers. Whereas horizontal mergers remove a direct competitive constraint and raise the possibility that post-merger prices will increase to the detriment of consumers, non-horizontal mergers do not. Moreover,

[9] The best known of these is the Herfindahl–Hirschman Index which is used in the USA.

[10] J Church, 'The Impact of Vertical and Conglomerate Mergers on Competition' (2004), available at http://ec.europa.eu/comm/competition/mergers/studies_reports/studies_reports.html.

[12] See 989–992.

[13] R Bork, *The Antitrust Paradox* (Basic Books, 1978) ch 12.

[14] [2006] ECLR 403, 406.

the general impact of a non-horizontal merger is to reduce prices as a result of eliminating externalities and other inefficiencies that might have existed pre-merger. While this is not to say that non-horizontal mergers are always pro-competitive, it does indicate an economic presumption (albeit rebuttable) that such mergers are competitively benign.

Another reason for merger regulation is that mergers have been used to strip the *assets of the acquired firm*, and although this may be in the short-term interests of some shareholders, it may not be in the longer-term public interest. Such concerns have been fuelled by empirical research, which indicates that mergers often do not produce the gains expected of them.[15]

Regional policy constitutes a third rationale for merger control. A merger may lead to the rationalization of existing plants, with consequential effects on unemployment and regional vitality. A government may use merger policy to maintain a balanced distribution of wealth and job opportunities around the country.[16]

(B) ARGUMENTS IN FAVOUR OF MERGERS

Mergers can however enhance economic efficiency in a number of different ways.[17] They can render it easier to reap *economies of scale*. Firms will produce most efficiently when they maximize economies of scale. These are economies that can be reaped by the firm which is at the optimum size for that industry. A certain product may be made most efficiently with a particular piece of machinery, but this machinery may require a specific turnover before it is economically viable. Mergers are one way in which scale economies can be reaped.

Mergers may also enhance *distributional efficiency*. It may, for example, be more efficient for a manufacturing firm which is seeking to extend its operations down-market to merge with an existing distributor, rather than learn the skills of this new area from scratch.

There is also a considerable literature on the relationship between mergers and *managerial efficiency*.[18] The argument, in brief, is that the threat of a takeover is a spur for management to perform efficiently. On this view the 'market for corporate control' helps to promote economic efficiency: where the shareholders are satisfied with the performance of management they will not wish to sell to another company.

The Merger Regulation recognizes the inevitability and desirability of mergers within the EU. Thus the third recital to the Regulation acknowledges that the dismantling of internal frontiers will result in major corporate reorganization; while the fourth recital states that this is to be welcomed as one means of increasing the competitiveness of EU industry on world markets.

[15] G Newbould, *Management and Merger Activity* (Cruthstead, 1970); G Meeks, *Disappointing Marriage: A Study of the Gains from Mergers* (Cambridge University Press, 1977); A Hughes, 'Mergers and Economic Performance in the UK: A Survey of the Empirical Evidence 1950–1990' in M Bishop and J Kay (eds), *European Mergers and Merger Policy* (Oxford University Press, 1993) ch 1.

[16] There may indeed be a conflict between regional policy and competition policy in this respect, particularly where the latter focuses exclusively on the impact of mergers on competition without taking into account other factors.

3 REGULATION 139/2004: JURISDICTIONAL ISSUES

(A) CONCENTRATION: GENERAL

Regulation 139/2004 will be applicable only if there is a concentration. This issue is dealt with in Article 3(1):

> A concentration shall be deemed to arise where a change of control on a lasting basis results from:
>
> (a) the merger of two or more previously independent undertakings or parts of undertakings, or
>
> (b) the acquisition, by one or more persons already controlling at least one undertaking, or by one or more undertakings, whether by purchase of securities or assets, by contract or by any other means, of direct or indirect control of the whole or parts of one or more undertakings.

Article 3(1) must be read in conjunction with Article 3(2):

> Control shall be constituted by rights, contracts or any other means which, either separately or in combination and having regard to the considerations of fact or law involved, confer the possibility of exercising decisive influence on an undertaking, in particular by:
>
> (a) ownership or the right to use all or part of the assets of an undertaking;
>
> (b) rights or contracts which confer decisive influence on the composition, voting or decisions of the organs of an undertaking.

Article 3 paragraphs (1) and (2) bring a number of different situations within the ambit of the Regulation, and catch concentrations with an EU dimension irrespective of whether the firms are based in the EU.[19] The Commission has made it clear that the determination of whether or not a concentration exists will be based on qualitative rather than quantitative criteria, focusing on the notion of control. It will take account of issues of law and fact in making this determination.[20]

Article 3(1)(a) covers the case of a *complete merger*. Although the Regulation does not define the term merger, it implies the formation of one enterprise from undertakings that were previously distinct. The Commission has made it clear that Article 3(1)(a) can bite in some circumstances where the undertakings retain their separate legal personalities, but create nonetheless a single economic unit.[21]

Article 3(1)(b) captures cases of *change of control*. This is a complex topic, detailed treatment of which can be found elsewhere.[22] The essence of this Article is as follows. A change of control can result in the acquisition of *sole control* by a person or an undertaking. This is exemplified by *Arjomari-Prioux/Wiggins Teape*,[23] where the Commission held that the acquisition of a 39 per cent shareholding in a company was sufficient to give a buyer control, given that the remaining shares were widely dispersed. The CFI emphasized in *Cementbouw Handel*[24] the need to prove that the control gave decisive influence to the acquirer, and this was reiterated in *Aer Lingus*, where the CFI held that acquisition of

[24] Case T–282/02 *Cementbouw Handel & Industrie BV v Commission* [2006] ECR II–319.

shares must give the acquirer decisive influence in order for Article 3 to be applicable.[25] The requisite control can, however, be obtained in a series of interdependent stages, even though they are legally distinct.[26] It is also possible for two or more undertakings to acquire *joint control* over another. Thus in *Northern Telecom/Matra Telecommunications*[27] both companies were held to have acquired joint control over Matra SA, because the consent of both parents was necessary for all important business decisions and financial plans. Cases concerning joint control raise difficult questions of how far the Regulation captures joint ventures.

(B) CONCENTRATION: JOINT VENTURES

Joint venture is not a term of art and covers a wide range of business arrangements, from the establishment of a new corporate entity by two competitors to a joint-purchasing scheme or joint research and development. This breadth of coverage causes problems for competition systems. There has been debate about whether joint ventures should be treated by analogy with cartels, and be regarded as essentially a 'behavioural' problem to be dealt with under Article 101, or as a 'structural' problem, to be dealt with under the Merger Regulation.

The approach in the 1989 Regulation was that the structural/concentrative aspects of joint ventures were dealt with under the Merger Regulation, while behavioural/cooperative aspects concerned with the impact on competition of coordination between independent undertakings were considered under Article 101. This caused real difficulties.[28]

The approach has now been modified so that the concentrative and competitive aspects of joint ventures can be considered within the Merger Regulation: the former is dealt with through Article 3(4), the latter through Article 2(4)–(5) of the 2004 Regulation. Hence, the Commission's powers of decision contained in Article 8, and the time limits specified in Article 10, apply to determinations made under Article 2(4). Article 3(4) of Regulation 139/2004 provides that:

> The creation of a joint venture performing on a lasting basis all the functions of an autonomous economic entity shall constitute a concentration within the meaning of paragraph (1)(b).

Article 2(4) of the Regulation states that:

> To the extent that the creation of a joint venture constituting a concentration pursuant to Article 3 has as its object or effect the coordination of the competitive behaviour of undertakings that remain independent, such coordination shall be appraised in accordance with the criteria of Article 81(1) and (3) of the Treaty, with a view to establishing whether or not the operation is compatible with the Common Market.

Article 2(5) further provides that:

> In making this appraisal, the Commission shall take into account in particular:
>
> — whether two or more parent companies retain, to a significant extent, activities in the same market as the joint venture or in a market which is upstream or downstream from that of the joint venture or in a neighbouring market closely related to this market,

[25] Case T–411/07 *Aer Lingus Group plc v European Commission*, 6 July 2010, [63]–[65].
[26] Case T–282/02 *Cementbouw Handel* (n 24).
[27] Case IV/M249.
[28] B Hawk, 'Joint Ventures under EEC Law', Fordham Corporate Law Institute (Fordham University, 1991) 575–576.

— whether the co-ordination which is the direct consequence of the creation of the joint venture affords the undertakings concerned the possibility of eliminating competition in respect of a substantial part of the products or services in question.

The fact remains that a joint venture will be caught by the Merger Regulation only if it results in the creation of an autonomous economic entity which performs functions on a lasting basis. Concentrative joint ventures will lead to the creation of the requisite autonomous economic entity. These joint ventures must operate on a market in the same general way as other undertakings on that market. This means that they must have sufficient financial and other resources to function as a business on a lasting basis.[29] Such joint ventures are known as 'full-function' joint ventures. These conditions will not be met where the joint venture only takes over a specific function of the parents' business activities without access to the market, as in the case of joint ventures relating to research and development.[30] The impact of the parent companies' support on the operational autonomy of the joint venture must be determined in the context of the relevant market. It must be decided whether the joint venture carries out functions normally performed by other undertakings on that market.[31]

A full-function joint venture may also have cooperative features, in the sense that the object or effect of the joint venture is the coordination of the competitive behaviour of independent undertakings. Cooperative features that threaten to restrict competition will be evaluated under Article 2(4). This will not be so if the parent companies transfer their entire business activities to the joint venture. In the converse situation where the parent companies retain their activities in the relevant product and geographic market there is a high probability of such coordination.[32] Various intermediate positions are also possible, such as where the parent companies operate in a market upstream or downstream from that of the joint venture. It can therefore be difficult to distinguish those joint ventures which will be treated as concentrations for the purposes of Article 3(4).[33]

(c) CONCENTRATIONS WITH AN EU DIMENSION

In order for a concentration to be caught by the Merger Regulation it must have an EU dimension. This is defined by Article 1(2) of Regulation 139/2004:

A concentration has a Community dimension where:

(a) the combined aggregate world-wide turnover of all the undertakings concerned is more than EUR 5000 million, and

(b) the aggregate Community-wide turnover of each of at least two of the undertakings concerned is more than EUR 250 million,

unless each of the undertakings concerned achieves more than two-thirds of its aggregate Community-wide turnover within one and the same Member State.

The reach of EU merger control is extended by Article 1(3). It was felt that concentrations which fell below the thresholds in Article 1(2) could nonetheless be examined under the merger laws of Member States, and that this could be costly and lead to conflicting assessments in the different legal systems.[34] By extending the reach of EU merger control to catch such concentrations which could

[29] CJN (n 20) [92]–[94], [103]–[105].
[30] Ibid [95].
[31] Case T–87/96 *Assicurazioni Generali SpA and Unicredito SpA v Commission* [1999] ECR II–203, [73].
[32] Case IV/M.088 *Elf Enterprise* [1991] OJ C203/14.
[33] Case IV/M72 *Re the Concentration between Sanofi and Sterling Drug Inc* [1992] 5 CMLR M1.
[34] CJN (n 20) [126]–[127].

have a significant impact in several Member States, it was hoped that the competitive impact of such concentrations could be considered for the EU as a whole. Article 1(3) provides:

> A concentration that does not meet the thresholds laid down in paragraph 2 has a Community dimension where:
>
> (a) the combined aggregate world-wide turnover of all the undertakings is more than EUR 2500 million;
>
> (b) in each of at least three Member States, the combined aggregate turnover of all the undertakings concerned is more than EUR 100 million;
>
> (c) in each of at least three Member States included for the purposes of point (b), the aggregate turnover of each of at least two of the undertakings concerned is more than EUR 25 million; and
>
> (d) the aggregate Community-wide turnover of each of at least two of the undertakings concerned is more than EUR 100 million;
>
> unless each of the undertakings concerned achieves more than two-thirds of its aggregate Community-wide turnover within one and the same Member State.

The figures in Article 1(2) and (3) can be revised.[35] Turnover is calculated in accordance with Article 5.[36] The test in Article 1(2) and (3) is purely quantitative: it does not in itself indicate that a merger will be regarded as contrary to the Regulation. The substantive criterion is contained within Article 2, considered below. It should also be noted that these definitions can bring many non-EU undertakings within the ambit of the Regulation.[37]

(D) THE RELATION BETWEEN EU AND NATIONAL MERGER CONTROL

(i) *The General Principle: 'One-Stop Shop'*

It is undesirable for the same merger to be subject to investigation under differing regimes at EU and national level. It is therefore central to the Merger Regulation that mergers with an EU dimension should, in general, be investigated only by the Commission. Thus Article 21(1) provides that Regulation 139/2004 alone shall apply to concentrations as defined in Article 3;[38] Article 21(2) stipulates that the Commission has sole jurisdiction to take decisions provided for in this Regulation, subject to review by the Union Courts; and Article 21(3) states that, subject to exceptions considered below, no Member State may apply its national legislation to a merger that has an EU dimension.

There are, however, exceptions to this general principle.[39] The Commission published a Notice in 2005 articulating the considerations that should be taken into account when deciding on the application of these exceptions to the one-stop shop principle.[40]

[35] Reg 139/2004 (n 8) Art 1(5).

[36] CJN (n 20) [157]–[205].

[37] See, eg, Case IV/M24 *Mitsubishi Corporation/Union Carbide Corporation* [1992] 4 CMLR M50; Case IV/M69 *Kyowa Bank Limited/Saitama Bank Limited* [1992] 4 CMLR M105.

[38] Subject to exceptions for joint ventures which do not have an EU dimension and which have as their object or effect the coordination of competitive behaviour of undertakings that remain independent.

[39] T Soames and S Maudhuit, 'Changes in EU Merger Control: Part I' [2005] ECLR 57.

[40] Commission Notice on Case-Referral in Respect of Concentrations [2005] OJ C56/2.

(ii) *Protection of National 'Legitimate' Interests: Article 21(4)*

Article 21(4) allows a Member State to take appropriate measures to protect legitimate interests other than those taken into consideration by the Regulation, provided that they are compatible with EU law. Public security, plurality of the media, and prudential rules are listed as legitimate interests for these purposes. Any other public interest must be notified to the Commission, which must inform the Member State of its decision within twenty-five working days.

(iii) *Referral to the Competent Authorities of the Member States by the Commission: Article 4(4)*

Article 4(4) of Regulation 139/2004 provides that undertakings may, prior to notification of a concentration, inform the Commission by reasoned submission that the concentration may significantly affect competition in a market within a Member State that has all the characteristics of a distinct market and should therefore be examined in whole or in part by that Member State.

The Commission transmits this submission to all the Member States. The Member State referred to in the submission can then agree or disagree. Unless the Member State disagrees, the Commission can refer the case to that state for the application of its national competition law, where the Commission considers that such a distinct market exists and that competition in that market may be significantly affected by the concentration.

(iv) *Referral to the Competent Authorities of the Member States by the Commission: Article 9*

When the Regulation was being drafted there was concern that a merger might not be regarded as harmful from the EU perspective, but that it could still be detrimental at national level. Article 9(1) provides that the Commission can refer a notified concentration to the competent authorities of the Member States. Article 9(2) sets out the conditions.

> Within 15 working days of the date of receipt of the copy of the notification, a Member State, on its own initiative or upon the invitation of the Commission, may inform the Commission, which shall inform the undertakings concerned, that:
>
> (a) a concentration threatens to affect significantly competition in a market within that Member State, which presents all the characteristics of a distinct market, or
>
> (b) a concentration affects competition in a market within that Member State, which presents all the characteristics of a distinct market and which does not constitute a substantial part of the common market.

Article 9(3) states that it is for the Commission to decide whether such a distinct market exists, and also whether there is the relevant threat to competition. The Commission can then either deal with the case itself, or refer the whole or part of the case to the relevant national authorities.[41] The Commission

[41] This is subject to the proviso that the Commission shall so refer the case where the concentration affects competition in a distinct market in a Member State that does not form a substantial part of the common market, if the Commission considers that such a distinct market is affected.

rejected a number of such applications from Member States,[42] but accepted a request from the United Kingdom,[43] and greater use has been made of Article 9 since 1996.[44]

(v) *Referral to Commission at Request of Undertakings: Article 4(5)*

Article 4(5) of the Regulation provides a mechanism for undertakings to suggest that a concentration should be considered by the Commission. It is open to such undertakings to suggest that the Commission should consider a concentration as defined in Article 3, which does not have an EU dimension as defined by Article 1, where the concentration is capable of being reviewed under the national competition laws of at least three Member States. This suggestion can be made by the undertakings before any notification to the competent national authorities. If one Member State disagrees within fifteen working days then the case shall not be referred to the Commission. If no such disagreement is forthcoming, then the concentration is deemed to have an EU dimension and is examined by the Commission. In such instances no Member State applies its national law to the concentration.

(vi) *Referral to Commission at Request of Member States: Article 22*

Article 22 provides that one or more Member States may request the Commission to investigate a concentration as defined in Article 3 that does not have an EU dimension within the meaning of Article 1, where it affects trade between Member States and threatens significantly to affect competition within the territory of the Member State or States making the request. The request may come from the competition authority of the Member State.[45] The Commission can then decide to take action where it considers that these criteria are met.[46]

The object of this provision was to provide a mechanism for merger control where none existed at national level. It will be rarely used, given that most states now have their own systems of merger control. The Member State that makes a request cannot control, or define the scope of, the Commission's investigation,[47] and once such a request has been made the Member State can no longer apply its national legislation to the concentration.

(E) RESIDUAL ROLE FOR ARTICLES 101 AND 102 TFEU

We have seen how the ECJ used Articles 101 and 102 to control mergers prior to the Merger Regulation. It is necessary to consider the possible scope of application of these Articles now.[48]

As regards the Commission, Article 21(1) of Regulation 139/2004 provides that it alone shall apply to concentrations as defined by Article 3,[49] and that the main implementing regulations concerning Article 101 shall not be applicable. The Regulation cannot however disapply Articles 101 and 102, since these are Treaty provisions, and it may be that the Commission would have power to use these provisions via Articles 104 and 105 TFEU.[50]

[50] Jones and Sufrin (n 1) 897–898.

As regards national courts, Articles 101 and 102 have direct effect. It might therefore be possible, for example, for an undertaking opposed to a hostile takeover to seek a preliminary reference under Article 267 TFEU, claiming that it was in breach of Article 101 or 102, even if the takeover would not come within the Merger Regulation.[51]

4 REGULATION 139/2004: PROCEDURAL ISSUES

(A) PRIOR NOTIFICATION

In order for merger control to be effective it is necessary for the Commission to be informed about any such acquisition. This is covered by Article 4(1), which deals with pre-notification. It provides that concentrations with an EU dimension must be notified prior to their implementation, and following the conclusion of the agreement, the announcement of the public bid, or the acquisition of the controlling interest. Article 4(3) imposes an obligation on the Commission to publish those notifications that it considers to fall within the ambit of the Regulation. Failure to comply with the duty to pre-notify can lead to fines under Article 14(2)(a). There is a standard form, known as Form CO, which is used for the notification. This form requires the parties to submit certain information to the Commission, including copies of the documentation bringing about the concentration, copies of the accounts of the parties involved, and copies of any reports which have been prepared for the purposes of the concentration.[52]

(B) SUSPENSION PENDING INVESTIGATION

The effectiveness of merger control also demands that a proposed concentration should not be completed pending investigation by the Commission. Article 7(1) provides for the suspension of a concentration before notification, or until it has been declared to be compatible with the common market pursuant to Article 6(1)(b) or Article 8(2), or on the basis of the presumption in Article 10(6). Article 14(2) allows the Commission to impose heavy fines for breach of this obligation. The suspensive effect of notification is, however, qualified by Article 7(3), which allows the Commission to derogate from Article 7(1). The derogation may be made subject to conditions.[53]

(C) INVESTIGATION

There are two stages to the Commission's investigation of notified concentrations.[54] First, there is a preliminary investigation pursuant to Article 6(1), and the Commission can decide that: the concentration is outside the Regulation; that it is within the scope of the Regulation, but is not incompatible with the common market; or that it is within the scope of the Regulation, that there are serious doubts about its compatibility with the common market, and that therefore proceedings must be initiated.[55] These decisions must normally be made within twenty-five working days of the notification: Article 10(1). There is also provision for a simplified procedure in certain types of case.[56]

[51] Ibid 897.

[52] Commission Regulation (EC) 802/2004 of 7 April 2004 implementing Council Regulation 139/2004 on the control of concentrations between undertakings [2004] OJ L133/1, Arts 2–6, and Annex I.

[53] See, eg, Case IV/M42 *Kelt/American Express* [1991] 4 CMLR 740.

[54] S Maudhuit and T Soames, 'Changes in EU Merger Control: Part 3' [2005] ECLR 144.

[55] Reg 139/2004 (n 8) Art 6(2) enables the Commission to decide that a proposed concentration that has been modified no longer raises serious doubts about its compatibility with the common market, and that it therefore can be declared to be compatible with the common market. Conditions can be attached and the decision can be revoked if the conditions are not complied with.

[56] Commission Notice on Simplified Procedure for Treatment of Certain Concentrations under Council Regulation 139/2004 [2005] OJ C56/32.

Secondly, the Commission investigates those concentrations where there are serious doubts about their compatibility with the common market. The Commission has a number of options, listed in Article 8. It can decide that the concentration or concentrative joint venture is not in breach of the relevant substantive criteria, subject to possible modifications,[57] and the Commission has the burden of proof in such instances.[58] If this finding by the Commission is dependent on commitments made by the undertakings, such commitments must eliminate the significant lessening of competition entirely.[59] The Commission may determine that the concentration is incompatible with the common market, because it significantly impedes effective competition, in particular by creating or strengthening a dominant position or because a concentrative joint venture would not benefit from Article 101(3) TFEU.[60] It may demand the reversal of a concentration in certain circumstances,[61] and has power to take interim measures to restore or maintain effective competition in certain instances.[62] The general time limit for such decisions is ninety working days from the initiation of the proceedings,[63] and if this is not complied with then the merger will be deemed to be compatible with the common market.[64] There are rights to be heard before decisions are made,[65] and the list of parties who can be involved in the proceedings is quite broad.[66] The Commission must consult the Advisory Committee on Concentrations, which consists of one or two representatives from Member States, before any decision is made under Articles 8(1)–(6), 14, and 15.[67]

(D) INVESTIGATION AND ENFORCEMENT

The Commission is given broad powers of investigation and enforcement. It can request information: Article 11; conduct on-site investigations: Article 13; and impose considerable fines: Article 14. A fine of up to 10 per cent of the aggregate turnover of the undertakings concerned may, for example, be imposed where the parties have proceeded with a concentration declared to be incompatible with the common market pursuant to a decision made under Article 8(3).[68]

5 REGULATION 139/2004: THE SUBSTANTIVE CRITERIA

(A) MARKET DEFINITION

Many of the issues encountered in the discussion of Article 102 TFEU are relevant under the Merger Regulation. Thus, it will be necessary to define the relevant market in geographical and product terms, and also in many instances to determine whether there is a dominant position, which has been

[57] Reg 139/2004 (n 8) Art 8(1)–(2); Case IV/M190 *Re the Concentration between Nestlé SA and Source Perrier SA* [1993] 4 CMLR M17; a decision finding that the concentration is compatible with the common market may also cover restrictions which are directly related and necessary to the implementation of the concentration: Art 8(1).

[58] Case T–102/96 *Gencor v Commission* [1999] ECR II–753, [318]; Case T–48/04 *Qualcomm Wireless Business Solutions Europe BV v Commission* [2009] ECR II–2029, [89]–[90].

[59] Case T–282/02 *Cementbouw Handel* (n 24).

[60] Reg 139/2004 (n 8) Art 8(3).

[61] Ibid Art 8(4).

[62] Ibid Art 8(5); Case T–411/07 R *Aer Lingus Group plc v Commission* [2008] ECR II–411.

[63] Ibid Art 10(3). There are a number of exceptions to this basic rule.

[64] Ibid Art 10(6), subject to Art 9.

[65] Ibid Art 18.

[66] Reg 802/2004 (n 52) Art 11; Case T–290/94 *Kayserberg SA v Commission* [1997] ECR II–2137.

[67] Reg 139/2004 (n 8) Art 19(3)–(4).

[68] Art 14(2)(c).

created or strengthened by the concentration.[69] The Commission makes reference to decisions under Article 102 when adjudicating on the Merger Regulation, and the Commission Notice on the definition of the relevant market for the purposes of EU competition law, considered earlier,[70] applies to the Merger Regulation. There must be a causal link between the creation and strengthening of a dominant position and the impact on competition.[71]

(B) THE TEST

The test for determining whether a concentration is compatible with the common market is in Article 2(1)–(3) of Regulation 139/2004, which should be read in conjunction with Article 2(4) set out earlier:

> 1. Concentrations within the scope of this Regulation shall be appraised in accordance with the objectives of this Regulation and the following provisions with a view to establishing whether or not they are compatible with the common market.
>
> In making this appraisal, the Commission shall take into account:
>
> (a) the need to maintain and develop effective competition within the common market in view of, among other things, the structure of all the markets concerned and the actual or potential competition from undertakings located either within or outwith the Community;
>
> (b) the market position of the undertakings concerned and their economic and financial power, the alternatives available to suppliers and users, their access to suppliers or markets, any legal or other barriers to entry, supply and demand trends for the relevant goods and services, the interests of the intermediate and ultimate consumers, and the development of technical and economic progress provided that it is to consumers' advantage and does not form an obstacle to competition.
>
> 2. A concentration which would not significantly impede effective competition in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position, shall be declared compatible with the Common Market.
>
> 3. A concentration which would significantly impede effective competition, in the common market or in a substantial part of it, in particular as the result of the creation or strengthening of a dominant position, shall be declared to be incompatible with the common market.

The current formulation in Article 2(2)–(3) differs from that in the earlier Merger Regulation. The original formulation was couched in terms of dominance. Article 2(3) of the 1989 Regulation provided that 'a concentration which creates or strengthens a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it shall be declared to be incompatible with the common market'.[72]

Prior to the adoption of the 2004 Regulation there was significant debate as to whether the dominance test contained in the 1989 Regulation should be replaced by a 'substantial lessening of competition' (SLC) test, which has been adopted in some other jurisdictions.[73] The Commission argued that there was little real difference between a dominance test and the SLC test,[74] and some academics

questioned the desirability of the change.[75] A number of academics however advocated the SLC test,[76] as did some Member States,[77] one rationale being that concentrations in oligopolistic markets could harm competition, even where there was no dominance and no tacit coordination between the parties.

J Vickers, Merger Policy in Europe: Retrospect and Prospect[78]

[M]ergers in oligopoly settings can reduce competition through non-co-ordinated effects as well as by co-ordinated effects . . . If erstwhile competitors A and B merge, the market has lost the competition between A and B. If there was a shortage of surrounding competition, this effect could lessen competition substantially in the market as a whole. For example, with A and B no longer competing, C and D might slacken their competitive efforts in the marketplace.

Thus we had what came to be known as the problem of the gap—i.e. the gap between the policy aim of catching all anti-competitive mergers and the ability to catch them by the concept of dominance even as extended to embrace tacit co-ordination between two or more firms. There were three approaches to the problem of the gap:

- denial at least of its practical importance.
- verbal elasticity—give "dominance" a sufficiently broad meaning in the context of mergers to cover non-coordinated effects as well as coordinated effects and single firm dominance, and
- change the test from dominance to a direct effect on competition formulation.

The outcome of the reform exercise was the change now embodied in Article 2 of Regulation 139/2004. It is broader than the previous formulation, since a concentration can be prohibited if it significantly impedes effective competition, even if it does not create or strengthen a dominant position. This can catch concentrations that will result in non-coordinated effects on oligopolistic markets, even where the firms are not collectively dominant.[79] However Article 2 also states that the significant impediment to competition can arise in particular by the creation or strengthening of a dominant position, thereby preserving the relevance of the prior case law.[80]

(c) HORIZONTAL MERGERS: NON-COORDINATED EFFECTS

The Commission's guidelines are binding on it, provided that they are consistent with the Treaty and the Merger Regulation.[81] The guidelines distinguish between non-coordinated and coordinated effects when applying the test in Regulation 139/2004.

Guidelines on the Assessment of Horizontal Mergers[82]

22. There are two main ways in which horizontal mergers may significantly impede effective competition, in particular by creating or strengthening a dominant position:

(a) by eliminating important competitive constraints on one or more firms, which consequently would have increased market power, without resorting to coordinated behaviour (non-coordinated effects);

(b) by changing the nature of competition in such a way that firms that previously were not coordinating their behaviour, are now significantly more likely to coordinate and raise prices or otherwise harm effective competition. A merger may also make coordination easier, more stable or more effective for firms which were coordinating prior to the merger (coordinated effects).

. . .

Guidelines on the Assessment of Horizontal Mergers[83]

Non-coordinated effects

24. A merger may significantly impede effective competition in a market by removing important competitive constraints on one or more sellers, who consequently have increased market power. The most direct effect of the merger will be the loss of competition between the merging firms . . .

25. Generally, a merger giving rise to such non-coordinated effects would significantly impede effective competition by creating or strengthening the dominant position of a single firm, one which, typically, would have an appreciably larger market share than the next competitor post-merger. Furthermore, mergers in oligopolistic markets involving the elimination of important competitive constraints that the merging parties previously exerted upon each other together with a reduction of competitive pressure on the remaining competitors may, even where there is little likelihood of coordination between the members of the oligopoly, also result in a significant impediment to competition. The Merger Regulation clarifies that all mergers giving rise to such non-coordinated effects shall also be declared incompatible with the common market.

The Commission then listed the relevant factors in deciding whether significant non-coordinated effects would result from a merger: the size of the market share held by the merging firms; whether they were close competitors; the ease with which customers could switch to other suppliers; the ability of the merged entity to hinder expansion by competitors; and whether the merger eliminated an important competitive force. The Commission then considered coordinated effects.[84]

The Commission's approach can be conveyed by reviewing two of its decisions. These remain relevant even though made under the previous Merger Regulation, since dominance is still important under the current Merger Regulation. We can begin by considering an instance in which it cleared the merger.

[84] Ibid [27]–[38].

Case IV/M57 **Re the Concentration between Digital Equipment International and Mannesman Kienzle GmbH**
[1992] 4 CMLR M99

Digital Equipment International (DEIL), a wholly-owned subsidiary of Digital Equipment Corporation (DEC), made an agreement with Mannesman Kienzle (MK) to establish a limited partnership under German law, Digital/Kienzle, which was to be owned as to 65 per cent by DEIL and 35 per cent by MK. The new company was to acquire the computer business of MK, which was then to withdraw from the computer industry (except for printers). MK also agreed not to compete with Digital/Kienzle. DEC had less than 10 per cent of the market for personal computers, and this market was, as a whole, relatively fragmented, with few firms possessing more than 10 per cent. The proposed concentration did not therefore raise serious doubts about its compatibility with the common market in this sphere. DEC was one of the world's largest suppliers of networked computer systems, but MK was very much smaller. The extract which follows concerns the market for workstations. The merger was cleared under Article 6(1)(b) of Regulation 4064/89.

THE COMMISSION

19. The workstation market is the smallest among the four markets mainly affected, but shows the highest annual growth rate (more than 30 per cent). It is also the most concentrated market with DEC, Hewlett Packard and Sun Microsystems holding an aggregate market share of about 80 per cent. DEC's market share has been in the last three years on average 22 per cent.

20. It is unlikely that the concentration will create or strengthen a dominant position because conditions of competition will not significantly change. The workstation market is a fairly new market which developed out of the PC and small computer market during the last 10 years. High market shares on a new developing market are not extraordinary, and they do not necessarily indicate market power. In fact the development of the market shares of the three leading companies over a period of time shows the dynamic nature of this market. There has been constant change including a change of market leadership.

21. DEC acquires with MK only a relatively small vendor and one which is rather insignificant for the maintenance of competition on this market. . . . Finally, barriers to entry are relatively low for other computer systems manufacturers, especially for those who sell PCs and small multi-user computers. Market entry seems to be feasible even for companies on adjacent markets. . . .

22. Thus, also with regard to the workstation market the concentration does not raise serious doubts as to its compatibility with the Common Market.

At the opposite end of the spectrum we can consider a concentration found to infringe Article 2(3) of the 1989 Merger Regulation.

Case IV/M53 **Re the Concentration between Aérospatiale SNI and Alenia-Aeritalia e Selenia SpA and de Havilland**
[1992] 4 CMLR M2

Aérospatiale and Alenia controlled the world's largest producer of turbo-prop regional aircraft, ATR, and sought to take over de Havilland, which was the world number two in this market. The Commission found that the product market was regional turbo-prop aeroplanes with between twenty and seventy

seats, with sub-markets for aircraft with twenty to thirty-nine seats, forty to fifty-nine seats and sixty seats and over. The geographical market was the world, excluding China and Eastern Europe.

THE COMMISSION

A. Effect on ATR's Position

27. The proposed concentration would significantly strengthen ATR's position on the commuter markets, for the following reasons in particular:

— high combined market share on the 40 to 59-seat market, and of the overall commuter market
— elimination of de Havilland as a competitor
— coverage of the whole range of commuter aircraft
— considerable extension of customer base.

(a) Increase in Market Shares

...

29. ATR would increase its share of the overall worldwide commuter market of 20 to 70 seats from around 30 per cent. to around 50 per cent. The nearest competitor (Saab) would only have around 19 per cent. On the basis of this the new entity would have half the overall world market and more than two and half times the share of its nearest competitor.

30. The combined market share may further increase after the concentration....

Following a concentration between ATR and de Havilland, the competitors would be faced with the combined strength of two large companies. This would mean that where an airline was considering placing a new order, the competitors would be in competition with the combined product range of ATR and de Havilland....

(b) Elimination of de Havilland as a Competitor

31. In terms of aircraft sold, de Havilland is the most successful competitor of ATR....

...

The parties argue that if the proposed concentration does not proceed, although de Havilland would not be immediately liquidated, its production might be phased out by Boeing so that de Havilland might in any case be eliminated as a competitor in the medium to long term. Without prejudice as to whether such a consideration is relevant pursuant to Article 2 of the Merger Regulation, the Commission considers that such elimination is not probable....

...

(c) Coverage of the Whole Range of Commuter Aircraft

32. The new entity ATR/de Havilland would be the only commuter manufacturer present in all the various commuter markets as defined above.

...

(d) Broadening of Customer Base

33. ATR would significantly broaden its customer base after the concentration. On the basis of deliveries to date, the parties state that ATR has currently delivered commuters to 44 customers world-wide and de Havilland has delivered commuters to 36 other customers, giving a combination of 80 customers in all....

The customer base is an important element of market power for aircraft manufacturers since there is at least to some extent a lock-in effect for customers once their initial choice of aircraft is made.

...

B. Assessment of the Strength of the Remaining Competition

34. In order to be able to assess whether the new combined entity would be able to act independently of its competitors, in view of its strengthened position, it is necessary to assess the current and expected future strength of the remaining competitors.

[*The Commission evaluated the strength of the other competitors and decided that it was questionable whether they could provide effective competition in the medium to long term.*]

...

D. Summary of Effect of the Proposed Concentration on the Commuter Markets

51. The combined entity ATR/de Havilland will obtain a very strong position in the world and Community commuter markets of 40 seats and over, and in the overall world and Community market, as a result of the proposed concentration. The competitors in these markets are relatively weak. The bargaining ability of the customers is limited. The combination of these factors leads to the conclusion that the new entity could act to a significant extent independently of its competitors and customers, and would thus have a dominant position on the commuter markets as defined.

...

E. Potential Entry into the Market

53. In general terms, a concentration which leads to the creation of a dominant position may however be compatible with the Common Market within the meaning of Article 2(2) of the Merger Regulation if there exists strong evidence that this position is only temporary and would be quickly eroded because of high probability of strong market entry.

[*The Commission concluded that there was no realistic potential competition in the commuter markets in the foreseeable future.*]

The Commission's decision to block this merger was not accepted unreservedly. The majority of the Advisory Committee on Concentrations agreed with the Commission. The minority disagreed, stating that the Commission 'is not so much protecting competition but rather the competitors to this proposed concentration',[85] and the decision was also criticized academically by Fox.[86] The Commission later approved a joint venture between Aérospatiale, Alenia, and British Aerospace.[87]

(D) HORIZONTAL MERGERS: COORDINATED EFFECTS AND COLLECTIVE DOMINANCE

The Commission also considers application of the Merger Regulation where there are coordinated effects of the concentration.

[85] [1992] 4 CMLR M2, 35.

[86] E Fox, 'Merger Control in the EEC—Towards a European Merger Jurisprudence' in B Hawk (ed), Fordham Corporate Law Institute (Fordham University, 1991) ch 28.

[87] [1995] 4 CMLR 377.

Guidelines on the Assessment of Horizontal Mergers[88]

Coordinated effects

39. In some markets the structure may be such that firms would consider it possible, economically rational, and hence preferable, to adopt on a sustainable basis a course of action on the market aimed at selling at increased prices. A merger in a concentrated market may significantly impede effective competition, through the creation or the strengthening of a collective dominant position, because it increases the likelihood that firms are able to coordinate their behaviour in this way and raise prices, even without entering into an agreement or resorting to a concerted practice within the meaning of Article 81 of the Treaty...

40. Coordination may take various forms. In some markets, the most likely coordination may involve keeping prices above the competitive level. In other markets, coordination may aim at limiting production or the amount of new capacity brought to the market. Firms may also coordinate by dividing the market, for instance by geographic area or other customer characteristics, or by allocating contracts in bidding markets.

The idea of coordinated effects, as exemplified by collective dominance, must be seen against the prior case law. The Commission took the view that the 1989 Merger Regulation covered collective dominance where the concentration created or strengthened a dominant position between the parties to the concentration and another party on that market.[89] This was confirmed by the ECJ and CFI.[90]

Cases C–68/94 and 30/95 **France v Commission**
[1998] ECR I–1375

K + S and MdK were proposing to enter into a concentration. Both firms operated in the potash and rock salt markets. The Commission was concerned that as a result of this concentration two entities would enjoy a dominant position: K + S/MdK and another firm, SCPA. The applicants argued that the Merger Regulation did not cover collective dominance. They claimed that the wording of the Merger Regulation did not, in contrast to Article 82, speak in terms of 'one or more undertakings', and that the legislative history of the 1989 Merger Regulation showed that it was not meant to cover such cases.

THE ECJ

166. [I]t cannot be deduced from the wording of Article 2 of the Regulation that only concentrations which create or strengthen an individual dominant position, that is a dominant position held by the parties to the concentration, come within the scope of the Regulation. Article 2 . . . does not in itself exclude the possibility of applying the Regulation to cases where the concentrations lead to the creation or strengthening of a collective dominant position, that is a dominant position held by the parties to the concentration together with an entity not a party thereto.

[88] (N 80) [39].

[89] Case IV/M190 *Nestlé SA/ Source Perrier SA* [1993] 4 CMLR M17, [112]–[115].

[90] R Whish and B Sufrin, 'Oligopolistic Markets and EC Competition Law' (1992) 12 YBEL 59; A Winckler and M Hansen, 'Collective Dominance under the EC Merger Control Regulation' (1993) 30 CMLRev 787; D Ridyard, 'Economic Analysis of Single Firm and Oligopolistic Dominance' [1994] ECLR 255; C Caffarra and K-U Kuhn, 'Joint Dominance: The CFI Judgment on Gencor/Lonhro' [1999] ECLR 355; R Whish, 'Collective Dominance' in D O'Keefe and A Bavasso (eds), *Judicial Review in European Union Law* (Kluwer, 2000) ch 37.

[*The ECJ found that the legislative history was not conclusive, and therefore that the scope of Article 2 should be considered by reference to its purpose and general structure. It considered the recitals to the Regulation and concluded that all concentrations with a Community dimension that could affect the structure of competition within the EC should be within the ambit of the 1989 Regulation.*]

171. A concentration which creates or strengthens a dominant position on the part of the parties concerned with an entity not involved in the concentration is liable to prove incompatible with the system of undistorted competition which the Treaty seeks to secure. Consequently, if it were accepted that only concentrations creating or strengthening a dominant position on the part of the parties to the concentration were covered by the Regulation, its purpose . . . would be partially frustrated. The Regulation would thus be deprived of a not insignificant aspect of its effectiveness, without that being necessary from the perspective of the general structure of the Community system of control of concentrations.

Case T–102/96 **Gencor Ltd v Commission**
[1999] ECR II–753

There was a proposed concentration between two firms in the platinum market. The Commission was concerned that this would lead to a collective dominant position as between them and another firm, the latter being the leading worldwide supplier of platinum and the principal competitor of the two firms that were proposing to concentrate. The CFI followed the ECJ's decision, set out above, and then gave guidance on the relevant factors in judging whether collective dominance existed.

THE CFI

163. In assessing whether there is a collective dominant position, the Commission is therefore obliged to establish, using a prospective analysis of the relevant market, whether the concentration in question would lead to a situation in which effective competition in the relevant market would be significantly impeded by the undertakings involved in the concentration and one or more undertakings which together, in particular because of factors giving rise to a connection between them, are able to adopt a common policy on the market and act to a considerable extent independently of their competitors, their customers and, ultimately, of consumers.

[*The CFI held that the existence of a very large market share could, save for exceptional circumstances, be indicative of dominance: paragraph 205.*]

206. It is true that, in the context of an oligopoly, the fact that the parties hold large market shares does not necessarily have the same significance. . . . Nevertheless, particularly in the case of a duopoly, a large market share is, in the absence of evidence to the contrary, likewise a strong indication of the existence of a dominant position.

[*The applicants argued that the Commission had ignored the CFI's decision in* Italian Flat Glass.[91] *They claimed that in that case the CFI had required some structural links, through agreements, licences, and the like, as a pre-condition for a finding of collective dominance. The CFI in* Gencor *rejected this argument: paragraphs 273–275. It held that in* Italian Flat Glass *the structural links were regarded as but one way in which collective dominance could be shown.*]

276. Furthermore, there is no reason whatsoever in legal or economic terms to exclude from the notion of economic links the relationship of interdependence existing between the parties to a tight oligopoly within which, in a market with the appropriate characteristics, in particular in terms of market concentration, transparency, and product homogeneity, those parties are in a position to anticipate one

[91] See 1022–1023.

another's behaviour and are therefore strongly encouraged to align their conduct in the market, in particular in such a way as to maximise their joint profits by restricting production with a view to increasing prices. In such a context, each trader is aware that highly competitive action on its part designed to increase its market share (for example a price cut) would provoke identical action by the others, so that it would derive no benefit from its initiative. . . .

277. That conclusion is all the more pertinent with regard to the control of concentrations, whose objective is to prevent anti-competitive market structures from arising or being strengthened. Those structures may result from the existence of economic links in the strict sense argued by the applicant or from market structures of an oligopolistic kind where each undertaking may become aware of common interests and, in particular, cause prices to increase without having to enter into an agreement or resort to a concerted practice.

It is clear from *Gencor* that collective dominance can catch oligopolistic collusion, and that the existence of structural links between the relevant firms is not a necessary condition for the concept to apply. In the subsequent *Airtours* case[92] the CFI held that three conditions were necessary for a finding of collective dominance: there must be sufficient market transparency such that the members of the dominant oligopoly can monitor the behaviour of the other members; the tacit coordination must be sustainable over time, with sufficient incentive to comply with the common policy;[93] and the common policy must not be at risk from the foreseeable reaction of competitors and consumers.[94]

In the *Impala* case, the CFI stated that, while the three conditions from *Airtours* must be satisfied, they could be 'established indirectly on the basis of what may be a very mixed series of indicia and items of evidence relating to the signs, manifestations and phenomena inherent in the presence of a collective dominant position'.[95] The case was appealed to the ECJ, which held that it was open to the CFI to regard the evidence in this manner, but that it must sustain its analysis with care and should adopt an approach based on the analysis of such plausible coordination strategies as may exist in the circumstances.[96] The ECJ also provided more general guidance on the conditions in *Airtours*.

Case C–413/06 P **Bertelsmann AG and Sony Corporation of America v Independent Music Publishers and Labels Association (Impala)**
[2008] ECR I–4951

Bertelesmann and Sony (B and S) proposed to merge their record businesses. This was opposed by Impala, which argued that it would create a collective dominant position. The Commission found the concentration compatible with the common market, but this decision was annulled by the CFI. B and S appealed to the ECJ, which reaffirmed the decisions in *France v Commission* and *Gencor*.

THE ECJ

122. A collective dominant position significantly impeding effective competition in the common market or a substantial part of it may thus arise as the result of a concentration where, in view of the

[92] Case T–342/99 *Airtours plc v Commission* [2002] ECR II–2585, [62].

[94] The conditions from the *Airtours* case feature in the Horizontal Merger Guidelines (n 80) [41], [49]–[57].
[95] Case T–464/04 *Impala v Commission* [2006] ECR II–2289, [251].
[96] Case C–413/06 P *Bertelsmann AG and Sony Corporation of America v Independent Music Publishers and Labels Association (Impala)* [2008] ECR I–4951, [127]–[129]; J Golding, 'The Impala case: A Quiet Conclusion but a Lasting Legacy' [2010] ECLR 261.

actual characteristics of the relevant market and of the alteration to those characteristics that the concentration would entail, the latter would make each member of the oligopoly in question, as it becomes aware of common interests, consider it possible, economically rational, and hence preferable, to adopt on a lasting basis a common policy on the market with the aim of selling at above competitive prices, without having to enter into an agreement or resort to a concerted practice within the meaning of Article 81 EC and without any actual or potential competitors, let alone customers or consumers, being able to react effectively.

123. Such tacit coordination is more likely to emerge if competitors can easily arrive at a common perception as to how the coordination should work, and, in particular, of the parameters that lend themselves to being a focal point of the proposed coordination. Unless they can form a shared tacit understanding of the terms of the coordination, competitors might resort to practices that are prohibited by Article 81 EC in order to be able to adopt a common policy on the market. Moreover, having regard to the temptation which may exist for each participant in a tacit coordination to depart from it in order to increase its short-term profit, it is necessary to determine whether such coordination is sustainable. In that regard, the coordinating undertakings must be able to monitor to a sufficient degree whether the terms of the coordination are being adhered to. There must therefore be sufficient market transparency for each undertaking concerned to be aware, sufficiently precisely and quickly, of the way in which the market conduct of each of the other participants in the coordination is evolving. Furthermore, discipline requires that there be some form of credible deterrent mechanism that can come into play if deviation is detected. In addition, the reactions of outsiders, such as current or future competitors, and also the reactions of customers, should not be such as to jeopardise the results expected from the coordination.

[*The ECJ held that these criteria were compatible with those laid down in Airtours*.]

125. In applying those criteria, it is necessary to avoid a mechanical approach involving the separate verification of each of those criteria taken in isolation, while taking no account of the overall economic mechanism of a hypothetical tacit coordination.

126. In that regard, the assessment of, for example, the transparency of a particular market should not be undertaken in an isolated and abstract manner, but should be carried out using the mechanism of a hypothetical tacit coordination as a basis. It is only if such a hypothesis is taken into account that it is possible to ascertain whether any elements of transparency that may exist on a market are, in fact, capable of facilitating the reaching of a common understanding on the terms of coordination and/or of allowing the competitors concerned to monitor sufficiently whether the terms of such a common policy are being adhered to. In that last respect, it is necessary, in order to analyse the sustainability of a purported tacit coordination, to take into account the monitoring mechanisms that may be available to the participants in the alleged tacit coordination in order to ascertain whether, as a result of those mechanisms, they are in a position to be aware, sufficiently precisely and quickly, of the way in which the market conduct of each of the other participants in that coordination is evolving.

It should in any event be noted that Regulation 139/2004 reduces the need to prove collective dominance.[97] It encapsulates, as we have seen, both non-coordinated and coordinated effects. The former can cover oligopolistic behaviour even where there is no coordination or dominance,[98] and thus the fact that it may be more difficult to prove collective dominance will be less important.[99]

[97] Reg 139/2004 (n 8) Art 2(3).

[98] Horizontal Merger Guidelines (n 80) [25].

[99] S Baxter and F Dethmers, 'Collective Dominance under EC Merger Control—After Airtours and the Introduction of Unilateral Effects is there still a Future for Collective Dominance?' [2006] ECLR 148.

(E) VERTICAL AND CONGLOMERATE MERGERS: COORDINATED AND NON-COORDINATED EFFECTS

The Commission has now also produced guidelines on vertical and conglomerate mergers. Space precludes detailed treatment, but the essence of the approach is as follows.

Guidelines on the Assessment of Non-horizontal Mergers[100]

12. First, unlike horizontal mergers, vertical or conglomerate mergers do not entail the loss of direct competition between the merging firms in the same relevant market...

13. Second, vertical and conglomerate mergers provide substantial scope for efficiencies. A characteristic of vertical mergers and certain conglomerate mergers is that the activities and/or the products of the companies involved are complementary to each other. The integration of complementary activities or products within a single firm may produce significant efficiencies and be pro-competitive... Vertical integration may...provide an increased incentive to seek to decrease prices and increase output because the integrated firm can capture a larger fraction of the benefits...

14. Integration may also decrease transaction costs and allow for a better co-ordination in terms of product design, the organisation of the production process, and the way in which the products are sold....

...

17. There are two main ways in which non-horizontal mergers may significantly impede effective competition: non-coordinated effects and coordinated effects.

18. Non-coordinated effects may principally arise when non-horizontal mergers give rise to *foreclosure*. In this document, the term 'foreclosure' will be used to describe any instance where actual or potential rivals' access to supplies or markets is hampered or eliminated as a result of the merger, thereby reducing these companies' ability and/or incentive to compete. As a result of such foreclosure, the merging companies...may be able to profitably increase the price charged to consumers. These instances give rise to a significant impediment to effective competition and are therefore referred to hereafter as 'anticompetitive foreclosure'.

19. Coordinated effects arise where the merger changes the nature of competition in such a way that firms that previously were not coordinating their behaviour, are now significantly more likely to coordinate to raise prices or otherwise harm effective competition. A merger may also make coordination easier, more stable or more effective for firms which were coordinating prior to the merger.

(F) CONCENTRATION AND EFFICIENCIES

Prior to Regulation 139/2004 it was unclear whether efficiencies flowing from a concentration could be taken into account.[101] The argument for considering efficiency gains is that relatively modest cost savings can outweigh the impact of price increases when considering allocative efficiency.[102] The issue has now been clarified. Recital 29 of Regulation 139/2004 states:

> In order to determine the impact of a concentration on competition in the common market, it is appropriate to take account of any substantiated and likely efficiencies put forward by the undertakings

[100] Guidelines on the assessment of non-horizontal mergers under the Council Regulation on the control of concentrations between undertakings [2008] OJ C265/7.

[102] O Williamson, 'Economics as an Antitrust Defense: The Welfare Tradeoffs' (1968) 58 Am Econ Rev 18.

concerned. It is possible that the efficiencies brought about by the concentration counteract the effects on competition, and in particular the potential harm to consumers, that it might otherwise have and that, as a consequence, the concentration would not significantly impede effective competition, in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position. The Commission should publish guidance on the conditions under which it may take efficiencies into account in the assessment of a concentration.

The Commission published this guidance in the Horizontal Merger Guidelines.[103] Three conditions must be satisfied. First, the efficiencies must benefit consumers in a substantial and timely manner, and must be passed on to the consumer; the greater the potential anti-competitive effect of the concentration, the greater and more likely must be the efficiency savings. The second condition is merger specificity, which connotes the idea that the efficiencies could not be achieved by less anti-competitive alternatives. The third condition is verifiability: the Commission must be satisfied that the efficiencies are likely to materialize and that they should be sufficiently substantial to outweigh the concentration's potential harm to consumers.

The fact that efficiencies can be considered is to be welcomed. It should nonetheless be recognized that the hurdles to be surmounted in order to 'save' a notified concentration on efficiency grounds are significant.[104]

(G) CONCENTRATIONS AND FAILING FIRMS

The ECJ[105] and Commission[106] have acknowledged that an otherwise problematic merger may be compatible with the common market if one of the merging parties is a failing firm.[107] The central condition is that the deterioration of the competitive structure that follows the merger cannot be said to be caused by the merger, as will be the case where the competitive structure would deteriorate to at least the same extent in the absence of the merger.

Guidelines on the Assessment of Horizontal Mergers[108]

90. The Commission considers the following three criteria to be especially relevant for the application of the 'failing firm defence'. First, the allegedly failing firm would in the near future be forced out of the market because of financial difficulties if not taken over by another undertaking. Second, there is no less anti-competitive alternative than the notified merger. Third, in the absence of a merger, the assets of the failing firm would inevitably exit the market.

(H) THE RELEVANCE OF NON-COMPETITION CONSIDERATIONS

The discussion thus far has focused on the competition inquiry within Article 2. This leaves for consideration the extent to which industrial or social policy can be taken into account. Regulation

[108] (N 80) [90].

139/2004, recital 23, instructs the Commission to place its appraisal within the general framework of the achievement of the Treaty objectives set out in what is now Article 3 TEU. This would arguably allow the Commission to take broader considerations into account. The Commission has, nonetheless, taken the view that competition is to be the prime objective of the Regulation.[109] Insofar as such issues are taken into account this may occur in the College of Commissioners.[110]

(I) REMEDIES

Structural and behavioural remedies are available for breach of the Merger Regulation.[111] The principles that govern the Commission's choice of such remedies are set out in a Commission Notice.[112] It is also open to the parties to modify a concentration found to infringe the Merger Regulation and to offer commitments to the Commission, but to be acceptable such commitments must eliminate the anti-competitive impact of the merger.[113]

6 JUDICIAL REVIEW

Commission decisions under the Merger Regulation are reviewable by the Union Courts, subject to the normal conditions, under Article 263 TFEU.[114] The EU Courts have increased their intensity of judicial review in this area and have imbued review for manifest error with more vigour than hitherto.[115] This is apparent from decisions such as *Airtours*,[116] *Tetra Laval*,[117] and other cases.[118] Thus in *Tetra Laval* the ECJ stated that:[119]

> Whilst the Court recognises that the Commission has a margin of discretion with regard to economic matters, that does not mean that the Community courts must refrain from reviewing the Commission's interpretation of information of an economic nature. Not only must the Community courts, *inter alia*, establish whether the evidence relied on is factually accurate, reliable and consistent but also whether that evidence contains all the information which must be taken into account in order to assess a complex situation and whether it is capable of substantiating the conclusions drawn from it. Such a review is all the more necessary in the case of a prospective analysis required when examining a planned merger with conglomerate effect.

[116] Case T–342/99 *Airtours plc v Commission* [2002] ECR II–2585.

[117] Case C–12/03 P *Commission v Tetra Laval* [2005] ECR I–987.

[118] Case T–464/04 *Impala* (n 95); Case T–210/01 *General Electric Company v Commission* [2005] ECR II–5575; Case T–282/06 *Sun Chemical* (n 81) [60]; Case T–48/04 *Qualcomm Wireless* (n 58); Case T–145/06 *Omya AG v Commission* [2009] ECR II–145; Case C–413/06 P *Bertelsmann* (n 96) [144]–[145].

[119] Case C–12/03 *Tetra Laval* (n 117) [39].

Space precludes detailed consideration of this topic, which can be found elsewhere.[120] Suffice it to say for the present that the General Court now engages in detailed review of Commission decision-making, and that while this is formally undertaken as review for manifest error, it is clear that the meaning of this head of review has been transformed from that in prior case law. The Union Courts nonetheless remain reluctant to find that an error by the Commission in assessing the economic evidence under the Merger Regulation suffices for the purpose of non-contractual liability.[121]

7 CONCLUSIONS

i. Merger policy necessarily entails choices. These choices relate to all the important aspects of merger control.

ii. In *jurisdictional terms*, Regulation 139/2004 contains more sophisticated provisions designed to ensure that a concentration is investigated by the most appropriate authority at EU or national level.

iii. In *procedural terms*, it reflects the need for prompt notification, coupled with adequate investigative powers, in order that the Union controls can be effective. This is balanced against the need for promptness in the application of the EU's powers, since important business decisions hang in the balance. The specific time limits under the Merger Regulation serve this imperative.

iv. In *substantive terms*, Regulation 139/2004 encapsulates important economic, social, and political choices, exemplified by the modified test for the application of the Regulation, by the explicit inclusion of an efficiency defence, and by the predominance accorded to competition considerations, to the exclusion, in general, of other social considerations.

v. The EU Courts continue to play an important role in this area, in part through their teleological interpretation of the Merger Regulation, and in part through the increased intensity of judicial review under Article 263 TFEU.

THE STATE AND THE COMMON MARKET

1 CENTRAL ISSUESS

i. This chapter is concerned with the way in which the actions of the state can infringe the Treaty. The Treaty contains a number of relevant provisions, including Article 4(3) TEU, and Articles 14, 34, 101, 102, 106, and 107–109 TFEU.

ii. There are valid reasons for controlling state action. Thus, for example, Article 106 is designed to prevent a state from enacting or maintaining in force measures relating to public undertakings, etc, which derogate from other obligations under the Treaty. This provision is required to prevent a state from evading the proscriptions of the Treaty insofar as these relate to such undertakings. It is equally apparent that the EU must have rules concerning state aids, since if a state were able to give preferential treatment to its own firms then the very idea of a level playing field would be undermined.[1]

iii. While there are valid reasons for EU controls, the topics discussed within this chapter raise important issues concerning the very nature of the EU. Thus the jurisprudence under Article 106 has prompted questions about how far it is possible for a state to entrust certain activities to a public monopoly, or to a private firm which has exclusive rights.

iv. The case law concerning state aids, Articles 107–109, raises broader issues concerning the way in which Union policy is developed in a particular area, and the appropriate balance between market integration and the attainment of other goals, such as regional policy and Union cohesion.

2 THE STATE AND THE MARKET: GENERAL PRINCIPLES

(A) THE GENERAL PRINCIPLE: THE COMPETITION ETHOS

In mixed economic systems it is common for the state to play some role in the marketplace. The rationale for this intervention and its legal form may well vary. It has, for example, been common in the past for utilities either to be nationalized or to have some privileged monopoly or quasi-monopoly status. Recent thinking has tended to favour a more confined role for the state, as manifested in the privatization of nationalized industries and in the deregulation of sectors of the economy. Notwithstanding

[1] C-D Ehlermann, 'The Contribution of EC Competition Policy to the Single Market' (1992) 29 CMLRev 257, 259.

these changes, there continue to be undertakings which either remain within public ownership or possess a privileged status in the marketplace.

The basic starting position is Article 345 TFEU, which states that the Treaty shall in no way prejudice the rules in Member States governing the system of property ownership. The mere fact that certain activities are undertaken in the public or the private sphere is not, therefore, contrary to the Treaty. Article 345 has, however, been narrowly interpreted so as, for example, not to prevent limitations on intellectual property rights under EU law.[2] Moreover, Article 173 TFEU provides that the EU and the Member States shall ensure that the conditions necessary for the competitiveness of EU industry exist. The Article is framed in terms of open and competitive markets. Action to attain this end includes encouragement of initiative and development of undertakings throughout the EU, particularly small and medium-sized undertakings.

Thus, while Article 345 supports EU agnosticism as to the regime of ownership within any particular state, the thrust of much else in the Treaty is against the type of dominance that can accompany public ownership. It is also against the grant of any special, beneficial position to firms which may distort competition within the internal market.

(B) THE QUALIFICATION: SERVICES OF GENERAL (ECONOMIC) INTEREST

While the general Treaty ethos is the free interplay of market forces, this is qualified in certain respects at least by Article 14 TFEU.[3]

> Without prejudice to Article 4 of the Treaty on European Union or to Articles 93, 106 and 107 of this Treaty, and given the place occupied by services of general economic interest in the shared values of the Union as well as their role in promoting social and territorial cohesion, the Union and the Member States, each within their respective powers and within the scope of application of the Treaties, shall take care that such services operate on the basis of principles and conditions, particularly economic and financial conditions, which enable them to fulfil their missions. The European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, shall establish these principles and set these conditions without prejudice to the competence of Member States, in compliance with the Treaties, to provide, to commission and to fund such services.

Moreover, Article 36 of the Charter of Fundamental Rights[4] provides that the Union recognizes and respects access to services of general economic interest as provided for in national laws and practices, in accordance with the Treaties, in order to promote social and territorial cohesion of the EU.

The Commission has addressed the concept of services of general interest on a number of occasions,[5] most recently in its White Paper on services of general interest.[6] This term is not found in the Treaty, the closest formulation being that in Articles 14 and 106(2), which speak in terms of services of general *economic* interest. The concept of services of general interest was, said the Commission, broader and covered 'both market and non-market services which the public

[2] Case 16/74 *Centrafarm BV v Winthrop BV* [1974] ECR 1183.

[3] M Ross, 'Article 16 EC and Services of General Interest: From Derogation to Obligation?' (2000) 25 ELRev 22.

[6] Communication from Commission, White Paper on Services of General Interest, COM(2004)374 final.

authorities class as being of general interest and subject to specific public service obligations'.[7] Such services were regarded as 'one of the pillars of the European model of society',[8] reflecting EU values and goals based on 'a common set of elements, including: universal service, continuity, quality of service, affordability, as well as user and consumer protection'.[9] Access to such services was perceived as 'an essential component of European citizenship and necessary in order to allow them to fully enjoy their fundamental rights'.[10]

The normal market principles are modified in relation to services of general interest: obligations relating to universal service, continuity, and the like are imposed on those providing the service. This has affected EU legislation and the interpretation of Treaty Articles.

In relation to EU legislation, the directives designed to liberalize markets in energy, telecommunications, and the like are not only concerned with the introduction of competition. They also enable or require Member States to impose public service obligations relating to security, regularity, quality, and price of supply on suppliers.[11]

In relation to the interpretation accorded to Treaty Articles, we shall see that the undertakings most likely to gain exemption under Article 106(2) are those with public service obligations,[12] and that aid granted to offset the cost of public service obligations on an undertaking will, subject to certain conditions, prevent it from being characterized as state aid under Article 107.[13]

Views on the overall impact of the preceding developments differ. Baquero Cruz argues that some of the legislation on utilities still evinces the relative priority given to competition over services of general interest.[14] Prosser strikes a more positive note when reflecting on developments relating to such services.

T Prosser, The Limits of Competition Law, Markets and Public Services[15]

> Initially they were seen as something of an irritant, limiting the creation of a full internal market. Now a much more positive view is taken, despite only cautious substantive proposals in the 2004 White Paper. Such services are confirmed an essential element of European citizenship and, rather than the main question being that of how their operation can be restricted and remodelled to become compatible with the single market, it is of how their operation can be improved and made both more efficient and more responsive to social values such as those underlying public service.

3 PUBLIC UNDERTAKINGS AND ARTICLE 106

The interplay between competition and the needs of undertakings that operate services of general economic interest is apparent from Article 106 (ex Article 86 EC), which provides as follows:

[15] (Oxford University Press, 2005) 172.

1. In the case of public undertakings and undertakings to which Member States grant special or exclusive rights, Member States shall neither enact nor maintain in force any measure contrary to the rules contained in the Treaties, in particular to those rules provided for in Article 18 and Articles 101 to 109.

2. Undertakings entrusted with the operation of services of general economic interest or having the character of a revenue-producing monopoly shall be subject to the rules contained in the Treaties, in particular to the rules on competition, in so far as the application of such rules does not obstruct the performance, in law or in fact, of the particular tasks assigned to them. The development of trade must not be affected to such an extent as would be contrary to the interests of the Union.

3. The Commission shall ensure the application of the provisions of this Article and shall, where necessary, address appropriate directives or decisions to Member States.

(a) ARTICLE 106(1)

(i) *Public Undertaking and Undertakings accorded Special or Exclusive Rights*

Article 106(1) covers two types of undertaking: public undertakings and those to which Member States have granted special or exclusive rights. These will be examined in turn. The scope of the term public undertaking was addressed by the ECJ in the *Transparency Directive* case.

Cases 188–190/80 **France, Italy and the United Kingdom v Commission**
[1982] ECR 2545

[Note Lisbon Treaty renumbering: Art 90 is now Art 106 TFEU]

The Commission, acting pursuant to Article 90(3), enacted Directive 80/723 on the transparency of financial relations between Member States and public undertakings. The object was to make available information on public funds given to public undertakings, and the use to which it had been put. This was necessary to ensure the proper operation of the rules on state aid. Three Member States sought to have the Directive annulled. The ECJ considered the definition of public undertaking contained in the Directive. It acknowledged that the Commission did not set out in the Directive to define 'public undertakings' for the purpose of Article 90, but it none the less approved of the definition.

THE ECJ

25. According to Article 2 of the Directive, the expression 'public undertakings' means any undertaking over which the public authorities may exercise directly or indirectly a dominant influence. According to the second paragraph, such influence is to be presumed when the public authorities directly or indirectly hold the major part of the undertaking's subscribed capital, control the majority of the votes, or can appoint more than half of the members of its administrative, managerial or supervisory body.

26. As the Court has already stated, the reason for the inclusion in the Treaty of the provisions of Article 90 is precisely the influence which the public authorities are able to exert over the commercial decisions of public undertakings. That influence may be exerted on the basis of financial participation or of rules governing the management of the undertaking. By choosing the same criteria to determine the financial relations on which it must be able to obtain information in order to perform its duty of surveillance under Article 90(3), the Commission has remained within the limits of the discretion conferred upon it by that provision.

The definition of the term public undertaking in the Transparency Directive is not conclusive, but it was approved by the ECJ. The existence of state influence in one of the above ways will therefore be a sufficient reason for an undertaking to be characterized as public. Thus in *Sacchi*[16] the Italian Broadcasting Authority (RAI) was under the control of a state holding company (IRI) the state was represented in its organs and could intervene in its operations.

An undertaking, such as a nationalized industry that has been privatized, but which continues to have a protected position in the relevant area, will also fall within Article 106(1) if a Member State has granted it special or exclusive rights. The rationale is that where the state has relieved an undertaking wholly or partially from the discipline of competition, it must bear responsibility for the consequences.

It is possible for undertakings to be caught by both limbs of Article 106(1). Thus, in *Sacchi*[17] the RAI, as well as being controlled by the state, also possessed a statutory monopoly in relation to broadcasting. In *Muller*[18] the state had power to nominate half the members of the management and supervisory board of a company that controlled port facilities in Luxembourg. The company itself had certain privileges, including that of being consulted before the development of any other port facilities within a particular area was undertaken.

(ii) *The Obligation Flowing from Article 106(1)*

Article 106(1) requires that a Member State shall neither enact nor maintain in force any measure that is contrary to the Treaty. It constitutes a duty not to enact any such measure, and a positive obligation to remove such measures that currently exist.

A breach of Article 106(1) presupposes that some other Treaty Article has been broken, as exemplified by the specific reference to Articles 18, and 101–109 TFEU. It is however possible for a Member State to maintain in force a measure that violated another Treaty Article, such as Article 34 TFEU. The way in which Article 106(1) operates can be seen from *Bodson*.

Case 30/87 **Bodson v Pompes Funèbres des Régions Libérées SA**
[1988] ECR 2479

[Note Lisbon Treaty renumbering: Arts 86 and 90 are now Arts 102 and 106 TFEU]

French legislation entrusted the provision of external services for funerals (the carriage of the body after it has been placed in the coffin, the provision of hearses, etc), to local communes. The communes then granted concessions to private undertakings and Pompes Funèbres (PF) held many such concessions. Bodson offered external funeral services at a price significantly lower than that set by PF. PF sought an injunction in the French courts, claiming that Bodson was acting in breach of its exclusive rights resulting from the concession. Bodson argued that PF had abused its dominant position in breach of Article 86 by charging excessive prices. One of the issues before the Court concerned the responsibility of the commune itself under Article 90.

THE ECJ

33. In so far as the communes imposed a given level of prices on the concession holders, in the sense that they refrained from granting concessions for the 'external services' to undertakings if the

[16] Case 155/73 [1974] ECR 409.
[17] Ibid.
[18] Case 10/71 *Ministère Public of Luxembourg v Muller* [1971] ECR 723.

latter did not agree to charge particularly high prices, the communes are covered by the situation referred to in Article 90(1) of the Treaty. That provision governs the obligations of the Member States—which includes, in this context, the public authorities at the regional, provincial or communal level—towards undertakings 'to which [they] grant special or exclusive rights'. That situation covers precisely the grant of an exclusive concession for the 'external services' for funerals.

34. It follows from that finding that public authorities may not, in circumstances such as those in this case, either enact or maintain in force any 'measure' contrary to the rules of the Treaty. . . . They may not therefore assist undertakings holding concessions to charge unfair prices by imposing such prices as a condition for concluding a contract for a concession.

(iii) *The ECJ's Expansive Case Law*

We noted above that the Treaty is agnostic in formal terms as to whether economic activity is undertaken by the state or those to whom it has granted special or exclusive rights, as opposed to allowing the free interplay of market forces. A state can therefore choose to grant exclusive rights to a particular undertaking, and the normal Treaty rules will apply. Provided that the state itself does not infringe Article 106, and provided that the undertaking does not exercise its exclusive rights so as to constitute an abuse of a dominant position under Article 102, then all will be well. The exclusivity will not, in and of itself, infringe Article 102. On this view Article 106 simply preserves parity by ensuring that public undertakings or those to whom exclusive rights are granted do not thereby infringe any Treaty provision.

We have, however, also seen that the thrust of the Treaty more generally favours the application of normal competitive principles. The result of this competitive contest may lead to a firm that is dominant because of its economic prowess. This is one of the reasons that the Treaty does not proscribe monopoly *per se*. The Treaty is, nonetheless, against artificial barriers to competition. This can produce tensions in relation to public undertakings, or those to whom the state has granted special or exclusive rights, because their privileged position is the result not of economic prowess, but of state grant.

The formal way in which the ECJ resolves these tensions is to recognize that the grant of exclusive rights will not *per se* infringe, for example, Article 102, but that the exercise of such rights may do so if it can be said to be abusive. This is fine in principle, but much depends on the more precise meaning given to the idea of abuse. We have already seen the elasticity of this concept in the discussion of Article 102.[19] The point can be put quite simply: the closer the Court comes to regarding the grant of exclusive rights as abusive in and of itself, the more difficult does it become for a state to organize its economic activities in this manner.

Thus in *Höfner*[20] the ECJ considered the legality of German rules which required certain categories of job-seekers to be placed in contact with potential employers through a state-licensed agency, and the agency was given exclusive powers in the relevant area. The effect of this monopoly was to suppress the activities of independent employment consultants, and contracts they made would be void. The ECJ decided that any state rule that compelled an undertaking to breach Article 102 would be illegal under Article 106(1). It held that the grant of exclusive rights was not *per se* incompatible with Article 106,[21] but that a state violated Article 106(1) if it placed an undertaking in such a dominant position that the very exercise of these exclusive rights could not avoid being abusive. The ECJ concluded that

[19] Ch 27.
[20] Case C–41/90 *Höfner and Elser v Macrotron GmbH* [1991] ECR I–1979.
[21] Ibid [29].

the Member State had created such a situation, because the state-licensed agency was not in a position to satisfy market demand, and the exclusivity could affect nationals of other Member States.[22]

The ECJ's willingness to characterize a grant of exclusive rights as abusive within Article 106 is also apparent in the following case.

Case C–179/90 **Merci Convenzionali Porto di Genova SpA v Siderurgica Gabrielli SpA**
[1991] ECR I–5889

[Note Lisbon Treaty renumbering: Arts 30, 85, 86, and 90 are now Arts 34, 101, 102, and 106 TFEU]

Merci enjoyed the exclusive right to organize dock work in the Port of Genoa. It would call upon a dock-work company to unload ships. Siderurgica (S) applied to Merci to have a consignment of steel unloaded, even though the ship's own crew could have performed the task. Merci called upon the relevant Genoa dock-work company to do the job. Delays arose as a result of strikes. S therefore demanded reimbursement from Merci, claiming that the charges were unfair for the services performed. The ECJ reaffirmed that an undertaking having a statutory monopoly over a substantial part of the common market would be regarded as having a dominant position for the purposes of Article 86. It then continued as follows.

THE ECJ

16. It should next be stated that the simple fact of creating a dominant position by granting exclusive rights within the meaning of Article 90(1) EEC is not as such incompatible with Article 86.

17. However, the Court has had occasion to state, in this respect, that a Member State is in breach of the prohibition contained in these two provisions if the undertaking in question, merely by exercising the exclusive rights granted to it, cannot avoid abusing its dominant position (see Case C–41/90, Höfner . . .) or when such rights are liable to create a situation in which that undertaking is induced to commit such abuses (see Case C–260/89, ERT . . .).

18. According to Article 86(2)(a), (b) and (c) EEC, such abuse may in particular consist in imposing on the persons requiring the services in question unfair purchase prices or other unfair trading conditions, in limiting technical development, to the prejudice of consumers, or in the application of dissimilar conditions to equivalent transactions with other trading parties.

19. In that respect it appears from the circumstances described by the national court . . . that the undertakings enjoying exclusive rights in accordance with the procedures laid down by the national rules in question are, as a result, induced either to demand payment for services which have not been requested, to charge disproportionate prices, to refuse to have recourse to modern technology, which involves an increase in the cost of the operations and a prolongation of the time required for their performance, or to grant price reductions to certain consumers and at the same time to offset such reductions by an increase in the charges to other consumers.

20. In these circumstances it must be held that a Member State creates a situation contrary to Article 86 EEC where it adopts rules of such a kind as those at issue before the national court, which are capable of affecting trade between Member States as in the case of the main proceedings, regard being had . . . to the importance of traffic in the Port of Genoa.

[22] Ibid [34]; Case C–55/96 *Job Centre coop arl* [1997] ECR I–7119; Case C–258/98 *Criminal Proceedings against Carra* [2000] ECR I–4217; Case C–260/89 *Elliniki Radiophonia Tileorassi AE (ERT) v Dimotiki Etairia Pliroforissis (DEP) and Sotirios Kouvelas* [1991] ECR I–2925.

21. As regards the interpretation of Article 30 requested by the national court, it is sufficient to recall that a national measure which has the effect of facilitating the abuse of a dominant position capable of affecting trade between Member States will generally be incompatible with that Article, which prohibits quantitative restrictions on imports and all measures having equivalent effect (see Case 13/77, GB-INNO-BM v ATAB) in so far as such a measure has the effect of making more difficult and hence of impeding imports of goods from other Member States.

22. In the main proceedings it may be seen from the national court's findings that the unloading of the goods could have been effected at a lesser cost by the ship's crew, so that compulsory recourse to the services of the two undertakings enjoying exclusive rights involved extra expense and was therefore capable, by reason of its effect on the prices of the goods, of affecting imports.

The ECJ's reasoning is instructive.[23] In paragraph 16 the Court reiterated the proposition that the creation of exclusive rights was not itself abusive within Article 106. This was then qualified in paragraph 17. Exclusivity could entail a breach of Articles 106 and 102 either when the exercise of the exclusive rights could not avoid being abusive, or where such rights were liable to create a situation in which the undertaking was induced to commit an abuse. It then applied the latter formulation to the instant case, paragraph 19.

This comes perilously close to regarding the grant of exclusivity as abusive *per se*, because of the ways identified in paragraph 19 in which an undertaking could be induced to commit an abuse. An undertaking can be in breach of Article 102 through charging excessive prices, discriminatory prices, and the like. Any firm with a dominant position has the potential to do this. Whether it actually chooses to behave in this manner is another matter. The message from the Court is, however, that the very grant of the exclusive rights can create a situation in which the undertaking is induced to commit such abuses.

The meaning of the word 'induce' is, however, crucial. The ECJ's reasoning comes close to stating that, because the holder of the exclusive right possessed market power which enabled it to price in an abusive manner, therefore it was induced to do so. On this hypothesis it could always be said that the grantee of exclusivity would be induced to price abusively, with the consequence that exclusive rights would, in effect, be rendered illegal *per se*. It might be argued that this ignores the fact that the holder of the exclusive right had in fact priced in an abusive manner: paragraph 19. If this was indeed so then Merci should have been condemned on this basis alone, since nothing was gained by the language of inducement.

The fact that the Court used the language of inducement was not, however, fortuitous. It wished to make a point about the consequence of forms of economic organization adopted by the state. What is distinctive about the grant of a statutory monopoly is that the grantee obtains a protected sphere of activity, which is immune from the normal rigours of competition. This is by way of contrast to other firms with a dominant position. They must always be looking over their shoulder lest new entrants erode their market power. This is a reason why such a firm might decide not to price too highly, since it will act as an incentive for others to enter the market.

The holder of the statutory exclusive right does not have the same rationale for self-restraint, or at least not to the same extent. It is for this reason that such firms might well be induced to charge disproportionate prices, secure in the knowledge that this cannot operate as a carrot to bring others into

[23] See also Case C–320/91 P *Procureur du Roi v Paul Corbeau* [1993] ECR I–2533; Case C–18/93 *Corsica Ferries Italia SRL v Corpo dei Piloti di Genova* [1994] ECR I–1783; Case C–323/93 *Société Civile Agricole du Centre d'Insémination de la Crespelle v Coopérative d'Elevage et d'Insémination Artificielle du Département de la Mayenne* [1994] ECR I–5077; Case C–242/95 *GT-Link A/S v De Danske Statsbaner (DSB)* [1997] ECR I–4449; Case C–451/03 *Servizi Ausiliari Dottori Commercialisti Srl v Calafiori* [2006] ECR I–2941, [23]; Case C–49/07 *Motosykletistiki Omospondia Ellados NPID (MOTOE) v Elliniko Dimosio* [2008] ECR I–4863, [49]–[50].

the market. It is for this reason that the ECJ was particularly concerned about monopoly power in this form. This is readily understandable when looked at from the EU's perspective, but does not alter the fact that the Court's reasoning comes close to regarding the grant of exclusive statutory rights as abusive *per se*.

(iv) *The ECJ's Current Approach*

The general thrust of the ECJ's current approach builds on the preceding jurisprudence: the grant of exclusive rights will normally be held *prima facie* to infringe Article 106(1), but the ECJ will then consider whether there is some objective justification for the exclusivity.[24]

In *Traco*[25] it was held that the grant to Poste Italiana of exclusive rights to carry the post violated Article 106(1). Poste Italiana charged any other postal operator charges equivalent to those paid by customers of Poste Italiana, even though it did not carry the mail. It could not therefore avoid abusing its dominant position, was caught by Article 106(1), and had to seek justification under Article 106(2). In *Ambulanz Glockner*[26] a public body refused to renew the applicant's authorization to provide non-emergency transport services for patients. Two other companies had exclusive rights to provide emergency services for patients. The ECJ assumed that the grant of these exclusive rights could violate Article 102(b), limiting markets, in the sense that only these two companies were allowed to provide non-emergency, as well as emergency, transport services. There was therefore *prima facie* a breach of Article 106(1), and the ECJ then considered justification under Article 106(2).[27]

It is therefore more difficult than hitherto for a state to organize its economic activities by giving special or exclusive rights to particular firms. Agnosticism as to forms of economic organization has been replaced by a more strident belief in the operation of free markets, unless the state can provide special justification for the privileges accorded.

(B) ARTICLE 106(2)

Article 106(2) has three parts. It begins by emphasizing that undertakings entrusted with the operation of services of a general economic interest, or which have the character of a revenue-producing monopoly, are subject to the Treaty. It then excludes the application of these Treaty rules where the performance of the tasks assigned to such undertakings is liable to be obstructed. This exception is then subject to a proviso that the development of trade must not be affected to such an extent as would be contrary to the interests of the EU.

(i) *The First Step*

The first step is therefore to determine whether an undertaking is of the kind mentioned. The ECJ has stressed that the category of entrusted undertakings should be strictly defined, since Article 106(2)

[24] L Hancher, Note (1994) 31 CMLRev 105; L Hancher, 'Community, State and Market' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 1999) ch 20; D Edward and M Hoskins, 'Article 90: Deregulation and EC Law, Reflections Arising from the XVI FIDE Conference' (1995) 32 CMLRev 157; Ehlermann (n 1) 273; L Hancher and P Larouche, 'The Coming of Age of EU Regulation of Network Industries and Services of General Economic Interest' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 2nd edn, 2011) ch 24; G Davies, 'Article 86 EC, the EC's Economic Approach to Competition Law, and the General Interest' (2009) 5 European Competition Journal 549.

derogates from the Treaty rules.[28] It is irrelevant whether the undertaking is public or private, but the service must have been assigned to it by a public authority.[29]

The *BUPA* case[30] provides guidance on the meaning of services of a general economic interest (SGEI). The CFI held that Member States have broad discretion as to what they regard as SGEIs, but that this discretion could not be used arbitrarily so as to remove a particular sector from the ordinary competition rules. It was for the Member State to show that the mission had been granted by an act of a public authority and to provide reasons why it regarded that mission as an SGEI. The provision of an SGEI presumed some general or public interest. It did not mean that the undertaking would have to be accorded exclusive or special rights to carry it out. An SGEI did not have to constitute a universal service in the strict sense of that term, nor did an SGEI have to be offered free of charge or without consideration for profitability. The compulsory nature of the service was however a condition for an SGEI in EU law, in the sense that the undertaking entrusted with the SGEI was required to offer the service to any person requesting it.

(ii) *The Second Step*

The second step in the application of Article 106(2) is to determine whether the exception applies. The ECJ previously held that the exception would apply only if the relevant Treaty prohibitions were incompatible with the performance of the undertaking's assigned tasks.[31]

This is no longer the approach. In *Commission v Netherlands*,[32] the ECJ held that for Article 106(2) to apply it was sufficient if the application of the Treaty rules obstructed the performance, in law or in fact, of the undertaking's special obligations. It was not necessary for the survival of the undertaking to be under threat. It sufficed to show that the exclusive rights were necessary to enable the holder to perform the tasks of general economic interest assigned to it under economically acceptable conditions. The Member State did not have to prove that no other conceivable measure could enable the tasks to be performed under the same conditions.[33]

The ECJ will nonetheless look closely at claims that the exception applies.[34] Thus in *Merci*[35] the ECJ decided that even if dock work were to be regarded as of general economic interest, there was no evidence that this demanded modification of the Treaty rules so as to prevent obstruction in the performance of this task. Similarly in *British Telecom*[36] the Commission decided that practices relating to the transmission of messages breached Article 102. The ECJ rejected the argument that the measures adopted by BT should be exempted from the competition rules because of Article 106(2), since BT failed to establish that the application of these rules would prejudice the accomplishment of its tasks.[37]

[37] See also Case C–203/96 *Chemsiche Afvalstoffen Dusseldorp BV v Minister van Volkshuisvesting, Ruimtelijke Ordening en Milieubeheer* [1998] ECR I–4075.

The ECJ has been more receptive to use of the exception where the undertaking granted exclusivity has universal service obligations requiring it to perform tasks that are not profitable. The only way that it can do this is to have exclusive rights over the profitable parts of the service, since if it does not other undertakings will 'cream off' those parts.

Thus, in *Corbeau*[38] the ECJ accepted that the Belgian postal service was an entrusted undertaking, and that some restriction on competition might be necessary to enable it to fulfil the duties it was required to perform. If this were not so then other firms could simply 'cream off' the profitable business, since they would have no obligation to perform loss-making activities. This did not, however, serve to exclude all competition. There could, said the Court, be services which could be dissociated from the general public service, which could be offered by other undertakings without threatening the economic stability needed by the holder of the exclusive right. It was for the national court to determine whether the services came within that category.

In *Albany*[39] a company argued that a Dutch law making affiliation to a supplementary pension scheme compulsory was contrary to Article 106. The ECJ held that the exclusivity was justified under Article 106(2). The compulsory pension scheme was obliged to accept all workers without a prior medical examination, and contributions did not reflect risk. If the exclusive right of the fund to manage the supplementary pension scheme were removed, then undertakings with young employees in good health engaged in non-dangerous activities would seek more advantageous terms from private insurers. The departure of these 'good risks' would leave the pension fund with an increased share of 'bad risks'. This would lead to an increase in premiums for these workers, since the fund would not be able to offer pensions at the previous cost.[40]

(iii) *The Third Step*

Even if the exception applies, the third step in Article 106(2) requires that the development of trade must not be affected to such an extent as would be contrary to the interests of the EU. This proviso subjugates Member State interests to those of the Union in the relevant area.

(c) ARTICLE 106(3)

Article 106(3) gives the Commission power to ensure the application of Article 106 through directives or decisions addressed to Member States. It is one of the rare Treaty provisions which confer direct legislative competence on the Commission.[41] The Commission has used this power relatively rarely, but the Member States have nonetheless challenged the Commission's competence to proceed in this manner. The ECJ has commonly rejected such challenges.

Thus in the *Transparency Directive* case,[42] the facts of which were set out above, the Member States argued that the Directive could not be enacted under Article 106(3), which, they said, was limited to

dealing with a specific situation in one or more Member States. It did not give any more general legislative power to the Commission. The Court rejected this argument. The term 'directive' in Article 106(3) had the same meaning as in Article 288.[43] The parties also contended that the Directive should have been adopted by the Council pursuant to Article 109. The ECJ disagreed. The specific power to issue directives contained in Article 106(3) was in furtherance of the Commission's duty of surveillance provided for in Article 106.[44]

(D) ARTICLE 106 AND NATIONAL COURTS

We must now consider how far the provisions of Article 106 are directly effective. A distinction must be drawn between Article 106(1) and (2).

It is clear that breach of Article 106(1) is dependent upon a breach of some other Treaty Article. The ability of an individual to invoke Article 106(1) will therefore depend on whether the other Treaty Article allegedly broken is directly effective. This is exemplified by the *Merci* case.[45] The ECJ held that Articles 34, 45, and 102 have direct effect when they fall to be considered within the framework of Article 106.

Article 106(2) has, as seen above, three parts: the determination of whether a body is an entrusted undertaking, the application of the exception, and the proviso to the exception. The ECJ has long recognized the competence of national courts to answer the first of these questions. In *SABAM*[46] the ECJ affirmed that a national court has the duty of investigating whether an undertaking which invokes Article 106(2) has in fact been entrusted by the Member State with the operation of a service of general economic interest.

There has been more uncertainty about whether a national court can apply the exception. The ECJ's initial response was that Article 106(2) could not be invoked by individuals before national courts, since it did not create rights for individuals,[47] but subsequent case law cast doubt on this proposition. The situation has now been clarified by the *ERT* case.[48] The ECJ held that Article 106(2) renders an undertaking subject to the Treaty rules unless their application is incompatible with the performance of its tasks. It was therefore open to a national court to determine whether the practices of such an undertaking were compatible with, for example, Article 102. The national court could also decide whether those practices, if they were contrary to such a provision, could be justified by the needs of the particular task given to the undertaking.[49] The difficulties that this presents for national courts should not, however, be underestimated.[50]

Should an applicant succeed in bringing a case within the exception, the question remains whether a national court is competent to apply the proviso in Article 106(2). It would be difficult for the national courts to perform this task, since they may not have the information on which to make the assessment. On this view it would require a Commission decision made under Article 106(3) to decide the issue.

[49] The ECJ adopted the same approach to the tasks of the national courts in the cases mentioned in (ns 27 and 40).
[50] See, eg, the task presented to the national courts in Case C–320/91 P *Corbeau* (n 23), discussed by Hancher, (1994) 31 CMLRev 105, 119–120.

(E) SUMMARY

i. Article 106 seeks to reconcile a Member State's interest in using certain undertakings as an instrument of social and/or economic policy with the EU's interest in ensuring compliance with the rules on competition and the internal market.

ii. The mere grant of a monopoly, or exclusive rights, will not infringe Article 106(1). It will do so only when the exercise of the exclusive rights could not avoid being abusive, or where such rights were liable to create a situation in which the undertaking was induced to commit an abuse.

iii. It is equally clear that the ECJ has been ready to find that either of these conditions applies, and that therefore Article 106(1) is applicable.

iv. It is then for the state to provide a justification under Article 106(2). It must be shown that the Treaty rules should be excluded because they would obstruct the performance of the tasks assigned to the undertaking. The ECJ will subject such claims to close scrutiny. However, the ECJ has held the exception applicable to bodies with universal service obligations or the equivalent thereto. Exclusivity in such instances has been held warranted in order that the profitable parts of an activity are not 'creamed off' by the private sector, with the consequence that the body granted exclusive rights is unable to fulfil its remit.

4 THE STATE, ARTICLES 4(3) TEU, 101, 102, AND 34 TFEU

The discussion thus far has focused on Article 106. This is not, however, the only Treaty provision relevant to state action and the EU. The Court has also made important decisions on the basis of Articles 4(3) TEU, 101, 102, and 34 TFEU.[51] The basic principle is that a state may not adopt or maintain in force any measure which would deprive, for example, Article 101 of its effectiveness or prejudice its full and uniform application. A state can be in breach of this obligation when it requires or encourages undertakings to conclude cartels in violation of Article 101, or when it divests its national provisions of their public nature by, in effect, delegating to the firms the responsibility for taking decisions about the boundaries of competition.[52] This jurisprudence is the means whereby the ECJ has extended the type of obligation imposed on a state by Article 106 to situations where the undertakings neither are public nor enjoy any specially privileged position. The following cases illustrate the Court's jurisprudence.

In *Vereniging van Vlaamse Reisbureaus*[53] a travel agent was prosecuted for violating a professional code of practice incorporated into Belgian law. The code involved horizontal price fixing, a blatant breach of Article 101. The Court also found that the Belgian state was in breach of Article 4(3) TEU, read together with Article 101, by supporting the cartel through its own legal regime.

[53] Case 311/85 *Vereniging van Vlaamse Reisbureaus v Sociale Dienst van de Plaatselijke en Gewestelijke Overheidsdiensten* [1987] ECR 3801.

In *Van Eycke*[54] holders of certain Belgian savings accounts had a tax exemption, provided that the bank offered interest rates below that set by the minister in a Royal Decree. Those who held accounts at banks that gave higher interest rates than that in the Royal Decree lost the tax exemption, so it was unattractive for the banks to offer such rates. The effect was to limit price competition between banks. The ECJ held that, although the duty in Articles 101 and 102 is directed towards undertakings, the state itself has an obligation, derived from Article 4(3) TEU, not to introduce measures which render the competition Articles ineffective. This would be the case where national legislation reinforced the effects of existing agreements that were in breach of Article 101, or where the state deprived its own legislation of its official character by delegating to private traders responsibility for taking decisions affecting the economic sphere.[55] Later attempts to invoke this principle have, however, not been notably successful.[56]

Where the state intervenes not to support an existing agreement which is itself illegal under Article 101, but through an independent measure which undertakings must follow, Article 34 TFEU is the most appropriate provision in relation to goods, and Article 56 TFEU in the case of services.[57]

5 STATE AIDS: POLICY DEVELOPMENT AND REFORM

(A) THE COMMISSION AND THE DEVELOPMENT OF POLICY

Certain general points should be made clear before we discuss the detailed rules on state aids. First, the Commission, as the initial decision-maker, develops the general policy in this area.[58] Its decisions are subject to judicial review, but the EU Courts are mindful of the complex evaluations of social and economic data involved, and they will not, therefore, substitute their view for that of the Commission in relation to determinations made under Article 107(2)–(3). Judicial review is limited to verifying whether the Commission complied with procedural rules, including the provision of reasons; whether the facts on which the decision was based were accurately stated; and whether there was a manifest error of assessment or misuse of power.[59]

Secondly, the Commission possesses discretion as to the approach to state aids. Thus it has, for example, applied a principle of compensatory justification. Before it will approve aid, there must be some contribution by the beneficiary of the aid, over and above the normal play of market forces, to the attainment of Union objectives as contained in the derogations from Article 107(3).[60] In general terms, aid can be designed to restructure an undertaking, to rescue an undertaking, or to help it with operating costs. The Commission has provided guidelines on these.[61] The guidelines for restructuring aid stipulate that viability is restored, that aid is in proportion to the restructuring costs and benefits, that undue distortions of competition are avoided, and that the restructuring plan is fully implemented. Operating aid relieves an undertaking of expenses that it would normally bear in its day-to-day operations, with no technical or structural alteration in the character of the recipient. It

is generally regarded as objectionable by the Commission[62] and the Court,[63] and is normally authorized only to cope with specific regional or sectoral problems. The Commission's discretion as to the approach to state aids has been evident more recently in modification of state aid rules in response to the banking and financial crisis.[64]

Thirdly, the Commission can also choose how to develop its substantive policy, whether through formal legislation or through informal rule-making. The Commission has made formal legislation in certain areas. The Council has, pursuant to Article 109 TFEU, delegated power to the Commission to make regulations exempting types of aid from the requirement of notification, and stipulating that it shall be regarded as compatible with the internal market.[65] The Commission has used this power to make formal regulations concerning small and medium-sized enterprises, *de minimis* aid, training aid, and aid for employment.[66] Formal legislation has also been made on procedural matters.[67]

Fourthly, the Commission can choose to develop policy, not only through formal legislation, but also through individual decisions or informal rule-making. Rules and policy frameworks have been made for particular industrial sectors, and in relation to matters such as regional aid, environmental aid, deprived areas, and aid to promote investment of risk capital in small and medium-sized enterprises.[68] It is lawful for the Commission to structure its discretion through guidelines, provided that they do not depart from the Treaty rules.[69] In *CIRFS*[70] the ECJ accepted that the Commission was bound by the terms of its policy framework, and in *Ijssel-Vliet*[71] it held that Commission guidelines built into a Dutch aid scheme were binding upon the Dutch Government. Moreover, in *Vlaams Gewest*[72] the CFI held that the guidelines adopted by the Commission had to be applied in accordance with the principle of equal treatment, with the implication that like cases, as defined in the guidelines, had to be treated alike. Such guidelines are however not formally binding on the EU Courts.[73]

The variety of instruments used by the Commission can however be confusing for users of the system.[74] The reasons for employing such policy documents are part practical, part conceptual, and part political. In practical terms such guidelines help an overburdened administration to cope with

increased workload.[75] In conceptual terms they have the advantages associated with rule-making.[76] They 'reduce Member States' room for manoeuvre in giving aid and the controller's margin of discretion, choice and possible arbitrariness';[77] and they facilitate 'the transparency, legal security and credibility which result from strict and consistent enforcement, to the benefit of governments and industry'.[78] In political terms, rule-making by the Commission obviates the need for consent in the Council, which is necessary under Article 109 when formal legislation is enacted. Thus Rawlinson, a principal administrator within the state aids directorate, argued that recourse to Article 109 would make policy-making more protracted.[79] However della Cananea has pointed to the lack of clarity of certain guidelines, and to the fact that the rights of individuals have not always been properly safeguarded.

(B) REFORM

The Commission instituted a consultation exercise in 2005 designed to reform the state aid regime.[80] It reiterated the imperative behind this area of the law: the maintenance of a level playing field between undertakings. The Commission acknowledged that state aid could be legitimate in circumstances of market failure. The more specific reform proposals resonated round that theme. Thus state aid for matters such as innovation, research and development, and risk capital was seen as potentially legitimate where the market failed to provide the requisite incentives to engage in these activities.[81] This has led, as will be seen below, to a new block exemption.[82] The Action Plan also considered improvements related to procedure, and to monitoring and enforcement,[83] which will be considered in the course of the ensuing discussion.

6 STATE AIDS: THE SUBSTANTIVE RULES AND ARTICLE 107

(A) DEFINITION OF STATE AID

Article 107 lays down the test for state aids.[84] It covers aid given to public undertakings within Article 106, subject to Article 106(2), as well as aid given to private firms.[85] Article 107 has three parts. Paragraph (1) establishes the general principle that state aids are incompatible with the internal market. Paragraph (2) provides certain exceptions for situations where the aid will be deemed to be

compatible with the internal market. Paragraph (3) lists types of case where the aid may be deemed to be compatible with the internal market. Article 107(1) provides that:

> Save as otherwise provided in the Treaties, any aid granted by a Member State or through State resources in any form whatsoever which distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods shall, in so far as it affects trade between Member States, be incompatible with the internal market.

There are four conditions before something is classified as aid under Article 107. These are cumulative: all must be fulfilled before the Member State's measure is caught by Article 107.

(i) *The Definition of State Aid: An Advantage Conferred on the Recipient*

Article 107(1) does not define state aid.[86] The ECJ and Commission have, as might be expected, taken a broad view. The rationale for the aid is not relevant at this stage,[87] and substance, not form, is the criterion when defining aid. The guiding principle is that the measure must confer an advantage to the recipient in order to constitute aid.

The Commission has provided a list of types of aid. These include direct subsidies, tax exemptions,[88] exemptions from parafiscal charges, preferential interest rates, favourable loan guarantees, the provision of land or buildings on special terms, indemnities against losses, preferential terms for public ordering, the deferment of the collection of fiscal or social contributions, and dividend guarantees. This list is illustrative rather than exhaustive.

The ECJ has made it clear that the concept of aid covers not only positive benefits, such as subsidies, but also measures that mitigate the charges an undertaking would normally bear,[89] such as the supply of goods or services at a preferential rate,[90] a reduction in social security contributions,[91] or tax exemptions.[92]

General measures of economic policy, such as an interest-rate reduction, while benefiting industrial sales, will not in themselves be classified as aid.[93] Thus a non-sectoral measure of general taxation policy remains within the area of state fiscal sovereignty.[94] A measure will, nonetheless, be classified as aid even if it benefits a whole range of undertakings, as in the case of a general export aid,[95] though by way of contrast aid for general infrastructure will not normally constitute aid within Article 107.[96]

[95] Case C–75/97 *Belgium v Commission* (n 91).

[96] Case C–225/91 *Matra v Commission* [1993] ECR I–3203.

The dividing line between general measures of economic policy and state aids may however be a fine one.[97]

Particular difficulties have arisen where the state takes a shareholding in a private company. In *Intermills*[98] the ECJ made it clear that no distinction could be drawn between aid granted in the form of loans and aid granted in the form of a holding acquired in the capital of an undertaking. Both could be caught by Article 107(1).[99]

Case C–142/87 **Re Tubemeuse: Belgium v Commission** [1990] ECR I–959

[Note Lisbon Treaty renumbering: Arts 92 and 93 are now Arts 107 and 108 TFEU]

In 1979 the Belgian Government acquired 72 per cent of the capital holding of Tubemeuse (T), which was in severe financial difficulty following the withdrawal of private shareholders. In 1982 the Commission approved a series of aid measures, but these were not successful and the state then acquired the remaining shares in the firm. Between 1984 and 1986 Belgium initiated a series of measures designed to increase the capital of T. These measures were notified to the Commission, but the Government did not wait for the Commission's approval as required by Article 93(2). The Commission then made a decision that these measures constituted unlawful aid and instructed Belgium to recover the sums. The Belgian Government argued that the measures in 1984–1986 did not constitute state aid, but were rather the normal reaction of any investor whose initial investment (made in 1979 and then in 1982) was at risk. The ECJ reiterated its holding in *Intermills* and then continued as follows.

THE ECJ

26. In order to determine whether such measures are in the nature of State aid, the relevant criterion is that indicated in the Commission's decision, and not contested by the Belgian government, namely whether the undertaking could have obtained the amounts in question on the capital market.

27. In the event, it can be seen from the contested measure taken together with the other documents before the Court that, in addition to the technical difficulties of its plant, which made necessary the extensive modernisation programme in 1982 carried out with the help of the public authorities and authorised by the Commission, the company has, since 1979, had to face structural financial difficulties. Excessively high production costs, continual operating losses, poor liquidity and heavy indebtedness led to the withdrawal of almost all the private shareholders from the undertaking.

28. Moreover, it is not contested that the seamless steel tubes sector whose production was intended principally for use in oil exploration, was in a state of crisis, marked by considerable surplus capacity in the producing countries and new production capacity in the developing and State trading countries. Furthermore, the restrictions which the United States imposed on the importation of steel tubes into their territory and the fall in world oil prices, which contributed to a reduction in drilling, led to a fall in demand for the tubes in question and therefore to a substantial reduction in their price and in world production. That is the reason why other Member States sought to reduce their production capacity in that sector.

[97] C Quigley, 'The Notion of a State Aid in the EEC' (1988) 13 ELRev 242, 252–253.

[98] Case 323/82 *Intermills SA v Commission* [1984] ECR 3809.

[99] See also Cases 296 and 318/82 *The Netherlands and Leeuwarder Papierwarenfabriek BV v Commission* [1985] ECR 809; Case 40/85 *Re Boch: Belgium v Commission* [1986] ECR 2321; Case T–16/96 *Cityflyer Express Ltd v Commission* [1998] ECR II–757; Case T–198/01 *Technische Glaswerke* (n 59) [98]–[99].

29. Under those circumstances, there is nothing which suggests any error in the Commission's assessment that Tubemeuse's prospects of profitability were not such as to induce private investors operating under normal market economy conditions to enter into the financial transactions in question, that it was unlikely that Tubemeuse could have obtained the amounts essential for its survival on the capital markets and that, for that reason, the Belgian government's support for Tubemeuse constituted State aid.

The ECJ has continued to apply the same test. When capital is invested by a public investor there must be some interest in profitability in the long term, otherwise the investment will be aid for the purposes of Article 107(1).[100] It is important to determine whether the private investor would have entered into the transaction on the same terms as the public investor, and if not on what terms it might have done so.[101] The privatization of an undertaking may also give rise to questions concerning state aid, depending upon the terms of the privatization. The Commission has provided guidelines on this issue.[102]

It is central to the idea of state aid that the recipient gains a financial advantage, directly or indirectly, over its competitors. This will not be so where the assistance is granted to offset public service obligations incumbent on the beneficiary of the aid, provided that the conditions in the *Altmark* case are satisfied.

Case C–280/00 **Altmark Trans GmbH and Regierungspräsidium Magdeburg v Nahverkehrsgesellschaft Altmark GmbH**
[2003] ECR I–7747

[Note Lisbon Treaty renumbering: Art 87 is now Art 107 TFEU]

The ECJ considered the compatibility with Article 87 of state measures that accorded assistance to local transport undertakings.

THE ECJ

87. [W]here a State measure must be regarded as compensation for the services provided by the recipient undertakings in order to discharge public service obligations, so that those undertakings do not enjoy a real financial advantage and the measure thus does not have the effect of putting them in a more favourable competitve position than the undertakings competing with them, such a measure is not caught by Article 92(1) of the Treaty.

88. However, for such compensation to escape classification as State aid in a particular case, a number of conditions must be satisfied.

89. First, the recipient undertaking must actually have public service obligations to discharge, and the obligations must be clearly defined....

90. Second, the parameters on the basis of which the compensation is calculated must be established in advance in an objective and transparent manner, to avoid conferring an economic advantage which may favour the recipient undertaking over competing undertakings.

> 92. Third, the compensation cannot exceed what is necessary to cover all or part of the costs incurred in the discharge of the public service obligations, taking into account the relevant receipts and a reasonable profit for discharging those obligations . . .
>
> 93. Fourth, where the undertaking which is to discharge the public service obligations, in a specific case, is not chosen pursuant to public procurement procedure which would allow for the selection of the tenderer capable of providing those services at least cost to the community, the level of compensation needed must be determined on the basis of an analysis of the costs which a typical undertaking, well run and adequately provided with means of transport so as to be able to meet the necessary public service requirements, would have incurred in discharging those obligations, taking into account the relevant receipts and a reasonable profit for discharging the obligations.

The *Altmark* ruling specified that public service compensation would not constitute state aid, and hence would not need to be notified if the conditions laid down were met.[103] This has enabled the Commission to make a Decision[104] and issue a Framework[105] specifying in greater detail the requirements to be met if the conditions are to be fulfilled. The Commission wishes to ensure that the ECJ's conditions are strictly adhered to, so that the ruling is not used by Member States to circumvent the application of the state aid rules.

(ii) *Definition of State Aid: 'Member State or through State Resources'*

A second condition for the application of Article 107(1) is that the aid should be granted by a 'Member State or through State resources'.[106] This can include regional as well as central government.[107] It will not suffice that the measure constituting aid was taken by a public undertaking. It has to be shown that the state actually exercised control over the undertaking and was involved in the adoption of the measure.[108] Subject to this, Article 107 can capture advantages granted by a public or private body designated or established by the state.[109]

Cases 67, 68 and 70/85 **Kwerkerij Gebroeders Van der Kooy BV v Commission** [1988] ECR 219

The Commission made a decision that the tariffs charged by Gasunie for gas to certain firms in the horticultural industry were preferential and constituted aid. Gasunie was a company incorporated under private law, but 50 per cent of its shares were held by the Dutch Government, and the tariffs charged by Gasunie were subject to approval by a government minister. It was argued that the fixing of the tariff did not constitute action by the Dutch state.

THE ECJ

32. In the first place, the applicants maintain that . . . the contested tariff was not imposed by the Dutch State and cannot be regarded as 'aid granted by a Member State or through State resources'.

33. They argue that Gasunie is a company incorporated under private law in which the Dutch State holds only 50% of the share capital and that the tariff is the outcome of an agreement concluded under private law between Gasunie, Vegin and the Landbouwchap, to which the Dutch State is not a party.

34. Turning to the point noted by the Commission that the Minister for Economic Affairs has a right of approval over the tariffs charged by Gasunie, the Dutch Government claims that that is no more than a retrospective supervisory power which is solely concerned with whether the tariffs accord with the aims of Dutch energy policy.

35. As the Court has held . . . , there is no necessity to draw any distinction between cases where aid is granted directly by the State and where it is granted by public and/or private bodies established or appointed by the State to administer the aid. In this instance, the documents before the Court provide considerable evidence to show that the fixing of the disputed tariff was the result of action by the Dutch State.

36. First of all, the shares in Gasunie are so distributed that the Dutch State directly or indirectly holds 50% of the shares and appoints half of the members of the supervisory board—a body whose powers include that of determining the tariffs to be applied. Secondly, the Minister for Economic Affairs is empowered to approve the tariffs applied by Gasunie, with the result that, regardless of how that power may be exercised, the Dutch Government can block any tariff which does not suit it. Lastly, Gasunie and the Landbouwschap have on two occasions given effect to the Commission's representations to the Dutch Government seeking an amendment of the horticultural tariff. . . .

37. Considered as a whole, these factors demonstrate that Gasunie in no way enjoys full autonomy in the fixing of gas tariffs but acts under the control and on the instructions of the public authorities. It is thus clear that Gasunie could not fix the tariff without taking account of the requirements of the public authorities.

38. It may therefore be concluded that the fixing of the contested tariff is the result of action by the Dutch State and thus falls within the meaning of the phrase 'aid granted by a Member State'. . . .

(iii) *Definition of State Aid: 'Distorts or Threatens to Distort Competition'*

A third condition for the application of Article 107(1) is that the aid distorts or threatens to distort competition by favouring certain undertakings or the production of certain goods. In many cases this will be unproblematic. The grant of, for example, a subsidy will indubitably place the recipient in a more advantageous position. The Court will consider the position of the relevant company prior to the receipt of the aid, and if this has been improved then Article 107 will have been met.[110] It is no 'defence'

[110] Case 173/73 *Italy v Commission* (n 87).

for the state to argue that the aid is justified because its effect is to lower the costs of an industrial sector which has, in relative terms, higher costs than other such sectors.[111] Nor is it possible for a state to contend that its aid should be excused on the ground that other states made similar payments to firms within those countries.[112]

(iv) *Definition of State Aid: Effect on Inter-State Trade*

The final element in Article 107(1) is that there should be an effect on inter-state trade.[113] If aid strengthens the financial position of an undertaking as compared to others within the EU then inter-Union trade will be affected.[114] The relatively small amount of the aid, or the relatively small size of the recipient undertaking, does not exclude the possibility that EU trade might be affected.[115] The fact that the aid is given to an undertaking that only provides local transport services does not preclude an effect on inter-state trade, since the aid may render it more difficult for transport undertakings from other Member States to penetrate that market.[116] It is not necessary for the Commission to prove that trade will be affected. It is sufficient to show that trade might be affected.[117]

(B) ARTICLE 107(2)

Article 107(2) lists three types of aid that are deemed compatible with the internal market. Article 107(2)(a) states that 'aid having a social character, granted to individual consumers, provided that such aid is granted without discrimination related to the origin of the products concerned' will be compatible with the internal market. This Article legitimates aid only if there is no discrimination as to the goods' origin. This limits the use of this provision, since most state aid is directed exclusively to a particular firm within the Member State providing the aid.

Article 107(2)(b) legitimates 'aid to make good damage caused by natural disasters or exceptional occurrences'. The rationale for this exception is self-evident, but its limits are somewhat unclear. While the notion of a natural disaster is reasonably apparent, the meaning of exceptional occurrence is considerably vaguer. The Article is construed strictly and will only be held applicable where the economic disadvantage to the state flows directly from the natural disaster of exceptional occurrence.[118]

Article 107(2)(c) makes provision for the special position of Germany, resulting from the division of the country, in order to compensate for the economic disadvantage caused by that division. It does not however allow full compensation for the new *Länder*.[119]

(c) ARTICLE 107(3)

The exceptions in Article 107(3) are discretionary: aid which comes within these categories *may* be deemed compatible with the internal market.

(i) *Article 107(3)(a)*

Article 107(3)(a) states that 'aid to promote the economic development of areas where the standard of living is abnormally low or where there is serious under-employment, and of the regions referred to in Article 349, in view of their structural, economic and social situation' may be considered to be compatible with the internal market.

There is a connection between this provision and Article 107(3)(c), in that both relate to regional development. Article 107(3)(a) can, however, only be used where the problem in an area is especially serious. The seriousness of the regional problem must be judged in an EU and not a national context.[120] To this end the Commission published criteria for deciding upon the relative development of different regions as compared to the EU average.[121] Moreover, the Commission can consider the impact of the aid on the relevant EU markets.[122]

Case 730/79 **Philip Morris Holland BV v Commission**
[1980] ECR 2671

[Note Lisbon Treaty renumbering: Art 92(3) is now Art 107(3) TFEU]

The Dutch Government gave aid to a tobacco manufacturer. The Commission found that the aid did not come within Article 92(3)(a), (b), or (c). What follows is an extract from the ECJ's reasoning concerning the general approach to Article 92(3), and its findings on Article 92(3)(a).

THE ECJ

16. According to the applicant it is wrong for the Commission to lay down as a general principle that aid granted by a Member State to undertakings only falls within the derogating provisions of Article 92(3) if the Commission can establish that the aid will contribute to the attainment of one of the objectives specified in the derogations, which under normal market conditions the recipient firms would not attain by their own actions. Aid is only permissible under Article 92(3) of the Treaty if the investment plan under consideration is in conformity with the objectives mentioned in subparagraphs (a), (b) and (c).

17. This argument cannot be upheld. On the one hand it disregards the fact that Article 92(3), unlike Article 92(2), gives the Commission a discretion by providing that the aid which it specifies 'may' be considered to be compatible with the Common Market. On the other hand it would result in Member States being permitted to make payments which would improve the financial situation of the recipient undertaking although they were not necessary for the attainment of the objectives specified in Article 92(3).

18. It should be noted in this connection that the disputed decision explicitly states that the Dutch Government has not been able to give nor has the Commission found any grounds establishing that

[120] Case 248/84 *Germany v Commission* [1987] ECR 4013, [1].
[121] Guidelines on National Regional Aid for 2007–2013 [2006] OJ C54/13, [15]–[17].
[122] Case C–114/00 *Spain v Commission* [2002] ECR I–7657, [81].

the proposed aid meets the conditions laid down to enforce derogations pursuant to Article 92(3) of the EEC Treaty.

19. The applicant maintains that the Commission was wrong to hold that the standard of living in the Bergen-op-Zoom area is not 'abnormally low' and that this area does not suffer serious 'under employment' within the meaning of Article 92(3)(a). In fact in the Bergen-op-Zoom region the under-employment rate is higher and the per capita rate lower than the national average in the Netherlands.

...

24. These arguments put forward by the applicant cannot be upheld. It should be borne in mind that the Commission has a discretion the exercise of which involves economic and social assessments which must be made in a Community context.

25. That is the context in which the Commission has with good reason assessed the standard of living and serious under-employment in the Bergen-op-Zoom area, not with reference to the national average in the Netherlands but in relation to the Community level.

(ii) *Article 107(3)(b)*

Article 107(3)(b) states that 'aid to promote the execution of an important project of common European interest or to remedy a serious disturbance in the economy of a Member State' may be considered to be compatible with the internal market.

The first limb has been used for the development of, for example, a common standard for high-definition television and environmental protection, but the ECJ takes the wording of Article 107(3)(b) seriously, as is evident from *Glaverbel*.

Cases 62 and 72/87 **Executif Régional Wallon and Glaverbel SA v Commission**
[1988] ECR 1573

The Belgian Government gave aid to certain glass producers. The applicants argued that the aid could come within Article 92(3)(b), since the new technology made possible by the investment aid would reduce European dependence on American and Japanese producers in the relevant markets.

THE ECJ

21. It should be observed that the categories of aid set out in Article 92(3)... 'may' be considered by the Commission to be compatible with the Common Market. It follows that the Commission enjoys a discretion in the matter.

23. ...The Commission has based its policy with regard to aid on the view that a project may not be described as being of common European interest for the purposes of Article 92(3)(b) unless it forms part of a transnational European programme supported jointly by a number of governments of the Member States, or arises from concerted action by a number of Member States to combat a common threat such as environmental pollution.

In adopting that policy and in taking the view that the investments envisaged in this case did not fulfil the requisite conditions, the Commission did not commit a manifest error of judgment.

24. The two applicants further complain that the Commission failed to give any reasons in the contested decision for its negative assessment....

25. The Court considers that a statement of reasons which is based on a supposedly 'clear' fact must generally be regarded as insufficient. In this case, however, the applicants' arguments cannot be accepted. None of the documents laid before the Court lends any support whatever to the conclusion

that the aid at issue might contribute to the implementation of an 'important' project of 'common' European interest. The mere fact that the investments enabled new technology to be used does not make the project one of common European interest; that certainly cannot be the case when, as in this instance, the products have to be sold on a saturated market.

The second limb of this Article concerning serious disturbance to the economy of a Member State will rarely be used, since the economic problem must afflict the whole of the national economy.[123] More specific problems are dealt with under Article 107(3)(a) or (c). The Commission has, however, signalled willingness to use Article 107(3)(b) for problems caused by the financial crisis.[124]

(iii) *Article 107(3)(c)*

Article 107(3)(c) is the most significant of the discretionary exceptions. It provides that 'aid to facilitate the development of certain economic activities or of certain economic areas, where such aid does not adversely affect trading conditions to an extent contrary to the common interest' may be compatible with the internal market.

It allows aid to be legitimated by reference to the needs of an industrial sector,[125] and by reference to economic areas,[126] which can have a national, and not just an EU, dimension.[127] Thus Article 107(3)(c) is the provision through which a state can seek to justify aid to a particular depressed region as judged by national criteria.[128] It is still necessary to consider the impact of the aid on EU trade, and its sectoral repercussions at EU level.[129]

The regional aid must form part of a well-defined regional policy of the state and conform to the principle of geographical concentration. Moreover, given that such aid will benefit regions that are less disadvantaged than those to which Article 107(3)(a) relates, the Commission interprets the geographic scope of the exception and the intensity of the aid strictly, with the consequence that only a small part of the national territory normally qualifies for aid under Article 107(3)(c).[130] The selection is based on a two-stage process, which considers the maximum population coverage for each Member State and then the selection of the eligible regions.[131]

The EU Courts and Commission have, moreover, made it clear that aid will not normally qualify under this Article unless it is linked to initial investment, to job creation,[132] and/or to restructuring of the activities of the undertaking concerned.[133] The purpose of the aid must be to develop a particular sector or region and not merely a specific undertaking therein.[134]

Case T–20/03 **Kahla/Thüringen Porzellan GmbH v Commission**
[2008] ECR II–2305

The claimants argued that aid given to them should fall within Article 87(3)(c).

THE CFI

267. Essentially, the applicant takes issue with the Commission's finding that the measures from which the applicant benefited between 1994 and the end of 1996 are not compatible with the common market in the light of the 1994 Guidelines on aid for rescuing and restructuring firms in difficulty.

268. First, it must be recalled that, in accordance with settled case-law, Article 87(3) EC confers on the Commission a wide discretion to allow aid by way of derogation from the general prohibition laid down in Article 87(1) EC, since the determination in such a case of the question whether State aid is or is not compatible with the common market raises problems which presuppose the examination and appraisal of complex economic facts and conditions (Case C–39/94 SFEI and Others [1996] ECR I–3547, paragraph 36). Since it is not for the Community judicature to substitute its own assessment of the facts, particularly the economic circumstances, for that of the author of the decision, the Court must, in such a context, confine its review to determining whether the Commission complied with the rules governing procedure and the provision of the statement of reasons, whether the facts are accurately stated and whether there has been any manifest error of assessment or misuse of powers...

...

270. [T]he Commission may adopt a policy as to how it will exercise its discretion in the form of measures such as the guidelines in question...Therefore, it is in the light of those rules that the contested decision must be examined.

271. In the present case, the Commission examined the aid granted to the applicant in the light of the 1994 Guidelines on aid for rescuing and restructuring firms in difficulty, which define the criteria to be used in the evaluation of the compatibility of aid for restructuring firms in difficulty.

272. The guidelines stipulate that restructuring aid must be granted under a plan, which is approved only if three substantive conditions are satisfied: the plan must restore the firm's viability, avoid undue distortions of competition and ensure that the aid is in proportion to the restructuring costs and benefits. Therefore, such aid must be linked to a genuine restructuring plan and can only be granted if it can be shown that keeping an undertaking going and returning it to profitability are in the Community's best interest.

273. It is for the Court of First Instance to check whether, in the present case, those requirements were met.

274. It is apparent from the contested decision that, in finding that the conditions laid down in the guidelines on aid for rescuing and restructuring firms in difficulty had not been fulfilled, the Commission relied, first, on the fact that there was no restructuring plan.

275. It must be noted, in this respect, that a restructuring plan must contain precise and reliable information as well as all the explanation for assessing whether it fulfils the substantive conditions laid down in the guidelines on aid for rescuing and restructuring firms in difficulty.

...

280. ...Moreover, aid granted to a firm in difficulty cannot be declared compatible with the common market on the sole ground that restructuring was envisaged, even if the restructuring ends up being successful, as in the present case. It must be stated, in this respect, that in order for the Commission to be in a position to assess whether the aid at issue can encourage the beneficiary undertakings to act in a way that contributes to achieving the aim set out in Article 87(3)(c) EC, it must first check whether the restructuring plan fulfils all the substantive conditions laid down in the guidelines on aid for rescuing and restructuring firms in difficulty.

The Court will, nonetheless, take seriously allegations that the Commission's decision was insufficiently justified.[135]

Case 323/82 **Intermills SA v Commission**
[1984] ECR 3809

The Commission held that aid granted by the Belgian Government in the form of shareholdings did not qualify for exemption, because it was not directly linked to the restructuring of the undertaking, but was rescue aid, intended to allow the undertaking to meet its financial commitments. Such aid could, said the Commission, do serious damage to competition in the Community. The applicants argued that the aid in the form of shareholdings was not rescue aid, and that it was used to finance the closure of unprofitable factories, combined with the conversion of others to products with a better prospect of profitability.

THE ECJ

33. ...the criticism raised by the applicants appears to be well founded, inasmuch as the contested decision does indeed contain contradictions and does not make clear the grounds for the Commission's action on certain vital points. Such doubts and contradictions relate both to the economic justification for the aid and the question whether the aid was likely to distort competition within the Common Market.

34. First, as regards the economic justification for the aid, the Commission concedes in the statement of reasons on which its decision is based that the restructuring aimed at by the applicants corresponds, as such, to the Commission's own objectives for the European paper industry. That factor seems to be the chief ground on which the Commission recognised the compatibility with the Treaty of the aid granted in the form of low interest loans and advances.

35. On the other hand, the Commission gave no verifiable reasons to justify its finding that the holding acquired by the public authorities in the capital of the recipient undertaking was not compatible with the Treaty. It merely stated that that holding was 'not directly linked to the restructuring operation' and in view of the losses suffered by the undertaking over several financial years, constituted purely financial 'rescue aid';...In making those assessments...the Commission did not properly explain why its assessment of the restructuring operation in question...called for such a clear-cut distinction between the effect of the aid granted in the form of subsidised loans and the effect of the aid granted in the form of capital holdings.

...

37. In relation to its claim that the contested aid damages competition in the Common Market, the Commission referred to the provisions of Article 92(1) and to the requirement in Article 92(3), according to which aid may be exempted only if it does not adversely affect trading conditions to an extent contrary to the common interest.

38. As regards the first part of that requirement, the relevant paragraphs of the preamble to the decision merely note the objections raised by the Governments of three Member States, two trade associations and an undertaking in the paper industry. Apart from that reference, the decision gives no concrete indication of the way in which the aid in question damages competition.

39. As regards the second part of the requirement, the Commission, having stated that the aid granted in the form of a capital holding is not directly linked to the restructuring of the undertaking but constitutes 'rescue aid', asserts that such aid 'threatens to do serious damage to the conditions of competition, as the free interplay of market forces would normally call for the closure of the undertaking,

[135] See also Case 248/84 *Germany v Commission* (n 120); Cases 296 and 318/82 *Leeuwarder Papierwarenfabriek* (n 99).

allowing more competitive firms to develop'. On that point it must be stated that the settlement of an undertaking's debts in order to ensure its survival does not necessarily adversely affect trading conditions to an extent contrary to the common interest, as provided in Article 92(3), where such an operation is, for example, accompanied by a restructuring plan. In this case, the Commission has not shown why the applicant's activities on the market, following the conversion of its production with the assistance of the aid granted, were likely to have such an adverse effect on trading conditions that the undertaking's disappearance would have been preferable to its rescue.

40. On those grounds, the contested decision must be declared void.

(iv) *Article 107(3)(d) and (e)*

Article 107(3)(d) was added by the Maastricht Treaty. It provides that aid to promote culture and heritage conservation may be compatible with the internal market, where such aid does not affect trading conditions and competition in the EU to an extent that is contrary to the common interest.

Article 107(3)(e) constitutes a safety net by providing that such other categories of aid as may be specified by decision of the Council on a proposal from the Commission may be deemed to be compatible with the internal market. A number of directives on aid to shipbuilding have been adopted pursuant to this Article.

(D) THE BLOCK EXEMPTION

The discussion thus far has focused on the individual exemptions under Article 107(2)–(3). A block exemption, part of the state aid reform package,[136] was introduced in 2008, which declares certain categories of aid compatible with the internal market.[137] It increases to twenty-six the categories of aid that do not need to be notified to the Commission. To come within a category certain conditions must be fulfilled to ensure that the aid leads to new activities that would not otherwise have taken place, and promotes economic development without unduly distorting competition. When such conditions are met the aid can be granted by the Member State without prior notification to the Commission, although the Commission has to be informed of the grant of aid. The block exemption applies to most, albeit not all, sectors of the economy. The principal categories covered by the block exemption are: aid to small and medium-sized enterprises; aid for promoting female entrepreneurship; aid for research, development, and innovation; environmental aid; regional aid; training aid; and aid for disadvantaged and disabled workers.

7 STATE AIDS: THE PROCEDURAL RULES AND ARTICLES 108 AND 109

The procedural rules that apply in this area are derived from the relevant Treaty Articles, the case law of the ECJ and CFI, and from Regulation 659/99.[138]

[136] State Aid Action Plan (n 80).

[137] Commission Regulation (EC) No 800/2008 of 6 August 2008 declaring certain categories of aid compatible with the common market in application of Articles 87 and 88 of the Treaty (General block exemption Regulation) [2008] OJ L214/3.

[138] Council Regulation 659/1999 of 22 March 1999 laying down detailed rules for the application of Article 93 of the Treaty [1999] OJ L83/1; Commission Regulation (EC) No 794/2004 of 21 April 2004 implementing Council Regulation (EC) No 659/1999 laying down detailed rules for the application of Article 93 of the EC Treaty [2004] OJ L140/1.

(A) REVIEW OF EXISTING STATE AIDS

The EU has an interest in keeping under review aid granted by Member States, even if the Commission has given the green light under Article 107. Article 108(1) provides that:

> The Commission shall, in cooperation with Member States, keep under constant review all systems of aid existing in those States. It shall propose to the latter any appropriate measures required by the progressive development or by the functioning of the internal market.

There are a number of categories of existing aid, derived from ECJ case law[139] and Regulation 659/99.[140]

i. Aid which existed before the entry into force of the Treaty.

ii. Aid which has been given the green light under Article 107(3).[141] Individual disbursement of aid pursuant to a general aid scheme that has been approved by the Commission counts as existing aid, provided that it comes properly within the general scheme.[142]

iii. Aid which has been notified to the Commission pursuant to Article 108(3), where the Commission has taken no action within the requisite time.

iv. Aid that is not recoverable because the limitation period has expired.

v. Aid deemed to be existing aid because it did not initially constitute aid, and only became so due to the evolution of the internal market.[143] Where certain measures become aid following the liberalization of an activity by EU law, such measures are considered existing aid after the date fixed for the liberalization.

(B) THE PROCEDURE FOR NEW STATE AIDS: NOTIFICATION AND PRELIMINARY REVIEW

In order for monitoring of state aids to be effective, it is essential for the Commission to be notified of any aid proposal. Article 108 establishes a two-stage procedure.[144]

Stage one concerns prior notification of any plan to grant aid and preliminary investigation by the Commission. This is provided for in Article 108(3):

> The Commission shall be informed, in sufficient time to enable it to submit its comments, of any plans to grant or alter aid. If it considers that any such plan is not compatible with the internal market having regard to Article 107, it shall without delay initiate the procedure provided for in paragraph 2. The Member State concerned shall not put its proposed measures into effect until this procedure has resulted in a final decision.

[139] Case C–44/93 *Namur—Les Assurances du Crédit SA v Office National du Ducroire and Belgian State* [1994] ECR I–3829; Cases T–195 and 207/01 *Gibraltar v Commission* [2002] ECR II–2309; Cases T–227, 229, 265, 266, and 270/01 *Territorio Histórico de Álava* (n 107) [228]–[233]; Case T–222/04 *Italy v Commission* [2009] ECR II–1877.

[140] Art 1.

[141] The Commission can review an existing aid scheme and decide that it is no longer compatible with the internal market: Reg 659/99 (n 138) Arts 17–18.

[142] Case C–47/91 *Italy v Commission* [1994] ECR I–4635.

[143] Cases T–298/97 *Alzetta Mauro* (n 117) [143].

[144] Code of Best Practice for the conduct of State aid control procedures [2009] OJ C136/13.

Member States are therefore under a duty to notify the Commission of any aid prior to granting it.[145] This is, however, qualified by the *de minimis* Regulation.[146] Small subsidies do not have to be notified under Article 108(3). Thus aid up to €200,000, granted over any three-year period will not be considered state aid, and loan guarantees are also covered to the extent that the guaranteed part of the loan does not exceed €1.5 million. Subject to this caveat, Member States cannot implement the grant of aid during the period in which the Commission undertakes its initial review of the proposed aid.[147] The Commission must come to some preliminary view within two months. If it does not do so the state is entitled to carry through its aid proposal, after having notified the Commission.[148] The Commission can request further information if it believes that the information supplied is incomplete.[149]

The Commission at this early stage engages in a preliminary review of the aid proposal.[150] It may decide to approve the aid, in which case it notifies the Member State and the latter implements the aid proposal. The ECJ has emphasized that the preliminary review procedure is 'meant to be just that'.[151] It is to take no more than two months, and if there are difficulties in reaching a decision within this time then the Commission should proceed to the more complete review in Article 108(2). This is important since other parties are entitled to be consulted under Article 108(2), but have no such rights under Article 108(3).[152]

Moreover, the Commission can resolve a case under Article 108(3) only where it is clear that the aid is compatible with the internal market. Where there are serious difficulties in deciding whether aid is compatible with the internal market, the fuller investigation under Article 108(2) should be used.[153]

The rules relating to Article 108(3) should now also be seen in conjunction with the simplified procedure[154] introduced as part of the action plan for reform of state aid.[155] The simplified procedure applies to aid which, for example, corresponds to that which the Commission has approved in at least three earlier decisions, or where it prolongs an existing authorized aid scheme. Where aid fulfils such criteria the Commission issues a short form decision within twenty days of being notified.

(c) THE PROCEDURE FOR STATE AIDS: DETAILED INVESTIGATION AND ENFORCEMENT

Stage two is based on the assumption that the Commission has not been able to give the green light to the state aid proposal under Article 108(3). In these circumstances Article 108(2) applies:

[145] Reg 659/99 (n 138) Art 2.

[146] Commission Regulation (EC) No 1998/2006 of 15 December 2006 on the application of Articles 87 and 88 of the Treaty to de minimis aid [2006] OJ L379/5.

[147] Case 120/73 *Gebrüder Lorenz GmbH v Germany* [1973] ECR 1471; Case 84/82 *Germany v Commission* [1984] ECR 1451; Reg 659/99 (n 138) Art 3. The Commission must also be notified of any amendment to the aid proposal: Cases 91 and 127/83 *Heineken Brouwerijen BV v Inspecteur der Vennootschapsbelasting* [1984] ECR 3435.

[148] Case 84/82 *Germany v Commission* [1984] ECR 1451; Reg 659/99 (n 138) Art 4(5).

[149] Reg 659/99 (n 138) Art 5.

[150] Ibid Art 4.

[151] Case 120/73 *Gebrüder Lorenz* (n 147); Case 84/82 *Germany v Commission* (n 148); Case T–171/02 *Regione Autonoma della Sardegna* (n 59) [31]–[32]; Case T–301/01 *Alitalia—Linee aeree italiane SpA v Commission* [2008] ECR II–1753, [157].

[153] Case C–367/95 P *Commission v Sytraval and Brink's France SARL* [1998] ECR I–1719, [39]; Case C–204/97 *Portugal v Commission* [2001] ECR I–3175, [33]; Case T–158/99 *Thermenhotel Stoiser Franz Gesellschaft mbh & Co KG v Commission* [2004] ECR I–1, [59]–[61]; Case C–431/07 P *Bouygues SA and Bouygues Télécom SA v Commission* [2009] ECR I–2665.

[154] Notice from the Commission on a simplified procedure for treatment of certain types of State Aid [2009] OJ C136/3.

[155] State Aid Action Plan (n 80).

> If, after giving notice to the parties concerned to submit their comments, the Commission finds that aid granted by a State or through State resources is not compatible with the internal market having regard to Article 107, or that such aid is being misused, it shall decide that the State concerned shall abolish or alter such aid within a period of time to be determined by the Commission.
>
> If the State concerned does not comply with this decision within the prescribed time, the Commission or any other interested State may, in derogation from the provisions of Articles 258 and 259, refer the matter to the Court of Justice of the European Union direct.

Article 108(2) applies to existing aids in relation to which questions have been raised pursuant to Article 108(1), and to new aids that have not been given the green light pursuant to the preliminary investigation under Article 108(3). If an existing aid is found to be incompatible with the internal market as the result of a review under Article 108(1) then it will be unlawful from the date set for compliance with that decision. In the case of a new aid, the effect of the decision made under Article 108(2) will be to render permanent the temporary prohibition which flows from Article 108(3), unless the Member State can at some future date show that the circumstances have changed. In either eventuality the procedure described in Article 108(2) comes into operation.

A notice will be placed in the Official Journal inviting parties concerned to submit their comments. The Commission will summarize the relevant issues of fact and law, setting out its doubts about the compatibility of the aid with the internal market.[156] The phrase 'parties concerned' covers the undertakings receiving aid, and others whose interests may be affected by the grant of the aid, in particular competitors and trade associations.[157] The participation rights of such parties are, however, limited. They cannot engage in adversarial debate with the Commission in the manner open to the party against which the formal investigation has been initiated.[158] The period for comment will, normally, not exceed one month.[159] Commission findings pursuant to formal investigations are made by decisions. The Commission may decide that the aid is compatible, or incompatible, with the internal market. It may attach conditions to a positive decision.[160] The Commission can revoke its decision where it was based on incorrect information that was a determining factor in the decision.[161]

The rationale for the more expedited enforcement process contained in the second paragraph of Article 108(2) is that the Commission has already had the opportunity to make its views known, and because the parties themselves have already been heard. While Article 108(2) provides a speedier method of enforcement against a recalcitrant state, the Court has set itself against any further modification of the enforcement process.[162]

[156] Reg 659/99 (n 138) Art 6.

[160] Ibid Art 7.

[161] Ibid Art 9.

[162] Case C–292/90 *British Aerospace plc and Rover Group Holdings plc v Commission* [1992] ECR I–493.

(D) EXCEPTIONAL CIRCUMSTANCES: ARTICLE 108(2), PARAGRAPHS 3 AND 4

The third and fourth paragraphs of Article 108(2) make provision for aid to be granted in certain exceptional circumstances in derogation from the provisions of Article 107. The ECJ has construed this provision narrowly.[163]

> On application by a Member State, the Council may, acting unanimously, decide that aid which that State is granting or intends to grant shall be considered to be compatible with the internal market, in derogation from the provisions of Article 107 or from the regulations provided for in Article 109, if such a decision is justified by exceptional circumstances. If, as regards the aid in question, the Commission has already initiated the procedure provided for in the first subparagraph of this paragraph, the fact that the State concerned has made its application to the Council shall have the effect of suspending that procedure until the Council has made its attitude known.
>
> If, however, the Council has not made its attitude known within three months of the said application being made, the Commission shall give its decision on the case.

(E) ARTICLE 109: IMPLEMENTING REGULATIONS

Article 109 empowers the Council on a proposal from the Commission, and after consulting the Parliament, to make any appropriate regulations for the application of Articles 107 and 108, and in particular to determine the conditions under which Article 108(3) shall apply and the categories of aid exempted from this procedure. Article 109 has been used relatively rarely, and the Commission has sought to rely on soft law and adjudication to develop policy in this area.[164] Article 109 was, however, the basis for the Council regulation empowering the Commission to make regulations about certain categories of aid.[165]

(F) CHALLENGE TO COMMISSION DECISIONS

Challenges to Commission decisions will normally be brought under Article 263 TFEU.[166] Applicants may be the state that granted the aid, the intended beneficiaries, and competitors. Applicants have to satisfy the requirements of Article 263[167] and show that the action complained of produces legal effects.[168] The time limit of two months will, in general, run from the date when the decision was published in the Official Journal.[169]

[163] Case C–110/02 *Commission v Council* [2004] ECR I–6333.

[164] Evans (n 58) 405–427.

[165] Council Reg 994/98, [1998] OJ L142/1.

[166] U Soltesz, and H Bielesz, 'Judicial Review of State Aid Decisions—Recent Developments' [2004] ECLR 133. Actions for failure to act under Art 265 will be difficult to sustain, since the applicant must show an obligation to act by the Commission: Case T–277/94 *Associazione Italiana Tecnico Economica del Cemento (AITEC) v Commission* [1996] ECR II–351. The Commission must, however, consider diligently whether it should act on a complaint: Case T–95/96 *Gestevision Telecinco SA v Commission* [1998] ECR II–3407. For the use of Art 277 see Case T–82/96 *Associacão dos Refinadores de Acucar Portugueses (ARAP) v Commission* [1999] ECR II–1889.

[167] Case C–47/90 *Italy v Commission* [1992] ECR I–4145: the Commission's decision to open the Art 108(2) procedure was a reviewable act which could be challenged before the Court.

[168] Case C–400/99 *Italy v Commission* [2001] ECR I–7303, [62]; Case C–521/06 P *Athinaïki Techniki AE v Commission* [2008] ECR I–5829.

[169] Case T–11/95 *BP Chemicals Ltd v Commission* [1998] ECR II–3235.

The state will have standing, as will a regional body.[170] The intended recipient of the aid has been readily admitted to plead the case,[171] and the Court has afforded standing to interveners who have submitted comments to the Commission and who would be likely to suffer harm if the aid were given.[172] Economic operators that played a significant role in the Article 108(2) procedure have been held to be individually concerned when they have been affected in their capacity as negotiators.[173] The fact that a party has taken part in the Article 108(2) procedure will not, however, suffice for it to be accorded standing under Article 263.[174] Moreover, where an undertaking has not exercised its right to submit comments under Article 108(2), it must prove that it is individually concerned within Article 263(4). The mere fact that the undertaking is in a competitive relationship with the beneficiary of the aid does not necessarily suffice.[175]

An important point concerning the availability of review was affirmed in *William Cook*.[176] We have already seen that interested parties do not have consultation rights under Article 108(3) during the preliminary examination phase, but do have such rights under Article 108(2). This may be problematic if the Commission finds that an aid is compatible with the internal market under Article 108(3), but an interested party believes that the detailed investigation under Article 108(2) should have been initiated. In *William Cook* the Court held that the *procedural guarantees* in Article 108(2) could be properly safeguarded in such a case only if the parties were able to challenge the Commission decision before the Court.[177] However, if the applicant seeks to contest the *merits* of the decision appraising the aid, the mere fact that it is a party concerned within Article 108(2) will not suffice to render the action admissible. The applicant must still show individual concern within the *Plaumann* test.[178]

The substantive grounds for challenge are set out in Article 263. The legality of a measure is decided on the basis of the facts and law existing when the measure was adopted.[179] It is common for applicants to argue that the Commission's decision is in breach of a general principle of EU law, that the reasoning is defective, or that the Commission has misinterpreted a Treaty Article. However the Court possesses considerable discretion as to the intensity of review under Article 263. The ECJ will often make reference to the Commission's considerable discretion concerning state aids, and will normally overturn such a decision only if the applicant can show a procedural defect, deficiency of reasoning, factual inaccuracy, a manifest error in assessing the facts, or some misuse of power.[180]

(G) AID THAT HAS NOT BEEN NOTIFIED

The consequences of a failure by a Member State to notify in accordance with Article 108(3) must be separately evaluated in relation to the Commission and the national courts.

[180] (N 59).

(i) *Non-Notification and the Commission*

The ECJ held that failure to notify does not in itself render implementation of the aid unlawful.[181] The Commission has the power, after giving the Member State the opportunity for comment, to issue an interim decision requiring the state to suspend immediately the payment of the aid, pending the outcome of the Commission's determination of whether the aid was compatible with the internal market.[182] If in the light of this request for information the state still refused to supply the requisite material, the Commission could then make an assessment of the compatibility of the aid on the basis of the information available to it,[183] although that must be sufficient to conclude that an undertaking benefited from aid.[184] This decision could demand the recovery of aid that had been paid. It was also suggested that the Commission should be able to require immediate repayment of the aid.[185]

These principles have been enshrined in Regulation 659/99. Where the Commission has information from any source regarding alleged unlawful aid, it must examine it without delay.[186] It can request information from the relevant state. The Commission may, after allowing the state to comment, make a decision requiring the state to suspend the aid until the Commission has taken a decision on its compatibility with the internal market. This is termed a 'suspension injunction'.[187] The Commission may, after allowing the state to comment, make a decision requiring the state to recover the aid, pending a decision by the Commission on its compatibility with the internal market. This is known as a 'recovery injunction'.[188]

These injunctions may be ordered only where it is clear that there is aid, it is a matter of urgency, and there is a serious risk of substantial and irreparable damage to a competitor. Non-compliance with either type of injunction can lead to an action before the ECJ.[189] The Commission can make its substantive decisions on such aid by way of preliminary review, or by means of the formal procedure. In either eventuality, the normal time limits do not apply.[190] If the Commission decides that the aid is not compatible with the internal market, it can issue a 'recovery decision'. This obliges the Member State to take all necessary measures to recover the aid from the beneficiary.[191] This shall not be required if it would be contrary to a general principle of EU law.[192]

(ii) *Non-Notification and National Courts*

The duty not to implement aid before notification to the Commission, and before the Commission has undertaken its preliminary investigation under Article 108(3), is directly effective.[193] The national court cannot rule on the compatibility of the aid with the internal market, this being for the Commission, but the national court should, nonetheless, rule aid to be illegal when it has not been

notified as required by Article 108(3).[194] The direct effect of Article 108(3) demanded that the rights of the individual should be protected in this manner. A later Commission decision which found that the aid was compatible with Article 107 would not be retrospective in effect.[195] However a national court is not bound to order the recovery of aid implemented contrary to Article 107(3) where the Commission adopted a final decision declaring that aid compatible with the internal market, but the national court must order the aid recipient to pay interest in respect of the period of unlawfulness.[196] The Commission adopted a Notice, which builds on the ECJ's jurisprudence.[197]

(H) RECOVERY OF UNLAWFUL AID

The Court has, not surprisingly, held that, as a matter of principle, illegal state aids should be repaid, this being the logical consequence of a finding that the aid was unlawful.[198] The peremptory force of this obligation will not easily be deflected by claims that repayment of the aid entails difficulties for the recipient.

Case 52/84 **Commission v Belgium**
[1986] ECR 89

[Note Lisbon Treaty renumbering: Arts 5 and 173 are now Arts 4(3) TEU and 263 TFEU]

The Commission found that the acquisition by a public regional holding company of shares in a firm manufacturing ceramic ware constituted state aid, and ordered that it should be withdrawn since it was incompatible with the common market. The Belgian Government did not contest this decision, but it stressed the serious social consequences of closing down the undertaking, and stated that Belgian law did not allow share capital to be refunded except by way of withdrawal of company profits, and no such profits were available. The Government also requested clarification from the Commission of what it meant by 'withdrawal of aid'. The ECJ held that the Belgian Government was outside the time limit for challenging the decision under Article 173. It then proceeded as follows.

THE ECJ

14. In those circumstances the only defence left to the Belgian Government in opposing the Commission's application for a declaration that it failed to fulfil its Treaty obligations would be to plead that it was absolutely impossible for it to implement the decision properly. In this connection it should be noted that the decision demands the withdrawal from the undertaking of a capital holding of 475 million Bfr . . .; that demand is sufficiently precise to be complied with. The fact that, on account of the undertaking's financial position, the Belgian authorities could not recover the sum paid does not

> constitute proof that implementation was impossible, because the Commission's objective was to abolish the aid and, as the Belgian Government itself admits, that objective could be attained by proceedings for winding up the company, which the Belgian authorities could institute in their capacity as shareholder or creditor.
>
> . . .
>
> 16. It should be added that the fact that the only defence which a Member State to which a decision has been addressed can raise in legal proceedings such as these is that implementation of the decision is absolutely impossible does not prevent that State—if, in giving effect to the decision, it encounters unforeseen or unforeseeable difficulties or perceives consequences overlooked by the Commission—from submitting those problems for consideration by the Commission, together with proposals for suitable amendments. In such a case the Commission and the Member State concerned must respect the principle underlying Article 5 of the Treaty, which imposes a duty of genuine co-operation on the Member States and Community institutions; accordingly, they must work together in good faith with a view to overcoming difficulties whilst fully observing the Treaty provisions, and in particular the provisions on aid. However, in the present instance none of the difficulties referred to by the Belgian Government is of that nature, and that Government made no proposals whatever to the Commission for the adoption of other suitable measures.

The message from the Court was clear. The only exception to the primary obligation to obtain repayment of the illegal aid was where recovery was absolutely impossible,[199] and this was narrowly defined. If the recipient company had to be wound up, so be it. Even where the exception to the primary obligation comes into play, the state is not let off the hook entirely. There is a secondary obligation derived from Article 4(3) TEU, requiring the state to enter into a serious dialogue with the Commission to resolve the problem.

The same uncompromising approach is apparent in other cases.[200] The mere fact that the undertaking is bankrupt does not remove the obligation to repay illegal aid.[201] Nor can the recipient of aid plead legitimate expectations. In *Commission v Germany*[202] the ECJ held that a recipient of aid could not have a legitimate expectation that the aid was lawful, unless granted in accordance with Article 108. A diligent businessman should normally be able to determine whether that procedure had been followed. National concepts of legitimate expectations could not be relied upon if the effect was to make it impossible to recover the aid, as where the national doctrine set time limits for the revocation of administrative acts. Similarly in *Lucchini* the ECJ held that EU law precluded reliance on the national concept of *res judicata* if its application prevented recovery of aid in breach of EU law.[203] The ECJ has nonetheless recognized that there may be exceptional circumstances where recovery of aid should not be ordered.[204]

8 STATE AIDS, MARKET INTEGRATION, AND REGIONAL POLICY

(A) THE RELATIONSHIP BETWEEN ARTICLE 34 AND ARTICLES 107–109

The provisions concerning state aids do not exist in a legal or political vacuum. The ECJ has considered the relationship between them and other Treaty provisions,[205] and this has broader implications for the balance between market integration and regional policy in the EU.

The most interesting point of interconnection is the relationship between Articles 107 to 109 and Article 34. The ECJ's approach has altered over time. In *Ianelli & Volpi*[206] it held that if some aspects of aid that might contravene Treaty provisions other than Articles 107–109 were so closely linked to the latter, then it would not be possible to evaluate them separately. However, where certain aspects of an aid scheme were not integral to its operation, then they could be scrutinized under other Treaty provisions. The Court thus used a severability test.

In its later case law the Court appears more ready to apply Article 34, without too delicate an inquiry into whether the measure caught by this Article was an integral part of the aid scheme. In *Commission v France*[207] the Court examined the legality of a measure which gave newspaper publishers tax exemptions on the condition that the papers were printed in France. The Commission argued that this constituted a breach of Article 34. The French Government argued that the measures should be considered under Article 107, since the tax provisions could not be separated from the general aid scheme for the newspaper industry. The ECJ was unconvinced and noted that France had not notified its scheme in accordance with Article 108(3). It then proffered the following strong statement of principle:[208]

> [I]t should be pointed out that Articles 92 and 94 cannot, as is clear from a long line of cases decided by the Court, be used to frustrate the rules of the Treaty on the free movement of goods or the rules on the repeal of discriminatory tax provisions. According to those cases, the provisions relating to the free movement of goods, the repeal of discriminatory tax provisions and aid have a common objective, namely to ensure the free movement of goods between Member States under normal conditions of competition. . . . The mere fact that a national measure may possibly be defined as aid within the meaning of Article 92 is therefore not an adequate reason for exempting it from the prohibition contained in Article 30. The argument relating to the Community rules on aid, which the French Republic in any case raised only by way of hypothesis in reply to the observations of the Commission, therefore cannot be accepted.

The Court persisted with this approach.[209] The Court's reasoning has force, but is not unproblematic. It is true that Articles 34 and 107 have in general terms the same objective. Yet the structure of Articles 107–109 attests to the different way in which this is realized in the context of state aids. These Articles are characterized by Commission discretion, enabling it to weigh certain social and economic variables in deciding whether aid is compatible with the internal market. If Article 34 predominates in the event of overlap with Article 107 then it will rule out the social balancing that occurs

[205] Cases C–149 and 150/91 *Sanders Adour et Guyomarc'h Nutrition Animale* [1992] ECR I–3899.

[208] Ibid [13]. References to Arts 30 and 92–94 should now be read as to Arts 34 and 107–109.
[209] Case C–21/88 *Du Pont de Nemours Italiana SpA v Unità Sanitaria Locale No 2 di Carrara* [1990] ECR I–889; Case C–351/88 *Laboratori Bruneau Srl v Unità Sanitaria Locale RM/24 de Monterotondo* [1991] ECR I–3641; Case C–156/98 *Germany v Commission* [2000] ECR I–6857, [78]; Case C–114/00 *Spain v Commission* [2002] ECR I–7657, [104].

in the context of Article 107(3). Concerns of this nature are apparent in the following extract. The case to which the authors refer is the *Du Pont* decision[210] set out above.

JFM Martin and O Stehmann, Product Market Integration versus Regional Cohesion in the Community[211]

First of all, one of the grounds on which the Court of Justice justifies its position is that both sets of rules have a common objective, that is to ensure the free movement of goods under normal conditions of competition. Although this is true, it is only partially so. One should not ignore that there is a second objective underlying Articles 92(3) and 93, namely to grant the Commission the possibility to declare compatible with the EEC Treaty those aids which are intended to close the economic, social and regional gaps existing inside the Community. Therefore, the fact that some competition distorting State aids may be permitted to operate proves that certain exceptions to the free movement of goods and to free competition principles are to be admitted. . . .

Secondly, the relation of both sets of rules . . . may have certain undesirable consequences. Whereas this position might be justifiable . . . in those cases in which no prior notification has taken place, applying Article 30 as interpreted in *Dassonville* without engaging in a deeper economic (or other) analysis risks obliterating Articles 92 and 93. After the *Dassonville* definition, almost anything would come under the 'imperium' of Article 30. State aids, by their nature, always have a negative effect on inter-state trade when they strengthen national industry or regions . . . If one follows strictly the Court's reasoning of giving priority to the application of Article 30 . . . Articles 92 and 93 would lose much of their sense.

. . .

From an economic point of view the Court's position leads to favouring rapid market integration—represented by the free movement of goods provisions—to the detriment of regional cohesion—represented by the State aids provisions . . .

(B) THE RELATIONSHIP BETWEEN NATIONAL AND EU REGIONAL POLICY

While there may be concerns at the too-ready application of Article 34, one must be cautious about the general relationship between national and EU regional aid policy. We must be careful not to condemn the EU for paying insufficient attention to regional problems. Regional[212] and environmental[213] concerns are taken into account within Article 107, and there are EU schemes for regional assistance. The proper limit of national regional assistance is a contestable issue, since such aid can inhibit market integration. Articles 174 and 175 TFEU prioritize greater cohesion within the EU. Attainment of this goal necessitates limits on aid by the richer Member States to regions that may be poor relative to those states, but not in relation to the EU as a whole. Only in this way will cohesion be possible.

It is the larger Member States that spend most on aid to their own industries and regions, and these sums exceed the EU's budget for regional policy. The consequence is that 'strict control of State aid in the central, more prosperous, regions is necessary in the interests of cohesion as well as of competition

[210] Case C–21/88 *Du Pont de Nemours* (n 209).

[213] H Vedder, 'The New Community Guidelines on State Aid for Environmental Protection—Integrating Environment and Competition?' [2001] ECLR 365.

policy'.[214] In a similar vein the Commission has noted the importance of state aid policy for cohesion, 'by preventing a damaging subsidy race between regions, and by creating the right incentives for growth and jobs, in the least developed regions and elsewhere'.[215] However, persuading the richer Member States to increase their contributions to EU spending in the weaker regions is one thing; getting them to refrain in the name of cohesion from spending so much of their own taxpayers' money locally is quite another.

9 CONCLUSIONS

i. The Treaty undoubtedly places constraints on state behaviour. Some of this is relatively uncontroversial, such as the control of state aids, and is justified by the need to ensure a level playing field between undertakings. In other areas the EU Courts have had to strike a difficult balance between a state's freedom to organize its economic activities and the impact that this might have on the market, as exemplified by the jurisprudence under Article 106. The EU Courts have had to face equally problematic issues concerning the relationship between state aids and free movement of goods.

ii. The ECJ and General Court have given a broad reading to the relevant Treaty Articles, enhanced the competitive process, and demanded a justification from the state for the grant of monopoly or privileged status under Article 106.

iii. However, they have also been more willing to recognize the importance of public service obligations, within the context of Article 106(2). This is reflected in EU legislation on liberalization, which has allowed states to impose such obligations on those providing energy, telecommunications, and the like.
